A short song for use in teaching and concert, with a fine climax for the singer.

STRICKLAND, LILY

Because of you. [C] [E♭-a] ..... .50
In the ballad style, with much life and vigor, making it an impassioned love song.

WEBER, CARL MARIA von

Leise, leise, fromme Weise (Prayer from *Der Freischutz*). [E] [b-F♯] ..... .40

MEDIUM VOICE

CLARIBEL

I cannot sing the old songs. [F] [c-E] .$0.40
One of the old songs in a new edition.

CLASS, F. MORRIS

Why does azure deck the sky? [E♭] [F-f] ..... .50
A concert song, modern in style, with rich harmonic coloring.

DICHMONT, WILLIAM

To you. [D] [c♯-D] ..... .50
A short, easy song for social or teaching use.

HYATT, N. IRVING

A winter song. [C min.] [b♭-F] ..... .40
Somewhat in the folk-song style; very singable and effective.

KROEGER, ERNEST R.

O violet, sweet violet. [F] [c-E] ..... .50
For description see Secular Songs, High Voice.

LOW VOICE

DICHMONT, WILLIAM

The heart o' ye. [E♭] [b♭-E♭] ..... .50
A song full of character, in the Irish style, with which the singer can produce a very good effect; particularly suited to a baritone.

HYATT, N. IRVING

A winter song. [B♭ min.] [A♭-E♭] ..... .40
For description see Secular Songs, Medium Voice.

SAAR, LOUIS VICTOR

To one I love. [C] [c-F] ..... .50
For description see Secular Songs, High Voice.

SACRED SONGS

MEDIUM VOICE

SHELDON, LILLIAN TAITT

The ninety and nine. [D♭] [c-E♭ (F)] .. .60
A fine setting of this favorite text.

LOW VOICE

FREY, ADOLF

Bow down Thine ear, O Lord. [C] [b-E] $0.60
A strong sacred song for baritone or contralto, in the style of an aria; suitable for festival use.

GOUNOD, CHARLES

From Thy love as a father (from *The Redemption*). [D♭] [a♭-a♭] ..... .50
A fine song from the oratorio repertoire.

PIANO SOLO

BACH, J. S.

Fantasia in C minor. V ..... .40
A new edition of a standard work; all advanced pupils should have this as a study.

First French suite in D minor. V ..... .75
A very melodious work in the classic style; excellent as a recital number.

Minuet, Anglaise and Gigue in B minor. IV-V ..... .50
Delightful works for the serious student.

Sarabande and Passepied in E minor. IV ..... .40
Requires considerable finger fluency.

Solo for the harpsichord (*Solo per il cembalo*). IV ..... .30
A delightful piece, different from most of the great composer's works; in the harmonic rather than the polyphonic style.

BRAHMS, JOHANNES

Capriccio in B minor. Op. 76, No. 2. IV-V ..... .50
A fine piece for advanced pupils to use in recitals or concerts.

RETTER, LOUIS

Joys of youth. II ..... .30
A tuneful little piece for young players; in waltz movement.

SCHYTTE, LUDWIG

Alla marcia in E♭. Op. 26, No. 3. IV .$0.50
Broad in style; a splendid study in chord-playing.

VERDI, GIUSEPPE

Miserere and Romance. Transcribed by D. Krug. Op. 196, No. 8. III .... .50
A gem from the opera repertoire.

VIOLIN

MOZART, W. A.

Minuet in D ..... .40
An easy piece, charming in melody and rhythm; a good teaching piece.

RISSLAND, KARL

Valse caprice in B♭. Op. 16 ..... .60
For somewhat advanced pupils in recitals and concerts; contains some double stops.

TRIO: VIOLIN, 'CELLO and PIANO

BARTLETT, J. C.

A dream ..... .60
An arrangement of the celebrated song.

ORGAN

FRANCK, CESAR

Andantino in G major ..... .60

Verset in F minor ..... .30
Two short pieces for use during the church service; they are easy and melodious.

MISCELLANEOUS

CZERNY, CARL

The Art of Finger Dexterity (*Die Kunst der Fingerfertigkeit*). Op. 740, Book II, No. 104, Ditson Edition. .30

Popular Italian Melodies. For mandolin orchestra. Arr. by Geo. L. Lansing.

Palms, The, by Faure, and **Forget-me-not,** by Hoffman. Arr. by Geo. L. Lansing.

PERFECT ASSURANCE

"Perfect gowning," an art that seems by right to belong to a favored few, is really at the command of every woman who truly cares.

Time was when a Paris pocketbook was the key. Today, irrespective of the size of a dress-allowance, the "perfect costume" is within the reach of all.

SMART STYLES

THE MAGAZINE OF INDIVIDUALITY

by showing the most fetching costumes well in advance of the mode, and by helping you adapt them perfectly to your own personality, can make your costuming a delight---smart, becoming, distinctive, truly economical. No ill-chosen gowns or hats to regret, if you use SMART STYLES.

SMART STYLES is the necessary magazine for every woman who cares for dress-distinction. The price is 25 cents a copy, but for the privilege of becoming acquainted we will gladly send you six issues for the price of four.

SIX MONTHS OF SMART STYLES
FOR A DOLLAR BILL

Tear off the coupon, write in it your name and address, pin a dollar bill to it, and send it to SMART STYLES, 41 West 25th Street, New York, for a six months' subscription---a dollar investment for perfect gowning.

NEW AND STANDARD TEACHING MATERIAL FOR MUSIC SCHOOLS, COLLEGES, CONSERVATORIES, CONVENTS AND ALL MUSIC TEACHERS

Piano

Oliver Ditson Company

PIANO TEACHING:
Its Principles and Problems
By CLARENCE G. HAMILTON, A.M.

The book is thoroughly practical, written by a practical man to meet practical needs. We do not hesitate to say that the work is one which should be in the hands of every piano teacher in the land seeking success.

Price, Postpaid, $1.25

"Crammed with information every teacher and pianist needs."—The Nation.

BOSTON NEW YORK

Oliver Ditson Company

INTERPRETATION OF PIANO MUSIC
By MARY VENABLE
A Text-Book for Class Study

For teachers and students of piano music and piano playing. The book is full of helpful suggestions to teachers and advanced students, and prepares the latter for intelligent study of the classical and modern repertoire, and artistic interpretation.

Price, Bound in Cloth, $1.25

"I shall take much pleasure in recommending it to our teachers as a valuable assistant in their work"—Geo. W. Chadwick, Director of the New England Conservatory of Music.

BOSTON NEW YORK

Oliver Ditson Company

TAPPER'S GRADED PIANO COURSE
Edited by THOMAS TAPPER, Litt. D.

This Course consists of: The First Piano Book; Seven Books of Graded Studies—Two Hands; Seven Books of Graded Pieces—Two Hands; Three Books of Four-Hand Pieces; Three Teachers' Manuals.

Price, per Grade, $1.00, Postpaid.
Liberal Discount to Teachers.

"A work of great practical utility."—Musical Courier.

Voice

Oliver Ditson Company

MANUAL OF THE ART OF SINGING
By EMIL TIFERRO

The seventy-five exercises contained in this book range from the easiest to the most difficult, and have been tested by constant use. Singers and teachers can both profit by a close study of this work; the author's directions are very clear and his exercises undeniably helpful.

Price, Postpaid, $1.25

BOSTON NEW YORK

Oliver Ditson Company

THE ART OF VOCALIZATION
By EDUARDO MARZO
For Soprano, Mezzo-Soprano, Alto, Tenor, Baritone and Bass

Three books for each voice; eighteen books in all

A progressive and systematic arrangement of the best vocalises by the best masters, covering the entire range of vocal training. One hundred vocalises for each voice. It is a complete grade course of studies for singers.

Price, Each, 75 cents, Postpaid

"One of the most valuable courses of instruction ever issued."—Music Trade Review.

BOSTON NEW YORK

Oliver Ditson Company

RESONANCE IN SINGING AND SPEAKING
By DR. THOMAS FILLEBROWN

Twenty-one years Professor of Oral Surgery in Harvard University.

For Singers, Speakers, and all who desire to improve the quality of the voice

Price, Postpaid, $1.25

"We heartily endorse all Dr. Fillebrown says. We like his straightforward appeal to naturalness. He talks of health and intelligence, not of psychology and buncombe."—Musical Courier.

Organ

Oliver Ditson Company

THE ORGAN STUDENTS BACH
Edited by JAMES H. ROGERS
Ditson Edition, No. 193

The purpose of the editor has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master.

Price, 63 cents net

"It contains a great deal of the Bach I use first. I am glad to have that material in Mr. Rogers' editing and your print, and will of course, use the book extensively in my teaching."—Harrison M. Wild.

BOSTON NEW YORK

THIRTY ORGAN PIECES FOR USE IN CHRISTIAN SCIENCE CHURCHES
Edited by WALTER E. YOUNG

This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth. It is just as desirable for use in other churches.

Price, $2.00, postpaid

"A truly admirable volume that will prove of great service."—Musical America.

IN JANUARY, 1912, we gave, as a supplement, a copy of the above picture, representing CHOPIN, as a boy, playing for his schoolmates, printed in colors. To meet the continued demand for copies of this picture we have secured a limited edition, in *photogravure*, by one of the leading American art publishers. We offer it as follows:

For $1.50, we will send THE MUSICIAN, one year, and one copy of THE BOY CHOPIN, postpaid. This offer is good until July 1, 1914. Copies of the picture, separately, 35 cents. Size of picture, $8\frac{1}{8}$x$11\frac{7}{8}$; mounted on heavy paper, 12x$18\frac{1}{2}$, equal to line sold for 75 cents and $1.00 in stores.

Address, THE MUSICIAN, Boston, Mass.

EXCERPTS FROM LETTERS

Regarding the Indian Song Cycle (New)

"From Wigwam and Tepee"

By CHARLES WAKEFIELD CADMAN

CHRISTINE MILLER

"I'm so pleased with these songs that I placed them on my programs at once."

YVONNE DE TREVILLE

"I am specially delighted with 'From the Long Room of the Sea' and 'The Thunderbird Comes from the Cedars,' and shall certainly use these two in my European concerts this summer."

ZOE FULTON

"I like them immensely, and will surely use them."

MYRTLE THORNBURGH

"It will be a worthy successor to the 'Four American Indian Songs,' and I shall use these songs at once."

This cycle is issued for high or low voice

Price $1.00

PUBLISHED BY

OLIVER DITSON COMPANY

SINGLE COPIES.....$ .15
SUBSCRIPTION PRICE, PER YEAR 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew. Renewals should be sent promptly as subscriptions are not continued after the time for which they are paid.

NOTE.—Customers with charge accounts in good standing may have their subscription charged to their regular account, if desired.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of THE MUSICIAN.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic Ditson Edition No. 196

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Arnold Sartorio: Twelve Melodious Studies in Velocity in Broken Chords Op. 1018.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

Ernest R. Kroeger: The Whole Tone Scales.

THIS little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

A NEW ORGAN WORK

30 Offertories for the Organ. Ed. by Jas. H. Rogers. $2.00.

A NEW volume uniform with the popular 30 *Preludes* and 30 *Postludes*. The editor has drawn upon the best works, by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organist's collection.

SPECIAL OFFER:—With The Musician, one year, $2.50.

MISCELLANEOUS

James H. Rogers: Five Quatrains From the Rubaiyat.

THE tempting quality of Omar's immortal verses has inspired the composer with most felicitous musical imaginings. For this a set of five song quatrains have been chosen which are in themselves among the most beautiful and which are adroitly contrasted in mood. To match their poetic content Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more virile nor his economy of means to produce just the right emotional effect more sure. These songs, the latest product of his muse, may be used as a cycle or singly, and will adorn any artistic recital program.

The price has been fixed at $1.25; until publication we will accept orders at 75 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.10.

J. C. Macy: Young People's History of Music. New Edition, $1.00.

THOUGH prepared for "young people" this book will be found interesting by all who do not care to study the longer histories, dictionaries, etc. It gives, in necessarily condensed form, valuable information, and is written in an easy colloquial style, free from technicalities. For this new edition much material has been added as was needed to indicate the trend of latter

composition: and the biographies of the great masters have been supplemented by sketches of modern composers who have earned a universal reputation.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.00.

Standard Anthems For Men's Voices. Edited by George B. Nevin. $1.00.

In this excellent collection are included, besides valuable numbers written originally for men's voices, arrangements of standard and popular works. The majority of these arrangements are from the practised and practical hand of the editor, and all are skilfully done with a view to use by choirs of moderate ability. The subjects chosen and their treatment show wide diversity, so that singers in possession of this collection are equipped to meet the varying requirements of the church year without going outside its pages.

Franz C. Bornschein: Zorah: Cantata For Women's Voices. 30 Cents.

This short cantata is composed to a highly picturesque text, descriptive of the desert, an Arab raid and capture. The music is in the modern idiom and breathes at times, the warmth and languor of Oriental scenes, and again is eloquent in its dramatic and vigorous mood. There are extended solo passages for soprano (Zorah), the beautiful captive of the raiders, who is rescued by her lover's warriors.

———*———

COMMENT ON "INTERPRETATION OF PIANO MUSIC"

"I have read your book with much interest. It treats upon a subject which is of vital importance to the piano student and pianist. I shall endeavor to bring it to the knowledge of all the students of this school and hope it may be placed on sale here where it will be convenient."—Willard Kimball, The University School of Music, Lincoln, Neb.

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music, selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal, marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality.

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription.

Subscription price $3.00 a year. Sample copy 25c.

The Organist's Journal $4.50 / The Musician—value } Both for one year $3.75 { Postage additional on Canadian and Foreign Subscriptions

SONGS FOR YOUR VACATION

CADMAN, CHARLES WAKEFIELD

The Heart of Her

As beautiful as the same composer's *At Dawning* which is making such a whirlwind success. Words and music are united in lovely effects ..... High in A♭, Med. in F $0.40

DICHMONT, WILLIAM

My Day

A gem—equal to Ethelbert Nevin at his best—and with the added merit of being easy. A short song, but with big effects and a strong climax ..... High in C, Low in A $0.40

Such a li'l' fellow

A song which goes straight to the heart—so simply tender and winsome. Either words or music alone would make a success, but together they are irresistible. High in G, Med. in F, Low in E♭ $0.40

MONTAGUE, LAURENCE H.

For You

A stunning concert song is this—with a haunting melody such as made Bartlett's *Dream* famous.
High in G, Med. in E♭, Low in D♭ $0.50

RICH, MARIE

Call me "Sweetheart"

This must be the song that prompted *I hear you calling me*, for no one can be indifferent to the appeal of its lovely melody which intensifies the words and makes a real heart-song.
High in D♭, Med. in B♭ $0.50

ROLFE, WALTER

Drifting and Dreaming

The refrain of this song is an inspiration, and proves that songs equal to the best are still being written. Easy to remember and not easily forgotten ..... High in A♭, Med. in F $0.60

NOTE: Discount on sheet music one-half

30 EXERCISES FOR THE DEVELOPMENT OF THE HAND AND FINGER MUSCLES

By FREDERICK A. WILLIAMS

DITSON EDITION, No. 201 Price, $1.00

Copy of letter from Mme. ZEISLER

My Dear Mr. Williams:

According to the promise made you in my letter of February 3d, I have today looked over your exercises and am glad to be able to praise them unstintedly. They are quite original and excellent, not only for the development of the muscles, but for the independence of the fingers and can be used also in stretching exercises, especially the later ones.

I wish you all success in making them known and shall do my best to that end.

Sincerely,

Fannie Bloomfield Zeisler

Copy of letter from Josef Hofmann

My Dear Mr. Williams:

After several months of experience with your "30 Exercises for the Development of the Hand and Finger Muscles," I can freely say that I consider them excellent. Everybody who desires to achieve a good finger technic ought to use them. Wishing you all the success you deserve, I am

Your sincerely,

Josef Hofmann

OLIVER DITSON COMPANY, Boston

CHAS. H. DITSON & CO., New York LYON & HEALY, Chicago

New Elementary Piano Works

A. B. C. of Piano Music

By Mrs. H. B. HUDSON

Price, 50 cents

A little book which is intended to precede any piano method. It is based on the principle of familiarizing the pupil with the piano keys before taking up notation. After the hand has been shaped and placed upon the keyboard, the young student begins playing at once, playing from large capital letters instead of from notes It is not even necessary to count time, yet the pupil is able to form melodies and become familiar with the keys. The pages are all illustrated and the exercises have appropriate names.

New Rhymes and Tunes for Little Pianists

By H. L. CRAMM

Op. 20. Price, 75 cents

A most interesting book for elementary students, which may be taken up in connection with any primer or instructor, and be used while the young students are still learning the staff notation. The pieces are as simple and as tuneful as it is possible to make them; most of them have verses accompanying them which may be sung. The music throughout is pleasing and appropriate and at the same time the book is really helpful and instructive.

Complete Catalogues and our unique system of dealing upon application. Accounts solicited.

New Songs by MARY TURNER SALTER

AN APRIL MESSAGE. For High or Medium Voice - - - - - - - - $0.50
A ROSE AND A DREAM. For Medium or High Voice - - - - - - - .50
TONIGHT. (With 'Cello obligato ad lib.) For Low Voice - - - - - - - .50

Reorders received for these songs prove that they are receiving immediate and most favorable recognition. An April Message is a jovial, animated song. A Rose and a Dream possesses the warmth and charm so attractive to singers, while Tonight lends itself to strong dramatic expression. This song is being successfully featured by the noted Baritone, Royal Dadman.

GRADED STUDIES, Book VII

Compiled by Mrs. CROSBY ADAMS. Price, $1.00

With Book VII is rounded out a series and sequence of studies for the piano which for choice, variety and wealth of material could be fully appreciated only by those who undertook a similar task.

In compiling these books of studies Mrs. Adams had in view a definite purpose regarding the ground to be covered. While technical difficulties had to be carefully considered, both as to their degrees and succession, that, in itself, was the simplest phase of the work in hand. The selection of material best suited to the various other and more important phases, and the relationship of the material in its teaching value, was much the greater problem. How well Mrs. Adams has succeeded is best attested by the very general and widespread demand for these studies from teachers (upwards of 15,000 of the earlier books having already been sold). The series comprises seven books for two hands and two books for four hands. In difficulty, Books I to VII ---two hands---grade from I to advanced IV, on a scale of one to seven. Books I and II---four hands---are in grades I and II.

DEALERS IN MUSIC OF THE BETTER CLASS

The Why and Wherefore

of the addition of new copyrighted sheet music to our publications.

Someone has said that the chief essential of success in the music publishing industry is op imism.

We are optimists. This is our creed:

We believe in the present and future of the art and business of music.

We believe that the standard of musical composition is advancing, not retrograding

We believe in the modern principles adopted in musical education.

We believe that there are latent geniuses living today capable of writing music on a par with the works of the old masters. And we want to help in whatever way it is given us to help the present day composers who represent your ideals, your thoughts, your aspirations, an opportunity to gain recognition.

We feel that our little initial catalogue is representative of some of the foremost of the "20th Century" composers' efforts. Such compositions as seem to reflect best the spirit of this age will be added to it from time to time. It shall be our earnest endeavor to have each number we publish deserve both from an educational and entertaining standpoint your unqualified approval.

May we not hope that the thought and care which led to the conception of this catalogue and the effort spent in its development will be rewarded to the extent of your giving it serious consideration? ***A postcard to us will bring it to you.***

Easy Pieces in Easy Keys. Vol. II
Forty easy piano pieces, arranged according to the keys.

Easy Salon Music for the Piano
FIRST SERIES. Sixteen bright and attractive piano pieces in salon style.

Easy Salon Music for the Piano
SECOND SERIES. Fifteen melodious pieces of parlor music, none of them beyond the third grade in difficulty.

Famous Piano Solos
GRADES III AND IV. Fifteen pieces in all, every one included in the standard teaching répertoire.

Forty Very Easy Piano Pieces
FIRST SERIES. Forty very easy piano numbers in the first and second grades, progressively arranged.

Forty Very Easy Piano Pieces
SECOND SERIES. This volume contains an unusually attractive collection of pieces of Grades I and II suitable for teaching and recreation. Every number is of practical value.

Familiar Melodies Transcribed for the Piano
IN THREE VOLUMES. Vol. I. contains ten compositions; Vol. II, contains nine compositions; Vol. III, contains eleven compositions.
These volumes contain the cream of popular transcriptions of familiar melodies, mostly in the third and fourth grades of difficulty. Each volume contains about sixty-four pages.

Richard Goerdeler Popular Piano Compositions
IN TWO VOLUMES. Vol. I, fourteen compositions; Vol. II, thirteen compositions.
These volumes contain twenty-seven compositions of approved worth, not beyond the third grade (or early fourth) and all acceptable pieces for use in teaching or in the social circle. Sixty-four pages, folio size, to each volume.

Carl Heins' Popular Piano Compositions. Vol. I
Contains sixteen pieces in the second and third grades of difficulty. Without any exception, these pieces are available for the teaching répertoire, as they contain passages of a technical character in pleasant musical form. Sixty-four pages, folio size.

Eduard Holst Popular Piano Compositions
IN TWO VOLUMES. Vol. I, fifteen compositions; Vol. II, fourteen compositions.
These volumes contain twenty-nine pieces of moderate difficulty suitable for teaching, recitals or for the home and social circle. They are all bright and pleasing. Sixty-four pages, folio size.

Little Recreations for the Piano
GRADES I AND II. This volume contains thirty true teaching pieces with exceptional musical interest, such as will interest young players and also advance their technic.

Marches and Two-Steps
Fifteen attractive marches and two-steps.

Modern Piano Compositions
Seventeen compositions, Grades IV and V. An excellent répertoire book for a busy teacher to have at hand.

Opera Transcriptions
All are good numbers for home, social, or public use.

Popular Salon Music for the Piano
Thirteen melodious pieces of proven acceptability for the drawing room.

School and Gymnasium Marches
Sixteen attractive marches suitable for school and gymnasium work.

PIANO—TWO HANDS

50 cents each, postpaid

Thirty Easy Piano Pieces
SECOND GRADE. This volume contains thirty carefully chosen teaching pieces, all of the second grade.

Twenty-five Easy Piano Pieces
GRADE II. Teaching pieces of genuine musical value, carefully fingered and phrased, the pick of the easy works of such composers as Aletter, Beaumont, Dorn, Engelmann, Fink, Horvath, Sartorio, Schmoll, and others.

PIANO—FOUR HANDS

50 cents each, postpaid

Easy Four-hand Pieces for the Piano
SECOND AND THIRD GRADES. Fourteen easy piano duets for two equal performers.

Four-hand Recreations for the Piano
THIRD GRADE. Twelve third-grade piano duets that are bright and recreative in character.

Very Easy Piano Duets. Vol. I
FIRST AND SECOND GRADES. Twenty-five very easy four-hand piano pieces, for two equal or nearly equal performers. The music is all in the first and second grades, and is arranged in progressive order.

Very Easy Piano Duets. Vol. II
This collection contains twenty-six pieces by favorite composers; neither part goes out of Grade II. Every piece has stood the test of use, and has become a standard for the *ensemble* class.

SONGS

50 cents each, postpaid

Encore Songs
For high voice; for low voice. The numbers contained in this collection are the cream of "encore songs," of moderate difficulty. Singers need never be at a loss for a suitable encore, if this book be handy.

Favorite Sacred Songs
For high voice; for low voice. The old favorites never lose their hold upon the average congregation. This volume should be in every choir library.

Favorite Songs
For high voice; for low voice. Sixteen songs by American and European composers, available for teaching and recitals. A choice addition to the répertoire for use with young pupils.

Thirty Songs for Children
Thirty songs written expressly for children to sing and selected for this volume because children really can sing them with delight.

Twenty Songs
BY STEPHEN C. FOSTER. The best of the 164 songs by the founder of American folk music.

Young Singers' Songs
Contains eighteen songs suited to the age and technical advancement of young people of both sexes. Adapted to students who have just begun vocal training.

PIPE AND REED ORGAN

50 cents each, postpaid

Popular Church Organ Pieces
Fourteen numbers for two-manual organs, consisting of original pieces and arrangements of favorite selections; an exceptionally useful collection.

Reed Organ Selections for Church Use
Thirty pieces by nineteen composers intended especially and only for the reed organ.

MANDOLIN, GUITAR & BANJO

50 cents each, postpaid

Favorite Duets for Mandolin and Piano
Twelve melodious standard pieces of a medium grade of difficulty.

Favorite Duets for Mandolin and Guitar
Twelve melodious standard pieces of a medium grade of difficulty.

Minstrel Songs with Guitar Accompaniment
Twenty-two favorite minstrel songs, some of which have choruses. An ideal collection containing good material for a musical evening.

Minstrel Songs with Banjo Accompaniment
Twenty-two favorite minstrel songs selected from the compositions of fifteen famous minstrel song writers. An ideal collection for the minstrel show.

Twenty-four Guitar Solos
One of the best collections of its kind, notwithstanding extremely low price.

VIOLIN, VIOLIN AND PIANO

50 cents each, postpaid

Easy Pieces for Violin and Piano
Contains twenty-six pieces of exactly the right style consisting of standard compositions of the violin and arrangements of favorite airs.

Favorite Duets for Violin and Piano. First Series
Thirteen universal favorites at the price of a single number.

Favorite Duets for Violin and Piano
SECOND SERIES. Eleven fine pieces for young artists' use; just the kind that will be appreciated by the average audience.

Favorite Reels, Jigs, and Hornpipes
FOR VIOLIN WITH PIANO ACCOMPANIMENT. Contains sixty numbers.

Old-time Jigs and Reels for the Violin
Eighty-nine jigs, seventy-nine reels, thirty-eight hornpipes, and twenty-nine miscellaneous dances. Many old popular dances are included which are obtainable only in this book.

CORNET, CLARINET, FLUTE, TROMBONE OR BARITONE AND PIANO

50 cents each, postpaid

Songs of Great Composers
Nineteen pieces for B♭ Cornet and Piano. Arranged by T. H. Rollinson.

Easy Dance Music for Cornet and Piano
Sixteen very attractive duets.

Popular Melodies for B♭ Clarinet
WITH PIANO ACCOMPANIMENT. Eleven melodies for the B♭ clarinet. Each number is written in easy compass, with piano accompaniment of medium difficulty.

Popular Solos for Trombone or Baritone
WITH PIANO ACCOMPANIMENT. The solos range from an easy grade to a moderate degree of difficulty, well suited to either the amateur or professional performer.

Selected Duets for Cornet and piano
A careful selection of solos for the cornet in B♭ or A, with piano.

Twelve Flute Solos
WITH PIANO ACCOMPANIMENT. A well-chosen collection of numbers in medium grades.

Twenty-five Duets
For Two B♭ Cornets; Two Trombones or Baritones; B♭ Cornet and Baritone, or Trombone and Baritone. With piano accompaniment. Arranged by Harry Prendiville.

'CELLO AND PIANO

50 cents each, postpaid

Favorite Duets for 'Cello and Piano
Thirteen compositions arranged by Gaston Borch, a well known composer and conductor. Every number is attractive for use in concerts and recitals or as a study piece for advanced pupils.

A booklet giving tables of contents of all the volumes will be sent free on request

ECOLE NIEDERMEYER

A MUSIC SCHOOL WHICH MAKES MUSICIANS

By ARTHUR de GUICHARD

A T a well-known Art Club there was, recently, a highly representative gathering of musicians, artists, composers, and teachers, together with a fair sprinkling of amateurs—a designation that is often employed to indicate one who is inferior to a professional musician, but which, in point of fact, more frequently serves to distinguish an enthusiastic lover of the art whose musical endowments id education are of a superior order.

The conversation had turned to the never-failing ipic of the advisableness of European education r our musicians, in the course of which were viewed different musical centers and their schools, ch as Berlin, Leipzig, Milan, Paris, Vienna, and hers. When Paris was named the only institution ntioned or referred to by any of the company as the Paris Conservatory (le Conservatoire Na-nal de Musique), to the complete exclusion or sregard of any other educational establishment.

Just as the subject seemed to be exhausted, the esent writer said, very quietly:

"What about the Ecole Niedermeyer?" Had a mb fallen in their midst they could not have own more surprise.

"The *what!*"

"The Ecole Niedermeyer"; then, realizing that a wer pronunciation would be advisable: "The Ay-e Nee-ay-dare-may-yare," scanning the syllables.

"What is that?" asked several.

"A school for the training and production of rough musicians and teachers. The Paris Con-vatory, a very admirable institution in its way, fects its endeavors chiefly to the training and duction of artist-virtuosos, singers, pianists, in-umentalists, etc. Every singing student who en-s the Conservatory goes there with the idea of he day becoming a star at the Grand Opera or the éra Comique; in the same way instrumentalists go re to strain every nerve to win a first prize (un mier Prix), which will usually assure them a cessful career as an instrumental virtuoso. While ny excellent artists are trained and produced by Ecole Niedermeyer, its unique object and goal is thorough training which will result in the pro-tion of a fully equipped, *complete*, and therefore petent musician."

"Will you tell us all about it? Where is it? How s it function? Has it brought out any noted icians? Why have we not heard of it? Are ericans admitted there?" A whole chorus of questions that could be answered only by giving a detailed description of the institution and its work.

LOUIS NIEDERMEYER

The school takes its name from its founder, Louis Niedermeyer, who was born in 1802, at Nyon, on the banks of Lake Leman. He became a piano pupil of Moscheles, and studied composition with Förster, Fioravanti, and Zingarelli. He began his career at Geneva, at the age of nineteen, and soon became widely known by a number of song compositions. When he was twenty-one he left for Paris, where he passed the remainder of his life, save for a period of two years spent in Brussels as a piano teacher at the Gaggia Institute, about the year 1830.

In Paris he tried his hand at operatic composition, and three of his operas were produced at the chief Opera House, but failed to meet with any success. He then turned his attention to the pedagogic side of his activities, and soon came to the conclusion that the great need of the period—even as it is today—was in less superficiality and greater thoroughness of musical knowledge and, consequently, in the teaching of music.

Alexandre Etienne Choron, a musician, who, according to Fétis, was the most learned theorist that France had ever had, became the founder, in 1817, of the "Royal Institute," or "Conservatory of classical and religious music." This school was highly successful until the revolution of 1838 brought about its downfall, followed shortly after by the death of Choron.

LOUIS NIEDERMEYER

A VIEW OF THE NIEDERMEYER SCHOOL

FOUNDATION OF THE ECOLE

In 1853, after the failure of his opera *La Fronde*, Niedermeyer resuscitated Choron's defunct school, obtained for it a subvention from the state, gave it his own name, and directed all his great pedagogical abilities towards the study and practice of classical and religious music. The success of the institution was immediate and lasting; and today the name of the Ecole Niedermeyer is a sure voucher for the thoroughness of its graduates' musicianship.

The death of the founder, Niedermeyer, only eight years later, in 1861, did not interrupt the success of his school, for, after passing under the direction of his son until his death, in 1865, Niedermeyer's son-in-law, Gustave Lefèvre, became the Director. For a period of forty-five years M. Lefèvre carried on the work of his father-in-law, with the same enthusiasm, the same zeal, the same musical ability, and with the same meed of success.

In 1907, some three years before his death, Gustave Lefèvre, then seventy years of age, gave up the reins of direction to his son-in-law, M. Henri Heurtel, the present Director. As the School has passed each time into the hands of sons-in-law, it may be said that M. Heurtel is the *grand*son-in-law of Niedermeyer.

THE FIRST SUMMER SCHOOL

For a period of almost twenty years the School had its quarters in the center of Paris; at first in the rue Fontaine-Saint-Georges, and then in the Passage de l'Elysée des Beaux-Arts. But the war of 1870 came to break up the peaceful establishment; half the students had to don their uniforms and, weapons in hand, go to fight for their country. The other half accompanied M. Gustave Lefèvre to his estate at Champ-d'Asile, near Lausanne, where, with the assistance of M. Gabriel Fauré, the Director continued to educate the young musicians. This may be considered as the first Summer School recorded.

At the end of the war, the School returned to its quarters in Paris, in Montmartre, at the foot of the hill. Its name was still the Ecole Niedermeyer, but it now bore for sub-title: School of Religious and Classical Music. It remained here for twenty-

HENRI HEURTEL

five years; but M. Gustave Lefèvre had never been able to forget the immense amount of good that the calm and peace of the country had exercised upon the minds and health of his pupils, and, while he recognized the fact that it was an absolutely indispensable part of their education for the students to be near an artistic center like Paris, with its concerts and operas, he made every effort to discover the ideal *rus in urbe*.

THE BEAUTIFUL BOIS DE BOULOGNE

Here again the School was favored by fortune, for M. Lefèvre was able to obtain an immense estate by the side of and practically in the Bois de Boulogne, which itself belongs to the City of Paris. Here, in the midst of trees and flowers, he had the buildings erected for their special purposes: Halls for study and for concerts, library, dormitories, refectory, everything conducive to the hygiene, comfort, physical and intellectual growth of the inhabitants. On one side is Paris, the center of which is only a three cent fare from the School; on the other side is the River Seine, Saint Cloud, and innumerable beauty spots of nature; while across the road is the incomparable Bois de Boulogne, with its health-giving walks and picturesque sites.

The chief object of the Ecole Niedermeyer (which has a name for sub-title that is full of descriptive meaning: "Superior Normal School of Music") is the training and forming of teachers, composers, organists, and pianists, who add to the thorough knowledge of their art all those qualities that a good literary and moral education alone can supply. Its chief ambition is to give to its pupils solid instruction in every branch of their art and to perfect them in their "classical" musical studies, so that, according to their aptitudes, they may become composers, organists, pianists and experienced teachers.

Nor is the voice forgotten. M. Bourrillon, the French light tenor, during the opening season of the Boston Opera House, was a pupil of this School.

The School also prepares candidates for the entrance examinations for the instrumental classes at the Conservatory. As a species of poetic justice, the School also receives as boarders those Conservatory pupils who wish to gain a musical education in addition to the Conservatory specialty.

THE CURRICULUM

The *musical* curriculum comprises: Solfeggio (sight-reading), singing, concerted music, plainsong, both written and accompanied, piano, organ, harmony, counterpoint, fugue, musical composition, practical harmony, accompanying from score, improvisation, and the history of music. There are special classes for the violin and for examinations to obtain the certificate of aptitude as a teacher of singing in colleges, high schools, and municipal schools.

GROUP OF PUPILS OF NIEDERMEYER SCHOOL

The *general* curriculum, taught by professors from the University of Paris, comprises the French language and literature, history and geography, elementary science, and Latin. Foreigners can have private lessons in French.

A glance at this curriculum shows that we have here the beau-ideal of what an institution for the education of musicians should be—whether it be called school, college, institute, conservatory, or what not; the more high-sounding the title, the more thorough the education should be. It is an idea long since exploded, that a musician requires to know only music. The better his general education and the more vast his field of knowledge, the greater a musician he will become. At the Ecole Niedermeyer the pupils' general education receives the same attention as their musical instruction. Witness Gabriel Fauré, who entered the school at the age of ten, with the ordinary grammar-school learning of a boy of his age, and remained there until he was twenty, having obtained all his education there.

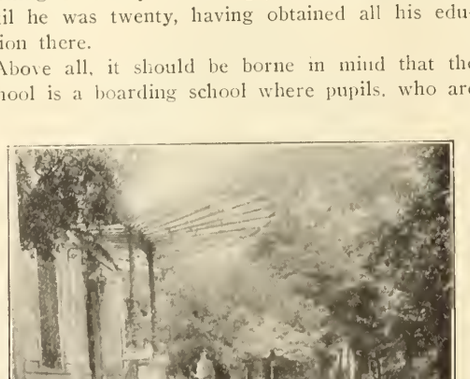
Above all, it should be borne in mind that the School is a boarding school where pupils, who are naturally gifted, see their faculties develop mu more rapidly than anywhere else, because they living constantly in unique musical surroundings

Ever since the foundation of the School, directors and teachers have always endeavored find positions for pupils when they have comple their studies. Nearly *all the students* have b placed as organists, pianists, singers, and teach in conservatories, high schools, and municipalit Thus every pupil is sure, when he has comple his studies, of obtaining a position that it would impossible to find elsewhere at his age.

There are special classes for girls.

There can be no better endorsement of the Ec Niedermeyer and its methods than to point to fact that the Conservatory of Paris, so justly universally renowned, has for its Director one the most celebrated of the Niedermeyer pupils, Gabriel Fauré.

The Ecole Niedermeyer is a boarding sch where foreigners are received and admitted to the same rights and privileges as enjoyed by th French fellow students.



NIEDERMEYER SCHOOL ENTRANCE

COST OF INSTRUCTION AND LIVING

One of the questions asked just now was: "H much does it cost?" Now, it is well known tha costs nothing at the Conservatory, save for music. But there a student is obliged to have course to private coaching, which is somewhat c ly; it is not a boarding establishment, theref rooms and board have to be provided for, with inevitable consequence that there is no musical outside the hours of classes, and with the "evitat temptations of wasting time unworthily. The *gr* education may thus prove costly.

At the Ecole Niedermeyer it costs $274 for entire scholastic year of ten months. For amount the pupil has board, lodging, instruction the full curriculum, bedding, and the doctor's c The only extras are paper, books, music, and pi hire, and extra special classes for violin and pedagogy. Thus it need not cost more than $ for a year's study, including the steamer tic there and back (second cabin).

The school year is from October 1 to gust 1 following, thus allowing a vacation of

months during August and September. Arrangements could be made for those who might wish to remain there during these months, but, of course, there would be no class work.

Non-resident or day pupils pay twelve dollars a month for the full curriculum. It would be an excellent plan, for those students and teachers who can spare only two or three months for a study vacation, to enter the School as non-resident pupils for the time at their disposal. They would be benefited far more than by running from one private studio to another—just for the vainglory of saying; "I studied with the great *Mangetoutvert*," but omitting to explain that only six lessons were taken in all: one from the great man and five from his assistant. It is probable that non-residents can enter at any time, according to their grade of attainments.

ILLUSTRIOUS TEACHERS AND ALUMNI

It would be manifestly unjust to the Ecole Niedermeyer to terminate without mentioning some of the celebrated teachers and equally celebrated pupils of the School. For no greater eulogium can be pronounced in its favor than to enumerate the galaxy it has produced.

Director: M. A. Périlhou.

Administrator: M. Henri Heurtel.

Curriculum Committee: M. Camille Saint-Saëns, president; M. Gabriel Fauré, Director of the Paris Conservatory, and M. André Messager, ex-Director of the Opera, vice-presidents.

Committee Members: M. Henri Busser, 1st Grand Prix de Rome, and the teachers of the School.

Teachers: *Supervisor,* André Messager; *Composition, Counterpoint and Fugue,* A. Gédalge; *Harmony,* Alfred Marichelle; *Solfège and Concerted Singing,* J. Froment; *Singing,* H. Expert; *Plainsong,* M. Caffot; *Organ,* Eugène Gigout; *Piano,* Messrs. Ch. de Bériot, Froment, Massuelle; *Violin and Accompaniment,* Paul Viardot; *Gregorian and Neumatic Music* (or musical notation by means of neumes), G. Houdard; *History of Music,* F. de Ménil.

Among the many illustrious pupils who owe their musical training to the fostering care of the Ecole Niedermeyer may be mentioned the following: Gabriel Fauré, Member of the Institute and Director of the National Conservatory; André Messager, ex-Director of the Opera; Messrs. Lutz, Letorey, Busser, and Le Boucher, all Grand Prix de Rome; Messrs. Audran, Victor Roger, Vasseur, Missa, Claude Terrasse, composers of light operas; Messrs. Boellmann, Périlhou, Gigout, Sprock, Bellenot, Planchet, Deck, Mercier, Jacob, Alexandre Georges, composers of symphonies; Henry Expert, librarian of the National Conservatory; Gaston Lemaire, composer.

MORAL, SOUND AND SAFE

It is impossible for me to recommend the Ecole Niedermeyer too highly to those who wish to go to Europe to finish their musical education in the very best possible manner, with the finest teachers, amid sound, safe, moral, healthy, and sympathetic surroundings. Here they can live in music and by music every moment of their wakeful day, with the example always before them of the golden roll of successful artists, teachers, and composers who were their predecessors in the entrance hall that leads to thorough musical knowledge and, perhaps, to fame and great reward.

[For several of the foregoing facts the writer is indebted to the courtesy of M. Henri Heurtel of the Ecole Niedermeyer, and to M. A. Mangeot of the *Monde Musical.*]

Pronunciation of proper names in the above article: Louis Niedermeyer, *Loo-i* (*i* in *it*) *Nee-ay-dare-may-yare* (*a* in *share*); Meyerbeer, *May-yare-bare;* Moscheles, *Mo'shel-es;* Förster, *Fer-ster;* Fioravanti, *Fee-o-rah-vahn-tee;* Zingarelli, *Tsingah-rel-lee;* Lyon, *Nee-on* (*o* rounder than in *or,* *n* nasal); Gaggia, *Gad-jah;* Premier Prix, *Prer-meay Pree;* Choron, *Show-ron* (*on* as before); Fétis, *Fay-tiss;* Lefèvre, *Ler-fay-vrer* (the first and third *r* have no consonantal value); Heurtel, *Errr-tell;* Fontaine-Saint-Georges, *Fon-taine* (sound the letters *n*) *Sahn* (nasal *n*) *Zhorr-zh;* Elysée des Beaux-Arts, *Ay-lee-zay day Boze-arr;* Champ d'Asile, *Shon* (short *o* like *not,* nasal *n*)*-dazeel;* Gabriel Fauré, *Gah-bree-el For-ray;* Bois de Boulogne, *Bwah der Boo-loin-yer* (letters *r* have no value, *n* liquid, like in *onion*); Seine, *Sane;* Saint-Cloud, *Sahn* (as before)*-Kloo;* Bourrillon, *Boo-rree-yon* (*on* as before); Périlhou, *Pay-ree-you;* Saint-Saëns, *Sahn* (as before)*-Sonce* (*o* as in *not,* *n* nasal); Messager, *Mess-sah-zhay;* Busser, *Bu-* (*u* as in *quip,* almost whistled)*-sayr* (*r* not trilled); Gédalge, *Zhay-dalzhe;* Marichelle, *Mah-ree-shell;* Froment, *Fro-mon* (*o* in *not,* nasal *n*); Expert, *Ex-pare* (trill *r*); Caffot, *Kah-foh;* Gigout, *Zhee-goo;* Bériot, *Bay-ree-oh;* Massuelle, *Mah-su* (*u* as before)*-ell;* Viardot, *Vee-ahrr-doh;* Houdard, *Oo-dahr;* Ménil, *May-nee;* Letorey, *Ler-* (*r* no value) *toh-ray;* Le Boucher, *Ler* (*r* no value)*-Boo-shay;* Audran, *Oh-dron* (*o* in *not,* *n* nasal); Roger, *Roh-zhay;* Boëllmann, *Boh-ell-mahn;* Bellenot, *Bell-en-oh;* Planchet, *Plon* (*o* in *not,* *n* nasal)*-shay;* Mercier, *Mare-see-ay;* Jacob, *Zhah-cob* (sound the *b*); Mangeot, *Mon-zhoh* (*o* in *not,* *n* nasal).

VICTOR TALKING MACHINE RECORDS FOR JUNE

Caruso, Enrico: *The palms,* by Faure. The great tenor's singing of this sterling song is thrilling in its beauty and power of tone.

Caruso, Hempel, Duchene, Rothier, and **De Segurola:** Quintet from *Un ballo in maschera,* by Verdi. One of the great ensemble numbers in the opera repertoire; sung by the cast which gave it at the latest production at the Metropolitan Opera House.

Destinn, Emmy: *Suicide only remains* (*Gioconda*), by Ponchielli. The favorite soprano delivers this great aria with splendid dramatic power and superb tone.

Gluck, Alma: *My old Kentucky home,* by Foster. A touching and appealing rendering of this fine American folk song.

McCormack, John: *Come where my love lies dreaming,* by Foster. Mr. McCormack sings this lovely old favorite with exquisite tone and style; the chorus is given by men's voices.

Bori, Lucrezia: *I hear you calling me,* by Marshall. A song by an English composer which has won great popularity on both sides of the Atlantic. Mme. Bori's rendering is one of unusual beauty and sweetness of tone.

Bori, Lucrezia, and **John McCormack:** *Parigi o cara (Far from gay Paris),* duet from *Traviata,* by Verdi. The two voices blend most beautifully in this duet, which is one of the gems of the opera.

McCormack, John, and **Fritz Kreisler:** *Angel's serenade,* by Braga. The violin obbligato by Mr. Kreisler adds to the beautiful tones of the tenor voice. The haunting melody which runs through the obbligato represents the song of the angels which a dying girl tries in vain to describe to her heart-broken mother.

Kreisler, Fritz: *Indian lament* (*Canzonetta Indienne*), by Dvorák. A number which Mr. Kreisler uses with much success in his concerts.

BOOK NOTES

Studies in musical education, history, and esthetics, 8th series. Papers and proceedings of the Music Teachers' National Association, 35th annual meeting, Cincinnati, Dec. 29, 1913-Jan. 1, 1914. Published by the Association, Editorial Office, Hartford, Conn. Price, $1.60.

It is impossible in the short space available to call attention to the contents of the book in full. There are 26 papers on various subjects, germane to the work of the Association, such as piano playing and teaching, musical conditions in the United States, scientific investigations, public school music, the voice, etc., by writers of experience and authority.

This publication is one of much value to the American musician, and is a record of progress in musical effort. No library is complete without it, containing, as it does, material not otherwise available.

A dictionary of musical terms. A handbook of definitions and descriptions. By Jeffrey Pulver. Funk & Wagnalls. Price, in cloth, 25 cents; in leather, 50 cents.

A handy little book, pocket size, 224 pages, explaining the meanings and uses of the various terms of importance used in music today. It is somewhat encyclopedic in character, giving definitions and brief histories of various subjects, such as the dance, etc. It makes a very useful work for the student.

NEW MUSIC BOOKS

Dodecameron. A lyric cycle of twelve days by Virginia Kline. Set for voice and piano by John H. Densmore. Boston Music Co. Price, $1.00, net.

A set of songs in which the composer shows much power in delineating and characterizing moods which are reflections of the weather, such as *A still day, A sullen day, A rosy day, A stormy day, The golden day,* etc. A singer who enjoys working out an interpretation will find this cycle presenting some problems that are interesting and well worth working out.

The Organist's Journal. A series of pieces for the organ, selected and arranged from the works of the classical and modern masters. Vol. 20, Parts 2, 3, 4. Wm. E. Ashmall & Co., Arlington, N. J. Published monthly, $3.00 per year; single numbers, 75 cents each.

Each part contains six numbers of useful music for the church organ, with careful directions for playing, the registration being for a three manual instrument, although readily adapted for a two manual organ. American composers receive considerable attention.

THE HARP AT THE WHITE HOUSE

Melville Clarke, of Syracuse, N. Y., harpist and inventor of the Clark Irish harp, assisted Miss Margaret Wilson in a recital at the White House, April 27. Mr. Clark played several numbers on the small harp, which instrument has attracted much attention wherever he has played it, and which, he predicts, will make for itself a favored place among musicians because of its essentially poetic and stirring effects. The tone is remarkably full and sonorous, considering the size, and enhances the charm of the human voice.

For his other numbers Mr. Clark played a superb Lyon & Healy harp made especially for him.

CONTEMPORARY MUSIC STUDY IN EUROPE AND AMERICA

BY EDWIN HUGHES

IN spite of the fact that we now have, in America, excellent teachers in all branches of music as well as a number of conservatories which can compare favorably with many of the music schools of Europe, there has seemingly been no decrease in the number of music students coming to the old-world music centers for inspiration and advancement.

Among them are the prepared and the unprepared, the latter being present, unfortunately, in large numbers, with the result that dreams of "study in Europe" being certain to make one an artist under any circumstances often end in shattered hopes and the return of the unfortunate to his native land just about as far removed from real artistic achievement as before the beginning of the pilgrimage.

The preparatory work of the serious music student who looks forward to a professional career can be done equally as well in America as in Europe, if not better. The fact that so much of the music teaching in America is real pioneer work has given rise to excellent methods for the medium grades and for children, methods which find *no* counterpart in Europe. The average German child imbibes his musical appreciation in a half-unconscious way, as music is such a natural part of nearly every German household, and it is only in cases of very pronounced talent that there is any thought of letting the child take up music as a career. There is, therefore, no general necessity of nursing musical appreciation to the extent that there is in America; and for this very reason much more attention is paid to the mediocre pupil in America, the pupil of just moderate talent, than in Germany.

HOME ENVIRONMENT A FACTOR

If we are to develop a national music life in America these moderate talents must be nurtured. Even if they do not grow into artists of distinction, they will be mothers and fathers, later, in households where music will have a place in the family life, and thus, gradually, a real appreciation for the art will permeate the life of the entire nation. There is any amount of really excellent musical talent in America which becomes completely smothered during the years of bringing-up in unmusical homes; and there is also a great amount among our professional musicians which would have developed to a fuller flower had the years of childhood been spent under more propitious musical circumstances.

An anecdote from Col. Roosevelt's last term as President has in it much real pathos for anyone who knows what budding musical talents often have to contend with among their own relatives. One of Roosevelt's friends, a real man of the people, and a supporter in a former political contest, was visiting the nation's capital and took advantage of the opportunity to call at the White House. During the course of the conversation Roosevelt took the opportunity to ask what had become of the younger brothers of his guest, among them a certain Jim. Very apologetically came the answer:

"Oh, Jim! Well, he took to music, you know. Jim always did have low tastes!"

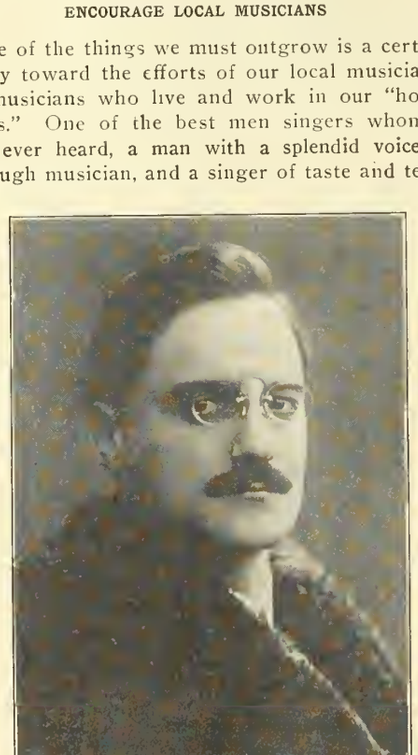
The position of music in American life at large is happily becoming more important and more respected, so that one can look at the whole situation with much optimism and with high hopes for the future. The progress of orchestral music in the larger cities, the activities of the many women's musical clubs, the frequency of outdoor music pageants, the growth in number of the permanent opera organizations and the fact that American composers have been admitted to the principal stronghold of opera in America, the Metropolitan Opera House, in New York; all these things indicate a growth of musical interest on a larger scale which cannot help arousing a feeling of pride in the breast of the American musician. At the same time it would be somewhat premature to imagine that we have fully "arrived" musically as yet.

ENCOURAGE LOCAL MUSICIANS

One of the things we must outgrow is a certain apathy toward the efforts of our local musicians, the musicians who live and work in our "home towns." One of the best men singers whom I have ever heard, a man with a splendid voice, a thorough musician, and a singer of taste and temperament, all of which would be quickly recognized in Europe, did he happen to live there, makes his abode in a college town of the Middle West. I was talking with one of the undergraduates of the college one day, a young man who had studied singing and who evinced some little appreciation for music, and during the course of the conversation I mentioned the fact that I was an ardent admirer of the singer in question, and accorded him a high place among the very best concert singers I had ever heard. The young gentleman was much surprised at my expressions of praise and said:

"I always thought that if he was any good he wouldn't be staying here in this town!"

The fact is that many American cities contain pianists, singers, and violinists who are entirely *too* good for the status of local musical appreciation, whose ardor for artistic growth and achievement becomes in time completely dampened because of the lack of popular interest in their public appearances, and who finally settle into a rut of teaching, their whole ambition for anything else completely gone. There is a crying need in American cities for more local patriotism in musical matters. After a musician goes away from his home city and makes name and fame for himself elsewhere his former townsmen are quick enough with their, "Oh! yes, he is from our town."



EDWIN HUGHES

Let them be a little more anxious to discover if they have not a real talent or two dwelling among them, and let them be thankful if they have within their numbers a singer, a pianist, a violinist who has the ability to give a really artistic recital. Local encouragement will bring out every effort on the part of local musicians to mount still higher in their art, and will mean a healthy increase of general musical appreciation.

APPRECIATION OF THE ARTIST IN EUROPE

In Europe one finds just this appreciation of local musical achievement which is so lacking in America, without its interfering at all with the appreciation of performances by artists from elsewhere. In Germany there is a deep-seated respect for art in all its forms, and particularly for the art of music among even the lower classes, among persons who have themselves no real intelligent appreciation for art. The butcher, the baker, and the candlestick maker, although they may not be able to listen to a Brahms symphony with complete understanding, have still a deep-rooted respect for such forms of art endeavor, a respect that is not to be found among similar classes in America.

In German Europe the artist is somebody in the community. His local activities occupy some part of the attention of mayors and town councils. Whether or not, for example, a symphony orchestra is able to keep its head above water and to cater properly to the tastes of the music-loving public is a matter of serious consideration at the city hall as well as for those personally interested in the organization. Some of our American municipalities are now making very laudable beginnings along these lines, just as they are also making experiments with the city manager plan of municipal government, something which has been in practical working order in German cities time out of mind.

There is, then, no doubt whatsoever of the existence of a superior "atmosphere," as a whole, for the study of music in Europe, trite as it may seem to even mention such a much abused word. This is not caused by the proximity into which the student may come with those long-haired, dreamy-eyed individuals who inhabit the art quarters of European capitals. One may find himself completely within a music-loving circle without having made the acquaintance of any of these self-appointed acolytes of art. The cause lies, in fact, in the general and widespread respect for art of which I have spoken, also in the fact that the very traditions of the art of tone are rooted deep in the music centers of Europe, and without tradition atmosphere cannot exist.

STUDY CONDITIONS BEFORE GOING TO EUROPE

The number of American students who come to Europe without any sort of a definite idea about where they are going to study and with whom they are going to study is really surprising. These students seem, many of them, to imagine that Europe is just full of excellent teachers in all branches of the art, and that they simply have to drop in almost anywhere in order to get exactly the training they need. Let me say that there are good and bad music teachers in Europe just as in America, and let me advise the prospective musical pilgrim first to obtain all the information possible from musicians of standing in America about study in Europe, and then to enter into personal correspondence with the teacher or teachers in Europe with whom he may contemplate working.

Often pianists in America are carried away by the playing of some particular virtuoso on tour in the States, and then rush over to Europe at the very first opportunity, only to find that their idol is of

most of the time on concert trips, that anything like regular study with him is quite out of the question, and, perhaps, that after all his abilities as a pedagog will stand no sort of comparison with his successes on the concert platform. I know several world-famous virtuosi in Europe who accept no pupils under any circumstances, one who teaches only in the spring, and a number of others who neglect their pupils sometimes for months at a time on account of concert tours. Music study under such conditions cannot but be most unsatisfactory to the American student who is in Europe for a limited time on limited means.

Conservatory study in German Europe is much the same as in our good conservatories of America. The value of any conservatory for music students looking forward to a public or professional career depends, of course, entirely on the personnel of the faculty, and not on the title of the institution. The fact that a musician has studied at, or even obtained a diploma, from such and such a "Royal Conservatory" or "Academie" of music is of little use today in the big world of music. Many European conservatories have the disadvantage that they keep their faculty members in harness until their pedagogical ideas have grown musty with age, and until the teachers themselves have settled into an ambitionless routine of lesson giving. For the solo instruments there is for each year a set course of études and pieces to be gone through which are totally beyond the digestive powers of the average pupil. The harmony and ear-training classes are usually of such unwieldy size as to make satisfactory work with all of the members an impossibility. The student orchestras are usually quite good, sometimes excellent, as well as the conservatory choruses. As a whole, it may be said that the ambitious and talented American student will accomplish much more in the same length of time with private teachers than within the walls of a European conservatory.

MUSICAL OPPORTUNITIES IN EUROPE

The opportunities for hearing an abundance of music at prices within reach of the most modest pocketbook are incomparably greater in Europe than in America. So great is the number of concerts given in the larger musical centers (in Berlin last season there were over 1,200, in Munich 435, in Vienna about 450) that it is quite impossible to fill most of them with paying audiences. There are free tickets in any number to be dispensed with for the concerts of new artists seeking to make a following for themselves. Many American students, coming from localities where concerts are not appreciated, are quite unable to enjoy the feast set before them in anything like moderation, and all too frequently injure their work and their health in Europe by too much concert and opera going.

For students who come to Europe during the summer, Munich is the only city where serious musical performances may be heard during the entire warm season. There are orchestral concerts all through the summer, and, with the exception of the month of July, opera performances as well, including the well-known Wagner and Mozart festivals.

With the exception of the Vienna Philharmonic Orchestra, there is no orchestra in Europe which can compare with the Boston Symphony, and many of the orchestras, even in the larger music centers, fall far short of our other good American orchestras—although "American" is in a sense a misnomer in this particular case, as nearly all of the players in symphony orchestras in America are of foreign birth, and the day is yet to come when rehearsals shall be conducted in English. The incomparably higher salaries paid to orchestra players in America attract many of the best German and Austrian orchestra musicians away from the *Vaterland*, which depends almost entirely on its own sons for talent in this line, the American custom of importing superior players from various countries being practically unknown in Europe.

DEVELOP AMERICAN PLAYERS

In the matter of orchestra players of ability there is a large opportunity for growth in America. American bands are made up to a large extent of born American players, and there is talent enough among the various "locals" of the Musicians' Union to give hope that some day the majority of the players who sit behind the desks of our excellent symphony orchestras may be native Americans instead of imported musicians. I know of the case of an orchestral director in one of the largest of the American cities searching in vain among the members of the local "Union" for an extra violinist of sufficient ability to sit among the first violins of his orchestra. What is the reason for this?

Are our American musical institutions even now incapable of sufficiently educating the talent which comes into their hands up to the degree of orchestral efficiency? Talent for reproductive musical art there is in abundance in America, talent that can be favorably compared with that of other countries, as is proven by the numbers of successful American singers now engaged at the leading European opera houses. Following the lead of the singers, a number of American violinists and pianists have, during the past few years, made a successful entrance into European concert life. Theodor Leschetizky, whose class during the many decades of his pedagogical activity has probably been of a more international character than that of any other piano master, does not hesitate to affirm that there is more purely pianistic talent among the Americans today than among the Germans.

That German musical talent does not incline overmuch to virtuosity is well indicated by the fact that with a single exception there is not one real German pianist today whom one can place among the first half dozen master pianists of the day. The exception, in the person of Emil Sauer, of Hamburg (of all places!), is, of course, an important one, for when all is said and done, Sauer must be given one of the very first places among present-day pianists, if not the first place. Pianistic talent of the first water comes from further east than Germany; from Russia, first and foremost, from Poland, Austria, and from the smaller Slavic states.

AMERICAN CONDUCTORS

With the day of the American symphony orchestra musician must come also that of the native American conductor. The necessary routine in this line can at present be secured only in Europe, for there are no practice orchestras to be secured for anything like reasonable terms in America, and, of course, the provincial opera house with all its advantages for the education of the rising young conductor exists at present only on the continent of Europe. The number of symphony orchestras which exist today in so many American cities makes it quite plausible that before many decades have passed by there will be a symphony organization or at least a well-patronized series of concerts by visiting orchestras in every city of the land of more than one hundred thousand inhabitants.

The Middle West, particularly, can point with pride to the number of permanent orchestras it supports in its larger cities, where hard-headed business men are beginning to see that the fact that their city possesses a symphony organization is an asset in an industrial as well as in an artistic way, adding greatly to the prestige of the municipality, particularly if a series of out-of-town concerts are possible. The increase in the number of symphony orchestras is perhaps the most important feature in the growth of musical appreciation in America, for a permanent orchestra in any city, well supported financially and backed by an appreciative public, is an institution which appeals to the American sense of accomplishing things much more than the local residence of even a very eminent pianist, violinist, or singer. Americans have it in the blood to be fond of the "biggest" this, the "tallest" that, and the "greatest" the other, and so even the unmusical citizen cannot go away from a symphony concert without a lasting impression of the volume of sound, the variety of tone color, in short, of the *size* of the effects possible in the modern orchestra.

Now why should our orchestra conductors in America be almost without exception imported musicians? There is surely talent for conducting among young American musicians, just as there is abundance of talent for piano playing, for violin playing, and for singing. Thousands of Americans visit Europe yearly for the purpose of perfecting themselves in the three last named branches of music, leaving behind them hundreds of thousands of dollars when they finally return to America.

POOR MUSIC HEARD IN EUROPE

Many American students coming to Europe will be taken aback slightly at the amount of bad music that is to be heard in European concert halls, in addition to that which is merely indifferent and that which is really excellent. Being used to hearing at home the very cream of Europe's reproductive musicians, their taste is often spoiled for anything but the best, and it is good that it should be so. Of the five hundred or so concerts each season in a large European music center, it is, of course, quite out of the question that all should be given by eminent artists. The wise student will choose very carefully the dates upon which he is to spend his evening in the concert hall, saving his strength and patience for his own work, and if, perchance, he happen into a concert where a violinist who ought to be sitting among the second fiddles of the local orchestra, or a pianist who is perhaps a conscientious second grade teacher is attempting a program altogether beyond his best abilities, he may console himself with the thought that he is at least learning what *not* to do.

ATTITUDE TOWARD AMERICAN ARTISTS IN GERMANY

American musicians seeking to enter European concert life will find German and Austrian audiences, as a rule, very friendly, unprejudiced, quick to recognize ability, and cordial in their appreciation of it. There is, of course, still a lingering suspicion, deep-set within many a German breast, that nothing of worth from an art standpoint can originate in America, or "Dollarica," as a German "funny paper" would have it. The successes of American artists on the operatic stage within the last decade have done a great deal, of course, to bring about a more lenient attitude of mind among those who are familiar with the situation; but among the more hide-bound type of German musician and music critics, the type which we are used to characterize in America by the expressive word "Dutch," there is still quite a bit of prejudice toward the artist from the land of *Unkultur*.

As a whole, it may be said that the American concert-giver in German Europe may look forward to a reception commensurable with his abilities from public and press, from the representatives of the latter especially when they do not happen to guess his nationality. European press notices are, at the present time, a most necessary adjunct to the artist, from either an American or a European standpoint. Perhaps the time may come when American music lovers at large will attach the same weight to opinions of American newspaper critics in the larger cities, for the critics of the New York and Boston

(Continued on page 376)

THE INFLUENCE OF DIFFERENT SCHOOLS AND COMPOSERS UPON EACH OTHER

BY LEONORA SILL ASHTON

THE other day I played the popular little G major *Minuet* of Beethoven's; and a listener of fine taste, but lacking in strictly technical training, said:

"The first and last of that I like so much; the middle part I do not care for; it seems out of place."

Of course, such a one as this would be more ready to criticise and pass opinion upon Beethoven than the careful student of his pages. But as I thought over the matter, later in the day, it came to me that she had instinctively picked out the essentially Beethoven idea, which showed his own particular thought and genius; and had rebelled, however slightly, against the less original section of the little piece, which, unmistakably, shows the influence of Haydn and Mozart.

And the thought came to me: Why should not children be trained, systematically, to study the form and structure of their music more thoroughly than some of them do, and thus gain a comprehensive knowledge of the different schools of musical thought and of their influence upon one another?

This seems a stupendous fact to face, when it first confronts us, coupled, as it has to be, with the other, ever-multiplying subjects of the music lesson. But it is really simpler and easier than one believes.

Beginning with a few authoritative composers, and keeping strictly in their straight and narrow path, let us see what habits of correct musical understanding can be formed:

As the pupils with whom you have to deal are probably piano pupils, begin with Haydn, who is looked upon as the "Father" of instrumental music of the present day, rather than with Bach, who is the "Father" of all music.

Taking the simplest of the former's piano sonatas, point out to the scholar's sight and hearing the simple, almost monotonous, bass, as the accompaniment in the left hand, and the equally simple, but pure and melodious, song for the right hand.

This is the foundation of all piano music, the song, played by the right hand on the upper part of the piano, and the accompaniment, played by the left hand on the lower part.

Have your pupil play a movement from one of these sonatas, and then yourself play for him one which he has not heard before.

It would be well to devote two or three lessons to the study and close observation of several of Haydn's most characteristic compositions for the piano, until his form and style are firmly embedded in the pupil's memory.

Then take up the next great musical mind in order, Mozart.

The first step in this new development will be to have the students, without your help, pick out the parts which resemble most closely the form used by Haydn (remember your are using the simplest of compositions throughout), and then see if they can tell you, themselves, of the wider, fuller expression which Mozart brings forth in the evolution of musical speech.

Lead them on slowly, seeing if they can hear the embellishment of both sound and thought; the development of the melodies and harmonies; and the breaking away at times from the monotonous bass.

The laughter-loving pupil will relish Haydn. When he plays Mozart, try to have him realize that the laughter is still there, fashioned in the same way, but more mellow and varied, and filled with a deeper and more poetic meaning.

When the forms and methods of these two masters are clearly understood, so that an intelligent pupil can recognize a strange strain from each without reading the page, turn to Beethoven.

With the two volumes of his piano sonatas before you, you will have food for reflection for weeks to come.

By simply turning the pages, the pupils can see how he clung to the old, tried forms, the simple bass and the sweet, singing melodies, moving over the piano one single note at a time.

But there comes a page when the old forms seem to be forgotten; where the melody is accompanied by great chords in the right hand; where the left hand leaves its place in the middle, or below the middle of the piano, and reaches up into the melody, and becomes part of it itself.

And all of this is to express upon the piano what had never been expressed upon it before, because no one had before this found a way. It is not that the old forms were forgotten; they were only enlarged upon.

Just as Mozart rounded out the melodies and harmonies of Haydn, so did Beethoven treat the work of both his predecessors.

There are such vivid and striking examples of this development of form in Beethoven's sonatas that you will find no difficulty in pointing them out.

After a careful study of these three masters, you will find that a very clear understanding of the value of the two great parts of harmony—the bass and the treble—and of their dependence upon each other has been gained.

Schumann and Schubert will probably be the names which will come most quickly to our minds in beginning a study of the more modern writers.

In the works of the former, *Farewell to the forest* shows the old, pure, classic form; but in *The prophet bird* try to have your pupils see how far in new pastures Schumann's thought has carried him.

Schubert will be an interesting subject, because, especially in the light piano pieces, the influence of Beethoven is clearly seen.

The next name following should be Chopin; in him one may find a peculiar and interesting little musical ancestry.

One of Mozart's contemporaries was Clementi, whose great, pedagogic works trained the mind and fingers for the old classics, as they do now for old and new.

His compositions are marked with great lucidity and elegance of style; and this he bequeathed to his pupil, John Field, whose exquisitely finished and poetic nocturnes set a standard for Chopin, who unfolded and enlarged this new form of composition, just as Mozart developed the forms of Haydn.

This fact is easily understood by merely glancing at the pages of two nocturnes side by side, one by Field and one by Chopin. But avoid always depending too much upon the eye. Let it be the *ear* which decides the matters of difference for the student.

Of the myriad other names in musical history there is neither time nor space to write. But the above is a very simple outline of the beginning of a study of form and schools, which may be enlarged upon as much as is desired.

———*———

RANDOM REMARKS

BY T. L. RICKABY

IF scales and arpeggios are not played by themselves and for themselves until the fingering is so firmly established that playing them is merely an automatic process, then passage work in pieces (that is, scales and arpeggios) will not be well done, and the performance will be marred. If a pupil cannot play a scale or arpeggio well by itself, there is not much probability that it will go well in connection with other difficulties. The same is true of chromatic scales, repeated notes, octaves, and other technical features.

* * *

If you leave the music room after a lesson without carrying away with you something that will enable you to help yourself in case you cannot return, then the lesson was a failure. Such lessons are easily recognized and should not be continued long. Merely learning to play a piece is not all there is to music. Genuine music teaching of our day covers so wide a field that the music teacher of fifty years ago would be considerably at sea in the profession at the present time.

* * *

Have you heard of the seven tone scale? No? Well, it's time you did. During the past months you could have read in this and other music magazines various paragraphs about it and those who use it in modern composition. Several State Music Teachers' Associations have had papers on this (seemingly) strange scale, and the still stranger harmonies that grow out of it. Every music pupil (and every teacher, by the way) ought to know something of it.

* * *

Years ago (nearly fifty, to be more explicit) the present writer said to his teacher, "When I play that passage I see violets." The teacher looked so witheringly contemptuous that the boy very studiously avoided the subject ever after. A few days ago the writer listened to a lecture on "The relationship of tone and color." The speaker prefaced his lecture by relating that many years ago when a boy he said to his teacher, "When I play that I see purple." The teacher not only looked, but spoke, contemptuously and suggested a specialist! I thought it quite a coincidence.

The lecturer was more courageous than I, for I dropped the matter so far as speaking of it was concerned, but he went on with it, and reduced it to a system, showing the analogy between the seven tones of the scale and the primary colors, and also between colors and the overtones or natural harmonics, all in a most interesting if not convincing way. Now comes the eminent English composer Bantock, who during the performance of an orchestral work throws on colored lights to heighten the effect of the sounds! Think over this! Read about it! There may be wonderful developments along this line in years to come, so prepare for them.

* * *

The writer of these notes has in his possession programs of a State Music Teachers' Association for many years back. Here are the names of the composers whose works were performed ten years ago: Brahms, Schumann, Handel, Gounod, Mendelssohn, Chopin, Massenet, Grieg, Liszt, Guilmant Kroeger, Foote, Saint-Saëns, Raff, Schubert, Wolf Wagner, and Rubinstein.

The names of the composers represented at the last meeting are as follows: Bach, Mahler, Rachmaninoff, Widor, Oldberg, Debussy, Albinez, Fauré Cyril Scott, D'Albert, Arensky, Tchaïkovski, Charpentier, Strauss, Sibelius, Dvorák, Liadov, Bartok and Grovléz. "The world does not so much need to be informed as to be reminded." So do not forget that the world of music is moving. It is not enough to be in the procession. Be in the van Look up these composers. If not able to play o sing their compositions (but few can), you can a least know who they are and the place they occupy in the musical work of the day.

SANG WITH FEELING

"You sang that last song with great feeling."

"No wonder. There was a pin sticking in me and I had to sing as if I felt it."—Horace Zimmerman.

SCHUMANN'S OPUS 2: PAPILLONS

BY JOHN BARNES

ROBERT SCHUMANN'S music contains much that is especially autobiographic in that intimate sense which is the distinguishing mark of the term romanticist; from his Op. 1 and 2, with their reminiscences of the University days in Heidelberg, when his resolutions wavered between jurisprudence and the life of the tone-poet for which he was predestined; resonant with promise of the rich harvest so fully gathered in the many works to follow, covering in all, a period of twenty-three years, down to that final theme written in the tragic confines of his asylum in Bonn on the Rhine.

This last inspiration, given him, as he fancied, by the spirit of his prototype, Franz Schubert, Brahms, in masterly manner, has developed with the fine set of variations for piano, four hands, Op. 23, and dedicated to Julie Schumann, a daughter of the poet.

Schumann found early recognition of this, his second, work, and from no less a man than Grillparzer, Austria's greatest dramatist, one of the mourner's at Beethoven's grave; he who wrote the fine memorial read there by Vienna's leading actor of that day. In the *Musikalische Zeitung,* No. 26, of the year 1832, is the following:

"It is always a satisfaction to stand on one's own feet, to need neither crutches nor the shoulders of others to lean upon. This probably still young tone-poet, whom we here meet for the first time, belongs to the rare phenomena of the times; he is dependent on no school, creates from his own resources, does not adorn himself with the ideas of others gathered with the sweat of his brow; has created for himself a new ideal world, in which he revels almost wantonly at times, even with original oddity; and, therefore, on this account, because the peculiarities of the Phoenix dwell within him, he is not unworthy an accolade. Certainly some, especially those, for example, to whom Jean Paul's deep-felt pictures of life are Bohemian villages, or who abhor Beethoven's genial lightning flashes as though an emetic were offered them, probably, I say, these gentlemen will be mightily provoked, turn up their noses at the keenness of this obscure neophyte, and create advantageous noise for themselves from the same; perhaps even consume several folios of paper and blunt a quarter hundred pens in the "here it is" and "here it should be"; nevertheless, that which has once been given to the public calls upon itself public criticism; only the conceited scorn advice, while he who strives for the heights accepts it thankfully, but remains true to his genius, which does not easily lead him astray on false paths.

"As to the matter itself, only a few words, for many would scarcely suffice. The work consists of six introductory bars and twelve partly shorter, some longer rhapsodic movements in changing keys, times, and rhythms, most of them jesting, fluttering, and coquette; a mirroring of the butterflies' nature. None of it is easy to play; the reproduction requires characteristic; the whole must, in order to attain the intended total effect, be carefully studied and practised. The publisher, from the name, at least, a new firm, has introduced itself here in a most agreeable manner."

That Grillparzer judged correctly the attitude the critics would take is shown by a quotation from a letter of Schumann's to his mother: "I am inclined to question whether we young artists, Chopins, Hillers, etc., have not rather more genius than they give us credit for, when the word genius is applied to things we have known and done for ages."

There is a deep meaning in that last clause. Schumann, in his famous last article, written with the enthusiasm which Brahms' first works awakened, speaks of "a secret union which, in every age, rules selected spirits." This is, of course, that innate appreciation and understanding of the older masters and their works. Bearing this in mind, it were well for a critic, when confronted by something new and strange to ascertain, if possible, the scholarship and appreciations of the writer; then when these are founded on an admiration of that which is great in the past, take for granted that he is building for the future. As we shall see, remembering that Schumann was not known to Grillparzer, the remarkable part of the above criticism is the reference to Jean Paul. With Franz Schubert, "Jean Paul, the unique," shared Schumann's devotion; and in one of his lessons he calls the *Flegel Jahre,* which Carlyle, whose style is largely influenced and formed by his studies and reading of Richter, translates, "Wild Oats," "My Bible, I always have it with me." From its last chapters the program for the *Papillons* is taken. In a letter to Rellstab, one of the leading literary men and critics of Berlin, Schumann writes: "I consider you a poet and kindred spirit with Jean Paul. You may remember the last scenes of the *Flegel Jahre* with the Larven dance, Walt, Vult, masks, Wina, Vult dances, the exchange of masks, confessions, anger, discoveries, the hurrying away, the concluding scene, and the departing brother. I often turned the last page, for the end seemed like a fresh beginning, and almost unconsciously, I found myself at the piano. Thus one *Papillon* after the other came into existence. I trust you may consider the origin an apology for the whole compositions, as the separate numbers often require explaining."

We are here given the titles to the twelve numbers, and in their proper order, too. It is strange that in these days of much editing use has never been made of them, for they are a valuable aid to a better understanding of the work.

Walt and Vult are twin brothers, both in love with a Polish lady, Wina. At a Shrove-Tuesday Carnival, the brothers, having exchanged masks, she accepts Vult, mistaking him for his brother Walt. In the two brothers Richter portrays the contradictions in his own nature, a conceit which Schumann uses in his criticisms, signing them, in turn, Florestan or Eusebius. He has also incorporated them in the *Davidsbündlertänze,* Op. 5, some of the numbers having the letters *F* or *E* affixed; while in the *Carnaval* the fifth number he names *Eusebius,* the following *Florestan.*

For those wishing an insight to Richter, there are two essays by Carlyle, the first a review of a biography written for the *Edinburgh Review,* in 1827; the other, the finest appreciation he has had in the English language, written in 1830 for the *Foreign Review,* which contains some masterly bits of translation, illustrative of Richter's style, with a quite comprehensive review of Richter's life. In it we learn that Richter used to go for inspiration in his writing to the piano and improvise, so that Schumann has only reversed the procedure.

A better introduction to Schumann's works for the student could not be made than with these same *Papillons,* which, while as replete with the true Schumann spirit and manner, are, excepting No. 11, much less difficult from the technical side than is the *Carnaval,* while the development is much simpler than in the well-known *Scenes from Childhood.* As Grillparzer says of them, they are difficult to play, though not in a technical sense, but the reproducing of the inner spirit, giving them as Schumann heard them.

With Wagner, Schumann had a predilection for easy temper; this, of course, does not shut out a *presto* in its place, for has he not, in one of his works, after demanding *"so schnell wie möglich"* (as fast as possible), called for *"noch schneller"* (still faster)? His *andante* should be a real *andante,* from *andare* (to go to walk), and his *allegro,* though "joyful," not always "strenuous."

There existed between himself and his wife, Clara Schumann, a veritable feud on the question; and in one of his letters he warns her to play certain numbers of the *Scenes from Childhood* as slow again as she would naturally do. As for many years he used a faulty metronome, one which was too slow, all of his tempi, as given on a correct instrument, will be too fast. The Nos. 1, 3, 4, 6, and 8 were written in Heidelberg; No. 8, originally in D minor, he played for his friends as one of Schubert's waltzes, and enjoyed their mystification; the remaining numbers he added, later, in Leipzig. Fantasy and humor, attributes always of a true poet, these we will find contrasted throughout in *Papillons,* with, now and then, as in the fine fifth number, *Wina,* a touch of the tragic and intense feeling.

Great accuracy and an exact reading of the text should be the first care; note values and making all the rests audible; close attention to all the marks of nuance, the contrasts of *piano* and *forte,* legato, staccato, and, especially, of all slurred notes. This, as always, will bring us on the right road to the author's intent without depriving us of whatever real artistic individuality we may be fortunate enough to possess.

The last page has an organ point in D, extending through twenty-six measures. As written, the D is struck but once at the opening; this makes it quite impossible of realization, for which I suggest a repetition of the D on the second beat in the eighth and sixteenth measures; this will bring it out clearly for the listener. The following three groups of four measures each, with a sustained D, then F♯, and final E in the soprano, should be grouped rhythmically by accents in the first and third measures, first beats, the others light or without accent. The opening arpeggio on the third beat to this long closing dominant seventh chord should be played clearly as a sextole; then relieve the lower tones one by one, with full measure value for each and carefully keeping the rhythm—three-one-two—to the end carefully.

—*—

WOULD BLOW OVER

A LADY with an unmusical voice insisted upon singing at a party.

"What does she call that?" inquired a guest.

"*The Tempest,* I think," answered another.

"Don't be alarmed," said an old sea captain present. "That's no tempest; it's only a squall and will soon be over."—Horace Zimmerman.

KINDER SYMPHONY ORCHESTRA, MACDONALD SCHOOL OF MUSIC, DETROIT

WAYS AND MEANS

BY HANNAH SMITH

TODAY'S first pupil is Harold. Harold is a very nice little boy—a *very* nice little boy. His hands are always beautifully clean (at least in the lesson hour), his fair hair is smoothly brushed, and his round, little face is a mirror of contentment and good nature. Harold always goes to the window when the organ grinder comes around (even when there is no monkey), and listens with placid pleasure when Cousin Fred plays the latest tango tune, and whistles college songs. In the Sunday school he sings all the hymns, with a clear, little voice quite true as to pitch (but is usually heard half a beat or so behind the others), and he likes to stand at the piano and touch the keys gently one by one. So his mother, noting these signs of a musical organization, has decided that he must have lessons. And quite rightly. For who can tell what careful development and training may do for the merest germ of talent in the mind of a child?

This is not Harold's first lesson, but he is still patiently and uncomplainingly—and, alas! also unsuccessfully—trying to lift his finger tips from the table without lifting also the rest of his hand. The telephone connection between Harold's brain and his finger tips is not well established. To differentiate between individual fingers and the whole of his chubby little fist is, as yet, for him, an unsolved problem.

So the teacher fashions from a bit of paper an absurd caricature of a tiny bird, lays it on the back of Harold's plump little hand, just below the middle knuckle, and says:

"Now, if you move the back of your hand, little birdie will fly away. See if you cannot lift up the tip of one finger without disturbing him in the least."

And Harold, who could not grasp the abstract idea of a finger moving independently of the rest of the hand, fixes his attention on the scrap of paper, and lo! the fat, little fingers make the right motions with ease; and Harold carries the birdling away with him, to show, by its aid, his mamma at home how much he has learned.

The next pupil is Martin, a clever lad of thirteen, with a fine, intellectual head—already definitely devoted to scientific studies. An only child of well-to-do parents, the latter think that he should have every opportunity for cultivation in all directions; and music, for which he has a moderate liking, is included in the course laid out for him.

He has mastered, without difficulty, everything in the art (so far as he has gone) that involves merely intellectual apprehension—notation, rhythm, keys, scales, chords, and the structure of such simple compositions as he has so far been able to attempt—but the acquirement of technical skill is seriously hindered by the stiffness and angularity which, not infrequently, accompany a high degree of intellectual development. It often seems no more possible for him than for Harold to make free and independent motions with the tips of his fingers, and not to tighten every muscle in the effort to use one.

"Look, Martin," says the teacher, "at the back of your hand. Notice the tendons that run from the wrist to each finger. When you use your fingers freely, the movement of these tendons is plainly visible under the skin; but when you tighten up the wrong muscles, these tendons seem to be almost fixed, and the fingers struggle in vain to make proper motions. Now, when you practise, watch these tendons, and if you do not see them move with absolute freedom, stop, loosen up your muscles, and try again."

And Martin begins immediately to watch the back of his hand, and, being intelligently interested in following the motions of the tendons, forgets to tighten up the arm muscles; so that the little running passage which before seemed almost impossible now goes with comparative ease and fluency. And he keeps on trying experiments to show the way the tendons work, until Alice comes to the door.

Alice is the prize worker of all the pupils; careful, intelligent, patient, persistent, conscientious, and methodical with genuine love for the best in every art but especally in music. Her talent is real, and it seems as if she were bound to excel.

But today the teacher sees the line in the forehead and the compression of the small mouth, and recognizes the signs of the extreme nervous tension that has so frequently, in large measure, neutralized the results of all the good work of preparation, and made the lesson hour a trial to both teacher and pupil.

So five minutes are spent in cheerful, pleasant talk of things not even remotely connected with lessons or music; and Alice almost forgets her grim determination this time to "do or die." Almost, but not quite. At the first pause in the talk she is again in the grip of the demon, and if the lesson is not to be a discouraging failure, something must be done.

"Alice," says the teacher, "put the music on the rack, and stand over here. Wait until I move the chairs out of the way. Now, stand lightly on your feet, and swing gently part way around and back again, letting your arms hang perfectly limp; now further—and further still—until your right hand flops loosely against your left arm, and your left hand against your right arm. Be sure that you are at a safe distance from the furniture, and then let yourself go."

And in another five minutes Alice, breathing deeply, with the blood coursing freely through all her veins and nervous force tingling to the ends of her fingers, seats herself at the piano and plays with a degree of relaxation that almost amounts to *abandon*. So well, indeed, that the teacher says "bravo," and Alice glows with pleasure at this revelation of what she really can do. The finger which never before took the skip without striking also the key on one side or the other of the right one, now lands securely in the middle of the ivory; the thumb, which would not pass under far enough in the difficult arpeggios, seems now to do it with ease; and the turn at the end of the trill, which was such a bugbear, runs fluently out from the tips of her fingers, seeming scarcely to be a difficulty at all.

"Alice," says the teacher, "you need to have more patience and sympathy with yourself. If you want your little brother to do something, you don't try to *force* him to do it; you coax him and help him. Now, do the same with yourself. To set your teeth and stiffen all your body with determination does not help you to play a piece. I do not say that will-power will not help you to *learn* it; but performance is a different matter. After you have so thoroughly mastered all the mechanical difficulties that your fingers are entirely competent to execute, then trust those fingers a little. In a dark night a good driver does not attempt to guide his horses if they already know the way. They can find it better than he can. So with well-drilled fingers; if you think of the music, singing it in your mind, they will find the places on the keyboard.

"But, besides, since you have by nature, for which you are not responsible, this tendency to an incapacitating nervous tension, do not treat it as a moral delinquency to be overcome by strength of will. Do not disdain to help yourself, as you have done today, by some simple physical exercise which puts your body into better condition to respond to the impulses of your mind. If things do not go as they ought in the practice hour, get up and swing your arms and body until your muscles are perfectly relaxed and your nervous force stimulated; and then see if they don't go better. If it is the lesson hour, it's a good way to spend the first four minutes. If it's a musicale—ah! there you must try to go upstairs or down for your swings—and, above all, keep out of the way of the furniture."

As many ways as there are pupils. Whatever means and devices can be invented by the teacher to aid toward the desired end. All are legitimate that secure the result. There are more roads than one up the Hill Difficulty, and the learner who is unable to surmount the steepness of the straight path must be helped to ascend by a curve, or a zigzag—even a spiral; like those Alpine tunnels which curve upon themselves, but always emerge on a higher level.

———*———

CONTEMPORARY MUSIC STUDY IN EUROPE AND AMERICA

(*Continued from page 373*)

dailies, for example, are certainly as capable of their duties as their European confrères, and their judgment is equally as valuable.

EXPENSES IN GERMANY

In concluding, a word about the expense of living and studying in Europe. The idea that a *mark* in Germany will go as far as a *dollar* in America is still a very widespread one, and as a result many American students come to Europe expecting to get everything for next to nothing. Now, it is very true that living expenses in the larger German cities are still much less than in American cities of equal size and importance, while the modern apartment houses in Germany have all the comforts to which Americans are accustomed: steam heat, tiled bathrooms, running hot water, elevators, and even vacuum cleaners! Many of the expenses are just half what they would be in America, while others are very little less, but withal the story of a *mark* doing the work of a *dollar* must be relegated to the realm of the fairy tale.

The student who is content to live modestly can get along in Germany on $60 a month, a little less if he wishes to pinch himself, and, of course, as much more as he wants to spend, if his pocketbook is an unlimited one. This amount does not include his music lessons, which must be added thereto, but it does include all other regular expenses, such as piano rent, a reasonable amount of concert and opera going in the less expensive seats, and so forth.

AMERICAN GIRL STUDENTS

In reply to the question whether it is safe to allow young students, particularly young women students, to pursue their studies alone in Europe, it may be confidently said that the music centers of German Europe present no dangers that would not be on hand in any of our large American cities. The real problem in such a case lies in the personal characteristics of the student. The girl music student who could not be trusted alone in New York, Chicago, or Boston, should also not be trusted alone in a foreign city. As for a girl student being in more danger in a Munich, Berlin, or Vienna pension than she would be alone in one of our big American centers, such an idea is entirely false.

Even the girl who arrives alone in a European center will not find herself alone and without friends very long, unless it is her own desire to be so. In nearly every large European city there is a woman's club or similar institution where the young American girl may find companionship among her fellow countrymen, friendly advice, and even financial assistance if she is in need of it. In Berlin there is the American Woman's Club, in Paris the American Girls' Club, and in Munich that unique and homelike institution, the American Library. In addition, there are American churches in all the large cities of Europe.

PREPARATION FOR PUBLIC PERFORMANCE

BY H. C. HAMILTON

THE majority of those who study piano are ambitious, sooner or later, to display their talents openly. Certainly this is commendable if ambition is combined with certain other necessary qualifications.

To be at one's best before a company is not possible to the majority, at first. Many of us know the unpleasant experience of being nervous, having perspiring or cold hands, temporary lapses of memory, etc. Thorough preparation, even in the minutest details, is necessary; for in public playing the building, with its individual acoustic properties, will often make a selection sound differently; the instrument may differ in the matter of action or tone, and the audience may be sympathetic or indifferent. All these things affect a player unless one is well prepared and has good self-control.

The importance of good technical preparation cannot be too strongly insisted upon. To be able merely to "get through" is far from sufficient. The player's technic should be such that even laboring under disadvantages such as an unsuitable building or a strange piano, the fingers will, to a certain extent, "go of themselves."

Getting a good start goes far towards inspiring confidence in a good finish, therefore the opening number should not make too many demands on the player. As number succeeds number the first feeling of nervousness gradually disappears, and with the increasing confidence difficult selections will generally go well further on in the program. This seems to be the plan followed by the best pianists today as an examination of most of their programs will show.

It will also be noted that the more strictly classical composers are represented at the beginning, and the semi-classical and romantic school during the latter part. For instance, a program may be opened by a Beethoven sonata, or an arrangement of a Bach fugue, and close with a Liszt rhapsody or transcription. Between these numbers we will find selections from Schumann, Schubert, Mendelssohn, Chopin, and possibly some composers of our own day. If the program is skilfully arranged, and the standard of performance high, the recital will be successful.

Several things, however, besides good technical ability, are needed when results of the highest order are desired. The young or inexperienced pianist should choose those things which suit his temperament. Too often we hear works rendered in a traditionally correct manner, but without individual expression. Sometimes it is the result of hearing some great pianist, for the follower of said pianist thinks that he or she can't achieve success better than by close imitation. It is not realized by many how the great players have worked to achieve such artistic finish in everything they play. The concentrated study of Paderewski would appall those who often affirm that they "would give anything to play like him."

Of course one of the best things a pianist can do is to hear those better than himself; but merely hearing and trying to copy will not make one a good player. One must feel the inspiration himself before he can make others feels it. How many, probably, have attempted the *Black Key* study by Chopin, after having heard Mark Hambourg's matchless playing of it, or Mendelssohn's *Spinning Song*, as played by Paderewski. These artists have the necessary technic and temperament to give such things life But how dull and uninteresting such notes sound in the hands of others! No! Choose only that which can be played flawlessly and with genuine feeling, even if it is something not very pretentious. The audience will receive it better, and the player will have the satisfaction of knowing that what has been done has been done well.

Another very important thing is not to have in succession pieces in the same style or in the same key. The ear demands variety. If one hears, say, three successive selections in D, the ear will soon hear little except the keynote; this is especially true if the key happens to be minor.

The study of any one of Beethoven's sonatas will give the thoughtful player ideas as to how to contrast his selections. A sonata is, in fact, a short program in itself. Note how a lengthy movement in a minor key is often succeeded by an *andante* or *adagio*. In one sonata we find a theme with variations, a scherzo and trio, a funeral march, and a rondo. This surely suggests thoughts and ideas of the highest artistic order as to arrangement of pieces in an original program.

Further, the pieces must be such as the people will understand. This does not mean that the public is incapable of appreciating what is good. Even those in the audience who hear or play little else than ragtime themselves, will enjoy really fine selections, provided they are well chosen and well played. The two things the average hearer wants are melody and rhythm. The less cultured the ear, the more strongly defined must be these two elements. Those pieces which are lyric rather than contrapuntal, should be more largely drawn upon, and the latter kind should be of a free character rather than strict. Unless the audience is accustomed to it, and one is an exceptionally fine interpreter, a Bach fugue should not be chosen at the beginning. However, many shorter pieces of Bach are very tuneful, as one will find who plays any of his gavottes or dances. These, too, are not as frequently performed as they should be; if heard oftener, they would go far toward cultivating a taste for the great master.

Chopin is always a favorite; but here again the shorter works should be more frequently given. Unless one is very well advanced, it would be wiser to give one of the easier nocturnes or the military polonaise well, than to attempt the Bb minor sonata. Schumann and Schubert have many short and graceful compositions with not too great technical demands, from which to draw. Mendelssohn is not played so much as formerly, but the *Rondo capriccioso*, if played well, will always be sure of a good reception, and several of the *Songs without Words* are well worth careful study. The public always likes the brilliance of Liszt, and some of his arrangements are not too hard for the ordinarily good player. *Hungarian Rhapsody*, No. 12, is perhaps as popular and well known as anything, and not so fatiguing as No. 6.

To the pianist who is working with high ends in view, an effective program, well within his ability, may be found in the following:

Chopin: *Berceuse*, Op. 57, *Valse Brillante* in Ab.
Mendelssohn: *Rondo capriccioso, Hunting song.*
Schumann: *Nocturne* in F.
Schubert: *Moment Musical*, Op. 94, No. 3.
Wieniawski: *Valse* in Db.

This is a program of the more romantic order. It will be noted that the different numbers follow in attendant keys, and that the program begins and ends in Db. There would be plenty of variety in this arrangement, and with possibly the exception of the final number, all within the range of the average player. Moreover, everything is of a nature to appeal to the audience, as all are rich in melody and rhythm. The thoughtful student will find program-making interesting work, and well worth the trouble. As a rule, it will be found more acceptable to represent as many different styles of attractive compositions as can be well embodied in one program.

SOME COMMENT ON SCHONBERG

IN an article recently published in the London *Music Student*, Mr. Michael Calvocoressi comments very interestingly on the work of Arnold Schönberg and other extremists of the modern school. He says among other things: "We can see that the 'frightful discords,' startling designs and combinations of designs, abrupt transitions—in short, all that had seemed to betoken Schönberg's lack of sincerity or of sanity — are used not only by Schönberg's actual disciples, but by Hungarians like Bartok or Kodaly, and Russians like Stravinsky. . . . The first thing that we learn (or ought to learn) from the history of art is to accept what comes, and study it in an unprejudiced spirit. Sir Hubert Parry has made the remark that 'every advance in art has been made by accepting something which has been condemned by recognized artistic authorities.'" Mr. Calvocoressi is careful to add that the fact that Schönberg is ridiculed and attacked with severity is not, however, a proof that his music will endure as has the music of Beethoven and Wagner. Commenting upon the artistic ancestry of Schönberg Mr. Calvocoressi says: "Schönberg's claim to descend in a straight line from the classics will appear as natural to those who study his early works, like the *Sextet, Verklärte Nacht,* or the *Gurrelicder*, as it will appear strange to those who begin their acquaintance with his output with the piano pieces, Op. 11 or 19, the five orchestral pieces lately played in London, or the *Pierrot lunaire.*"

Some of the readers of THE MUSICIAN may not be aware that Schönberg is the author of a *Handbuch der Harmonielehre*, a book which Mr. Calvocoressi calls "one of the soundest and finest that have ever been written on the art of music; it contains many axioms, any one of which would suffice to prove that the spirit of Schönberg is far from revolutionary, or even reckless."

Here are two quotations from the book: "Whenever, having written music, you notice that it is too intricate, begin by asking yourselves whether you were absolutely sincere in writing it."

"If you jump from the fourth story into the street, you will arrive sooner than by using the staircase. But in what state? Therefore select the best road, not merely the shortest."

In summing up the author says: "I must acknowledge that although I believe in Schönberg, and am certain that interest in his music increases in proportion as one studies it, I find, for the present, little emotional appeal in his recent works, and little to please my taste."

———*———

PADEREWSKI'S PRACTICE

IN an article published in the *Century Magazine*, entitled *Paderewski at Home*, we read some statements about his habits of practising that will doubtless be somewhat of a revelation to those young persons who think themselves so highly talented that they need not practise faithfully and frequently.

"There are seven pianos in the house, two being in the drawing room; but it is in his own study that Paderewski does all his practising and composing. His practising would be both an encouragement and a discouragement to students. Hour after hour he works with the patience that none but the greatest possess, polishing and repolishing phrases that sound perfect even to a practised ear, but which do not satisfy his critical judgment. Only occasionally does he allow himself the relaxation of playing even a page of music; after this he returns relentlessly to octave work, to staccato finger passages, to separate phrases from Liszt's sonata, to the more difficult portions of his own magnificent *Variations et fugue* to snatches of Chopin, or to bits of Debussy, whose piano music he likes."

THE UNWRITTEN PAUSE

A Study in Interpretation

BY CONSTANTIN VON STERNBERG

RECENT years have added the term "unwritten law" to forensic oratory. Although the two words of the term almost contradict each other, their combined meaning has swayed the judgment of many a jury. Since the phrase was coined to express something that is opposed to the statutory, written law, there must have been some inner, deep-seated necessity for it, a necessity which is readily explained by the bases of the two kinds of law—if such they may be called.

The paragraphs filling the law books result from purely intellectual and deductive processes, while the unwritten law reposes upon the mystery of that feeling in which Kant recognized "the moral law within ourselves," the categoric imperative, the instinct of right and wrong which—obeyed or not—is innate in the human heart. If the written law conflicts with the unwritten, as it often does, it is because of this essential difference between their bases. As for the conflict itself, it is as old as the world. It is the eternal conflict between mind and heart, between reason and feeling, between religion and dogma, in a way also between genius and talent, and it underlies every drama, on and off the stage; it presents itself more or less seriously in every walk of life, in every pursuit of the human mind, and it were strange, indeed, if art alone were exempt from this conflict.

Being a reflex and an interpretation of life, art must needs be as much subject to laws as is life; but, like life, it must also have a place for unwritten laws. If we indulge in pursuing this thought at some length with reference to artists, we may discover that the greater artist excels the lesser by just so much as he leans toward the unwritten, in preference to the written, law. The more an artist inclines toward the traditional rules, laws, regulations, norms, codes, canons, tenets, or doctrines of his branch of the art, the narrower the horizon of his imagination is bound to be. Within reasonable limits this may be regarded as a fairly general principle.

THE UNWRITTEN LAW

Let us, however, not shoot beyond our mark. Let us never lose sight of two all-important points which apply to the artist as well as to the judge in court: First, that the unwritten law *is* a law; not a mere mental whimsicality but a governing principle upon which—unwritten though it is—the feelings of all normal people agree whether they do or do not obey it. And, second, that one who decides in favor of the unwritten law—be he judge or artist—must have completely mastered the principles and functions of the written, statutory, traditional laws. These two points demand the strongest possible emphasis in matters of art.

One whose innermost heart was touched and thrilled by a great musical performance, and who subsequently analyzes it in his memory, may find that the performer has, here and there, violated the traditional rules governing either the conception of the composition or the style of its interpretation, and possibly both. But he will, nevertheless, not call the performance lawless, because he must find that it only rose above the academic level in obedience to a law higher than human terminology can express, higher because it is ordained by that mysterious psychic faculty of ours, already mentioned, which, in art at any rate, must never be free to transcend the processes of the intellect.

One of the written laws in music says "Play in time." The unwritten law replies, "It is impossible to do so whenever expression demands deviation from strict time." Both dicta are right. And our choice between them is very easy, indeed, when we reflect that we have no right to play *out* of time before we have proven to ourselves that we are able to play *in* time. All liberty must have freely willed obedience at its foundation. When we are able to play in time our choice of deviations will produce results vastly different from the time vacillations of those who are rhythmically too weak to keep time and whose playing impresses one like "the gait of a drunken man," as Schumann says.

The particular unwritten law to which I now invite the reader's attention concerns the "unwritten pause" or "rest." In orchestra circles the German (slang) expression, *Luft-pause*, is in general usage for it; we may, more in keeping with its delicate nature, call it the "art-pause."

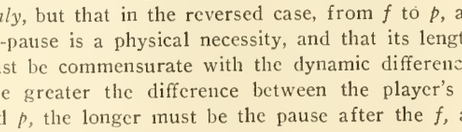
THE ART-PAUSE

There is hardly any medium of expression in music the neglect of which causes quite so much confusion in the auditor's mind as the art-pause. Before approaching, however, the more refined, esthetic demands for it, the art-pause should be proven to be, at times, a physical necessity. The occasions for its imperativeness are too numerous, by far, to be treated exhaustively in this discussion. Only a few of them may be pointed out here, but they suffice to argue convincingly and to lead to something like a generalizing and applicable working principle. The art-pause may be classed according to its physical and its esthetic necessity. The physically required one may be called acoustic, while the others respond to formal and harmonic demands.

MOMENTUM

To avoid a lengthy technical discussion of the acoustic properties of sound and tone, it may be sufficient to state the general physico-mechanical principle that a violent motion of any kind can be neither stopped nor materially lessened with such abruptness as a lesser motion can be increased or even started. The reason for this lies in the *momentum*. The principle, however, holds as good with a machine as it does with a horse or with our own locomotion. By showing the whip to a horse, its speed will not only increase but also do so instantly; having the horse on a run, however, no pulling of the reins can stop it with the same suddenness; even for any considerable decrease of speed it will have to make a few paces to lose the momentum it acquired during the run.

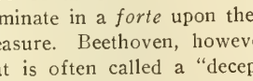
Applying this principle to music, the inference is obvious that change from *p* to *f* may be made *suddenly*, but that in the reversed case, from *f* to *p*, an art-pause is a physical necessity, and that its length must be commensurate with the dynamic difference. The greater the difference between the player's *f* and *p*, the longer must be the pause after the *f*, as the following design illustrates. It represents, much magnified, the vibrations of a string (or rather, of the air around it) both in *f* and *p*; the dotted line, following the violent vibrations of the *forte*, shows what is happening in the auditor's ear when the change from *f* to *p* is made without an intervening art-pause,



namely, that all the music made during the time represented by the dotted line was simply not heard! The responsive Corti-organ in our ear once set into violent co-vibration by a great volume of tone, needs time to regain that degree of repose which would make it sensible of a lesser tone volume. If we throw a rock of fifty pounds weight into the quiet surface of a pond and let a pebble of a few ounces follow it immediately, we could perceive no effect whatever from the pebble, although we learned from Sir Isaac Newton that, theoretically, there must be an effect. The fact is that the effect is there, but that our eye, adjusted to the comparatively greater commotion in the water due to the fifty pound rock, cannot perceive the little ripple caused by the pebble. If, however, we wait until the greater commotion has sufficiently subsided and then throw in the pebble, we shall be able to perceive an effect from it.

ILLUSTRATION FROM BEETHOVEN

A patent illustration of this point can be found in the *Andante* of Beethoven's sonata, Op. 28. The third measure contains a *crescendo* which would naturally culminate in a *forte* upon the first beat of the next measure. Beethoven, however, was very fond of what is often called a "deceptive climax" and so he put a *p* under the culminating point,



and this necessitates a break between the two measures. We can obtain this break, of course, by curtailing the duration of the last chord before the *p*, but this would destroy the unity of the whole group of chords. It is far better to give this chord the same duration as the others had and then make a pause, say of a thirty-second or sixty-fourth (according to the height the *crescendo* has reached) before playing the *piano* chord. Still more impressive is the case in the *Andante*, fifteen and thirteen measures before the end, where the chords are not only fuller of parts, but also in a lower, more sonorous octave.

An art-pause is also necessary wherever a melody is interrupted and its natural sequel sacrificed to some dramatic effect, as, for example, in the sonata, Op. 7, development part of the first movement, between measures 40 and 41. The necessity arises here, however, not from acoustic but from formal causes, a full explanation of which would lead too far from the present discussion. This brief mention might, however, suffice to indicate that the reasons for an art-pause are not exhausted by the few to which the space of this article permits us to refer.

ILLUSTRATIONS FROM SCHUMANN AND MENDELSSOHN

Coming now to the "harmonic" art-pause we may, first of all, generalize by saying that it will transform harshness into sweetness whenever it is used slightly to separate two consecutive chords of all too remote harmonic relation. To illustrate by a well-known piece, the first *Novellette* by Schumann may be referred to. The steps from measure 34 to 35 and from 44 to 45 (also in the corresponding places of the later transposition to A major) are esthetically impossible without a pause between them. These measures show harmonic cross-relations that may be easily forgiven a master like Schumann in view of the fact that the two cross-related phrases are entirely unconnected. But, if they are played without a disconnecting art-pause, they sound very bad, and that is, in music, a crime. If the art-pause is made, however, the crime turns into a stroke of genius and the harshness into a delicious harmonic surprise. The question, how long the pause should be, is unanswerable because its length depends upon the degree of force in which measure 34 was, and measure 35 is to be, played. A similar case occurs in

fourth *Novellette* (the so-called *Waltz-Novellette*), in the A major part between measures 12 and 13.

In the first *Novellette* the reason for the art-pause is not exclusively harmonic; inasmuch as it serves to keep two phrases apart it could be also classed as "formal," like the case in Beethoven's Op. 7, mentioned before. A similar case occurs in Mendelssohn's *Song without Words*, No. 47. There is a so-called "chained period," masterly constructed and of great charm if properly rendered. It begins at measure 16 counting backward from the end, and runs on for three measures and when nothing seems more natural to expect than the concluding tonic chord of A major, Mendelssohn turns the trick of employing the tonic A of the melody into the fifth of D major and starts an entirely new phrase of the melody in this new tonality. If this turn into the totally unexpected subdominant is not prepared by a slight pause, possibly also preceded by a gentle retarding; if after this tiny retard and pause the new phrase is not attacked with a renewal of strict *a tempo*, the entire charm of this clever bit of work is lost and the end of the piece becomes utterly commonplace.

THE "BREATHING" PAUSE IN PIANO-PLAYING

What would we think of a singer who keeps on singing as long as his breath holds out and then refills his lungs regardless of the fitness or unfitness of the pause he makes to breathe? Must the singer not study the text of his song and arrange his breathing in conformity with the punctuation marks? Indeed, when he reaches a comma dividing a line or sentence into two sections, he *should* breathe, and he should *pause* to breathe, whether the composer did or did not state the pause in writing. And the esthetics of vocal art compel the singer to make this pause regardless of the composer's name, whether it be Beethoven, Schubert, or John Doe. The composer usually takes it for granted that a comma or period in the text will be regarded by the singer as tantamount to a pause for breathing. The pianist, unfortunately, does not need a pause for his breathing and often thinks that, for this reason, he need not regard his melody from a vocal point of view. This is a sad fault and one that has much, if not everything, to do with the failure of his auditors to "understand" the piece. The pianist should imagine some text to every melody he has to play; some text which fits the melody in regard to meter, at least, and then make a breathing pause where he thinks that the text would be punctuated.

This is a matter of musical refinement which, of course, cannot be "taught"; but in art there are many unteachable things of which, nevertheless, a perception can be awakened in the student's mind through a mere suggestion that directs the attention to them; and this pause for breathing at punctuation points is one of those things. It will, by the way, show the student's mettle to the teacher; it will show whether his pupil learns purely and exclusively by imitation, like a parrot, or whether he puts his *own* thinking apparatus to its proper use.

THE WRITTEN PAUSE

Speaking so lengthily of the unwritten pause, it may not be amiss to say a kind word for that poor, neglected Cinderella of musical notation, the *written* pause, of which amateurs and students are so often recklessly unmindful. To say to them that stated rests should be honored because they are expressly stated would scarcely convince them. They would brush the advice aside as a purely academic rule. It requires stronger arguments than that to convince them. Well, then, to begin *ab ovo*: When we buy tickets for a theater or concert and don full dress, we do not go to the trouble and expense for the sole purpose of gazing upon the handsome features of the man that takes the tickets at the door. And yet it is he whom we have to satisfy, first of all, or else the theater or concert is closed to us.

Now, rhythm may not be quite so menial an attribute of music as the ticket-taker is as an employee of the theater; but even if it were the very lowliest of all musical attributes, before the temple of music Rhythm stands at the door, an inflexible, uncompromising, stubborn guard with whom we have to come to a satisfactory understanding before we may enter to behold its interior beauties. And in the rhythm of a piece the pauses are just as important as the notes. If a pianist curtails the pauses, which serve to separate two phrases, sections, or parts, he not only commits an esthetic sin, but he also inflicts upon his auditor a most unpleasant physical sensation. The auditor may not understand the cause of his displeasure and ascribe it to the composer, the hall, or the piano, but he certainly *feels* it. The man in the audience has, unconsciously, conformed his breathing and pulse to the rhythmic meter of the piece, and when curtailed pauses disturb this meter the auditor feels suddenly "yanked" into the next phrase before he was rhythmically ready for it. He experiences a shock not unlike that we feel when at the top or bottom of the stairs we take a step that isn't there. How it jars every bone, every nerve in us! Now, please, imagine the feelings of a person going through this experience twenty or thirty times in about five minutes, because, oh, just because the pianist did not mind the pauses.

SILENCE

In conclusion, the student and the amateur may be reminded that a pause—written or unwritten—means SILENCE. It does not mean merely a cessation of finger activity, not only a removing of the fingers from any contact with the keys, but also a prompt and complete release of the pedal; for, if the pedal is not released, the auditor receives the impression, not of a pause, but of a retard or of a lingering upon the last note or chord, if nothing worse. There must be no sounding "left-overs"! A pause is—a pause! *Tabula rasa!*

SOME GENERAL RULES FOR THE USE OF THE DAMPER PEDAL

BY ERNST EBERHARD

The use of the damper pedal is one of the most important features of modern piano playing. Viewed from a mechanical point of view, artistic pedaling is a setting which gives to a perfect technic its supreme attraction. And just as a jeweler takes from his stock of precious stones those which, combined, make a striking whole and yet do not detract, but rather contrast one with the other and places them in a setting which shall enhance their peculiar beauty, so must the pedal be used. Just as a jeweler may spoil a perfect jewel by a poor setting, so may the pianist spoil his most effective technical passages by an inappropriate pedaling. No hard and fast rules can be laid down; for just as different settings, each beautiful in itself, may set off a stone to equal advantage, so may different pedalings be used, each bringing out some particular point which needs emphasis. And we can only decide which to use by deciding which is the most important point to be brought out, and then choosing the pedaling which will contribute most to the desired result.

There are a few general, very general, rules which may be kept in mind when seeking out the pedaling. The first and most important is:

1. The ear is the supreme judge of the adaptability of a certain pedaling for a particular message. Without careful and attentive listening you will never use the pedal with good taste, much less artistically.

2. Pedal after each change of harmony; that is, connect notes of the same harmony together by means of the pedal. If the same harmony continues for several measures, it will, of course, be necessary to lift the pedal at convenient points within the harmony, especially if the tempo be slow. Play the following chords, pedaling carefully as marked. Notice how in (*a*) the sound of the first chord is heard half through the second chord and the consequent blur, while in (*b*) the harmonies do not have time to mingle, being connected just enough to be legato, but not enough to blur.

3. The pedal may be used to obtain a legato which cannot be gotten by the fingers alone, but DO NOT DEPEND ON THE PEDAL FOR YOUR LEGATO when it is impossible for the fingers to connect the tones.

4. Rule four is perhaps the easiest of all to follow, and yet is one of the most important: Pedal after each accented note or after each melody note. Be sure that the legato is obtained by the fingers, as the finger legato will allow a more free and artistic use of the pedal.

5. In chord playing pedal immediately after each chord. Be sure that the fingers are down when the pedal is raised and kept down until the pedal is again depressed; otherwise there will be an objectionable break.

6. Remember that when the pedal is down all the tones which have been played are sounding, and have the same effect, even though to a less degree, as if they were all played simultaneously.

7. Very often, indeed, the best way to pedal a passage is not to use the pedal at all, especially in a rapid scale or in similar places where the legato may be obtained by the fingers. This leads us to rule eight.

8. The final and most artistic use of the damper pedal is for purposes of tone coloring. Every student of the pianoforte knows that the piano possesses a richer tone with the damper pedal than without, and this fact, together with the combining of tones, is the foundation of tone coloring.

STRINGS FROM TANNHÄUSER

A country cousin who had never been in a theater, and whose knowledge of musicians was very limited, noticed, in looking over the program, that the next selection was to be *Strings from Tannhäuser*.

"I'm mighty curious" said he, "to see what kind of an instrument that *Tannhäuser* is going to be."
—Horace Zimmerman.

J. S. BACH ON HIS WAY TO THE ST. THOMAS SCHOOL
(FROM AN OLD PRINT)

LESCHETIZKY TELLS OF HIS METHOD

TWO LETTERS TO CARL STASNY

Most interesting reading is found in two letters received from Leschetizky by Mr. Carl Stasny, pianist and teacher of Boston, one of the faculty of the New England Conservatory, written by the famous Vienna teacher in reply to Mr. Stasny's inquiries as to mute practice of the hand upon a table or a dumb keyboard and a statement of his experiences with exercises for training the hand.

The translation of the letters was made by Mr. Louis C. Elson, and published in the music column of the Boston *Advertiser,* March 30, of which he is the music editor. These letters were written nearly fifteen years ago, but have never before been made public. They will certainly have value for American musicians who are interested in piano playing.

THE FIRST LETTER

"Very Honored Mr. Stasny:

"Your treasured lines, after considerable traveling to and fro, have at length reached me; this is why the answer to them comes so tardily. I am personally against any fixed principle in instruction; every pupil must, in my opinion, be treated differently according to circumstances. Therefore, I could never come to a decision to publish a Piano School, since such a work would demand a definite line of work which would need to be logically followed. 'All roads lead to Rome,' they say, and there is something true in the saying. But the by-paths are, in my opinion, a matter of considerable importance. Therefore, I hold, above all things, to a correct beginning, which is very seldom made, since few beginners seek a teacher who understands the demands of a course of preparation for future virtuosity.

"Even in the beginning, the most various attempts must be made to bring to this or that pupil the technical art touch, without over-straining the differently organized hands, and without unnecessarily using up too much time in the matter.

"In general, I am against all exercises which are not actually heard, and I hold the dumb keyboard to be of value only to the advanced artist who can tell by his experienced sensations whether he is using the right touch and playing equally. This party has a right to a dumb keyboard to spare his nerves the audition of his finger exercises.

"It is something quite different when the firmness of the stroke is concerned (my leading principle), which, according to my view, can only be attained by a stiff finger bent inwards at the tip, in which each finger must be practised to attain both the percussive and the pressing touch which shall be effective both in a large and a small hall, without necessitating a stroke of the hand. This style of touch can be heard just as well upon the cover of the piano or upon a table as upon a sounding key.

"Chords and runs are not in question here. It is, therefore, not impossible that I have counseled this or that pupil to practise this touch upon a table when no piano is at hand, since I am strongly in favor of practising this very constantly through the day, to accustom the hand to the style of touch.

"The principle of practising technic upon a table would be ridiculous, since one must hear what one plays and how one plays it; the tone color is, with velocity and equality, the principal thing.

"With best wishes,

"Yours most sincerely,

"Theod. Leschetizky."

THE SECOND LETTER

The second letter runs as follows:

"Honored Mr. Stasny:

"With pleasure I certify that your 'Finger Training' is well adapted to bring the obstinate fingers to training and reason, if the performing pupil and the by-sitting teacher are earnest and understand them. . . .

"In general, I think that far too many schools for the development of piano technic have already been written and published. In 1850-60 hundreds of such modern publications did not exist. The great piano virtuosos existing then had, nevertheless, quite as good a technic as those of the present time. Piano technic has become more general, but not greater, since that time. Is, for example, the *Don Juan fantaisie,* by Liszt, easier now than it was then? Are there more difficult piano works and studies now than those of Alkan, Chopin, Kessler, Henselt, Liszt, etc., which existed 50 years ago and were played by the artists then?

"In all times one could count the artists on one's 10 fingers who could enthuse the masses and by their public performance always win a golden harvest. It was difficult then to use up the 10 fingers in counting them. It is not less so now. An epoch which had as contemporaries such artists as Liszt, Thalberg, Henselt, Dreyschock, Doehler, Willmers, Clara Schumann, Pleyel, etc., has not come again.

CARL STASNY

I have lived through a few generations of piano players, and the result of this experience is the conviction that, while there are many more young people who play pretty well, yes, even good, yet the ranks of the very good and excellent pianists are no more crowded than they were in the time of the Messiah of the piano—Franz Liszt. Therefore, most honored Mr. Stasny, I am not a thankful and appreciative recipient of new works on piano technic.

"My motto is that, without a good, yes, a very good teacher, no printed method will be effective, and only he is a good teacher who can practically demonstrate every possibility to his pupils. Here one can quote the old classical saying—*Hic Rhodus, hic salta!*—to apply which the pupil is only too ready. Without these demonstrations, all technical studies are only dead, dry routines,—Amen!

"I write these lines from a sick-bed, where I have plenty of time to meditate upon the present and the past. . . .

"With best greetings to you and the dear friends in Boston, who yet think of me, I am

"Most sincerely yours,

"Theodor Leschetizky."

CO-OPERATION AMONG MUSIC TEACHERS

BY C. L. CHAMBERLIN

Musicians were ever a jealous class, according to report. But music teachers are only human beings selected by the chance of the divine inspiration, and the feelings are distributed quite evenly and impartially. Whatever there is of jealousy is quite apt to be restrained when individual interest shows this course to be best.

Co-operation is the key tone of modern business. Specialism has shown that there is plenty for all to do, and that the general interests are best served when all work together in mutual assistance. Music teaching is a business in no wise exempt from this principle. It is possible for many musicians to unite their endeavors in a manner that advances the interests of all alike. Let us investigate some of these methods and their results.

There is no possible reason for hostility or the least antagonistic feeling between musicians who teach different instruments. On the contrary there is every reason for co-operation. The piano teacher has access to many musical homes and the violin teacher gains admission to a different list. By uniting their interests each recommends the other for instruction in that respective line, and thus each gains admittance to a double number of musical homes. A musical home, as teachers know, always means possible pupils.

Furthermore, advanced piano pupils of one teacher learn to play the accompaniments of voice and violin pupils of other teachers. Thus each pupil gets the needed musical assistance paying for it in the very act which makes it necessary.

This matter of co-operation has been carried still further in many places. Teachers of different instruments unite and announce their joint work as a local school of music. Personal experience vouches for the success of this plan. One of the best equipped teachers is chosen as the manager by all the teachers. Rules governing the payments for lessons are adopted, including the prices to be asked. Each teacher is listed as an instructor. Each performs some general service in which all the others share so that no salaries are paid to anyone outside of the fees received for lessons by each. Thus one acts as manager, making all general arrangements with the public. Another teaches a class in sight-reading, elementary theory, harmony, musical history, etc. Each may take a different class to which the pupils of all have access. In like manner a chorus class or military band and orchestra may be organized and directed.

It is not necessary that teachers of the same instrument remain in direct competition. There are different grades of teachers in all the music schools and conservatories. Let an older, well prepared teacher receive $2 a lesson. A teacher of less advancement may ask $1, not in competition and underbidding, but because there are always pupils who can pay $1, by whom $2 will be thought prohibitive. Then let a young teacher, just beginning, handle a cheaper class of pupils at 50 or 75 cents the lesson.

A course of study is laid down for each instrument to which are added certain requirements in theory, harmony and history. When the course is finished and the pupil has a passing credit in the other studies, a certificate (called a diploma by courtesy) is granted, and with it a letter stating details of the pupil's work signed by the teacher body or as many as have ever given the pupil any instruction. This plan is well worth careful trial.

LETTERS TO THE BEGINNING TEACHER

MACHINE-MADE MUSIC, THE SCHOOLS AND YOUR PUPILS

BY HELENA MAGUIRE

At one of the National Conferences of Music Supervisors, Mrs. Frances Clark read a paper on the Victor Victrola in which the true place and value of mechanical music was set well forth.

Every Beginning Teacher is following with interest the movement for reviving pageant, mask, pantomime, and festival, but most of all that phase of the movement which is being worked out in the playgrounds throughout the United States, where most delightful work in eurhythmy is being done by the children, and where they are being taught, through the medium of folk dances, games, and songs, to express themselves physically, rhythmically, and musically.

A music teacher who is alive to all that concerns her pupils, who, as President Wilson said the other day, is willing not only to use all the brains which she possesses herself in her work, but is anxious also to borrow or to make use of all the brains of all other persons that she can, is quick to recognize and to approve anything in her pupil's school life which will forward interest in music study.

Up to a very short time ago all good music teachers felt impelled unreservedly to condemn all mechanical music of whatever kind. The teacher of today, however, sees in the records of the Victrolas and other machines her very good friends in the work she is trying to do.

As Mrs. Clark said, music supervisors were slow to endorse the folk-dance movement in the schools because the *music* used was, for the most part, of an absolutely worthless character. They saw that while the children were helped physically, they were injured musically by the poor stuff used. Unhappily the physical culture teachers were not musicians also, and there was this added difficulty, that, to be of real value to the children, these dances and drills must be done in the open air, and it was practically impossible to have a piano in most of the playgrounds. So there it was. While music teachers were ready to admit the value of these for the pupils, the movement could not be carried on because of lack of proper music. It was right here that the machine came most gallantly to the rescue.

Miss Elizabeth Burchenal, who has published the best book we have on folk songs and games, and who was the organizer of the Folk-Dance Committee of the Playground Association, has directed the making of a set of records from collections in England and elsewhere, she having gained her knowledge directly from the peasants in Sweden, France, Denmark, Ireland, Germany, England, and Scotland.

This collection of records, while already large, is still being added to, and may be carried into the playgrounds all over the country. By its means, our children are healthily and happily acquiring eurhythmy, and, again to quote Mrs. Clark, "it is a collection of distinctly educational value; it furnishes a basis for, and means to achieve, a nation-wide movement for the uplift of healthful play."

No teacher could condemn that which is doing so much for her pupils.

How much wiser, on the contrary, for the Beginning Teacher enthusiastically to support the use of "the machine," to use her influence to have one placed in every school in her own district, and to have Miss Burchenal's records used in the instruction of the children.

If the music teacher will work *with* the physical culture teacher, each can *learn* from the other as well as aid, and the Beginning Teacher's work will certainly be immensely lightened if she has for pupils children who have already been taught to *feel* rhythm, and whose young ears have been attuned by the daily listening to *good* music.

Instead of being ready to believe that the machine is going to hurt music and its teachers, how much better to believe that it is going to prove a benefit, to think of it as a friend rather than an enemy, and to make clear to the pupils just wherein its value lies, and also its limitations.

Personally, I have never lost a pupil through the advent of the "ready-made music" into the house. On the other hand, after a few weeks I would hear, "Father brought home such a *good* record the other evening, I'd give anything if I could play it." You may be sure that I never lose time in getting piano arrangements of these "awfully good" records, and many productive lessons have been spent in trying to "get" the *Humoresque*, by Dvorák, or Saint-Saëns' *Swan*, or some such thing on the piano as Mischa Elman or Maud Powell "did" them on the violin, and last week one of the pupils practised a Clementi canon with intense enthusiasm because she had found a bit of one of Harry Lauder's songs in it.

Now there may be teachers who will say that all this is wrong, and that experience has proven that it is not possible for the private music teacher to work with, or to accomplish anything in, the schools.

It is too true that many music teachers have had most unpleasant experiences in trying to bring about better musical conditions. There was the teacher, for example, who was so pleased to find that the pupils were studying the lives of the composers in school that she went to a great deal of trouble to give a recital of each composer's work as his life was taken up in class; and the principal stopped her after the second recital because, he said, "it was a purely advertising scheme of hers"!

And the teachers have often found themselves balked in their efforts by an ingrained belief on the part of the school music supervisors that the private music teacher really does not know what is best for the student. Consciously or not, their attitude has too often been—"being private you must be narrow."

As in every other new movement there must be the uncomfortable period of adjustment, during which the music teachers will come in for some hard and undeserved knocks, but that they are everywhere taking these philosophically and quietly gaining the ends for which they are working, is evidenced by one fact alone—namely, the amount of space which is today given to the subject in the magazines.

Read the editorial entitled, "More about credits in the High School for work done outside of school" on page 240 of the April MUSICIAN. Send for a copy of the Bulletin referred to in it, and spend the summer devising ways and means by which you, personally, can aid this movement in your own school district.

———*———

RULES FOR PIANO PRACTICE

In a work recently published in Paris, **L'étude du piano*, by L. E. Gratia, we find some extremely valuable material on the subject of the study of piano playing. Unfortunately, a very large number of our readers are not able to read this book in the original language. But those who can read French will find much to interest them and help them in their work of teaching.

The author has departed from the usual treatment of the subject, and prepared a book on a clever, scientific plan; especially helpful are the synopses which precede the various chapters, giving a clear idea of the material before taking up the study.

The chapter headings will offer the reader some notion of the contents of the book:

The study of the piano, its necessity from the educational, artistic, and recreative point of view; Length of study; Muscular independence; Position of the hands and fingers; Ways of practice; Difficulties; Mechanical aids; Fingerings; The pedals; Memory; Interpretation.

As an indication of the material which the author offers, we reprint the following rules which cover many of the conditions which arise during practice:

Practice slowly.

At first play with each hand separately, then with the hands together. Develop useful motions, and discard all useless ones.

Do not repeat, twice in succession, the same passage in the same manner. Repeat difficult passages a great number of times, but always in a different manner.

Make pages of exercises out of difficult passages.

Search for the causes of imperfection in playing and practise according to the proper means for decreasing that imperfection.

Increase the conscious knowledge of motions to create reflexes and co-ordinations of automatic movements.

Each day repeat your exercises, studies, and pieces, playing them very slowly, a veritable "toilette" of the fingers.

Do not go from a slow to a lively movement except gradually and rhythmically.

In proportion as the tempo is increased the amplitude of the movement of the fingers should decrease, until it becomes imperceptible when the note successions are very rapid.

Always play the notes as written, and observe the tempo rigorously.

At the least irregularity stop short and begin again, slowly.

Cease practice when the thoughts wander and the attention begins to lag.

Commence your practice with the difficult passages.

Never look at the hands or the keyboard; the eyes should be fixed upon the music.

Choose a good fingering, write it down with a pencil, and never neglect to use it.

Cease your practice when muscular fatigue manifests itself.

Practise regularly every day, so far as possible at the same time, and for the same length of time.

Lay aside for a time a piece that has received much study to take it up again later, giving it the same care and the same methods of study and practice as will be applied to an entirely new work.

Do not forget that one wears out a piece in playing it frequently at a rapid tempo; slow study is indispensable to put it in good order and to perfect it.

Playing at a high speed brings about imperfections which, repeated and added to each other, end in distorting good work.

Sometimes it is well to count out loud, subdividing at first, and according to the composer's directions later.

Listen to your playing and always try to secure a beautiful tone quality.

It may not be out of place here to say that the purpose of the author was to help players in a practical manner. As he expresses it: "How to realize a maximum of progress by means of the minimum of work."

*L'etude du piano, par L. E Gratia, Paris, Libraire Ch. Delagrave 3fr.50.

———*———

One of the surest signs of a composition's not being understood is the general complaint that it has no melody. This charge of lacking melodic invention has been brought against every great and original composer who has had to fight for appreciation and fame. At first his works are uncomprehended, and an outcry is raised forthwith that he has no melody in him; but as soon as his works begin to be understood this clamor ceases of itself.—*William F. Apthorp.*

THE PROFESSOR TALKS TO YOUNG MUSICIANS WHO WISH TO "GET BY"

SALUTATIONS

"GOOD MORNING, my dear Editor. What! You object to the word morning! Why? Because it is now five 'P. M.,' as the English say? That's all very well in its way, but, you see, I have traveled so much and through so many countries that I have acquired the habit of adopting many of their customs. Some of them are not at all ridiculous, I can assure you.

"Now, in England and France, where they lunch about middle day and dine when the day's work is over, it is the custom to make the greeting: 'Good morning,' 'Good day,' or *'Bon jour,'* as the case may be, until dinner time, when the day's work is ended and the evening begins. Then the salutation changes to 'Good evening,' *'Bon soir,'* and so forth. 'Good night' and *'Bonne nuit'* are the going-to-bed good wishes. Since I have not yet dined—indeed, I may confess to you, my dear boy, that I have not even lunched, such has been the urgent stress of my work—I may surely be permitted to say 'Good morning' without in any way suggesting that your most appropriate reply should be an invitation to a Rabelaisian repast!

"What! You *do* invite me! You are the best of editors! Ah, bah! Your invitation is to 'the feast of reason and the flow of soul'! Once more am I reminded that eating and editing do not necessarily coincide, although they should do so, according to the *look* of the Latin root (*edere*).

THE PROFESSOR IS ANNOYED

"I am afraid you will have to supply the 'reason'. If by 'soul' you mean feeling, temper, I am certainly temperamental enough just now to give you all that is wanted—and to spare! So you think I seem ruffled, not to say annoyed? Well, I admit it. Let me ask you what would you be if, after an entire season's careful teaching and daily example, three different pupils — man, woman, and suffragette — came to you at three different lessons, in three consecutive hours, and put to you the one insidious, intolerable, inane, insane, and inadmissible question: 'What must I do to "get by" as a musician?'

"*'Get by'!* Is it not a detestable term?—a shockingly shameful, self-sufficient term?—a subterfuge and a sham? It is a subterfuge, because it means the use of all kinds of tricks and shifts to 'make believe' a sound musicianship that is wanting. It is self-sufficient, because it satisfies the ambition of the shallow being whose only aim is to *appear* to be a musician, instead of being one. It is shockingly shameful, because its object is to fool the public and to take money for making a show of having earned it, by pretending to a knowledge that is non-existent. It is a sham, because it makes a superficial appearance of being genuine all through; like the veneer of the 'mahogany' table—dig beneath that thin veneer and nothing but plain deal is found.

"GET BY" SUPERFICIALITY

"This pernicious catch-phrase, 'get by,' is unfortunately as prevalent among the general mass of pupils as among a very large class of so-called teachers. Their chief object is that same superficiality which is the most inveterate enemy of the art of music. There is the desire to 'get by' in order to please parents, with some ear-tickling piece that fails to show the pupil's want of thoroughness.

"Then there is the scramble to 'get by' for a diploma at the end of the term. Then, forgetting that their state of pupilage with its inevitable diploma has been only a period passed in learning *how to learn,* the endeavor to 'get by' impels the pretender towards the career of artist or teacher, or both. If it be as artist, the rude jolt given by the public and the press effectually puts an end to any 'get by.' Probably the next step is to plunge into the turgid stream of teachers, as little equipped as he for the exalted calling of educator.

"This is no overcharged picture painted in too lurid colors. It is a true, but feeble, description of the canker that is actively eating the very vitals of musical progress in the country: the curse of superficiality, summed up in the smug, complacent slang 'get by.'

NEED FOR DEEP STUDY

"The lack of serious, profound study is one of the chief reasons why we have no plainly defined national music, characteristic in mold. The French, Germans, Italians, and Russians, for example, give us music that bears the unmistakable stamp and ring of their respective nationalities. I do not mean to imply by this that they have no pretenders, who are also trying to 'get by.' Far from that. But there they are in the minority, whereas here they form the majority. We possess musicians whose names are household words with us and who are held in high esteem abroad; but they are not yet in sufficient number and force of individuality to impart any decided national characteristic to our music. This will come about in time, but only after we shall have abandoned imitating the music of others in our endeavor to 'get by' and our race to 'get there quick.'

"We should muse upon Mendelssohn's words: 'In my opinion, a musician's real work only begins when he has reached what is called perfection, namely, a point beyond which he has apparently nothing more to learn.' And what does Schumann say? 'Continuous application, vigor, energy, and incessant striving for improvement and refinement—those are the great mainsprings of art.' Richard Wagner wrote to Hans von Bülow: 'It is knowledge that is destined to face and purify the divine flame in disciples of Apollo.'

"Instead of this knowledge, this constant striving after perfection, this continuous application, what do we find? We see all the young people, youths and girls, men and women, supremely satisfied with themselves, setting themselves up as shining constellations in the musical galaxy, a law unto themselves. These same young people should now be preparing themselves for their position in the musical progress of twenty years ahead, instead of contentedly lingering in their present-day smug satisfaction and shallow superficiality.

CONSTANT PROGRESS IN MUSIC

"Music will not stand still for them, because Music never stands still. It is the most progressive of all the arts. It is like the heart; it cannot stop. There is a dictum which says, 'Time and tide wait for no man.' Change 'tide' to 'tune' and you have the musical dictum, for the idioms of rhythm and melody never wait; they are constantly changing kaleidoscopically, whence progress in musical expression. Where will the present-day self-satisfied young people be, musically speaking, if their studies have not fully equipped them to keep in step with the march of musical progress?

"I do not, for one instant, believe that the Conservatory students of today are anything like as solid, thorough musicians as those of the past generation. (By the 'past generation' I refer to several of those who are, happily, still with us, encouraging, teaching, helping, showing us how to live music, and still studying—yes studying; that is the secret of their success and their undoubted authority.) The pity of it is that young fellows of the present day want to be composers, conductors, singers, virtuosi, anything—*except solid musicians.* They forget that to be any one of these they must *begin* by being musicians. Schubert said: 'From the bottom of my heart do I detest that one-sidedness of the uneducated—many who think that their own small vocation is the best, and that every other is humbug.'

"If our art is not to sink entirely to the level of trade, commerce, and fashion, the training for it must be complete, thorough, intelligent, and really artistic. Art is or should be the end the student has in view, and study is the only means to that end. This applies equally to amateur and professional.

APPEAL TO PARENTS

"But I am afraid that all the superficiality and its accompanying desire to 'get by' as well and as quickly as possible is not always the fault of the student. Parents have a very great deal to answer for in this respect. Let it be anything else but music and they will require the best that is to be had; and they will see that they get it. But as soon as it comes to a question of beginning to learn music the fond, but foolish, parent insists upon the low-priced teacher for the elements. 'Anyone will do to start with; later, we will get a "good teacher."' By 'good' he means 'high-priced'—not always synonymous! He is altogether wrong, no matter whether for voice or instrument. The pupil usually develops some vice of technic that entails a greater outlay to correct than if the 'good teacher' had been employed at first. I would be glad if fathers and mothers could hear me say: 'The most important steps in music are taken at the beginning; they must, therefore, have the best teachers to guide them.' Schumann has told us: 'Nothing is more fatal to music than inferior masters. It is incredible how beneficial, but also how iniquitous, can be the influence of masters for years, nay, for generations to come.' I hope the young people will see that their parents read this.

"MAKE GOOD" THOROUGHNESS

"Still more earnestly do I hope that students—yes, and teachers also—will endeavor to profit by my justifiable diatribe against the superficial 'get by.' I have indulged in it not for their sakes alone, but for the benefit of the whole of the nation's music. In my time the watchword was 'make good'! Think of the joy of meeting your old 'Professor' some years hence and hearing him greet you in terms of undisguised delight and admiration, because you did 'made good' and have become a notable musician among the notable of the world. Testy and disagreeable as your 'Professor' is towards all shams and make-believes, he is the very acme of kindness and great-heartedness to those who MAKE GOOD.

"The ideal picture of the meeting of success: teacher with equally successful pupils reminds me of something similar of recent occurrence. The great French musician, Camille Saint-Saëns, who had just given a 'farewell' concert and retired into private life—as much as it is possible for so active a musician and *littérateur* to retire—was made the guest of honor at an anniversary banquet the other day in Paris. After dinner the *maestro,* surrounded by a crowd of celebrated musicians, happened to be standing between Gabriel Fauré, Director of the Paris Conservatory and Eugène Gigout, the talented organist of Saint Augustin. Affectionately placing an arm around the shoulders of each of them Saint-Saëns said: 'In days gone by, gentlemen

aught music to these two young fellows!' It hould be mentioned that the *maestro* is seventy-ine, Fauré sixty-nine, and Gigout seventy.

WISE WORDS FROM FRANZ

"There, my dear Editor, I feel very much better ow that I have expelled all that from my system. I vas feeling very vicious when I came in. You now, as well as I, what it is to devote all your nergy and enthusiasm to the teaching of some oung persons who, when you have worked your-elf into a fine transport of ardor, calmly interrupt vith: 'I really haven't time to study as deeply as hat. Will you not show me how to "get by"?'

"No; I will not get hot again. I will merely say, n the words of R. Franz: 'To the true artist music hould be a necessity and not merely an occupation, e should not manufacture music, but live in it.' Eliminate the 'get by' from your vocabulary and eplace it with *'Make good'!"*

MUSIC BY THE CHILDREN AT THE PANAMA-PACIFIC EXPOSITION

From a report of the plans of Mr. George W. Stewart, of Boston, director of music, and Mr. . B. Levison, of the committee on music, we learn number of interesting items in regard to the im-ortant part which the children are to have in the usical entertainments at the Exposition.

Choruses of more than five thousand boys and irls will join in the singing of the songs of all ations. Handel's *Largo,* the *Intermezzo* from *avalleria Rusticana,* the *Sextet* from *Lucia,* selec-ions from *Stabat Mater,* the *Pilgrims' Chorus, Miserere* from *Trovatore, Blue Danube Waltzes,* rditi's *Waltz,* the *Barcarolle* from *The Tales of Hoffmann,* the *Three Grenadiers, Praise ye the Lord,* y Gounod, will make up the principal numbers in he repertoire of the youthful singers.

Classes will be conducted showing how singing taught, and conventions of school music super-isors and teachers of public school music will meet o interchange ideas on the subject of this very mportant phase of education in music.

Particular interest is attached to the plan of hav-ng choruses of school children of the various races epresented in the San Francisco schools sing songs f the country of their adoption.

Several concerts will be devoted to the singing of olk and patriotic songs as well as songs by modern omposers, by groups of singers ranging between o and 6,000 voices. Arrangements are also to be ade for song competitions between various schools nd between the champion school singers of the ifferent states and territories.

Another feature of unusual interest will be the xhibitions of folk dancing, which has recently come to such prominence as a recreation for children, articularly for girls. It teaches grace and muscu-r control as well as an appreciation of rhythm nd enjoyment of music, and will be a leading eature of the exhibitions of the work of certain chools.

School bands and orchestras will also be invited o show the results of their study. Of late there as been a great interest on the part of school fficials and boards of education, generally, in this ase of musical work, the result being that quite number of cities have fine instrumental organiza-ons in their schools.

NOTES ON THE MUSIC IN THIS ISSUE

June! This month, with many teachers and pu-ils, marks the end of the study period. As we have reviously written, there is no valid excuse for dis-ontinuing lessons in music, simply because the ummer season is at hand. In fact, we are con-nced that many pupils are able to do better work in the summer, particularly the early summer, than at any other period of the year. Especially is this true of pupils in singing.

Just a few words to teachers. It is, in part at least, your own fault if you have little or no teaching to do from June 15 or 20 to Oct. 1. Try the effect of a little publicity in your community; let it be known that you will be at home for most of the summer and that you have planned a special course of study for summer pupils, especially school children who cannot give as much attention to their music during the winter as they should. The results are likely to be satisfactory.

In the present issue of The Musician we have included music suitable for use in teaching, self-study and practice, and recreation. We hope that the selections chosen will prove attractive and useful to many of our readers.

Le ruisseau (The brook), Op. 25, by H. A. Wollenhaupt, is by a musician of German birth, who lived in the United States for a number of years prior to his death in 1863. He wrote a large number of pieces of an attractive style, including some very effective études, of which *Le ruisseau* is a fine example. It is, in part, a study in broken chords and octaves. A very distinct melody runs through these chords, in certain places indicated by notes with double stems. This makes an admirable number for recital programs, and will prove a good study for the player's private practice. It has been carefully edited by Mr. John Orth, the well-known Boston pianist and teacher.

Village wedding procession (Hochzeit im Dorfe), Op. 43, No. 3, by John M. Steinfeldt, is intended to portray the spirit of a wedding in some village of Germany, in the wedding party march to the church and back again to the bride's home. The music is animated, gay, and well set in the polonaise rhythm. In playing the repeated chords in the opening theme avoid stiffening the wrist and arm. As one pupil expressed the feeling, "You sort of shake the chords out of your arm and hand." The middle section is more quiet and purely melodious, as if the bridal party is chanting an appropriate song, the accompaniment suggesting the zither, perhaps.

There is undoubted technical value in this number, although the player and the hearer will appreciate it also because of its attractive musical character.

Alla marcia, in Eb, Op. 26, No. 3, is by Ludwig Schytte, a composer of Danish birth who lived much of his life in Germany. It has a very broad style, because of the strong harmonic character of the opening theme. Be careful to give the correct time value to the dotted eighth followed by a sixteenth which is so prominent a figure in the opening theme. In the cantabile section, the melody in the right hand suggests the 'cello or trombone. It is to be played with broad legato effect, the accompanying chords struck lightly, so as not to obscure the melody in the lower register.

The caged coquette, by H. Engelmann, is in the valse caprice style, that is, the general tempo is that of the waltz, but played with a freedom such as is generally used in the "caprice." The composer has made an effective use of syncopation in the first theme, giving it a decidedly capricious effect. By all means use a very light touch in this part and be careful to avoid dropping on the quarter note with a "thump." The other themes, in Bb and Eb, furnish pleasing and effective contrast to the first, and the piece, as a whole, should prove an exceptionally attractive one for use in public or in private.

Vienna forever, a stirring march, by Johann Schrammel, should prove useful to young players, as it is just the thing for home, school, or recital use. Notice the tempo direction, the *alla breve* sign, which means two beats to measure. The themes are snappy, vigorous, and filled with a long, melodic swing that is particularly effective. This will make a good piece for gymnastic drill or exercises.

A merry prank, Op. 3, No. 1, by Wilmot Lemont, is selected on account of its suitability for use with young pupils. Make a distinction between the time value of the eighth note followed by an eighth rest and then an eighth note, and the rhythmic figure of a quarter note followed by an eighth. Both these figures are freely introduced by the composer. The general need is for a light, free touch.

Playing soldier, Op. 5, No. 2, by Wilmot Lemont, is one of a set of six pieces for young players entitled *The Merrymakers.* This one has a strong march movement with pleasing melody. The middle section presents a melody for the left hand, a style of playing generally pleasing to the young player. This piece can be used with good effect in school marching and setting up exercises.

Valsette in G, by James H. Rogers, is a charming little piece, in waltz rhythm, by one of the leading American composers. We consider this an especially useful number on account of the great variety of its movement, half notes, quarters, and eighths being used, arpeggios, and diatonic passages calling for quite different hand positions. This is a piece for the young artist.

Resignation, by Emil Rhode, is a very attractive melody in A minor, with a contrasting action in A major. In the opening keep the broken chord accompaniment very quiet and subordinate to the melody which must be presented with a distinctly singing touch. We consider this an excellent piece to use in developing a cantabile style of playing.

The night has a thousand eyes, song, by William T. Miller, has a text that has been used by many composers, yet one which always seems to afford new inspiration to others. To the present writer, it seems that Mr. Miller has well caught the spirit of the text and expressed it with charm and true poetry in tones. Two keys, medium in E, high in G.

Minuet in D, by Mozart, is a violin number of rather easy quality which we have included in this month's issue for the benefit of young players. It has been carefully fingered, phrased, and bowed for teaching use, and can be added safely to the teacher's repertoire.

Because of you is a passionate, stirring love song which works up to a strong and very effective climax. It is available for the use of pupils in the first years of study, and can be sung by an artist who wishes a song of the high class ballad style, which has breadth of vocal effect. Two keys, high in C, medium in A.

The ninety-and-nine, by Lillian Taitt Sheldon, is an effective setting of the familiar poem. The composer has done her work well. We are sure that choir singers are going to use this with fine effect upon congregations. Two keys, high voice in E, medium in Db.

A GENTLE HINT

"I notice you've got new paper in your hall."

"Yes. How do you like the design?"

"It seems to me it's rather loud."

"Yes, that's why we selected it. We thought it might drown the sound of your daughter's piano playing."—Horace Zimmerman.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

TO THE 1914 MUSIC GRADUATE

JUST now you are in a somewhat peculiar position in respect to the work before you, a position such as you are not likely again to occupy. You have finished a course of study. This carries with it the feeling of having accomplished something, and therefore of having special value to the work of the world, as one who has done something out of the usual line.

In point of fact, however, your value to the world consists in the possibilities in you rather than in your present acquirement, what you may become rather than what you are today. You should look upon what you have done as merely a preparation for what you are expected to do in the days to come.

This is said to stimulate, not to discourage. It is intended to help you to take a correct attitude as to your relation to the world and the work which each of us must do. You need ambition to achieve, not satisfaction with what you have done; you must direct your gaze toward the future and forget the past save as it may be a lesson to you. You may have been an unusually capable student, but the important thing is how clever and capable you shall prove to be in the work you are soon to undertake.

When you go home or elsewhere to begin the work of your life do not think of yourself as a person of more than common consequence, but rather as one of many on the same level, who must fit himself for the work by the most careful thought and continued effort. To do this requires that you survey the whole range of musical activity in order to see wherein you can make your labors more effective.

Here are some relations between you and the people of the community which you must consider:

I. AS AN ARTIST

Many a young musician has the ambition to earn fame by work as an executive artist, it may be, attracted by the splendid rewards offered to the successful ones. This desire is a worthy one, and the rewards are desirable. But they are not for the young musician who has "finished" a course of study, but for the artist who never knows what it is to have perfected his art.

Therefore if you aspire to the career of a virtuoso understand that your period of real study has just begun. Exacting and severe as was the work required of you while in school, doubly exacting is the work you will require of yourself from now on. Formerly you depended upon your teachers, now you must depend upon yourself.

II. AS A MUSIC LOVER

Perhaps you have no desire to try the career of the virtuoso or even to use the knowledge and skill you have gained as a means of a livelihood.

There is a fine field for usefulness for one who will unselfishly aid in all efforts to make a community more appreciative of the beauty and necessity of music in the lives of the people. You can be a patron of musical enterprises and assist, by counsel and money, in the organization and support of the various musical interests of your town. A music lover who has social position and wealth can be of immense service to music. It is no slight honor to be known as a staunch supporter of musical work in a community.

III. AS AN EDUCATOR

The music teacher of today has a broad conception of his calling. As to his means of livelihood he is a teacher; but he considers himself as much a member of the community in its political, economic, social, religious, and cultural relations as is any other professional or business man or a manufacturer. He is touched by every phase of the life of his community, and in turn has his share in these activities.

To make his work most effective, and best to fulfil his obligations to his community — incidentally making a greater success from the point of view of his profession—the musician should strive to increase his efficiency along the following lines:

1. With his pupils. By the results he achieves with them will his work be judged. His pupils must be made musical and capable of independent effort, not mere parrot-like imitators.

2. With a church as organist or choirmaster. Here is a great opportunity for a musician to influence a community for good in music. He is prominently in the public eye, and, in a measure, represents music.

3. With musical organizations, such as a choral society, an orchestra, string trio or quartet, etc. Every town should have thoroughly organized musical work, so that the good effect may be distributed to the greatest number. It is a great opportunity for the young musician to become identified with this kind of work.

4. With a music club for study and personal development. This form of organization has been a great force in musical progress in the United States, but the possibilities have not been more than simply touched.

5. With music teaching in the public schools. Of late years there has been much discussion in regard to the methods whereby the work of the private teacher and the courses of study in the schools may be brought into closer relation. Musicians should make themselves familiar with what has been done in various cities to the great advantage of music generally.

6. With public musical affairs, such as concerts, recitals, etc. A town needs much hearing of good music to make it musical. The teacher should do his share in this line not only by his own offerings, but by his support of what others do, local as well as foreign artists.

7. With municipal efforts such as free concerts and lectures in the parks, school houses, etc., also the work which can be conducted under the auspices of the town library. This is a means of making music touch the lives of a community very effectively and practically.

8. With the social life of the people. The musician must mingle with society; he must talk music, make music, represent music to his community. The more the people think of him as a man and a force in the town the more they will think of music.

9. With the local press. The musician who makes his work count in the town can always look for the aid of the local papers, not to boom him, but to forward the musical interests of the town. Too many musicians think that an editor should exploit their doings, not understanding that he wants news and things of significance in the life of the community, social, cultural, or artistic.

10. With his fellow-musicians. Every teacher needs the support of his professional brethren. What promotes the general good is for the welfare of the individual teacher. Every town should have organization among the teachers of music, that they may strive to improve the conditions under which they work.

The thoughts contained in this writing are set forth here with the hope that young teachers may be led to close and serious thinking on all problems connected with their profession.

STRONGHEART

One who never turned his back, but marched breast forward,
Never doubted clouds would break,
Never dreamed, though right were worsted, wrong would triumph;
Held we fall to rise, are baffled to fight better,
Sleep to wake.—*Robert Browning.*

The SINGER and His ART

THE "FALSETTO" VOICE AND VOICE CULTURE

BY LESTER S. BUTLER

THE first thought on reading the heading of this article will doubtless be: "What is the falsetto voice?" To define this term and agree with many others who have undertaken it is no little task, as investigators and writers upon the human voice do not agree as to what "falsetto" is, to which part of the voice it belongs, or whether it is a natural or an unnatural product of the vocal organs.

Perhaps the majority of authors divide the voice into low, middle, and high, or "chest," "mixed," and "head," or "falsetto" voice. Garcia calls the mixed register the "falsetto."

Grove's *Dictionary of Music and Musicians* favors two divisions, "chest" and "head," while the "thick," "thin," and other terms are found with little effort.

Two principal methods are used in determining the limits of these divisions: one, the special mechanism or state of the vocal organs in each during phonation; the other, the different modes of producing the same notes. A few writers depend largely upon the quality of the tone to fix the separating point.

Says one writer, "The whole question of registers (divisions) and a great part of quality or timbre are involved in uncertainty; indeed, it is scarcely too much to say, mystery," but that the voice is produced in the larynx is undisputed, and that the sound thus given forth can be modified both in part and quality by numerous pairs of intrinsic and extrinsic laryngeal muscles, muscles acting upon trachea, on windpipe, on the pharynx, on the soft palate, on the throat, tongue, and nostrils, front and back, on the lips and cheeks, all these parts being concerned in the formation of the resonance chambers, of both men and women, has no dissenter. So, for convenience, we will divide the voice into three portions, low, middle, high, in the last including the "falsetto," claiming that each and all divisions are natural to both sexes.

I hear someone say, "'Falsetto' is an unnatural or feigned voice," but I must ask for the proof of its unnaturalness. Exhaustive investigation has not furnished it. By means of the stroboscope, an instrument enabling one to see the intrinsic movements of any vibrating object, such as a string, or the vocal cords of the human larynx, Prof. Oertel, of Munich, and others prove that the vocal cords vibrate their entire length and breadth, in both sexes, during the emission of tone in the upper register; that the cords are flatter and their edges thinner, and, further, that they are divided into segments which have their own rate of vibrations.

"This division is characterized," says H. H. Curtis, "by a faint oval line marking off a narrow zone comparatively close to the free border (of the vocal cord); this oval line is a nodal line, dividing the cord into two unequal segments." Oertel observed in a cultivated singer, with a remarkable "falsetto," that the vocal cord was divided into three segments. Grove asserts that, "The peculiarity of the female voice is the possession of a large range of 'head' notes in the place of the male 'falsetto,' but the terms 'falsetto' and 'head' voice are often used interchangeably by other authors, and it is generally conceded that the 'falsetto' of the male and the 'head' tone (why not 'falsetto'?) of the female strongly resemble one another in timbre, as naturally they should, since the division of the vocal cords into nodal lines and segments is alike in both sexes."

Nearly all animals, perhaps not fish, and all birds, while not all so musical as the "falsetto" of the human voice, have this register. The same laws govern it in all voices, non-human animals or not. When a bull bellows, the "break" or change from the low (chest) voice to the high ("falsetto") voice is clearly heard. A horse's neigh is usually from high ("falsetto") to low (chest) voice, and the cock's crow, or the bark of a dog, further illustrates the fact that the two sounds, "chest" and "falsetto," are common and natural to the voices of all animals.

In view, then, of this common heritage, what stronger evidence of the naturalness of the "falsetto" voice need be sought? The higher pitch, with natural differences in the chambers of resonance, easily account for any slight change in timbre between the "head" or "falsetto" voices of women and men.

Now, what is the "falsetto" voice? The answer is that it is the highest division of the human voice (*that* of *all* animals), distinguished, generally, by its fluty quality, its velvety softness, and, in the male, a tendency toward the tone-*klang* of the female, and that it is a voice natural to both.

But from disagreements let us turn to agreements, for even the subject of voice, its training and use, allows accord to the discussion, fixing our attention upon three which receive unanimous endorsement from all. First, that forcing the voice is not only likely permanently to injure it, but that there is danger of impairing the health of its owner. Some writers gravely warn singers that forcing the voice may induce serious throat troubles and even "consumption." Curtis says that "forcing may cause nodules of attrition, dreaded growths, the *bête noire* of artists, which may show a tendency toward appearing long before these become a fact. The subjective symptoms are these: Pupils complain that they are losing their piano notes, it is difficult to sing *mezza voce*, they begin to sing off the pitch, then they are hoarse after singing." When this condition has been reached, the writer in question, says that a cure, if possible at all, will take from "three months to a year's time," and complete rest for the voice is absolutely necessary. Secondly, that as nearly an effortless way of singing as possible should be acquired, and that the respiration be regulated so that the greatest amplitude of vibration of the vocal cords be produced with the least possible blast of air.

The so-called registers should not be carried upward beyond their natural limits, or the voice will be injured by forcing; but, *per contra*, carrying a higher register downward into and blending with a lower one, prevents voice forcing, beautifies the vocal tone, and preserves the voice. Third, that the least effort is made when the "falsetto" register is used, and that this, when persistently and intelligently cultivated and blended with the lower register, adds several notes, of clear, brilliant, or soft, fluty tone to the higher *tessitura* of the voice, which otherwise would soon be lost if, perchance, it were ever attained.

Sir Morell Mackenzie says, "The finest alto singers, among men, are developed by the use of the 'falsetto' or short reed. Corney Groin," he says, "was able to sing two octaves with the long reed (chest voice) and a higher one with the short reed (that is, in the 'falsetto'), and it is difficult to tell which register is the finer." And he adds, "Most tenors experience great fatigue of the tensor muscles of the vocal cords if they sing very high notes in the 'chest register'; indeed the attempt often brings on serious congestion of the windpipe. On the other hand, by using the short reed ('falsetto') such singers can produce charming notes without any injury to the delicate muscular apparatus of the larynx." What is true of tenors, he claims is true of sopranos, many of whom "can only reach their higher notes with the 'head' ('falsetto') register, or short reed."

W. H. Daniels in *The Voice and How to Use It*, answering a question about allowing the use of the "falsetto" by male singers, says: "It is generally regarded as something to be avoided; but I doubt whether it is wise to give it up. It is certainly most necessary to possess the ability to produce it. In former times the 'falsetto' tone was regarded as much a part of the voice as any other. At all events, it is most useful as an agent in forming and developing tone. We have had, however, to overcome the prejudice in favor of the splendid, shouting high C, which seems the great object to be attained, in the minds of most tenors. It cannot be indulged in with safety. One use of the 'falsetto' is to induce the muscles (of the vocal organs) to act easily and flexibly."

In *The Philosophy of the Voice*, Charles Lunn says: "The high register has always the impression of perfect ease. In light voices the notes above D are apparently 'stopped' notes, a part of the length of the cords being cut off." When these notes are sung he asserts, "There must be no force and no effort."

Practically all authorities agree that the air blast is much less strong in "head" ("falsetto") than in "chest," low tone production, and with Mackenzie's statement that "Every singer knows by his own experience that it is difficult to render a high 'chest' note piano, and that the higher the pitch the less easy it becomes."

Now let us see whether Time gives its sanction to the use of the "falsetto" by singers, and whether its use, combined with the other divisions of the voice, preserves, develops, and beautifies the whole instrument. History first mentions "falsetto" male singers in the Sistine Choir, Rome (the choir dates back to a period of very remote antiquity), who sang soprano and alto parts, in the 16th century. Quoting Grove, "During the latter half of the 16th century, the youthful treble voices of the choir were supplied by a new kind of adult male soprano, called the soprano 'falsetto,' imported in the first

instance from Spain, in which country it was extensively cultivated by means of some peculiar system of training, the secret of which has never publicly transpired." It is now said to have been divulged. So great was the demand for these Spanish "falsetto" soprani that the supply was insufficient, and during 1718 the singers in European theatres were nearly all obtained from the ranks of male soprano and alto voices preserved by a process so barbarous that at one time Italy forbid it under pain of death. It is, however, noteworthy that many of the famous male singers of history had voices preserved either purposely or by accident, among which are Nicolini, Grimaldi, and Farinelli, perhaps the greatest, in whose case the voice is said to have been accidentally preserved. A true adult male soprano, made by careful, intelligent training (not by operation or accident) was a very rare voice that lasted, generally, to extreme old age. A writer, speaking of the Sistine Choir singers' voices, says that "the uninitiated were astonished and could not understand the freshness of tone co-existing with long white beards."

A tenor of the last half of the 18th century, Davide, is credited with a voice of three octaves, compassing four B flats, including, doubtless, something like an octave of "falsetto," which must have remained to him, instead of in great part disappearing with the development of the rest of the voice. This is usually the case, only the "falsetto" tone gradually absorbs some of the timbre of the lower voice divisions.

Giovanni Battista Velluti, the last of Italy's great male soprani, sang in London when quite old, and his middle voice was harsh and unpleasant, but the upper tones were "exquisitely sweet, and could be swelled and diminished with charming effect." His low voice was mellow and full. The noted English baritone, Santley, is said to have made most effective use of the "falsetto," and the great oratorio tenor, Sims Reeves, who at first was thought to be a baritone, used the "falsetto" in the development of his tenor voice, and this "falsetto" voice remained with him, as it has with many other singers, to a ripe old age.

What has been said of the male voice is true of the female, and Jenny Lind proves the value of using the "head" ("falsetto") register in conjunction with and to beautify lower portions of the voice. Other female singers famous for their vocal ability might be mentioned as illustrious examples of this method.

Jenny Lind's voice extended from C to G in *alt*, the high (head or falsetto) being superior both in strength and purity to the low (chest) tones. Her whole voice was, however, thrilling and sympathetic and the high part was rich and brilliant. Realizing the weakness of her low division, she moderated the power of her high tones so that these should not outshine the low ones, and she could "fine" down her tones to the softest pianissimo, maintaining the quality unvaried. Her voice lasted more than three score and ten years.

Mezzo-sopranos and contraltos (the term including all low voices of women) who have attained historic mention have developed their voices by the same method of careful blending of their "head" ("falsetto") tones with those of their lower divisions, and those who most carefully followed this course remained before the public, with voices unimpaired, the longest. A writer says, "The power to mix the registers and to use it well shows vigilant training."

Although the theme is by no means exhausted, the hope is entertained that enough has been said to provoke thought and to direct attention to the use of the "falsetto" as a valuable means of training the voice without creating a screamer, or shouter, or of destroying in a few years, for the purpose of singing, an instrument with which each individual is entrusted.

In this connection Grove says, "A voice in which the middle register is blended with the 'falsetto,' if the blend is perfect (the result of much work and much exercise of the reflective powers), is not only a legitimate use of the voice, but very beautiful in its effect, being chiefly brought into play in *piano* passages and high tones."

Then, as the interpretation of music demands every resource of the singer's voice and art, and one cannot safely rely upon deficient training, or an instrument of imperfect and incomplete development, assiduously cultivate blending the "falsetto" with the other divisions of the voice, thus perfecting, beautifying, and preserving every part of Nature's vocal gift.

SHOULD A WOMAN SINGER WEAR A CORSET?

A SYMPOSIUM

II

THE CORSET AND BREATHING

BY DR. ARTHUR DE GUICHARD

What is the relation of the corset to a singer's breathing and breath control? Is it a help or a hindrance? Is it beneficial to the singer by giving greater sustaining power, longer phrasing and increased elasticity and beauty of tone? Or, is its use injurious to the singer's breathing?

Before considering the rôle of the corset and its effect upon the action of the breathing apparatus, as well as upon the action of the other organs of the body, it will be well to inquire into the phenomena of the functions of natural and of scientific breathing, as required in song.

The primary object of breathing is to purify and give renewed life to the blood by bringing oxygen into contact with it and so chase away the carbonic acid. The outward and upward movement of the ribs increases the circumference of the chest, and the downward and outward movement of the diaphragm creates a space for the greater expansion of the lungs. The two actions are simultaneous, resulting in an average supply of some thirty cubic inches of fresh air into the lungs, about every fifteen minutes.

So much for the health-giving breathing, which might be termed natural or normal breathing. The scientific breathing needed in the art of singing is to all intents and purposes the same, but with a few additions necessitated by the use to which the breath is to be put: for example, it has to be taken more frequently and much more rapidly, it has to be stored up in a compressed state for twenty seconds (sometimes more), and it has to be emitted with a perfectly regulated minimum of air pressure, in order to produce pure tone and to sustain that tone evenly in all its purity.

NO RESTRAINING INSTRUMENT

Since good health and good singing (singing means, primarily, breathing and breath control) alike require that the lungs shall have full, free play, does not common sense dictate the necessity for absence of any kind of restraint, on any part of the lungs, that will interfere with their full inflation and their rhythmic swelling? Yet that is what the baleful corset does.

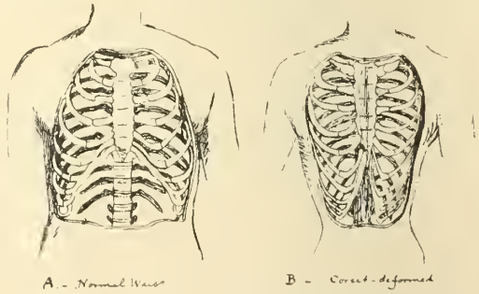
Can you imagine a sprinter, or a Marathoner, or a bicycle racer, or a race horse wearing a belt, or a corset, or anything that will embarrass the action of the lungs? Yet this is what the woman singer does.

Considered physiologically, woman has no more need of a corset or other mechanical "support" than a man has. Her thorax and its contents (ribs, sternum, lungs and heart) are the same as a man's —subject to the same laws of function and hygiene, therefore necessitating the same treatment. What is the result of corset wearing?

Figure A shows the natural development of the thorax, the breathing-box, in a subject that has never worn the deleterious corset. Compare this generous amplitude with the "cabin'd, cribb'd, confined, bound in" spectacle of Fig. B of the corset wearer. There is nothing more harmful to the singer's voice and health than the wearing of any form of corset and, more particularly, of the corset worn by the great majority of women and girls. It is true that the habit of golf and of the tango has caused the adoption of a more supple and elastic form of corset *for these sports,* but these are only for the pockets of the wealthy few, and even these change their sporting corset for one that is more rigid, more of a cuirass, when they dress for some formal affair. Inquire at the leading dry-goods stores and it will be found that the vast majority of girls and women are wearing the pernicious contrivance, known as corset, made of coutil and steel.

DISORDERS FROM CORSET WEARING

A grave result of this tightness is that the lower part of the lungs do not act properly because the walls of the chest can scarcely move during breathing, and their volume is much diminished, so that the upper parts have to do more than their share of work. This reduced size of the lungs with the attendant diminished power of breathing is responsible for many illnesses and serious disorders, among which may be mentioned kidney trouble, dyspepsia, congested liver, heart disease, weakness of the spine and even tuberculosis.



A - Normal Waist B - Corset-deformed

Corset wearing is absolutely unnecessary. Tietjens, the greatest dramatic soprano I have ever heard, Trebelli-Bettini, Christine Nillson, Albani, a pupil of my master, the great Lamperti, Madame Patey, the English contralto, are a few among the celebrated singers who did not wear corsets. Sarah Bernhardt, the great actress, celebrated the world over for her golden voice (*la voix d'or,* as she is called by her compatriots), has never worn a corset; she is a zealous non-corset partisan.

Like all mechanical support for various parts of the body, once the habit of such support has been acquired it becomes very difficult to do without it; nor must it be abandoned suddenly. By gradual stages, the ordinary corset may be replaced by others less rigid, until all that is worn of that nature will consist of a very light webbing entirely without steels or whalebone, but simply corded; this may, in due time, be discarded altogether.

Keep young girls from the corset habit; if they have already acquired it, wean them from it before it becomes confirmed. If any woman suffers from some weakness of some part of the body, let her consult a first-class surgeon and follow his advice faithfully; but do not let her cripple her back, her bust, her thorax, her abdomen and all her organs (and—*en passant*—ruin her voice) merely to follow the dictates of vanity and fashion. Lavignac, professor at the Paris Conservatory, is right when he says: "so far as concerns dressing, never compress either the neck, *or the body,* or the feet."

Omitting other arguments that would occupy twice the length of this paper, the only sane and safe conclusion for health of body and the full possession of our respiratory powers to their greatest capacity is: NO CORSET.

———*———

WHAT SHALL BE DONE ABOUT THE CORSET?

BY KARLETON HACKETT

In the first place, if experience has taught us anything, it is that for man to interfere with the fashion of woman's garb is to court hopeless defeat. No power has yet appeared on the earth strong enough to make woman vary an inch from the rule laid down by the fashions of the day. But, in addition to this, what are the facts about the effect of the corset on women singers, not the theory as to what it ought to do, but what is actually the truth?

For generations women have worn corsets which to a man would have been insufferable. This is undeniable, and yet, incredible as it appears to men, they live very comfortably in them, and this is just as true of singers as of any other women. We have always heard a great deal to the effect that tight corsets make it impossible for women to breathe properly and that as a result they cannot control their breath in singing. They certainly cannot breathe as men do, that is, they cannot if they wear tight corsets; yet, in spite of this, they succeed in singing right into the highest prima donna class. How is this possible? Well, in this world a thing that is a fact has to be possible, whether it fits into some man's theories about the matter or not.

The human frame is so elastic, so adapts itself to conditions, that it can be trained to do all sorts of things that at the first thought appear to be absolutely beyond possibility; and women's breathing in spite of the handicap of tight corsets is one of them.

When Mme. Sembrich first came to this country, away back in the eighties, she made a tremendous success; then she did not return for a number of years. The report was circulated at that time that she did not return because she had lost her voice, and that this had been caused by over-tight lacing of her corsets. This served as a wonderful warning to many an aspiring young singer, until Mme. Sembrich did return, with her voice more perfect than ever, and a waist that was no larger than the law allowed. Then many were sadly put to it for explanations.

I used to know a distinguished opera singer whose gowns were always made so small about the waist that it was painful for me to look at her, and yet, when she was to sing any part in the opera which demanded especial dressing in modern fashion, she used to have the waist made so small that her maid could not perform her proper functions, but had to call in the aid of her husband, who was a very powerful man. She used to say that she hated to do it, "but the public demands it." Now, whether or not the public demanded any such thing is beside the question, but as a matter of fact, with her waist drawn in four inches smaller than her ordinary gowns, she could sing magnificently.

There are many distinguished women singers who have the good taste and good sense to adopt a comfortable corset, and a few so fortunately constructed by nature that they can do away with them altogether. If these women were to pinch themselves in tight corsets, they would feel as tortured as a man, and be quite incapable of governing their breath. But the women who have always worn tight corsets, though tremendously handicapped, nevertheless succeed in accomplishing their dual purpose, of having a modish figure and yet singing.

A corset is made especially for singers which comes only to the waist, leaving the upper part of the chest altogether free, and a great number of singers have adopted this form, which appears to be the best solution of the matter. Not all the warnings of the doctors have been able to make the women wear an easily fitting corset if the style prescribed a small waist, and it is hopeless for the teachers of voice to win a crusade against fashion.

(*Continued on page* 422)

———*———

THE PROPER USE OF THE VANISH

BY HAROLD L. BUTLER

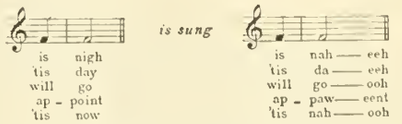
In English, the diphthongs *oi, oy, ow,* and *ou,* and the vowels *a, o,* and *i* (which are diphthongal in character) together with the digraphs, such as *ei, ai, au,* etc. (which are simply different ways of spelling the long sounds of the vowels), are made up of a combination of two sounds: the first, the *initial,* and the second, the *vanish.* For example, *a* is pronounced *a-eeh; o* is pronounced *o-ooh; i* is pronounced *ah-eeh; oi* and *oy* are pronounced *aw-eeh; ou* and *ow* are pronounced *ah-ooh.* The vowel name *u* and the digraphs *eu* and *ew* have two sounds, *eeh-ooh* or *ih-ooh,* the first being the shorter.

It is impossible to sing English expressively or elegantly unless the student is willing to give time and thought to the proper combining of these sounds. The infraction of the following rules relating to these sounds is one of the common faults of the untrained or poorly trained singer.

First, these vowels and diphthongs (with the exception of *u, ew,* and *eu*) must be sustained on the *initial* sound, until just before the end of the tone, when,

Second, the voice glides quickly and easily into the *vanish* sound, ceasing as soon as the *vanish* has been sounded.

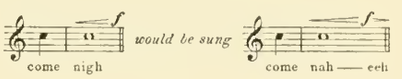
No matter whether it be one or ten tones over which the word is sustained, the *initial* sound must be continued unchanged in the slightest particular until the moment the word is about to cease, when the sound glides quickly into the sound of the *vanish,* and ceases as soon as the *vanish* is sounded. For example:



Great care must be taken to glide quickly and smoothly into the *vanish* and to make the *vanish* lightly but distinctly, and not to prolong it. In the example above let the singer sustain the *nah* for nearly the entire two beats, and just before stopping the tone let him glide quickly into the *eeh,* ceasing the tone as soon as he has touched it.

Third, when the word sung ends with a consonant, the vanish sound is even less noticeable than when the word ends with a vowel. The vanish *eeh* in *night* is made more quickly and lightly and is less noticeable than the same sound in *nigh.*

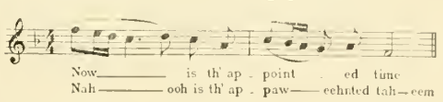
Fourth, the *vanish* is never accented or stressed in any way.



The tone would reach its greatest power on the *initial* sound, and instantly diminish in power for the *vanish.*

Fifth, there must be no *w* or *y* between the *vanish* of one word and the beginning vowel of the following word, such as *now wis* for *now is,* or *nigh yus* for *nigh us.*

Let us examine the following phrase:



This phrase is a difficult one to pronounce distinctly and elegantly, and at the same time give full value to the notes of the melody. It is made more difficult by the fact that the singer must carry the *now* over to the fourth beat.

The singer must sustain the *nah* with no movement of the tongue or jaw until the time for the *is,* when he must glide quickly into the vanish *ooh,* going instantly to *is.* Care must be taken that the *d,* on the last half of the third beat, is sung with the full sound of *nah,* and not on *ooh.* The two syllables *th' ap* must be sung as a diphthong.

The initial *paw* of "appointed" must be treated in the same manner, care being taken to sustain it as long as possible, gliding into the *eehn* just before time for the syllable *ed.*

Let the student find a few phrases in which the above sounds are employed; let him practise them slowly and carefully with a light tone and a loose jaw. The result will be an immediate gain in the distinctness and elegance of his enunciation, and a greater gain in the effectiveness of his legato.

GEO. CHADWICK STOCK, TEACHER OF SINGING
OFFERS A
Six Weeks' Summer Course of Vocal Study
BEGINNING JUNE 15th

THIS Course is intended particularly for soprano and contralto voices; for those who sing as well as for those who teach.

I believe that every possible facility should be accorded prospective students of singing for investigating the merits of any teacher.

By all means ask any questions that may come to your mind

Full information regarding my views and way of training voices will be mailed on request.

My purpose in advertising this studio through **The Musician** is to spread widely information that is continually proving of practical help to singers

All instruction is individual, and is given by me personally.

The number of students that can be accepted is necessarily limited—no applications can be received after June 10th.

Instruction is based on clear, logical lines, that do not leave the student in doubt as to what to do. *The student, therefore, who is willing to do straightforward, enthusiastic work, cannot fail to make progress.*

Address all communications to

GEO. CHADWICK STOCK, Vocal Studio, Y.M.C.A. Bldg., New Haven, Conn. Phone 3094

CHILDREN'S WORK IN MUSIC

CONDUCTED BY HELENA MAGUIRE

THE BASS CLEF BOYS

Five jolly little boys, called G, B, D, F, A,
Found such a wondrous ladder,
While playing out one day.

Oh! such a merry scramble!
"Come boys, here let us play!"
And each one found a place to sit—
Did G, B, D, F, A.

Because A was so very quick
Upon the fifth climbed he.
F, close behind, upon the fourth;
Down on the first sat G.

Because he was so very fat
And somewhat lazy, too,
B took second, and D took third—
For what else *could* he *do?*

EDNA MONTAGUE.

"TO GRAND OPERA VIA PIGS"

BY VIRGINIA CARTER

GRAND OPERA and pigs! If I had racked my brain day and night and searched through every available reference work on record, do you think I could have chosen two subjects more widely separated? Yet these two can be brought to bear upon each other quite closely, when a very enthusiastic and determined little girl takes it into her head that they should.

It was the first week in March, with the coming season of grand opera, which always lasted only one week in our neighboring city, less than two months off, and at this time for the two previous seasons I was accustomed to have everything in readiness for the trip, and had only to look forward in joyful excitement to that most treasured of all yearly events.

But somehow other things had attracted my mind as well as my pocketbook that year, and there was March nearly half gone when I suddenly awoke to the realization that something must be done at once, for I had planned to have a season ticket that time, instead of a ticket to one or perhaps two performances. *Something* must be done surely, but *what?* How could I earn the desired amount in so short a time?

Now, as to set my heart on a thing meant, in most cases, to obtain that thing after one fashion or another, I had no sooner completed my plans than I had set to work at a task which is, I suppose, a most unusual one for a girl, but one which is, as I can now testify, a very profitable one in the end.

It was no other than that of "raising pigs"! Yes, I was already the proud possessor of five of the cutest (if that adjective may be applied to a pig) little full-blooded Berkshires just one week old! As was a habit of mine ever since I was old enough to love the opera, I had named each of the pigs, like all my other pets, for some of my favorites among the opera singers. Now, don't you know that if Caruso, Slézak, Amato, Scotti, and Gilly could have had a glimpse of their namesakes, they would have felt highly honored! But, of course, no disrespect was intended; the pigs were named in honest admiration of each of them.

Well, everything moved beautifully for me in my newly acquired business, or perhaps I'd better say occupation, for I don't think I'd like it as a business. Of course, I was discouraged by some who thought that I should be more dignified than to waste time with anything so *undignified* as a pig, and I was promptly termed "an opera fanatic," which I must acknowledge pleased rather than offended me.

I also seemed to afford much amusement for the family, who would discover me, at times, comfortably seated on the top rail of the fence surrounding the spacious home of the five tiny animals watching their food disappear rapidly, while I sang or whistled little snatches of the famous *Sextet* from *Lucia di Lammermoor*, the *Miserere* from *Il Trovatore*, or hummed softly the beautiful *Barcarolle* from *The Tales of Hoffmann*. I remember, too, that this shameful little parody on the lovely song of Arline's in the *Bohemian Girl* was a favorite:

"I dreamt that I sat in the very best seat
Of a gorgeous and vast arena,
With my favorite star who was singing so sweet,
More lovely'n I'd ever seen her.
I had tickets, too many to count, could boast
of opera glasses so big—
And I also dreamt, which charmed me most,
That I earned them at 'raising pigs'!"

However undignified, fanatical, or anything else I may have seemed, my enterprise turned out as I had hoped and expected, for full-blooded Berkshires six weeks old bring a fairly good price; indeed, an enormous one to a little girl! And even if it was not the "desired" amount, it was at least the "required" amount for seven such operas as I shall never forget or cease to enjoy in my memory.

And I felt more than repaid for my small efforts at perseverance, regardless of the criticism of others.

———*———

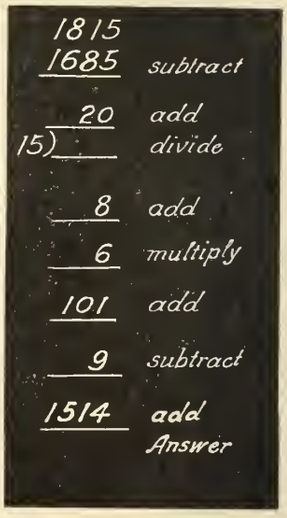
MUSICAL PROBLEM

BY RENA I. BISBEE

How would you children like to work out a musical problem that we had at our "Pupils' Music Study Club" the other day?

We took up the history of the pipe organ, and the question was asked, When was the first pipe organ set up in America? The teacher said if we could find the correct numbers to use in a problem she had and then add, subtract, etc., correctly, it would give the desired date. So one pupil went to the blackboard and the rest all helped on this problem.

See how many of the dates, etc., you know without looking at the parentheses.



Take the year that the Handel & Haydn Society was organized in Boston (1815) and subtract from it the year that Bach and Handel were born (1685). Add to the remainder the number of children Bach had (20) and then divide by the number of major scales (15). Add the number of measures in the chorale *Old Hundred* (8), multiply by the number of tones in an octave (6), add the number of members of the Boston Symphony Orchestra at the present time, including the conductor (101), subtract the number of symphonies Beethoven wrote (9), finally add the year that Palestrina was born (1514), and we have the result 1714, the year when a pipe organ was put in King's Chapel, Boston, the first of the kind in America.

THE SPIRIT OF MUSIC

BY ELIZABETH A. GEST

ONE lovely summer day, Meriam and some of her friends were taking a walk over a beautiful green hill where the birds live, and where the butterflies live, and where the lotus-flowers grow. All the other girls and boys went off to find birds' nests and to gather star-flowers, but Meriam sat down under a linden tree and watched the white cloud-boats sail by in the blue-sky ocean.

Soon a tiny cloud-boat came down close to the linden tree and a lovely fairy stepped out. She had beautiful golden hair and butterfly wings, and Meriam loved her the moment she saw her.

Then the fairy came over to Meriam, and sat down beside her under the linden tree, and began to talk to her.

"Who are you?" she asked, and her voice was like a silver dewdrop.

"My name is Meriam," answered the little girl; "and who are you?"

"My name is Musica," answered the fairy, "and I am a spirit of music."

"And where do you live?" asked Meriam.

"I live in the Land of Music," said the fairy.

"Oh! How lovely to live in a land of Music. Where is there such a delightful place?" asked Meriam, full of wonder.

"Oh, it is far away," said Musica; "so far that no one on earth can ever find it; not even the birds can find it. When the lark flies high he tries to reach the Land of Music, but he cannot fly far enough. Then he sings his lovely song, and the air carries his song to the Land of Echo, and the echo sends it to the Land of Music, and then the Land of Music sends it back to the lark again."

"Oh, how lovely!" cried Meriam, clapping her hands. "But how does the Land of Music send it back to the lark?" she asked.

"We bring it back," said the fairy. "We are messengers from the Land of Music to the earth. I just came down to give a song to the lark when I saw you here under the linden tree."

"Have you the lark-song with you now? Do give it to me," cried Meriam. "The Land of Music will send a new one for the lark; please give it to me."

"Oh, no," answered Musica; "I could not give you the lark-song, because you are a little girl; but I will give you a music-spirit instead, if you like."

"Do, please do," cried Meriam.

"Before I give you a music-spirit, will you promise to love it and always take good care of it?"

"Indeed I will," answered Meriam.

"When you have a music-spirit, you must take lessons and practise hard every day, so that the music-spirit will not be lonely for the Land of Music," said the fairy.

"I will," promised Meriam.

"And you must let it hear beautiful music every day, so it will not be lonely for the Land of Music."

"I will," she promised again.

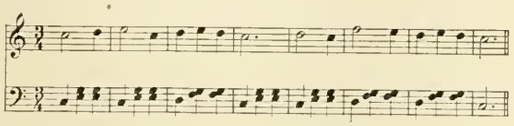
"You can never see it as you see me, for it will live in your heart, but you must always be good to it, and take care of it."

"I will," said Meriam; "and when will it come to live in my heart?" she asked.

"I will send it down to you when I go back to the Land of Music," answered the fairy; "and now I must go and find the lark. Good-bye," and she flew away.

And Meriam opened her eyes and saw the branches of the linden tree overhead, and saw the cloud-boats sailing by, and heard the lark sending his song to the Land of Music, and she knew that Musica had found him.

And the little music-spirit that the fairy sent to her slipped into her heart; and she kept her promise and loved music, and practised hard every day; and the spirit of music dwelt in her heart forever.



THIS is the photograph of Master Morril Ritter, one of our readers. Master Ritter is five years and six months old, a member of a musical kindergarten, in Roseburg, Oregon, and he already writes very pleasing little original melodies, adding the accompaniment in a most intelligent way.

A DUTCH MUSICAL

BY LAURA ROUNTREE SMITH

THE invitations contain a drawing of a tulip or windmill in one corner, and the following verse:

A wee little maiden, a little Dutch maiden,
And little Dutch laddie you know,
Invite you to come to a musical new,
And we will say, "How do you do?"

Large tulips stenciled in color on cheese-cloth and stretched across the back of the stage, or painted on a screen add to the effect.

The girls wear blue dresses, white waists, caps and aprons, and wooden shoes.

The boys wear brown trousers and caps, white waists, and wooden shoes.

The shoes are obtained from the *Novelty Wooden Shoe Company, Holland, Michigan,* and are ordered by size of shoe.

The songs are found in *One Hundred Folk-Songs of All Nations,* and *Folk-Songs for Children.*

The songs with guitar accompaniment are found in *College Songs* and *Popular Ballads for Guitar.*

All of the songs are published by the Oliver Ditson Company.

1. Song (with guitar accompaniment). *The Dutch Company.*
2. Recitation. *Holland Maids.*

ALL.—Three little maids from Holland,
Greet you here today,
Gretel, Hilda, Gretchen,
Delight to sing and play.
From Holland then with wooden shoes,
We come to tell you all the news.

1ST.—From Holland I have come today,
To entertain, to sing, and play,
Which it shall be the guests shall choose,
While clump, clump go the wooden shoes.
A foreign child quite often guesses,
Why we all wear such funny dresses,
No one could ever have the blues,
While clump, clump go the wooden shoes!

2D.—We leave our shoes outside the door.
As do the Japanese,
We scatter sand upon the floor,
As neatly as you please.

Our brightly colored tulips grow,
In gardens in an even row,
While windmills all with pleasant sound,
Are gently turning round and round.

3D.—We come from Holland far away,
The idea may seem new,
To put each little tiny foot,
Within a wooden shoe.
You may wonder what's the matter,
We make such a noise,
Wooden shoes make such a clatter,
On Dutch girls and boys.

3. Song. *Dutch Warbler* or *There's Music in the Air.* (With guitar accompaniment.)

4. Recitation. *The Guitar.*

Young Hans, a boy of good intent,
Plays on a Spanish instrument,
So popular where'er you are,
You'll hear the tinkle of guitar,
The music sweet, we will repeat,
And keep time to the dancer's feet.
When Hans is asked to play a tune,
At morning, eventide, or noon,
He says there's nothing sweeter far,
Than tinkle, tinkle, of guitar,
The music rings from out the strings,
And many pleasant songs it sings.

5. Song. *The Fir Tree.*

6. Dialogue.

BOY.—Of the Dutch masters who can tell,
Or sing and play their music well?

GIRL.—Come, pause a while before you go,
And we will tell you all we know.
(They now sit and read in turn.)

7. 1ST.—Long ago our staff had but four lines and spaces. Franco of Cologne used four characters instead of notes.

ALL.—They were called the *longa*, the *brevis*, the *duplex longa*, and the *semi-brevis.*

2D.—The Netherlands masters developed counterpoint, which was further developed later on by Bach.

3D.—The Netherlands masters did their finest work in church compositions.

4TH.—Jacob Hobrecht was a great Dutch master. He wrote a mass for the choir of Bruges Cathedral. He wrote eight masses and is said to have composed one mass in a single night. He led a choir of seventy voices. During this time the canon was developed, in which one voice imitates another.
(A canon may be played; *Canon*, by Clementi, Op. 40, is suggested.)

5TH.—First the canon had a form in which the melody was repeated from the last note to the first. Second there was used the inverted canon. There were also the augmented and diminished canons. These four forms were later used by Handel and Bach and they are still in use. (Song. *Meeting.*)

6TH.—Josquin des Pres was another great Netherlands master. Some one said of him: "Josquin is the master of the notes; they have to do as he wills, other composers must do as the notes will." At this time riddle canons were written which were very difficult to work out. These masters made valuable rules for the writing of canons. Josquin is said to have been the "first real genius in the history of music." He wrote 19 masses, 50 secular pieces, and 150 motets. (Song. *Lady Bird.*)

GUITAR ORCHESTRA

7TH.—Nicolas Gombert was a pupil of Josquin. He was a priest and chapel-master, and did much to advance music.

8TH—Adrian Willaert was chapel-master at St. Mark's, Venice. He was the head of a great school of music and instructed many organists. He was also a noted composer. There are two organs in St. Mark's. The choir was divided into two parts facing each other. For the first time separate choruses were written.

9TH.—In the time of Luther the congregations began to sing. Church songs from the Latin were very much like folk-songs. So it was hymns first originated. The melodies of folk-songs were also used in instrumental music. (Song. *Where'er man ranges. Dutch Battle Song.*)

10TH.—Some of the Netherlands masters tried to tell a story in music, as Gombert in his *Bird Cantata* and Jannequin in his *Cris de Paris,* which imitates the cries of the city.

11TH.—Philippe de Monte wrote nineteen books of madrigals and eight books of song. (Song. *Two Stars.*)

12TH.—Orlando di Lasso was the greatest of all these masters. He wrote *Penitential Psalms,* and with him music began to take on expression. He is said to have been kidnapped several times, when a boy, for his beautiful voice. He was musical director for the Duke of Bavaria. He composed over one thousand sacred pieces and eight hundred secular pieces. We could easily proceed to tell about the music of Germany, but our time is short and we must go.
(All arise and skip about while *Deutsche Tanz,* by Schubert, is played.)

8. Song. *Rosa.*

9. Closing drill. The children stand in a circle, extend skirts, holding them out with both hands. Bow toward center of circle twice, face out, bow again twice, whirl slowly around saying:

Round and round the windmills go,
Turning either fast or slow,
Round and round with pleasant sound,
See, they all are turning round.

Join hands two and two, arms up, clasp right hand, take two steps forward and back, lower arms, one whirls round the other; reverse it. All stand in a circle, place arms on shoulders of one in front, turn head right and left. Face each other two and two, bow low, roll arms round. March in a circle singing, *How can I leave thee?* They march out and re-enter with refreshments served on blue china. (Cocoa and wafers make a good refreshment.)

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

STRAY STUDIO THOUGHTS

BY RAY G. EDWARDS

What shall I practise to keep up technical perfection? This is a question that often comes to me through the mails from various correspondents. What one thing will be most beneficial? That is a question for each violinist to solve for himself. The one thing for some violinists might be to keep going over the Rode *Caprices,* for another I might, if I knew the patient, prescribe a daily dose of Sevcik bow studies; to a third violinist I would say slow scale practice, and to another swift bow strokes. But for a beautiful legato stroke, I would suggest something entirely different, and this is the one most important thing, it seems to me, for all violinists to cultivate. Legato in single and double stops will do more to keep up a finished style of technic than any other one thing, and will give more finish to solo work.

A violinist should be able to produce a continuous flow of perfectly clear tone without end: a tone that has no hitch or blemish at the end of the bow strokes. It should be as if the bow were a mile long, the tone flowing beautifully and seemingly endlessly. Of course, you cannot gain such perfection, but this should be the mental picture of what you are trying to do. You may come very near it, but there will be some slight change to indicate the change of stroke. No matter, the mental picture, the ideal to work for, this will be your guide, and without such guide you have no object in your practice.

The best work for the left hand is scales, in two and three octaves, in broken thirds and sixths, and in double stops, slurring four, eight, twelve, and sixteen notes to the stroke. Broken triads and dominant harmonies, through two or three octaves, will also be helpful. I would also recommend scales of artificial harmonics, four or eight notes to the stroke. Practice of harmonies in legato style is unusual, and, while it will help in gaining command of these artificial notes, the real benefit of the practice is as a bow practice. The finger playing the harmonic should rest a little on one side of the string instead of directly above. In the former position it more effectively divides the vibrations. For an explanation of the harmonics, see any good work on acoustics.

By the way, the study of string vibration is very important to the violinist and he should learn all that the study of acoustics can offer on the subject. It will give him reasons for many little tricks in bowing that will be helpful and that he can get in no other way. For instance, he will learn about the action of the bow, the reason for resin on the bow, and the best way to draw over the strings. Also the reason for tipping the outer edge of t hair to the strings, and the reason for approaching the bridge for a *forte* tone.

On this subject of tone, had you ever studied the effect of different qualities of tone? Did you know that a clear and beautiful tone, as used in the Mendelssohn *concerto,* would not do at all for the Beethoven *concerto*? The latter calls for what one violinist of note calls a "bloody" tone, while other composers produce music "on the surface" that need be only brilliant. Again it is a perfectly legitimate thing to slur over the strings in a false harmonic bowing. Paganini is thought to have made use of the false harmonics in some of his compositions, thereby gaining an effect that baffles imitation until one knows the trick. And even then there remains the mastery. Some violins will not make these false harmonics at all (except in the hands of a beginner).

Another effect in violin playing is the rasping tone made for a perfectly legitimate purpose, as in the final measures of *Asa's Death,* by Grieg, where the final death rattle is given with uncanny effect by a seeming imperfection in the bow stroke. At any other point in the composition, and in almost any other music, such a stroke would detract from the perfection of art. But that awful, hushed death rattle; I have had people plead and beg of me not to repeat *Asa's Death.*

Another stray thought: A well-known concert pianist once told me that he never plays a tone solo, such as the slow movement of a concerto, a romance, or berceuse, or such well-known solos as the Handel *Largo* or the Bach Air for G string, without having a definite mental picture, which he believes is conveyed to his hearers, or at least to the more sympathetic members of his audience.

Another vacation period is upon us. Is it our duty to close up the violin case and join the vacationists in an idle, aimless life at the seashore or in the mountains? Are we so tired of music, or even if not actually tired, would the change be helpful? If you and I are built on anything like the same plan, a change to the outdoor life will appeal so strongly that you will not have to consider the question very long.

But as to taking along the violin, that is for you to say. I can think of such a tiresome winter of work with the fiddle that it might seem for the moment reasonable to suppose that I could get along for three months without even looking into the violin case. But I also have had the experience of hiking to the woods and in less than a week being willing to give anything in my possession (except rations) if someone at home would just have sense enough to send that violin outfit by "express collect." It is wonderful what fine people grow in the country, and one is sure to meet them, "young men and old men and men that are no men at all," and suffering women, all anxious to hear you play a tune. Willing to tramp five miles over to Uncle Ike's to borrow his fiddle for you.

Yes, of course you want to take your violin. And even if you are going fifty miles from the end of the road, you will want the violin, even more than if you expected to meet people. Three days of absolute rest is as much as any violinist needs. And then, if the songs of birds, the mating call, the consciousness of life all around you, and the sense of being part of (instead of apart from) the Whole Thing, the world around you, does not call for fiddle expression or some bits of original thought (compositions), I am afraid you are not very musical, after all.

*

THE SECOND AND FOURTH POSITIONS STUMBLING BLOCKS

BY A. WALTER KRAMER

In the course of studying the violin comes the time when Master or Miss Young Enthusiast finds himself or herself, as the case may be, confronted with one of these obstacles which are part and parcel of the technical requirements. It is the second position. What fear has beset young students, who have accomplished a fairly respectable proficiency in the first position, on arriving at it! It must be recorded here that many of them have also played for some time in the third position before arriving at the second.

For this has been the state of affairs in violin teaching: Years ago teachers of the instrument, realizing that the second position caused dismay in their pupils' ranks, decided that a better way to proceed would perhaps be to give the pupil the third position after the first and then tackle the second. This had an element of reasonableness to it, because the hand has something to rest against in the first and third, while the second requires a perfect poise, if playing in tune was to be desired; and teachers, for their own sake, if not for their pupils', desire it.

Years went on and the second position, which was scheduled to be studied after the third was "glossed over" in the merest fashion when a certain passage came up in an intermediate solo or concertino, where the teacher realized that the only proper way of fingering it was by the use of the second position. I have heard violinists of respectable enough ability totally ignorant of the "how" and "why" of this second position. They will tell you that they had intended to devote a year or so to it, only their teachers forgot about it.

And this is what has happened. Teachers, finding their pupils getting along nicely, have not stopped to teach the second position after a certain proficiency of execution was obtained in the third. They have been eager, as have the pupils, to go ahead, to explore new territory. After the third they have taken the fifth, a position which is analogously easier than the fourth. The fourth has suffered the same neglect as the second.

But modern times are changing these things and there is cause for rejoicing. Carl Flesch, the eminent Hungarian violinist now on his first American concert tour, said, in a recent interview, that instead of composing violin pieces, for which he admitted he had no especial talent, he had edited a great many standard violin works for leading European publishing houses. And the main thing that he had to change, he said, was the fingering. Here, he claimed, editors, who of course were violinists, set down fingering which did not call into play the second and fourth positions as much as they should be used. Modern violin playing makes much use of it. There are, of course, concert violinists before the public today who do things which they should not do. They finger their pieces as they choose,

with little or no regard as to what is correct. Some of them even boast of it!

Observe closely, however, serious violinists like Fritz Kreisler, Kathleen Parlow, Efrem Zimbalist, Jacques Thibaud, and a number of others, and you will see that they finger their music carefully, not in a manner which would ordinarily arrest your attention, but nevertheless observable if one watches intently.

And this second position—and the fourth as well—is very important. A list of passages might be printed here, taken from the standard concert répertoire, showing where the masters wrote passages which lie as naturally in this position as do others in the first or third.

Teachers should not make the mistake of believing that the second position is a sort of evil. It can be accomplished with but a little painstaking on their part and that of the pupil right after the study of the first position. To be sure the hand has nothing to support it in this position; neither can one deny that after a year or a year and a half of study of the violin it is well to have the hand rest on something. But the danger of forgetting to go back to the second if one studies first the third, is so great—it has been in evidence for years—that teachers who wish to give their pupils the greatest possible benefits from their violin study should teach it after the first position and use all their pedagogic ability in keeping the hand in its independent position, supported by nothing other than the knowledge that the hand *must rest midway between the scroll and the body of the violin.*

Only those violinists who have a complete technical development,—which means in nowise that they must be *virtuosi* of the first rank—who do not have to hinder themselves in reading music by playing a passage, which lies splendidly in the second position, in the third, and one that really exists only in the fourth, in the fifth, can enjoy their music. They will realize at some time or other that something that they should have been taught was omitted and the recognition of the fact will neither tend to make them saisfied with themselves, with the teacher who has guided them, nor add one iota to their interest in musical art as expressed through the violin.

"Study the second position after the first," "the fourth after the fifth," and "study both second and fourth as carefully as possible," might well be regarded as watchwords for the modern violin teacher, if he would give his pupil the best possible tuition.

PART OF THE ORIGINAL PENCIL-SKETCH OF EDWARD A. MAC-DOWELL'S "TO A WILD ROSE" COLLECTION: ARTHUR HARTMANN

THE illustration above is a reproduction from a sketch in Arthur Hartmann's collection of manuscripts and autographs. In a letter to the Editor of THE MUSICIAN Mr. Hartmann says: "In my collection I have manuscript writings of Debussy, Godard, Walt Whitman, Mark Twain, Carmen Sylva, the poet-queen of Roumania, Grieg, Björnson, Richard Strauss, Saint-Saëns, Bayard Taylor, Hubay, Sauret, Sinding, Halvorsen, and others. Especially valued are the manuscripts of *Will o' the wisp* and a part of a piece called *In German woods,* by MacDowell, which the latter changed to *In Autumn.*"

———*———

FROM A VIOLINIST'S NOTEBOOK

BY EDITH L. WINN

POOR strings are not only bad economy, but their use precludes any possibility of sure intonation. A silk E string may be used in the summer, or during damp weather, or for café work or dances, but never when solos are to be played. A wire E must never be used unless the player's hands perspire a great deal. If its use is necessary, get a repairer to insert a piece of metal directly over the bridge, where the string strikes. Do not tune the string quickly or frequently move the pegs up and down. The string will break with such sudden tension or relaxation. Remember a wire string has no tone color.

The methods of the great artists are not infallible. The artist is a free lance. Rules are made for players of average talent. Do not imitate the high position of Ysaye's and Kreisler's violin. Their position is an effort to free the back and arm muscles, subjected to a great strain in a concerto. Their arms are large and must have freedom.

Imitating a great artist's bow arm is dangerous. He plays as genius prompts. No pedagogue ever held him to hard and fast rules. You will observe that he sometimes allows his first finger to be upright. This habit gives freedom to the hand but a great artist may allow himself to play thus, his technic is so ample. He immediately produces a freer vibrato and a more brilliant trill, with the hand in a free position.

Note that he frees the first and second fingers when playing a third or fourth finger trill. Also note that he always frees the thumb, and usually the thumb and hand move in the same plane. There is absolutely no pressure from the thumb and first finger.

Why do great artists vary as to the position of the wrist when playing at the point of the bow? Some artists, like Kreisler, play with the bow flat. With him, as others, the wrist is therefore slightly depressed when playing at the point of the bow. The Berlin School players keep the wrist elevated except when playing at the point of the bow. Then there is a straight line from the knuckle to the elbow.

The next thing to consider is this: Some great artists play with high arm, others with medium arm position. Whether the arm be high or low, one should make two, three and four string transfers, with the elbow in a plane with the string to be next used.

In playing legato passages over two strings use the flat surface of the hair, and do not tilt the wrist from side to side. The wrist presents an undulating stroke, the player describing as little curve over the two strings as possible. This is a stroke much used in quartet playing and is not the same as the figure 8 stroke, presented in the Casorti *School of Bowing.*

Many violinists play with false intonation through life. The trouble is with fundamental ear training. This should be taken from the very start. A young pupil who has a poor ear should be drilled on whole steps and half steps, major and minor thirds and intervals, for two years, using the Sevcik, Book I, *Left Hand Technic,* and Sitt, Op. 92, Book I. These works are very clear, and the ear training may be combined with varied bowings.

Pupils play out of tune for different reasons:

1. They have not been taught the actual position of fingers in the fundamental work.

2. They dip the fingers at the middle joint after the pitch has been taken.

3. They bend the fingers (the third especially) forward instead of sliding forward if the pitch is flat.

4. They incline the wrist forward, and depress the fingers, which ought to be almost upright.

5. They do not strike the strings with force, and they keep the hand in a restless position.

6. They raise the fingers when unnecessary, thus giving the hand no repose. The first finger should remain in place while the other fingers play, unless one is using the vibrato, or playing trills with the third and fourth fingers.

7. The vibrato, when studied too early, interferes with intonation. Pitch must be accurate, before any pupil studies the vibrato.

8. When pupils are changing methods, the left hand suffers. An advanced pupil will play out of tune for months, if the thumb is placed between and opposite the first and second fingers, after it has been *behind* the first finger for years.

The proper position of the hand in order to secure good intonation is this: The first finger rests against the fingerboard lightly at the crease, or lowest joint of the finger. The thumb is in advance of the first finger, and rests against its middle joint. Neither thumb nor first finger should press against the violin neck. A tight left hand is an enemy to technical facility.

False intonation is often due to the use of false and cheap strings. Every pupil, even a child, should use tested A and D strings.

If You are in the Market for a
RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

LA FAVORITA STRINGS
Italian Gut. Best in the World. Warranted
VIOLIN
E, 4 lengths; A, 2½ lengths; D, 2½ lengths; each in separate envelope; and single lengths tested, each string with tag "La Favorita." For sale by Leading Music Dealers. Ask your dealer but insist upon "La Favorita."
Trade Supplied by M. E. Schoening, 56 E. 2nd St., New York

In rapid technical work, the finger last used does not lead to the new position. The fingers move with great rapidity and lightness and elasticity.

When playing trills, the hand must be very free. Elasticity, not strength, is required. Do not raise the fingers too high for attacks. Play close to the strings.

Works edited by great artists are guides for the virtuoso. Average players often need less difficult fingering and bowing; for instance, in Kreisler's edition of the Beethoven sonatas, he used the second and fourth position very often at times, when the average player could use first or third positions better. To be sure, you may say, all advanced players ought to know the fourth and sixth positions, but the fact remains that Mr. Kreisler chose the most difficult way. Artists think of effects. Wise teachers eliminate difficulties as far as possible, without sacrificing the intent of the composer.

———*———

UNFAMILIAR CHAMBER MUSIC

BY RAY G. EDWARDS

It would be a matter of interest to know how many towns in this country can boast an amateur group of chamber music players. I venture the number is not large. In fact, the matter would hardly bear investigating, and upon further thought I believe I am happier to remain uninformed on the point. But I can assure the violinists of the country that half the pleasure of their art is lost in not being familiar with chamber music. By this I do not mean the usual string quartet and piano trio only, for there are many exquisite combinations for strings, by the best composers, in which the refinement and delicacy of expression and intense climaxes afford both pleasure and surprise for the performers.

That there is a scarcity of viola and violoncello players in the small towns must of course be admitted, but no one is to blame for this state of affairs, unless we may point to the violinists themselves. Any violinist can learn to play these instruments and it should not be beyond the ability of any violin teacher to give the technical instruction necessary to make good chamber music performers upon the 'cello. Of course the teaching of viola playing is strictly a matter for violin teachers. And where, as so often happens, one is called upon to teach pupils of limited means, or no means at all, it is an easy matter to shift such pupils to the larger instruments. For the sake of free instruction or reduced rates many pupils would be willing to study the viola or 'cello, and even if not quite so well pleased, it is their contribution to the music life of the community, in compensation for special favors shown. Then, too, such pupils should be considering the problem of earning their way later on, and from this point of view it is important that they have an instrument like the viola or 'cello, one that is always in demand and with which they can more readily turn a dollar than with a violin.

I have said that the players need not lack for inspiring music, no matter what combination of instruments is available. Let us suppose a violin teacher in a small place has only one good violin pupil, and one viola pupil; even so he can have trios for two violins and viola by Beethoven, Mozart, and Mendelssohn, and others less familiar by Manns, Dvorák, Schroeder, and Dancla. There is also an arrangement of fifteen trios by Bach, by the violinist, Ferd. David. And for young players there are trios by Pleyel, Bruni, Clement, Mazas, Suppé, Wichtl, and others.

If but one player each upon the 'cello, viola, and violin can be brought together, we can again head the list with Beethoven, for there are several trios, besides the famous Op. 25, *Serenade* in D. Also many of the piano sonatas and piano and violin sonatas of Beethoven have been arranged for these instruments. Then there are the Haydn string trios, and those by Mozart. Dotzauer and Romberg, the 'cellists, have each composed trios for violin, viola, and 'cello. There are also trios by Mayseder, Naumann, Blanc, Herzogenberg, Hiller, and DeMarin, besides the easy ones for pupils by Spielter, Pleyel, Mazas, Kayser, and Wohlfahrt.

For two violins and 'cello the mere listing of names of composers who wrote for these instruments would be tiresome, but it includes Beethoven, Corelli, Handel, Haydn, Tartini, Viotti, and the easier student works.

For the usual string quartet combination two violins, alto, and 'cello, the literature is limitless; at the least, four players could spend a lifetime just going over the music, and they would have to invest several thousand dollars in their music library.

Of string quintets, where there is an extra viola or an extra 'cello, there is a great variety. With the extra viola we can have quintets by Mozart and Mendelssohn, Haydn, and Spohr, among the old classics, and newer works by Dvorák, Gade, Brahms, Svendsen, Ries, Franck, Romberg, Naumann, Reissiger, Mayseder, Bruckner, Fesca, and Max Fiedler. Have I overlooked Beethoven? Only to mention him separately and to emphasize his great service to chamber music players. In every combination he finds expression, for which let all fiddlers be thankful. For the present combination he wrote several quintets (Op. 4, 29, 104, 137), to which have been added arrangements of several of his symphonies and of the octet, sextet and septet.

The extra 'cello in a string quintet gives us the quintet in A by Glazounov, one in D minor by Dotzauer, one in A minor by Goldmark, besides several by Mozart, Blanc, Boccherini, and a quintet in A by Beethoven, after the *Kreutzer* sonata.

For six instruments, two violins, two violas, and two 'cellos, there are sextets by Brahms, Dvorák, Gade, Glass, Köhler, Franck, Alary, Hofmann, Tchaïkovsky, Molbe, and Raff. Haydn presents a sextet for four violins and two 'cellos; David offers three violins, two violas, and 'cello. There are many other combinations of six strings, by composers of note. The *Symphonie pastorale,* by Beethoven, can be had for the regular sextet.

Coming now to octets, we have the famous one by Mendelssohn, and others less familiar, by Svendsen, Raff, Bargiel, Gade, Afanasieff, Grädener, and Spohr. Many of these are designated "double quartets." Handel's concertos for two violins with accompaniment by two violins, viola, 'cello, and bass should be mentioned as curiosities.

Of the music for strings with flute and other wind instruments, it may be sufficient here to say that the best composers have contributed enough to show that there are possibilities in any combination; it remains for the performers to inquire and get hold of some of this unusual music. Of the better known trios, quartets, quintets, sextets, octets, and the classic symphonies and overtures, pocket editions in score can be purchased for about 25 cents each (except the symphonies), and studied as masterpieces in composition, or for their technical difficulties, with a view of purchase later in parts for performance. They are also extensively used by aspiring conductors, and by concert devotees desiring to read the full score as it is played.

A library of such scores is a valuable asset in the hands of any musician who knows how to use it, and especially to the chamber music player, who should always be reaching up to something higher, becoming acquainted with the classic and modern compositions for chamber instruments. Remember that the man or woman who is prepared for bigger things will sooner or later have the opportunity of doing bigger things. Not, possibly, just the particular thing expected, but something for which he is prepared by the doing of other things. To the lover of chamber music the greatest reward comes in the life-long associations of the music room, just a few friends, appreciative and inspiring. The soloist has his triumphs, but it is a peculiar reflection on the life of a soloist that, nearly without exception, celebrated violinists have found their greatest pleasure in quartet and trio playing.

PEDAL BOARDS OF VARIOUS TYPES

BY H. C. MACDOUGALL

A SHORT time ago THE MUSICIAN sent the following questionnaire to some of the prominent organists of the country:

1. In your judgment, has the superseding of the straight by the concave-radiating pedal board (so far as it has gone) been of distinct advantage to organ playing?

2. Is there any real reason why it should not be more generally adopted in France and Germany?

3. Are standard organ works easier to execute on the concave-radiating board?

4. Considering that organs with the flat pedal board are still in the immense majority in the United States, is there any advantage to students in learning to play with the concave-radiating board in mind and taking lessons on that type of organ, while playing habitually on the other type?

5. Do you consider that the theoretical as distinct from the practical advantages are with the flat board or with its rival?

To these questions replies were received from G. W. Andrews, Oberlin; J. Warren Andrews, New York; W. D. Armstrong, Alton, Ill.; Wm. Benbow, Buffalo; Elias Blum, Walla Walla; John Hyatt Brewer, Brooklyn; J. D. Buckingham, Boston; G. A. Burdett, Boston; J. S. Camp, Hartford; Wm. C. Carl, New York; Charles E. Clemens, Cleveland; E. H. Cosby, Richmond, Va.; H. Brooks Day, Brooklyn; Clifford Demarest, Tenafly, N. J.; Clarence Dickinson, New York; Ernest Douglas, Los Angeles; Ferdinand Dundley, New Orleans; Clarence Eddy, Chicago; J. Lawrence Erb, Chicago; G. H. Fairclough, St. Paul; G. H. Federlein, New York; Charles Galloway, St. Louis; H. B. Gaul, Pittsburgh; C. W. Grimm, Cincinnati; C. G. Hamilton, Wellesley, Mass.; Homer Humphrey, Boston; Edwin Arthur Kraft, Atlanta; Ralph Kinder, Philadelphia; Edward Kreiser, Kansas City; E. R. Kroeger, St. Louis: John Hermann Loud, Newton Centre, Mass.; P. C. Lutkin, Evanston, Ill.; J. J. McClellan, Salt Lake City; O. A. Mansfield, Chambersburg, Pa.; J. P. Marshall, Boston; Frederick Maxson, Philadelphia; C. H. Morse, Hanover, N. H.; G. B. Nevin, Johnstown, Pa.; J. T. Quarles, Ithaca, N. Y.; Sumner Salter, Williamstown, N. Y.; Carl G. Schmidt, New York; H. J. Stewart, San Francisco; E. E. Truette, Boston; S. P. Warren, New York; R. Huntington Woodman, Brooklyn; F. L. York, Detroit.

In looking over this list one misses some notable names, but on the whole it is representative of all schools of organ playing and includes many of our very best players.

As may be imagined, the answers to the five questions disclosed a decided preference for the concave-radiating pedal, which, for the sake of brevity, will be referred to as the C. R. P. board. Nine organists, however, showed a decided liking for the straight pedals (perhaps better described as "flat"); I shall refer to this type of pedal as the F. P. board. The significance of the second question did not seem to be grasped by the great majority of players replying to it. It was framed in anticipation of the fact that replies would be strongly in favor of the C. R. P. board, and it was really a challenge to its advocates to show why, if it is superior, it has not been adopted by the great organists and builders of Germany and France. Most of the replies to the second question are to the effect that excessive conservatism is back of the non-adoption of the newer boards. Those organists who think the F. P. superior to the C. R. P. pay more attention to the second question. I quote some of the replies from both sides. "France and Germany seem to have had sense enough to have left it (the C. R. P. board) alone. To my mind, nothing has yet been devised superior to the old 'Music Hall scale,' as we used to call it." (J. Warren Andrews.)

"The musicians of France and Germany are much more conservative than those of this country, and apparently have not as yet been convinced of any advantage with the C. R. P. board." (E. E. Truette.)

"The principal reasons for the non-adoption of the C. R. P. board more generally on the continent of Europe are that the F. P. board is better for certainty of pedaling and for the acquisition of the legato touch." (W. C. Carl.)

"Organs in France and Germany are not of as much interest to the public; little money is spent on new organs; they are more conservative. We have gone to the other extreme." (H. Brooks Day.)

"I know of no reason why France and Germany should not fall into line, except the influence of tradition. Perhaps their argument is, especially in France, that they have produced fine organists on their pedal board, so why change!" Frederick Maxson.)

"To the average German organist, with his jealousy of British inventions, a C. R. P. board is too utterly un-Teutonic for anything. Consequently he prefers to execute his pedantic fugues and other academic compositions on a board the keys of which are often so far apart as to make legato toe-and-heel work an impossibility." (O. A. Mansfield.)

"I know of no reason save conservatism why the C. R. P. board should not be adopted in France and Germany." (P. C. Lutkin.)

"Much has been said concerning the French and German pedal boards, but it must be remembered that they are radically different, and, in fact, agree only in one respect, namely, that both are 'straight.' The German board with its flat keys and wide spaces is not well adapted to the toe-and-heel method of pedaling; in fact, the pedal passages in the works of Bach are evidently designed for the alternate-feet method of pedaling. Yet the difficulties of Bach's pedal passages are greatly reduced when the organist has the advantage of playing them upon a modern C. R. P. board, where the toe-and-heel system can be freely used. French pedal boards are as a rule much smaller than German, and they are therefore more manageable. Some passages of no great difficulty on a French board would be almost impossible on a German one, for example, the pedal chords in the last movement of Guilmant's first sonata." (H. J. Stewart.)

"The present generation of players in France and Germany has learned to play on the F. P. board, and there are not enough of the C. R. P. boards to warrant the change; it will come, but slowly." (W. D. Armstrong.)

"Concerning Germany, I recall two organ students of German extraction, and a third student from Holland, each of whom could not play on our modern 30 and 32 note board, their unusually large shoe area making it impossible to avoid depressing two notes at a time. An available organ with a 27 note board of the old, wide, straight pattern was successfully used." (Chas. E. Clemens.)

"I think the reason why it should not be more generally adopted in France and Germany is the same reason why it should not be adopted here—that in the long run the straight board is better. I can find no possible reason, after ample opportunity to try out the newer board, both in my own work and with my pupils, for adopting it, provided, of course, that one acquires a good, workable pedal technic in any case." (J. Lawrence Erb.)

(To be continued)

GOOD ENOUGH FOR CHURCH

BY CHARLES N. BOYD

IT would be interesting to know how many persons sang in choirs and played for church services last Sunday in the United States and Canada. Perhaps the figures are available somewhere, but no matter, those so employed would constitute an enormous army.

And think of the different churches and choirs. Here a wealthy church with a high-salaried precentor, and yonder a little congregation gathered in a school house, with one timid maiden to lead the singing. Thousands of quartets, good, bad, indifferent, assist or disfigure their respective services. Volunteer choirs, large and small, exert their varying influences. These hosts of singers are accompanied by an army of organists, playing all sorts of instruments from five manual organs down to melodeons.

Out of this entire number of church musicians, a goodly company of organists, directors, and soloists must decide each week on certain selections to be performed in the church service, and it is to an occasional member of this company that the present remarks are addressed. Taking the organists and singers "by and large," as the saying is, personal pride and musical instinct lead most of them to select their church music with care and respect. But it cannot be denied that occasionally some singer or player excuses a poor composition or inadequate performance with the remark that "it is good enough for church."

When we consider what the architects have thought good enough for church, there rise before us visions of the noble cathedrals of England and France, the stately churches of Germany, and not a few edifices in our own country which are lacking in nothing but venerability. These great structures are supplied with furniture, windows, monuments—a host of details which represent the finest work of almost every craft.

What the clergy have thought good enough for church needs only the suggestion. Hosts of great preachers and writers might be passed in review, all contributing their best.

Among the composers but a surprisingly small number have failed to contribute to the music of the church. Time, place, and circumstance have, of course, influenced their work, in some cases to our present regret, but there is no lack of fine and appropriate music for any of the services of the church.

Taking these and similar matters into consideration, and by no means forgetting the reason for them all, a sad lack of consideration is evidenced by the remark that unworthy music is "good enough for the church." It is not necessary that the music be difficult, it certainly need not be abstruse, but it can never be too good or too conscientiously done for the church.

Perhaps we should not be concerned with the words of vocal music in this connection, but we cannot deny that music has been responsible for the introduction of much "poetry" that would otherwise never find a place in the church service. There is an old and trite saying that what one would be ashamed to speak may safely be sung, and this applies to sacred as well as secular music. Careful reading of the words of many so-called "sacred songs" discloses merely a weak sentimentality.

When "good enough for church" is used as an excuse for poor organ compositions, there is indeed cause for shame. The richness of the organ literature for church purposes is inexhaustible. It has been accumulating for three hundred years; it comes from almost every civilized nation, adapted to services of every sort, and a large part of it is good if not inspired music. This is not a brief for the use of preludes and fugues, sonatas or elaborate concert pieces as voluntaries. If the capable organist wishes to play such compositions, and feels their character in keeping with the service, well and good. But the less experienced player can easily find an abundance of good, easy organ pieces which are well-fitted for church use, and of which he need not be ashamed.

Any so-called church music which would not interest a musician on Monday is of very doubtful propriety in Sunday's services, and to say that "it is good enough for church" is to admit either incompetence or laziness.

———*———

AN ENDOWED CHOIR SCHOOL

Considerable interest was aroused in New York church circles several months ago by the announcement that Mr. Frederick G. Bourne, head of the Singer Corporation, had set aside a fund of $500,000 to endow a choir school for the Cathedral of St. John the Divine.

This is probably the largest gift of the kind in the history of the world, and sets a precedent which deserves imitation. Not infrequently it happens that a man or woman of wealth gives freely to the music fund of a church, enabling the music committee to provide for the musical needs of the organization in a very generous manner. Later, when this support is withdrawn, for one reason or another, the church is unable to keep up the establishment, and the cause of church music correspondingly suffers.

Mr. Bourne's interest in church music has led him to make most ample provision for the musical needs of the Cathedral. A number of years ago he was a member of the choir of Trinity Church, and in this capacity attracted the attention of Mr. Alfred C. Clark, then head of the Singer Company. It was through the opportunities thus opened that Mr. Bourne finally succeeded his patron in the control of the destinies of this powerful corporation. And it is in recognition of the influence of church music in his life, as well as his deep interest in it, that Mr. Bourne has endowed the Choir School of the Cathedral, and thus assured it the funds necessary to carry on the work with success.

It was made a condition of the gift that Mr. Bourne is to be an honorary member of the choir.

THE ORGAN RECITAL---WHY?

BY LAWRENCE EIB

This is the way the program committee of one of the Chapters of the American Guild of Organists put it, in a recent discussion of Guild policy, and the conclusion was much like that of the raw recruit, who was being instructed in his duties and obligations. When asked by his commanding officer why a man should die for his country, he replied, after much deep thought:

"Sure, Captain, you're right. *Why should he?*" Popular and professional indifference made it seem to these earnest men and women as though the game were not worth the candle, and it is not, unless there be some valid reason for it.

I believe it would be entirely safe and just to say that the great majority of organ recitals are given primarily for *advertising purposes*, either in the hope of making the recitalist more conspicuous, therefore more sought after and more "solid" in his position, or in the hope of attracting pupils, or of getting paid engagements for other recitals.

As an advertising medium, organ recitals are as good as they are cheap, and as cheap as they are good. That they are of value is unquestionable, but their value varies with the man and the community and the circumstances. Moreover, in these days of a surfeit of advertising of all kinds, it is more difficult to attract attention than in the simpler times when every street fakir could attract a crowd. (He can yet, but it is usually the crowd with empty pockets, and, mayhap, empty heads.)

Besides, one who adopts this sort of advertising must not feel too badly if the majority of those who are attracted by the novelty of his appeal do

INTRODUCTION RATES — ONLY 3 CENTS FOR A SAMPLE COPY

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS: MIXED VOICES

BURDETT, GEORGE A
No. 12,579. O be joyful in the Lord.....$0.12
A bright, easy setting of this canticle, available for quartet or chorus; very effective for a small choir.

HENRICH, C. W.
No. 12,617. Unto Thee, O Lord, I lift up my voice ..... .12
Serious in style, but not difficult; it has considerable solo work for the soprano, followed by a duet with the tenor.

HOWELL, CHARLES T.
No. 12,565. By the waters of Babylon..... .12
An anthem arrangement of a very popular sacred solo; it has a recitative and short solo passage for tenor or soprano.

NICHOL, H. ERNEST
No. 12,566. The shadows of the evening hours .12
A quiet, easy anthem for the evening service, with solo for tenor or soprano.

ANTHEMS: MEN'S VOICES

GOUNOD, CHARLES
No. 12,589. Send out Thy light.....$0.12
An effective arrangement for men singers of the well-known anthem, originally issued for mixed voices.

MOIR, FRANK L.
No. 12,620. Sanctus ..... .12
A broad melody, with much two-part effect; the organ accompaniment is full of vigor.

ROBINSON, CLARENCE C.
No. 12,555. Be strong ..... .12
In addition to effective part-writing for the chorus, this anthem has solos for tenor and bass.

SALTER, SUMNER
No. 12,598. I will lift up mine eyes unto the hills ..... .12
A work of fine, musicianly character, written for the choir of Williams College, has a strong solo for baritone.

WEST, JOHN E.
No. 12,599. Te Deum, in B flat (Arr. by Sumner Salter) ..... .16
An arrangement which makes available for men's choirs a popular anthem in the standard choir repertoire.

PART SONGS: MIXED VOICES

NEVIN, GEORGE B.
No. 12,593. Young Love, he went a-Maying..$0.12
A lively little song for quartet or chorus, the refrain is in waltz rhythm, a very attractive melody. A good song for Commencement programs.

PART SONGS: MIXED VOICES

PIKE, HARRY HALE
No. 12,538. Medley from the South.....$0.16
Introduces some of the old tunes, such as SWANEE RIVER, DIXIE, OLD BLACK JOE, OLD KENTUCKY HOME, etc. Very cleverly done.

VINCENT, CHARLES
No. 12,541. Merry June (Vocal polka) ..... .12
Just the thing for Commencements, lively in movement and especially pleasing in melody.

PART SONGS: WOMEN'S VOICES

BARTLETT, J. C.
No. 12,570. A dream $0.10
An arrangement of the widely popular song, for four women's voices, introducing humming effects.

GILCHRIST, W. W.
No. 12,571. Three Summer songs..... .20
Three choruses of high musicianly value, by a composer who has a keen ear for vocal effects; they can be used separately or as a group.

LAZARUS, GUSTAVE
No. 12,582. The coming of Spring, Op. 164, No. 1 ..... .10
A short, easy little song in a waltz movement; a good number for a girls' glee club.
No. 12,583. The stars move in measure (Slumber song), Op. 164, No. 2..... .10
A quiet song, with pleasing melody, for three-part chorus.

PART SONGS: MEN'S VOICES

STEBBINS, G. WARING
No. 12,641. Ode to March.....$0.16
A fine concert song, with striking descriptive effects; with piano accompaniment.

MUSIC FOR SCHOOLS

JENSEN, ADOLF
No. 12,609. The mill $0.08
An effective arrangement of a classical melody.

SCHRAMMEL, JOHANN
No. 12,649. Away to the woods..... .08
A vocal arrangement of a favorite march for band or orchestra; it makes a good piece to use as the opening number on a school program.

NEW ORGAN MUSIC

The Organ Students Bach

Edited by JAMES H. ROGERS
Ditson Edition, No. 193
Price, 63 cents net

The purpose of the editor has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master.

Thirty Offertories for the Organ

Edited by JAMES H. ROGERS
Price, $2.00, postpaid

A new volume uniform with the popular **30 Preludes** and **30 Postludes.** The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is bound in cloth and is in every way a distinct addition to the organists' collection.

Thirty Organ Pieces for Use in Christian Science Churches

Edited by WALTER E. YOUNG
Price, $2.00, postpaid

This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth. It is just as desirable for use in other churches.

as they are wont to do with the free sample which is landed in at the kitchen door—use it, or throw it away, as the case may be, and then keep on patronizing the same old standby. Of course, even in such case, the *net* gain may justify the expenditure, if one is not too hopeful, for there will be at least the publicity.

But, frankly speaking, this phase of the question is hardly worth considering in a serious discussion, for it is strictly a personal matter and has to do primarily with the business end of the musician's activity. What we are more concerned with is the justification of the organ recital from the point of view of its artistic or educational value, or its contribution to the social welfare of the community.

Putting it just this way states the case for the organ recital perhaps as well as it may be stated in a sentence. First, then, if it is to be justified, the organ recital must be *artistically* worth while. Now, I suspect that one reason why organ recitals are so often taken lightly by the public is because the recitalist does not take himself or his task seriously enough. In these days of musical advantages of all kinds, when even the remote frontier may have the Victrola and the most untutored fingers may "play" the Pianola, ears are being unstopped and intelligence awakened, and a degree of *accuracy* of performance, for one thing, is required that a generation ago was unnecessary.

Moreover, when the church organ was the only instrument heard, and that only once a week, standards of instrumental performance were lower than now, when the hearing of instrumental music of some sort or other is well-nigh universal. Possibly organists have not always been the first to appreciate the new order of things, for, undoubtedly, much that is unworthy in material or slipshod in performance is still perpetrated, even in recitals, although the American Guild of Organists and other organizations have done much in raising standards of performance.

Hence, the primary function of the organ recital everywhere, especially in the more important musical centers, must be artistic—it must contribute to the musical life of the community its own particular and distinctive elements.

Right here enters the much discussed question of the transcription, which, it would seem, ought to be answered in the same fashion as the broader question of the recital itself, on its artistic merits. Where a composition may be really beautified and made more worth while by playing it on the organ, I can see no reason why it should not be so played; or where it is paraphrased and made into a characteristic organ composition, there should be no objection. The realm of musical literature of all kinds is full of examples, both successful and unsuccessful, that ought to serve to point the way. The great objection to many transcriptions, especially from operatic or orchestral scores, is that they actually *rob* the composition, instead of enhancing its beauty.

The educational phase of the organ recital opens wide vistas. The literature for the organ is in itself of the highest importance and includes much of the best product of the master-minds. Of course, Bach has had his fair share of exploitation—often unwisely done, it must be admitted, and not serving to add to the true appreciation of his works—and in the minds of many persons (and they are not all laymen, by any means) the serious literature for the organ is well-nigh comprehended in Bach preludes, fugues, toccatas, etc. At the other extreme are such composers as Batiste and Wély, of the saccharine French type, long since supplanted in their own country by the giants of the generation just passing, though the type still persists and is proudly exploited by many organists.

Of the great body of distinctive organ music since Bach, or even contemporaneous with or antedating Bach—and the list of composers includes many of highest rank—the great majority, even of the musically intelligent people (and, may we whisper it, some of the organists, too), are absolutely uninformed.

Here is a wonderful opportunity for the organist who is also an educator. It would be futile to attempt to name even a portion of the excellent material which might be worked up into recitals, but I cannot leave the subject without referring to three giant figures of the past generation who should loom big in any scheme of organ recitals, whether educational or otherwise, namely, Guilmant, Rheinberger, and Merkel. Each of these men is as individual in his style as Chopin, and, save for the handicap which arises from their being organ instead of piano composers, should be as well, and, in their special field, as favorably known. All have written voluminously and in various types of composition, and each furnishes a great variety of material from which to draw.

But these names merely point the way to many more, some scarcely less worthy of perpetuation, and, in a few cases, like Handel and Mendelssohn and Brahms, of even greater weight. Then there is a large number of contemporary composers for organ who are worthy of the greatest consideration and whose works furnish a large body of beautiful music, much of it eminently suitable for recitals.

Then, of course, in communities where the opportunities for hearing music are limited, the public-spirited organist must supply wholly or in part the good music which the community ought to hear. In this connection, of necessity, transcriptions and arrangements of all kinds must figure largely, and it is in this connection that they are most useful. Just as the minister and the schoolmaster between them are the leaders of literary culture and literary enterprises in many a small town or city, so the organist must be the leader in esthetic matters, and a great responsibility (and privilege) rests upon his shoulders. There is no question that the organists of the land have done and are doing a great missionary work which has, to a very large extent, depended almost wholly upon them for the doing. The organ recital has been a tremendous factor in the dissemination of musical culture, and its work is by no means completed.

But there remains a third important justification

for the organ recital, which might well be cal'ed its "social" value, that is, its value as an asset toward social uplift in the community life. I do not now refer to its value as a *social function,* which is, like the advertising features mentioned earlier in this discussion, a matter for personal appraisement, but to its real value in raising the standards of community life. I still remember with pleasure an experience in my first college position, many years ago, when the mother of two boys who were both members of the Glee Club (and "live-wires," too) came to me with the tribute, "You don't know how thankful I am that my boys are interested in their music, for they spend their evenings at home, with their friends, singing their college songs and playing their mandolins and having an evening of good, innocent enjoyment. I need not *worry* about where they are or what they are doing."

"But,"—and I can see in fancy the indignant faces of a multitude of serious musicians—you say, "do you suppose I would sacrifice My Art to the end simply of amusing a parcel of boys and keeping them off the street? Is that all that you consider My Art good for?" And I answer that, in many cases, to have it good for so much would be to have it worth a good deal more than it is at present. We boast a great deal of the value of music as a cultural medium, and try to prove that it has in itself an uplifting moral influence—and no one believes these things more implicitly than I —yet all we do in many cases with out Art is to furnish us a living and a little selfish satisfaction because we "are not as other men."

Now, if music is valuable as a cultural and moral force, it and its practitioners owe the world all that they can give toward the social uplift. Therefore, the concert or recital, free or otherwise, is an important social factor (using the term in its larger sense) to which the community has a right, just as it has a right to any other upbuilding influence. They are beginning to see this more and more in our largest cities, where the best local artists are glad to appear at concerts of good music for the masses, either at a nominal charge or free of all cost. And I maintain that here is one of the greatest opportunities for the organist. Many a person will attend an organ recital in a church edifice who will not participate in any other form of worship. Many a person will respond to music who will scoff at practically every other appeal to the higher nature. I sometimes wonder whether the true musician is not, after all, a sort of priest, but ministering to a *sense* rather than to a definitely formulated religious creed. At any rate, with the idea of social service in mind, he may well exploit all of art or of educational value that his good taste and his executive ability are capable of, and here at least, if he forgets self and remembers the goal toward which he is striving, he will reap a golden harvest.

———*———

THE ECHO ORGAN

BY H. C. M.

When one reads in *Le Guide Musical* that there is a regular battle on between the theatre and the moving picture show, that authors and actors do not perceive that they are killing the goose that lays the golden egg when they accept the seductive offers of *le cinema,* that complaints from the theatres all over France, Germany, Belgium, and Italy are general, and that, for example, the theatre in Hamburg is so hard pressed that Herr Loewenfeld, the director, announces his purpose to give it up unless the municipality increases its contribution, one cannot help wondering what will be the effect of the all-devouring cinematograph on music. If the theatres go, a large number of orchestral musicians will be out of employment, although it is possible that if the moving picture is developed, the orchestra again may be asked for assistance. It is more than probable, however, that *"le cinema"* and the talking machine will make a combined onslaught on both the drama and music.

But let us not lose our courage just yet!

* * *

Have many readers of The Musician seen the series of articles by Professor Niecks on *Phrasing in organ playing,* just concluded in the March number of *The Musical Record?* They are extremely suggestive and attack the organ on its weakest, that is, its rhythmical, side. There are also constructive hints of much value. Niecks' purpose in writing the articles was to help towards an increase of popular interest in organ playing on the part of the public. He says: "I am convinced that organ playing needs brightening very much if the public's interest is to be kept up. The organ is a noble instrument of great capacities and of virtues quite its own, and it would be a misfortune were it to be allowed to fall into disfavor."

* * *

In a discussion as to the legitimacy of arrangements for the organ, we often lose sight of the effect on the player himself. While I approve of arrangements (1) if well made, and (2) if well played; I see quite clearly that in one aspect of the case they are harmful to the player, and, from another, helpful. For example:

In playing arrangements, is it not true that the average organist, knowing that he is playing not the original, but the original made over, will consider himself quite at liberty to "arrange" the arrangement? And will not the conscience of a man who tinkers with arrangements finally get so weak that he will tamper with everything that he plays, omitting a bit here, putting this up or down an octave, adding pedals or taking them out here and there, as his "taste" suggests? In other words, ought not loyalty to the printed text on the whole to be expected, and is it not discouraged by the "arrangement"?

* * *

On the other hand, I know no more stimulating or enjoyable task than the translation of an orchestral score into terms of organ tone. It makes no difference what the score be, whether the overtures to *Zampa* or the *Vorspiel* to *Parsifal,* either is equally useful. An organist who has never tried making his own arrangements can have only a superficial estimate of his instrument's powers.

To arrange piano pieces, especially those of a strikingly pianistic type, is also equally to be recommended. The attempt at such arrangements involves a study of organ equivalents leading to a more profound knowledge of the instrument. I do not go so far as to recommend adapting Chopin's *Fantaisie Impromptu,* or Debussy's *Clair de lune,* or pieces involving a wide keyboard dispersal, but it would loosen the rheumatic joints of many a player to work up Mendelssohn's *Rondo capriccioso,* or the *Spinning Song,* or the Chopin *Nocturne* in F♯.

* * *

How long will it be before the characteristic organ style will be modified by the whole-tone scale and by the experiments—I had almost written "vagaries"—of Stravinsky, Schönberg, and Scriabine? The organ, through its lack of easy rhythm, is essentially a conservative instrument, and it will participate in the impressionistic and futurist reaction late, if at all. The sophisticated, elided, and altogether complicated discordance of the present day is softened on the piano and, when judiciously instrumentated, in the orchestra. On the church instrument, however, everything comes out unmitigatedly, in honest, flat-footed fashion; and I think it will be a long time before we have *grandes choeurs a la* Scriabine, or *Toccatas* with Schönbergian harmonies.

I imagine that I have harrowed the feelings of my conservative readers long enough. Let me therefore say that after they are made, the arrangements should be left in the attic cupboard; the making of them was their own reward!

MERCERIZED BROCADE

There is a rarer thing than a day in June, and it is a perfectly normal woman.

The "Natural Line" Corset produces this "rare" woman.

The "Natural Line" Corset does this because it supports the abdomen correctly. It reduces the hips and gives poise to the body.

Each "Natural Line" model is designed for some particular woman's form, to enable her to have style, comfort and health.

Sizes, 19 to 36 waist

Prices, $3.00 to $35.00

For the musical "student" the "666" model in French batiste, at $3.00, fills a long felt want.

Model "401" Price, $8.50
Front-Laced for Health

WHAT SHALL BE DONE ABOUT THE CORSET?

(*Continued from page* 411)

It is one of those things about which people talk and argue, while the women go ahead and do as they see fit.

There appears to be no question but what, if a woman has become accustomed to a tight corset, she feels altogether lost without it, so much is the human body the creature of habit. I have had them tell me, and women who meant business, that without the corset all their support was gone and they could neither breathe properly nor sustain a tone.

To a man it seems so foolish for women to constrain themselves in this manner that they usually lose their tempers when talking about the subject, but, nevertheless, the women will do it, and their extraordinary bodies adjust themselves to conditions whereby they are enabled to sing. There is no use in disputing the facts. Women in great numbers wear tight corsets, putting themselves thereby in serious physical discomfort and grave danger to their health; but so long as fashion decrees that a small-waisted woman is beautiful, so long she will continue in her present way, and let her voice take its chance with the rest.

When we were young we expected to see the time when something decisive would be done about the matter; now we are not so sure.

———*———

A SINGER'S CORSET

BY CHRISTINE MILLER

I BELIEVE that most women are benefited by wearing a well-fitted corset, and especially a singer.

A corset which fits snugly (not too tightly, of course) about the hips and abdomen (and which acts in a measure as a support to the abdomen), and which comes only about two inches above the waist-line helps in the matter of breath control very greatly.

It must be loose enough at the waist to leave the diaphragm quite free for the necessary expansion, and yet assist the abdominal muscles in supporting the breath.

The style of the corset of today is well adapted to the singer's needs.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

"WILL you tell me what is the best use a teacher of piano can make of her summer? I see a number of summer schools advertised in different papers, and would like to know your opinions regarding them."—E. S. G.

I judge from your question that you have never attended any summer school for teachers, for if you had, you would never be in doubt as to the best way to spend a part of your summer. Living, as you do, in a small town, where you have but few opportunities to hear good music and no opportunities to discuss teaching material or methods, you must be in need of practical helps as well as of the stimulation which you will receive from "talking things over" with the first-class educators of the country.

When I began teaching I attended one or more "teachers' classes" yearly, and it is to these sessions that I feel I owe most of my success in teaching. There is such a vast difference between studying the piano from a playing side and from the teaching side, and in these classes the round tables alone are of inestimable value to the earnest teacher. For it is not alone from the teacher who is conducting the class that one learns, but from the teachers present. Many valuable and helpful suggestions come from these workers, who represent all classes and conditions, and, sometimes, nearly every state in the Union.

As to where to go, you must decide. Location, climate, expense must all be considered, and that is a matter as to which, obviously, we cannot pretend to advise. In almost every city good work is being offered, work which costs the teacher very little in comparison to what it can mean to her for a successful teaching season. Try combining your vacation with this special study, and I think you will return to your following refreshed in body and soul.

* * *

"Is it necessary for me to give a graduating recital?"—C. W. B.

I judge you mean "Closing Recital," for no one pretends to give graduating recitals in music any more. There is always so much ahead of us to accomplish that "graduating" is out of the question. Most schools give "closing" programs, although personally I never do. I like to ease up on the work in June rather than to keep the pupils on a strain when they are all tired out with school examinations. In my school I give my principal recitals in the Easter vacation, as the work is generally at its best at that time.

It is certainly necessary to have students show what they are doing and how much they are growing. Also we owe it to them, as a part of their music education, to give them the opportunity of acquiring poise through public performance. Monthly playing meetings, in which nearly every student takes part, seem preferable to me to the closing recital.

* * *

"I use a graded course of studies for the piano, and try to grade accordingly. If a pupil needs Czerny's *Velocity*, which has forty studies, with which grade should they begin, and through how many grades should they extend?"

All graded courses are made in order to avoid giving the complete works of any one writer. No pupil should need the Czerny velocity studies complete after going through seven grades of such books. If the pupil appears to need them, it is because sufficient drill has not be given in the grades to secure evenness of finger and the other qualities which go to make up good piano playing. Try special technical exercises to develop strength and evenness and scale practice in rhythmic tables for passage of the thumb and endurance, some of the practice being with metronome to secure definite progress in speed. Along with this give plenty of Bach and some brilliant pieces like the *Rigoletto* of Liszt or the B♭ minor *Scherzo* of Chopin, and I think you will find the complete volume mentioned above unnecessary. Pieces and fundamental technic are what bring out the seventh grade pupil. Make exercises out of each difficult passage, and when the difficulty is conquered there is something to show for the work.

* * *

"How do you treat a dull pupil. I have one who has studied for over a year, but cannot play in a satisfactory way such things as Köhler's exercises, Op. 157, *Twelve Little Studies*. She seems interested, however."—E. S.

The studies to which you refer are not of a nature to arouse a student. Many pupils seem very dull on certain material, whereas if a change of books is made the mental lethargy disappears as if by magic. Try some modern material by American writers, and teach chords and the pedal very early, bringing out the expressive side of music, and this attitude will change. Open up the art of music to her. Explain the relationships and have some easy transposition work done, and she will soon find herself and surprise you. I believe there are very few really dull pupils. It's the teacher who is dull and calmly gives up when she should be fighting hardest. If a pupil doesn't appear to learn, change your material and your method of approach until you find the avenues through which you can reach her.

There are a thousand ways of doing it through rhythm, melody, or harmony, and the modern material, issued by the American publishers, will give you many suggestions.

* * *

"Can you give me some ideas as to how to develop a taste for sight reading? I have tried duets, but with no apparent improvement. My students memorize everything, and to secure reading is my great problem."—C. M.

They say readers are born and not made, but still I feel we can do something toward creating an appetite for reading. Most students do not read because they care nothing about music. They practise the allotted time, but to go to the piano and read some music as they would pick up a book to fill an idle hour is a thing unheard of. The secret of the whole thing lies in creating a taste for reading. If we can do that the pupils will read whether we ask them or not.

I have taken a new stand this winter in my following, and it has proven very helpful to the students. At every playing meeting I have engaged an artist either to sing or to play on some other instrument besides the piano, and at least three pupils have done the accompanying each time. The accompaniments are played from notes and must be extra work, but it is given as a privilege to those students who are willing to work. One of my little tone-deaf boys has played each time with the artist, and the most remarkable change has taken place in him since this experience has come to him. He realizes now that music is something more than ordinary piano playing, and his point of view has changed entirely. I have engaged none but the best artists procurable in the city, and it has been a wonderful thing for the little children as well as for those who are just at the hard age. I find that the children who have played with the artist are reading now of their own accord. They realize that it's worth doing and that "it's fun." Theory work and the sight reading books of Miss Frothingham and Mr. Mokrjes are very helpful, but it's the appetite for reading that must finally be taken into account. The only way to learn to read is to READ. Therefore, unless the student *wants* to read, speaking of it once a month will do no good. It's up to us, as teachers, to make them want it. The experiment above described has been a wonderful thing for my flock.

* * *

"What shall I do with a pupil who will practise only a certain kind of music? I have one who plays melodies beautifully, but will not practise any running work at all. She is in the fifth grade in melody and far behind in scale work. I would so appreciate some suggestions."—H. E. S.

I would suggest practising more technic with her, having her work with you three times a week, if only for fifteen minutes. Give her an easy study and show her different kinds of practice to bring up the speed and work on them with her. Then use pieces which combine melody and running work, like Merkel's *Butterfly*, or, if that is too easy, the *Song to the Evening Star*, Wagner-Liszt. You can omit the *Recitative* and begin with the melody or *Romance* proper. A piece like the *Valse mignonne*, by Philipp, is also very useful. I am a firm believer in technical work with the pupil, that is, working with the student to interest her in technic and technical work. If the student understands *how* to do a thing and *what it's for*, the practice is necessarily more intelligent. I prepare my pieces with technical exercises, and the students soon learn that if a scale or arpeggio is given, in all probability, I am preparing some piece which will use this particular scale or arpeggio, and therefore they "get it ready" for musical use with the least possible delay.

* * *

"Am inclosing a copy of a few measures of the accompaniment of the song *Love of an Hour*, by Mary Turner Salter, for explanation of the two measures I have marked with a (x).

"What is meant by the use of a sharp in parenthesis when C is sharped in the signature? Is the second measure to be an exact repetition of the first? In both measures is the B♭ to be struck on the first count and held through the measure as it has been in the two measures before?

"This song I found in my last number of THE MUSICIAN."—L. M. C.

The measures to which you refer are a little misleading. When an accidental is written in parenthesis the player is generally at liberty to disregard the accidental if he so desires. In this particular place the C is sharped in the signature, and the composer evidently feared that the player might play C instead of C♯, which is required to give the harmonic effect wished. Both measures are alike, except that the second is an octave higher, a leger line being omitted by the engraver causing the desired C♯ to appear as a D.

The B♭ is a part of the chord on the first beat and should be a dotted line lasting all through the measure.

The passage would have been clearer, it seems to me, if written in the key of B♭, that is, changing the signature to two flats.

GENERAL NEWS ITEMS

THE Chicago Madrigal Club, D. A. Clippinger, conductor, offers its 12th annual competition for the W. W. Kimball Prize of $100 for the best setting for chorus of mixed voices, *a cappella*, in madrigal style, of a poem entitled *Nymph and Swain*. Copies of the poem and a circular giving full instructions to composers can be secured from D. A. Clippinger, Kimball Hall, Chicago. The contest closes Oct. 1.

A MUSIC FESTIVAL will be a prominent feature of the exercises at the New York Chautauqua Assembly, July 27 to Aug. 1, in celebration of the 40th anniversary of the Institution. Victor Herbert's Orchestra, the Schubert Club, of Schenectady, N. Y., the Chautauqua Choir, and soloists will form the festival forces, which will be under the general direction of Alfred Hallam.

THE Choral Society, of Larned, Kan., Mr. W. B. Kinnear, conductor, gave selections from *The Messiah* and *The Creation*, April 28. The Society has 30 members.

SINDING'S new opera is entitled *The Holy Mountain*, and is dedicated to Arthur Shattuck, the American pianist. The first performance at Dessau, April 19, was a big success.

DR. ERNST KUNWALD has been re-engaged as conductor of the Cincinnati Symphony Orchestra, for a period of four years. The next season the Orchestra will give 16 rehearsals and 16 concerts, with a popular series of 10 concerts.

SIBELIUS, the Finnish composer, wrote a new tone-poem for orchestra, which is to be produced for the

THE BEST-EQUIPPED ELECTROTYPE ESTABLISHMENT IN NEW ENGLAND

first time at the Norfolk, Conn., Festival, early in June. There is a possibility that he may come to the United States to conduct the work. Other novelties for the Festival are a tone-poem, *Lucifer*, by Henry K. Hadley, and a posthumous piece, an orchestra rhapsody by Coleridge-Taylor.

MR. EMIL MAHR, a veteran violin teacher of the New England Conservatory, died March 31. Mr. Mahr was born at Wiesbaden, March 25, 1851, and was a pupil of Joachim. He joined the faculty of the Conservatory in 1887.

THE Austin Organ Company, of Hartford, Conn., will construct the organ for the Panama-Pacific Exposition. It will have 113 speaking stops, and will become municipal property after the Exposition has closed.

THE People's Choral Union of Boston, F. W. Wodell, conductor, sang *Elijah*, April 26. The society has a membership of 400 and is self-supporting. Each member pays ten cents for each rehearsal.

CINCINNATI'S 21st biennial May Festival was held May 5-9, under the direction of Dr. Ernst Kunwald, conductor of the Cincinnati Symphony Orchestra. The chorus numbered about 350 voices, and was assisted by a chorus of children and a choir of boys. The choral works given were: *The Damnation of Faust*, by Berlioz, Bach's B minor *Mass*, Verdi's *Manzoni Requiem*, and Beethoven's *Choral (Ninth)* symphony.

THE Wisconsin State Music Teachers' Association met at Milwaukee, Wis., April 20-22, Prof. Arthur W. Locke, of the University of Wisconsin, presiding.

THE 1914 meeting of the Indiana State Music Teachers' Association was held at Logansport, April 30 and May 1. A good program was arranged by the chairman, Mr. Milton Griffith, of South Bend. About 150 members were in attendance.

ST. LOUIS is the place of meeting for the 19th annual convention of the Missouri State Music Teachers' Association, to be held June 23-25. Mr. Wort S. Morse, of Kansas City, is president, and Mr. Alfred G. Hubach, also of Kansas City, secretary.

TITO MATTEI, the famous song composer, died in London, March 30. He was born at Campobasso, near Naples, May 24, 1841. He was only five years of age when he first appeared in public, studied in Naples as a boy, and was also under Thalberg for a time. He began his professional career as a pianist, and did not take up composition until later. In 1863 he settled in London, where he made his home until his death. He wrote many songs which had wide popularity, such as *Non è ver* and *Dear Heart*, and a piano piece, *Grande valse de concert*.

ERNEST HUTCHESON will be at the Chautauqua Assembly, Chautauqua, N. Y., during July and part of August, in charge of the piano department of the School of Music, returning to Berlin in the fall.

GEORGE W. CHADWICK, director of the New England Conservatory of Music, Boston, has written a chorus for male voices which is to be sung at the 50th anniversary of the Concordia Singing Society, of Leipzig, next fall. Mr. Chadwick was a member of the Society during his student days, and has kept an honorary connection since then.

STATISTICS of the season of the Century Opera Company of New York make rather interesting reading. Twenty-five operas were sung at two hundred and twenty performances, and heard by four hundred thousand persons. The cheaper seats, ranging from twenty-five cents to one dollar, were entirely sold out at ninety per cent of the performances. In the case of very popular operas, such as *Madame Butterfly* and *Tales of Hoffmann*, many were turned away for lack of room.

A GERMAN statistician has published some interesting facts in regard to the longevity of musicians. He limited his researches to the period from January 1, 1870, to December 31, 1913. He found that of more than 4,000 musicians who died during that period the average duration of life was sixty-one years, certainly a fairly ripe age in these strenuous days. There were nearly seventy suicides among the number, the larger proportion being women singers; thirty of the musicians considered died insane.

THE salary list of the Chicago Symphony Orchestra is $24,000 greater than it was nine years ago.

THE Marshall Field & Co. Choral Society, of Chicago, gave its second concert for the present season, April 16, under the direction of Mr. Thos. A. Pape. Sullivan's *Golden Legend* and Grieg's *Olaf Trygvason* were the principal choral works performed.

GEORGE W. STEWART, director of music at the Panama-Pacific Exposition, is a Boston musician, and manager of the Boston Festival Orchestra. He is well qualified to direct the many-sided work at the Exposition.

THE New England Conservatory Choral Club, Mr. Charles Bennett, conductor, gave a delightful concert, April 3. Among the choral numbers was *The Sea Fairies*, by Mrs. Beach.

FOUR concerts, instead of three, were given at the 11th Annual Musical Festival, University of Kansas, Prof. Charles S. Skilton, conductor, April 15, 29, and 30. The St. Paul Symphony Orchestra assisted.

COMPOSERS who are British subjects are offered an opportunity to compete for a prize of $250 for the best original string quartet on lines laid out by Mr. W. W. Cobbett. The full text of the conditions can be obtained by addressing Mr. Cobbett at 52 Circus Road, London, N. W. The contest closes December 31, 1914.

CORNELL UNIVERSITY held its ninth annual Music Festival, April 30-May 2. Grieg's *Olaf Trygvason* and Gounod's *Faust*, in concert form, were the principal choral works sung by the Festival Chorus under the direction of Prof. Hollis Dann, of the University. The Chicago Symphony Orchestra assisted.

THE CECILIA, the choir of the Western Theological Seminary, Pittsburgh, gave its 11th annual program of rarely-heard church music, May 4, under the direction of Charles N. Boyd. The program included Bach's church cantata, *My spirit was in heaviness*, and unaccompanied choruses by Italian and Russian composers.

NEW YORK NOTES

THE Olive Mead Quartet gave a concert before the People's Symphony Club at their last concert, April 7, in Cooper Union, assisted by Cecile Behrens, pianist. The Quartet gave Mendelssohn's quartet, Op. 12; Glazounow's *Interludium*; a movement from a Grieg quartet, and Schubert's quintet in A Major.

THE second private concert of the Singers' Club, of New York, was given in Aeolian Hall, Wednesday evening, April 15. The soloists were Madame Schnabel-Tollefesen, pianist, and Arthur Philips. The Club, in addition to other numbers, gave *Love's pinions*, by Frank Seymour Hastings, its president.

THE members of Musicolony gave their last dinner of the season at Restaurant Roma, April 15. There was a delightful evening of music and good fellowship. Those contributing to the musical program were Walter L. Bogert, Robert Stuart Piggott, Louise Martin, John Nichols, Marion Winant, and Dr. Lawson.

MRS. MARIAN MACDOWELL gave a lecture recital on *MacDowell and his ideals* for the Phi Tau Kappa Club, at the Old First Presbyterian Church, April 20.

APRIL 17 a piano recital was given at the Von Ende School by Mrs. Edmonds Putney, a pupil of Sigismund Stojowski, Otillie Schilling, soprano, assisting. Schumann's *Papillons* was given, besides numbers by Handel, Tchaïkovsky, Stojowski, and Paderewski.

ETHEL LEGINSKA, pianist, and Marie Caslova, violinist, were heard, April 21, in a joint recital at Aeolian Hall. Schubert's *Rondo* in B minor, for violin and piano, and Sinding's sonata in D minor were the numbers contributed. Leginska also played a Chopin group, and Caslova the Saint-Saëns's *Havanaise* and Kreisler's *Tambourin Chinois*.

HELENE KOELLING, soprano, gave a recital at Aeolian Hall, April 23. In addition to songs by the classical composers she sang compositions by Mary Helen Brown, Dagmar Rübner, and Gena Branscombe.

MADAME IDA HAGGERTY-SNELL gave a delightful musicale at her Broadway studios, April 25. Madame Snell's large following was well represented on this occasion and creditable work was done by her class of pupils.

THE Oratorio Society, Louis Koemmenich, conductor, gave Schumann's *Ruth*, April 25, at Carnegie Hall, with Florence Hinkle, soprano; Mildred Potter, contralto; Arthur Middleton, bass; and Foster Why, bass.

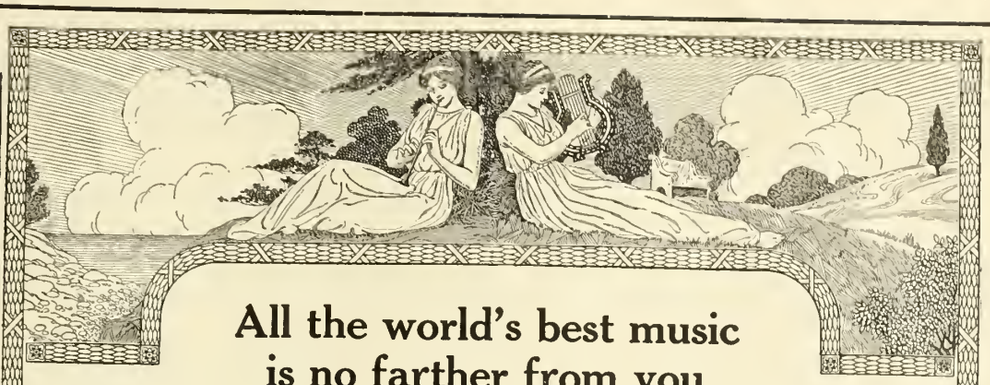
MADAME JEANNE GERVILLE-REACHE, prima donna contralto, has been engaged as soloist for the 20th annual musical entertainment for the benefit of the Norfolk Missionary Society, which will take place at Norfolk, Conn., July 29.

———*———

ACTIVITIES OF THE MACDOWELL CLUB

MR. WALTER BOGERT, Chairman of the Committee on Music of the MacDowell Club, sends us an interesting report of the work of the Club during the season which is now coming to a close. From the report we select the following items:

In all, fourteen musical events were scheduled, among them a song recital by Reinald Werrenrath, baritone; a lecture recital, on *Songs of the Hebrides*, by Mrs. Kennedy-Fraser, of Edinburgh; a joint recital by Mme. Lambert, formerly of the Paris Opera, and Miss Ethel Altemus, pianist; a lecture on *Pageants* by Arthur Farwell; a recital by Harold Henry, pianist, of Chicago; a composers' evening, the program made up of works by Rubin Goldmark, Sigismund Stojowski, Howard Brockway, and Bruno Huhn; a program of *Spanish sacred songs* by Hugo Wolf, sung by George Harris.

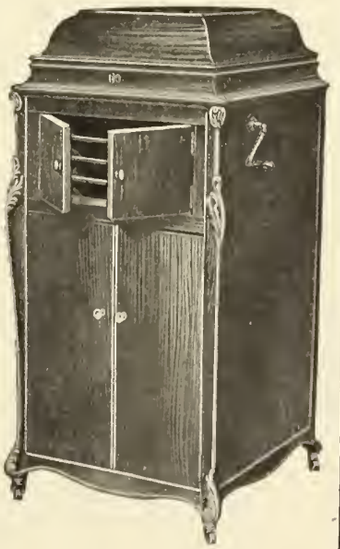


All the world's best music is no farther from you than the Victrola

The world's best music, superbly rendered by the world's greatest artists—Caruso, Melba, Tetrazzini, Paderewski, Kubelik, Mischa Elman, Sousa, Pryor, Victor Herbert, Harry Lauder, Christie MacDonald, and Blanche Ring are a few of the famous artists intimately associated with the Victrola.

Its exquisite renditions are a source of cheerfulness and inspiration alike in the homes of wealth and prominence, in the homes of discriminating music lovers, in the homes of thousands upon thousands who can hear the best music in no other way.

Your home would be brighter under the charm of the Victrola's beautiful music, and it will be a constant delight to every member of your family.



Victrola XVI, $200
Mahogany or oak

There are Victors and Victrolas in great variety of styles from $10 to $200, and any Victor dealer in any city in the world will gladly demonstrate them to you.

Victor Talking Machine Co.
Camden, N. J., U. S. A.
Berliner Gramophone Co., Montreal, Canadian Distributors

Always use Victor Machines with Victor Records and Victor Needles—*the combination*. There is no other way to get the unequaled Victor tone.

New Victor Records demonstrated at all dealers on the 28th of each month

WITH THE SCHOOLS AND TEACHERS

MR. DANIEL SILVESTER, of Worcester, Mass., has organized a symphony orchestra of about 50 players. The plan is to hold rehearsals on Sunday afternoons, the works selected for study consisting of the classics and standard symphonies and overtures. The management of the Orchestra expect to receive an appropriation from the city for a series of Sunday afternoon concerts.

PUPILS' RECITALS were held at the Faelten Pianoforte School, Boston, May 2 and 7. The work of the Ensemble Classes was especially interesting.

MRS. DAVID GAIRAUD, San José, Cal., sends us a program of a recital given by her vocal pupils, April 16. Twenty-five pupils took part.

MISSES ALIDA J. KOCH and HAZEL M. BAYLES, post-graduates of the Kroeger School of Music, St. Louis, gave a graduating recital program, May 1.

THE Choral Club, of Hartford, Conn., Ralph L. Baldwin, conductor, gave its second concert for the present season, April 24. Arthur Foote's *Farewell of*

Hiawatha, for men's voices, was the principal choral work. The Club has a membership of about 70.

MR. EDWIN HALL PIERCE, of Auburn, N. Y., gave an organ recital at St. John's Church, April 16, assisted by Roderic Pierce, 'cellist.

MR. T. CARL WHITMER'S class in composition at the Pennsylvania College for Women, Pittsburgh, gave the annual recital of original compositions, May 7. The program included pieces for voice, violin, and piano, by 12 pupils.

MR. RUSSELL CARTER, organist, and Mrs. Flora N. Kerean, contralto, gave a recital in St. Ann's Church, Amsterdam, N. Y., April 18 under the auspices of the Central New York Chapter of the A. G. O.

THE Symphony Orchestra of the Northwestern University School of Music, Prof. Harold E. Knapp, conductor, gave its sixth concert, April 30. The orchestra numbers 70 players.

MR. HENRY DOUGHTY TOVEY, assisted by Mrs. Gather and Miss Oates, of the faculty of the University School of Music, University of Arkansas, gave a program of classic dance music before the Tuesday Musical Club of the University.

MR. GUSTAV L. BECKER, a well-known pianist and teacher of New York, presented seven of his pupils in a "Musical Afternoon," March 20.

THE Choral Music Society, of Boston, Mr. Stephen S. Townsend, conductor, gave a concert of works by César Franck, April 29.

THE Cosmopolitan School of Music, Chicago, gives a public recital every Saturday afternoon during the teaching season. April 18 the program was supplied by pupils of the school, playing pieces for the voice, violin, 'cello, and piano.

MR. LOUIS ARTHUR RUSSELL, of New York, will conduct a four weeks' summer course at St. Mary's Academy, Columbus, Ohio, and will also arrange for his usual teachers' courses at his school in Newark, N. J.

THE Ashland (W. Va.) Choral Club, Mr. Nelson Weedon, conductor, sang Stainer's *Crucifixion* and Sphor's *God, Thou art great* at its concert, April 17. Mr. J. Henry Francis, of Charleston, was the organist.

MR. LEROY B. CAMPBELL, of Warren, Pa., will accompany the Dunning Co. European Tour, this summer, as lecturer on music and the other arts.

MR. G. O. HORNBERGER'S sonata *Finlandia*, Op. 91, for 'cello and piano, was performed at the Tonkünstler Society, Brooklyn, April 7, and at a private meeting of the National Arts Club, New York, April 17. The theme of the sonata is the national Finnish spirit as shown in the recent political disturbances.

MR. EDGAR STILLMAN KELLEY'S *Quintet* for piano, two violins, viola, and 'cello, Op. 22, has had five performances this season in Cincinnati.

MR. WALTER SPRY, pianist, gave a recital before the MacDowell Section of the Centennial Club, Chicago, April 4.

SECULAR SONGS

HIGH VOICE

LOGAN, FREDERIC KNIGHT
Where the purple heather blooms. [A♭] [E♭-F (*a♭*)] $0.60
An attractive song in the Scottish ballad style; it is easy but, sung with simplicity of style, will prove very pleasing.

MANNEY, CHARLES FONTEYN
Since we parted. [D] [d-*g*] ..... .40
A short song of more than usual interest and artistic value; especially suitable for encore use.

SAAR, LOUIS VICTOR
The little day-star. [C] [E-*g*] ..... .50
For concert or recital use; in a distinctly modern vein.

TCHAIKOVSKY, PETER ILYITCH
At the ball (*Inmitten des Balles*). [D min.] [d-*g*] ..... .40
A dainty song in the Russian folk-style, in which the singer is called upon to indicate a variety of moods.

TOWNSEND, STEPHEN S.
The night has a thousand eyes. [D♭] [E♭-*g♭*] ..... .40
A new setting of a favorite text by an experienced singer, who knows fine vocal effects and how to achieve them; a good recital song.

MEDIUM VOICE

GOUNOD, CHARLES
Night radiant in splendor (*Nuit resplendissante*). [B] [d-*g*] ..... .60
From the opera, *Cinq-Mars;* a lovely song in the best French style, one which shows the voice to fine advantage.

LOGAN, FREDERIC KNIGHT
Where the purple heather blooms. [F] [c-D(F)] ..... .60
For description see Secular Songs —High Voice.

MANNEY, CHARLES FONTEYN
Since we parted. [B] [b-E] ..... .40
For description see Secular Songs —High Voice.

MOZART, WOLFGANG AMADEUS
Voi che sapete (*Tell me, O fair ones*). [A♭] [b♭-E♭] ..... .50
A song from the opera, *Marriage of Figaro*, favorite from the classical repertoire.

SINDING, CHRISTIAN
Sylvelin. Op. 55, No. 1. [A min.] [E-E]. .30
A gem from the modern repertoire for concert or recital use.

STRICKLAND, LILY
Because of you. [A♭] [b-F] ..... .50
An impassioned love song in the artistic ballad style; a good number for a first year pupil.

LOW VOICE

DICHMONT, WILLIAM
My day. [A] [b-D(E)] ..... .40
An easy little song for young singers.

HUERTER, CHARLES
Daddy's lullaby. [B♭] [c-D] ..... .50
A lovely melody to a text for a child who has lost a mother.

STICKLES, WILLIAM
A sea song. [E♭] (bass clef) [G♭-*d*] .... .60
A rousing song of the sea for a bass voice; it will make a good concert song and well display the lower notes.

TCHAIKOVSKY, PETER ILYITCH
At the ball (*Inmitten des Balles*). [B min.] [b-E] ..... .40
For description see Secular Songs —High Voice.

SACRED SONGS

MEDIUM VOICE

FREY, ADOLF
Incline your ear. [C] [c-E♭] ..... .60
A fine song for church use, broad in style, and melodious.

GOUNOD, CHARLES
Forever with the Lord. [C] [c-E] ..... .50
A song from the standard repertoire; especially good for prayer or faith services.

LOW VOICE

BULLARD, FREDERIC FIELD
Jesus calls us. [B♭] [c-D(F)] ..... .50
A simple, unusually melodious song, one that is sure to please a congregation; requires clear diction.

SHEATZ, ELIZABETH Q.
The Lord's prayer. [D] [b-E] ..... .30
A fine setting of the text; the singer has some strong effects to realize.

TOPLIFF, R.
Consider the lilies. [D♭] [b♭-E♭] ..... .50
An old favorite that is always enjoyed by a congregation, particularly when sung by a deep contralto voice.

SACRED DUET

HAMMOND, WILLIAM G.
O day of rest and gladness. Sop. and Bar. ..... .60
An easy, effective duet, one in which the good points of the two voices are brought out very well.

PIANO SOLO

ALEXANDER, M. P.
Flora's waltz. II. ..... .30
A melodious little teaching piece; has a short passage in thirds for the right hand.

BACH, JOHANN SEBASTIAN
Italian concerto ..... .75
An edition for artists; also intended for advanced pupils who may be studying the piece.

DURAND, AUGUSTE
Second valse, in A♭. Op. 86. III-IV.. .75
A popular piece in the standard teaching and recital repertoire; brilliant and effective.

HARTHAN, HANS
Dance of the ladies of yesteryear (*Danse des dames d'antan*). Op. 103. III .... .40
A charming little piece in the classical minuet rhythm.

HEMANN, CARL
The spinning wheel. III ..... .50
An unusually interesting and useful teaching piece, with plenty of rapid finger work for the right hand; melodious.

HUERTER, CHARLES
Berceuse, in E♭ (*Lullaby*). III-IV..... .50
Boat ride, The. III..... .30
Jesters, The. III..... .50
Snow-birds. II-III..... .40
Two brown eyes. IV..... .60
A splendid set of pieces for teaching or recreation use. No. 1 has a broad, rich melody for the thumb and adjoining fingers of the right hand while the other fingers furnish a chord accompaniment. No. 2 is a barcarolle, with a good melody. No. 3 is light in style, full of character, as suggested by the title; calls for a snappy style in playing. No. 4 is an easy little waltz; one of the themes is a melody played by the left hand. No. 5 is a piece for young artists, somewhat in the waltz caprice style; it is melodious and interesting.

KERN, CARL WILHELM
Spring dance (*Caprice a la schottische*). Op. 278. IV..... .60
Quite a novelty in many ways; melodious and attractive in rhythmic effects; a good number for pupils' recital use.

Tarantella, in D minor. Op. 284. IV.. .60
A splendid teaching piece that offers fine opportunities for training the fingers in fast playing.

Valse lyrique. Op. 258. IV..... .60
A fine concert waltz of a little more than average difficulty; good drill in rapid finger work.

MANNEY, CHARLES FONTEYN
Chansonnette. Op. 24, No. 2. IV..... .50
A charming little song in the French style, especially desirable for use in teaching style and grace to pupils.

Scherzo-minuet. Op. 24, No. 3. V.... .75
A brilliant work for the repertoire of the advanced student or the concert artist.

RHODE, EMIL
Chatterbox. Op. 31, No. 2. II-III.... .40
A light little piece, partly in two-part writing; has considerable light staccato work.

Little gipsy, The. Op. 31, No. 1. II-III. .30
A little teaching piece very useful in helping young pupils to acquire speed in playing.

Village dance. Op. 31, No. 3. III.... .50
A melodious little teaching piece in the old minuet rhythm.

ROLFE, WALTER
Valse courante. III-IV..... .60
A brilliant, moderately easy concert waltz; calls for rapid finger work, and the playing of thirds and sixths.

STREABBOG, L.
Shower of roses. Op. 186, No. 1. II... .30
A melodious little waltz for young players.

ORGAN

HARKER, F. FLAXINGTON
Nocturne, in G minor. Op. 55, No. 2 .. .60
Can be used as a concert number or for the church service; the registration is for a three manual organ.

VIOLIN

SARASATE, PABLO DE
Playera (*Danse Espagnole*). Op. 23, No. 5..... .50
In the best and most characteristic style of this great player and composer; for the artist or advanced pupil.

VIOLONCELLO

HARKER, F. FLAXINGTON
Liebeslied (*Idylle*). Op. 3, No. 1. Tr. by Frederick Blair..... .60
A broad, rich melody, of the kind which shows the great charm of the instrument.

MISCELLANEOUS

Anthology of German piano music. Vol. I. Early composers. Edited by Moritz Moszkowski. Musicians Library. Paper 1.50
30 pieces by composers of the German classical period.

BURLEIGH, CECIL
12 short poems for violin and piano. Op. 18. Ditson Edition, No. 194..... 1.25
A collection of charming pieces of moderate difficulty; especially good for teaching use.

WITH THE SCHOOLS AND TEACHERS

Continued from page 427

MR. HERBERT WILLIAM REED, Bryan, Texas, has made quite a success with his lectures on certain of the great masters in music, with illustrations from their works.

MISS KATE MCDONALD, director of the McDonald School of Music, Detroit, sends us an interesting program showing the work done at one of the recent pupils' recitals.

SMITH COLLEGE has a Symphony Orchestra with 40 members, under the direction of Miss Rebecca Wilder Holmes. At the last concert the symphony performed was the Beethoven, No. 2.

THE Charleston (W. Va.) Choral Club, J. Henry Francis, conductor, gave so successful a performance of Mendelssohn's *Hymn of Praise* at its concert, late in March, that it was requested to repeat the work later on the West Side.

THE Pianoforte and Theory Students' Association, Newtonville, Mass., gave a recital, assisted by Marie Clifford Bartlett, reader, March 28. Ensemble playing was a feature of the recital.

MISS ELLEN SNYDER sang a program illustrating the work of the class in history of music at the Crane Normal Institute of Music, Potsdam, N. Y., March 26, the pieces being selected from the works of Haydn, Mozart, and Beethoven.

MR. J. LAWRENCE ERB, of Chicago, will attend the Paris meeting of the International Music Society this summer, and will probably remain in Europe until next spring.

W. G. HAMMOND'S cantata, *The Liberty Bell*, was sung by the Banks Glee Club, New York, April 16. Mr. Hammond played the piano accompaniment.

MR. ERNST PERABO, a well-known Boston pianist, gave a recital, April 28, playing a program of works from the classical period: Bach *Chromatic fantaisie and fugue*; Rubinstein, three pieces for piano and 'cello, Op. 11, No. 2, the 'cello being played by Carl Webster; Rheinberger, sonata in Eb major, Op. 77, for violin and piano, with the assistance of Frederic Mahn, violinist; Beethoven, *Triple concerto* in C major, Op. 56, arranged as a trio, by Carl Reinecke.

———*———

SAIL FROM BOSTON

THE HAMBURG-AMERICAN LINE'S NEW FLEET SAILING FROM BOSTON

FOR a number of years past many Americans have thought that there is but one way to Europe, and that through New York. But of late it is evident that a large number of persons have found that Boston is still a seaport, a city that has much of interest to offer to the traveler *en route* to Europe.

If you have planned to spend the summer in Europe, make the trip one way, at least, through Boston, and arrange to spend a week or more there. No city in the United States has so much of great historic interest to the traveler as the metropolis of New England.

Beginning this summer the Hamburg-American Line will have three of its magnificently appointed steamers sailing from Boston, namely, the *Cleveland*, the *Cincinnati*, and the *Amerika*, the latter being the largest boat ever used in Boston service.

A well-known Boston newspaper man, in speaking of the service offered by the Hamburg-American Line, said, after the dinner given on board the *Cleveland*, just after she had returned to Boston from the 20,000 mile trip around the world:

"There is something about the Hamburg-American Line that grips one from the very moment that one comes in contact with it. I well remember the favorable impression I received when I visited the office on Boylston Street, to inquire about tickets and accommodations. I went away with the feeling that I had been visiting friends, and this feeling was strengthened when later I took my trip."

The boats are comfortable and speedy, and Boston is so much nearer to Europe as to make it possible for passengers to arrive in Paris at a very convenient time of day.

"If anyone contemplates a trip abroad or to Panama," continued the gentleman previously referred to, "he will choose the Hamburg-American Line, if he wishes to be taken care of properly. And he will sail from Boston, too."

IN JANUARY, 1912, we gave, as a supplement, a copy of the above picture, representing CHOPIN, as a boy, playing for his schoolmates, printed in colors. To meet the continued demand for copies of this picture we have secured a limited edition, in *photogravure*, by one of the leading American art publishers. We offer it as follows:

For $1.50, we will send THE MUSICIAN, one year, and one copy of THE BOY CHOPIN, postpaid. This offer is good until Aug. 1, 1914. Copies of the picture, separately, 35 cents. Size of picture, 8⅜x11⅞; mounted on heavy paper, 12x18½, equal to line sold for 75 cents and $1.00 in stores.

Address, THE MUSICIAN, Boston, Mass.

SONGS FOR YOUR VACATION

CADMAN, CHARLES WAKEFIELD

The Heart of Her

As beautiful as the same composer's *At Dawning* which is making such a whirlwind success. Words and music are united in lovely effects ..... High in A♭, Med. in F $0.40

DICHMONT, WILLIAM

My Day

A gem—equal to Ethelbert Nevin at his best—and with the added merit of being easy. A short song, but with big effects and a strong climax ..... High in C, Low in A $0.40

Such a li'l' fellow

A song which goes straight to the heart—so simply tender and winsome. Either words or music alone would make a success, but together they are irresistible. High in G, Med. in F, Low in E♭ $0.40

MONTAGUE, LAURENCE H.

For You

A stunning concert song is this—with a haunting melody such as made Bartlett's *Dream* famous. High in G, Med. in E♭, Low in D♭ $0.50

RICH, MARIE

Call me "Sweetheart"

This must be the song that prompted *I hear you calling me*, for no one can be indifferent to the appeal of its lovely melody which intensifies the words and makes a real heart-song. High in D♭, Med. in B♭ $0.50

ROLFE, WALTER

Drifting and Dreaming

The refrain of this song is an inspiration, and proves that songs equal to the best are still being written. Easy to remember and not easily forgotten..... High in A♭, Med. in F $0.60

NOTE: Discount on sheet music one-half

O'ER the hill the sun is setting, and the eve is drawing on;
Slowly drops the gentle twilight, for another day is gone.
Gone for aye, its race is over, soon the darker shades will come;
Still 'tis sweet to know at even, we are one day nearer home.

OLIVER DITSON COMPANY

SINGLE COPIES.....$ .15
SUBSCRIPTION PRICE, PER YEAR 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew. Renewals should be sent promptly as subscriptions are not continued after the time for which they are paid.

NOTE.—Customers with charge accounts in good standing may have their subscription charged to their regular account, if desired.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of THE MUSICIAN. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of THE MUSICIAN.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in THE MUSICIAN, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic Ditson Edition No. 196

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Arnold Sartorio: Twelve Melodious Studies in Velocity in Broken Chords Op. 1018.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

Ernest R. Kroeger: The Whole Tone Scales.

THIS little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

A NEW ORGAN WORK

30 Offertories for the Organ. Ed. by Jas. H. Rogers. $2.00.

A NEW volume uniform with the popular 30 *Preludes* and 30 *Postludes*. The editor has drawn upon the best works, by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organist's collection.

SPECIAL OFFER:—With The Musician, one year, $2.50.

MISCELLANEOUS

James H. Rogers: Five Quatrains From the Rubaiyat.

THE tempting quality of Omar's immortal verses has inspired the composer with most felicitous musical imaginings. For this a set of five song quatrains have been chosen which are in themselves among the most beautiful and which are adroitly contrasted in mood. To me their poetic content Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more vital nor his economy of means to produce just the right emotional effect more sure. These songs, the latest product of his muse, may be used as a cycle or singly, and will adorn any artistic recital program.

The price has been fixed at $1.25; until publication we will accept orders at 75 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.10.

J. C. Macy: Young People's History of Music. New Edition, $1.00.

THOUGH prepared for "young people" this book will be found interesting by all who do not care to study the longer histories, dictionaries, etc. It gives, in necessarily condensed form, valuable information, and is written in an easy colloquial style, free from technicalities. For this new edition much material has been added as was needed to indicate the trend of latter-day

composition and the biographies of the great masters have been supplemented by sketches of modern composers who have earned a universal reputation.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.00.

Standard Anthems For Men's Voices. Edited by George B. Nevin. $1.00. In this excellent collection are included, besides valuable numbers written originally for men's voices, arrangements of standard and popular works. The majority of these arrangements are from the practised and practical hand of the editor, and all are skilfully done with a view to use by choirs of moderate ability. The subjects chosen and their treatment show wide diversity, so that singers in possession of this collection are equipped to meet the varying requirements of the church year without going outside its pages.

Franz C. Bornschein: Zorah: Cantata For Women's Voices. 30 Cents. This short cantata is composed to a highly picturesque text, descriptive of the desert, an Arab raid and capture. The music is in the modern idiom and breathes at times the warmth and languor of Oriental scenes, and again is eloquent in its dramatic and vigorous mood. There are extended solo passages for soprano (Zorah), the beautiful captive of the raiders, who is rescued by her lover's warriors.

———*———

COMMENT ON "INTERPRETATION OF PIANO MUSIC"

"I have read your book with much interest. It treats upon a subject which is of vital importance to the piano student and pianist. I shall endeavor to bring it to the knowledge of all the students of this school and hope it may be placed on sale here where it will be convenient."—Willard Kimball, The University School of Music, Lincoln, Neb.

———*———

"FORTY SONGS" BY JENSEN AND THE "BERGERETTES" BY WEKERLIN

TRANS. BY FREDERICK C. MARTENS

"They are both valuable and I shall use and recommend them. The Musician's Library is so well edited that it is a pleasure to possess any one of the volumes. The *Bergerettes* will be welcomed by those not able to sing in French."—Isidore Luckstone, New York City.

ANALYSIS OF MOZART'S SONATAS

By JANET SALSBURY

A short, concise, systematic analysis of each of the 22 Pianoforte Sonatas.

The book contains a detailed description of the various forms used and embodied in the writing of Sonatas. These descriptions are then used in tabulated form in the analysis of each of the Mozart Sonatas.

It is an exceedingly valuable book for students and is of great assistance in forming a clear conception of these classics.

Bound in paper, price 50c

In this connection we also call attention to the extremely important work of a similar nature on the Pianoforte Sonatas of Beethoven---

INTRODUCTION TO THE INTERPRETATION OF BEETHOVEN PIANO WORKS

By ADOLPH BERNHARD MARX Translated by FANNIE L. GWINNER

This work treats much more extensively on the proper interpretation of the Sonatas and deals more minutely with their analytical study.

Bound in cloth, price $1.25

Easy Piano Music

FOUR EASY TEACHING PIECES

FOR PIANO

BY

HANS T. SEIFERT

1. MY FIRST WALTZ.....$0.30
2. SOUVENIR MELODY.... .30
3. MARCH OF THE TEDDY BEARS..... .30
4. THE MILL CLACK..... .50

Four delightful little pieces which are a decidedly welcome addition to the literature of this class.

CHILDHOOD JOYS

Six Melodious Piano Pieces for Small Hands

BY

GASTON BORCH

1. TIN SOLDIER'S PATROL..$0.25
2. A LITTLE STORY..... .25
3. GRANDMA'S WALTZ..... .25
4. A PONY RIDE..... .25
5. EVENING ON THE LAKE .40
6. TARANTELLA..... .40

These new piano pieces are charming and very attractive throughout. They are specially written for Juvenile players and their characteristic novelty and melodious freshness should establish them ere long as universal favorites.

Music lovers all enjoy the splendid reading matter and music supplement in the **MUSICAL OBSERVER** America's fastest growing musical monthly. Single copy, 15c. One year, $1.50.

FLOWER FANCIES

A Cycle of Six Easy Compositions (Children's Pieces) for Pianoforte

BY

GUSTAV SAENGER

1. TO THE MORNING GLORIES.....$0.30
2. A BED OF VIOLETS..... .30
3. THE ROSE BUSH..... .30
4. LILIES OF THE VALLEY.. .30
5. THE WATER LILY AND THE HONEYSUCKLE.. .30
6. A BUNCH OF GOLDEN-ROD..... .30

Melodious little piano solo numbers specially designed for Juvenile players. Particularly desirable for young players of slightly advanced musicalability, although they contain no technical difficulties of any account. Appropriate little introductory poems give additional interest to each number.

SIX CHARACTERISTIC LITTLE PIECES

FOR PIANO SOLO

BY

FRANCES E. TERRY

1. IN THE CANOE.....$0.30
2. CASTANET SONG..... .25
3. A TWILIGHT STORY.... .25
4. SERENADE..... .30
5. A MERRY CONVERSATION .30
6. THE WINDING PATH... .30

It is seldom that we meet with easy pieces which are imbued with such an amount of individuality as these six numbers. Their delightful simplicity and refreshing melodious character have gained immediate popularity for them with teachers and young students.

CARL FISCHER COOPER SQUARE **NEW YORK**

VOLUME II

A Companion Book to the Most Popular Piano Pieces

The wonderful popularity of The Most Popular Piano Pieces, published in 1906 to satisfy the wants of those lovers of good music whose limited technical ability prevented their playing the works of the great masters in their original form, explains the publication of this companion volume. We feel that a book containing compositions of the same style by the same composers, arranged by the same arranger in the same easy grade, as a collection which proved an instantaneous success, and for eight years has steadily increased in popularity, should satisfy the wants of many music lovers.

Here is the complete contents list of the new book. Every composition is within the technical ability of the average third grade student.

CONTENTS PIANO PIECES VOL. II

Composer	*Title*
E. Grieg	Asa's Death
Richard Wagner.	Bridal Procession (Lohengrin)
P. Mascagni	Siciliana (Cavalleria Rusticana)
Gabriel-Marie	Serenade Badine
Louis Ganne	Tzigane, La
Richard Wagner.	Walter's Prize Song (The Meistersinger)
Ch. Gounod	Marche Pontificale
A. Thomas	Polonaise (Mignon)
G. F. Haendel	Hallelujah (The Messiah)
Ernest Gillet	Babillage
A. Jungmann	Will o' the Wisp
A. Czibulka	Scene de Ballet
L. Arditi	L'Ingenue
A. Rubinstein	Romance
R. Eilenberg	Evening Bells
L. Delibes	Coppelia (Valse Lente)
F. Chopin	Nocturne (Op. 37, No. 1)
A. Sullivan	Lost Chord, The
E. Paladilhe	Mandolinata, La
L. Delibes	Czardas (Coppelia)
Ph. Scharwenka.	Barcarolle
C. Saint-Saens.	Swan, The
L. Gauthier	Brook, The
M. Moszkowski.	From Foreign Lands (German)
P. Lacombe	Aubade Printaniere

COMPOSERS IN LOVE AND WEDLOCK
RICHARD WAGNER

By J. CUTHBERT HADDEN

WHEN Wagner wrote to Liszt detailing his plans about *Tristan,* he said: "I have never in my life felt the real bliss of love," adding that it was the most beautiful of his dreams. At another time he spoke of women as "the music of life," forgetting to note that, like music, women have their discords. He, at least, had abundant experience of the discords! Somebody once asked him whether he did not find his parrot a rather noisy pet. "I am used to it," he said. "It *is* noisy; but I am compensated by having a wife who does not play the piano." It was a suggestive witticism; but Wagner would have been lucky if the domestic discord had been struck only on the domestic piano. Let us see what sort of music he managed to extract for himself from the fair sex.

It was only the other day, comparatively speaking, that a German-Jewish journal, pretending to have discovered Wagner's first love, told her story. Young Wagner had been visiting his sister Louise in Leipzig, Louise being engaged at one of the theatres there. In the actress' room there was a dog which took up his attention so much (he was always fond of dogs) that he did not notice the presence of a young girl, Leah David, who had come in quest of the animal, which belonged to her. Leah was a friend of Wagner's sister. She was "exceedingly beautiful," of the composer's own age, and in grace and sweet demeanor of the best type of the Portuguese Jewess. Her father was a rich man, whose delight it was to entertain the artists. Leah was his only daughter; she had early lost her mother, and her slightest wish was anticipated by the fond parent.

Soon the relations between Richard and Leah became affectionate, Richard having been invited to David's evening parties. At one of these a nephew of David played some pieces on the piano and scored a modest success. Wagner, who, as one says, 'could never fondle a piano without making it howl," was mortified at the other fellow's little triumph, and revenged himself by a very bitter criticism of his performance. He was invited to do better, and did so badly that he rushed from the room vowing vengeance on his rival.

For two days he kept away from the Davids, and then presented himself at the house of her whom he adored. No one received him. Next day a letter reached him from Leah, in which she announced her engagement to the rival pianist, and told him that after what had occurred, she did not desire to see him any more. This mortification of his self-esteem, comments the recent chronicler, evidently did not conduce to make Wagner especially favorable to the Jews. And then the chronicler adds that

MINNA WAGNER

the composer's biographers "do not speak of the incident simply because it proves the ascendancy which, for some time, a girl of the accursed Jewish race maintained in the heart of Wagner. Here once more the beauty of Israel's daughter exercised its irresistible charm." He is wrong in saying that the biographers ignore the incident. Wagner himself writes that "it was my first love sorrow, and I thought I should never get over it." He had certainly a morbid hatred of the Jews, but that was a later development. And in any case he might hate the Jews as a race and yet love a Jewish woman as an individual.

There are hints of other juvenile fancies in the Wagnerian biography, but they are too intangible to grasp. The woman who really first captured his heart was his first wife. In February, 1834, Wagner, then conductor at the Stadt Theatre at Magdeburg, wrote to his brother that he was engaged to Minna Planer, an actress at the same theatre. The brother's answer seemed cynical enough to the enthusiastic young lover. It ran thus: "There are men who call the time immediately before marriage the finest in their lives. It is to be hoped that all your life you will retain only the remembrance of the former time. And what are you going to marry on, for no one can assist you?"

Aye, what, indeed? Wagner was gloriously impecunious at this time and for long after—a young man struggling with poverty and beaten down by disappointed hopes. But what of that? "I was in love," he said afterwards, "and I persisted in getting married, thus involving myself and another in unhappiness." Minna Planer was the daughter of a spindle-maker, and, according to Ferdinand Praeger, who knew her well, went on the stage not because she was specially fitted for it, but because she was required to contribute to the support of her father's family. She is described as pretty by some ("pretty as a picture"), and of a "pleasing appearance" by others. One painter said she was beautiful, but had a sober, unimaginative soul.

Wagner married her in November, 1836, at Königsberg. And here Glasenapp, his leading biographer, may perhaps be quoted. Glasenapp writes:

> The link was now forged that bound his future to a helpmate with whom he had the smallest possible community of inner feeling. Beyond doubt, he brought her that genuine affection which survived the hardest trials it ever was put to; beyond doubt, the pretty, young, and popular actress meant well by the ardent young conductor when she joined her hands with his at a time of so little outward prospect; beyond doubt, she expected much from his abilities. Any profounder sense of the enormous artistic significance of her husband never dawned upon her, either in this cloudy period or at a later date; and though she made him loving sacrifices, she neither had the blissful satisfaction of knowing to whom they were offered, nor of affording the struggling artist a sympathetic ear in which to pour his deeper woes. Wagner never forgot how she bore the trials of the next few changeful years without a murmur; nevertheless, this precipitate marriage of two natures so immixable dragged after it an almost endless chain of sorrows and internal conflicts.

On the whole, this is fairly and temperately said. On the whole, too, one feels sorry for poor Minna Wagner. The biographers make much of her failure to recognize her husband's genius. But how many persons, much better instructed than a pretty actress was likely to be, recognized Wagner's genius at that date? When Wagner married he was totally unknown to the great world of music. Minna was in love with him and he was in love with her. What should we expect them to do but to marry? And how should Minna know that she was giving her hand to a man who, though obscure and poor, would successfully fight against all difficulties, and whose works would, in the distant future, become not only celebrated, but even popular?

That Minna Wagner lacked this perception was her misfortune rather than her fault. If anyone was to blame it was Wagner himself, who ought to have seen from the first that Minna Planer was not the kind of woman he should have for a wife. A man, even a genius, has no right to marry an ignorant, unsympathetic woman and then turn round and abuse her because she *is* ignorant and

unsympathetic. And there is this to be remembered to Minna's credit, that she suffered bravely and even gladly all those terrible hardships which beset her husband during the changeful years after the marriage. Wagner's diary reveals that in Paris, when he had invited a sick and starving German to breakfast, his wife told him there could be no breakfast, as there was no money in the house. It is even recorded that she pawned her jewelry under some domestic distress. When the Revolution of 1848 broke out and drew Wagner into the vortex, it was Minna who arranged his flight and saved him from sharing the fate of his friend, August Roeckel, who suffered several years' imprisonment for his participation. Wagner, himself, always admitted the brave part that his wife had played. Indeed, he used to tell with moist eyes many of these stories of her self-denial, and of "the cheerfulness with which she, the pretty actress of former days, cooked what meals there were to cook and scrubbed what clothes there were to scrub."

That the union ended in estrangement and separation was more Wagner's fault than his wife's. She would probably have borne with him to the end, but he would not bear with her. And then when she went he did not like it! He bewailed his loneliness, and realized, for the first time, what Beethoven had to go through as a bachelor housekeeper. "The commonest domestic details must now be done by me; the purchasing of kitchen utensils and such kindred matters am I driven to. Ah, poor Beethoven! Now is it forcibly brought home to me what his discomforts were with his washing-book and engaging of housekeepers, etc. I, who so praised woman, have not one for my companion."

Of course there is no use blinking the fact that Wagner was something of a libertine with women. He was not the faithful husband he ought to have been. Mr. W. J. Henderson puts it pretty strongly, but on the whole truthfully, when he writes: "He

MATHILDE WESENDONCK

was guilty of many liaisons, and the Sybaritic character of his self-indulgences increased as the years went by. It is not possible to give the details of these secrets of Wagner's life; but it must suffice to say that while Minna was unsuited to him through her inability to understand him, she was more sinned against than sinning. She was a faithful and devoted wife, patient in adversity and modest in prosperity. It is impossible to say the same of him as a husband."

While the separation from his wife was probably inevitable in any case, it was undoubtedly precipitated by his flirtation with Mathilde Wesendonck. The story of this connection was told a few years ago in a big volume devoted to the subject. Of Mathilde Wesendonck Wagner wrote: "She is and remains my first and only love. They were the zenith of my life, those fearless, anxious, beautiful years which I spent in the ever-growing enchantment of her nearness. They hold all the sweetness of my life." Daughter of an Elberfeld merchant, the lady had married Otto Wesendonck, partner in a great New York silk business. In 1851 the Wesendoncks, with their three children, settled in a villa at Zürich, where they met Wagner.

The acquaintance, founded on mutual musical enthusiasm, ripened into friendship, and, in 1857, Wagner and his wife came to live in a little house, "The Refuge," close to "The Green Hill," occupied by the Wesendoncks. In Mathilde, young, delicate, beautiful, Wagner found his spirit's mate. The result was that he lived more at "The Green Hill" than at "The Refuge." Blissfully, peacefully, the days flowed by. But Minna's patience became exhausted, and she struck the first discord. That she should resist her husband's ongoings with Mathilde was natural and inevitable. It is too much to expect of poor human nature that a wife should calmly allow her husband to spend all his time with another man's wife on the other side of the fence. Of course there were scenes, opened letters, wild reproaches, and passionate recriminations. Wagner left "The Refuge" and became a wanderer. From Venice, Lucerne, Paris, Vienna, he sent Mathilde letters, music, leaves from his diary.

In one of his letters he says:

"Who feels it more clearly than I that it is this accursed art which eternally gives me up to the torment of life and all the contradictions of existence? But for this strange gift, this so strong preponderance of the creative fantasy within me, I might follow the guidance of the heart—become a saint, and as saint I might say to thee, 'Come, leave everything that ties thee, burst the bonds of nature. On Allhallows Eve at Venice I stood on the balcony and looked into the canal's black flood: the storm wind raged. My leap, my fall would have been unheard. I should be free from torment if I sprang. . . . Could I—with my thoughts on thee—on thy children? . . . Now I know that I am destined to die in thy arms. Now I know it! . . ."

That was pretty warm to a married lady. Of course so long as Herr Wesendonck lived and so long as Minna proved faithful, there was nothing for Richard but to sigh after the unattainable. But it is really the unattainable that stirs the imagination of the artist. How hard it is for him to combine his Ideal with the form of the lady who sits opposite him at breakfast every morning! He may have a sincere regard for her; he may respect her and be grateful to her (if the bacon is not burned). But he does not write her poetry or compose fervent love duets because her image is always before his eyes.

The best thing that can be said for Wagner is that after the separation he did his duty, financially, by the unfortunate woman who had struggled along by his side for twenty-five years. It was said by his enemies, among other outrageous libels, that he had allowed his wife to starve. But Frau Wagner publicly protested that her husband had provided her with an ample income, and there is nothing to show that their relations were not friendly right on to the end. Poor Minna went her way in 1861, and five years later death freed her at Dresden, where she had been residing in indifferent health, with sadness and sorrow filling her heart.

The story of Wagner's second marriage is tolerably familiar. It brackets his name with the names of Liszt and Von Bülow. Cosima Liszt was one of the results of the great virtuoso's illicit connection with the Countess D'Agoult. She had married Von Bülow and had not found happiness. When Bülow went to Basle to teach, the beginning of the end had come, and it was not long after that when the relations between Mme. von Bülow and Wagner could no longer be kept secret. Bülow was furious but the situation was complicated by the fact that he had an intense admiration for Wagner as a composer. "If it were only someone I could kill," he said, "Wagner would have been dead before this."

Things worked out in the usual humdrum way. The Bülows were divorced in 1869, and in July

RICHARD AND COSIMA WAGNER

1870, Wagner was writing to Praeger: "My dear Ferdinand, you will no doubt be angry with me when you hear that I am soon to marry Bülow's wife, who has become a convert in order to be divorced." Shortly afterwards Praeger received the wedding cards announcing that the marriage had been celebrated at the Protestant church of Lucerne. What Liszt thought of the business may be inferred from Wagner's statement that he was much annoyed by his daughter's change of religion that by her divorce. That the divorce and the marriage had to come about, however, may be assumed from the fact that in the summer of 1869 Mme. von Bülow had borne to Wagner a son. In November 1870, Wagner wrote to Praeger: "Often do I think of you because of your love for children. My house too, is full of children, the children of my wife, but beside there blooms for me a splendid son, strong and beautiful, whom I dare call Siegfried Richard Wagner. Now think what I must feel that this last has fallen to my share. I am fifty-seven years old." It is suggestive, but only natural, that the date of Siegfried Wagner's birth has never been made known by the Wagner family.

The fact of the divorce and marriage may be allowed to stand without comment. But it should, in fairness, be said that Cosima Wagner gave to her husband a loyalty, a devotion, and a sympathetic comprehension which made him a wholly happy man in his domestic life. Wagner himself wrote of her as the woman "who was destined to prove that I could well be helped, and that the axiom of many of my friends that I could not be helped was false. She knew that I *could* be helped, and helped me. She has taken upon herself every condemnation." To his Cosima, Wagner was constant, in spite of the fact that temperamentally he was an inconstant man. He died in her arms, and she lived ever since as the loyal guardian of his fame

A STANDARD FOR MUSIC TEACHERS

BY NATHAN SACKS

[Mr. Sacks is a member of the examining committee of the Missouri Music Teachers' Association, and sends the article below as an expression on the subject from the Middle West. It is evident from the attitude of the state associations from Ohio to Kansas that the question of a higher and definite standard for music teachers is an important one.—The Editor.]

For several years the Missouri Music Teachers' Association has been urging that there should be a standard of attainment for music teachers, just as there is in other professions.

Present conditions in regard to music teaching are appalling. There are no requirements. Pupils who have taken lessons one year or less frequently begin to teach, and frequently succeed in forming large classes. The harm worked by these teachers in ruining musical talent and lowering public taste is incalculable.

The leading conservatories of Russia (government endowed) have an eight or nine year course of study. Progress in technical development is constantly insisted on, as well as a comprehensive guidance through the literature of music.

Music is an exact science as well as an art, and a thorough mastery of its many branches should be obtained by those who would teach most effectively. Some of the requisites of the capable teacher are: A good ear, a developed sense of rhythm, a thorough knowledge of how to produce a good tone and to develop technic, a certain amount of harmony and musical theory, a knowledge of the best composers, past and present, and a highly developed taste to teach the pupils to sing or to play intelligently and in a musicianly manner.

Some of the advantages to the public and to the music profession of the adoption of a standard of attainment, are:

1. Incompetent teachers would eventually disappear. The public would soon become aware that a standard had been set and would insist that this standard be met before employing a teacher.

2. A greater appreciation in the community for better musical things. As the quality of musical instruction became better, a better taste would spring up and an increased patronage of concerts, and more secure support of orchestras, opera, and oratorio societies would be provided.

3. There would be greater honor and respect for the musical profession. The professions of law, medicine, and engineering are held in high regard, owing to the standards which they maintain. It is a distinct achievement for a young man to be permitted to enter these professions. If music teachers generally would work with the State and National Associations for the proper standards, a similar position would soon be occupied by our profession.

4. A better remuneration would be obtained. This would result from the retirement of the incompetent teacher, giving more patronage and a better scale of remuneration for the qualified teachers.

It may be of interest to the public to know that this question is now agitating the ranks of music teachers from Maine to California, and will be one of the leading features of discussion at the Music Teachers' National Association. At the 1913 meeting of the Music Teachers' National Association reports were read from states in which definite efforts have been made to inaugurate a system of examinations for music teachers, to give credentials to those properly equipped and thus establish a standard of attainment for the profession.

There is a glaring injustice to the public in permitting present conditions. They have the same right to the services of competent teachers of music that they have to the services of competent doctors, lawyers, school teachers, etc. It is deplorable that the talent, time, and money of so many thousands of music students are ruined and wasted. The cultural value of good music, correctly taught, is a factor of inestimable importance in the education of girls and boys, and it is almost a crime and surely is a breach of trust when incompetent music teachers do such injury.

It is but fair to state that any attempt to introduce such a standard of attainment should take into account that many teachers of recognized standing and others by reason of their years of experience should be exempt from the necessity of taking an examination.

The Missouri Music Teachers' Association has adopted a standard of attainment for teachers of piano and violin, and will decide on a standard for voice and organ at the coming convention at St. Louis, June 23-26, committees for these branches being now at work upon the same.*

Standardization means better teachers, better pupils, better music schools, and a general musical uplift.

*This was written before the Convention met.

UNIVERSITY STUDENTS AND MUSIC

Mr. R. G. McCutchan, dean of the School of Music, DePauw University, Indiana, sends to The Musician an interesting letter bearing on the question of music in the university course.

It has been the case that the men students of universities offering courses in music with credit toward graduation have felt that such courses are hardly worth the attention of the serious student. The professors in charge of the music work have found it a difficult matter to get any number of men to take work in the department. Mr. McCutchan has been quite successful in this regard, as will be seen from the statement that in the past few years the number of DePauw men students who take work in the Department of Music has greatly increased. Now comes an evidence of the fact that this music work has scholarship value.

At the last election of members of the senior class to the Phi Beta Kappa Society, admission to which is based on high standing in scholarship, four of the twelve men who were elected are students in the Music School. Three students of the School of Music were eligible for membership in the University Choir of 16, made up of four from each class; two were selected. The two new members of the University String Quartet were taken from men students of the School of Music.

It is pleasant to record these facts, showing, as they do, an increasing appreciation of music as a study worth the attention of the university student with a serious purpose. The heads of the departments of music in the various colleges and universities of the United States should make a determined effort this coming season to increase the interest in music as a university study.

A PLAN FOR CREDIT TO HIGH SCHOOL STUDENTS FOR WORK DONE OUTSIDE THE SCHOOLS

The following resolutions were adopted by the Kansas State Music Teachers' Association at the sixth annual meeting at Topeka, Dec. 3, 4, 5, 1913:

The Kansas State Music Teachers' Association recognizes that there has been a growing demand among pupils of the High Schools throughout the state to take some form of music outside of the school. To do this, they are obliged to run the risk of overwork, or postpone their musical training until a later date, with the result that many young people who have musical talent never have an opportunity to develop it.

A number of authorities along educational lines place the study of music on a par with regular school studies, and issue credits for the study of music outside the school, provided the student received regular instruction from some accredited teacher. Wichita, Salina, and Belle Plaine are already giving such credits, and this system of issuing credits for the study of music outside of the schools is being considered by a number of cities and towns of the state, with the object of adopting the same. Eureka, Anthony, Independence, and Dickinson County High School are giving credits in piano under a special teacher. The plan has proved popular and successful. The K. S. M. T. A. begs to submit a plan for consideration of High School authorities.

1. The Kansas State Music Teachers' Association recommends that an accredited teacher, who shall be eligible to issue credits for High School students for the study of music outside the school, shall be required to possess in his own name a certificate or diploma issued by a Music School of good standing, accepted and approved by the K. S. M. T. A., or

2. Any person not in the possession of such certificate or diploma shall have the privilege of taking an examination at any one of the approved Music Schools of Kansas, who shall have the power, as Sub-examining Committee, to examine candidates and submit the examination papers and report to the Executive Committee of The Kansas State Music Teachers' Association for confirmation and approval.

3. The State Association further recommends that one-half unit credit annually, out of a possible 16, be issued to students taking music outside of the school. Said student shall be required to take not less than one private lesson per week in instrumental or voice, and practise not less than one hour per day, for not less than nine consecutive months.

4. It further recommends that one full unit out of a possible 16 be issued to High School students taking two private lessons per week with not less than two hours' practice per day, for nine consecutive months.

5. It is further recommended that local High School authorities require accredited teachers to furnish quarterly reports to the High School principal, of diligence and progress of each and every student under his care, who shall receive credits.

6. The Executive Committee of The Kansas State Music Teachers' Association shall have the power to pass upon the eligibility of Music Schools as well as to indorse well-known music teachers without examination.

TESTS FOR YOUNG THEORY STUDENTS

1. Name the relative minors to C major, D major, Ab major, F♯ major, B major, Cb major.

2. Name the relative majors to D minor, Ab minor, Eb minor, F♯ minor, B minor, C minor.

3. Write natural, harmonic, and melodic minor scales, ascending and descending in the keys of A, D, E, and G minors.

4. What is the submediant in B minor, Cb major, G♯ minor, Gb major, C♯ major?

5. What is the difference between 4-4 and *alla breve*?

6. What does the metronome direction mean, for example, a dotted half note equals 56? How many quarter notes would be played per minute at that tempo?

7. If you play 960 thirty-second notes per minute, what would be the metronome indication, taking a quarter note as the unit of beat?

8. Write a whole tone scale beginning on C.

9. Write the scale commonly known as the Hungarian gipsy scale.

10. Write a pentatonic scale with C, D, and F as tonics. Examine the melody of *Auld Lang Syne*. What kind of a scale is this?

MME. JULIE RIVÉ-KING ON TEMPOS, INTERPRETATION, EDITIONS

Secured Especially for THE MUSICIAN

BY GRACE DICKINSON PATTERSON

HAD Mme. Julie Rivé-King never become known as an eminent virtuoso, she would still have possessed many gifts that would have served to elevate her above the ordinary walks of life. Her ability to express herself clearly and forcibly upon occasion discloses a mentality at once logical and judicial. Thus her attitude toward questions which often agitate the enthusiastic student is invariably one of unprejudiced candor. She indulges in no mawkish sentimentalities relative to her art or that of other artists; and, no doubt, this mental attitude had much to to with her tremendous success of former years.

An hour spent with her "Interpretation Class" at Bush Temple Conservatory, Chicago, is one of entertainment and instruction to the layman as well as to the student. Mme. King's remarks to the class savor of wisdom, practical advice, and sound sense, interspersed with incidents drawn from her own career as a concert pianist. Her wide experience and broad musical comprehension, combined with her immense repertoire ever at command, is a never-failing source of inspiration to the eager student. Should a pupil experience difficulty with a number (no notes are allowed in class work) instantly Mme. King is ready at the second piano with the required help. Often students prepare compositions which she has had no occasion to recall for years, but if she has ever known the work she still knows it, so unusual is her musical memory. And she is able at once to give aid in any measure or passage wherein difficulties are encountered.

Her classes are conducted much after the manner of those instituted by Liszt, and attended by her when she was with Liszt at Weimar. As the large majority of musical students expect to become instructors, her advice to the budding teacher will, if heeded, be of incalculable benefit, and will save many heartaches and often humiliation to those who aspire to stellar honors.

"Young musicians make a mistake," she remarked to the class, "when they seek to imitate too closely the great artists in tempos and certain eccentricities of interpretations. In the first place, artists do not always confine themselves to the same tempos. *Tempo,* with the artist, depends largely upon the rapidity with which the blood flows through the veins. Often pianists are called upon when their physical condition is not of the best, and this may cause them to play more rapidly or the reverse. Also different artists vary in regard to tempo. For instance, one may play the *Scherzo* in the Beethoven sonata in C♯ minor, Op. 27 (*Moonlight*) with more sprightliness than another, and may take the last movement of the sonata with a temptestuous rush of passion. I have in mind a pianist whom the world has always designated as one of the most 'fiery' of artists. But she is a notable exception to this class in her rendition of this particular sonata.

"Many years ago, when it was still customary to play from notes, I heard this artist play the sonata under discussion in Pike's Opera House in Cincinnati. She was then a mere slip of a girl and I was a few years younger. Her performance was characterized by a calm nobility of expression and careful consideration as compared to the renditions we often hear today. However, this was the interpretation which we were all taught to consider as authentic in those early years of our tutelage. I have listened to this admirable artist many times since, and it was recently my good fortune to hear her give this sonata again. She still adheres to the *tempos* of former years; and the entire sonata, as performed by her, displays a mood less agitated than many of her *confrères* bestow upon it. This interpretation is the expression of her thought and taste in regard to this work, and she makes it a thing of beauty."

Referring to the dissimilarity between two eminent pianists in their reading of the same composition, she said: "For example, take the Chopin *Polonaise* in A major (*Polonaise militaire*), I heard Paderewski and Hofmann play this composition, a few weeks intervening between the performances. They varied considerably in their manner of presenting the work. Paderewski gave it a much more deliberate reading than Hofmann. They varied as to time. The younger man felt the tempo faster than the elder. Naturally you ask, 'What, then, must we do? Whom is it safe to follow?'

MME JULIE RIVÉ-KING

"Granted an able instructor is employed—and there are many—the student must be guided in the main by his or her advice. Upon becoming technically perfect, he gradually comes to feel what the composition means to him, and his playing will exemplify his own mental attitude. There are certain rules or guideposts, however, that all pianists must and do observe, and a slower or faster tempo will not affect the mood of the composition necessarily, providing all things else are in keeping. But it is this ability to keep a fine balance that differentiates the artist from his imitator.

"There are editions which are recognized as a comparatively safe guide for students, for the reason that many artists use them, both in teaching and in playing. For example, the Von Bülow Edition of certain of the Beethoven sonatas is good. Von Bülow was one of the few recognized exponents of Beethoven upon the piano. Therefore his editions are standard and are accepted by many. In this C♯ minor sonata, for instance, there are agitated passages in the Von Bülow Edition that none other contains, and it is quite easy to discover whether an artist plays from this or another edition. But when a pianist elects to read the passages without the 'fine frenzy' which symbolizes them to you, it would signify ignorance on your part were you to declare he played incorrectly.

"Learn to use common sense," she continued, "when listening to great artists; for it is only after a long period of study and the repeated hearing of many different artists that you will be able to judge correctly as to the merits of various interpretations. Hamlet's *Soliloquy* is not spoken alike by all great actors. There are those who recite more rapidly than others; they also vary as to inflection and emphasis. The actor himself will not use the same intonations upon every occasion; nevertheless, the beauty of his delivery is not marred. So it may be with the pianist."

Referring again to editions, she said: "I believe an intelligent student, one who possesses intelligence from the point of view of the virtuoso, may study the Beethoven sonatas from a good edition and be able to give an acceptable interpretation of the sonatas. Dr. Wm. Mason summed up the situation succinctly when he remarked to me one day in New York City, as we chanced to meet in the Knabe Piano Co. warerooms: 'The trouble with the great majority of students is that they do *not see what is on the paper.*' I often recall this statement since I have devoted myself to teaching. Examine the music of the numbers you are studying. Are you observing the crescendos and the diminuendos properly? Are you giving the kind of an accent required? Do you play a staccato correctly, or do you fail to observe them at all? It is because of this lack of attention to detail that your performance suffers. You do not see *what is on the paper.*

"On the other hand, we may observe all of these fine points and still be unable to give a satisfactory rendition of a certain number or numbers, because of a lack of good rhythm, a harsh and unsympathetic touch, or the inability to overcome nervousness. The attributes of tenderness, sympathy, brilliancy, and the countless diversified meanings possible to the pianist are acquired only through constant study, observation, and experience.

"A pupil was studying the C♯ minor *Valse* by Chopin, and experienced difficulty in the first four measures where the seconds, thirds, and sixths occur.

"Her fault lay in not observing the *tenuto* mark under the sixth. She played these double sixths staccato. The character of these measures becomes altered when the *tenuto* marks are not strictly observed. As they recur more than once throughout the piece, it can readily be seen that the entire *Valse* must, of a necessity, take on a different coloring because of this error.

"Many students have not learned the different meanings of the accent and cherish the idea that all accents denote sharpness or a greater or less degree of violence, and they possess little or no sense of undulation. It is quite essential that students play from good editions, and that they observe the directions given. It is best to regard those which are most widely recommended by the celebrated pianists as being sufficiently authentic to warrant their use.

"On the other hand, there is no harm in studying from a new or a comparatively unknown edition, providing one is able to do so with intelligence. On one occasion I was conversing with one of the great artists relative to an edition of Bach by an eminent pianist. In reply to my question as to her opinion

(*Continued on page* 494)

STRONG MUSCLES?

SOME FACTS CONCERNING OUR PLAYING MECHANISM

BY LE ROY B. CAMPBELL

Scattered throughout our literature on piano playing we find much advice on how to strengthen the muscles.

One writer advises special practice with the fourth and fifth fingers in order that they may become as strong as the other fingers (just as if the small muscle of the little finger could ever become as strong as the second or third fingers).

Another teacher suggests an after pressure on the depressed key in order to impart strength to the digits. The practice clavier advocates are sure they have the secret, in being able to give to the action of their instrument a resistance up to twenty ounces. In another work we are told in italics (and surely that should be convincing) that while many practise with a good, healthy finger stroke, yet they make the grave error of forgetting to keep the forearm quiet and entirely out of the process.

Several books are written, giving explicit directions as to gaining phenomenal strength away from the instrument.

A VALUABLE LESSON FROM A PHYSICAL CULTURIST

A few of us music students once went to Prof. Max Unger, a well-known physical culture specialist, who was then in Leipzig; we had caught the "get strong" fever and considered that this specialist would surely satisfy our desires.

He met us cordially, and, after hearing us patiently, as we unfolded to him our aspirations, calmly made answer in this wise, "You young gentlemen may know more about music than I do, but as to physical culture, that is the sphere in which my knowledge takes precedence." He drew the following parallel for us which was most convincing, and proved to be one of the best lessons we had ever received. Two men were under his instruction; the one was preparing to lift heavy weights in vaudeville, the other was working at élite boxing. To the first he gave work of a very strenuous character, such as heavy pulley-weight work, heavy dumbbells, etc. This man had phenomenal strength, could lift enormous weights, but he had not a quick move in his body; he was slow, logy, muscle bound, and stiff.

The élite boxer, on the other hand, received such exercises as hand ball (of light rubber), the punching bag, and half-pound dumbbells. This man was not over-possessed with strength, but he was agile, quick, elastic, and very fine fibered. "Now," said Mr. Unger, "it seems to me that instead of the great strength which always brings with it the attributes of the first man in my parallel, you young men, aspiring for piano technic, not only need work akin to the second man, the élite boxer, but work even much finer; you do not want strength, what you want is delicacy, graceful movements, sensitiveness, elasticity, and fine control of a supple muscular system."

INTROSPECTION AFTER THE LESSON

This lesson not only set me on the proper course at that particular time, but it led me to make diligent research into the question of muscular phenomena, especially in its relation to piano playing. Upon looking into my own case, I found that my finger and hand motions were stiff, due to the kind of work which I had done up to this time. My work had been all of the type set forth in the first of this article, namely, hours of high-finger whacking at the keys while the arm was held still.

The act of calling on small muscles to make loud tones was naturally a tiring process; every morning I was compelled to go through what students of the old methods call "limbering-up exercises." Day by day one's fingers and forearm mechanism are bound, by this procedure, to become gradually more and more stiff.

WHAT TIREDNESS IS

The reason lies in the fact that tiredness is something materially detrimental to ligament and muscle.

You can see tiredness, that is, the product that causes it, through a microscope; what one sees is really excess waste matter and worn out tissue. Now a ligament (and the hand and forearm are a veritable labyrinth of them) is made, for the most part, of two substances, namely, elastic and fibrous; the elastic part is yielding, rubber-like, while the fibrous part is like wood.

The fibrous part of a ligament, which extends even into the end of the muscles, feeds on this waste matter and worn out tissue, and the more of this matter one creates through tiredness and tension, the more does the ligament become fibrous. Keep up this one condition for an extended period and the ligament becomes nearly all fibrous, therefore unyielding, logy, and stiff, often causing what is known as a weeping sinew.

This fact can be corroborated by noticing a man's hands who has worked for some years on the railroad handling a shovel; his hand assumes a curved shape similar to the shovel handle, and it is so stiff one cannot again straighten it.

This comes through continued and prolonged spells of tiredness.

This is, of course, an extreme case, but a piano student should not follow at all exercises that foster such conditions even to a slight degree; what he *should* have is such movements as will *not* create tiredness, especially in the forearm, and then will the elastic part of his ligaments be fed, producing a mechanism that will be alive to his every shade of delicacy, elasticity, fineness, quickness, and all degrees of power.

But, you ask, how obtain "power" when you curtail the muscular action?

POWER WITH VERY LITTLE EXPENDITURE OF MUSCLE

It was shortly after my experience with Mr. Unger that I came into touch with the modern methods, and it was through these ideas that I learned to find power by using weight, thrown weight or leverage, using the fingers as supports.

In this wise one drills the fingers for quickness, but only very close to the keys, while the upper arm does all heavy work by various degrees of weight actively impulsed, as it were, on the keys at the proper time.

The whole arm is an undulating mass and through its training in relaxation can make firm whenever and wherever it wills, thereby being conditioned for heavy or light passages.

THE FUNCTION OF THE FINGERS

The active part which the fingers take is in spacing and articulating. In this system, the fingers bear the same relation to eliciting the tone from the piano as the throat muscles do in the case of the singer; the throat muscles do no heavy work, for the breathing muscles are responsible for that, thus leaving the smaller muscles simply the work of articulation.

PRESERVING GOOD MUSCULAR CONDITIONS

After practising several months along these new lines, where tiredness was an unknown quantity, my ligaments and muscles were restored to a proper condition and I found that since I had removed the cause of it, the weeping sinew on my wrist had also disappeared. With the playing mechanism kept in such form, progress is assured; one's playing becomes not only a pleasure to hear, but also a pleasure to see.

EXAMINATION FOR THE DEGREE DOCTOR OF MUSIC

The degree of Doctor of Music is granted at the University of London upon conditions of which the following are the most important:

I. WRITTEN EXAMINATION

The written examination will include one paper in harmony, one in counterpoint, one in fugue, including canon, one in composition, one in the history of music.

The syllabuses of the subjects are as follows:

Harmony: harmony of all kinds up to eight parts.

Counterpoint: counterpoint in eight real parts.

Fugue including canon: the composition of a fugue in not more than five parts on a given subject, for strings or for voices.

Composition: treatment of form, treatment of voices, instrumentation.

History of music: a general knowledge of the history of music, and especially of the most important forms of the art. A critical knowledge in some detail of the standard compositions.

No use of any musical instrument will be allowed during the examination unless specially directed by the examiners.

Candidates shall not be approved by the examiners unless they have shown a competent knowledge in all the foregoing subjects.

II. A MUSICAL EXERCISE

Any candidate who has passed the written examination may at any time send a musical exercise.

Such musical exercise must be clearly and legibly written in the proper clefs, paginated and securely bound, of such length as to occupy at least forty minutes in performance, and fulfilling the following conditions:

(1) It must be an opera, oratorio, or cantata, to any words the writer may select.

(2) It must contain choruses representing a variety of treatment of choral forms, and one movement, at least, in good fugal style, if not technically definable as a complete fugue.

(3) It must also comprise examples of polyphonic part-writing for voices in eight parts.

(4) It must also contain solos with orchestral accompaniments.

(5) It must have accompaniments for a full orchestra, and must contain an instrumental overture, in modern style.

(6) Artistic interest will be required as well as technical correctness.

After the examiners have read the exercise the candidate shall be required to present himself at such place in the university as the examiners may direct, upon such day or days as may be notified to him, to be further tested orally with reference both to the exercise, and to his general knowledge of music, but it shall be within the discretion of the examiners to reject the candidate without such further test.

Any candidate whose exercise has been rejected by the examiners, or who has been rejected at the oral examination, may send in at any time another exercise.

III. SUPPLEMENTARY

Although technical skill in performance will constitute no part of the qualification for this degree, any candidate may offer to be examined in:

(1) Playing at sight from a full orchestral score.

(2) Extempore composition, in regular form, on a given subject.

Any candidate otherwise approved shall, if of sufficient merit, obtain a distinguishing mark in either or both of these particulars.

The expense of securing the degree is $100.

THE MUSICAL SENSE

BY HERBERT SANDERS

ITS ORIGIN

We musicians of today, professional and amateur, are heart-whole in our study of music in all its relations but one—and that a most important one—the MUSICAL SENSE. We may profitably ask whether this power of appreciating or creating music has always been possessed by man or whether it is a faculty like the "soul" which cannot be accounted for, except on the hypothesis that it is a gift from the Creator, bestowed at that stage of development when the "beast" was left behind and MAN was evolved. Assuming it to have been dormant for so long, when did it first manifest itself, and what are the milestones which mark its development? Is its present development to be regarded as the first, intermediate, or final stage?

ITS PROBLEMS

It would take volumes to make an attempt to answer these questions, but it is only their consideration which will help us to form correct estimates of the historic significance of the works of the masters, to estimate their likelihood of living, to judge aright the correct relation of the present condition of our art to its former and (so far as we can gather from a study of the past) its probable future development, and to give us that breadth of outlook which gives saneness to our ideas and validity to our opinions.

Genius has been defined as "the capacity for seeing things in their relations." To have a right conception of art we must study it in as many relations as possible, and it would save much time, and be more profitable, if this study started with a consideration of the instinct itself. It is not enough to look outward; we must look inward as well.

A NEW SENSE

A consideration of the musical sense shows that, unlike the other senses, it is so new as to seem almost a new mental endowment. It may be said that music (as we now understand it) is but a couple of centuries old. Sculpture dates back to Pericles. The Great Pyramid was built 6,000 years ago. The Athenian Parthenon was built 2,500 years ago. The Roman Pantheon dates before the Christian era. The modern painter, sculptor, and architect, therefore, look back to men who, centuries ago, accomplished more than they do today. The musician on the contrary, can look forward, instead of backward, for his art is but in its infancy and, as yet, walks with tottering feet. Mr. William Wallace says: "I believe that (viewed in correlation with man's other faculties) music is still in its infancy, and that the utmost effort of the most notable composers of our own time, will be but an iota in its inscription recording man's endeavor towards its accomplishment. It will be to future generations what our present generation must have been to a Hellene of the age of Pericles—an aspect of art unconceived and inconceivable."

ITS INDIVIDUAL DEVELOPMENT

Not only the musical sense of the race, but that of the individual requires consideration. It will show that the musical youth, who, conscious of his powers, decides on a musical career and relies on a future development as fast and sure as that which has already taken place is on uncertain ground. His may be a case of premature development. On the other hand, another youth may be unconscious of his musical sense and not give a musical career a single thought, and yet, later, he may be found to be an inherently cleverer musician than the former; his musical sense was late in asserting itself, or the outward circumstances were not favorable to its unfolding. In fact, it is not unlikely that the works of those composers whose faculties were prematurely developed are the least likely to live.

A unique example of the late development of the creative gift is that of Wagner. Mr. William Wallace says of him: "He was fifty-six years of age when his eldest child was born; after a strenuous fight, which well might have exhausted the energies of half a dozen, he compelled the world to recognize him, and, beginning his crowning work at the age of sixty-six, he produced, at seventy, his *Parsifal*, a work whose teaching many regard in the light of a new gospel."

COMPOSER'S MUSICAL INSTINCT

The study of the musical sense shows our indebtedness to those composers—and there were many of them—who, without hope of reward and often at the expense of physical and mental suffering, pushed forward the boundaries of musical art with such rapid advances that their contemporaries were unable to grasp the significance of their creations. Such men were Monteverde, Bach, Beethoven, Mozart, Berlioz, and Wagner. In the study of these masters, singers and executants were obliged to develop their musical instinct in order rightly to appreciate them, which shows that the composer leads the van, that the executant really is a far less developed musical creature than the composer, and the absurdity of letting the composer starve and of giving all the honor to the less meritorious performer.

Further, the composer whose creations are not ahead of his time can have but ephemeral fame, for musical idiom quickly changes. Mendelssohn wrote in the idiom of his day, and many of his works have already lost their power to charm. On the other hand, Brahms, who extended the boundary line of music in several directions, is now only just coming to his own, and that for the simple reason that he wrote ahead of his time.

HEREDITY

With many heredity solves all problems. But on fuller consideration it is found that many results attributed to heredity can be accounted for on what Mr. William Wallace calls the CONTINUITY OF VOCATION, that is, the son nurtured in the calling, traditions, and atmosphere of his father's vocation assimilates them so unconsciously, that they are apparently so natural to him that their presence is attributed to heredity instead of to environment.

If such be the case, while it is still necessary for a man's education to commence a hundred years before he is born (as THE PROFESSOR said), it is of paramount importance that parents should seek for their children a musical atmosphere. "I cannot play. I have no gift," should never be said but after years of incessant attempt. "I haven't a voice" is better left unsaid, unless training has been adequately tried from the teacher's point of view.

Heredity has been blamed for many mental and temperamental deficiencies. My firm conviction is that most persons are more talented than they suppose. The teacher's first aim must be to convince his pupils of the reality and immensity of their unexplored powers, which only require suitable conditions of environment to bring them to fruition.

MUSIC ROLLS FOR PLAYER-PIANOS IN THE EVANSTON, ILL., PUBLIC LIBRARY

BY MARY B. LINDSAY, LIBRARIAN

MR. MELVILLE DEWEY in an address, some six years ago, said: "We must get away from the old idea that a library is a reservoir or mere collection of books. It is the center now of education. Art and music play an important part in its make-up and the mechanical piano can do much in effecting an improvement in the public taste, because it has made it possible to bring the great masterpieces into the home. It is a greater agent for effecting the betterment of humanity than the printing press."

The idea of circulating printed music from public libraries is not a new one. Without attempting to go into the history of the matter, we would mention Los Angeles, Cal., Public Library and Peoria, Ill., Public Library, where collections of printed music have been maintained and circulated since 1889 or earlier. Possibly there are other collections that antedate these.

It may seem quite a step from the use of printed music to that of the music roll as a part of a library's equipment, but in actual practice it has proved quite feasible. The next and most natural development of a musical department of a public library was that of the laboratory idea by the addition of an instrument for the actual trying out of the music.

Just such a complete working library of music containing a collection of music and music rolls, as well as a pianola-piano, was established in March, 1908, in the Evanston, Ill., Public Library, and is probably the first of its kind in this country.

This collection, known as the Sadie Knowland Coe Music Collection, was founded and endowed by Prof. George A. Coe, then of Northwestern University, now of Union Theological Seminary, New York City. The donor's purpose, as expressed, was "to perpetuate the work of popular musical culture carried on in Evanston by Mrs. Coe for twelve years. The books, printed music and pianola rolls are all selected with this serious end in view. Whatever is merely entertaining is excluded."

The collection now contains over 1,400 books on musical history, biography, and theory, about 400 pieces of sheet music, 565 pianola rolls, and five current musical periodicals.

The room devoted to this department of music is located on the second floor of the Library, the floors, walls, and double doors having been made as near sound-proof as possible.

In addition to the instrument, the equipment of the room consists of a complete card catalog of the collection, a reading table, and other facilities for reference workers. The reference privileges of the room are available at any time during regular library hours. These privileges include the use of the piano for the playing of such music as is in the room.

The use of the pianola is restricted to three and one half hours each day and two evenings per week, this time being divided into twenty-minute periods in order to give a greater number of people an opportunity to use the instrument.

That this room is one of the most popular departments of the Library is attested by its constantly increasing use. Special helps are afforded, such as posting of reading lists, reserving of special books or music rolls for study of programs of opera, or of orchestral concerts.

The use of the pianola rolls is not confined to the music room, but together with the books and printed music, they may be borrowed for home use on the regular borrower's card, in addition to the usual number of books.

In spite of the large use made of the rolls, there has been comparatively little wear and tear, and practically no serious damage, which is surely an encouraging point as indicating the practicability of maintaining such a collection in a public library.

The pianola has opened up the treasures of the masters of music to scores of people whose opportunities for musical culture have been very limited. The use of the music rolls, both in the library and as they are drawn for home use, has had a distinct value in promoting a taste for the best music among our young people, as well as encouraging the purchase of a better class of music for the home pianola.

THE INTERNATIONAL MUSICAL SOCIETY

FOUNDED 1899

The Society has now over one thousand members, distributed in about twenty different countries. It is not an exclusive organization, the sole condition of membership being the payment of an annual subscription to its publications. This freedom as to enrolment has, however, not prevented the Society from being recruited by musicians and scholars of the highest reputation, particularly in Germany, Austria, France, and England; and the United States Section, by no means the smallest of the national branches (over one hundred members), believes that there should be in this country a far larger and more representative membership.

PUBLICATIONS

The Society's publications are two, a Quarterly and a Monthly. The former undertakes to make substantial contribution to the History, Philosophy, and Theory of Music. As the youngest of the arts, Music still offers rich opportunities for research, both amateur and professional, in all these fields; and the Quarterly of the Society is preëminent among periodicals as the current embodiment of the best and ripest musical thought and experience. The Monthly presents briefer records of investigation, reports meetings and historical concerts in various countries, and gives systematic and thorough summaries of important articles from all the musical periodicals of the world. These records of current events in the domain of "musicology" are not merely of great contemporary value, but, by their excellence in scholarship and editing, they also furnish the best obtainable basis for further studies.

ORGANIZATION AND ACTIVITIES

As to personal fellowship and inspiration, the Society furnishes, by its triennial International Congresses and the meetings of its National Sections and Local Groups, effective media of association. The United States Section holds one annual meeting in connection with the Music Teachers' National Association. Local Groups are already formally organized at Ann Arbor (Detroit) and Boston, and informally at New York and Evanston (Chicago). At the meetings—national and local—papers are read and discussions carried on in accord with the purpose of the Society: "The promotion of scientific investigation and discussion regarding musical topics and the closer affiliation of thoughtful students of such topics."

MEMBERSHIP

Membership in the Society is secured by payment of five dollars annually to the General Treasurers, Breitkopf and Härtel, 22 West Twenty-eighth Street, New York City; or at Leipzig, Germany. This payment includes a subscription to the Monthly and Quarterly of the Society.

Active Membership in the United States Section is open to members of the International who indicate in writing their desire to be enrolled and agree to pay an annual fee of fifty cents.

Associate Membership in the United States Section is open to such other persons as wish to be enrolled, are approved by the Executive Committee, and agree to pay an annual fee of one dollar.

The fees for Active and Associate Membership are payable to the Financial Secretary of the United States Section.

PLANS FOR THE FUTURE

The object of enlarging the American membership is to encourage individual and group work in various fields. At present there is no powerful agency in the United States for the promotion of sound musical scholarship, except in the domain of purely technical theory and practice. Of course, no American organization can vie with the scholars of Europe, for whom tradition has not merely evolved methods, but also multiplied materials. But out art centers and educational institutions will certainly develop an interest in the things for which this Society stands. The United States Section can foster that interest, can broaden its scope, and furnish it a medium of expression, and can thus assist in conserving a valuable intellectual asset of the nation.

AN INVITATION TO MEMBERSHIP

Musicians and educators are urged to ally themselves with the Society, even though personal participation in its work may, for geographical or other reasons, be impossible. Enrolment will be a welcome evidence of interest in the Society, and will open the way for whatever coöperation the individual's personal taste may prompt him to give.

A WORD AS TO LIBRARIES

While the publications of the Society are of unique value to individuals, they are indispensable to large libraries. All are advised to urge public and institutional libraries to subscribe for the Quarterly and Monthly.

OFFICERS

The officers of the United States Section are: President, Waldo S. Pratt, 86 Gillett Street, Hartford, Conn.; Vice-President, P. C. Lutkin, Northwestern University, Evanston, Ill.; Secretary, Leo R. Lewis, Tufts College, Mass.; Financial Secretary, Rossetter G. Cole, Fine Arts Building, Chicago, Ill.; Executive Committee, the above officers with George C. Gow, Vassar College, Poughkeepsie, N. Y.

Through affiliation with the Music Teachers' National Association, opportunity has come for the publication, in that organization's proceedings, of the papers read before the United States Section of the International Musical Society. Most of the following addresses have thus been published:

1908
Sixteenth Century and Nineteenth Century Tendencies
George C. Gow, Vassar College
North American Folk-Songs
Jaroslaw de Zielinski, Buffalo, N. Y.

1909
The International Musical Congress at Vienna, 1909
Albert A. Stanley, University of Michigan

1910
The Laws Governing the Editing of Musical Compositions
Max Friedlander, University of Berlin
Operatic Italy in 1770, by an Eye-Witness
Bruno Hirzel, Library of Congress
The Growth of Musical Form in Plain-Song
Charles W. Douglas, Fond du Lac, Wis.

1911
The International Musical Congress at London, 1911
Albert A. Stanley, University of Michigan
The Need of a Progressive Policy
Waldo S. Pratt, Hartford Theological Seminary
Was Richard Wagner a Jew?
Oscar G. Sonneck, Library of Congress

1912
The History of Musical Degrees
Charles H. Mills, University of Illinois
The Origin of the Intervals of the Major Scale
Fritz Krull, Indianapolis, Ind.
The Possibilities of Thematic Indexing
Leo R. Lewis, Tufts College

1913
The Date of Peri's "Dafne"
Oscar G. Sonneck, Library of Congress
Beethoven and His Nephew as Seen in the Notebooks
Henry E. Krehbiel, New York City
The Phonographic Transcription of Primitive Music
W. Van Dyke Bingham, Dartmouth College
Friedemann Bach
George B. Weston, Harvard University
The History of the Schola Cantorum at Rome
Charles W. Douglas, New York City
The Modern Interpretative Ballet
Edward Burlingame Hill, Harvard University

SPEED OF NERVE REACTION IN PIANO PLAYING

In an address to the students of the London University Extension Department, in 1888, Sir James Paget made a report in regard to certain observations he had made of piano playing. Although this was twenty-six years ago, the facts have equal importance today, and are full of interest to the musician, who thus has proof of the complicated processes of playing the piano. We quote from the address:

"Mademoiselle Janotha was so good as to play on the piano, at my request, one of the swiftest pieces of music, known to her, a *Presto* by Mendelssohn. The time it occupied was taken, and the number of notes was counted. She played 5,995 notes in four minutes and three seconds; rather more than twenty-four notes per second.

"We may, from this, estimate approximately the number of what we may call nervous vibrations transmitted during a given time to and from the brain; from the brain to the muscles; and from the muscles and the organs of hearing and of touch to the brain.

"Each note required at least two voluntary movements of a finger, the bending down and the raising up; and besides these there were a very large number of lateral movements, to and fro, of the fingers, as well as many and various movements of the wrists, elbows, shoulders, and feet. It was not possible to count these, but I think I can be sure that they were not less than at the rate of one movement for each note, making altogether not less than three voluntary movements for each note, even if we allow the chords in which several notes were struck at the same instant.

"Certainly there were not less than seventy-two distinctive variations in the currents of nerve force transmitted from the brain to the muscles in each second, and each of these variations was determined by a distinct effort of the will. And observe—for herein may seem a chief wonder—each of these movements was directed by the will to a certain place, with a certain force, and a certain speed, at a certain time; and each touch was maintained for a certain length of time. Thus there were, as we may say, five distinct and designed qualities in each of the seventy-two movements in each second.

"Moreover, each of these movements, determined by the will and exactly effected by transmission of nerve-force from the brain along nerve fibres to the muscles—each of these movements was associated with consciousness of the very position of the finger, each hand, each arm, and each foot, before it was moved and while moving it and with consciousness of the sound of each note and the force of each touch.

"Thus there were at least four conscious sensations for each of the twenty-four notes in each second; that is, there were at the rate of ninety-six transmissions of force from the ends of nerve fibres, along their course to the brain, in each of the same seconds during which there were seventy-two transmissions going out from the brain along other nerve fibres to the muscles. And then, add to all this, that during the time, in each second of which the mind was conscious of at least ninety-six sensations, and directed not less than seventy-two movements, it was also remembering each note to be played in its due time and place, and was exercised with the judgment, in the comparison of the playing of this evening with those of the time before, and with some of the sentiments which the music was intended to express.

"It was played from memory, but Mademoiselle Janotha assures me she could have played it as swiftly at sight, though this would have added another to the sensations associated with each note."

THE ECONOMY OF MEMORIZING

BY ADELIA M. RANDALL

A PRACTICAL question for all teachers and students of piano is, "At what stage in its study should a standard composition be memorized?"

All thorough students have their own ways of memorizing. And while the chief difference between musical and non-musical persons is in the matter of sensitiveness to musical impressions, among musicians themselves there is a wide difference in the degrees of this sensitiveness; so that some, in a day, are able to reproduce without notes an elaborate work, while others must impress its component parts again and again on the memory.

Some leave memorizing to nature and play the work as a whole until it leaves its own impression without forcing; others begin the study of a composition by working out its minutest parts and committing them to memory by a forcing process. The questions as to whether memorizing should precede the working up in tempo, and whether it should precede or follow the working out of interpretation and tone color are answered variously by the best teachers.

Without dogmatizing, we would call the attention of the piano student to one phase of his subject, namely, the advantages of memorizing pieces in the early stages of learning them. Whatever wields the greatest amount of discipline, development, power, in the shortest time is sought for in this practical age.

To prove to yourself—I address myself to the average student—that these ends are secured musically by memorizing a piece in the early stages of studying it, you have but to observe yourself when you take up your next new composition of moderate difficulty. So long as you are using the notes, observe how many a repetition of the whole piece or any part of it, will count for almost nothing of real progress made; perhaps for a slight gain technically or a little more light on the general interpretation, but little of real possession.

After repeating twenty times—with no determination to memorize—Schumann's *In der Nacht* or Rachmaninoff's C minor *Prelude,* how much have you made your own? If you are only an "average student," you can probably progress but a little way from memory. But try twenty repetitions of the first period, or better still, the measures to the first half cadence, with close attention to every change of harmony, every transient modulation, every chromatic or diatonic passing tone, every chord inversion; this, with a determination to make all these things your own, like so many stepping stones on which you plant your feet, or so many marks on the trees by which you make your way through the forest—this kind of repetition gives a very different result. The first way of working is to the second what strolling through a palace at dusk would be to stopping in each apartment, turning on electric light and scrutinizing every piece of furniture and decoration.

You will doubtless want to read the new composition through a few times at first to see what it is like. But if you are going to pursue this method of detail memorizing, these preliminary repetitions will be of doubtful advantage. Start in with the first phrase of the first subject and go no further. Begin at once your close study of this, and your mind will not be confused with the varied treatments of this subject that you are sure to find as you go on.

Some advocate taking still more minute parts for memorizing—a measure or half measure at a time. But this seems like memorizing prose or poetry one word at a time. To memorize a prose or verse selection we would surely take for our unit a phrase that made more or less complete sense, and each phrase thus adds a new and complete link to our memory chain. Divide your musical composition into such brief phrases, marking them off if necessary, and make these marks definite stopping places. Use your will power and do not go beyond them until you have accomplished what you set out to do.

Take each one a few times at ordinary tempo, then very slowly, listening with all your attention. Observe first the main theme or voice, with its phrasings and accents, then the bass, then any accompanying theme, then the harmony, noting every change, every dissonance and resolution, every modulation, every passing note. Reproduce it as soon as you possibly can without the notes. After studying the whole composition in this way, put the same method into practice on larger sections of it, several phrases together, and you will find fewer repetitions will suffice.

Of course, this minute observation presupposes an analytical ability that can be acquired only by much practice in recognizing harmonious keys, and modulations. And we make no definite assertions as to just how much you, our average student, will profit by this twenty-fold repetition of single phrases of Schumann or Rachmaninoff; that depends upon your individual powers of observation and concentration. We do not say that phrases so repeated today will be given to your memory for all time. Probably you will have to take them up tomorrow or next day, using certain observations as crutches to help yourself through as today—such as that the resolution was to minor instead of major at this point, or that the tonic chord was in the first inversion here, or that the elaboration of the melody was this time of this or that nature.

But these very perceptions, which serve us as crutches first and become instinctive later, form a sure foundation—to change the figure—on which we build a feat of memory that does not crumble away in spots and fail us, as does much of the memorizing that is simply in the fingers, or in the eyes, or in the unintelligent hearing.

Besides the concentrated experience in analysis and observation and the economy of time that such practice affords, there is the economy of eyesight, which many need, and others would do well to consider. Much of the eyesight expended in practice is wasted, for the simple reason that so many repetitions from notes count for so little progress.

This is not recommended as the *only* way of studying compositions worth memorizing. A great deal of unforced memorizing, and of practice without a view to memorizing at all, is, of course, done with profit. But it is safe to say that some of this detailed, volitional memorizing should be done constantly, for the development of musicianship and the keeping of it in practice. No student can afford to forego it entirely.

———*———

MR. KENNERLEY RUMFORD, MME. CLARA BUTT-RUMFORD, AND THEIR CHILDREN

A LAYMAN'S VIEW OF MUSIC

BY EDWARD P. GUILD

I DESIRE to say something as to the value which the piano may be to a person with a love for music who has never had an opportunity to study under a teacher. Much has been said regarding the development of musical appreciation in this country, and music is being taught as never before. In all sections are well equipped conservatories with ambitious students; in nearly every town and hamlet are private teachers with their many more or less promising pupils; in the public schools musical instruction is free for all. Still the fact remains that the great majority of persons grow up to be *listeners* only, unable to express themselves musically with piano or other instrument.

Talk with an average group of men or women. Nearly all will avow a fondness for music of some style or other, several may be able to sing, a less number be more or less proficient at the piano. The others will say, "I thoroughly enjoy music and only wish I had learned to play when young." And here is the pitiable part of it, namely, that so many, with music in their souls, feel that the piano is for them only when some trained performer sits at the keyboard and they may listen. Does not this fact come through failure to realize what is possible to achieve in the way of self-culture? Here is an illustration:

A boy once came into possession of a little four-octave melodeon. Without the least help from anyone he discovered the relation of the keys one to another. Then from old singing books he learned how to read music, and, little by little, was able to play hymn tunes.

In the course of time (this was in a small country town) he got a music publisher's catalogue, sent for scores, mostly classics, and at his much loved little instrument became surely initiated into the musical thoughts of the great composers.

In later years, when he came to hear the same music played by orchestras or pianists, he realized how well he knew it. In fact, Beethoven, Mendelssohn, Schumann, Wagner seemed to mean more to him because he had first discovered to himself the beauties of their music without outside suggestion or explanation.

And now, many years later in life, he finds the same keen delight in bringing home some score new to him and reading it at the piano. He has never "taken a lesson" and is, of course, unable to meet many technical difficulties, but he can mentally read music at sight, and, while he has to skip some passages, he hears them all in his mind. From this very fact he sometimes thinks that he gets the deeper meaning better than if the impression was through the ear alone.

It is his daily delight on coming home from business to go to the piano and delve into music, heavy or light, as it may be.

This experience has not been related as being unique. Doubtless there are many similar, but might there not be a great many more?

Whatever one's occupation in life, ability to translate a musical composition for oneself is a great asset. Imagine a large percentage of us able to know the contents of a book or magazine only when someone else reads aloud! We cannot always listen to an accomplished pianist or trained reader, but as all, except illiterates, can read the language of words and sentences, why should the language of music be to so many a mystic art? Technical proficiency is not possible for all, but ability to play a little, with understanding and appreciation, is far better than not to play at all.

May not the time come when the number of music lovers to whom the keyboard is meaningless except when under other hands shall be the few rather than the many?

IS THERE AN EXCUSE FOR NOT PRACTISING?

BY WILBUR FOLLET UNGER

For many years I have been the victim of pupils who come to their lesson unprepared and laden with excuses for not having practised. I reasoned, I pleaded, I threatened, with the satisfaction only of hearing myself talk by way of doing my duty, until there came a time, recently, when I grew weary of all excuses, and decided to start a little campaign with a view to ascertaining if the "impossibility" were real or only existed in the minds of certain pupils.

To this end, I distributed among all my pupils a circular letter announcing the offer of prizes for the best letters received by a certain date, describing just how the pupil so arranged his time that he was able faithfully to practise the prescribed music lesson at least one hour a day in addition to fulfilling the regular school, business or other duties, still having time left for social recreation.

Some pupils (principally the ones who furnished excuses) failed to respond, but I received many interesting, well-written letters, the majority of them proving in effect that it *is* possible and practical to spend at least an hour every day on music study—*provided a proper system is maintained.*

Following are samples of letters that I received. Read them carefully, and learn from the pupils themselves how to practise!

Dear Mr. Unger:

Most pupils would say that it is impossible for them to get one hour daily practice and still have time for school work, business and social recreation, but, from my own experience, *I know it can be done.*

There are weeks when I find it possible to get two and more hours each day. To do this, I first make up my mind to do it and then go at it. I find I must *make time* in order to keep engagements, do my school work, and still have time for recreation. I have to concentrate my mind on my work, forgetting everything else.

There are many pupils who do not know how to practise, and avoid the waste of time. Practice is the frequent repetition of a thing. A good many pupils take a new étude, play it over once, lay it aside, and go on with the rest of their practice. This is not practice; it is merely sight-reading. When getting a new étude or piece, I always practise each hand separately several times before putting hands together. In perfecting an étude or piece, one generally finds some part which he cannot play as fast or smoothly as the rest. This part is taken separately and studied until all can be played correctly and evenly.

How can I do all this and not feel tired? Take the morning hours! During the summer months I rise about five o'clock and can get about two hours' practice before breakfast. In winter, it is not so easy to get up early, but throughout the year in general I find it best to practise almost directly after luncheon, for if I delay there is sure to be something turn up preventing my practising.

Now, let me sum up the matter into a more clear form:

First, I make up my mind to practise and then go at it!

Second, I concentrate on my work.

Third, I practise, not play, my lesson.

Fourth, I practise when I am rested. In the morning I can do my best work.

CHAS. ROY CASTNER.

Dear Mr. Unger:

In order to attain satisfactory results in music study, a time schedule for each day is necessary for one who attends school. Since practising when the mind and body are fresh is most worth while, one must arise sufficiently early in the morning to accomplish at least a half hour's practice before going to school or business. As the latter grants at least one hour at noon, devote from fifteen to thirty minutes of this time to practising or studying musical theory. Thirty or forty minutes may be accomplished directly after school. If one's afternoon practising is interfered with for any good reason, this time may well be spent in outdoor exercise. There is usually a half hour before and after dinner, at which time the members of the household are relaxing and will not be annoyed by the sound of the piano.

Thus, one to two hours of practising at broken intervals may be accomplished with the best of results. (Signed) S. HELEN BRIDGE.

Dear Mr. Unger:

In arranging my time, I find the best time for practice to be in the morning when the mind is clear and the body rested. Therefore, I make it a point to practise at least one half hour in the morning before going to business, and again after lunch another hour or more. I do not practise much in the evening, as I have enough time during the day if only utilized, but at times I know that I do not make as good use of my time as ought to be done.

Yours for more practice,

(Signed) J. W. JOHNSON.

Dear Mr. Unger:

I have, on an average, fourteen hours every day (as I get up at seven o'clock and go to bed at nine), in which six and one half hours are spent in school. That leaves me seven and a half hours to spend in various ways. Out of seven and a half hours a day there is no reason why I should not spend at least one hour on music. So, from eight to half past eight in the morning I practise; and when I come from school in the afternoon I have some recreation. Then I practise another half hour, thus getting at least one hour a day.

(Signed) JEANNETTE JACOBUS (age 11).

Dear Teacher:

I get home every day at about two o'clock. Then I allow myself one hour for lunch and little things I have to do. After lunch I practise for three-quarters of an hour. As I do not care to do my school home work in the evening, I stop practising and do as much school work in the afternoon as possible. Sometimes I practise before dinner.

Often it is necessary for me to go out. In that case, I do my school work when I get home, and therefore have no time to practise at all.

No matter how I plan my work, I seldom have time for social recreation unless at night. Generally, having been busy all day, I am too tired to go out in the evening. Thus that part of the day is omitted.

The majority of other pupils have an advantage over me, for they have short walks to school, while my walk is a long one.

(Signed) JENET SHIELS.

Dear Mr. Unger:

I shall tell you how I practise seven hours a week and still have time left for other things.

I come home from school in the afternoon and practise three-quarters of an hour, and then do my home work. After supper I practise three-quarters of an hour, making a total of one hour and a half each day. I have the rest of the evening to myself, but if I know that I am going out in the evening, I get up earlier that morning and practise a half hour, in order to complete my time. (Signed) HATTIE OMELIA.

———*———

TUNING UP IN THE SUMMER

BY CHARLES BANCROFT

She realized that her nerves needed a rest; in fact, they felt like the "much used piano." They needed tuning up.

One day one of her pupils brought her a bunch of fresh plucked roses. It was the pupil's last lesson of the season. After the child had gone, the teacher stood with the bouquet in her hand, feeling very much like the day she graduated. Placing them in a silver vase, a commencement gift, she took a look at herself in the mirror.

As she stood there, taking a mental impression of the tired look on her face, the rose perfume scented the air, a ray of brilliant sunlight coming through the studio window seemed to whisper, "Summer is here." She had been so interested in her profession that she had not given a thought to a vacation. "Tuning up time," she called it.

All through the past season she had intended saving a little towards going away, but just when everything looked favorable, an unexpected bill would come up for payment. As she stood there, realizing that she would not be able to go out of town, she determined to get as much pleasure out of her "stay at home vacation" as her more fortunate professional friends would, those who could afford a trip to the mountains or the shore. Here was an opportunity to start that Summer Music Club she had often thought about. To each of her pupils she sent the following invitation:

> Dear Pupil:—If you will be in the city during the summer it will be to your advantage to join the Summer Music Club I am now forming. The Club will be composed of my pupils. The object of the meetings will be to familiarize ourselves with the musical opportunities our city affords to music students. Visits will be arranged to the Music Department of our Public Library, the Music Department of the City Museum; occasional open air concerts will be attended. Everything will be done to give an enjoyable time at all meetings, so that we may be thoroughly prepared for our fall studies. You may bring a friend if you desire.

She was surprised at the number of pupils who were anxious to join the Club. Pupils who were only going away for a short time wished to enroll because they would be able to attend some of the meetings. The following two meetings were a decided success.

"Pure air, its value to the music student." She explained the necessity of keeping one's room well ventilated in order to obtain the best results in practice.

"Appreciating Father and Mother." This topic made a favorable impression upon the pupils' parents. She told her pupils how often parents will do without personal needs, in order that the children may have a musical education. She told her pupils they should appreciate the opportunity their parents gave them by practising faithfully.

One day she stood looking in the mirror. It was near September. She had just completed arranging her lessons, finding a vacant hour for a pupil who had developed from the Club. She noted how the tired expression had disappeared from her face; and, as she stood there, she realized that determination will accomplish a great deal, if one only has enough grit to carry their ideas through.

LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

TEACHING THE TRUTH ABOUT MUSIC

THERE may be Beginning Teachers who think that because they have entered the profession at the present enlightened period they have naught to do in the way of correcting false ideas about music. Yet even today there is work to be done; there is more for the Beginning Teacher to teach than music itself, and others whom she must enlighten beside the music student.

The attitude of the young person toward music, as toward anything else, is influenced greatly by the attitude of his elders toward music, as toward everything else, and, if the Beginning Teacher would obtain a right attitude toward that study which she is teaching, it behooves her to give thought to "the elders." This fact has been remarkably brought out by a controversy that has been going on in Boston.

It began at the two hundred and twenty-sixth regular meeting of the grand old Boston Browning Society.

This meeting commenced with some exquisite music written for the occasion; then followed a charming paper on "The Croisic Celebration," and a group of Browning's songs; then—then arose a speaker who talked on "Music, Its Influence on Progress." When he had finished Music lay a poor, dishonored, mangled, worthless thing in our midst. He had stripped her of every illusion, and denied every claim to a useful existence that had ever been hers.

Several musicians were present, but the only person who rose to reply to this onslaught was a New York woman writer, who replied to his "slamming" of progress in general rather than of music in particular. The musicians were mute.

Well, two Sundays later this same subject was taken for the symposium of Boston's biggest paper; it was discussed by an author, a musician, an artist, and a critic, and it was three to one, the musician being the only one to allow that music had done anything whatever for human progress, and his defense was such a feeble one that the readers were left with the impression that, after all, music was but a poor business indeed—"simply a means of emotional satisfaction—that it does not strengthen the character—that there is the same relation between music and human progress as between silk stockings and life—that music is only an 'emotional spree,'" and much more to the same effect.

Now, this concerted belittling of music was read in thousands of homes throughout the country, and discussed again by the members of the family and their relatives, friends, and neighbors, and, in almost every instance, before the young persons who are studying music.

Does not this one Sunday's work alone give the Beginning Teacher something to do?

If this is all that music is or does, then you are a hypocrite and all that you are teaching is false, and children certainly should not be led by you into the way of "musical sprees."

Emotional sprees are bad, but it is worse that conditions should be such that the paper with "the largest circulation" should choose for its weekly discussion, and print in its largest type such a subject as "What Relation Has Music to Human Progress?" and then proceed in such a bantering ridiculing, "refuse-to-be-serious" tone that it is nothing short of an insult.

This is the sort of thing which sets the pace for the "elders" the country over, which has a most unfortunate influence upon the young person, and which makes the work of the music teacher so difficult.

If these persons who so glibly ridicule and condemn music would give a few moments of honest thought to what progress really is, such an attitude toward music would be impossible.

First, there is financial progress; second, educational progress; and third, social progress.

Has music done nothing to further financial progress? Have the factories the world over in which musical instruments are manufactured counted for nothing? Are the marvelously skilled workmen which the manufacturing of musical instruments produced to receive no credit? Is the "business" side of music nothing—the stores, the offices, the printing plants, the studios, the magazines, the schools, the orchestras—do not all of these make business, provide bread and butter, produce skilled labor, enlarge and enrich cities, better the condition of the people, as well as provide amusement for the millions? (And I have not mentioned the talking machine!)

Also, music must be reckoned with as a community asset in this, that it is the "first aid" to many *other* kinds of business. The modern department store could not be run so successfully by half if not for the music it offers its customers; the restaurants and hotels have found it "good business" to offer music with meat; the street and railway companies make their thousands by offering patrons a "select musical program" at the end of a trip, and have even found it worth while to support really elaborate music festivals each year in the parks at the ends of some of their trolley lines, festivals of two or three days in length. Edgar Stillman Kelley says that the time will come when it will be as common to be head musician to an electric light company, or a law firm, or to a can company, even, as it once was to be head musician to the petty courts of Europe. This is natural in a country in which Business reigns. (And we have not touched that great phase of the subject, the commercializing of music by the opera impresarios and others of that ilk!)

EDUCATIONAL PROGRESS

As to educational progress, it would seem as though this battle had been won for good and all, and that its acceptance by the schools is proof sufficient that music has been recognized as a factor in educational progress, yet here is a Boston writer declaring "that music never taught a single truth."

For the ignorant music holds no more of truth than does mathematics or Sanskrit or stenography, but to those who *study* music it reveals some of the greatest laws of the universe as does no other study —vibration, proportion, acoustics, harmony, eurhythmics. The boy who studies music gets a view of life at a different angle, and sees things as the boy who does not, cannot. The hundreds of men, *educated* men, who have expressed regret that music had not been made a part of their education, did this because they realized that the man who goes through life lacking music misses something which nothing else can make up to him. (Some realize this, many do not, and it is with these latter ones that you Beginning Teachers must strive. It may be too late to do them, personally, any good, but for the sake of the children do this to make them give to music its due.)

SOCIAL PROGRESS

Even the critics admit, although it may be with a self-saving shrug, that in social progress music does count for something.

Imagine life without music! One man said, "We can do without the necessaries of life, but we *must* have the luxuries." Always a luxury to those who will not stop to think! Yet where is the man who will deny that the home in which the bread is kneaded to music and the dishes done to the rhythm of a merry tune is not a happier and a more humanly progressive home than the one in which no music is heard except for the entertainment of guests, and that the man who opens his house door at the end of a hard day to the lilt of a song is going to be a livelier unit in the general progress of humanity than the man who enters upon a house of silence! Religion cannot do without music, and true morality never thinks of trying to; it is a part of it.

These are some of the things which teachers must continue to teach over and over again with as ceaseless iteration as they do the scales and finger exercises, for their pupils' sakes. These are some of the facts which it seems to be necessary to force people to admit. They will go on laughing at music and musicians, and declaring that music has done absolutely nothing for human progress, but that human progress has done everything for music, and it is for you to *convince* them that music is worthy of respect and consideration; and then, after you have convinced them, you must proceed to *convert* them to a proper attitude.

For the children's sake, if music is to be to them anything more than an "emotional spree," work always among the "elders," that our young people may not, in their turn, also become scoffers.

SONGS FOR COMMUNITY SINGING

FROM lists of hundreds of musical compositions the National Conference of Musical Supervision chose nineteen songs, to be issued in a book for use in community singing classes to be held in American school buildings everywhere at night. The aim was to include songs of intrinsic value, but not to exclude others of patriotic or otherwise hallowed associations, whether in America or elsewhere. The idea of making such a selection for publication was to build up the practice of community singing; and to insure, when members of different communities are thrown together, that they would have a common stock of songs. The songs selected were these:

America; Star-spangled Banner; Old Folks at Home; Lovely Evening; Auld Lang Syne; Annie Laurie; Home, Sweet Home; How Can I Leave Thee; Dixie; My Old Kentucky Home; Drink to Me Only with Thine Eyes; Flow Gently, Sweet Afton; Nancy Lee; The Minstrel Boy; Sweet and Low; Row, Row, Row Your Boat; Blow, Ye Winds, Heigh-Ho; Love's Old Sweet Song.

Not so representative a list, one might think, as could be compiled, but with this as a first book the beginnings may be made of choral singing by the people, and a second easily follow when needed.—*Christian Science Monitor.*

THE MOZARTEUM, OR MOZART MUSEUM AT SALZBUR

MARY WOOD CHASE

A SUMMER MUSIC SCHOOL IN THE WOODS ALONG LAKE MICHIGAN

BY MARY WOOD CHASE

[Having learned of the unique natural attractions of the location which Miss Chase has chosen for her summer teaching season, the Editor of THE MUSICIAN wrote to her making some inquiries. In reply a lengthy letter was received, from which we quote freely in order that other teachers who are doing summer teaching or have in mind to take up such work may have a report of how one school has made a success in mingling serious work and healthful recreation. The Editor.]

We must recognize that there are reasons for the fatigue and depression felt by conscientious teachers at the end of the season. In the first place, constant tension of the nerves is caused by never ceasing alertness. Pupils must be reached in the most direct way to produce satisfactory and lasting results. Much time must be spent in looking over new music, in practising and working out difficulties so as to eliminate loss of time during lesson hours. New ways must be planned to interest and inspire pupils. This constant outpouring of energy and inspiration during lesson hours, giving out dynamic enthusiasm with small returns, brings often discouragement and depression, a condition intensified by the relaxation resulting from the humidity of spring and the approaching heat of summer. A mental and physical lassitude is felt which only much ambition can counteract.

Many are the attractions of the city to the teacher from small towns and college experience. But too often study in the city in the summer means to be shut up in a close, stuffy room practising, perspiration combining with the city's soot and dirt to make life miserable. Trips to the parks are on crowded cars filled with equally uncomfortable persons, pavements burn the feet, nights bring little relief, and all the time a longing is felt for the fragrant freshness of God's out-of-doors, which not even the most beautiful park can successfully satisfy.

It was after seeing the pale, tired faces, year after year, in our Summer Sessions, and learning of many nervous breakdowns of teachers who had spent their summers in the city studying for their further advancement, that we conceived the idea of finding a home for a summer school which should combine all the advantages of summer study with all the essentials of summer recreation. It was on one of our tours of exploration that we discovered the Conservatory in the Glen.

This little building, as in the fairy stories of old, stood, hidden almost from view, save for the cupola peeping out from the forest below. As we pushed our explorations deep down into the ravine we found the building boarded up and deserted. Inquiry disclosed the fact that it had been built a few years before as a studio building for the use of a small Chautauqua. After a season it was closed. Our overtures were accepted, with the frank assurance that we could not make a success of that place so far from any city. The summer cottagers near by did not want instruction. But our thoughts went back to the tired faces of those earnest young teachers whose ambition to improve every opportunity led them to sacrifice health in their zeal.

We took the Conservatory in the Glen and engaged our teachers, arranging with some of the cottagers to board the students. We shipped in half a dozen pianos for practising, and before the season opened had as many applicants as we could accommodate. The cottagers, gathered from all parts of the compass and supposed to be indifferent, quickly awakened to the remarkable opportunity at their doors and sent their children.

What were the advantages offered which were superior to those we had offered in the city? First of all, the advantages of a charming small summer resort with an ideal bathing beach on the great Lake Michigan, a tiny river connecting it with a small inland lake for canoeing and fishing; wonderful ravines, pine woods with an historical Indian trail, tennis courts, golf links, and a six weeks' Chautauqua course for entertainment.

A short walk leads from the beach to the Conservatory in the Glen. Here all of the practising is done. Every studio window looks out into the luxuriant foliage of the Glen, with its birds and squirrels and wild life. Cool, refreshing breezes blow gently through the Glen at all times. Practice hours are interspersed with a plunge in the lake, a tramp through the woods, with an armful of wild flowers for recompense.

MacDowell recognized this need for inspiration to be drawn from Nature when he established his retreat for artists and students. At Epworth our plan has been so successful that another studio has

THE CONSERVATORY IN THE GLEN

been built for teaching purposes, consisting of one large room with windows on all sides looking out into the Glen. It is furnished simply with a Steinway grand piano, a desk and rustic seats.

Here we give from our fount of inspiration. Teaching in such surroundings is a joy. The influence is felt by both teacher and pupil. Here we discuss all the problems of the young teacher's past experience. Here we also study in detail the new methods which shall help her to solve them and other problems more easily. Here, in a word, she receives inspiration, recuperation, and recreation for mind and body. Many of the lectures are given out under the trees. On the beach and on the cottage porches the students congregate and discuss their plans and studies. The very atmosphere is musical,

LAKE MICHIGAN BEACH

and inspiration and enthusiasm increase with each day's work and recreation.

Instead of leaving for home with a weary sense of relief that the course is at last finished, that summer is nearly gone, that relief from the suffocating heat and heavy, dustladen air will soon be found, our summer students long to prolong their stay and begin to plan for their return the next season. Their hot journey home they often prefer to break by the delightful boat trip by day or by night, as they may choose. Their memory of Epworth is surrounded on all sides by charm and romance.

EFFICIENCY

BY AUBERTINE WOODWARD MOORE

Qualified experts have reduced efficiency in business to a science, and it has been logically demonstrated that through intelligently directed movements the workingman or woman can accomplish half as much in a given time as through ignorant effort, and do the work better and more easily. In fact, the demand of the day seems to be: "More brains, less sweat."

Common sense views of this kind are too little recognized in the matter of piano study, where it is most desirable to move directly toward a clearly defined goal. Instead, the luckless piano pupil often flounders helplessly through quagmires of error, recklessly squandering his forces in trying to find his way in the dark.

When a poorly prepared lesson is brought to the average piano teacher, the verdict is pronounced: "There has not been enough practice." The unlucky pupil proceeds to practise more and more, making the same mistakes in fingering, touch, rhythm, phrasing, dynamic variations, even in the notes struck, because he has not learned the ground principles of his work.

It must never be forgotten that to work profitably is to work well rather than merely to work much. To work well, to attain true efficiency, everything at first must be taken slowly.

An old Italian proverb says: "He who goes slowly goes wisely, and he who goes wisely, goes far." Thalberg, in his *Art of Singing Applied to the Piano*, wrote: "Pianists, in general, play too fast and think they have proved a great deal by displaying much agility with the fingers. To play too fast is a capital offence." Furthermore, he recommends that great sobriety be put into the movements of the body and great tranquillity into arms and hands, and he advises students to listen carefully while playing, to be severe upon themselves, and learn to judge themselves. Pianists work too much with their fingers, he declares, and too little with the intelligence.

His words are as useful today as when they were written, and should be considered by those who desire to attain efficiency in piano playing.

THE PROFESSOR TALKS ABOUT GRADUATION AND KEEPING ON AT WORK

It is quite an unexpected pleasure, my dear Editor, to have the privilege of a talk with you at this time of the year, for it has usually been looked upon as the dead season for teachers and their disciples; a season when music study of every kind has been abandoned in favor of foreign travel, woods, streams, lakes, mountains, seashores with their hammocks, canoes, yachts, autos, motorcycles—yes, and aeroplanes; a season when THE MUSICIAN, each month as it arrives, is often tossed unopened into a corner by some careless hand, whose possessor is oblivious to all the pearls of thought and of counsel contained in its columns. True, the subscriber, on his or her return, may deign to cast a cursory glance at its contents; or it may continue to share the fate of many other musical magazines and periodicals, whose ever constant endeavor is to raise the standard of musical thought and effort—a fate best described in the remark made to me by one of Boston's foremost musicians: "What? The musical papers? I receive them all; *but I never open them, much less read them!!!*"

THE HALO OF A DIPLOMA

But my seemingly unreasonable visit is really prompted by the desire to make some very pertinent and seasonable remarks. It appears that my recent diatribe against self-styled musicians who wish only to *"get by"* has, "like an eagle in a dovecote, flutter'd your Volscians in Corioli"—which means, in plain English, that the would-be "getters by" object to being exposed. I don't blame them. So would I, if my musical outfit were as scanty as theirs!

It is a most unfortunate circumstance in the cause of musical progress that the large majority of music students look upon graduation and the possession of a diploma as the climax of their musical endeavor, and that henceforward they have only to "linger and play on its summit." In the early days of its possession, it is true that the diploma serves as a halo of renown to the graduate, who smiles and beams contentedly in its reflected rays. But a halo is a very difficult thing to wear gracefully and effectively! The halos of early Christian and mediaeval times were accorded only to saints at the painful price of martyrdom. The halos with which Mozart, Schubert, Beethoven, Chopin, Schumann, and others have been invested came to them after death; they were gained by simple, unobtrusive lives of contant work, study, and striving towards the attainment of perfection in musical expression. Witness Beethoven's notebooks full of sketches, corrected again and again, for his various works.

HALO MUST BE KEPT BRIGHT

Yes, indeed; that diploma is a halo that is going to give the graduate a lot of trouble. Of course, it will be framed and hung up in a conspicuous place in the studio or den to serve as a striking proof of the musicianship of the owner, who will forget that he (or she) only just "got by" by intensive coaching on the surface of subjects whose depths remain unfathomed. But that halo is worn; that diploma *has to be lived up to.* Its possessor has to fill in the holes at the foundation of his musical edifice in order that the structure may be solid; nay, more—he has to study constantly to keep up with the never ceasing march of musical progress. What will the student, who has never gone beyond Scarlatti, Clementi, Handel, Haydn, and Mozart, understand of Berlioz, Brahms, Beethoven, Strauss, Debussy, and Ravel, to say nothing of the Russian school of composers? Truly, that halo is a nuisance unless it be regarded as the *foundation stone of the musical edifice now to be erected.*

If this be the case, the diploma may be looked upon and cherished as the true starting point of a musical career. For, having proved that he was able to acquire certain essential elements of study, he may now employ them in the development of his musical growth; then he will find that the height to which he may climb the Parnassian mount is subject only to his talent and capacity for constant, untiring labor.

Therefore, let the new—yes, and the old—graduates wear their halo and treasure their diploma; it is their passport into the land of music, where they will find competent guides to lead them on from wonder to wonder, until they become experienced travelers, able to journey alone and trace their own particular path to success and renown. But, let them be advised: the diploma is only the passport; the journey is that which makes the musician.

SUMMER SCHOOLS FOR GRADUATES

Until quite recently summer schools have been looked upon by many as something freakish: places where a jolly holiday might be spent at farm or seashore, with pleasant companions and a semblance of musical study, just enough to give color to the title of "school." Those who have gone to them with this wrong idea have returned, not "sadder and wiser" for the experience, but *gladder* and *wiser,* and with more musical baggage than they took with them. It is my very strong conviction that the summer school (or the summer course) is just the very thing for the new graduates. Here they will have instruction and information conveyed to them in a new and attractive manner; they will be made conversant with old facts in new dresses; they will make the acquaintance of new theories and methods, both of learning and teaching; daily, and at every turn, they will come face to face with new viewpoints and solutions of problems which have puzzled them; they will probably meet excellent, talented musicians who will be of use to them in years to come; and, above all other considerations, they will most surely consolidate all that they have learned during their diploma preparation—the mists of their feverish study for graduation will be dispelled and they will be made to feel that they are now standing firmly on a solid musical basis.

You hit the right nail on the head, my dear Editor, when you pointed out last month that "every teacher needs the support of his professional brethren." This thought underlies my statement that every summer school should serve as a tributary for supplying active members to the state associations of musicians, for it is most probable that we shall have to look to these associations to establish the standards of teaching and of teachers. In so doing they may well bear in mind Mendelssohn's words: "It is idle to talk of the defects of music; progress and reform—that's the question."

PROGRESS AND REFORM

"Progress and reform": these are two great words, pregnant with still greater actions. Reform must result from healthy criticism, which is destructive in the sense that it lops off the dead wood of the musical tree, and uproots the fungoid growths of fakeism; but it is highly constructive in that it grafts it with new life and sap, fertilizes it with new ideas, and keeps it constantly watered with genial, generous words of encouragement. In this manner a healthy and vigorous impetus is given to that progress, without which our art would speedily become a dead letter.

We must not lose sight of the fact that music is an emotive art and can, therefore, never remain stationary; it *must* progress. Consequently, we must also progress. We must either be carried along in its train or, better still, become innovators and impart the impetus to progress that music needs—each according to his endowments; *but we cannot stand still.*

Ponder well over these words, my dear graduates, for your whole musical career will depend upon *how far* you will advance with the progression of music, and *how much* you will help music to progress. You have taken the first step; you have your diploma. Do not look back at it; forget it; he who would climb must not look down. Look ahead and overcome the next step, and the next, and the next. Do all this by means of constant study, unremitting practice, and the frequently renewed experience of experiment.

EMPIRICISM

Surely you will not deny the necessity and real benefit of that last requirement: experiment? You looked, my dear Editor, as if about to protest; but I know how thoroughly well aware you are that very much in music, both theory and practice, is empirical. Please do not object to the word. I do not employ it in its wrong sense, as so often applied to charlatanism, but in its best meaning: "founded upon experiment or experience." As a matter of fact, is not nearly all, if not all, our music empirical? From the remote times of Egyptian incantations and Chinese rites with their flutes made from reeds or the tibias of animals (men included); from the fabled discovery of the Egyptian lute by the accidental kicking of a dried tortoise-shell, and the Greek lyre, down through the harp to the harpsichord and piano; from the pentatonic scale to the various forms of minor scale, thence to other scale combinations down to the present-day octave scale divided into twelve half-steps and the whole-tone scale; from the earliest attempts at counterpoint with the abhorrent successions of bare fourths and fifths to enharmonic combinations; from Pythagoras to Hucbald, Franco of Cologne, Dufay, Ockeghem, Josquin des Prés, and Palestrina, on through Monteverde, Carissimi, Scarlatti, and Rameau to Bach, Gluck, Haydn, Mozart, Beethoven, Brahms, down to the modern inventions, methods, and discoveries of Wagner, Strauss, and Schönberg, of Debussy, Florent Schmitt, and Ravel; *all,* from first to last, has been empirical—"founded upon experiment or experience."

EMPIRICAL TEACHING

Then again, our practical teaching must be, to a very great extent, empirical in the best acceptation of the term. We are not all constituted alike, either physically or mentally. Our dispositions, temperaments, yearnings, and manners of expression are personal and varied. It is impossible for the ready-made tailor to supply us with well-fitting garments of distinctive individuality; two different persons cannot be perfectly dressed from the same pattern: the tailor must study the build of his customer. Very few constitutions are alike: it is the duty of the experienced doctor to study his patient and to prescribe accordingly.

The music teacher has to act similarly. Take, for instance, the teacher of singing. He cannot take a method and apply it in hard-and-fast lines to everyone alike, because there are no two voices exactly similar, and no two singers with precisely the same faults. The capable teacher must depend upon the observation of the phenomena exhibited and found his teaching upon

his experiments and experience. There can be no doubt that this was all the "secret" of the so-called "old Italian method"; it was certainly not founded upon the revelations of a laryngoscope, which had not yet been invented!!!

There, my dear boy, have I sufficiently answered the question-mark of your eyebrows at the word "empirical" just now? I could give you a whole number of THE MUSICIAN full of this subject of empiricism in music, and it would be highly entertaining and instructive—but I will deign to spare you this time, while reserving the right to "come back."

STUDY, OBSERVE AND EXPERIMENT

But the very practical lesson that I would like our friends, the young graduates with the halo—I mean the diploma—to draw from these remarks is the necessity, not only for constant study in the whole art of music, but, also, for incessant observation and experiment in every feature of their art as felt in their own individuality. Let them apply their learning to all they undertake; but let them, above all, concentrate their experience (experiment) and powers of observation upon every problem that may be presented to them—whether it be their own special instrument or voice, or their pupils' physical and mental make-up, or their ventures in the field of composition and instrumentation.

If they will but observe this advice, they will surely educe from themselves all that is latent musically in them, as artists and as teachers.

———*———

NOTES ON THE MUSIC IN THIS ISSUE

JULY marks a cessation in the teaching activity of musicians yet not a few teachers may be found, here and there, at work with pupils. THE MUSICIAN has always deplored the tendency on the part of teachers to let their work slacken in the summer months without real necessity. It not infrequently happens that parents will be pleased to have their children continue study during the summer months, particularly in July, on account of inevitable interruptions during the school season.

We make the suggestion once more that teachers who plan to be at home during part of the summer announce to their patrons and the public generally that they will be in their studios for a limited time, giving special attention to school children who are desirous of going on with their music.

For the benefit of the faithful teachers and pupils who are keeping up their music work we have put into the music section of THE MUSICIAN pieces that will prove helpful in building up playing skill, a larger number of pieces of the easier grades, melodious and interesting to players and hearers.

Spring dance (Caprice à la schottische), Op. 278, by Carl Wilhelm Kern, is a piece of unusual musical interest, one worth while memorizing so as to be available when the young musician is asked to play for friends. The opening theme is a bold one, somewhat in the military style, which is sure to stick in the memory; the second, in B♭, is quite different, the effect being of two clarinets in a band, playing a sharp staccato tone. This passage gives excellent drill in playing thirds with staccato touch, a delicate style which is often called for in modern music. The third theme, in A♭, is a suave, appealing melody, to be played *una corda*, but with the use of the other pedal as well, the so-called "soft" pedal being employed for the purpose of giving color, and not a very soft tone. We feel sure that our readers are going to like this piece very much. Has it ever occurred to you that the Editor is glad to know when you have found a piece that is useful and interesting to you?

Andante con espressione, from a sonata in D, by Mozart, is a fine example of this master composer's work for players of average skill and experience. The tempo is moderately slow, and the player should be careful not to increase the speed in measures in which the accompaniment progresses in sixteenth notes. Aim for a clear sustained singing touch so as to follow the style of playing characteristic of the time of the composer. The ornaments, whic are an inseparable part of the music of the classical period, must be played with careful attention to detail, light and graceful in effect. Wherever it has been practicable the notation of these ornaments has been given at the bottom of the page. Other passages are indicated following this paragraph.

Varsovienne, Op. 81, No. 6, by James H. Rogers, is in a Polish dance rhythm, as is suggested by the title which means "in the Warsaw style." The tempo is that of the mazurka, somewhat slower than the waltz. The composer has used a harmonic style a little removed from the conventional, but we are sure that the student will enjoy the "spicy" effect of the rather chromatic harmonies. This is a useful little piece by which to accustom young pupils to the modern style of music.

Romance in E♭, Op. 44, No. 1, by Anton Rubinstein, is inserted in the music section this month for the benefit of pupils who are not familiar with the literature for the piano comprehended under the head "romantic," to which school Rubinstein belonged. The principal demand upon the player is to produce a sustained singing tone, a *cantilena* style, which is required in making the melody prominent. The special difficulty which the player will meet in this piece is to play two melody notes to an accompaniment of three. It is not out of place here to repeat the trite advice to practise each hand separately until approximate independence has been gained.

Fête joyeuse (Intermezzo), by the favorite American composer, H. Engelmann, is a fine example of this writer's style. The key to the meaning of the piece is found in the title which means "a joyous festival." The mood of the composition, therefore, is that of gayety and pleasure-seeking. Note the contrast of legato and staccato, which is an essential if the player wishes to reproduce the intention of the composer. In the section in F major the player must be careful to keep the chords for the right hand very light and staccato, so as not to obscure the melody in the left hand. Here is a very useful piece for summer playing.

The spinning wheel, by Carl Hemann, is a fine example of that very useful style of composition, the teaching piece, one that can be used to promote the acquirement of some phase of piano technic and also for playing in recitals and in the home. The special design in this spinning wheel piece is to develop rapid finger action by means of passages in sixteenth notes made up of diatonic movement and broken chords. In the *Trio* the music is quiet in style, and calls for a quiet hand and legato touch; one may consider the music as, in part, a duet by the spinner and an accompanying voice.

A dream of summer (Un rêve d'été), Op. 142, No. 3, by Gustave Lazarus, is characterized by a pleasing melody for the left hand, suggestive of a song by a baritone or tenor voice. This melody must be played in a broad, sustained style, in contrast to the second theme, in E♭, which has a somewhat plaintive character. This is a fine piece for teaching use, and will certainly prove a delightful study for young players.

May breezes, by Paul Opper, has a very pleasing lilt, one that will inspire young players to learn the piece perfectly. The rhythm is about the same as that of the mazurka, and must not be played fast. Be sure to observe the sixteenth rest in the second and following measures. The way to make sure of this is to play the previous eighth note staccato, throwing the sixteenth toward the dotted eighth, with much the same effect as a grace note.

Valse entrainante, by Paul Wachs, is one of this popular French composer's best pieces in dance rhythm. The title is a well-chosen one. *Entrainante* is from the verb *entrainer*, which has various meanings, among them "to win," "to captivate," "to sweep off" one's feet, as it were. The title, therefore, may be translated *Winning waltz*, or *Captivating waltz*. It opens with a movement in eighth notes, rapid tempo, for twenty measures without a break. This is most admirable drill for the fingers. In the middle of the piece is a section in C minor marked to be played with the so-called "soft" pedal (*con sordino*). Be sure to observe the staccato indication. The last sixteen measures are to be played at an increased speed, as indicated by the directions *con fuoco* and *string.*, an abbreviation of *stringendo*.

Meditation, for violin and piano, by J. Howard Richardson, is distinguished by a charming melody, which will attract the average hearer with power. This applies with particular force to the opening theme as played on the G string. *Meditation* is not for beginning pupils, but for the use of concert performers and advanced pupils who have mastered playing in the upper positions. We suggest that those of our readers who have sufficient technic for this piece use the summer months to add this and other pieces to their repertoires.

Love ye the Lord, a sacred song, with obbligato for the violin, is an adaptation of the favorite *Largo* from Handel's opera, *Xerxes*. Every music lover knows this air so well that we need make no comment upon it. The transcriber has done his work with fine taste and discrimination. The addition of the violin amply justifies itself. The piec makes a fine festival number.

My day, by William Dichmont, is a song in t best ballad style, one that will make its way into the favor of singers and public. It has a simplicity of style and a beauty of melody that are of the type to please the general public. We have used the edition for alto, bass, or baritone, to which voices this song is especially adapted. It may be had for high or medium voice in the key of C.

For you, by Laurence Montague, is also in the high-class ballad style, in which the characteristics are an appealing melody, easy to learn, one that will permit the singer to make every word plain to the hearer. The text is one that will awaken a sympathetic chord in the heart of everyone who hears it.

The heart of her, by Charles Wakefield Cadman, the most popular of American song composers of the day, will fully sustain the reputation he has e tablished as one who knows how to write a melo that will touch the heart. Here is a song that offers no technical difficulties to the young singer, at the same time being worthy the use of the concert singer who is looking for a song to use with a general audience. To sing a simple song with charm of voice and style is an achievement which even the greatest singers do not disdain.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

HIGH SCHOOL ORCHESTRAS

SCHOOL work in music is receiving recognition in many cities, a recognition that is very encouraging to those who are interested in securing a much wider and more serious appreciation of music and its place in our cultural life. The public is showing a very evident interest in the work of school organization, particularly the choral and orchestral bodies. Every time we see a notice in a local paper of a concert by a high school orchestra we are impressed with the possibilities of this branch of musical work.

May 22d, in Boston, an orchestra composed of players selected from the various high school orchestras, gave a public concert. This note was written before the concert was given, but we understand that the Governor of Massachusetts is to be present and make an address, and Dr. Carl Muck, conductor of the Boston Symphony Orchestra will be the guest of honor. The patrons of the concert are persons prominent in social and educational life, giving the occasion and the work for which it stands the highest and most valuable indorsement that can be desired.

It has come to pass that no school work can be considered complete if the choral and orchestral activities are ignored or disallowed by the school authorities. If your city is not in line see what you can do to agitate the matter.

A SMALL CITY ORCHESTRA

GOOD work in music is not confined to the large cities, and there is no reason why it should be. There is work for the smaller city where it is sometimes possible to arouse an interest in the activities of local musicians which is not to be had in a city of metropolitan character. This was fully demonstrated in the work accomplished under the direction of Mr. Will Earhart, at Richmond, Ind., some years ago.

We have recently received an interesting letter from a subscriber to THE MUSICIAN telling of the work done in Pottstown, Pa., a city of 15,000 inhabitants, by a local orchestra which was organized about six years ago. In pursuance of our policy of presenting to our readers a record of progressive activity in musical work in the United States we give some items in regard to this orchestra and what it is doing for the community with which it is identified:

"The Alumni Orchestra is a regularly organized body of semi-professional and amateur musicians. The members are, to a man, engaged in various occupations, using music as a side issue, and for the musical uplift of the community.

"Rehearsals are held weekly under the direction of Eugene C. Weidner. We hold one concert annually, and a series of concerts of a lighter character during the summer months at a local summer park.

"Our annual concert is guaranteed by patrons and subscribers, as well as a public sale of tickets. These annual concerts are not a financial success, but we manage to take care of all expenses, including the fees of assisting artists, the latter by no means a trifle. Our audiences are highly appreciative."

We reiterate what we have said a number of times before, namely, that real musical progress in music calls for personal effort in all cities of the United States. This includes you, reader of THE MUSICIAN, and your town. Perhaps you are the very person to stir up interest in the matter. At any rate it is worth while thinking about. It would be a great pleasure for us to record the formation of new orchestras in many cities during the coming musical season.

THE PRICE OF LESSONS

"WHAT price shall I ask for the lessons I am planning to give to music pupils this Fall? I paid $5.00 a half-hour for the lessons I received from A———, in the city. But of course I cannot ask any such price as that."

The value of an article is not always easily determined. Quite a number of factors enter into the calculations. For example, it is related that an expert electrician's bill was questioned by a man who had tried in vain previously to find a workman to make some repairs. The electrician in question located the trouble almost immediately, and as quickly remedied it. When the householder received the bill he objected saying, "Why you only spent half an hour on that job. Surely you do not intend to charge at that rate."

The electrician replied, "You had men at your house trying to fix the trouble, some of them spending several hours on the job. I am charging you for 'knowing how' and not merely for the time spent on the work."

Another illustration bearing upon this thought is worth repetition here: Whistler, the painter was once asked how long it had taken him to paint a certain one of his pictures. His reply was, "Perhaps half an hour; or I may have returned to it for a while the next day." "And you charge $2,500 for that picture?" was the query. "No," said the artist, "I charge $2,500 for the sketches I have torn up."

The lesson to the young teacher is this: You charge your pupils not for the time you give them, but in proportion to the time and money you spent on your own education plus the thought you put into the preparation of the lessons, and the care with which you carry out your instruction. In other words you must make the lesson worth to the pupil what you are going to charge her. Do not forget that many persons look for full value—and in some cases even a little more—for the money they turn over to a teacher. If you ask $2.00 a lesson some one is sure to figure that each minute costs him six and two-thirds cents, a price that makes the thrifty ponder.

Therefore charge as much as your patrons are likely to be willing to pay, but be sure that you give return value in the lessons.

SPREADING USEFUL IDEAS

IDEAS are what most of us are looking for. But the work is by no means an easy one.

Neither you nor I can monopolize the finding of new and worth-while ideas. This is where THE MUSICIAN comes to the aid of the teacher who is looking for ideas. We seek to get into touch with the man or woman who is doing good work, no matter where it is, and then to transfer the good things in that work to some other person at some other place. We are trying to get our readers to look upon us as a medium for the exchange of useful ideas.

These reflections are due to a letter which the Editor received from a subscriber, commenting upon an article in THE MUSICIAN for January of the present year on the subject of giving credit in school work for music study done outside the school under conditions laid down by school authorities. The writer of the letter ordered five copies of the issue in question stating that he intends to put a copy of the article in the hands of each member of the local school board.

Needless to say that we were much pleased. It was a demonstration of the fact that people are looking for things that have been tried succesfully; the difficulty has been to find the way to learn what others are doing. As we have said THE MUSICIAN is ready to help in every possible way to pass from one to another the good ideas which are developed in many places in this broad land.

If your school has not joined in this movement which has great value to music education in the United States why not do as the party referred to is doing, namely, get busy and try to show to the school authorities the value of the method of promoting music study by giving credit for work when done under correct conditions? You can do much for the cause by taking the initiative step.

The SINGER and His ART

TO THE GIRL WHO WANTS TO SING

BY PUTNAM GRISWOLD

THE cynically minded have often commented upon the fact that a very few of the great army of music students make a success of their chosen career. *The Woman's Home Companion* for June contained an article by the late Putnam Griswold which discussed this question, as well as other matters of special interest to music students, particularly girls. With the permission of the Editor of *The Woman's Home Companion*, we make some quotations from the article which ought to be read by all our patrons. Mr. Griswold says:

"They (students) have not learned the habit of study. . . . The master can do only ten per cent of the work. The pupil must do ninety per cent. There are no good masters; there are only good pupils."

While Mr. Griswold was studying in Paris under Bouhy, he had worked for three weeks on the rôle of Mephisto in *Faust* without memorizing it. At the end of that time the master said, "You are the stupidest pupil I have ever had in my studio. You may go." The singer says:

"In that moment I realized that I had left to him the whole responsibility, instead of taking it with vital seriousness upon myself. I must be the one to drudge, and he could do no more than make suggestions, which, if I did not find the way to demonstrate practically and satisfactorily, would be without result."

To a plea for a further trial, Bouhy replied: "If in three days you bring me that first act thoroughly memorized, and at each successive lesson you have learned another act, you may stay. Otherwise my decision stands." This ultimatum was accepted. As Griswold puts it: "I did it. My career commenced with that. I had acquired the habit of study."

Referring to the fact that most singers study with several teachers, he says: "In gaining an education vocally, you pick up something from this teacher, something from the other. You learn from your colleagues who have had wider experience; with the proper attitude of mind, which is humility, you learn even from beginners. Every good item thus gathered must be fused in the crucible of your mind."

In the matter of a choice of a teacher he says: "If you find a careful, helpful teacher, stick to him until you have made your own all those special qualities in his work which go to improve your voice. . . . The beginner must select her teacher by investigating the records of that teacher's former pupils.

"Primarily in a lesson, no matter with whom, we must find out the why and wherefore of things. If a new exercise is given the pupil should discover just what result it is intended to produce, or what fault it is proposed to correct. Then only should it be put into concentrated practice alone.

"In everything the singer should work for his own voice. This is why it is necessary to understand, in exercises and in all else, the reason back of the information given."

In discussing the relative value of voice and brains, Mr. Griswold very pertinently says:

"In the making of a singer the element of voice alone counts but for twenty-five per cent in the total. The other contributing seventy-five per cent is mentality, which, developed, makes the voice effective, for the voice is but the expression of the brain. . . . None can foretell what a voice that he hears today will be ten years hence, both in quality and volume. . . . Nearly all (prima donnas) begin with the lighter rôles, going gradually, with vocal and physical growth, into those of medium character, and finally, at the career's zenith, into more heroic ones. But only those who have learned how to work do this."

In regard to American teachers, our readers will be pleased to note the following:

"America can produce the greatest teachers in the world, because the keen, practical type of the national mind, being free from hidebound conservatism and age-worn tradition, is quick to grasp and apply all that is good and vital in teaching.

"I believe that it is possible for the girl who wants to sing to begin here and bring her art as near to perfection as it can go. Moreover, there are not the distractions from the habit of study presented in other countries. More great artists can be heard in New York than anywhere else in the world."

———*———

SOFT PRACTICE

BY GURDON A. FORY

A TOADSTOOL springs up in a night and a pumpkin attains size and perfection in a summer, but an oak tree is a matter of years. Thus may be compared vocal development by loud practice and vocal development by soft practice.

There are always persons who openly ridicule voices which cannot be "heard," persons who sit back and disparage the progress of pupils and the methods of their teachers because "big tones" are not forthcoming at once. Even parents of young pupils are often so ignorant and thoughtless and impatient for "noise." And this is one of the most aggravating and disheartening obstacles with which the conscientious and careful vocal teacher has to contend.

"Will my voice ever be big?" is among the first of the questions asked by new pupils. And in about two weeks begin to come:

"Yes, my tones are easier and sound better, but I can't seem to get any force to them."

"Papa says he can't hear me without getting right up to me."

"I can't sing nearly so loud as I could before I began to study."

People can wait for other things. They do not expect an athlete to develop strength and agility and endurance in a few weeks; they do not expect a colt to pull a heavy load the first few times he is hitched up; they do not expect a child to do the work of a grown man. But the voice! That is a different matter!

"Look at Mary Smith! Never had a lesson, and she can drown out the whole choir!" True, she can. But that does not mean necessarily that her tones are liquid. Mary Smith either possesses a very unusual voice or is forcing it atrociously. One or the other you will find to be true. Most voices are not unusual and forced tones are short-lived tones.

William Shakespeare, the London teacher, says that every good tone is at first a small tone. That is true. The tones in the middle part of the voice we use from childhood up. The tones at either extreme of the voice we use less or not at all until voice work is taken up. Then we find them very young and feeble just as the middle tones, now grown through use, were feeble when we first used them. In beginning vocal work, if we wish to equalize and unify the voice throughout and extend its compass, we must do everything to favor the newest and youngest and feeblest tones, which are, as I have said, at either end of the voice, most noticeably the upper.

In order thus to equalize and unify and extend the voice, is it not more safe and sane and scientific, as well as artistic, to soften the middle tones slightly to correspond with the upper and lower, and then to work and watch and wait for the equal development of all of them? I believe it is.

Nothing freshens and keeps young the voice like a proper mixture of head resonance in the middle tones. To get this the head tones must be carried down, which lightens the upper middle tones temporarily. It also bridges the break here most effectually, if there be one. So for the soprano and tenor.

The contralto must learn to carry the middle tones down to where they dissolve easily into the chest tones. This means a softening of the upper chest tones temporarily, but it is sure in time effectually to bridge the break, if there be one. By persistent soft practice in this part of the voice, the soprano may entirely eliminate all trouble with chest tones.

Does not this line of reasoning prove soft practice to be safe, sane, and scientific? Results in my studio for a number of years have proven it to me; experiences of other teachers sustain me; great singers themselves endorse it. And as for growth, growth is natural. Normal growth is sure to follow careful and proper cultivation. It takes time—it takes years to reach size that is not forced bigness. Yet it will come—all the size that Nature intended your voice to have.

"Music teaches most exquisitely the art of development." The possessor of one of the largest, richest, roundest, roomiest voices I ever heard told me that for two whole years he had practised so softly as not to be heard outside of the room in which he worked.

———*———

THE USE AND ABUSE OF THE NASAL CAVITIES IN SINGING

BY LOUIS SAJOUS

FROM time to time there appear in our Sunday magazines and other valued periodicals, excellent articles of common interest to students of singing, containing numerous illustrations showing the relative position of the larynx and tongue in the act of singing low, medium, and high tones; also illus-

trations which prove by bad training the possibilities of nodes, cystic growths, and other kindred ailments, which, in many instances, compel the singer to abandon what might otherwise have been a successful career.

The theory of such diseases has been advanced and dwelt upon at length by some men of science and nurtured by irresponsible singing teachers as an absence of nasal resonance. Though readily understood by voice teachers, the student immediately jumps to the conclusion that singing in the nose must be the means of attaining vocal perfection and immunity from disorders that beset many of our singers.

The misconception regarding the nasal tone must be due to the "hurry up" student and teacher of today, who, disregarding Nature's laws, adopt what at first appears to be the true solution of a difficult problem and a "short cut" to vocal renown; but the very foundation of the voice is threatened, for its easy accomplishment is an incentive to exaggeration and the entire compass of the voice is thus treated, which in a short while must prove disastrous.

Resonance or overtone is the secret of correct tone production and this reinforcement is only produced by means of the sounding boards and sympathetic vibrations of the air in the resonating cavities. It is upon these, then, that we must depend for our only means of reinforcing the fundamental tone. Resonance is thereby the most important factor in avoiding all strain and the evil consequences of improper singing.

That the nasal cavities influence the resonance of the voice is certain. When a sound is produced, the air in these cavities, as well as in the mouth, is thrown into vibration, and if the condition of the former is such as not to interfere with the passage of the sound waves emanating from the larynx, the note will be clear, having acquired resonance and body through the additional vibrations of the air in the nasal spaces. If the nose be closed, either by the fingers or by some abnormal conditions of its walls or lining membrane, the air contained behind the seat of obstruction will also be thrown into vibration, but, being imprisoned there, will not contribute to the quality of the note. A nasal twang will be produced and the tone will be devoid of volume and character.

Purity of voice and enunciation depend largely upon the condition of the nasal cavities and the soft palate, and require the absence of all obstructions of the former or of any condition interfering with the free motion of the latter. The fault lies in the fact that over-zealous students, in their anxiety, overdo this and focus the column of air, the initial tone, upon that one given point, at the expense of all the other cavities, of the larynx, pharynx, etc., thereby losing all naturalness and purity, and giving the tone a hard, unsympathetic quality.

One can hardly credit Jean de Reszke with having said, *"La grande question du chant devient une question du nez"* ("I can but say that the question of singing becomes a question of nose") without having made some further explanation and without physiologically dissecting the relation of the nasal cavities to the other resonators, thus modifying a dangerous and pernicious theory, which has been misconstrued by many student readers, the male (tenors) proportion especially, who seem to consider it personal property.

The whole energy of the teacher from the beginning should be to prevent the singer from forcing the column of air exclusively upon the bridge of the nose, not necessarily causing a closure, but an interference with the natural tendency of the other cavities of the mouth and pharynx, preventing them from performing their just function in developing this overtone or resonance. The fullest use of the cavities can only be obtained by the complete relaxation of the extrinsic muscles, thus giving that vibratory power indispensable to true vocalization and enunciation and minimizing both breath pressure and resistance and consequent effort.

Though the French use more of a nasal quality in their pronunciation, yet the expression used by French masters, *"Chantez dans le masque de la figure"* ("sing in the mask of the face") certainly contradicts the impression that they use exclusively the nasal resonators at the expense of all others.

An earnest endeavor should be made by all conscientious voice teachers to eradicate this false practice of concentration and avoid the possibilities of nodes, cystic growths, etc.

Huxley has said: "Mother Nature is serenely obdurate to honeyed words; only those who understand the ways of things and can silently and effectually handle them get any good out of her."

———*———

LILLIAN NORDICA

Whoever writes the story of American music will certainly include in it an account of the career of Lillian Norton, the Maine girl who, under the name of Nordica, won a rank on the operatic stage equal to any of the great prima donnas who preceded her. The historian, however, may record her activity as a singer and dramatic artist. To the music educator there is a side of Mme. Nordica's career which calls for special consideration, namely, the development of personal strength and of character which accompanied her growth in artistic stature.

The Musician has stoutly and constantly claimed that the study of music has high intellectual and disciplinary value, and that it is a subject worth the attention of the serious-minded educator. Mme. Nordica was a mere girl when she first came before the public. Naturally the efforts to carve out a career left little or no time to devote to gaining a liberal education. It was with her as it has been with many others: The work in music developed the faculties in a broad, cultural way that left a permanent impress upon her personality.

But this was not achieved without persistent effort and attention to the work she had in hand. Her ambition was great and so was her devotion to her studies. Endowed by nature with perhaps a little more than the average, it was not her natural gifts, but rather the enormous persistence and unremitting diligence that brought success.

There is a splendid lesson in Nordica's career for the American girl who has an ambition to win public approval in the music life. Natural gifts are not sufficient. They must be backed by work, intelligent and persistent, all tending toward the desired goal.

The daily press gave unusually large space to notices of Mme. Nordica's death and of her career as an artist. We add here quotations from some of these which will probably not have come under the notice of a number of our readers. Let us add that the *Literary Digest* gave considerable space to review of Mme. Nordica's life and work.

During the past few years Mme. Nordica's public appearances were not numerous. In 1913 she went to the Antipodes with a party on a concert tour. On December 28 the vessel in which she was a passenger was wrecked in the Gulf of Papua, and the resulting exposure and nervous strain brought on an illness which ended in death at Batavia, May 10, 1914.

The Boston *Herald,* of which Philip Hale is the music editor, said: "Lillian Nordica is proudly referred to by natives of New England as one of their most distinguished daughters. After an opera career extending over two decades, she stood alone as an interpreter of all rôles written for dramatic sopranos. She had a repertoire of 40 operas and all the standard oratorios, but reached the highest excellence in the works of Wagner."

The same paper had an editorial comment which every admirer of the great singer ought to read. Space will permit of reproducing only a portion here.

"It was not easy for her to master the music of a rôle. There was need of long and laborious preparation. Her ambition was great; her eagerness to study, her admirable perseverance enabled her to accomplish an artistic purpose. Applauded in Italian and French operas, she was not content. She realized that there was another operatic art in which the impersonation of a character was held important. She did not know the German language; the musical speech of the later Wagner was to her an alien tongue. Her grit enabled her to triumph at last in operas that had been to her a sealed book. . . . Her career may well be an example and an incentive to all young students, especially to the young women ready to leap upon the stage after a year or two of superficial preparation."

The *Evening Post,* of New York, of which Mr. Henry T. Finck is music editor, said editorially.

"Lillian Nordica was the greatest vocal artist America has produced. For sheer luscious beauty of tone her voice has seldom been equaled—'glorious' was an adjective frequently applied to it. She had, too, what most singers lack, style and plentiful powers of expression. She modestly attributed her success to her zeal and industry. 'Plenty,' she once remarked, 'have natural voices equal to mine; plenty have talent equal to mine; but I have worked.' Like Lilli Lehmann she retained the art of singing Italian florid music long after she had become a Wagnerian specialist. She applied the Italian art of *bel canto* to Wagner's 'speech-song'; and, conversely, infused the charms of the fervent dramatic style into such a part as Gounod's *Marguerite.* . . . As a singer of *lieder* she had few equals."

The New York *Globe* said: "Many women of greater native gifts than Mme. Nordica accomplished less in opera than she. She had by nature an admirable voice and a commanding presence, but not a presence predisposed to dramatic expression. . . . But she was endowed with a will that stopped at nothing. If a thing had to be learned the masters were sought and it was learned. Sound teaching, hard study, and a firmness of purpose unswervable made Lillian Nordica a singer to stand with the best that America has given to the world."

The story of Mme. Nordica's life is familiar to

most of the readers of THE MUSICIAN, yet we give a few details which will refresh the mind:

Born at Farmington, Me., May 12, 1859.

Studied at the New England Conservatory, Boston.

First public appearance at a pupils' recital in 1876.

Sang soprano solo parts in *The Messiah*, Christmas, 1876.

1878 went to London as soloist with Gilmore's Band.

Went to Milan to study for opera under San Giovanni.

Début at Brescia, 1880, as *Violetta* in *Traviata*.

Paris début, July, 1882, as *Marguerite* in *Faust*.

New York début as *Marguerite* in *Faust*, November 26, 1883.

Member of the Metropolitan Opera Company.

Upon invitation of Mme. Wagner sang at Bayreuth, 1894, as *Elsa*, followed by a number of German engagements.

1907 announced her purpose to found an American Institute of Music on a plan similar to that of the Wagner festivals at Bayreuth.

Married F. A. Gower, 1882. Mr. Gower died in 1887.

Married Zoltan Doeme, 1896; divorced, 1904.

Married George W. Young, New York banker, 1909.

SOME SUGGESTIONS ON HOW TO STUDY A SONG

HAVING found your song, first take the words alone and see into which of the various styles they fall, whether they are of the dramatic type, or suggest atmosphere; whether they are sentimental or tell a story; and then try to attune the mind to the mood in which they are written so as fully to absorb their import.

It sometimes happens that words are badly set, and their meaning obscured instead of being illuminated. Composers of the first rank have been known to trip in this matter; therefore, first aim at getting a general conception of the idea of the song, then study the words in detail and let their import "soak in."

After the words proceed to the music, and take great care to get the melody accurate first time—a mistake which may not happen to be dissonant is so easily made and so easily repeated, and yet when at length discovered may be difficult to eradicate; moreover such a mistake is not always easily discoverable, so avoid the initial error.

Then when words and melody are familiar proceed to study the expression. Take note of what directions are given by the composer. Do not, however, be slavishly bound by them, and do not, on the other hand, consider that all you need to do is indicated on the copy; the broad lines of direction may be given, but there are a thousand and one delicate nuances, accents, variations of tone, tone-color and tempo which it would be impossible for a composer to indicate, even if he wished to do so, and all these go to the making of a personal rendering.

When it is considered that nearly every sentence can be infused with varying values, it will at once be seen what scope there is for individual expression in almost any song; it is the work of the student to weigh up these meanings and adopt that which seems best to fit in with the composer's intentions and the singer's temperament.

Play your song through and think the rendering several times, then play and sing what you have thought, and you will be surprised at this simple demonstration of thought power. In this way also it is possible to get valuable practice in singing even when the voice is *hors de combat* through cold or for any other reason.—*The Music Student.*

TALKS ON SINGING

BY MME. LUISA TETRAZZINI

(In the October MUSICIAN we reprinted some quotations from an article on the above subject, published in the London *Monthly Musical Record*. We add a few more.—The Editor.)

YOU can train the voice. You can take the raw material and make of it a finished product; not so the heart. It is there or it is not there. If it is not there you will never move an audience to tears. You will never find sympathy responding to your lack of sympathy. . . . I am not saying in all this that if you have a natural gift and are very, very sympathetic you can succeed without the usual hard work. Every thinking person must know that nothing can be accomplished without that art.

I have found in studying different nationalities that it is fairly easy for the French and Spanish people to learn relaxation of jaw and the opening of the throat. The English-speaking people generally talk with the throat half shut, and even talk through half-shut teeth.

For a beginner it is well to practise opening the mouth wide, being sure to lower the jaw at the back.

The singer should feel as if her jaw were detached and falling away from her face. As one great singer expresses it: "You should have the jaw of an imbecile when emitting a tone—in fact, you shouldn't know that you have one."

From the moment the note is attacked the breath must flow out with it. It is a good idea to feel at first as if one were puffing out the breath. This is particularly good for the high notes, on which a special stress must be laid always on attack with the breath, and not to press or push with the throat. As long as the tone lasts the gentle but uninterrupted outpouring of the breath must continue behind it.

High notes with plenty of head vibration can only be obtained when the head is clear and the nasal cavities unobstructed by mucous membrane or by any of the depression which comes from physical or mental cause.

In attacking the tone on the breath, particularly in the high tones, it is quite possible that at first the voice will not respond. For a long time merely an emission of breath or perhaps a little squeak on the high note is all that can be hoped for. If, however, this is continued, eventually the head voice will be joined to the breath, and a faint tone will find utterance, which, with practice, will develop until it becomes an easy and brilliant tone.

The scale is the greatest test of voice production. No opera singer, no concert singer, who cannot sing a perfect scale, can be said to be a technician or to have achieved results in her art.

———*———

DICTION IN SONG

A SHORT time ago Mr. Plunket Greene, the well-known English singer, wrote a letter to the London *Daily Telegraph* in which the following occurs. It is worth while for singers and teachers to follow the suggestions.

There are two truths I should like to see printed in capitals on the walls of every singing studio in England.

1. There is no physical reason, except in the extreme high registers of the voice, why any word in song should sound different from the same word in speech.

2. No sung word, however beautiful the voice, and however beautiful the tone, can in itself be beautiful if it is different from the spoken word.

And this brings us to the most obvious truth of all—so obvious as to be laughable—that every country must have its own school of singing founded upon its own language.

CHILDREN'S WORK IN MUSIC

CONDUCTED BY HELENA MAGUIRE

WHEN HIS VOICE BEGAN TO CHANGE

Behold the sapling, tall and straight,
Beside his mother proud;
The congregation on its feet,
The organ pealing loud;
Ah, happy day! Three pews ahead
Is Phyllis, clad in white,
And, conscious of her presence there,
He sings with all his might.

To force his tone, for her to hear,
He sings with reckless vim;
His larynx turns a somersault,
A shriek escapes from him—
A something not like human voice,
Nor heard on earth before,
A bray, a snort, a squeal, a shout.
'Twas all of these and more.

And one who passed the church beheld
A boy with flying feet
Come rushing forth without a hat,
And vanish down the street.

H. S. HASKINS.

THE STORY OF THE AEOLIAN HARP—SOMETHING THE BOY CAN MAKE

BY C. A. BROWNE

How often do we carelessly say that a thing is as old as the hills, when it is not the case at all. But there is just one of our musical instruments which comes very near to that description. For when the prehistoric breezes began to murmur through the leaves, or even the bare branches of the prehistoric trees, the first Aeolian harp came into being—"The Harp of the Winds," as it is called in a very beautiful modern painting.

Any time that you care to hear a large instrument on the same plan you have only to listen to the pretty tune the wind so often plays upon the telegraph wires near your home, where the big sturdy poles act as sounding-posts.

Over on the other side of the globe, among the old eastern nations, they have known, for many centuries, that the wind, all by itself, could make pleasing musical sounds.

A long, long time ago, there was a handsome, curly-haired boy, who was put to work watching his father's sheep. It was a far-away country, and wild beasts were very apt to attack them, unless they were closely watched over. It was lonely too, as well as dangerous, at times. But the boy was passionately fond of music, and it helped wonderfully to pass the time. For he had a small, light harp that he carried everywhere with him. It was called a "kinnor" by his people. And at night he hung it up over his bed; and the wind came and played upon it, and made an Aeolian harp of it, while he slept or listened.

And in the daytime, as well as in the evening, the boy made up new songs and music, besides the pieces he had been taught at school.

But who do you suppose that busy little shepherd-boy grew up to be, in the end?

Well, afterward he became the great Hebrew King, David, whose Psalms we still read at home, and sing in our churches. Surely you remember the great *23d Psalm* which has brought comfort to so many of us, and which we are all supposed to know by heart.

But to go back to the natural wind instruments. We have all seen the dainty little Japanese wind-bells so made that the draught in our door-ways makes them tinkle so sweetly.

The Chinese have kites too, with strings that vibrate in musical sounds. And even the Malay Indians, away over there between Asia and Australia, have a very curious Aeolian instrument which is made of a tall, rough bamboo cane, pierced with holes, and stuck in the ground. This is also played by the wind, as it blows through the holes. And they have still another contrivance of split bamboo, in place of strings.

The instrument we know as the Aeolian harp seems to have developed from a very early one, called the monochord, which was simply one string stretched upon two bridges, over a soundboard. And the name is from *Aeolus*, whom the Greeks called the God of the Winds.

During the seventeenth century, a man by the name of Kircher—who lived from 1602 until 1680—wrote about what was then called an entirely new instrument. He speaks of it as being easy to make, and the admiration of everyone. He writes, "It is Nature's own music."

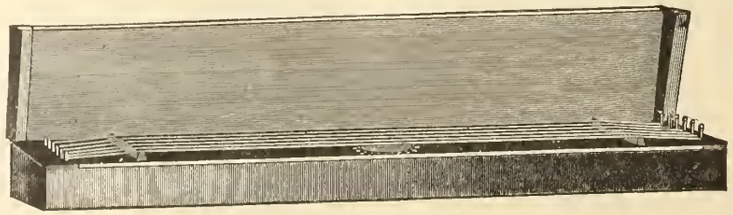
Any ingenious boy can make one for his window as it is merely a shallow wooden box, which is to act as soundboard, and to strengthen the tones of the six or more strings of either silk or catgut. These are passed over bridges about three-quarters of an inch high, and tuned in unison, that is, the same note. The air currents, passing over these strings give the tone of an open violin string—one that is made by passing the bow over it, but not pressing down any of the fingers upon it.

And as this tone is really made up of many lesser tones—called harmonics, or overtones, as you will learn in some of your lessons on physics—and as these shift or change with the varying air pressure, it makes wonderfully sweet music. So sweet indeed, that when good Saint Dunstan of Canterbury, England, used, like King David, to hang his harp over his bed at night, where it sounded in the midnight breezes, his ignorant neighbors, not understanding the music, accused him of bewitching folks, and it made him a lot of trouble.

The manufactured Aeolian harp is usually about three feet long, five inches broad, and three inches deep. It is made of pine wood, with strong beech ends, in which the tuning and hitch-pins are inserted. There are narrow bridges of hard wood, and over these light catgut strings are stretched. The ends are raised about an inch above the strings, and support another pine board. It is between this and the soundboard that the draught of air is directed. In the soundboard, there are generally two soundholes—which makes it somewhat like a violin played by the wind, with the two sides open, and the strings inside. Frequently the violin E, A, and D strings are used.

To hear the Aeolian harp at its best, we must place it across a window that is opened wide enough to admit it, and with the wind blowing over the strings in a slanting direction. The evening time is best; for then the day's work is done and our feelings are more likely to be in sympathy with the fairy-like tones, which change from a very delicate *pianissimo*, to an imposing *forte*, which then dies gently away, in its turn, with the passing of the breeze.

A German musician by the name of Kalkbrenner was at one time so fascinated by the



AEOLIAN HARP

pretty sounds of this instrument, that he even tried to reproduce them on the piano. And how well he succeeded we may see now in his *Nocturne*, Op. 129, No. 1, which he has called *Les soupirs de la harpe colienne—The sighs* —or perhaps he meant *The whispers—of the Aeolian harp.*

NOTE: The Publisher of THE MUSICIAN will send to any address an Aeolian Harp, as shown in the accompanying illustration, with six strings, at $3.50. We also have on hand a new make, cylindrical in form, with metal sound box, five strings, a very rich, sonorous tone. These will be furnished at a special price of $2.00. As the supply is limited, send your order early.

BAND BOYS, STATE NORMAL SCHOOL, PLATTEVILLE, WIS.

MUSICAL BOYS

A PICTURE OF SOME OF THE BAND BOYS OF THE STATE NORMAL SCHOOL, WIS.

THE Training School Band of the State Normal School, Platteville, Wis., consists of 24 members who meet to practise every week and give public recitals. They play nearly all the popular quicksteps and a number of standard overtures Their leader is Harold Dyer, a student in the Normal proper. These boys

PLAYING STRINGED INSTRUMENTS

are very musical and well trained and like to get together at times with their stringed instruments.

STUDY PIANO DURING THE SUMMER

IF you are going to be at home most of the summer, ask your teacher to give you lessons. You will find this season a good one for study Do your practising in the early morning, before the heat of the day comes on, and you will experience but little discomfort.

A HALF HOUR WITH JOHANN SEBASTIAN BACH

BY LAURA ROUNTREE SMITH

(Books rights reserved)

(The stage is set to represent the woods, the piano is behind a screen. The class may sit at one end of the platform.)

SCENE I. IN THE WOODS

1. Piano. *Praeludium I.* Bach.
2. Dialogue. (Bach enters and walks about with a violin in a case, under his arm.)

BACH. I must hurry, hurry homeward, or I shall be late for my hour of practice on the violin. I dare not stop and play in the woods today or my brother Christoph will be angry with me.

Only one hour a day to practise. Oh, you dear old fiddle, how I wish I could play on you all day!

1ST CHILD. Bach, with a fiddle, how strange!

2D CHILD. I thought he only played solemn pieces upon the organ!

BACH. What was that? Did some one speak, or were they only the voices I hear from Music-land? How beautiful it is in the forest tonight! I wish every musician might hear the murmur of the little brook, and the bird songs, and the wind sighing through the trees!

(Enter organist Reinken)

REINKEN. Hello, Johann, what have you under your arm? And where are you going?

BACH. I have here my father's fiddle. See his initials are upon this old bag, J. A. B.; that stands for Johann Ambrosius Bach.

REINKEN. Can you also play the fiddle? You are such a little boy.

BACH. Yes, I play the fiddle and piano and organ a little, but I must hurry, hurry homeward, for my brother is very strict with me.

REINKEN. Do not be in such a hurry. Sit down under this shady tree and I will tell you a tale about your great-grandfather. When I am through talking you may run on homeward all the way. (They sit down.)

REINKEN. Your great-grandfather, Hans, made all kinds of fiddles in his day, on some he put many strings, on some he put but *one string.*

BACH. And could he make real music on *one string?*

REINKEN. Yes, indeed he could make music on any instrument. He made flutes and drums, and played in an orchestra. He used to play the fiddle and the village folks came out to dance. They said he played upon a magic fiddle!

BACH. I wonder if I can ever learn to play like that!

REINKEN. There is an old tale or legend told about Hans and whether it be true or not I cannot say. It is said that he played the fiddle and the haymakers danced, and forgot their hay and the rain came, and all their hay was spoiled. They said then they would punish the man with the magic fiddle!

BACH. You are so good to tell me about my great-grandfather that I will tell you of a trip I once took with my father.

REINKEN. Tell me about it.

BACH. We went once together to a great festival. The way was long; we walked many miles and we were tired. One night we slept in a barn. One day we played at a farm house, and the good folks gave us dinner. At last we arrived at the church where the festival was held.

Oh, the music was fine. I will never forget the great organ, how my fingers ached to touch it and draw forth sweet melodies! Perhaps I can play on a great organ some day.

REINKEN. If you ever come to Hamburg, you may come into the church and hear me play.

BACH. (Shaking hands) I shall indeed come to hear you play. Now I must hurry homeward or my brother will scold; he thinks me an idle fellow to linger in the woods so often. Good-bye. (All go out.)

3. Piano. *Invention 8, F Major.*

SCENE II. AT CHRISTOPH'S HOME

CHRISTOPH. Where have you been, little Johann?

BACH. I went into the woods on my way home from the grocer's, and I met a man who told me about our great-grandfather.

CHRISTOPH. What did the man tell you?

BACH. He said that our great-grandfather played on a fiddle and that people had to dance whether they would or no!

CHRISTOPH. Our great-grandfather would better have stayed at home and done his weaving. I will teach you not to be idle as he. Only a half-hour of practice today.

BACH. Oh, brother, what can I accomplish in half an hour when my fingers are throbbing with melodies?

CHRISTOPH. Get to work and cut your practice short; it is hard to endure the music as it is! (Bach goes out, Christoph's wife enters.)

CHRISTOPH. There is that boy scraping away on his fiddle again. I doubt if he ever does much with his music. He has been listening to tales of our great-grandfather, Hans; likely they were true enough.

WIFE. I get tired enough hearing the boy practice. Where has he been all the morning?

CHRISTOPH. He has wasted his time in the woods. I hope he will not grow up shiftless like father and grandfather and great-grandfather!

WIFE. We must be very strict with the boy.

CHRISTOPH. I shall try to make him work hard and be honest. (Calls, "Johann, Johann.")

BACH (Enters). Surely, my brother, the practice time is not up?

CHRISTOPH. Never mind about the practice

time today. Come with me, and I will show you some really good music. (They go toward a cabinet where Christoph has organ music. He takes a key from his pocket, unlocks the cabinet and together they look over the music.)

BACH. Oh, brother, please try this piece for me.

CHRISTOPH. It is too difficult for you to understand. I will however play one piece for you. (He plays.)

4. Piano. *Prelude in D Major.* Bach.

BACH. Thank you, brother, for letting me see your music. (They both go out. The children enter and sit on one side of the stage. Bach re-enters from the other side.)

SCENE III.

1ST CHILD. What is Bach going to do now?

2D CHILD. He is going to the music cabinet.

3D CHILD. See, he is trying to open it!

BACH. I certainly hear voices; the fairies must be abroad tonight! How can I open the cabinet? Christoph put the key in his pocket. I will use my knife. I must see that music again!

Ah, the lock turns, I have it open. I will copy the notes in the moonlight. (Goes to window-sill and copies music.)

5. Piano. *Bourrée.* From the third *Suite for Violoncello.*

BACH. I shall come up here every moonlight night and copy music. I shall soon have it all by heart!

1ST CHILD. How wonderful to see Bach as a little boy, I always had thought of him as an old man!

2D CHILD. How wonderful to want music so badly you would sit and copy the notes!

3D CHILD. I am going to learn one of his *Preludes* by heart.

4TH CHILD. I am going to the piano to play one of his pieces now entitled *Bourrée* from the *Suite for the Trumpet.*

5TH CHILD. Do please tell us what is meant by *Bourrée?*

4TH CHILD. A *Bourrée* is an old French or Spanish dance, and is still danced in Spain. It is a very lively dance at any rate.

6. Piano. *Bourrée* from the *Suite for Trumpet.*

BACH. I certainly did hear music. It was, I suppose, my little musical neighbor playing one of my own compositions. (He replaces music in the cabinet.)

Oh moon, how can I thank you for your help?

I shall come and copy music every chance I get.

I shall dream tonight of the organ I heard at the festival in the old stone church.

I shall dream that I have learned to manage all the stops of the great organ and the music shall rise and swell until it reaches the very dome of heaven.

It will be a great dream, good night, kind moon, good night! (Goes out.)

CHILDREN. We will never think Bach's music tiresome again. How we love the little boy who copied notes by moonlight.

—*—

WILLY FERRERO, A BOY CONDUCTOR

(From Le Monde Musical)

THE latest musical sensation in certain parts of Europe is the little Willy Ferrero, not yet eight years old, who has amazed Russian musicians and music lovers by his prodigious talent in conducting. Great crowds came to his concerts at St. Petersburg, the prices for seats ranging from 90 cents to $5.50. He had previously attracted attention in his native country in Italy, but it was in Russia that he created the greatest sensation.

It appears that the Czar became interested in the reports as to the extraordinary talent of the lad and gave directions for a concert before the imperial family. An orchestra of 85 musicians was assembled and the Czar himself selected the numbers to be played.

First the overture to *Tannhäuser* was called for. The boy mounted the impromptu platform arranged for him, struck his stand with his little baton, and struck in on the first measures. When he is conducting Willy loses, for the moment, his childish expression; his face becomes severe and his eyes take an expression of strange seriousness; the child is lost in the musician.

After *Tannhäuser,* one of Grieg's dances was called for and was directed by the little Italian. Then came Boccherini's *Menuet.* Several times the young conductor stopped the playing and explained in French his idea of the execution of certain phrases. The Czar, who led the applause, was visibly moved. Another number was the *Farandole,* by Bizet, which the boy made almost to live by his movements and his mimicry, so much so that the Russians dubbed him "the little charmer."

It is readily understood that the child attracted great interest and curiosity. There is a society in St. Petersburg which aims to protect children from maltreatment which became much interested in little Willy. An offer was made to the Italian ambassador to settle a pension on the boy providing he would not appear in public until after a certain age.

An eminent physician examined the young musician, and reported that precocity in the sense of rhythm and of musical memory is a phenomenon of no great rarity among musicians, especially when they are children of musicians. It is true that the use of a baton in directing calls for considerable exertion, but the perfectly normal state of the child outside of this exercise is a proof that this expenditure of energy does not, in any way, affect his organic or psychic balance.

He ought, so far as possible, direct only in the daytime and not too frequently. The most injurious to the little fellow, both as to character and poise, are the endearments, caresses and compliments of women and notable personages, which fatigue and exhaust a child.

It is expected that the boy conductor will be heard in London and Paris.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

PLUNGING AND PLUGGING

BY RAY G. EDWARDS

THE general opinion of violinists is expressed in the thought that "violinists are born." "Some folks are born fiddlers, and to others God gave brains." The slur is well deserved. We plunge away and plug away in a purely physical effort to subdue the four strings of the violin, and, of course, it takes years to get results. It is as if we would master mathematics in its highest forms by taking paper and pencil and writing down figures, thoughtlessly, two or three hours daily for years.

The student should know, every time he takes up his violin, just what he is working for; if it is correct position, the model should be in his mind. To begin with, the left elbow should be far enough under the instrument to bring the fingers over the strings. How shall you know when it is far enough? By seeing that you do not have to give an extra jerk of the elbow every time the fourth finger is employed on one of the strings. How shall you maintain this position? By playing finger exercises on the A string while holding the fourth finger firmly on the D string, or even on the C.

Possibly you think this a rather slow and tiresome practice; you would rather go ahead, learning to read exercises. All right; the remark has often been made that this is a free country. Learn to read if you like, but do not be deceived into thinking that you are learning to play the violin, for you are not. I venture to go on record as saying that, out of every hundred persons who attempt to teach violin playing, the real teachers can be counted on the fingers of one hand. All the others are merely teaching the reading of music in general, with more or less application to the strings of the violin.

But that is not violin teaching. A teacher who cannot correct the position of the left arm, allowing the elbow to jerk every time the fourth finger is used, has not the first simple ideas of violin teaching. In my own published studies for beginners, I have tried to emphasize the use of the fourth finger, yet I have known teachers to overlook this important feature of the work and allow open string practice entirely. Pupils are inclined to think only of the reading, and, of course, the open strings offer the easiest way of playing E, A, and D.

Another proof that neither teacher nor pupil understand what they are trying to do is in evidence when the pupil plays the notes on one string, up and down repeatedly. No matter how slowly or swiftly the notes are to be played, four out of five pupils will lift each finger before putting down the next one. Of course, this all takes time, and if the exercise is at all rapid it results in a panic and almost paralysis of the fingers. Yet the teacher usually offers no better advice than to "practise slowly and work up to speed." If the pupil could only be told, impressively, to keep each finger down after playing until it is needed somewhere else, it would be worth a year of instruction from such a teacher. If every violin pupil in the country could read this one paragraph, I fear there would be an army of so-called teachers out of a job next week and applying for work in other lines. If I have offended, the remedy is easy enough: Learn something about violin technic and how to impart your knowledge to others.

THE WORK OF FERDINAND DAVID

BY WILLIAM REED

THE career of Ferdinand David furnishes an interesting example of unremitting industry and the effective application of eclectic qualities centered in one who was eminent both as artist and educator—violin virtuoso, concertmeister, teacher, and progressivist, a pioneer in the cultivation of chamber music, editor, and a life-long student—all these was David in addition to that of being a man of wide reading and intellectual tastes.

As a pupil of Spohr (violin) and Hauptmann (theory) David closely followed the style of the former in violin playing, combining with it the piquant qualities of the modern French school, eventually exercising an influence on German violin art which was greater than had resulted from the work of anyone before his time.

The high artistic and personal esteem in which he was held by Mendelssohn was repeatedly evinced during the long and intimate association of the two men—Mendelssohn it was who, as conductor of the Gewandhaus Orchestra, secured David as his concertmeister, and also sought his advice concerning some of his own compositions, among the latter being the string quartets, the *Antigone* music, and, more especially, the violin concerto.

Concerning the latter much correspondence passed between Mendelssohn and David, the violin part being discussed in detail and ultimately adopted by Mendelssohn, largely in accordance with David's suggestions—with what result is well known. David himself had the honor of giving the first performance of the concerto at a Gewandhaus concert, in March, 1845.

As concertmeister of the Gewandhaus Orchestra, David was associated not only with Mendelssohn as conductor, but also with such players as Ernst, Eckert, Kalliwoda, Joachim, Wilhelmj, etc., the efficiency of the organization reaching a height hitherto unattained and, perhaps, never since excelled, such efficiency being due in no small measure to David's musical insight and intelligent tact.

David also instituted regular performances of chamber music at Leipzig which continued for many years. At these he brought forward the later quartets of Beethoven, which, previously, had remained practically unknown, besides the equally unfamiliar chamber music of Schubert. The string quartets, etc., of Spohr, Mendelssohn, and Onslow figured largely at these meetings, even Mendelssohn himself taking part at times as a viola player. As a virtuoso David was the first publicly to perform the solo sonatas, suites, and the *Chaconne* of Bach.

His claim, however, to the gratitude of violinists in general rests mainly on his revival of the works of eminent violinists of the German, French, and Italian schools, works which he edited with phrasings, accompaniments, etc., and subsequently published. And not only on this, David revised and edited authoritatively almost the entire repertory of classical violin writing available; in addition to the publication of his own *Violin School* and *Studies,* both of which long ranked as among the best of their kind.

It is hardly surprising to find that, considering his multifarious activities, David was not prolific as a composer. His more characteristic work in this department appears in the five violin concertos, the *Variations* and concert pieces, all of which still command attention. He also left two symphonies, one opera, songs, a sextet, a string quartet, and some pieces for trombone and wind instruments. Generally speaking, however, David's compositions are distinguished less by inspiration than by a wholesomeness and dignity and by an intelligent appreciation of the *media* employed.

As violin teacher David was eminently successful, his most famous pupils being Joachim and Wilhelmj. Of these two, the latter followed the rôle of a virtuoso almost exclusively, while Joachim, who, like David, was many-sided, devoted his long career to solo playing, teaching, quartet leading, and some composition.

Doubtless, the activity of David's nature was stimulated by his life amid congenial surroundings, and by contact with the masters and the numerous able musicians with whom he was in frequent cooperation.

To have had the example and encouragement of such as Spohr, Mendelssohn, and Schumann must have been inspiring in different ways. But that Ferdinand David was a gifted man and a true artist is not less certain than that he turned his unique opportunities to the best account, both in largely improving the artistic conditions of his day and in giving to the world educational material of a high order which remains as valuable to mature violinists as to students.

EASY SHIFTING EXERCISES

BY RAY G. EDWARDS

I AM asked to say a word about shifting and the best way to give freedom to the left hand in violin playing. This would be a very large subject for treatment in one short article, but, as the student takes particular pains to tell me just what she knows about position playing, I shall start in with one or two favorite exercises which I use on nearly all new pupils who have not had sufficient training along this line. And I may add that hardly one in a dozen teachers of violin playing seem to have ideas of their own on the subject. They use some one favorite book of studies, and when they come to position work the pupil is told to "go for it" and play the notes. In the course of several months the pupil may work out some fairly accurate way of hitting the notes, and again he may not. That is the beauty of it, the element of chance. Of course the pupil knows nothing about the chance; he expects to arrive at proficiency some time, and presumes he is doing the thing in the right way, or that there is no better way—having full confidence in his teacher.

But usually there is a better way. Of this you

may be certain from the fact that so few pupils of the average sort of teacher of violin playing get any satisfaction out of a solo which requires much shifting from one position to another. It is evident that some special exercises are necessary. "But," objects the instructor, "my pupils will not play dry old exercises. I could teach them if they would practise, but they want a nice solo or melodious studies for every lesson." To which I must reply that you have failed to present the subject properly.

To begin with the manner of presenting purely technical work, as in the Sevcik books, will do only for a very few pupils; the majority will be frightened by the pages and pages of finger exercises, without a melody from cover to cover. But even such work can be interesting if the instructor keeps his book of technic out of sight. Let him carefully select two or three (not more) of the exercises most needed by a pupil and then put the book aside. When the pupil comes for his lesson, tell him about his deficiency and how he can overcome certain faults by centering his thought on one or two exercises. Impress upon him the fact also that a few minutes daily, for one week, will bring such improvement as to make it unnecessary for you to give it further attention, and that it will then remain with him to keep up the practice. Now for the shifting.

I ask my pupil to use his imagination and to consider himself deformed, having but two fingers on his left hand. With the first and second fingers he is to play the Ab major scale through three octaves beginning with the first finger on the G string. He will have to use the two fingers in the first position and then shift to the third position. Then, shifting to the first position, he will play on the D string and shift again to the third position. With the same shifts on the A and E strings he will have played one note over two octaves. From here he could descend again to the G string, but if he is to complete the three octaves he now ascends to the fifth, seventh, and ninth positions, shifting each time by passing the first finger above the second. He will then descend in the same manner. This is followed by the Bb major scale, played with the second and third fingers only, and the C major scale with the third and fourth fingers.

For the second lesson I make one finger play all the notes of the F major scale through one octave on the D string. This may be either the first or second finger. Then, for measuring the distance between the positions, I have the pupil play this same scale, through one octave only, but return after each note to the tonic, F. After this exercise it will be easy to make use of the first and fourth finger in playing scales in octaves, shifting the two fingers together.

If the pupil has trouble in making short shifts of only one position (usually he will go too far), I give him the G major scale through one octave beginning on the D string. Starting with the third finger, he is to shift and play the same note with the second finger. Then the next note of the scale with the third and shift again to the second finger, and so on through the octave. He is now to play the same scale again, but sounding each note six times and shifting so that the six notes are played with the following fingering: 3, 2, 1, 2, 3, 2. Ending with the second finger leaves the hand in position to get the next note with the third, when the same series of shifts takes place.

These exercises can be given to a pupil just as I am telling it, without paper or pencil. Tell him how it is to be done and that he is to remember the fingering and practise it daily. Such exercises will make more of an impression than anything on the printed page; will seem a bit personal and will be long remembered.

If a pupil grasps his violin so tightly as to make shifting awkward, there must be some careful study of the position, to see wherein he has failed to get an easy and graceful hold. Then make the shifts of the C chord on the A string, C, E, G, C, using only the second finger. Then the Bb chord with the first finger. This will make the hand flexible and loosen the thumb. The above described scale of F played with one finger and returning after each note to the tonic, is also a good one for correcting the position and tension of the thumb.

For the study of shifts in double stops and more complicated shifts of all kinds, I will refer my thousand of readers and friends to a future early article in THE MUSICIAN. As for memorizing these short exercises, it saves the eyes and furnishes material for study on those occasions when one has the fiddle handy but no music. And as most of a musician's thoughts come to him through the medium of the eye (sad to say), it is just as well (and a little better) that he occasionally get hold of something without the printed music. It makes an impression where the mere reading of the notes so often fails. But enough. If you have too many exercises at one time, I fear you will give none of them proper attention.

———*———

HERE is a tale told by an Australian teacher: A lady called to see me about violin lessons. I explained to her that it was my son, not I, who taught the violin. She arranged the times with me, and was just going, when a sudden thought struck her. "I forgot to ask," said she, "whether your son teaches the first or second violin." Wishing to be obliging, I said he would do whatever was required. "Then let it be the first," she said, "and I'm glad I thought of it, for it would have been very vexing after going on some time to find that I'd been learning the second."

NATIONAL CHARACTERISTICS OF VIOLINS

BY FRANK WALDO, PH.D.

VIOLINS have been made chiefly in Italy, England, France, Germany, Bavarian Alps, Tyrolese Alps, and, to a limited extent, in the United States.

Since many, if not most, of the better class of violins bear labels purporting to show the makers' names and place of manufacture and, frequently, the very year of production, and since much of the interest in and even the values of the instruments depend on the place of manufacture, it is of importance to all those interested in violins to know something about the instruments when classed by countries.

In order to obtain a true knowledge of violins according to their nationalities, it is necessary to realize that each nation imparts to the products of its handiwork certain characteristics more or less easily discernible to the experienced and skilful observer. It is also necessary to understand something of the conditions under which violins have been manufactured, and under which they are held by their owners, or are sold and exchange hands, in order to view the identification of violins in its proper light.

In the earliest days of violin manufacture instruments were made to order, but with the increase of skill by individual makers the itinerant and consignment methods of selling surplus products developed into a well-defined trade in violins as an artistic commodity.

Since various makers exercised different degrees of skill in the manufacture of their instruments, it became necessary to identify instruments which had already left the maker's hands.

There has always existed a national pride in the violins of each country because they reflected national character and tastes not only in form, but, strangely enough, also in tone.

In all countries in which violins have been made, except in America, there has been a classical, an imitative, and a modern period of violin making. In America alone the classical period is lacking because our violin making history is a comparatively short one, and even at the beginning the outline and form of the instrument were copied from those made in other countries.

In the classical period the violins were of original design and the national character was most strongly expressed, particularly in the sound holes and scroll as well as in the general outlines. Each maker made his instruments according to his own ideas, and frequently changed his style, thus working along experimental lines. Comparatively few of these classical violins have come down to us; but when once seen they are unmistakable, unless they have been so disguised by their restoration that their own makers would find difficulty in recognizing them.

During this period, which extended up to about the middle of the 18th century, there was a groping after form, model, adaptability, tone, and *tout ensemble*, which resulted in the production of many instruments of odd and peculiar design according to our present day standards. Many of the instruments of this period, aside from those of the great classicists, are, therefore, regarded as valuable chiefly as musical curiosities by the practical violinists of today.

Such instruments are, therefore, frequently not valued at their real worth by musicians, but are relegated to the cabinets of the collectors, who rightly cherish them.

While the few earliest violin makers thus made instruments according to their own ideas, yet when the demand caused a considerable number of skilled artisans to become professional violin makers, these latter constructed instruments on

If You are in the Market for a
RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

LYON & HEALY, 19-31 E. Adams St., Chicago
The world's largest music house. Owners of the famous Hawley collection.

LA FAVORITA STRINGS
Italian Gut. Best in the World. Warranted
VIOLIN
E, 4 lengths; A, 2½ lengths; D, 2½ lengths; each in separate envelope; and single lengths tested, each string with tag "La Favorita." For sale by Leading Music Dealers. Ask your dealer but insist upon "La Favorita."

lines which had been developed by their predecessors, and thus a national character for the violins was firmly established.

In Mirecourt, France, Markneukirchen, Germany, and Mittenwald, in the Bavarian Tyrol, centers were established where violins were made by the thousands, of good wood but of cheap construction on stereotyped models. Most of the old violins, changing hands at the present day, were made at one of these three centers; and those that have come under the present writer's observation in this country have been chiefly from the Markneukirchen region. A large number were made in Mittenwald, however.

The Italian violins, by reason of their beautiful quality of tone and artistic construction, have taken the lead in the violin world; and have a market value several times that of instruments of other nationalities. It would be a conservative estimate to say that not more than one so-called old violin in every three hundred instruments sold in this country is of Italian make.

It is easy to understand, then, that when so many purchasers are anxious to obtain Italian violins, and these are so rare, and old violins are plentiful of other nationalities,—some of which only an expert can distinguish from the genuine Italian violins,—many old violins are called Italian when they are not. And since very close copies of the printed Italian violin labels can be purchased in the violin trade and easily pasted inside of these so-called Italian violins, it is easy to see how such a violin will pass from hand to hand as a genuine Italian instrument of the make designated by the spurious label.

It is unfortunately a very common practice to insert these spurious labels in old violins; and on this very account the real violin expert looks at the label the last thing in identifying an old violin. More will be said on this point in another article.

The violin market is flooded with old violins misnamed and mislabeled. I could recount many interesting experiences regarding such instruments, for I have seen English, German, French, Tyrolean, and even American made violins all bearing spurious labels of Italian makers.

The violins thus sailing under false Italian colors may be divided roughly into three classes: First, old violins constructed by makers who made and sold the instruments as their own make; but other persons, into whose hands the violins have fallen, have inserted in them spurious Italian labels. Second, old and modern violins constructed in imitation of the old Italian violins by makers who inserted imitation old Italian labels in them, or perhaps these imitation labels are put in by some subsequent owner of the violins. Third, cheap modern violins made in great numbers at the chief German and French centers of violin making on the general lines of the Italian models and provided with new imitation Italian labels.

The genuine old violins of this first class are valued off as Italian violins with a success in proportion to their similarity to the genuine Italian instruments; although many misguided or thoroughly ignorant persons regard every old violin that is well shaped and has a good tone as of Italian origin. Still, some makes of old violins lend themselves to this deception better than others.

Many of the old English violins pass as Italian instruments, which they resemble greatly, not only as regards shape and style but also as to both wood and tone. In fact, it takes an expert of a high degree of skill to distinguish between the better class of old English violin and those of some of the second and third rank Italian makers; and, to my mind, the English violins stand right next to the Italian violins in regard to quality of tone, lacking only the peculiar richness of the latter. In fact, in America, English violins are little known as such, unless the name is stamped into the wood; and even then I have seen such stamped instruments where the stamped portion of the wood has been cleverly removed and perhaps a new bit of wood inserted to replace it. I have seen many fine old English violins passing as Italian; some of the earliest English violins being called Brescian, and those of a later period bearing Florentine names; and even those of the great Cremona makers themselves.

Of the German made violins sailing under Italian names, there are many instruments that easily lend themselves to masquerading as products of the Venetian school of violin making, because the German influence on the Venetian school was very strong; some German and Tyrolean makers evidently seeking employment in Venice. The Mittenwald violins of a certain Klotz type have some resemblance to certain of the Florentine school instruments. I have also seen Neapolitan violins which had strong German characteristics, and *vice versa*.

The old French violins do not pass so readily for Italian instruments except in the case of two or three makers who perhaps worked in Italy and who acquired something of the Italian style. Such instruments are very rare, and those seen by the present writer might easily pass as the work of the Italian copyists of the Cremona school.

The second class of spurious Italian violins, those which have been made as close copies as possible of the Italian products, are the most difficult of all to detect. Such instruments have been made in past times and are still being made by some of the most skilful violin makers of each country, and they form the great menace to a true valuing of the art of violin making.

The earliest of such spurious instruments are, perhaps, the production of the very pupils of the great Italian makers themselves, who desired to profit by their reflected light derived from their masters' prominence.

Among the older of these copyists the models developed by Maggini, Amati, Stradivarius and Guarnerius were chiefly employed; but in more recent years many of the second rate or even the minor Italian makers have been copied, it evidently having been felt that the work of copying the greatest old masters had been overdone, and it was time to extend the field of imitation to the lesser known makers where authenticity could be less easily questioned.

Some of these copies are indeed wonderful, and in many cases only those who have had opportunities to study great numbers of Italian violins can distinguish between the real and the imitation instruments. There is one point to be considered that is a useful help, however, and that is: that the Italian models copied are nearly all on those lines suited to the modern taste; the arching is flat and the finish is overdone. Natural wear is difficult to imitate, and so the more recent of these copies are put out in a condition to represent carefully restored old Italian violins. All of the violin making countries have had skilful imitators of the classic instruments, but a few English and French copyists have excelled in this work, and many a violinist is in possession of one which he firmly believes to be an old Italian violin, and what is more he has paid the price of the latter.

The great mass of violins manufactured, and sold in music stores, are those made on classical lines at the great centers of Markneukirchen, Mirecourt, and Mittenwald. These violins are mostly brand new and they have newly printed labels inserted, generally bearing the names of the great classic violin makers, but sometimes those of the lesser makers. Some of these violins are, however, given an imitation of age which is very deceptive, and they are frequently sold as genuine old instruments, from one individual to another.

There is a constant endeavor on the part of the manufacturers to furnish the best appearing instruments for the money and the competition is very active. There is a tendency towards a common standard of workmanship for such instruments of like grade; and it becomes more and more difficult to distinguish the violins of different nationalities. This has been made the more difficult since the Germans have taken to imitating so closely the French instruments. Many of the violins of so-called local make are instruments of this class in disguise, having been refinished and varnished by the purported maker.

PEDAL BOARDS OF VARIOUS TYPES

BY H. C. MACDOUGALL

II

A SYMPOSIUM

In the first article on this subject the questions sent to about fifty of the best known American organists were given and some comments made on the second question of the series,—"Is there any real reason why it (that is the concave and radiating pedal board) should not be more generally adopted in France and Germany?" This seemingly innocent query was more crafty than a cursory reading would indicate; for, if the pedal board in question be so much superior to all other pedal boards, why is it that the great organists of Europe have not adopted it? The answer given was usually that the European countries named were too conservative to change either in pedal board or in methods of blowing organs, or in other matters.

The real meat of the symposium, however, lies in the very first one,—"In your judgment has the concave-radiating pedal board been of distinct advantage to organ playing?"

The answers were largely in the affirmative, and range from those enthusiastically and even somewhat pugnaciously advocating the concave-radiating pedal board to those modestly but firmly opposed to it. Dr. O. A. Mansfield, a musician trained in England, and now professor of music in Wilson College, Chambersburg, Pa., writes:

"The concave-radiating pedal board is of the greatest advantage, facilitating execution by avoiding physical strain, and insuring accuracy by more scientifically proportioned measurements. For lady organists a concave-radiating pedal board should be regarded as a necessity, however possible it may be for some lady organists to play on the old-fashioned pattern. I may add that I carried this conviction into practice upon taking up my duties at Wilson College, by having the straight pedal boards on the practice organs immediately removed in favor of what I considered the only possibly correct type. In my youth I had for some time to play on a straight abomination, and consider that the bad habits acquired thereby, or therefrom, took years totally to eradicate. One of the most trying experiences of my early organ playing days was wrestling with the *Finale* of Mendelssohn's 4th sonata on a straight pedal board, while one of the pleasantest remembrances of the same period was the ease with which I found I could play these same passages on a modern clavier. In conclusion, I may say that to me the whole question seems to be one which scarcely permits of argument, all the weight of fact and finding being on the side of the concave-radiating board. In England the question was settled in favor of this form some 30 years ago, and although some wiseacres on the Council of the College of Organists made an attempt to recommend a type of straight concave board the attempt ended in failure and the recommendation concerning it has long since been withdrawn. The history of the concave-radiating board is but a modern exemplification of the old Latin tag, *Magna est veritas et praevalebit;* which, it will be remembered, the schoolboy translated as 'Great is truth and it will prevail a bit.' But in the case of the concave-radiating pedal board it will prevail altogether, if indeed it has not already done so."

Equally positive is Mr. Carl G. Schmidt, of Brooklyn, N. Y., that the advantages are entirely with the old board. He writes: "The c. r. p. b. has been of no advantage whatever. I do not think standard organ works are easier to execute on the new board. Although it is well for a student to learn both boards I consider the advantages are with the flat board. I play two organs, one with a straight board, the large Hutchings organ at the N. Y. Avenue Church, Brooklyn, and the other a Möller organ, at the Erasmus High School, Brooklyn. Most pedal work is done in the center of the keyboard and because of larger spacing the work is cleaner. The advantage claimed for the c. r. p. b. is that one can reach the extremes easier. This is true, but the little advantage here is much more than offset by the difficulty of avoiding wrong notes in the middle of the board. Although speed is claimed for the radiating board, great speed is never necessary for pedal work since the demands of clearness will not permit it on the heavy pedal stops. A *glissando* on the pedals is unspeakably horrible."

In this connection it is interesting to note that Mr. Gottfried H. Federlein finds the *glissando* of great use in the *Oberon* overture; he says: "In considering the one pedal board as against the other we must consider that organists gradually must play more and more with one foot. When we have four or five swell pedals to attend to this must be done in order to give proper and necessary attention to the pedals. The organ is not a dead machine—the more swell boxes it has the more alive it is in the hands of an artistic player. Organists must play *glissandi* not alone on white pedal keys but on the black ones as well. This can be done far smoother and easier on the radiating board. I can play the two runs in sixteenth notes included in the last two bars of Weber's *Oberon* overture with my left foot only, using my right to obtain a magnificent crescendo in the course of these runs. Why not? I know of organists who have had the c. r. p. b. taken out and the flat board substituted."

Mr. Henry Houseley, organist and musical director of St. John's Cathedral and Temple Emanuel, Denver, answers decidedly but moderately. "I prefer the radiating-concave board—it is more convenient certainly, but I cannot say that it has been of distinct advantage to organ playing. Good organists play well on *all kinds* of pedals. A good and conveniently constructed pedal board should be of advantage to any organist whether German French, English, or American. As the radiating-concave pedals are slightly more convenient, naturally a difficult passage is proportionately easier to play. A good organist can accommodate himself to *either system*. I play *both*, and experience no difficulty. I prefer the newer board."

There seems to be an occasional difference of opinion as to the easy interchangeability of the c. r. and the flat board. Ferdinand Dunkley, of New Orleans, writes: "I had a personal experience a few years ago which is perhaps worth mentioning. Holding two organ positions I was constantly playing on two different pedal boards. One was the latest type of c. r., 32 note, furnished with a new organ by an up-to-date builder; the other was a straight-radiating board. (I am quoting literally from Mr. Dunkley's letter, but there is evidently a slip of the pen here. H. C. M.) For seven years I struggled with the latter without acquiring a feeling of certainty on it; in two weeks I felt at home on the new board and my pedaling improved immensely in accuracy. Not only that, but I became so hopelessly lost on my old board that it was necessary to ask the church to have a board installed similar to the one belonging to my other organ. This was done and my trouble of seven years was at an end. This is conclusive to my mind of the theoretical and practical supremacy of the c. r. board, particularly of the A. G. O. model."

Mr. G. H. Fairclough, organist and choirmaster of St John's Episcopal Church and of Mount Zion Hebrew Temple, St. Paul, says that "one can easily with practice adapt himself to the change of pedal board. All advantages are with the concave-radiating type. At the church I have a modern and at the Temple an old-fashioned board; I am therefore accustomed to both, but play with more comfort and less effort on the c. r." To somewhat the same effect Mr. John Herman Loud, of the First Baptist Church, Newton Centre, Mass.: "Standard organ works are doubtless easier to execute on the new board, or at least I find it so. It is not very difficult for a good player on one kind of board to get accustomed to the other at short notice."

Mr. Francis L. York, director of the Detroit Conservatory of Music, although not specifying which board he habitually uses, says: "In my own experience, while I am continually playing on my own organ at the Sunday services and in teaching, when I give a recital on the other form I find that by the time I am familiar with the organ, the arrangement of the stops, pistons, and other mechanical appliances I have no trouble with the pedals." Another Detroit organist, Mr. N. J. Corey is able "to go from one to the other interchangeably with comparatively little practice. I assume that others can do the same." According to Professor George W. Andrews, of Oberlin Conservatory, Oberlin, Ohio, "it is not at all impossible to pass rather readily from the c. r. to the straight and *vice versa*."

On the whole the opinion of a large majority of the organists contributing to this discussion is that while the c. r. board is an improvement over the flat board it is easy both for concert organist and, in a less degree, for pupils to pass easily from either type of board to the other, the change usually requiring but a little practice.

To return to the particular point under discussion, whether the c. r. board has been of advantage to organ playing. Mr. Elias Blum, director of the School of Music, Whitman College, Walla Walla, Wash., writes conservatively in opposition to the claims of advocates of the c. r. board: "In reply to your letter concerning the organ pedal board, I would say that personally I have found no decided

advantage in the use of the radiating pedal board over the straight board which I was brought up on in Europe, and I am inclined to believe that on the whole it is a matter of what one is accustomed to. I have never had any difficulty in playing the standard organ works on the straight pedal board more than I have found difficulty on the radiating pedal, and cannot see how it has raised the standard of organ playing, though I do not wish to deny a certain amount of comfort, especially for people of short build. The organ that I teach on at this college has the radiating pedal board, but I also have students who practise technical exercises on a pedal piano which has a straight pedal board. Students have no difficulty in coming from one to the other I find and it gives them the advantage of being able to adjust themselves readily to either one they may be called upon to play."

Anyone who knows Mr. J. Warren Andrews, warden of the American Guild of Organists, and organist of the Church of the Divine Paternity, New York City, will expect something spicy and to the point from his pen. He writes—I print his letter entire:

"Sorry I have been too busy to reply to your queries *re* the pedal 'bored' before this time. There is no advantage that I can see in the c. r. pedal board. We are all continually going from one type of pedal board to another. It seems easy to adapt oneself to either after a little practice. After using a concave and radiating board on my organ for five or six years I had it changed to a straight board, which is attached to the console at the present time. While I was chairman of this 'Uniformity of Console' Committee I advocated the adoption of the concave and radiating board because I felt the trend of the times seemed to be in the direction of this 'fad,' and not because I felt it to be best. I will state, however, that I have played upon some boards which were much less objectionable than others. This was another reason why I counseled the innovation, because I felt we might, by a more advantageous placing and measurement, get something upon which we all might unite; but I fear we have but added still another complication. If the 32 note scale is to come, and possibly be extended, we may have to advocate the placing of stilts upon the organist. I have often wished I could make use of the teeth in making an electric connection with the swell shutters when both feet are in use. We read of one of the old masters using his nose for notes in the middle of the keyboard when the hands were too far extended. As this is, in some cases, a vibrant organ possibly some other use may be found for it.

"The only one distinct advantage that I can see in the concave board over the straight is in the range of the high upper notes of the pedal. Except for the looks I can see no use in its running uphill on both ends. Some consoles now look like a half barrel. Why not put the organist inside and build the staves around him the rest of the distance?"

(To be continued)

———*———

THE ECHO ORGAN

The Foyer, a paper devoted to the stage, has an article on the organ in Wanamaker's store in Philadelphia, in the course of which reference was made to a program played on Washington's Birthday. It seems that Dr. Morgan, the organist, arranged to play several pieces current during Washington's life. The list is interesting and I print it below:

Flat Bush—A village on Long Island, so called.

The Jäger Horn—A favorite Hessian war piece.

The Brandywine—Used after the Battle of Brandywine.

Red Bank—The battle in which Donop lost his life.

The Anspacher—A favorite composition in Washington's time.

Washington's March—Used on state occasions during Washington's administration.

Roslin Castle—Dead March, played at Washington's funeral.

Monody—A vocal requiem, *Sad Are the Tidings,* sung at Washington's funeral.

* * *

It is well known that, in countries where there is a king or emperor and all the appurtenances of royalty, an appearance at court as executant or composer stamps the artist as first-class. It is assumed by the general public—and with some right—that the court, on account of its coigne of social advantage, is able to discriminate in artistic matters as well as in social. Courts are less in danger of making ridiculous mistakes in matters of music, since they always have a capable musician attached to the household in some capacity and to whom they may appeal for advice.

We have escaped that sort of thing in the United States. We are, of course, not without our moments of snobbishness, since we are but human. If you will read Thackeray's *Book of Snobs* you will note that few men in any walk of life escape the great novelist's characterization of "snob." Some years ago, when there was an unusually popular lady in the White House, the newspapers were fond of referring to her as "the first lady of the land," a rather ridiculous appelation when one considers the Declaration of Independence. These remarks are provoked by an advertisement of an organ-builder—too good an one to need that kind of one—that at a church to contain one of their organs, which I might name, but will not, a certain Exalted Personage is a regular attendant.

This is, of course, an innocent enough matter; most of the readers of this column care very little for the President's opinion on matters musical, and I presume that Clarence Eddy's estimate of the value of an organ would quite overshadow that of even the great T—— R——!

* * *

In a musical company, not long ago, a parson present told a story that, though not entirely humorous, had a certain amusing side. It seems that a minister, called to a certain church and much opposed to the singing of the long metre *Doxology* to the tune of *The Old Hundredth,* announced that during his administration the *Doxology* should never be sung. This *pronunciamento,* however, would probably have attracted little more attention than is given to a bit of eccentricity, had not there sprung up a feud between the minister and an influential parishioner who was also a member of the choir. After a few years the relations between the two men, and between the minister and

INTRODUCTION RATES — ONLY 3 CENTS FOR A SAMPLE COPY

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS: MIXED VOICES

MAUNDER, J. H.
No. 12,623. To Thee, our God, we fly....$0.12
An easy anthem for patriotic use on all occasions of a national character; includes a solo for tenor or soprano. Choir leaders should welcome this addition to the rather scanty list of anthems suitable for national use.

ROBINSON, CLARENCE C.
No. 12,661. The King of love..... .12
An easy, melodious setting of the 23d Psalm. It includes a solo for tenor or soprano. The main theme is a strong one.

ANTHEMS: MEN'S VOICES

DOANE, W. HOWARD
No. 12,577. Some sweet day. Arr. by Ross Hilton $0.12
An interesting arrangement of the favorite hymn-setting. It is specially suitable for use on memorial or funeral occasions. The highest note for the tenor is A flat.

PART SONGS: MEN'S VOICES

BERGH, ARTHUR
No. 12,640. The boog-a-boo $0.12
This delightful number has a decidedly humorous side, as it tells of two negro children's adventures in the woods. There is a touch of syncopation almost rag-time in its effect. It will make a desirable concert number.

PART SONGS: MIXED VOICES

NEVIN, GEORGE B.
No. 12,592. It was a lover and his lass..$0.10
An interesting setting of the old text in the madrigal style; a good number for a school chorus.

ROOT, GEORGE F.
No. 12,612. The vacant chair.....$0.10
An effective arrangement for a chorus of mixed voices

STRAUSS, JOHANN
No. 12,605. Voices of Spring (Waltz song) Op. 410 ..... .20
A splendid concert number for choral societies and school glee clubs. It is one of the finest waltz melodies written by the great waltz-king.

STRICKLAND, LILY
No. 12,643. To Anthea ..... .12
In the old English style, with solos for soprano and bass. It is full of charming vocal effects, the kind of a piece which calls for polished style in singing.

TOSTI, F. PAOLO
No. 12,631. Good-bye..... .12
A fine arrangement of the popular song. A choral society should make a strong impression with this number.

PART SONGS: WOMEN'S VOICES

HILLER, FERDINAND
No. 12,615. O world, thou art wondrous fair $0.12
Arranged by Louis Victor Saar, for a three-part chorus of women's voices with an obbligato solo for soprano or tenor voice. Can be used effectively by a high school chorus.

MUSIC FOR SCHOOLS

RODNEY, PAUL
No. 12,648. The clang of the forge.....$0.08
A choral arrangement of a popular song. It can be used by two soprano and one alto parts; two soprano, alto and bass; two soprano, tenor and bass parts; two soprano, alto, tenor, and bass parts.

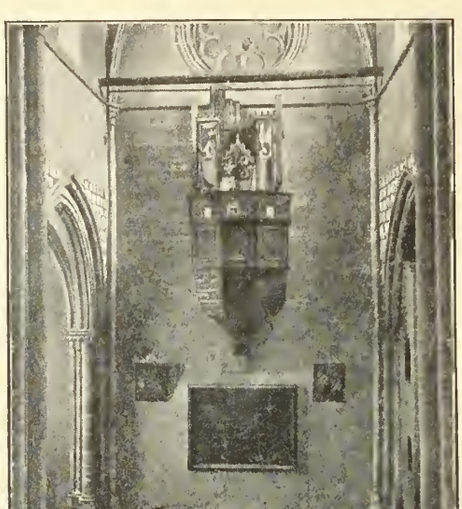
choir as well, became more and more strained until the pastor had to find another place.

In his last sermon he "went for" his adversary in excellent style, all but calling him by name, and after a stirring peroration and the reading of his resignation, announced a hymn, which he proceeded to read through. As this was not his custom much attention was attracted to the hymn. Now was the chance of the minister's adversary. As soon as the minister sat down the organist struck the chord and the choir sang *Praise God from whom all blessings flow* right lustily and sat down! The minister's opponent certainly paid off old scores in a novel fashion.

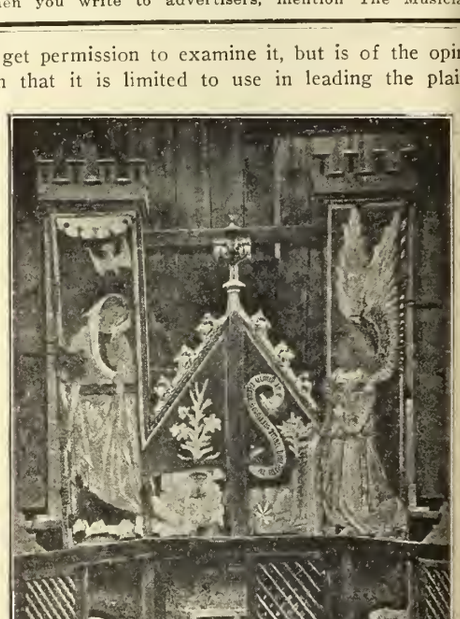
* * *

Through the kindness of Mr. Percy A. Scholes, editor of *The Music Student* (London), I am able to give the Echo Organ readers two interesting photographs of the organ in the cathedral of St. Valère, Sion, Switzerland. The building itself is a treasure house of mediaeval art, and the organ must be of great antiquity. Mr. Scholes was not able



ORGAN AT VALERE

to get permission to examine it, but is of the opinion that it is limited to use in leading the plain-



FRONT OF ORGAN CASE, VALERE

chant and is hardly sufficient in scope to allow of ordinary chord or recital playing.

* * *

In response to a request for service-lists an organist in California sends several which shall have attention in due time. An interesting letter accompanies the lists, and since it contains so much sound sense and depicts so accurately the difficulties that many organists have to meet, I print it, suppressing, of course, the name. "My organ is a small but agreeable Estey. The congregation is intensely non-liturgical and unequally divided as to musical taste. We have a few lovers of the best, the comfort of my soul. Some love noise and will even condone the *Toccata* and *Fugue* in D minor because there is so much 'go' in it! Others abhor everything noisy and crave 'sweet little things.' Not in many

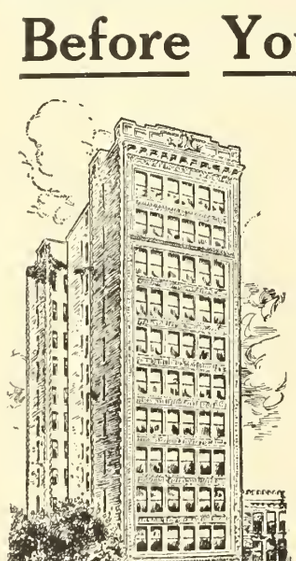
Before You Build or Decorate



visit *The Craftsman Homebuilders' Exposition (Permanent)* in the *Craftsman Building*—just off Fifth Avenue on 38th and 39th Streets, in the heart of the most famous shopping section of America. Here you will find four floors devoted to complete "life-size" exhibits of the materials you should choose to insure permanence, beauty, and comfort in your home. There are no admission fees or charges of any kind. The exhibits are grouped as follows:

"Building Materials for the New Home"—(EIGHTH FLOOR)

showing "Tapestry Brick," Denison interlocking hollow tile, Rookwood faience, Colonial and Covert fireplaces with improved appliances, a Van Guilder hollow-wall fireproof house, metal lath, Ruberoid roofing, Johns-Manville asbestos stucco and shingles, Bay State cement coating, parquet floors, and the new sanitary flooring.

"Home Decoration and Model Rooms"—(SEVENTH FLOOR)

showing completely furnished model rooms, decorated with the famous Fabrikona wall covering,—with Dutch Boy lead and oils,—with Sanitas, Flatlan, etc.,—and a "working" Brunswick-Balke billiard room, a Macey model library, a model bedroom, reproductions of classic ceilings and mantels, Morgan doors to match any style of furnishings, and beautiful copper and bronze wares from the leading craft shops.

"Home Equipment for Home Comfort"—(SIXTH FLOOR)

showing a model kitchen and model laundry in operation, Western Electric household helps, Battle Creek electric light baths, Pyrene fire extinguishers, Richardson boilers, Leonard refrigerators, Meilink wall safes, the unique Rector gas heating system, Humphrey automatic heaters, a model group of casement windows,—and (on the 5th floor), the "Eye-Comfort Lighting Shop" with its beautiful showroom and model rooms showing the new indirect lighting.

"The Home Garden and Grounds"—(FIFTH FLOOR)

showing a Lord and Burnham greenhouse, hot beds and cold frames,—Hodgson portable houses, play house and poultry houses (with live chickens)—charming English garden benches and rose arbors,—a complete Hartmann-Sanders pergola,—Dodson bird houses,—miniature models of country houses and grounds,—Fairbanks-Morse water supply systems,—and all the garden needfuls, from seeds and lawn mowers to fences and bay trees.

And finally, make yourself at home in the Clubrooms and Rest Rooms for men and women (entirely free to visitors) on the 11th floor, and lunch or dine in the Craftsman Restaurant on the top floor,—one of the show-places of New York.

NEW YORK

a year have I played anything I did not myself respect. (Bravo! H. C. M.) Sometimes I alter the title when of too secular a character, and no matter at what cost all plans are subject to change without notice. Usually if the anthem is long and heavy the offertory is quiet and lies in a different range. On the contrary, a hymn-anthem of a meek and quiet nature will be followed by a demonstrative offertory. If preluding a communion service the organ commotion gradually subsides to a pianissimo. If the service becomes evangelical with an 'appeal,' perhaps the postlude is *Almost persuaded* (barely audible) instead of what is listed. We do not get the sermon subjects in time as a rule to fit appropriate anthems to them. 'Gospel solos' interpolated are our reliance in that respect. So far as my organ work is concerned, I intend to give them so much variety in each service that every person in the house will enjoy or be helped by at least one number. There is very great confusion at the beginning of the service prelude at both services, due to nearness of other services breaking up and the coming of people into the main auditorium. Quiet music is worse than none; hence I use two selections to cover the seating and to induce silence before the opening of the service. (The organ prelude ought to be considered the beginning of the service. H. C. M.) A long struggle to gain quietness from the outset met with complete defeat. California people are very cordial!"

* * *

I ASK organists and choirmasters of any and every denomination to send me copies of their service-lists; names will not be used in connection with the publishing of these unless permission is given.

———*———

ORGANIST AND PASTOR

BY WILLIAM REED

GRANTED, in the first place, that organists are only human, the same is equally true of pastors, a fact which pastors themselves will readily admit. They are men like ourselves, and, in forgetting this, we may be induced to expect more from them than is reasonable. Doubtless, however, there are pastors (I have known of such) who, from a love of power or from jealousy of a fancied rivalry, persist in keeping worthy organists uncomfortable, not to say downright unhappy, until a change is effected. When this comes about, it is, of course, the organist who must go, for, as a music-committee man recently remarked, "We can get lots of organists; pastors are a different sort of proposition." This would seem to suggest not only that the church organist is not yet accorded that status as an official to which his important vocation entitles him, but also that there may be no great difference between one organist and another. Nevertheless, a fair proportion of present-day organists are cultured Christian gentleman, a fact which, once generally recognized, should make more for the respect due them both as musicians and men.

I believe that difficulties between organist and pastor often originate in the absence of preliminary mutual understanding. In his anxiety to secure a position, the organist is apt to leave some things to chance. His first dealings being usually with a music committee, business details appear to sum up conditions, to which, later on, his association with the pastor may add others; or, whether a pastor be musical or not, he is likely to have ideas on the musical service.

With these, the organist will, if he be wise, endeavor to assimilate his own *as far as possible*, besides interesting himself in the general policy of his church, thus regarding his position less as a "crib" (horrid expression!) than as a *trust*. He should remember that the financial aspect of his work is by no means everything. Such expressions as "a comfortable job," "a soft snap," "a tidy billet" and the one above quoted are too often exchanged among organists.

In the somewhat rare cases where the pastor is a cultivated church musician, the organist will find a congenial co-worker who is likely to materially further his efforts. I myself can attest the delight of working with such a man.

On the other hand, that little knowledge which is a dangerous thing is sure to cause some trouble, and it is in this connection that pastors are not infrequently culpable.

For, obviously, a competent organist understands most about his own department and, consequently, his administration of it—always according to pre-understood conditions—should be respected. Someone has said that a thoroughly capable musician is out of place in many churches. Whether so or not, it remains a fact that even eminent organists are sometimes compelled to suffer humiliations.

I hinted previously that organists are sometimes apt to engage themselves too hastily—perhaps, pastors and music committees err similarly when selecting organists. Neither degree, titles, nor testimonials are necessarily conclusive on all points. A preliminary interview between the parties concerned and a clear understanding *on both sides* are fully as important. Then, if the pastor elects to remain passive in musical matters, it will be, to say the least, inconsistent on his part to interfere subsequently. Yet, as we all know, this is just what does sometimes happen.

On the other hand, the organist would have an understanding, enabling him either to withdraw his application, or, deciding to accept the position, placing him more safely.

It would be well if church authorities in general would, at the time of engaging an organist, first, as I suggest, instruct him as to *all* probable conditions and requirements. Then, give him a year to carry them out, and then—leave him alone. Failing to make good within the specified interval, he could not reasonably complain if dismissed on its expiration. But, in the meantime, it is only his due that he be afforded facilities and encouragement. Without these, he may lose interest, feel himself frozen out, and work ineffectively.

In writing as above I refer, of course, to the many well-qualified and personally worthy organists who find pastoral relations difficult. And I would emphatically disclaim any antagonism to the clergy as a body.

Nowadays, their work has become strenuous and difficult, facts which alone should command our sympathy. But this very increased difficulty of their vocation should be sufficient to deter them from interference with a department, the very elements of which they may not know.

After a good understanding, were pastors in general to leave matters musical in the hands of a competent man, we should hear far less of dissensions between organist and pastor.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

One of the most interesting features in our development as music teachers is the large attendance promised in the summer schools for teachers, held in different sections of the country. Hundreds of teachers are flocking to the large cities to take some special work and avail themselves of the numberless opportunities offered to hear music and come in contact with the great educators.

But there are also thousands of ambitious teachers who, for reasons financial or otherwise, are unable to pull up stakes for even a short term, nevertheless are very anxious to make the most of the little vacation they have, to improve their work, and gain inspiration from some source or other for the coming year.

To those I would say that they must bear in mind that the art of music is open to all and does not belong to a favored few. One does not have to go to a city to enjoy it. One can shut oneself in for two hours daily in the company of the finest minds the world has ever known in music, and grow in musical intelligence and technical proficiency without the impetus of a city teacher.

Every teacher needs at least two weeks' rest from music in a year. Why not, at the close of the teaching season, take that time for absolute recreation, and then return to your studio determined to do a little quiet work, not for your pupils, but for yourself.

Examine your work carefully. See wherein is your greatest deficiency, and lay out some technical schedule which will help to correct those faults, and then get to *studying music,* music that will rejuvenate you and give inspiration for the coming year.

Don't study hackneyed things that you are using daily through the year, but something that will take you into new fields where you can wander at will, unhampered by the thought of the mistakes pupils usually make at this and that point in the score you are studying.

If you haven't studied Brahms at all try, possibly the *Rhapsodie* in G minor, Op. 79, or the *Cradle Song,* from the *Intermezzi,* Op. 117. The slow movement from the first sonata is also very appealing and not especially difficult technically, but full of mood and very pianistic.

Along with some Brahms, possibly the *Vienna Woods* waltz Strauss-Schuett arrangement, will prove interesting, or one of the Smetana polkas from the *Bohemian Dances,* which are published by Urbanck of Prague, without opus number. Number three in this set, in the key of F major, seems the most interesting. It's a wonderfully effective concert number, not nearly so difficult as it looks, and well within the powers of a good sixth grade player.

The *Nocturne,* in Db major, by Ernest Moret, is another extremely beautiful piece of modern music, full of atmosphere, affording the interpreter great opportunities for individual pedaling and color work. The *Seguidilla,* by Albeniz, is a lively dance that is interesting to take one out of a rut, and also not over sixth grade.

And so there are numberless pieces effective and modern, and not too modern for a good, earnest student to tackle alone, for much of the new music is difficult to understand and to interpret unless the opportunity to hear it well played is offered the student.

Add to this study of modern works some Bach and Beethoven, something that you like and take comfort in.

If every teacher will do this study, or, if not this, some works which appeal to her, and add to such study some serious reading, such as *From Grieg to Brahms,* by Daniel Gregory Mason, *Music, Its Ideals and Methods,* by W. S. B. Mathews, *The Nature of Music,* by Klauser, *The Art of Interpretation,* by Venable, *Sketch of a New Esthetic of Music,* by Busoni, I am sure she will feel that she has made a big gain. A month or six weeks spent in such company as outlined above cannot fail to bring its reward.

Teachers are prone to excuse themselves from studying, as they are unable to get to the city yearly, when they can easily keep in touch with the best if they will make the effort to do a little quiet study every year.

* * *

What shall I do with the pupil who "does not like to practise," and whose mother "has to keep after her." She is studying Burgmüller's 25 *Studies* and Duvernoy's *Ecole primaire.*—E. A. S.

If I could give an infallible recipe which will make students out of our pupils, music teaching would be an easy work. I know of nothing but constant effort on the part of the teacher to endeavor to make the work more interesting. Try different material. The pupil must have some preferences, even if it is merely disliking some things less than others.

I should avoid studies with such a pupil, giving attractive pieces easily within her powers, so that she is not working for weeks on the same things. Give her chords and help her to enjoy them. You must remember that few children like to work at anything. They wouldn't go to school unless other children went, and their mothers must see that they go or the truant officer appears. Be thankful that you have a mother who will see that the child practises and do your part by studying the pupil to make the work more interesting.

* * *

In Debussy's *La soirée dans Grenade,* in measure 15, should the sixteenth note in the left hand come exactly with the last note of the triplet or just after? Again, in measure 23, is this the same way or different; also measures 50, 51, etc., are they all alike?

Do you know whether Paderewski plays the cut version of Liszt's *Soirées de Vienne* or the original version, as in The Musician's Library edition?

Why was not Leschetizky considered of enough importance to be mentioned in Hamilton's recent edition of *Outlines of Music History*?

Do you consider all the secondary sevenths indispensable for daily technical work, that is, for piano of course?—E. A. M.

The sixteenth note in question should come just after the last note of this triplet. The dotted note rhythm in the left hand part should be uniform throughout the piece, as it is a characteristic Spanish rhythm made more marked by the Spaniards by the use of castanets. In measure 50, while the rhythms are exactly the same, they are made more complicated by the lower voices in the right hand part duplicating the dotted note rhythm.

I haven't heard Paderewski play the *Soirées de Vienne,* but the original version is the one generally used.

Mr. Hamilton has followed the course in his *Outlines of Music History* which so many have taken, namely, the addition of a few of the modern men before their work has stood the test of time. It is impossible to mention everyone, and so he mentions those who seem to him to be worthy. Like all theorists—and theorists are the only people who write histories—he believes that the only people who amount to anything in a country are those who are writing music or teaching theory. They never consider the people who are influencing the children who, later on, are going to be our citizens. A man like Leschetizky, who has influenced the piano-playing world more than any other ten personalities in the last generation, as well as done some little music writing, would seem deserving of mention.

It is difficult and questionable to include in an *Outline of Music History* the work of our own times, and this volume has omissions, although we must give Mr. Hamilton credit for attempting a very difficult task in small compass.

As regards secondary sevenths, I do not consider them indispensable for daily technic.

* * *

I have a pupil who cannot play fast; she is afraid of everything that has runs or difficult passages. What would you recommend for her?

There is something wrong either mentally or technically, or both. It is generally the pupils who cannot think fast who cannot play fast, although lack of routine and one-sided work have much to do with it.

I would advise rhythmic table work as outlined in Mason's *Fundamental Technics,* as well as the practice of the velocity forms on page 112, exercises Nos. 384 to 391.

Follow these with pieces like the *Butterflies* of Grant-Schaeffer, or *Columbine* of Gerritt Smith, if the pupil is in the fourth grade, or, if in more advanced grades, try the *Polonaise* in C♯ minor of Chopin, or the *Butterfly* of Grieg, applying this velocity practice to each run.

———*———

MME. JULIE RIVÉ-KING ON TEMPOS, INTERPRETATION, EDITIONS

(*Continued from page* 446)

of the work, she remarked that she thought it exceedingly good and very interesting, but that "it reminded her of one who said to himself: 'I am now a very great man and I will make an edition of Bach which will differ from that of all others. Pianists have been playing this passage *fff* for many years. It tires me to hear it always the same. *I* will make it *ppp* for a change. And over here I will have four bars rest where there is no rest at all.' And she continued: 'He has, in this arbitrary manner, quite revolutionized the playing of Bach.'

"How the future generations may regard these new departures I cannot say," continued Mrs. King; "as performed by the annotator himself they are very effective, and in time may become recognized as one of the authentic editions of Bach. To solve the perplexing problems ever before the student, I would advise: First of all, secure an instructor of authority; next play from good editions and hear the best artists. The student will thus be able to cultivate a correct view of music in general and will obtain a clear understanding of the masters.

"Finally, it is well to remember that all conscientious artists give of the best that is in them at all times. But there are events of extraordinary importance when, whether from some outside influence or because of an unusually clear mental vision the artist is impelled to heights such as he has never before attained, and the result is an almost superhuman display of virtuosity. We exclaim 'Stupendous! Wonderful!' The blood was coursing more rapidly through his veins than usual, and the remarkable display required no extreme effort. On the contrary, it was less difficult to play than ever before.

"James Huneker, the well-known critic and writer

once said to me, after a performance of mine before the Music Teachers' National Association, held at Indianapolis, Ind.: 'I have never heard you play as you did today, although I have had that pleasure many times. When you *wish* to play like this you can do so. But you do not always care to play as you have done today.'

"I was quite at loggerheads with him over this remark, for I always try to do my best; but I realize now what he meant. When you listen to great artists keep in mind the fact that they are human beings, subject to the same annoyances in life which affect all persons, and give them credit at least, for having the genius to give, at all times, an artistic performance. Liszt was once requested to express his opinion as to the relative merits of two celebrated artists, and he characteristically replied: 'All *artists* play well.'"

GENERAL NEWS ITEMS

OKLAHOMA music teachers met last month to organize a State Music Teachers' Association. Two objects are "to maintain a proper standard of scholarship, and the furtherance of musical culture." The two go hand in hand. A community in which the teaching is of high quality is sure to have a cultured musical public.

THE estimated cost of the projected European tour of the Mendelssohn Choir, of Toronto, is $75,000, of which $10,000 will be provided by the city. The chorus will consist of about 200 singers.

FOUR HUNDRED AND FIFTEEN concerts were given in New York City during the season just closed. Of this number 102 were orchestral; piano recitals between 40 and 50, and song recitals, 60.

SALZBURG, Austria, will have a music festival Aug. 12-20, the occasion being the inauguration of the Mozart House. Dr. Muck of the Boston Symphony Orchestra will be one of the conductors.

KARL KOELLING, a well-known Chicago composer, died in that city, May 3. He was born at Hamburg, Germany, Feb. 18, 1831. After a period of professional activity in Europe, he came to the United States and located in Chicago. His published works include more than 500 pieces for the piano.

KARL NAVRATIL, a Bohemian composer of prominence, died at Vienna, April 6. His works for orchestra are well known in Europe.

HUMPERDINCK'S new opera, *Die Marketenderin* (The Vivandiere or Canteen-woman), received its first performance at Cologne, May 10, where it was well received. The scene is in the Rhine provinces during the time of the Napoleonic wars. Marshal Blucher, the German hero, is a prominent figure. The title comes from the heroine, who has charge of the canteen or sutler stores.

ERNST VON SCHUCH, director of the opera at Dresden, died in that city, May 10. He was born at Graz, Nov. 23, 1843. Before he finished his university course he turned to music, making his studies in Vienna, early showing marked talent for conducting. After filling positions at Breslau, Würzburg, Graz, and Basel, he came to Dresden in 1872, where he quickly won the favor of the public by his work in opera and orchestral performances. A Dresden critic, writing of Schuch, says: "Beethoven's depth, Haydn's clear, forceful geniality, he comprehended as well as the individuality of the later composers, Liszt, Strauss, Brahms, Bruckner, Mahler, Reger."

The Cecilia Choir, of the Western Theological Seminary, Pittsburgh, Charles N. Boyd, director, gave its 11th annual program of church music, May 4.

GEORG HENSCHEL retired from public activity as a singer at the close of the recent season. He will continue to make his home in London.

CHARLES W. CLARK, the baritone and teacher, who made his home in Paris for some time past, will be head of the vocal department at the Bush Temple Conservatory of Music, Chicago, beginning next fall. It is understood that the contract is for three years.

THE Owensboro (Ky.) Choral Society, Mr. Henry Ward Pearson, conductor, gave its second concert, May 7. Dvorák's 149*th Psalm* and Coleridge-Taylor's *Hiawatha's Wedding Feast* were the principal choral works. Mr. Pearson writes to THE MUSICIAN that the concert was a great success, and that plans are under way to organize a festival orchestra and a big music festival for May of 1915.

PAOLO GIORZA, an Italian composer, who had been a resident of the United States for a number of years, died at Seattle, May 4. He was particularly successful in his compositions for the Catholic church service. As an opera conductor he was much appreciated. He was born in Milan in 1838.

THE Wilkinsburg, Pa., Choral Society, Charles N. Boyd, conductor, gave its third concert for the season, May 19, singing a program of selections from oratorios, as well as a number of part-songs.

ANNOUNCEMENT of a vacancy in the Conservatory at Valenciennes, France, gives some light on the duties of a teacher and the remuneration. The position was that of violin teacher; in addition he is to give instruction on the viola and assist in the chamber music classes. For this he is to have a yearly salary of $300. He will also fill the position of violin soloist at the theatre at a salary of $80 per annum.

RECENT researches, it is claimed, establish the date of birth of Palestrina, in 1514, instead of 1524, as it is often given.

THE Mendelssohn Club Company, of Cleveland, Mr. Ralph Everett Sapp, musical director, offers a prize of $100 for an accompanied musical setting of a poem by Richard Watson Gilder, entitled, *Prelude of a New Day* (also known as *Dawn*). The composer must be a resident of the United States, the setting for a chorus of mixed voices, the accompaniment for piano for four hands, or for two pianos. The competition will close Oct. 15. All communications regarding this competition should be addressed to Mr. Sapp, 701 The Arcade, Cleveland, O

THE tenth annual May Music Festival of the Central State Normal School, Mount Pleasant, Mich., was held May 7-8, under the direction of Mr. Wm. E. Rauch, of the Department of Music. Elgar's cantata, *Light of Life*, and Gounod's *Faust* were the principal choral works. The chorus numbers 140 voices.

HANS ENGELMANN, a composer whose works are known in all parts of the United States, died at Philadelphia, May 5, 1914. He was born in Berlin, in 1872. In 1892 he came to the United States and located in Philadelphia, where he lived until his death. His compositions, mainly for piano, numbered upwards of 1,500. His *Melody of Love* had

. . . . . *before you purchase any piano*

be sure to read "The Pith of the Piano Problem," the 32-page booklet which we are prepared to send free without obligation to all readers of The Musician who may be contemplating the purchase of a piano.

¶ This booklet tells the important things to look for, and the pitfalls to avoid, in selecting a piano.

¶ Far too many pianos have merely a beautiful exterior finish, while the interior of the piano—the part you don't see, but by far the most important—is slighted or cheapened. The pleasure derived from such pianos is ephemeral and fleeting. Not so the world-renowned

Sohmer

"The Piano of Permanent Tone"

¶ A piano is for a great many people a *life-time* purchase! Why make such an important purchase without knowing for yourself just what you are doing? "The Pith" tells you. It gives TESTS by which you can judge the quality of different pianos.

¶ Write for this booklet if you contemplate, even remotely, exchanging your piano or purchasing a new piano. You will find it not at all dry or technical, but live and interesting.

¶ When you write, we shall consider it a favor if you will mention the make and age of your present piano (if you have one), so that we can classify your inquiry and take proper care of it. Writing for this booklet does not put you under the slightest obligation. Write *today*, mentioning The Musician.

a very large sale. Readers of THE MUSICIAN will recall many delightful pieces which have appeared in the music section during the past ten years.

THE next meeting of the Wisconsin State Music Teachers' Association will be held at La Crosse in 1915. Mr. Liberius Semmann, of the Marquette College Conservatory of Music, Milwaukee, is president.

MR. W. J. HENDERSON, music editor of the New York *Sun*, made an address on the subject *Methods and Madness* at the May meeting of the National Association of Teachers of Singing, New York City.

THE Illinois State Music Teachers' Association held its annual convention at Aurora, May 12-15. Strong resolutions were passed on the subject of examinations for teachers of music. Mr. E. R. Lederman, of Centralia, was elected president for the coming year, and the next convention will be held in that city.

THE New York State Music Teachers' Association held its last annual convention at Saratoga Springs, June 17-19. A large attendance aided in creating enthusiasm in the work of the association.

MUSICAL scores are to be added to the music section in the Chicago Public Library. These will include works for piano, voice, violin, 'cello, and for orchestra and chamber music.

MR. EDGAR STILLMAN KELLEY'S *New England* symphony was given at a music festival in Altenburg, Germany, the first performance in Germany. It had previously been heard at the Norfolk (Conn.) Festival, in 1913. Mr. Kelley's quartet in C major, for strings, was also given at the festival.

RICHARD STRAUSS' *Legende Josephs* received its first performance at Paris, May 14, under the baton of the composer.

MR. EDWIN HUGHES, an American pianist and former assistant to Leschetizky, and a frequent contributor to THE MUSICIAN, won splendid appreciation from the music critics as well as the public of Germany by his work in concert and recital last season.

WITH THE SCHOOLS AND TEACHERS

THE Faelten Pianoforte School, Boston, reports a marked interest in the two weeks' special course for teachers, to be conducted July 1 to 14. Inquiries came from widely separated points.

MR. ALLEN H. DAUGHERTY, of Boston, gave his annual recital by advanced pupils, June 5. Six pupils appeared on the program which was selected mainly from the classics. Three ensemble numbers were included, the first and second movements of Mozart's concerto in D minor, Rheinberger's *Duo* for two pianos, Op. 15, and Mendelssohn's violin concerto in D minor, Op. 40.

IOLANTHE, by Sullivan, was given by the Charleston, W. Va., High School Chorus, under the direction of Mr. J. Henry Francis, May 15. It was enthusiastically received.

MISS MARY H. SHEEDY, of Boston, gave a recital by a number of her pupils at the Copley-Plaza Hotel May 13. The young musicians were assisted by Mrs. Daniel McIsaac, contralto, Mr. Wm. Howard violinist, and Mr. Milo Goldstein, 'cellist.

THE Pianoforte and Theory Students' Association Newtonville, Mass., pupils of Miss Helen Douglas gave a recital of first grade music, May 19. The program included the naming of keys, interval sharps, flats, transposition exercises, naming notes, stories of composers written by the pupil etc.

MR. STANLEY ADAMS, of the Canadian Academy of Music, Toronto, gave *An Evening of Song as Story*, May 20. Several of the selections were from the opera repertoire.

THE Choir of the Hartford, Conn., Public High School, 500 voices, under the direction of Ralph Baldwin, gave a concert May 22, singing *The Creation*, by Haydn.

MISS CLARA BAUR, director of the Cincinnati Conservatory of Music, sent to THE MUSICIAN seven programs showing the recital activities of the school for the two weeks, May 14-28: Violin recitals by Miss Isidor, Miss Knox, and Mr. Schenck pupils of Sig. Tirindelli; a students' recital of piano music; an *Evening of Russian Compositions*, piano and vocal; a song recital by Miss Vail, soprano, pupil of Mr. Hoffmann; and a violin recital by Miss Munz, pupil of Mr. Sturm.

MR. J. W. F. LEMAN, of Philadelphia, a member of the Philadelphia Orchestra, gave an *Invitation Recital* by a number of his pupils, May 23. Mr. Leman divides his time between five studios in the city and suburbs.

FAVORITE OLD MELODIES was the theme of a musicale given at the Grigutsch Music Studios, Los Angeles, last month. The program was made up of folk-songs of various nations.

MR. GRENVILLE COMMOSS, Newark, N. J., gave his annual Pupils' Musicale, May 28. Nine pupils assisted in presenting the program.

MR. WILLIAM WOLF, Lancaster, Pa., gave a pupil recital, May 23, in which eight pupils took part. Several interesting ensemble numbers were played.

COMPOSITIONS by Dr. F. Morris Class, New York made up the first program of a series devoted to the works of American composers, to be given in the Auditorium in the Wanamaker Store, New York.

MR. JOSEPH VILIM, director of the Vilim American Violin School, of Chicago, has removed to Kimball Hall, where the School will hereafter be located. The commencement concert was held June 1. Diplomas and certificates were awarded to eight pupils.

MISS ETHELYNDE SMITH, soprano, made quite a success the past season with her recital of songs by American women composers. She is under the management of Ernest L. Briggs, of Chicago.

GRADUATING exercises were held at the Faelten Pianoforte School, Boston, June 11. Diplomas were presented to 14 pupils.

MR. DAVID ROSS' pupils gave an *Evening of Song* at the Hambourg Conservatory of Music, Toronto, May 7. Sixteen pupils took part.

MR. HENRY P. EAMES' class in ensemble playing at the Cosmopolitan School of Music, Chicago, gave an interesting recital May 18. The program was made up of works for piano, violin, and 'cello.

GRADUATION recitals were given at the North Star College, Minn., by Levina Nordlund, Florence Be

Mabel Lundgren, Helga Anderson, and Anna Peterson. The annual concert was held May 22.

THE May Festival of the Potsdam, N. Y., Normal High School Chorus, Mr. R. M. Tunnicliffe, director, was held May 14 and 15. The chorus of 100 voices sang Sullivan's *Golden Legend* at the second concert.

MR. GEORGE L. MCMILLAN gave a pupils' recital at his studio in New Rochelle, N. Y., May 12. Compositions by Bach, Chopin, Debussy, and Grieg were played.

THE fifth special recital by students of the Warren, Pa., Conservatory of Music was held May 14. Twelve pupils assisted in presenting the program.

———*———

NEW YORK NOTES

THE BOHEMIANS (a well-known club) gave a banquet on May 2d in honor of Ignace Paderewski at the Ritz-Carlton Hotel which proved to be one of the most notable musical functions of the spring season.

THE pupils of Mr. and Mrs. Henry Holden Huss held their annual concert at Carnegie Chamber Music Hall, May 4th. Mr. Huss' artist pupil, Eleanore Payez, gave a brilliant rendition of his B major concerto. Great credit is due both teachers for the efficient work presented by all their pupils on this occasion.

REINALD WERRENRATH, baritone, and conductor of the University Heights Choral Society, directed the final concert of that organization in the New York University Auditorium, May 7th.

MAY LAIRD BROWN, the well known teacher of lyric diction, gave a musicale at her studios, May 7th, in which the pupils of many prominent vocal teachers in New York were heard to splendid advantage in the exposition of their diction in the different languages.

HANS MERX, the German *Lieder* singer, gave the first of his series of spring concerts, May 11th, at the Waldorf Astoria.

GUGLIELMO CARUSON'S pupils, Miss Ruby Green, soprano, of Quebec, Canada, who has continued her studies with him throughout the winter, will sing at the Duke of Connaught's reception in Canada this month.

Dancing to the music of the Victrola is the favorite pastime

The Victrola illustrated here is the $200 style

With a Victrola and Victor Dance Records it is easy to learn all the new dances.

The maxixe, hesitation, tango, one-step—you can enjoy all the modern dances in your own home with the Victrola.

"How to Dance the One Step, Hesitation, and Tango" is a new Victor booklet just issued—illustrated with photos of Mr. and Mrs. Vernon Castle (who use the Victor exclusively and superintend the making of Victor Dance Records) and 288 motion-picture photographs. Ask any Victor dealer for a copy, or write us.

There are Victors and Victrolas in great variety of styles from $10 to $200, and any Victor dealer will gladly play any music you wish to hear.

Victor Talking Machine Co., Camden, N. J., U. S. A.
Berliner Gramophone Co., Montreal, Canadian Distributors

Always use Victor Machines with Victor Records and Victor Needles—*the combination*. There is no other way to get the unequaled Victor tone.

New Victor Records demonstrated at all dealers on the 28th of each month

THE Von Ende School of Music has been exceedingly active during the closing weeks of May. On May 12th, the piano pupils of Hans Van Den Berg gave a recital; May 16th in the afternoon the Junior pupils' concert took place; in the evening pupils from all the departments were represented at a concert; May 20th, a recital by Alfred Ilma, baritone, and Maurice Lichtmann, pianist; May 23d Ottilie Schilig, soprano, a pupil of Adrienne Remenyi; May 25th, the annual concert was given at the Waldorf Astoria, when pupils of the various departments were represented. Remarkable progress has been noted by the students of the School, and every recital reflected the high standards maintained by Mr. Von Ende and his assistants.

MME. ESPERANZA GARRIGUE sailed for Europe, June 5th, to spend her summer vacation in rest and travel. In London she will be the guest of Patti, and also meet her tenor pupil, Enrico Alessandro, who will come to London from Rome, Italy, for a few weeks' study with Caruso.

SECULAR SONGS

HIGH VOICE

DICHMONT, WILLIAM

To you. [F] [E-F] $0.50
A short love song, simple in style and easy in execution. It can be used for teaching purposes as it lies in the middle voice. An excellent song for the recital program.

KRAMER, A. WALTER

A sigh (*Soupir*). Op. 34, No. 1. [F min.] [E-*a*] ..... .50
A song of unusual interest as an art song; it will repay study. It has undoubted concert quality.

MANNEY, CHARLES FONTEYN

Heart of hearts (*Cor cordium*). [D] [E♭-*a*] ..... .60
An artist's song, strong in thought and powerful in expression, with a splendid climax. It will repay careful study.

TCHAIKOVSKY, P. I.

Don Juan's serenade (*Standchen des Don Juan*). [D min.] [d-*a*] ..... .50
The rhythm is similar to that of the waltz, the accompaniment suggesting the guitar; a very good light song for a man's voice.

MEDIUM VOICE

FOSTER, FAY

Sing a song of roses. [D] [d-F♯] ..... .60
A light, tuneful love song telling of June the month of roses and love. Can be used by a first year pupil.

KRAMER, A. WALTER

Come to me. [C] [b-D] ..... .60
Has a touch of the serenade, the melodic lines are broad and effective and the piano part unusually interesting.

A sigh (*Soupir*). Op. 34, No. 1. [D min.] [c♯-F♯] $0.50
For description, see Secular Songs, High Voice.

TAYLOR, DEEMS

Witch-woman. [C min.] [b-E♭] ..... .50
Out of the usual run of pieces both in text and in music; just the piece for a baritone.

LOW VOICE

CLASS, F. MORRIS

Why does azure deck the sky? [C] [d-D] ..... .50
An art song, modern in style; should appeal to singers who are interested in free, chromatic treatment of melody and harmony.

SACRED SONGS

HIGH VOICE

HAMMOND, WILLIAM G.

O Jesus, every thought of Thee. [B♭] [E-*g*] ..... .60
A fine song for the church service; the special feature is an attractive melody calling for a full sustained tone without forcing, and easy, clear diction.

MEDIUM VOICE

HAMMOND, WILLIAM G.

O Jesus, every thought of Thee. [G] [c♯-E] ..... .60
For description see Sacred Songs, High Voice.

LOW VOICE

BEETHOVEN, LUDWIG VAN

O what is man? (*Die Ehre Gottes aus der Natur*). Op. 48, No. 4. [A] [*a*-E]. .30
One of the best of the few songs written by the great master.

STEANE, BRUCE

O Jesus, I have promise. [C] [a-D]. .60
A hymn-like setting of a beautiful text, the voice-part being especially suited to show the best qualities of the contralto voice.

SECULAR DUET

SMITH, ALICE MARY

O that we two were Maying. Sop. and Alto $0.75
A standard duet, always enjoyed by audiences.

PIANO SOLO

COMINS, DANFORTH W.

Drifting. Op. 6, No. 3. III ..... .50
A mingling of the "song without words" and barcarolle styles. The melodies are attractive and the harmonies interesting. The most exacting technical demands are contained in a passage in full chords.

FLETCHER, PERCY E.

Old curiosities. (Three fanciful sketches.)
No. 1. **The old spinet.** II ..... .40
No. 2. **The Dresden shepherdess.** II ..... .50
No 3. **The spinning wheel.** II-III. .60
A set of easy pieces, poetic in quality, in a musical style suited to the title. No. 1 is played with a light staccato touch to reproduce the detached effect of the old instruments; No. 2 is pastoral in character, with graceful melodies; No. 3 is full of motion for both hands, and will promote a fluent style of playing, with nimble fingers.

Three miniature dances.
No. 1. **A dainty gavotte.** II ..... .40
No. 2. **A jolly jig.** II ..... .40
No. 3. **A merry hornpipe.** II ..... .40
The titles indicate the character of these little dance numbers. They are musically well made, and are attractive in melody and harmony.

ORTH, CARL

Indian sketches. Op. 1.
No. 1. **Indian chief.** IV ..... .60
No. 2. **Winniwawa.** III-IV ..... .60
The composer has furnished notes as to the meaning of the various sections of the pieces as a guide to interpretation. In effect these two numbers are pictures of Indian life and character worked out in musical tones.

RACHMANINOFF, SERGEI

Humoreske in G. Op. 10, No. 5 IV-V $0.75
A splendid concert number for pianists and advanced pupils; contains some fine effects in interlocking chords.

RUBINSTEIN, ANTON

Valse caprice in E♭. V-VI 1.00
A favorite from the classical repertoire, carefully edited for the use of teachers and players.

PIANO—FOUR HANDS

DVORAK, ANTON

Humoreske. Op. 101, No. 7 ..... .75

VIOLIN

BUSCH, CARL

Seven melodious pieces in the first position.
No. 1. **A la valse** ..... .60
No. 2. **Badinage** ..... .60
No. 3 **Evening song** ..... .60
No. 4. **Fleurette** ..... .60
No. 5. **A little dance** ..... .60
No. 6. **The little dancer** ..... .60
No. 7. **Mazurka in E** ..... .60
A useful set of teaching pieces which are also charming from the musical point of view.

ORGAN

SPENCE, WILLIAM R.

Andante pastorale, in A. ..... .60
A lovely number for recital or church use, with registration indicated by the composer.

HARP

LAPITINO, FRANCIS J.

Valse impromptu, in C major ..... .50
A charming number of moderate concert difficulty.

DITSON EDITION

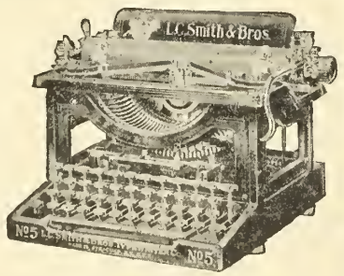
VACCAI, N.

No. 157. **Practical Italian method of singing.** For low voice. With English and Italian words ..... .75

LINDQUIST, ORVIL A.

No. 195. **100 exercises for the weak fingers** ..... .75
Specially valuable to young players whose fingers are developing unequally.

The Typewriter of Least Office Friction



Ball Bearing, Long Wearing

Irritability and nervousness are contagious---so much so that one overtired, dissatisfied girl may disorganize the entire force.

Pounding an inferior typewriter will "get on the nerves" of an operator and breed discord.

Proper working tools insure against trouble with office help. Executives whose operators use

The L. C. Smith & Bros. *Typewriter*

know that this is so because it runs with the **least noise, least effort** and **least nerve strain.**

When you look into its mechanical construction, and especially its system of ball bearings, you will understand why this is so.

Write for free book giving further explanation.

L. C. Smith & Bros. Typewriter Co.

Home Office and Factory - - - SYRACUSE, N. Y.

VICTOR TALKING MACHINE RECORDS FOR JULY

THE educational value of the record of a musical performance has been demonstrated again and again. Singers and teachers of singing have used the records of the great artists to make a study of interpretative nuances and other elements of style, as guides rather than something to be slavishly imitated.

For the month of July the Victor Records have unusual value to the young artist and ambitious student. In looking over the list we are particularly struck with the following:

Paderewski, Ignace: *La bandoline* (*Rondeau*), by Couperin, a gem from the old French repertoire of classics for the piano.

Ober, Margarete, mezzo-soprano; *Star of the Mariner* (*Stella del marinar*), from Ponchielli's opera *La Gioconda,* an aria of unusual beauty and pathos.

Althouse, Paul, tenor: *The stars were shining* (*E lucevan le stelle*) from *La Tosca* and *On with the play* (*Vesti la giubba*) from *Pagliacci.* This young American tenor won high appreciation for his work at the Metropolitan Opera House last season.

Caruso, Enrico, and **Emmy Destinn:** *An indomitable force* (*Sento una forzu indomita*) from *La Guarany,* an opera by Gomez, a Brazilian composer. A splendid duet.

Gluck, Alma, and **Paul Reimers,** tenor: *Du, du liegst mir in Herzen* (*You live in my heart*), a duet arrangement of a German folk-song.

Hempel, Frieda, and **Pasquale Amato:** *Say to thy daughter* (*Dite alla giovine*), duet from *Traviata,* one of the gems from this favorite opera.

Amato, Pasquale, baritone: *Rafaele's Serenade,* from *Jewels of the Madonna,* a number of striking beauty.

Culp, Julia, mezzo-soprano: *All through the air,* an old Welsh air that always pleases.

McCormack, John, and **Fritz Kreisler:** *Ave Maria,* adapted to the *Intermezzo* from *Cavalleria Rusticana.* The tenor voice, with violin obbligato by Mr. Kreisler, makes a splendid record of this favorite air.

McCormack, John, tenor: *A dream,* by Bartlett. One of the gems of American song; over 200,000 copies of this song have been sold by the publishers.

15c COPY

1.50 YEAR

New Music Books of Quality for Music Lovers

DITSON EDITION

The Ditson Edition is absolutely the best among the so-called cheap editions. Do not start the season without a knowledge of this splendid edition. Will be sent ON SALE. Correspondence invited.

PIANO

Exercises for the Development of the Higher Pianoforte Technic

By ISIDOR PHILIPP
Ditson Edition, No. 196
Price, 75 cents net

This system of the distinguished teacher at the Paris Conservatory has been the educational basis of many noted pianists, and consists of valuable original exercises which deal with the advanced technical problems tnat confront the modern teacher and pupil.

Thirty Exercises for the Development of the Hand and Finger Muscles, Op. 80

By FREDERICK A. WILLIAMS
Ditson Edition, No. 201
Price, 50 cents net

The thirty exercises contained in this work are intended to develop the muscles of the hand and fingers, in the shortest possible time. The exercises are so arranged, that if practised correctly, every muscle of the hand will be brought into action. Special work is given to the fourth and fifth fingers in order to equalize the muscular action of hand and fingers.

100 Exercises for the Weak Fingers

By ORVIL A. LINDQUIST
Ditson Edition, No. 195
Price, 50 cents net

Material of a very useful character such as every teacher needs in his work with pupils.

First Studies for Young Pianists

Twelve Progressive Studies, Op. 112
By L. STREABBOG
Edited by Karl Benker
Ditson Edition, No. 192
Price, 38 cents net

Useful for development of style and technic. Grade III.

VIOLIN

Twelve Short Poems, Op. 18

By CECIL BURLEIGH
Ditson Edition, No. 194
Price, 63 cents net

A set of fine pieces for the violin for the use of advanced pupils and in concerts. While they have exceptional value for teaching use in the matter of training for style and interpretation, they were composed primarily for purely musical ends, are poetic in conception and content, and thoroughly violinistic in form and expression.

Scale Studies for the Violin

By HENRY SCHRADIECK
Edited by Franz C. Bornschein
Ditson Edition, No. 172
Price, 38 cents net

These splendid studies need no word of commendation. They have a distinct educational value recognized by all teachers. Mr. Bornschein has not only edited these studies in a masterly manner, but has also extended them.

The Violin

By BERTHOLD TOURS
Revised and Enlarged by Franz C. Bornschein
Ditson Edition, No. 198
Price, 38 cents net

A splendid new edition of one of the most popular violin methods ever published. New engraved plates are used, and the editor has greatly amplified the old material making this the best and the handsomest edition in the market.

ORGAN

The Organ Students' Bach

Edited by JAMES H. ROGERS
Ditson Edition, No. 193
Price, 63 cents net

The purpose of the editor has been to make a selection from the organ works of J. S. Bach, of such pieces as will serve as an adequate introduction to the study of the greater works of the master.

Organ

Thirty Offertories for the Organ

Edited by JAMES H. ROGERS
Price, $2.00, postpaid

A new volume uniform with the popular *30 Preludes* and *30 Postludes*. The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organists' collection.

Thirty Organ Pieces for Use in Christian Science Churches

Edited by WALTER E. YOUNG
Price, $2.00, postpaid

This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth, with gilt top.

For the Children

Sixty Musical Games and Recreations for Little Musicians

By LAURA ROUNTREE SMITH
Price, 75 cents, postpaid

Teachers of children are constantly on the lookout for material in the style of little musical games, plays, and entertainment specialties, with and without stage setting and costuming, to use in their recitals and concerts. The present work meets exactly the want specified above and gives a very great amount of material, varied in character, using quite young children as well as girls of fourteen to sixteen. It is in every way the best book of the kind in the market.

IN JANUARY, 1912, we gave, as a supplement, a copy of the above picture, representing CHOPIN, as a boy, playing for his schoolmates, printed in colors. To meet the continued demand for copies of this picture we have secured a limited edition, in *photogravure*, by one of the leading American art publishers. We offer it as follows:

For $1.50, we will send THE MUSICIAN, one year, and one copy of THE BOY CHOPIN, postpaid. This offer is good until Sept. 1, 1914. Copies of the picture, separately, 35 cents. Size of picture, 8¾x11⅞; mounted on heavy paper, 12x18, equal to line sold for 75 cents and $1.00 in stores.

Address, THE MUSICIAN, Boston, Mass.

SUCCESSFUL PIANO PIECES

FRANCIS, J. F.
Shadows at Twilight
Price, 60 cents
One of the best salon pieces of recent years. A beautiful melody, treated with brilliant but easy variations. A second "Shadows on the Water."

GRUNN, HOMER
Toualowa
Price, 60 cents
A characteristic piece, better than the famous "Hiawatha" Intermezzo. Very original, catchy, with a rhythm to set the pulse beating and the feet moving. Also for band and orchestra.

HUERTER, CHARLES
Berceuse in E♭
Price, 50 cents
Beautiful and touching melody in every measure. Easy to play and to bring out the expression.

KROGMANN, C. W.
The Star
Price, 60 cents
A graceful, tuneful number in semi-classical style; excellent for teaching.

ROLFE, WALTER
Valse Courante
Price, 60 cents
Brilliant waltz number, which sounds difficult—but isn't. Splendid concert piece.

SMITH, H. WAKEFIELD
Woodland Chimes
Price, 60 cents
A sure winner, with its pretty melodies and bright swing. The chime figure is a remarkable imitation of bells, and moreover is very simple to play—anyone can make it sound realistic. Also for orchestra.

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic Ditson Edition No. 196

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Arnold Sartorio: Twelve Melodious Studies in Velocity in Broken Chords Op. 1018.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

Ernest R. Kroeger: The Whole Tone Scales.

THIS little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

A NEW ORGAN WORK

30 Offertories for the Organ. Ed. by Jas. H. Rogers. $2.00.

A NEW volume uniform with the popular 30 *Preludes* and 30 *Postludes*. The editor has drawn upon the best works, by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organist's collection.

SPECIAL OFFER:—With The Musician, one year, $2.50.

MISCELLANEOUS

James H. Rogers: Five Quatrains From the Rubaiyat.

THE tempting quality of Omar's immortal verses has inspired the composer with most felicitous musical imaginings. For this a set of five song quatrains have been chosen which are in themselves among the most beautiful and which are adroitly contrasted in mood. To meet their poetic content Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more vital, nor his economy of means to produce just the right emotional effect more sure. These songs, the latest product of his muse, may be used as a cycle or singly, and will adorn any artistic recital program.

The price has been fixed at $1.25; until publication we will accept orders at 75 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.10.

J. C. Macy: Young People's History of Music. New Edition, $1.00.

THOUGH prepared for "young people" this book will be found interesting by all who do not care to study the longer histories, dictionaries, etc. It gives, in necessarily condensed form, valuable information, and is written in an easy colloquial style, free from technicalities. For this new edition much material has been added as was needed to indicate the trend of latter-day

composition and the biographies of the great masters have been supplemented by sketches of modern composers who have earned a universal reputation.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.00.

Standard Anthems For Men's Voices. Edited by George B. Nevin. $1.00.

In this excellent collection are included, besides valuable numbers written originally for men's voices, arrangements of standard and popular works. The majority of these arrangements are from the practised and practical hand of the editor, and all are skilfully done with a view to use by choirs of moderate ability. The subjects chosen and their treatment show wide diversity, so that singers in possession of this collection are equipped to meet the varying requirements of the church year without going outside its pages.

Franz C. Bornschein: Zorah: Cantata For Women's Voices. 30 Cents.

This short cantata is composed to a highly picturesque text, descriptive of the desert, an Arab raid and capture. The music is in the modern idiom and breathes at times the warmth and languor of Oriental scenes, and again is eloquent in its dramatic and vigorous mood. There are extended solo passages for soprano (Zorah), the beautiful captive of the raiders, who is rescued by her lover's warriors.

COMMENT ON "INTERPRETATION OF PIANO MUSIC"

"I have read your book with much interest. It treats upon a subject which is of vital importance to the piano student and pianist. I shall endeavor to bring it to the knowledge of all the students of this school and hope it may be placed on sale here where it will be convenient."—Willard Kimball, The University School of Music, Lincoln, Neb.

SECULAR SONGS

HIGH VOICE

RYDER, ARTHUR H.

When the last day is ended. Op. 15, No. 2. [B♭] [d♯-F♯] $0.60
A song of broad conception, broad in its working out, with strong climax, of undoubted concert quality.

MEDIUM VOICE

KRAMER, A. WALTER

In dreams. Op. 29, No. 1 [D minor] [d-F] ..... .50
An effective song for teaching or recital use; it contains some fine work for the voice at the same time with no difficulty in technical demands.

MILLER, WILLIAM T.

Foreboding. [A min.] [d♯-F] ..... .40
An easy melodious song for use in teaching or the home and social circle; it has some of the style of the "high class ballad."

WATTS, WINTTER

The boat of my lover. [E♭] [b♭-F] ... .60
An appealing song, the idea being that of the boat which bears the soul of the loved one across to the land of the immortals. It is full of sympathetic quality.

LOW VOICE

AVERY, STANLEY R.

The song of the timber trail. (For bass.) [B♭] [B♭-e♭] $0.60
A song for bass or baritone with the rollicking swing and the virile note which belongs to the men of the woods; a very effective song for concert or recital.

BIZET, GEORGES

Quand la flamme de l'amour (*When the flame of love's desire*) (*La jolie fille de Perth*). [E min.] [B-e] ..... .50
A great song for bass voice by the composer of Carmen.

DELIBES, LÉO

Tant que le jour dure (*Now while the daylight still lingers*) (*Jean de Nivelle*). [F♯] [c♯-E] ..... .50
A favorite aria for contraltos, from a French opera not very well known; this is one of the gems.

GLUCK, CHRISTOPH WILLIBALD

O del mio dolce ardor (*Oh, from my tender love*) (*Paride ed Elena.*) [E min.] [b-F♯] ..... .50
A fine aria for contralto voice, from the classic opera repertoire; well suited to display the best qualities of a voice.

LEO, LEONARDO

Se mai senti (*When around thy dear face*) (*La clemenza di Tito.*) [E] [b-E] ..... .50
A contralto aria from the old Italian opera repertoire; fine to display *bel canto*.

MILLER, WILLIAM T.

Foreboding. [F min.] [b-D♭] $0.40
For description see Secular Songs, Medium Voice.

SACRED SONGS

MEDIUM VOICE

STEANE, BRUCE

O Jesu, I have promised. [E♭] [c-F] .. .60
An easy melodious setting of a favorite hymn; works up to a fine climax.

DUET for SOPRANO and ALTO

WAREING, HERBERT W.

The sea. [D] ..... .75
Full of life and beauty, and an effective duet for recital or concert use; each voice has interesting passages.

PIANO SOLO

BAKER, FRED. T.

Promenade in the garden (*Une promenade dans le jardin*). III. ..... .50
A new edition of a favorite piece in the older piano repertoire; a good number for a pupil whose rhythmic sense needs stimulating.

BOHM, CARL

Throwing kisses (*Kusshändchen*) (Mazurka). Op. 327, No. 4. IV. ..... .60
A brilliant composition in the drawing room style; good to promote agility of finger.

EGGHARD, JULES

Tendre fleur. Op. 229, No. 1. II-III. . $0.30
A simple, melodious little piece for young players; the accompaniment gives excellent drill in playing broken chords.

PIANO—FOUR HANDS

SCHUETT, EDUARD

A la bien aimée (*To my dearest*). Op. 59, No. 2. ..... 1.00
One of the finest pieces in the teaching repertoire; in waltz movement.

ORGAN

TRUETTE, EVERETT E.

Five short preludes. Op 16. ..... 1.25
Easy, melodious numbers, with full registration.

VIOLIN AND PIANO

BUSCH, CARL

Mazurka in E ..... .60
One of a set of seven melodious pieces in the first position, unusually good for teaching use.

CANTATA FOR MEN'S VOICES

LAZARUS, GUSTAV

Hakon the Strong ..... .50
A fine concert work with baritone solo, requiring about fifteen minutes for performance. Orchestra parts may be rented from the publisher.

ANALYSIS OF MOZART'S SONATAS

By JANET SALSBURY

A short, concise, systematic analysis of each of the 22 Pianoforte Sonatas.

The book contains a detailed description of the various forms used and embodied in the writing of Sonatas. These descriptions are then used in tabulated form in the analysis of each of the Mozart Sonatas.

It is an exceedingly valuable book for students and is of great assistance in forming a clear conception of these classics.

Bound in paper, price 50c

In this connection we also call attention to the extremely important work of a similar nature on the Pianoforte Sonatas of Beethoven---

INTRODUCTION TO THE INTERPRETATION OF BEETHOVEN PIANO WORKS

By ADOLPH BERNHARD MARX Translated by FANNIE L. GWINNER

This work treats much more extensively on the proper interpretation of the Sonatas and deals more minutely with their analytical study.

THE BICENTENARY OF CHRISTOPH WILLIBALD GLUCK

BY ARTHUR DE GUICHARD

CHRISTOPH WILLIBALD GLUCK was born at Weidenwang, near Berching, in Bavaria, close to the Bohemian frontier, July 4, 1714, two hundred years ago. Some historians erroneously give the date as the second of July; but the fourth is generally accepted as the exact birth-date, thanks to the diligent research of Anton Schmid and of Gottfried J. Dlabacz, and to the documentary proofs upon which they based their decision.

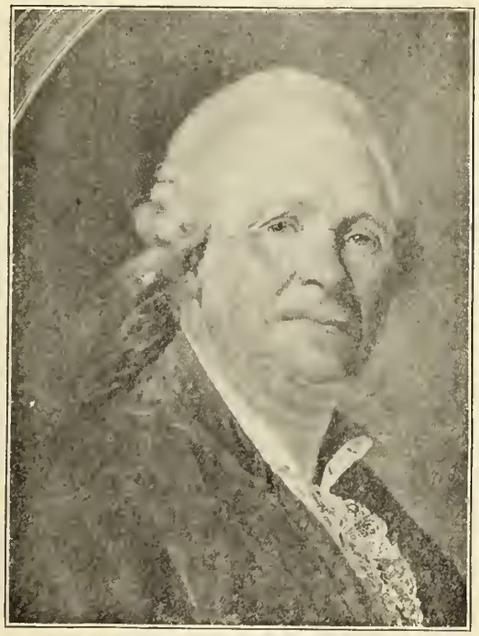
After such a lapse of time, a difference of two days in a date might seem of little moment. But when it is remembered that Gluck owes his position and renown in the sphere of music and musicians chiefly to the "revolution" that he brought about in the lyric drama, and that our own "glorious fourth" of July (the climax of a revolution) is an unforgettable date, then our boys and girls and music students in general will be glad to have this mnemonic aid to remember Gluck's fourth of July by their own.

The year 1714, however, is marked by no other notable historical event, unless the accession of George I to the English throne be so considered. In order to have some idea of the period, it may be stated that Gluck's birth occurred one year after the Peace of Utrecht (1713), for which Handel composed a *Te Deum;* during the last year of the reign of Louis XIV of France (1714); and three years before the building of New Orleans (1717).

So much for the actual date of Gluck's birth.

A CONSTELLATION OF MUSICIANS

What about the period? Truly, in literature and in music "there were giants in the earth in those days." During Gluck's lifetime, his contemporaries were: In MUSIC: Scarlatti (1659-1725), Rameau (1683-1764), Johann Sebastian Bach (1685-1750), Gluck was ten years old when the *St. John Passion* and 15 when the *St. Matthew Passion* were produced, Carl Philipp Emanuel Bach (1714-1788), whose sonatas were Beethoven's daily studies, George Frederick Handel (1685-1759), Cristofori (1655-1731), who invented the piano in 1711, Haydn (1732-1809), Mozart (1756-1791), Beethoven (1770-1827), Fux (1660-1741), Paesiello (1741-1816), Cimarosa (1749-1801), Porpora (1686-1766), Jommelli (1714-1774), Sacchini (1734-1786), Lotti (1667-1740), Marcello (1686-1739), Matheson (1681-1764), Telemann (1681-1767), Jean Jacques Rousseau (1712-1778), Piccini, the celebrated rival of Gluck (1728-1800), Monsigny (1729-1817), Cherubini (1760-1842), Keiser (1674-1739), Hasse (1699-1783), François Couperin (1668-1733), called *le Grand*,—they all lived and worked at some period of Gluck's existence. In addition to Bach's oratorios of the *Passion*, Handel's *Messiah* (1742), Haydn's first



C. W. GLUCK

symphony (1759), Rameau's masterpiece *Castor and Pollux* (1737), Mozart's *Mithridate, Die Entführung* and *Figaro* were all produced during Gluck's lifetime; so, also, was the *Beggar's Opera*, by Gay and Pepusch (1727), the first English ballad opera. Mozart's operatic masterpiece, *Don Giovanni*, was produced the same year that Gluck died and that Beethoven left his home for the first time to go to Vienna, with the intention of becoming the pupil of Mozart (1787). Weber, one of the greatest composers of opera, was born in the year preceding Gluck's death.

It may be noticed, by the way, that this year is also the bicentenary of Jommelli and of Carl Ph. Emanuel Bach.

GREAT WRITERS

In the realm of LITERATURE, so closely allied to that of music, are found: Defoe, Prior, Gay, Young, Swift, Steele, Addison, Pope, Richardson, Thomson, Benj. Franklin, Fielding, Samuel Johnson, Hume, Sterne, Gray, Smollett, Goldsmith, Cowper, Gibbon, Burns, Cobbett, Wordsworth, Scott, Coleridge, Southey, Lamb, Thomas Moore, Washington Irving, Massillon, Le Sage, Montesquieu, Voltaire, Rousseau, Diderot, Beaumarchais, Marmontel, Saint-Pierre, Mme. de Stael, Mme. de Genlis, Chateaubriand, Gellert, Lessing, Bürger, Von Herder, Klopstock, Kant, Schiller, Wieland, Richter, Voss, Schlegel, Niebuhr, Gœthe, Metastasio, Alfieri, Volta.

Truly, "there were giants (of music and language) in the earth in those days."

Some idea may be gained, from a careful perusal of the foregoing names, of the opportunities that existed, in that wonderful century of transcendental intellects, for the development of genius in one possessing the gifts of application, perseverance, and determination to excel, added to facilities for travel and powers of critical observation.

GLUCK WAS A CZECH

Such was the case with Gluck. The place of his birth, in Bavaria, has given color to the statement that he was German, while his official connection with the Court of Austria was deemed sufficient for him to be considered an Austrian. He was, in reality, by his family, his forbears, his education, his temperament and intellectual desires and tendencies, a Czech or Bohemian—a member of the Czechic branch of the great family of Slavs, found principally in Bohemia and Moravia, which has given us so many gifted musicians.

The father and grandfather of Gluck were gamekeepers to Prince Lobkowitz, the father of Beethoven's future patron. The Lobkowitz was a princely Bohemian family, possessing estates in Silesia and Bavaria, and all their dependents were Czechs (Bohemians). Still more conclusive corroborative testimony that the composer was Bohemian is found in the fact that Gluck's grandfather bore the name of Adam *Kluck*, and that his son, our musician's father, signed his name Alexander *Klukh*. In the course of time, Kluk, Klukh, and Kluck became Gluk, Gluckh, and finally Gluck; but this should not be confounded with the German "glück" (fortune, good luck, happiness) for the true signification of the name, in its primitive form "kluk," is "lad."

Gluck's first musical repertory consisted of the Bohemian folk-songs, which he heard and sang daily, and the greater part of his musical education as a youth was Bohemian. When twelve years of age he became a choir-boy at Komotau (Bohemia) and remained there until he was eighteen, learning music, singing, piano, organ, and violin. As a child he was accustomed to roam the forests at will, barefooted, scantily clad, poor but happy—receiving all those impressions from Nature with which his works are impregnated.

STUDIES IN BOHEMIA AND ITALY

At the age of eighteen he went to Prague to continue his musical education under the instruction of the Bohemian master Czernohorsky. So poor

was he that he had to pay his way to get there by singing in the villages through which he passed, or by playing his violin for the village dances. Here, in Prague, he became still more imbued with the spirit of Hungarian music and of Bohemian folk-song—one of the richest in Europe.

After a sojourn in Prague of four years, Gluck was introduced by Prince Lobkowitz, in Vienna, to Prince Melzi, of Lombardy, became the latter's "Chamber Musician," and followed him to Milan, in 1736; age twenty-two. But he was far from satisfied with the knowledge gained and the position attained. The knowledge gained did but show him how little he really knew, and the position attained was but a stepping-stone of the ford he passed through to reach his real goal: innovator and inventor of operatic form. It is not surprising, therefore, to find him eagerly seizing the opportunity afforded him by Prince Melzi to study with Sammartini. From Sammartini, Gluck acquired the practical knowledge and technics of the stage and of musical conducting, as well as of the resources of the orchestra of the period; for, unlike other Italian teachers and musicians, Sammartini was much more instrumental than vocal in his methods. Four years of this study closed Gluck's period of pupilage. Thus it is seen that, far from being (as has been claimed) German, or even Austrian, this son of Bohemian family was a musician full of Czechic folk-lore and formed in the Bohemian and Italian schools of musical expression.

HIS CHECKERED CAREER

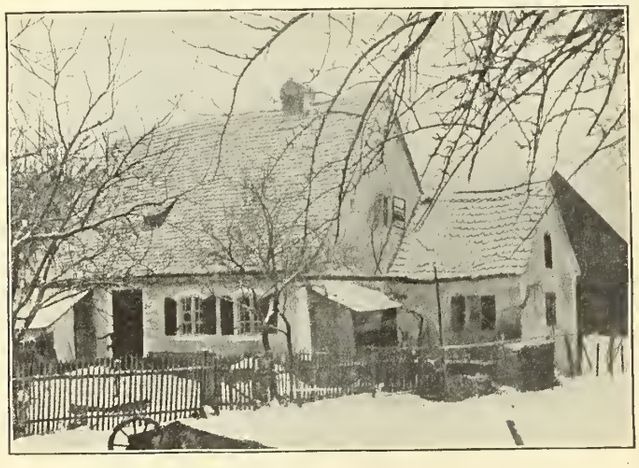
In 1741, Gluck produced *Artaxerxes,* his first opera, followed, during the next four years, by nine others, all in the Italian style, and performed with success in all the chief cities of the Italian peninsula. The renown thus achieved caused him to be called to the Haymarket Theatre, London, in 1745. There he met and talked with Handel and the English composer Dr. Arne. For the next four or five years his life was that of a wandering musician: journeys, concerts, musical composition (impecunious, no fixed position despite his titled patrons), and more journeys, London to Hamburg, then Dresden and Vienna, thence to Denmark, where he appeared as a virtuoso, giving concerts on the harmonica, or musical glasses! These consisted of a set of twenty-six tumblers, fastened by their feet to the bottom of an open, shallow box and tuned by the quantity of water poured into them. The curious fact of a great composer having to lend himself to such an exhibition in order to earn his bread lends piquancy to Goldsmith's well-known line: "They would talk of nothing but . . . fashionable topics, such as . . . Shakespeare, and the musical glasses."

The financial worry of Gluck was ended by his rich and happy marriage at Vienna, in 1754. Free from care, he was thenceforward able to devote himself entirely to the development of his ideas for reforming the lyric drama. The store of energy and rugged health he had acquired in early childhood, his constant study and frequent travels, by which he obtained a working knowledge of several languages and came into personal contact with the chief creators and exponents of art and literature throughout Europe, all conduced to make him *the innovator* who revolutionized the operatic stage and gave the formulæ to the lyric drama that Wagner and all later writers have conformed to, in a certain measure and on certain lines.

REASONS FOR REFORM

In a letter to the grand duke of Tuscany, Gluck speaks of the contemplated reforms: "I thought of reducing music to its true function, which is that of seconding poetry in the expression of the sentiments and situations of a story, without interrupting the action or making it halt by useless and superfluous ornaments." In the course of a conversation with Corancez, after the first performance of *Alcestis,* he states that Gluck said: "I can conceive that a piece composed simply in the musical system may or may not succeed; that depends upon the very changeable taste of the spectators (*sic*). I even conceive that a piece of this kind may at first succeed from infatuation and that it may afterwards die in the presence and with the consent, so to speak, of its first admirers. But if I see a piece fail that is entirely composed upon the truth of nature and in which all passions have their true accent, I confess that I am at a loss to understand it. *Alcestis* should not please now only and by its novelty. There is no time-limit for it. I affirm that it will give equal pleasure *two hundred years* hence, if the French language does not change, and my reason for it is that *I have placed all its foundation on Nature,* which is not subject to fashion."

Gluck was almost prophetic. It is two hundred years since his birth, yet now and for several years past his operas of *Alcestis, Orphée, Iphigénie en Tauride, Armida,* and *Iphigénie en Aulide* have occupied an important place in the repertory of the Paris Opéra-Comique. In art, as in all else, great truths based upon Nature and simply expressed will always prevail, despite passing aberrations and infatuations and running after false gods.



BIRTHPLACE OF GLUCK

A WHOLESOME LESSON

But the most remarkable thing in the whole of Gluck's career is the fact that he did not begin his revolution in operatic form until he was sixty years of age, and then it was not initiated in his own country or in his own language, but in France, where he was but a passing guest (invited by Marie Antoinette, who was his pupil in Vienna), and in the French language, which he spoke with difficulty, although he wrote it excellently.

The chief lessons to be drawn from the example of Gluck's life are: Perseverance, constant study of the Art in its different aspects, schools, and styles, as well as in all its tributary subjects (languages, painting, sculpture, history, fiction, poetry, literature); single-minded fidelity to high ideals, never turning aside for the popular applause of fashion's passing dictates; in face of all adversity to lead a pure, loyal, moral, honest, and virtuous life. To sum up in the words of Romain Rolland: "It is the word 'virtue' that seem to me to best characterize the music of *Alcestis,* or *Orphée,* or of the chaste *Iphigénie.* It is chiefly by it that the composer will be dear to mankind; it is by it that he is, like Beethoven, much more than a great musician: a great man with a pure heart."

A VISIT TO STRAVINSKY

[The following is taken from a recent number of *The Music Student,* an English musical publication.]

Before I saw Stravinsky a friend described him to me as follows: "You might take him for a respectable and intelligent local preacher." Now, without making any reflection upon the respectability or intelligence either of Stravinsky or the devoted class of men alluded to by my friend, I must say that I found the comparison inadequate; perhaps its foundation lies no deeper than the possession on the part of the composer of a modest demeanor, the appearance of perfect sincerity, and—a suit of solemn black. He is of middle height and somewhat slightly built, has none of the external signs of a musician (on his head, for instance), and in conversation displays a frankness and fulness of expression that, to the interviewer, at any rate, are very welcome. Next month he will attain his thirty-second year; he was married in 1906, and his hostages to fortune already amount to four. For the most part he spends his time, as so many of his famous compatriots have done, on the shores of Lake Geneva. Here, with his wife and children and a little party of local musical friends, he lives a quietly happy life, disturbed only by occasional rushes to the capital cities of Europe when the first performances of his works take place.

HIS MUSICAL CAREER

With Stravinsky, music is an inheritance, for his father was for long employed in St. Petersburg as a solo singer at the Court. Apparently personal inclination or parental intention did not at first lie in a musical direction, for until the age of twenty, or thereabouts, classical and legal studies occupied the growing mind. Yet from the age of nine a remarkable ability as a pianist had been recognized in and around the family circle, and the teaching of a pupil of Rubinstein had been called in to direct this.

In composition and orchestration Stravinsky is a pupil of Rimsky-Korsakoff. Only eight years ago did the composer finally cast aside other pursuits and give himself entirely to music, and the performance of his *Scherzo fantastique,* at St. Petersburg, two years later, gave him a position in the art world of Russia. Paris became a second fatherland to him from 1911, when the ballet, *Petrouchka,* described as "burlesque scenes in four pictures," created a furore of admiration. His reputation as a bold innovator became established so recently as last year, with the performance of the ballet, *Le sacre du printemps.* The mixed opinions this obtained in England when the boards of Drury Lane received it are still fresh in one's mind. Shortly the same place will witness the performance of *The Nightingale.*

THE NIGHTINGALE

The three acts are only of ten to fifteen minutes' duration apiece, and the whole work lasts only forty minutes. It was begun five years ago, and then relinquished for a time. Last year its completion was commissioned for the opening of a new theatre in Moscow. As this event will not, however, take place until 1915, Paris and London, and possibly other places, are to have prior performances.

In five years Stravinsky's style has completely changed, and he tells me that one of his chief difficulties has lain in this circumstance. He says that he has tried to continue the work in his older style, and that where differences are found they must be taken as the result of unconscious forces which are too strong for him. My own view is that much of the work will be considered "advanced," but that the parts of *The Nightingale* and *The Fisherman* will appeal to all.

MUSIC EDUCATION IN NEBRASKA PUBLIC SCHOOLS

BY C. H. MILLER

[A short time ago the Editor of THE MUSICIAN asked Mr. Miller to send us an account of the efforts being made in Nebraska to correlate music teaching and the work in the public schools. We print his article, which includes a sketch of the unique musical work carried on in Bruning.—Editor.]

IN compliance with your request, I am giving you a statement of the development of music education in our state—especially as related to our public school system.

We of the West look to the East for our ideals in culture and in all other forms of human achievement. Any idea or system is much easier to propagate here if it has had its inception east of the Alleghanies. Here, tradition has not secured a firm hold. New ideas are readily embraced if they have reason behind them.

When Harvard, in the beginning of the last decade, decided to recognize music as having educational content, and the New England Educational League, in 1904, recommended a plan for incorporating systematic music study as a part of the High School curriculum, the way was opened for music to come into its own.

Chelsea, Mass., was first to adopt the plan, and Lincoln, Neb., was probably the next city to take it up.

The plan, in brief, is to give credit for the private study of piano, organ, voice, or a principal instrument of the symphony orchestra. This study must be accompanied by the proper theoretical courses in music, and the results tested by an unprejudiced committee of musicians. The theoretical courses may be given by a teacher employed by the High School, or the work may all be taken at a conservatory of music with proper safeguards to insure good work. The school insists that at least the work in music appreciation be taken in the High School.

This latter is a kind of work that has not been taught in special classes in music schools. It includes the study of musical structure and form, and its purpose is to enable the student to listen intelligently. It includes something of the general nature of the composition, its composer, and any special points of interest or information making it more intelligible. This work is carried on by the teacher of music in the High School with the aid of local artists and mechanical musical instruments.

Several other cities in this vicinity have recently undertaken this work, and the Nebraska High School Manual, which is soon to be published, will contain complete plans and regulations under which the University of Nebraska will receive music work for entrance credits. The University of Nebraska not only allows entrance credits in music, but also gives liberal credit for piano study in the College of Fine Arts.

Nearly every town of this state, with one thousand or more inhabitants, has a teacher of music whose work is largely the teaching of singing in all grades. At Bruning, Neb., a town of 400 population, the school district employs a piano teacher to give private lessons to all above the second grade who elect it. Out of 75 pupils, 60 took piano lessons last year. A few of these had no piano at home and they were permitted to practise on the school instruments. The town supports a military band of over forty pieces. A band instructor is paid $1,200 a year. They play so well that they won, in competition, the appointment as Fifth Regimental band. The town is singularly free from immoral characters, having absolutely none of the "rough-neck" element so conspicuous in other small towns. The people attribute this largely to the musical atmosphere. The town is also well to the front in education and other things that make for good citizenship. The school is a community center where regular patrons' meetings, socials, contests in spelling, writing, debating, and athletics are held. The Principal of the school, Mr. J. A. Crawford, is the leader in everything, even to being president of the Commercial Club. He has just bought enough tooth-brushes to furnish one for each child when school opens in September.

While all of our towns are not so progressive as Bruning, yet this will give the readers of THE MUSICIAN an idea of the spirit that animates Western people. I have mentioned these things also to prove that a large interest in music does not necessitate a less interest in other important affairs. The ultimate analysis will prove that music does more than any other one agency to elevate the moral tone of the community, and to develop good citizens.

Lincoln, the capital city, not only has three universities, but it has four conservatories of music. One of these enrolls over 800 students.

The Lincoln High School has over 1,200 students, a band of 52 pieces plays high class music, including several overtures and at least one symphony. An orchestra of 15 pieces, besides playing concert selections, furnishes accompaniments for oratorios, operas, and choruses. The chorus last year gave the opera *Martha* without the aid of anyone except students of the school. Next year they will give *The Messiah* and *The Bohemian Girl*.

Many Eastern people have an idea that wild buffaloes and savage Indians still roam our plains, and that cowboys are the chief social asset. I venture the assertion that a larger percentage of our young people are enrolled in colleges and conservatories than in the state of Massachusetts.

The West is always willing that the East should lead in educational movements, and we try to follow closely behind; but when we see a better way we have the courage and the initiative to act upon our convictions.

A MIDSUMMER DAY'S MUSIC

A STORY OF HOW A TEACHER MADE SUMMER STUDY INTERESTING

BY PHILIP GORDON

"IT was this way, sir. Thursday morning I get up, and the first thing I see is a letter on my pillow. 'Mr. William Bradley,' it says. That's me, you know. So I open the letter and it says on the card inside: 'Mr. William Bradley is kindly invited to participate in a Midsummer Day's Music on Sunday, at 3 P. M. Harvey Smith.'

"That's Mr. Smith, my music teacher, you know. I says to my ma, 'Can I go?' and ma says, 'Certainly.' So on Sunday I put on my best clothes and I go. Mr. Smith was standing at the door with Miss Burton—Miss Burton what was, you know; they're married now. Her pupils were invited, too. So Mr. Smith shook hands with me and introduced me to Miss Burton, and she gave me a flower and took me inside and put me between two girls. She also gave me a program, and there it is framed up over there on the wall under the picture of Haydn.

"Well, the first thing the program said was a 'pageant of composers.' So pretty soon the room gets all dark and someone plays on the organ real quiet Bach's *First Prelude*. Then all of a sudden we see a picture of Bach—lantern slide, you know—but it was an awfully fine picture, all colored, and underneath it said, 'Johann Sebastian Bach, 1685-1750.' Then they showed us Bach playing the organ and pretty soon the prelude was over.

"Then they played a piece I didn't know. So I asked the girl next to me, and she said it was the *Dead March* from *Saul*. And sure enough, there was a picture of Handel, all colored too. There were two more pictures with Handel in them.

"Next the piano played *Gypsy Rondo* and everybody knew Haydn was next. We had all the composers that way. MacDowell was the last, and then they put up the lights.

"Well, that was fine. So I look at my program and it says next, 'Games of composers, to be played out on the grass.' So we all go out and sit down on the grass, and Mr. Smith explains us the first game. It goes like this:

"Somebody gives the first letter of some composer's name, only he mustn't tell what the name is. Then the next one adds a letter and everyone in turn adds a letter, but the one that puts on the last letter is out. And if you misspell or you can't add a letter you are out. And if you get three outs you get put out of the game. Then, to make it real hard, Mr. Smith says no name should be used twice.

"So Miss Burton started with B and the next boy says E. That could be either Bellini or Beethoven. The next letter added was another E, so everyone knew it was Beethoven. Only the girl next to me says the last E, and I got stuck with the N. So I get one out. We played that way until only two were left, and then we went to the next game. But I bet you I knew those names all right after that game, and I learned a lot of new ones, too.

"That next game wasn't very easy for me. It was like this. Everyone gets a card with five composers written on it, and you have to write the name of one of his compositions beside every name. You bet I had to think, but I answered them all. Here's my card; I kept it with my answers on it:

1. Schubert—*Military March.*
2. Weber—Opera *Freischütz.*
3. Bach—*Well-tempered Clavichord.*
4. Beethoven—Opera *Fidelio.*
5. Liszt—*Consolation.*

"Then there were all kinds of games. Everyone gets a number of names to arrange so that you spell a musical term by drawing a line straight through them. My names were Handel, Mozart, Liszt, Cherubini, Schubert, and I made this word:

Han*D*el
M*O*zart
*L*iszt *DOLCE*
*C*herubini
Schub*E*rt

"Some of the others were:

*F*ranck	Schu*M*ann	*V*ivaldi
B*O*ieldieu	M*O*zart	Bell*N*i
B*R*ahms	Mac*D*owell	*V*iotti
Schuber*T*	Aub*E*r	B*A*ch
M*E*ndelssohn	B*R*ahms	Glu*C*k
	H*A*ydn	W*E*ber
	Bee*T*hoven	
	Sp*O*ntini	

"Well, we played until five o'clock. Then we had some ice cream and Mr. Smith announced that those who had done best in the games would get prizes. I didn't get one, but the girl next to me did, and I saw it yesterday. It is a picture of Handel in a big powdered wig, and it hangs over her piano."

*

NEW YORK STATE MUSIC TEACHERS' ASSOCIATION

Convention at Saratoga Springs, June 17-19

THE twenty-sixth annual convention of the New York State Music Teachers' Association was held at Saratoga Springs, June 17-19, under extremely pleasant auspices. The president of the Association, Mr. Alfred Hallam, is also director of music in the Skidmore School of Arts, Saratoga, and placed the resources of the School at the service of the Convention. In addition to this the Association had the use of the beautiful Casino on the State Reservation, which contains a fine concert hall, suitable for recitals and lectures, and the city authorities granted the use of the Convention Hall for the evening concerts, a large hall being necessary to accommodate the audiences.

The state has taken over the property formerly belonging to Congress Hall and other establishments, is turning it into a public park, protecting the celebrated springs from contamination, making everything free. It is an inspiring place at which to hold a convention, and those who attended the meeting of the N. Y. S. M. T. A. enjoyed themselves to the full amid such delightful surroundings.

An abstract of the program follows:

Wednesday, June 17—Opening session. Harmony Conference, Prof. George C. Gow, of Vassar College, chairman. Speakers: Mr. Frederick Schlieder, New York, on the topic, "Harmony and Its Relation to Musical Development." Mr. J. Warren Andrews, New York, on the topic, "Why Pupils Fail to Understand the Principles of Harmony." Following this was an organ recital by Mr. Harry L. Vibbard, of Syracuse University, assisted by Mrs. Edith Baxter Harper, soprano, of New York.

In the afternoon two programs were given, one by the Zoellner String Quartet, of New York, consisting of Mr. Joseph Zoellner, two sons and daughter; the other by Marie Stapleton Murray, soprano, of New York.

The evening concert forces were the Schubert Club, men's voices, of Schenectady, Wm. G. Merrihew, conductor, Miss Sally Schaupp, soprano, of Schenectady, Miss Blanche Goode, of Smith College, pianist, Miss Edna Miner, violinist. Following the concert a reception was held at the Skidmore School, attended by the visiting members, the officers of the school, and a number of Saratoga music lovers.

Thursday, June 18—Business meeting, followed by two conferences, namely, Piano, James Francis Cooke, editor of *The Etude,* chairman, at which the speakers were Miss Mary Venable, of the Cincinnati College of Music, author of *The Interpretation of Pianoforte Music,* whose subject was "Awakening and Developing the Musical Talent of the Average Pupil in Piano Playing"; Mr. Hans Schneider, Providence, R. I., who spoke on "The Advantage of Psychology to Music Teachers"; and Mr. Perlee V. Jervis, of New York, who discussed the topic, "A Plea for a More Rational Method of Teaching." The other conference was on vocal topics, Mr. Walter L. Bogert, of New York, chairman. The speakers were Mr. W. Warren Shaw, of Philadelphia, author of *The Lost Vocal Art,* whose subject was "The Requirements of the Vocal Teacher"; Dr. A. Madely Richardson, of New York, on "A Visit to the Choir-room of Southwick Cathedral in 1908"; and Mr. Perley Dunn Aldrich, of Philadelphia, who presented a paper on the topic, "Some Problems of the Vocal Teacher." The morning session closed with a piano recital by Mr. Horace Alwyn, a young English pianist, recently elected a member of the faculty of the Skidmore School.

The afternoon was taken up by a concert by the New York Symphony Orchestra, Walter Damrosch, conductor, with Miss Carolyn Beebe, pianist, and Mr. Frank Croxton, both of New York, as soloists. Miss Beebe, on a sudden enforced a change of program, and without rehearsal gave a fine presentation of Schumann's concerto in A minor.

In the evening the Skidmore School of Arts Choral Club, Mr. Hallam, conductor, presented Sullivan's *Golden Legend,* with the following soloists, Miss Marie Kaiser, soprano, Miss Christine Schutz, contralto, Mr. A. Judson House, tenor, and Mr. Edmund A. Jahn, baritone, all of New York. Previous to the cantata Mr. Austin Conradi, pianist, played the Saint-Saëns G minor concerto.

Friday, June 19—The morning session opened with the final business meeting at which Mr. Frederick Schlieder, of New York City, was elected President; Prof. George C. Gow, of Vassar College, Vice-president, and Miss Emma Walton Hodkinson, of New York City, Secretary-Treasurer. The

ALFRED HALLAM, PRESIDENT

next meeting will be held in June, 1915, in New York City. This was followed by a conference on the subject of "Standardization of Music Teaching," Mr. Gustav L. Becker, of New York City, chairman. The ensuing discussion was a spirited one and ended with the adoption of certain resolutions on the subject, which appear elsewhere in this issue. The work of the morning closed with a song recital by Mr. Edmund A. Jahn, baritone, of New York.

The afternoon was taken up by a vocal recital by Evan Williams, tenor, and an address on "American Musical Independence," by Mr. John C. Freund, of New York City, editor of *Musical America,* in which the speaker presented an array of fact concerning American achievement in music that was staggering, and comparisons with conditions in European countries in which the advantage was largely with us. For an hour and a half Mr. Freund held the attention of a large audience. The closing concert, in the evening, presented the following artists: Mr. Milo Picco, baritone, of the Boston Opera Co., Mr. Jules Falk, violinist, New York, Mrs. Marie Murray, soprano, Miss Christine Schutz, contralto, Mr. Charles W. Harrison, tenor, of Philadelphia, Mr. Andrea Sarto, baritone, late of the Metropolitan Opera Co., and Mr. T. Austin-Ball, bass, of the Skidmore School. Mr. Picco sang several opera arias, and Mr. Falk gave two groups of violin numbers. The Skidmore Choral Club, under the direction of Mr. Hallam, presented *Il Trovatore,* in concert form.

It will be noted that the program contained a preponderance of musical over educational features. In the smaller cities experience has proven that the local public can be brought out in no other way. The expenses of a convention are considerable and fine concerts are a great aid in raising the necessary money. From this point of view a program rich in musical events is justified.

Teachers, on the contrary, are more interested in the consideration of educational matters, and in the discussion of professional problems. To the present writer that seems to be the prime reason for the existence of a music teachers' association. Whenever it is possible so to do the program committee of an Association should recognize this need and special interest of teachers, and make educational features the very strongest possible. The discussions should be searching and thorough, and, year by year, include the most important questions of the day, not neglecting the business relations of the music teacher with his patrons and the community as well. This is a feature of the teacher's interest which has been much overlooked.

Another idea that grows out of the observations of the writer of this sketch is that the educational conferences or "Round Tables," to use a common term, have not been as carefully planned as they should be. First of all the papers in each conference should bear upon the same question. A comprehensive and logical outline should be prepared, each speaker taking a part of the scheme, and each one limited, strictly, to a certain number of minutes. In addition to this several other persons could be invited to contribute to the discussion by a three to five minute presentation of one thought bearing upon the subject. Finally a short time should be left for general discussion.

For example: Three papers of fifteen minutes each (about 2,250 words); six invited discussions of three minutes each; a general discussion, questions, etc., of fifteen to twenty minutes. The chairman of the conference should not make extended comment in introducing a speaker. The aim of a conference is to illumine a subject, present helpful, practical ideas, and stimulate thought. All papers should be concise in expression, clear in thought, and full of real "meat." Attempts at fine literary style, poetic illustration, and superfluous verbiage, are strictly out of place. Ideas and solid fact should be the aim of those who prepare papers and those who discuss the subject. If it is worth while to "confer" upon a topic it is worth while to do it well. If a person accepts an invitation to prepare a paper he owes it to those who are to listen to him to prepare thoroughly, and not wait until a week or a few days before the time to "jot down a few thoughts," as has been the case in some instances.

If recitals are given they should have some definite purpose, and not be merely repertoire work, the programs consisting of numbers which appear very commonly with artists. The net result of this kind of a recital is a mere exploitation of the artist, and not an educational contribution. The committee in charge of the work of preparing a program have a splendid opportunity to serve the members of the Association and the public who attend the conventions.

In closing we would call attention to the possibility of greatly increasing the membership through more earnest effort on the part of the county vice-presidents, and by the formation of county or city organizations among the teachers. The Dutchess County Association is an example of what can be accomplished if a few teachers will take the ini-

tiative. The reports from various counties showed an extension of the feeling that local organization is very desirable, and will greatly redound to the benefit of the teachers of a community. It is to be hoped that by the time the next convention gathers in New York City the number of county associations will be greatly increased.

———*———

GENERAL REQUIREMENTS FOR MUSIC TEACHERS

[A report on the subject of standardization for music teachers, submitted at the Saratoga Convention of the New York State Music Teachers' Association, Mr. Gustav L. Becker, of New York City, chairman of the committee.]

First: That he be well acquainted with the essential facts of musical tone-phenomena, evinced by an intelligent appreciation of the artistically applied elements of music, rhythm, melody, and harmony, as well as the ready recognition and comprehension of the symbols and signs in common use, by means of which musical thought and emotion are chiefly transmitted from the composer to the executant, whether artist, teacher or pupil.

Second: That he be able to elucidate for his pupils any doubt or misapprehension, and that he be able, on occasion, to give an adequate illustration of the proper interpretation or execution of the music taken up for study by his pupils.

Third: That he know how to adapt his instruction, also his general personal attitude during the lessons, to the special needs and peculiar traits of each pupil.

Fourth: That he be sufficiently acquainted with the instructive, classical, and romantic teaching literature of his department or specialty.

Fifth: That he have a working knowledge of the technical and other difficulties that are most likely to be encountered along the path of advancement, reckoning with the mental, physical, and temperamental equipment of the average pupil; and knows how, in some effective manner, to remedy or help to overcome the faults, deficiencies, and problems as they arise.

A teacher who cannot at all meet such requirements may mean to do well, and may, in the isolated case of a very talented pupil, show a partial success; but he is likely with most of his pupils, to misguide and influence them injuriously against any future possibility of success.

It is understood that it will be left to practical experience to show wherein modifications or amplifications of these requirements must be made by subsequent committees and special sessions of this association. Our committee has realized that it would be wise in making the requirements, at any rate to begin with, as liberal and flexible as can be and yet fulfil the purpose. Especially was this requisite in all points wherein strongly divergent views are still held. There was a strong inclination at times to insist upon this or that particular requirement or test—but finally everything was eliminated which should not be agreed upon as being absolutely essential. It was thought that as soon as the average standard of achievement is raised, we can make our requirements and tests for examinations more exacting. We must be glad if, at first, we can keep out the frauds and incompetents. We can all succeed better by learning from each other, and we should pass along our own particular observations and experiences. At our conventions, and at our local auxiliary meetings we should diligently compare notes, discuss subjects freely that affect upon the success of our profession. How much more resourceful and profitable will such meetings and discussions be when a larger percentage of those who attend and take part are well versed in the essentials, for most assuredly, upon the essentials is dependent a ready comprehension of all higher problems.

The following text books for preparing for examinations, for teachers in general, are suggested: Maryott's *Musical Essentials,* and McMurray's, *How to Study, and Teaching How to Study,* as well as the following:

Pauer's *Musical Forms,* Hamilton's *Outlines of the History of Music,* Venable's *Musical Interpretation,* Parry's *Evolution of the Art of Music,* Jackson's *The Art Principle and Its Application to the Teaching of Music,* Tapper's new book on *First Year in Music Analysis,* with suppl.—*Musical Form,* Farnsworth's *Education Through Music.*

———*———

THE ESSENTIAL STANDARD FOR TEACHING ADOPTED BY THE NEW YORK STATE MUSIC TEACHERS' ASS'N JUNE 19, 1914

OUTLINE OF REQUIREMENTS FOR THE PIANOFORTE DEPARTMENT

I. As to technic. A thorough knowledge of the theory and practical application of the principles of muscular relaxation, action and control, toward tone production.

II. The ability to apply effectively the various artistic touches, including legato, staccato, non-legato, stentato (*sfz*), and—not to be neglected—the precise touch in melody playing. These touches and dynamic inflections and gradations should be studied with particular regard to the bringing out of the inner meaning, or mood, of the composition.

ALFRED HALLAM AND WALTER DAMROSCH

III. Knowledge of the different kinds of musical metre and their normal accentuation, also the ability to analyze and compare various rhythmical groupings.

IV. A practical knowledge of the structure of music, including the intervals, scales, elementary harmony, and musical form, with the ability to apply such knowledge in an illuminative analysis, including phrasing indications of the simpler classical compositions, thereby to aid the pupil in sight-reading and memorizing, as well as gaining a comprehension of the musical content. The teacher should also know how to apply his knowledge toward a correct and musically effective use of the damper pedal.

V. He should be able to detect and correct obvious mistakes in printed music.

VI. He should possess a musically well-trained ear, so that he may readily discover and call attention to faults in the pupil's performance, especially regarding accuracy in keyboard work and pedaling.

VII. He should have acquired sufficient ability as a performer adequately to illustrate for the pupil any required portions of the latter's repertoire. The applicant should be required to play for the examiners at least two classical pieces and one romantic piece, of the player's own choosing, of at least the fourth grade of difficulty. He should also be able to read at sight fairly correctly, if not at full tempo, short selected portions from a number of compositions of varying metre, key, and style, of about the third grade of difficulty.

VIII. He should have some knowledge of the best methods of studying and learning, aiming at the most efficient utilization of the pupil's practice time.

IX. He should also bear in mind a variety of such practical points of piano teaching that have a more or less direct bearing upon the pupil's health, comfort and success.

X. It is important that he should have an adequate knowledge of the standard, instructive, musical literature of the piano, so that a proper selection may be made, that shall best conduce to the pupil's esthetic, mental, and technical growth.

XI. He should also, on occasion, be able to tell the pupil something of interest and educational value from out of the pages of history of music.

XII. It is understood, of course, that all these requirements will not suffice unless the teacher brings to his task real enthusiasm and the ability to get at the idiosyncrasies, that is, personal traits and needs of each individual pupil. The applicant can, to a large degree, prepare himself by studying the following books:

Hamilton's *Piano Teaching* and Taylor's *Primer on Piano-playing.* It will be to his advantage to make himself familiar with such books as Grabill's *Mechanics of Pianoforte Technic,* Cooke's *Great Pianists on Piano-playing,* Krehbiel's *The Pianoforte and Its Music,* as well as the books mentioned for teachers in general.

OUTLINE OF REQUIREMENTS FOR THE VOCAL DEPARTMENT

SUBMITTED BY WALTER L. BOGERT, OF NEW YORK CITY

The Vocal Conference of the N. Y. S. M. T. A. 26th annual convention, June 18, unanimously adopted the following recommendations presented by the Chairman, Walter L. Bogert, looking toward the establishment of a Standard of Essentials of Musicianship for teachers of singing who desire to become members of the Association.

Resolved that, before a person is considered qualified to teach singing he should demonstrate to the Examining Committee

1. That he possesses an ear, accurate in appreciation of differences in the pitch and quality of musical tones and in the pronunciation and enunciation of the English language.

2. That he has sufficient pianistic ability to enable him to play simple accompaniments.

3. That he has had at least three years of continuous study with some competent teacher.

4. That he possesses such elementary knowledge relating to general musicianship as is contained in such a book as *Musical Essentials,* by Maryott.

5. That he is familiar with the contents of one or more standard works dealing with Tone Production, Voice Development, and Interpretation.

6. That he possesses the ability to impart his knowledge, that is, to teach.

7. That he has some familiarity with teaching material in the shape of vocal exercises and songs.

THE WELL EQUIPPED PIANIST

BY ROBERT W. WILKES

II

RÉSUMÉ OF PRECEDING ARTICLE

THERE are two principal varieties of tone quality: the brilliant (sharp, inclined to harshness) and the sympathetic (singing tone).

The only way in which the quality or quantity of the tone can be influenced—outside of the pedals—is by means of the piano key, and then *only when it is descending.*

A weight of 3 oz. will, on most pianos, cause a string to sound. Tone may therefore be produced by the *weight* of the arm or hand.

Tone may also be produced by downward *exertions* of the arm, hand, or finger muscles.

Tone may also be produced by a combination of the weight and muscle elements; also through a rotary movement of the forearm.

Certain touches can be produced only at low speeds.

For the extreme sympathetic (singing) tone, the mere *weight* of the arm should be used—no downward muscular exertion whatsoever. Also, the wrist and fingers should be in a very flexible condition.

It was found out that the movement of the arm or pressure from the arm cannot be transmitted to the fingers unless the wrist is stiffened at least in a slight degree.

When the mere weight of the arm is insufficient to produce the desired sonority, recourse must be had to downward muscular force, although the tone thereby suffers in singing quality.

The *sympathetic* tone is produced entirely, or mainly, by *weight*; the *brilliant* is produced entirely, or mainly, by downward *muscular force.*

FURTHER CONSIDERATION OF ARM TOUCH

Some people find it difficult to get a good singing tone because, besides arm weight, they always use a little downward muscular force. In other words, too much effort is used. But when the details of the singing (sympathetic) touch are well understood, it will be realized that much more muscular force is used *before* the tone is produced than during the actual touch.

For *before* the tone, the arm must be completely supported by its own muscles. To realize the muscular effort required, it would be instructive to hold the arm out in the usual playing position, but without resting it on anything, for just two minutes by a watch or clock. The strain will be plainly felt. Now, *before* the tone is played, these supporting muscles are working—holding up the arm; *during* the actual production of the tone they are not used at all, in consequence of which the arm falls. The only muscular force required just as the tone is being made is a gradual slight stiffening of the wrist to transmit the motion of the arm to the fingers.

Of course, it will be realized that the greater the distance that the arm falls, the greater will be its momentum, and consequently the louder will be the tone. It is therefore advisable to prepare for a loud singing tone by holding the arm rather high, so that it can have a greater fall. Care must also be taken that the *whole* arm and not only the *forearm* be used.

When it is desired to obtain a very "sympathetic" touch, the fingers should not be held in a bent position. They should be straight, or nearly so, as they are thereby in a more flexible condition.

THE CONNECTION OF TONES IN LEGATO

Most melodies are to be played legato. To sustain the tone, it is not necessary to continue the pressure of the arm on the key. No arm weight is necessary, or, in fact, desirable for this purpose on account of the strain on the fingers. *The mere weight of the hand is sufficient.*

It has been previously stated that the available weight of the hand varies from about 4 to 8 oz. Now, although it takes a weight of 3 oz. to depress a key, it takes only about 2 oz. to hold the key down after it has been depressed. Therefore the weight of the hand is amply sufficient to keep the key down and thus effect a perfect legato.

It is very necessary to see that the weight of the arm does not still press upon the fingers after the tone is produced. The finger muscles are the most delicate part of the whole playing mechanism, and it is most important that they should not be used unnecessarily.

It should be fully realized that it is absolutely useless to press with the arm upon the key after it has reached the key-bed; such pressure does not improve the tone in any way, and the strain upon the finger muscles in a long selection is terrific.

OTHER IDEAS ON THE SINGING TONE

Most piano teachers seem to realize that for a singing tone something more is required than a mere finger stroke, and many of them vaguely describe the tones as being "pressed out." Thus, in a late book, which purports to give the foundation principles of a celebrated piano pedagog, we read: "When a strong, full tone is to be brought out legato in a *cantilena,* the strength of the fingers (*sic*) does not suffice, but must be reinforced by wrist-pressure. . . . Such directions are, to my mind, vague and in some ways misleading. For, although we have found out that the use of arm-weight tends to increase slightly the tension at the wrist, still the word "wrist-pressure" brings forcibly to the mind the idea of *muscular effort,* and we have found out that real singing tone is not produced by direct *muscular effort,* but primarily by the *falling weight* of the arm.

FINGER AND HAND (WRIST) TOUCHES

Note—We use the words "finger touch" to indicate a movement of the finger, and "arm touch" to describe the movement of the arm; therefore, as pointed out by Matthay, in his book to which reference has previously been made, it is more logical to indicate a movement of the hand by the words "hand touch" than by the commonly used term, "wrist touch."

Here are a number of finger and hand touches, which are used according to the tonal effect which is desired and according to their practicability; that is, they vary considerably in amount and quality of tone, and some are capable of much greater speed than others. As a general rule, we find that the greater the speed, the softer must be the tonal effect.

But before taking up the details of the various touches, it will be necessary to consider one of the physical laws, which has a very important bearing upon the question—I refer to the law of *action* and *reaction.*

ACTION AND REACTION

For the benefit of those readers who have not studied the principles of natural philosophy, it might be well to state that the law as formulated by Newton is: "Action and reaction are equal and opposite in direction. A familiar example would be the recoil of a gun of large calibre. When such a gun is fired the reaction or recoil, as it is called, is sometimes sufficient to cause the user, if he is sitting down, to be thrown violently backward upon his back. Thus also, when we jump from a small rowboat to the shore, our action tends, if the boat is not firmly imbedded in the bank, to send our skiff back into the water.

Now, when the fingers or hand are exerted *downward* against the keys, there is a reaction *upward* in the hand or arm which is equal in force to the downward exertion. Such reactions must be met by appropriate resistances—with an appropriate basis—if we wish to obtain the best results.

To illustrate: We might imagine that a man standing upon smooth ice on a frozen lake wished to push away another man who was standing near him on the ice. Now, it can be readily seen that if both men were of the same weight and in an upright position, the push which would send the one man forward would also send the first man backward, and each would move about the same distance, but in opposite directions. In this case practically the only basis that the arm of the "pusher" would have would be the weight—or, more strictly speaking, the inertia—of his own body; in other words, the resistance or the basis would be slight, and, therefore, even if the full force of the arm were used, the effect upon the second man would be slight.

This condition we might compare to the touch which is used for very light and extremely fast finger passages. The wrist is held very loosely—the arm in consequence being fully supported by its own muscles—and the fingers, when exerted against the keys, have only the light weight of the hand as a basis. As the basis is so slight, even the full force of the fingers will have only a slight effect. It is therefore impossible to play loud with this touch, although the highest degree of speed may be obtained.

Now, returning to our illustration, we might imagine that two or three friends of the first man stood directly in line in back of him, each man with his arm rigidly extended against the shoulders of the man ahead. In such case, the man who wished to do the pushing would have so much extra weight as a basis and consequently could deliver a push that would have more effect. Although the basis in this case would be firmer, still a vigorous push would give a reaction that would more than counterbalance the weight of the groups; in other words, the reaction would show itself in a *backward movement* of the men and, as a consequence, the full force of the push would still not be felt by the opponent.

This would be analogous to using as a basis for the downward-acting fingers, not only the weight of the hand, but also the weight—or, more strictly speaking, the *inertia*—of the arm. This would be effected by a slight stiffening of the wrist, although the arm would still be fully supported.

Or, again to return to our illustration, we might imagine that at the very instant the first man was exerting force against his opponent, that his friends should give their bodies a slight forward tendency. In such case, the reaction resulting from the push would be met by the forward tendency of the other men, and the push delivered by the first man would have its full effect.

This would be analogous to allowing the whole weight of the arm to be unsupported just as the vigorously acting finger is being applied to the key. The reaction, in this case, would be met not by the mere *inertia* of the arm, as in the former touch, but by the powerful *downward tendency* of the arm weight—thus making the basis immovable—and the fingers, when employed with full force, would produce a maximum effect.

THESE DIFFERENT FINGER TOUCHES COMPARED AS TO SPEED AND VOLUME

The first of these finger touches, the one in which the only basis is the light weight of the hand, admits of the greatest speed, but is very soft.

The second, in which the inertia of the arm and hand are used as a basis, admits of greater tone volume, but of slightly less speed.

The third, in which there is a momentary downward tendency of the arm—a tendency, however

which is separate and distinct for each tone, and which does not manifest itself in any actual movement of the arm, admits of a very large volume of tone, but at a comparatively low speed. Indeed, passages played with this kind of touch cannot be executed much faster than in the ordinary arm touch.

HAND TOUCHES

There are two principal hand touches, one in which the inertia of the arm is used as a basis—therefore similar to the second finger touch; the other, in which a momentary *downward tendency* of the arm is used as a basis—therefore similar to the third finger touch. The first hand touch admits of slightly more speed than the second, although the tone quality is much smaller.

A more particular description of these different finger and hand touches will be given in a succeeding article.

RULES FOR YOUNG PERFORMERS CONCERNING A FIRST APPEARANCE IN PUBLIC

BY PHILIP GORDON

1. Wear very tight clothing and feel as uncomfortable as possible. That is the first rule in all good playing.

2. Come onto the stage impressively. See that your new shoes squeak and try to move in jerks. Pick your way across the stage very carefully, as if you were walking on eggs.

3. Now, when the audience applaud, gaze about the hall vacantly and smile a sheepish grin; if possible, keep your mouth open all the while.

4. It is now time to look for the piano. As soon as you discover it, grope your way thitherwards and fall into the seat.

5. Look bored. Wrinkle your nose, sigh rather wearily, and take off your rings, which you should place on the piano with a thump. Lay your handkerchief on a corner of the piano, being very careful to let it fall into the shape of a pyramid.

6. Now look down for the loud pedal. Put your foot on it, and keep it there—forever.

7. When all this has been performed, you should play your piece, if you remember it. Sway back and forth as you play, and contort your face into whatever expressions the mood of the piece requires.

8. When you have gotten to the last chord, jump up and clatter noisily off the stage. Take your handkerchief with you, but leave your rings on the piano; carelessness about jewelry always impresses people.

9. If the audience applaud, and want you to come back and get your flowers, do not condescend to do so immediately. The usher is used to waiting, anyway.

10. When you are beginning to fear that you may not get the flowers if you don't come after them, run on the stage and rush for the usher. Grab the bouquets and sweep back off again, pushing your face into the largest flowers.

11. Now go out and take a seat in the audience. Patronize the other soloists. Pay no attention to the innumerable persons who look at you and point you out to the others. Pay no attention to them, even if they really are not looking at you, do not even look to see if you are there, to tell the truth.

12. After the performance receive your friends. But do not for a moment forget that you are a great soloist, and everyone else is only an ignorant person.

Having memorized the above suggestions, do just the opposite when you come on the stage.

PARIS VERSUS BERLIN AS A MUSIC CENTER

BY ARTHUR HARTMANN

Berlin is constantly being given pre-eminence as a music center, whereas Paris is always referred to as *"La ville lumiere"* and *"Gay Pareé."* It is the object of the present article to prove that Paris not only offers every bit as much as Berlin, but in many things a great deal more. Paris is not only as great a music center (as we shall proceed to prove), but is a greater art center.

The history, the streets, the monuments, public buildings, *and the great men of Paris,* are, collectively, a greater education than what Berlin affords. First, the streets of Paris are named after the great scientists, authors, poets, composers, inventors, doctors, and philanthropists of the world. This is, in itself, an education, if the reader is ready to concede that one ought not merely have the uses, advantages, and privileges of a great city, without being a part of it and vitally interested. To reiterate, every street, monument, etc., relates to some epoch-making man or event, and the thorough acquaintance with these names, as well as the knowledge of the authors who inspired or created these soul stirring changes in governments and people, etc., leads the student into history, the sciences, the arts, medicine, and civil government.

Paris is nothing if not ideal, and the artistic mind is worshiped alike by the concièrge and man of culture. Some years ago the city was lighted by electricity; but it was voted to abandon this, for the people found the softer tone of gas light more sympathetic. "We shall have all the light we need, but it must not be garish," they argued. Thus again, while being practical, they remained artistic. Nor is a telegraph pole to be seen in all Paris.

Another widespread exaggeration which I should like to refute is the so-called squandering and debauch of the Frenchman. The French are the *most thrifty* people on earth! I fully realize that this statement may cause hilarity among some readers who have the *tourist's* impression of Paris. Nevertheless, it remains a fact that nothing is wasted. Beginning with the wrapping paper and cord from packages brought into the house, everything is carefully preserved, and the strictest economy in all details is constantly practised.

Climate originally compelled man to seek shelter, —thus was architecture born. Climate is furthermore responsible for the melancholy of the Norsemen and for the charm of the Southern races. The sun shines on France, therefore she is gay and laughs; but between gayety and frivolity is the chute into which the foreigners, the tourists, and pleasure-seekers fall. And these are responsible for making of Paris a place of debauch, frivolity, and extravagance. Remains the question, Why do students flock to Berlin?

From the economic viewpoint, Berlin offers nothing that Paris does not duplicate. While it may be a question of personal taste, the present writer's experiences (and they are those of a thorough globe-trotter) decide in favor of the French culinary art. One can live in Paris for just as little, or as much, as one is inclined to spend. It is a well-established fact that at any of the restaurants of the student's quarters, at Montmartre or on the Raspail, one gets a better plate of soup for four cents than what can be had for ten cents in any part of Germany.

The question whether Berlin offers less temptation than Paris, may be posed by some. Without going into grewsome details, it may be accepted today (for it is generally conceded) that New York or Chicago does not fall behind any of the European centers in alluring folly. Therefore Paris is neither better nor worse than the great German capital, and for the student decidedly more stimulating, because France, the modern France, the vital, energetic, brilliant France, is not steeped in alcoholism as is Germany. The quantity of thin red wine (invariably diluted with water) consumed by the Frenchman is as nothing compared to the gallons of beer on which the German bases his diurnal existence. The absinthe drinker in Paris is at least as rare as the water drinker of Germany.

The café life of Berlin—that living morgue of young men's hopes, that vampire of ideals, vigor, and aspiration—is what draws students into "camaraderie" and regrets. In Paris the cafés exist, but the student life is not around them nor in them.

Is it, then, that Berlin has more concerts than Paris? Unquestionably, and of a calibre that has not led to the maintenance of a high artistic standard. Some years ago the present writer published broadcast (through the medium of the Associated Press of America) a lengthy article depicting the ghastly conditions and the tragedies hidden behind the countless concerts and concert givers.

These meaningless public attempts, which invariably are disastrous, inasmuch as they drop into the oblivion whence they came, serve only two purposes: namely, to make the various concert agencies thrive, and to make the few *real* events of the season stand out in sharper relief. For this reason, it may with justice be claimed that in the *quality* of concerts Paris affords, it stands on the same plane as Berlin.

Why would you have it otherwise? The French race is a highly cultivated and musically educated one, and, as a matter of fact, the culture of Paris is far more ancient than that of Berlin.

It may be *apropos* here to remark that the reason for the excellent musicianship of the French is that *every* music student is thoroughly trained in solfeggio and rhythm, and "absolute pitch" is so common that it may well be called a *national* accomplishment. If America would only grasp this great secret of the fundamentals of music!

Is it that Berlin boasts of greater men? This may be important. Let us compare: In juxtaposition to Strauss we have Debussy, unquestionably the greatest revolutionary since Wagner's days. Opposite men like Humperdinck, Kaun, etc., we have D'Indy, Dukas, Ravel, and others.

There is no one in Germany to compare to the great vocal artists living in Paris, such as the DeReszkés, Bouhy, Sbriglia, Journet, Pavla Frisch, and others.

Of pianists living in Berlin today there looms but one name—Busoni—and he is soon to leave. Paris has Philippe, Moszkowski, Risler, Bauer, and others.

The achievements and records, as soloists and teachers, of violinists resident in Paris, Marsick, Thibaud, Enesco, Geloso, D'Ambrosio, Rèmy, Bachmann, Capet, Hayot, etc., would certainly compare favorably with those of Berlin, Willy Hess, Flesch, Spiering, Serato, Marteau, Press, Barmas. Joachim, with a record of approximately fifty years of teaching, never turned out a violinist whom the world has considered great; whereas the violinists to whom the world, for the last quarter century, has paid tribute, Wieniawski, Sarasate, Sauret, Ysayc, Thomson, Hubay, and their disciples have all been molded IN PARIS.

The Frenchman is averse to advertising! Those haunts, where the most delicious tidbits or where the most exquisite treasures of antique art can be had for a mere twopence, must be ferreted out; likewise the abodes where the great men live and work must be sought with no less hunger.

The French take the attitude that true greatness is its own passport and needs no other recommendation; and the truth of this is so palpable that nowhere is talent more appreciated and encouraged.

ADVICE TO YOUNG COMPOSERS

BY ONE

Now that I have struggled upward a little towards the surface, where I can gasp and blink and look about me, I view my own flounderings, together with those of others just testing the water, much as a bather who has learned to float watches the antics of a "first-time-iner." When the first towering wave pounds him to the sand, will he retire in disgusted discouragement to a point of safety? Or will he scramble up and heave at the next one, until finally he flings himself triumphantly upon the water, and behold—he swims!

To my dying day I'll remember the first song that I wrote while studying harmony. I was living in Chicago, and my teacher was renowned for the development of talent in pupils, often where the student had not dreamed he possessed it.

At the close of a spring term he took me to one side and asked me very earnestly to write a song during the summer months. I chose Eugene Field's *Heigh-ho, my dearie,* and appeared in the fall armed proudly with the manuscript. I remember well the way my teacher's face lit up and the cherished words of praise he gave me. O wise! O foresighted! He did not mention that the accompaniment was fairly bursting with harmonies. (I had thought that I must use them all.) He did not suggest that the range of the voice was impossible. Instead, he made a kind little speech to the class, and had me play it for them. I suppose he realized how easily talent takes fright at the first word of censure; the next effort is postponed, and again postponed, until ambition is gone, and one is content to stop without having begun. The moment I got him alone I asked to which publisher he thought I should send it. Understand, *I* was selecting the *publisher.* If I could have seen the breakers rolling as far as eye could reach, I would not now be writing this article. Again, the one who had learned to swim,—and with what masterly strokes! —looked down upon me kindly. There was not even the suspicion of a smile on his face.

"Let us wait until you have written several things," he said; "a publisher will be much more apt to notice you if you submit three or four."

Although he and I have been staunch friends these several years, he does not yet know that I realize how skilfully he lifted me over those first waves. I was bitterly disappointed, but trusted in his judgment implicitly, and putting my song aside, plunged into the second year's work. And now since I have come this weary way, I often have pupils bringing me music, saying would I please give them a lesson on it at once, as they wished to get it to a publisher so that it would be out by a given time—which they put some six weeks ahead! And I also try to look down kindly, and not let my mouth quiver with—is it mirth?

I wrote more songs, and I sent them. The first time I saw that roll of music waiting for me in the mail box, I was ready to give up. I dared not look the postman in the face. I knew that he was pitying me, and that entire Chicago saw that music in his mail bag. I felt that my very dress design spelled "Rejected Manuscript." (Now, one of the first things I guard a pupil against is sensitiveness about returned manuscript.)

Finally a Chicago firm accepted one if I would stand the expense of publication, and in desperation I agreed. The song is even now one of my favorites, but they said it did not sell and I have never received five cents royalty from it. I wrote another song and a Chicago firm liked it so much they offered me five per cent royalty instead of the usual beginner's two and a half per cent. I thought now that my troubles were over; they had scarcely begun. Although I knew personally that many dozens of this song had been sold, the firm offered me no report. And when at the end of two years I wrote and demanded one, they said the sale had been very light and royalty reached only a dollar and ten cents. Also, they paid me at the rate of two and a half per cent royalty. As I had mislaid my contract I was forced to accept this sum, which is all I have ever received. Since then I have found the contract, which reads five per cent. Some day I will present this to the firm with my compliments.

I think at this time if it had not been for my teacher's continued encouragement, I would thankfully have ceased struggling. Spurred by his belief, I learned to fight, learned not to care when a manuscript returned—that was merely part of the game. I sent songs far and wide and they were returned. Even with a personal word to the editor from his firm's own representative, they returned. And no one said why. That was my cry always, if I could only know why!

At last some one said to me, "Why don't you send to ———. He is not afraid of beginners." And to him I sent. I have since learned that this publisher is respected and loved by all who deal with him, but at the time I sent blindly. To my astonishment, and almost to my undoing (kindness always breaks one), when the manuscript came back there came also a kind note. Would I write something simpler; my accompaniments were too difficult. I scrambled up and went at it again. I sent things to that firm for just one year before anything was accepted, trying first one style and then another; for soprano, for alto, for baritone, for bass. And one day, losing patience completely, I wrote a simple ballad, and also set a favorite hymn to music. The firm took both.

Here are a few rules taught me by bitter experience:

Be sure first that you find a good modern teacher.

When you are far enough advanced to try your strength, select some short, simple poem, and try to set it to music. If songs prove hard for you, try piano music, a gavotte, a minuet, or something in the more modern style. Try violin solos, vocal duets, quartets. Be sure to find in what you are the most at home.

Then, be simple. Try for good effects, even odd effects, but don't cram your music with harmony.

Do not make the range of the voice difficult One or two high notes on a simple word are very well, but a sustained passage "keeping the voice up" is impossible.

Write women's songs for women, and men's for men. A man with a big bass voice does not like to stand up and gurgle about spring and robins.

A good method is to commit to memory the verse you mean to use. The repetition of it will suggest a natural rhythm and diction.

You cannot take too much pains in making a neat, readable manuscript. The publishers literally have to wade through hundreds of copies a week, and if your work is illegible it will be tossed aside.

Send the manuscript by itself, and write the publisher a plain business letter, separately. He is quite capable of judging whether it is fitted to his needs.

And no matter how much talent you have, your entire success depends upon the spirit with which you start. It is either success or failure; there are no ifs. Don't test the water mincingly, ready for retreat at sight of the first breaker. Throw yourself in boldly, start forth with lusty strokes, and behold!—you swim.

THE PIANIST FATHERS

BY FRANCESCO BERGER

By a somewhat odd coincidence the names of th "Fathers" of the art of playing the piano all begi with the letter C: Czerny, Clementi, Cramer, Chopi We may call Bach "Grandfather," Mozart "Uncle

When I speak of the four founders of pianism, do not mean that they have exhausted all there wa to be done. No summary would be complete witl out naming J. S. and Philipp Emanuel Bach, Hayd Mozart, Beethoven, Schumann, Brahms, and Lisz But, speaking roughly, I mean that the further d velopment of piano playing which Schumann, Lisz and Brahms accomplished had been prepared f them by the four masters named. However exce lent much other music may be, we can afford, fro a purely technical point of view, to dispense wi much of it, if we carefully, patiently, and persis ently work at what these four bequeathed to us.

Take Czerny's "101," his *Études de la velocité,* h 40 *Daily exercises* (Op. 337), and his Op. 740; tal Clementi's *Gradus,* Cramer's *Studio per il pian forte,* and Chopin's preludes and études; add J. Bach's *Two and three-part inventions,* the *We tempered Clavichord,* and some Mozart, and y you will have enough material with which to bui up a sound technic, to be developed afterwards Schumann, Liszt, and Brahms. You may, for i stance, dispense with Handel, for you get his tec nicality in Bach; you can dispense with Haydn, f you get him in Mozart. Even Beethoven is, fro a purely mechanical side, not indispensable. Su pedagogues as Hummel, Bertini, Ludwig Berg Moscheles have all done good work, but their wo is not essential technically. With Stephen Hell the case is different. His terse rhythms, accen and phrasing are a good preparation for Schuma Mendelssohn, taken collectively, offers less to t student of piano technic than Schumann, but a f of his works, notably his *Six Preludes and Fugu* have a decided educational value. Weber, Hense and Rubinstein have contributed little that is tec nically new. But Brahms makes quite a specific d mand on the pianist, and his *Studies,* his *Paga Variations,* and his *Handel Variations* are unqu tionably highly important. Thalberg's *Three Studi* all in the key of A, are delightful and useful e amples of études in attractive form, but neith Raff, Grieg, Tchaïkovsky, nor Saint-Saëns can said to have advanced on their predecessors, or offer novelty to the student's technic.

Let those who commence working at Liszt warned not to expect too much "music," for, tru to say, some of his studies are, in a musical sen poor stuff. But, while only few can arrive at pla ing his advanced études as they should be play it is desirable that all should grapple with his di culties, which have in every instance the merit being brilliant and essentially pianistic.

Doubtless any experienced professor can c further examples of music written with the obj of overcoming some special difficulty; I could na Benjamin Godard and Moszkowski as admira contributors to the études of the day. But, wh all is said, I think most teachers will agree that t walls and joists of the pianist's edifice are the fo C's I have mentioned, the foundation being p pared by Bach, and the sunlight admitted by M zart.—*Monthly Musical Record.*

———*———

MacDOWELL ANECDOTES

BY LILY ALTHAUS SMITH

A PECULIAR charm always attaches to sketches relating to personal contact with master minds, with those who have achieved greatness in some field of endeavor. Proof of this are the numerous "Recollections" and "Memoirs" which appear in periodicals.

While the present sketch may hardly be considered a "Memoir," yet I believe it contains intimate glimpses from the teaching life of a great American, which perhaps are not entirely without interest.

It was the good fortune of the present writer to be among the first to enter the newly established Course of Music at Columbia University, in 1896, then under the leadership of Edward MacDowell. In the three happy years spent in these classes the one characteristic of the Master which stands out above all others is his never-failing courtesy and gentleness under even the most trying circumstances. Oversensitive himself, he became embarrassed and profuse in apologies if he thought that by some remark he had hurt anyone's feelings. I remember one particular instance:

A young lady had brought a composition of uncertain tonality, and in criticising it Mr. MacDowell said it reminded him of a hedge with a hole in it through which an animal was looking at you. At first, seeing only the jaws, you might say: "It is a dog"; then, as more appeared, "No. it is a fox," etc.

Suddenly it occurred to Mr. MacDowell that perhaps he had said something very unkind, and he at once tried to apologize, saying that of course he did not mean that the music made him think of dogs and foxes, appearing to be much disturbed at the thought that what he had said might be misunderstood.

Mr. MacDowell himself told us how very painful his public appearances were to him. He said that he could only bring himself to go on the stage by issuing to himself a series of commands somewhat after this manner: "Now go to these stairs, now put one foot up, now the other, now put your hand on the door-knob, now turn it, open the door, now enter"—all with the most painful deliberation.

Our class at Columbia gave periodic concerts, and, as may be imagined, we performed our beloved professor's work whenever possible. My instrument being the violin, I felt quite unhappy not to be able to play a MacDowell piece, for he had not written any for violin. One day I plucked up courage to ask him about this, but he answered very evasively that he "was not quite ready to write for the queen of instruments," or something to that effect.

In his writings Mr. MacDowell was nothing if not original, and detested anything that looked like "copying" someone. He told us that, intensely as he admired Wagner, he dared not permit himself to study him too closely for fear he might unconsciously pattern after him. Without wishing to be personal, I would like to illustrate from my own experience:

I was a great admirer of MacDowell's bass in some of his works, and determined to use similar deep bass chords. Alas, they were at once mercilessly denounced as "grumpy" and "impossible" (a favorite MacDowell expression). Again, I brought in triumph a sonata for violin and piano modeled painstakingly after a favorite one by Beethoven. It was silently handed back after one glance, too bad to even merit reproof.

In desperation I determined not to copy anyone, but to write just as I pleased. So next I brought in a love song. Mr. MacDowell looked in some surprise at the rather passionate words (I was quite young), but said at once that the music showed a decided and great improvement, and proceeded to carefully look it over and suggest changes.

Mr. MacDowell had a very vivid color conception in connection with his music, and tone-painting was very real to him. He often spoke to us of "high lights," of "background," "grays," and "neutral tints" in criticising a musical composition.

Each key had for him a very real individuality. For instance, the key of D major he termed "absolutely vulgar"; the key of C major, "noble and sublime"; the key of B major, "brilliant," and so forth. He told us that certain combinations of tones conveyed to him certain mental pictures; that, for instance, in depicting a moonlight scene he had, unbeknown to himself, used the identical means later in life that he had found himself, in looking over some youthful studies, to have made use of in his student days.

His characterization of orchestral instruments was most original, and gave them an unforgettable individuality, thus:

The bass drum is often used as an instrument of mystery; in picturing haunted woods or forests full of monstrously vague things, the faintest tap on the bass drum gives a marvelous effect.

Cymbals may produce fine effects in picturesque scenes, comparable to a visible shower of silver.

Tam-tam, quite terrifying and vulgar, used for effects of horror. Bass tuba, indicative of brutal strength.

Regarding cathedral chimes, Mr. MacDowell expressed himself emphatically; no respectable church should have them, their effect is indecent, reeling, and drunken. In response to a question as to whether a melody might be distributed among various instruments, he said the effect would be that of a poster picture man, with a red face outline and a green nose.

A sample of some work assigned us may prove interesting; for instance, set to music:

"In the valley of the Vire
Still is seen an ancient mill,
With its gables quaint and queer;
And beneath that window-sill,
On a stone, these words alone:
'Oliver Basselin lived here.'"

Again, write a male quartet in fugue form to these words:

"The moon hangs pale o'er Ora's steep,
And lists to hapless maiden sighing;
The sullen southwinds caverned sleep,
As loth to rave o'er maiden dying."

A word with regard to the personalities which constituted our class. It contained both regular University students and special students. No doubt many of the names are now well known, but I will speak of but two —one, a most particular and painstaking young man, who appeared many times on our programs, for he possessed a voice of great sweetness, though not of much power, and sang with exquisite taste. His name was Hugh Martin, now Ricardo Martin, the favorite of opera-goers.

The other was a somewhat dignified young man, of whom we stood in some awe, for his status in our class was not exactly clear to us. It was rumored that he was to become Prof. MacDowell's assistant, which he did, and afterward for some years also his successor. His name was Leonard McWhood.

Of Mr. MacDowell's winning personality and charm of manner, so much has been written I feel I can add but little. His memory is held in undying affection by all fortunate enough to have known him. For my own part, the memory of his unfailing courtesy and great patience with blunders which must have tried his very soul has helped me over many a weary place in my own teaching experience.

LOCAL TALENT

"He says his wife learned to sing in Paris."

"That may be. She certainly can't sing in Boston."

———*———

HOW THEY DO THE TANGO IN THE ARGENTINE

THE now world famous "Tango," that is so occupying our minds (and also our feet) at the present time, attained its first prominence in the Argentine Republic, and so, naturally enough, it is this country that leads the way in showing the world new methods of "doing the tango."

The photograph below shows the interior of a dining car on the Central Cordoba Railroad running between the city of Buenos Aires, Argentina, up the Parana River to Asuncion del Paraguay, a distance of about 675 miles. This car is unique in having installed a player-piano, with a young lady to operate it. During meal hours the diners are regaled with all the latest music of the day; after meals the tables are folded up and pushed to one side, and any who wish, limited in number only by the space, may dance the tango to their hearts' content. So expert are they in South America that the swaying of the train disturbs them not the least.

Through passenger service on the Central Cordoba Railway from Buenos Aires to Asuncion, was inaugurated on October 12 last, when this musical innovation was put into practice. So successful has it proved in making the journey pass pleasantly for the passengers that many other cars have been equipped in similar fashion. The idea is also favorably looked on by many of the owners of private cars, several of which are being fitted up this way.

Let us not smugly consider ourselves ahead of every other nation in this hemisphere in everything, for in doing the tango at least, Argentina "can dance all around us."

MUSIC IN THE DINING CAR

THE PLEASURES OF MUSIC TEACHING

BY CHARLES N. BOYD

Are these remarks for the young musician who has just finished the prescribed course of study at the Conservatory and, having achieved a public appearance at the expense of a Liszt rhapsody and annexed a diploma, now regards the teaching field with a superior eye? No, gentle reader, these remarks are not for such. They are rather directed to those who are growing gray or bald in the service, who have seen many students come and go, and whose class now includes grand-pupils as well as pupils. Such teachers have learned the difference between pride and pleasure in music teaching—let us hope, without delay, that they also possess both.

Every lesson brings its pleasure — in varying amounts, to be sure — and often with a gayly-figurated accompaniment of other factors which cannot exactly be classed under the head of pleasure: but these factors are a part of the game, and their final subjugation but adds to the pleasure of teaching. The child who is just making the acquaintance of such mysteries as notes, keys, wrists, rhythms, and signatures brings to every lesson the possibilities of as much or more pleasure as the advanced pupil whose music roll (and head) contains compositions by Beethoven or Chopin. That student whose progress is slow and rather difficult, whom you may sometimes regretfully compare with the quick-witted, volatile player or singer of the previous hour, may yet bring you the greater pleasure of the two. The first may never have the grace or lightness of the second, but solid columns are as necessary to the cathedral as lofty spires and elaborate carving. When, thanks to the application of the pupil and the patient guidance of the teacher, the once halting, uncertain player develops into the steady, reliable performer, is there not a real pleasure to be enjoyed?

The teaching material itself is a great source of pleasure, and one need not wait until the sixth grade to enjoy it. Consider the enormous number of simple compositions for piano, violin, or voice, which present delightful little melodies "in perfect form and fully grown," to recall the words of Haydn's *Creation*. Much better these than many a more ambitious composition. The Germans have a certain advantage over us in their possession of many familiar melodies which can easily be put in suitable elementary teaching form. By the way, the Musicians Library contains one of the most enjoyable books for any musician, Granville Bantock's *One Hundred Folk Songs from All Nations*. It is a veritable treasure-house, and one is bewildered to think of the many happy hours these songs have afforded, all over the world. To return to our mutton, good teaching material, from the very first grade, is interesting music, and the teacher who aims at more than mere performance of notes makes it a pleasure for both himself and the pupil from the very beginning.

Another happy angle of music is its close connection with literature, and this can be enjoyed without reading *Evelyn Innes, Sister Teresa,* or even *The First Violin*. (Perhaps for the violinists we should also add *The Kreutzer Sonata*.) Almost every page of Bulfinch's *Age of Fable* reminds one of some composer's inspiration, and brings one in closer touch with the musicians on one hand and the writers on the other. To be sure, we cannot always rely on the musical statements of literary folk—one of our best American writers has tried two or three times in the past ten years to get trombones into the first movement of Beethoven's *Fifth* symphony—but we can enjoy a literary and musical exposition of the same subject. Even the tunes for little people often have titles which the teacher will do well to understand and explain.

One of the great pleasures of the music teacher is attendance upon good concerts. Here one has a chance to sit back and enjoy the performance of great singers and players, choruses, or orchestras, without a particle of responsibility, and get a welcome relief from the eternal watchfulness of teaching. The pleasure and profit of the program are enhanced by previous acquaintance with the music, and often both teacher and pupils will profit by mutual preparation for intelligent listening. It is hard to imagine any member of an audience enjoying a good concert more than a hard-working music teacher.

If the music teacher thinks the material return for his work, the loaves and fishes so to speak, incommensurate with what it should be, several matters are to be considered Does the quality of the work warrant larger returns? Is the teaching so perfunctory that there is no pleasure in it? Has the business part of the work been properly attended to, or allowed to care for itself? Too much blame should not be attached to the locality before these questions can be satisfactorily answered.

All things considered, music teaching compares favorably with other professions, save that its freedom is sometimes a hindrance. Properly conducted, it provides as good a living as the teacher deserves; it can give the teacher an honorable standing in the community, and it can produce as much genuine pleasure, day in and day out, as the teacher is willing to find.

EXAMINATIONS FOR MUSIC TEACHERS

HISTORY QUESTIONS

The French society for the examination of teachers of music publishes the following list of questions upon which the coming examination will be based. Two questions will be put to each candidate, selected from the published list.

FOR A CERTIFICATE OF APTITUDE FOR TEACHING

1. Give the names of the principal French masters who have written for the piano. Speak particularly of one of them and tell what you know about his life and his works for the piano and other instruments.

2. Give a résumé of the life of Mendelssohn. What were his notable artistic relations? What was his influence in Germany? What are his principal works for piano solo, and with other instruments?

3. What do you know about J. S. Bach and his works?

4. To which epoch of Beethoven's life does his sonata Op. 90 belong? What are the great compositions of his which date from the same epoch?

5. How many mazurkas did Chopin compose? What is their style, their rhythm, and their harmonic characteristics?

6. Speak of Mozart's symphonies. Mention the one you know best and tell all you know about it.

FOR A TEACHER'S LICENSE

1. What do you know about the old Greek modes? Mention the principal ones, and give their construction.

2. Give a sketch of the life of Domenico Scarlatti. What is the usual form of his sonatas? What do they show, particularly from the harmonic point of view.

3. What was the contribution of Schumann to the literature of music for the piano? Give examples of the most typical novelties of his writing for the piano.

4. What are the differences in point of style and form between the first and last sonatas of Schubert?

5. Give a sketch of the life of Weber. What are his most important compositions outside of his works for the piano? To what art movement do they belong, and what was their influence upon later composers?

6. What was the rôle of Berlioz in France? What movement did he create? Which one of his works do you prefer, and tell what you know about it? What influence has it had upon later works?

FOR THE DOCTOR'S DEGREE

1. What is the origin of counterpoint? To what epoch does it go back? How has it been transformed?

2. Which great works for the piano make use of the fugue up to and including Beethoven?

3. What was Liszt's contribution to the literature and technic of the piano?

4. Make a parallel between the works for piano of César Franck, Camille Saint-Saëns, and Gabriel Fauré.

5. Give a sketch of the evolution of the piano and the influence of this evolution upon composition and technic.

6. What are the principal signs of embellishment and how are they to be interpreted?

MUSICAL CONSTRUCTION

Candidates for aptitude in teaching must explain orally: 1. The construction of one of the sonatas listed below. 2. The construction of a sonata, the text of which will be supplied to the candidate half an hour before the examination.

Bach: 1st English Suite (in A major).

Mozart: Sonata in A minor (No. 16 in Litolff Ed., No. 7, Peters Ed., or No. 8, Breitkopf and Härtel).

Beethoven: Sonata, Op. 79, in G major.

———*———

Scenes in the course of singing Schumann's famous song, *Ich grolle nicht*. No. 1, the artist makes his bow; No. 2, the signal for the accompanist to begin; No. 3, the first line; Nos. 4 and 5, other lines; No. 6, acknowledging the applause.

DON'T TRAMP

BY MARIE M. BENEDICT

Not long ago I chanced to hear one of the daintiest of the Chopin waltzes rendered by a person whose business it is to give piano lessons in one of our very large cities. There was much definiteness of notes and of time, there was clarity of execution; but there was hard, unmusical tone, and there was ponderous heaviness of movement.

In the accompaniment, in particular, each chord came down with a leaden weight, which suggested the tramp of a race of elephantine beings, rather than the witching lightness of the dance.

"When youth and pleasure meet
To chase the glowing hours with flying feet."

Of the fascinating rhythmic movement of the waltz, with its primary accent upon the first, and its secondary accent upon the third beat of each measure, of the pulsing rhythm, which draws the listener irresistibly into the mood of the dance, there was not a trace.

Neither had the player learned the artistic necessity of the subordination of accompaniment to theme. Continually the chords of the bass were claiming a prominence not their own; as who should say, "Here am I. Listen to me. Mine is no secondary place," and yet have naught but the secondary part to play.

Of that elasticity of movement of wrist and hand, which gives to accompanying chords the quality of staccato, which combines lightness and clearness without the slightest sacrifice of definite, though subordinate, individuality, there was no evidence.

I fell to wondering how many persons there are, in the length and breadth of the land, who are under the impression that this type of work is piano playing; who are teaching unnumbered children and youth to "tramp" over the keyboard in this thoroughly orderly, businesslike way to the utter destruction of the soul of the music.

Tone is the material with which the piano student must work; it is the medium through which he must express the thought of the composer whose works he essays to interpret, as color is the medium through which the student of painting essays to reproduce the work of a master. It is, therefore, evident that if the quality of the tone used by the piano student is hard, unmusical, unsympathetic, cold, it is not the medium through which the warmth and tenderness, the lightness and gaiety, or the intensity of tragedy, which the composer has given to his tone-poem, may be interpreted to the listener. The first and the continuously great essential to the student of the piano is the ability to produce the tone of beautiful quality, and of increasingly wide variety of effect.

But there have not been wanting those who assert that the quality of tone produced by the vibration of the piano string is the same, whether the attack, which sends the hammer against the "singing metal," comes from a hand and arm in which the muscles are stiff and unyielding, or elastic and responsive. That the multifarious degrees of *crescendo* and of *diminuendo* represent the limits of tonal variations possible to the pianoforte. To those who, having ears, hear the absurdity of such an assertion is immediately patent to those who, having ears, do not hear, in any true sense, it was left for Raif, the well-known German specialist in tone production, to prove, by use of a clever, mechanical device, that the sound waves produced by wrong use of the muscles of hand and arm in depressing the keys of the piano, are, in shape, distinctly different from the sound waves produced by the piano string set in vibration by right use of muscles of hand and arm in depressing the keys. In other words, by bad and good piano touch.

In this device of Prof. Raif, a needle was attached to the piano string in such fashion that, with the sounding of the tone, the needle point must trace upon the surface of a piece of smoked glass or paper the series of movements corresponding to the string's vibration. Angular sound waves, that is, those in which the climax of movement was marked by a point or angle, were the result of muscles wrongly used. Sound waves which, though the movement might reach considerable height, were always marked by the curve, the "line of beauty," were the result of the piano touch with muscles rightly used.

Music being, very evidently, an art for the ear, one which makes its appeal through the ear and not through the eye, it seems a bit absurd that such visible proof of tonal effect should be needed to convince the unknowing and, let us hope, forever to settle the matter.

If you are a piano student, seek nothing short of the best instruction, that you may make your own the ability to produce tone of exquisite quality and of infinite variety. Remember that the straight pressure, the wiping-off touch, the different forms of staccato, the wrist legato in octaves, chords, and single note melody, the treatment of themes in chords or double notes, each has its distinctive effect; that the condition and use of the hand and arm muscles have all to do with the quality of tone produced; and that only one who knows can guide you aright.

If you are teacher as well as student (for no true teacher ever ceases to be a learner) see to it that you are cognizant of all that is best in your field of work; that you have the authority of those who stand at the head of your profession; if not from their personal tuition, then from that of their pupils.

If you have aught to do with the piano, never forget that accompaniment and theme are always and forever distinctly differentiated in tonal quality. That the theme, wherever placed, whether in bass or in treble, in single tones, upper chord tones, lower or mid-chord tones, is always and forever the solo, of which the accompaniment forms the harmonic background, and to which, as the background, it is continually subordinated.

Above all, never allow the chords of the accompaniment to "tramp" their way ruthlessly through the composition, irreparably crushing whatever of beauty may lie in their path. In all such chords, place the fingers upon the piano keys which may be used, then, by the impulse from the source of power in the upper arm, simultaneously sound the strings and give to the wrist that elastic, upward spring which assures fine tonal quality, and through which may be produced any gradation of quantity that the player may desire. This is the touch through which may be attained that dainty chord-staccato so absolutely essential to the accompaniment in thousands of compositions, without the slightest sacrifice of any chord's individuality. It is the touch which gives to each note and chord of the accompaniment its indispensable share in the beauty of the composition; but which never allows any chord or series of chords of the accompaniment to "tramp" through the measures, thereby obscuring the charm of the theme's true solo effect, and hopelessly marring the artistic message of the composer.

There is a definite law of proportion which must be observed in rendition of any and every composition for the piano only, just as truly as there is a definite law of proportion which governs the performance of compositions for violin and piano, voice and piano, 'cello and piano, or any other combination of solo accompaniment.

BRAHMS AND THE BEGGAR

COLORED HEARING

BY LAURA REMICK COPP

Seeing color, when music is heard, is an unusual phenomenon that some musicians experience and also some persons who are not musically inclined. It is a peculiar combination of the two senses, seeing and hearing, known to psychologists as chromesthesia or colored hearing. Calling upon one sense seems to arouse another, so that when a note is struck some color is seen, as a result of having heard the note, and the same color is seen when that same note is struck again. Of course, not all persons experiencing this phenomenon will see the same colors.

One case of a girl of twenty-three is cited by a Harvard professor. To her C was red; D♭, purple; D, violet; E♭, soft blue; E, golden yellow; F, pink; F♯, green blue; G♭, greener blue; G, clear blue; A, cold yellow; B♭, orange; B, very brilliant, coppery tone. A few years later the same experiment was tried again with a few differences. As a result, D♭ was lavender; E♭, thick blue; F♯, blue green. Objects became associated with some of the colors, such as F, apple blossoms (pink); G, sky (clear blue); E, sunlight, instead of merely the color, golden yellow, as formerly.

The same tone usually produces the same color in all parts of the scale, but changed, as to luminosity, being bright in the higher octaves and dark in lower ones. When two notes are struck together usually the complementary color is seen. With the girl already mentioned, C (red) and F♯ (green) gave, when struck, a very indefinite light verging on gray, the complementary color; G (blue) and A (yellow) produced a misty, hazy color. In all triads the color of the fundamental note prevails. If C-E-G were struck, the color of the predominating tone, C, would be seen. In dissonances the colors are paler, as if veiled. In altered chords no one color predominates. There is no fusion, different colors flashing up more or less together.

In hearing a whole composition one would experience a fleeting panorama of color, as an accompaniment to the music. The American pianist, Augusta Cottlow, has colored hearing to quite a marked degree. It would be interesting to know if the English composer who wanted his tone poem played in a hall lighted by violet-tinted rays and suffused with the perfume of violets possessed this peculiar combination of the senses. No less a musician than Granville Bantock says the following color effects, if used in lighting an auditorium, will afford a wider appeal to the senses: Green lights, to suggest the hues of early spring; dim, misty gray lights, to suggest the eternal void; white lights, changing to rosy pink, to suggest the purity and innocence of love; red lights, to suggest the spirit of defiance and revolt.

LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

TEACHING BOYS

A GROUP of busy men were discussing the Idle Hour. Because they were *busy* men they were fully alive to the possibilities and the importance of the Idle Hour. To a man who had not yet spoken one said, "And how do *you* spend your spare moments?" "Cursing the teacher who made me hate music when I was a boy," was the reply. So, you see, one never can tell.

Let us hope that the old teachers, whether now in this world or elsewhere, may never know of the anathema that follows them. While we all know that if the teachers of the past generation made their boy pupils hate music—some of them did it quite unwittingly, and in fullest belief that they were doing their whole duty by them—can we not also see that there were mistakes made, mistakes which, although they were not by any means confined to music teachers alone, are, nevertheless, to be avoided?

Oliver Wendell Holmes said that it had taken a whole century to remove the lark from American literature, because the American poets insisted in writing, not about the birds that they knew, saw, and heard, but about the birds they had *read* of in the writings of other poets. So it has been with the music teachers of the past. They have persisted in teaching boys whom they have read about or heard about or theorized about, instead of the real BOY who had come to them for lessons.

The Beginning Teacher who succeeds in making boys love and enjoy music will not have lived in vain, but she must deal with boys at first hand, and be satisfied to work on without anything to speak of in the way of present results.

KINDS OF BOYS

In the first place, it is as well for the Beginning Teacher to begin work with the thesis, "No boy studies music willingly." This has nothing whatever to do with a boy's liking or disliking music.

Some boys like music and will admit that they do.

Some boys like music, but would not admit it for the world.

Some boys do not like music, and are disconcertingly frank about it.

Some boys do not like music, but, because they are natural-born sycophants, will pretend to their teacher (especially if she be young and pretty) that they *do*.

But I never heard any boy say that he liked to practise. There *may* be boys who like to practise; I have never met them.

Now perhaps you have read a great deal about boys and have known a good few. Here are some of the *actual* boys who will come into your studio for lessons:

There will be the priggish boy, who almost invariably "takes lessons," and will most probably get on your nerves.

There will be the sentimental boy, who has the most ridiculous, absurd notions about music "and things," and who will add to your disgust for puppy-love. (It is amazing how young some of them actually begin.)

There will be the "hard" boy, as his mates call him, who will be at once a joy and an exasperation to you.

There will be the bad boy, who will make your work just as difficult as possible, and try your mettle.

And there will be the nice boy, who does exist, even in music studios, and who makes up for all the rest.

But it is foolish to try to discover the "traces of nobility" and the "splendid qualities" which some teachers are forever trying to dig up out of a boy's character. They are there, more often than not, but be sure that they are deeply hidden, any outward evidences of them causing a boy to be regarded by his fellows as "soft," and the teacher that is guilty of making a boy betray "softness" of whatever kind makes that boy her enemy forever.

Never try to make a boy admit that anything either you or he may play is "beautiful." He may be fully cognizant of the beauty in music, may feel it through all his vital young being, but just because music moves him in this new and strange way, it is, to him, something to be ashamed of, and it is, from his point of view, a violating of his privacy for a teacher to make him talk about it. It is something to be let alone. So leave the boy to his sensations. Give to him of all that you are capable of the truth and the beauty of music, but do not demand response from him. Not only that, but permit him even to cover his boy's reserve with jeers and pretended indifference. One must take a great deal on faith with boys. The general unsatisfactoriness of the Boy is the most natural thing in the world, and is to be respected; otherwise you are apt to waken disgust and even the hatred for music of the man in the opening paragraph.

WHEN MEN TEACH BOYS

In the past parents have thought that men were the best teachers for boys. This might be true but for one thing, which may be both disputed and denied, but remains a fact to be faced, namely, that men, as a rule, do *not* like boys. For sons men have a great and wonderful love, but for boys as *boys,* young hobbledehoys between ten and seventeen, men for the most part feel rather an aversion which is not conducive to that sympathy and understanding necessary between teacher and pupil, and some men are honest enough to admit that this is true.

So then, when a brother and sister go to a man teacher for lessons, almost invariably the little girl will get on famously, while the boy gets nowhere at all.

"What wonder," protested a boy, stung at last to retort. "All the time Dorothy is having her lesson he sits right up and teaches her, but when I am having *my* lesson he sharpens pencils and writes letters and does all sorts of things!"

This has been true of many Dorothys and their brothers ever since music teaching began! Then this strange combination of absurd and illogical contradictions that we call BOY grows into manhood, lives and learns and suffers, and—then he feels the need of music, of this medium for self-expression; he wants music for the Idle Hour, for that hour which makes possible, and bearable, all the busy hours—and he hasn't got it! So he curses the teacher who made him hate music as a boy.

Let others say that the fault was not the music teacher's. Let us admit that much ignorance has been displayed in the teaching of music. "The perception of ignorance is the summit of knowledge," and we will not get very far in the teaching of the Boy until we admit that, after all, we know nothing about him and are simply and humbly to study and to learn; until we admit that nothing is to be taken for granted about him, and that no knowledge counts for much except that first-hand knowledge which is gained by actually teaching the Boy.

Be willing to present the truths of music to him whether he appears to be willing to *listen* or not. Be ready to do your work just as thoroughly as though you had a polite and interested listener. Suppose he does not care a rap for music; go on revealing the beauty of it just as persistently, against all his callousness and indifference. He *is* listening and learning despite himself, but don't suppose he is going to give you the satisfaction of believing that "you can teach *him* anything." But if he does not get the knowledge of music *now* he never will get it; so go on generously, giving him of the best you have, and the more difficult he makes it for you, the more enthusiastic do you become. He will admire you for it, though he will not let you see that he does for the world (if he is the "right sort"). And, during the very moments he is exasperating you the most, he is quite likely receiving from you that for which he will *bless* you in the hard years to come.

What boy grown to a man could bless a teacher who had sharpened pencils during his lesson, or yawned through his mistakes, or got excited and disgusted, or sarcastic and sharp? It takes strength indeed not to do any of these things, but that is what people have a right to expect of those of us who call ourselves "teachers." We are human enough to feel the desire to throw the boy and his music out of the window, but we must be strong enough to inhibit the impulse and work for the future against present discouragements.

Always remember that the chances are the boy will be a *man* some day, and will hold you responsible for the hours of his life he has spent with you. "Banish the lark," and deal with the actual boys that you *know*, or, rather, are trying to know. I think that we teachers in the past have talked too much about "molding character" and that sort of thing. Better for us to keep right down to our own work of *teaching*, never interfere, and to do that most difficult of all things—set an example.

ANECDOTES OF ROSENTHAL

MORIZ ROSENTHAL, the famous piano virtuoso, is feared by his colleagues not merely as a competitor but also on account of his biting tongue. The following anecdotes show the latter side of the artist:

On one occasion he compared two well-known pianists, saying, "The one exhausts the content of the piece, the other, the public."

A musician once remarked to Rosenthal, referring to Joachim's *Hamlet* overture, that he could not find any justification for the title since the music presented nothing in the way of a striking subject. "On the contrary," said Rosenthal, "regarding this subject, I ask myself *'Sein oder nicht sein?'"* A play upon the German words which may be translated in two ways, "To be or not to be?" referring to the play, or "His or not his?" as to originality.

Rosenthal was present at a concert during which a certain pianist played the *Minute* waltz of Chopin (the one in D♭ major) in the arrangement in thirds made by Rosenthal. The latter congratulated his colleague, saying, "This *Minute* waltz was the pleasantest quarter hour of my life."

Another concert pianist once said to Rosenthal, "Tell me, why it is that in my case hardly anyone comes, while all the seats are always taken when you appear?"

Rosenthal replied, "Don't worry yourself; in your case all the *tempi* are taken."

A pianist who, in Rosenthal's opinion, played very tediously, gave a concert in a small city. In the foyer of the concert hall Rosenthal accidentally met a friend. Suddenly a gentleman passed hurriedly by and darted into the foyer, followed by an attendant of the concert hall. "Evidently the fellow had no ticket," said Rosenthal's friend. "No," responded the artist, "he was snoring and the audience complained because he disturbed their slumber."

An artist, whose repertoire was very polished, but also very small, was asked by a lady, after one of his concerts, to write something in her album. "Only a line, dear master, but something very characteristic for you," she said. Turning to Rosenthal, who stood near by, the artist said, reflectively, "What can one write characteristic in a line?" "Perhaps your repertoire," said Rosenthal.

LEGATO IN PIANO PLAYING

BY J. W. BLEECKER

PERHAPS one of the rarest qualities in a pianist is a smooth, flowing, distinct legato. The reason may be found in the extremely complicated nature of the mechanism required in its production. The difficulty of teaching a good legato has led the present writer to investigate the problem in its mechanical aspect. The old, time-worn rule that the keys should pass each other midway does not seem to bring the desired results. A little study proved that this rule is far from the truth. The results of the investigation are not given with the hope that the student may obtain a good legato by following any rules deduced from them, but rather, that the student, being conscious of the mechanical requirements, may be free to listen attentively. It is also believed that the following ideas will show more clearly the need of depending altogether on the ear:

Let us examine the old rule that in legato the keys should pass each other midway. This rule is evidently built on the supposition that the damper of one key will act at exactly the same instant that the hammer of another reaches its string. If one always played with the same amount of force this could be true (provided the exact amount of force was determined, which would make the hammer arrive at the desired instant). In this case the speed of both damper and hammer would be constant. In actual playing, however, the speed of the damper is constant and the speed of the hammer is varying. In a *pianissimo* the hammer moves its slowest, and in a *fortissimo* its fastest.

To make it clearer, let us suppose that at *mezzo forte* we obtain a perfect legato by observing the rule already mentioned. Increase the dynamic one degree and the hammer will move to its string faster, but the damper will fall with the same speed as formerly, and, being released at the same instant also, it will reach its string too late, thus making a slight blur. The correction would be to release sooner in a *forte,* which will bring the passing point of the two keys nearer the top of the keys. The contrary case would be to play softer, for instance, *piano.* The hammer now moves more slowly and, as usual, the damper falls with its constant speed. If it is permitted to fall according to the old rule, it is evident that it will arrive too soon. In this case the legato will become a non-legato. The cure is to release the key later, thus making the passing point lower, nearer the bottom of the keys.

A good mechanical conception, then, of legato will be as follows: At a certain dynamic (which can be determined only by careful listening) the keys will produce a good legato when they pass each other midway. In a passage played with more force, the point at which the keys pass will have to be nearer the top of the keys; in softer passages, nearer the bottom.

In acquiring a good legato, the student must depend upon his ear, but it will do not harm to be conscious of what is necessary mechanically. Because, in actual playing, the point at which the keys will have to pass to produce a good legato will be constantly varying, it is best to practise first at one degree of power only. The present writer favors a *mezzo forte* to begin with. When some progress has been made with this, change to a *piano* and then to *forte.* Later, attempt the extremes, and last of all the *crescendo* and *decrescendo.*

The foregoing explanations have not been made to show the student how he may obtain a legato by mechanical means (which is impossible), but to free him from false conceptions. The one rule is LISTEN.

NOTES ON THE MUSIC IN THIS ISSUE

VACATIONS are the order of the month just now. The whole country has been turned into a vast playground for the people. Seashore resorts, mountain hotels, farms, and the wilds of the woods are filled with the dwellers from cities and towns. And everywhere that the people go music is with them, for who of us can imagine the amusement hours without some form of music?

With this great recreation activity, however, we can find traces of serious musical work. Study has not been entirely discontinued, here and there teachers still put in appearance at their studios, and look after the musical needs of their young charges. Such teachers will find the present issue of THE MUSICIAN full of easy, tuneful pieces for young pupils.

The wayside spring, Op. 79, by Frederick A. Williams, is one of those fine and very useful combinations of musical interest and technical stimulus which are known as "teaching pieces." The central idea here is to improve the pupil's playing of broken chords, the upper note of each chord usually being a melody note. This piece offers splendid drill for the fingers, the question of speed being regulated by the pupil's ability. At a metronome speed of 66 quarter notes to the minute, we would have 132 eighth notes in the same period. And since the movement is in triplets (three sixteenths) to each half beat, we have 396 notes to the minute, a fair rate of speed. When the pupil has mastered the piece at the above tempo add several degrees, say to 144 eighth notes to the minute, and then to 160. Indicate the melody running through the various chords by a slight pressure, avoiding sharp accents unless called for by the necessity for clearness.

Woodland chimes, by H. Wakefield Smith, is well-suited to the season of the year, the gavotte rhythm being indicative of the light, gay mood of open air life and recreation, the chime passage suggestive of a chapel or church in the woods, or the spirit of worship which springs up in the heart that is in close touch with Nature in her summer moods. Watch the staccato in the opening theme. In playing the "chimes" be sure that both hands press the chords together; the "choppy" effect of the hands out of unison will make the passage ludicrous. Notice the direction *una corda* as well as *Ped.* This means that both pedals are to be used. In the middle section in F minor play the melody for the left hand with a broad, legato effect, keeping the repeated chords for the right hand rather subordinate; press the keys rather than strike them.

Valse des poupées (which may be translated Waltz of the dolls or puppets), Op. 92, No. 1, by R. de Aceves, is a fascinating little dance, easy and melodious, which should interest and please young pupils, who can use it in recitals or for home playing. The opening theme, in which the left hand doubles the melody an octave lower, will rivet the attention of the listener at once. The D major section is to be played with a lighter, more graceful touch than the first; the fingers must act fluently and easily, as if the weight were mere feathers. This little waltz will surely attract the friends of our young readers who may play it for company.

The lark's song (Lerchenjubel. Le chant d'alouette), Op. 101, by Gustav Bendel, is a fine example of the brilliant drawing room piece. It is a good number to give to pupils because of the fact that when played at the metronome speed indicated or a little faster the effect is so brilliant as to suggest a grade of difficulty beyond what it really is. The opening theme, marked staccato, is to be played with the fingers, the arm being held free and vibrating, as it were, with the movement; the player, however, must be careful not to stroke from wrist or arm. The little episode in Ab major is to be given with a bolder style. The middle section, in Bb, represents the "lark's song," and must be played very lightly. Note that the same fingers are used to play the little short trill figure. Try to imitate the bird song.

Song without words (Chant sans paroles), Op. 3, No. 1, by Heinrich Pachulski, is the work of a Russian composer. It is a fine study in the expressive rendering of a melody, which is always to be clearly delineated. In the middle section note the imitations between the two hands. This is a good piece for the quiet hour.

Joys of youth, by Louis Retter, is intended for the young players. It is an easy, melodious waltz, which ought to be learned readily, one that fathers and mothers will be delighted to hear the children play. Put it on your next pupils' recital program.

The Jester, by Charles Huerter, is for the older pupils, those whose technic is somewhat advanced. It requires a light, playful style of execution to deliver the short rhythmic figures properly. The most exacting work will be found in the middle part. The double note chords in the twenty-fifth measure may be slightly simplified by dropping the lower notes.

The little gipsy, Op. 31, No. 1, by Emil Rhode, is in triple measure, but not ordinary waltz rhythm; it is more on the style of the *caprice* or *valse caprice,* and requires agile fingers to give the best effect. It is tuneful and sure to please the little players.

A jolly jig, by Percy E. Fletcher, is one of a set of little pieces in dance rhythms. The movement is near that of a two-step, but, perhaps, with a little heavier emphasis, the step in the jig not having the lightness of many other dances. This and the following number may be played together.

A merry hornpipe, by Percy E. Fletcher, suggests the old-time sailor enjoying his favorite recreation dance. Nimble fingers and the dance feeling will go far toward making this a pleasing number to play for your young friends and the older ones as well.

Humoreske, Op. 101, No. 7, by Anton Dvorák, is a four hand arrangement of one of the most popular of the pieces of the day, that is, one in the standard repertoire. This favorite melody is an almost perfect example of the attractive qualities of what many persons call "classical" music. Once they have heard it enough to know it fairly well, they will want to hear it again and again.

O Lord, Thou hast searched me out (From *The Woman of Samaria*), by W. Sterndale Bennett, is a beautiful aria for the contralto, baritone, or bass voice from one of the standard oratorios, and a fine type of a truly churchly song. Add it to your repertoire. Soprano edition in Ab.

Since we parted, song, by Charles Fonteyn Manney, calls for careful study on the part of singers, but it is worth all the time and study they may give to it. In style it is an example of what is commonly called "the art-song." It is quite free, from the point of view of harmony, with a piano part that is more than mere accompaniment. When sung by a good singer, well supported by the pianist, it will prove a strong number. Also for medium voice in B.

To you, by William Dichmont, is a short song of the pure lyric type in which beauty of tone and clear diction are demanded. Do not rush the tempo. Give the voice opportunity to create sustained tone effects. Also published in F, for high voice.

I love thee (Ich liebe dich), Op. 5, No. 3, by Edvard Grieg, is one of the most appreciated songs of this composer. It was written for and sung by Mme. Grieg in their joint concerts, and always well received. Not too fast in tempo. For low voice in Bb.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

THE SUBJECT OF STANDARDIZATION

PROMINENT on the programs of the various state music teachers this spring and summer has been the discussion of the desirability, the necessity even, of fixing a standard of attainment to which those who may wish to teach music should conform. In some cases the aim has been to secure voluntary acceptance of the standard, but in others the feeling of the members has been that the state owes it to the public to require examination and registration as a protection both to the public and to the musical profession.

Thus has come about the appointment of committees to prepare reports and to draft bills to be submitted to state legislatures requiring certificates from a state examining board similar to the rules now in force to regulate professional practice of physicians and lawyers. In fact these two professions have been held up as models of what should be the rule in the profession of music teaching as well. To the present writer this idea is an erroneous one. The great concern of society is that life and property shall be adequately protected, and that advice, treatment and other professional services on the part of physicians and lawyers shall be safe and authoritative. Hence the state exercises the right to prescribe a standard of attainment for the man or woman who wishes to practise in either of the two professions named.

But music is not an essential of life or property rights, speaking broadly, and the public can get along without it in their homes as many persons do. It is a purely voluntary act on the part of parents to engage a teacher of music for their children. Music is a subject which has but scant recognition on the school program, and is therefore outside the pale of the activity of the state authorities of education. Other reasons could be assigned why, in the opinion of the writer of this note, any attempt to fix a standard by state legislative enactment is unwise and untimely, particularly the latter. Nothing could be more disastrous to the true interests of the music teachers of any state than for the authorities of that state to say that no man or woman may teach music in any school or as a private practitioner without successfully passing an examination in the subject. The result would be a deadening of the true art spirit and much of the enthusiasm with which teachers enter the profession and carry on their work, a spirit and enthusiasm which have been the great forces in reaching the stage of development in music which is noticeable in all parts of the country. We believe that whatever action is taken must be based on voluntary and not enforced acceptance of a standard of attainment.

Some persons say that to fix a standard is desirable, and, if accepted, will improve conditions. But how will you get teachers to accept it? is the query.

What is one of the strongest forces in securing action from men and women? Self-interest. This may be based on various influences. To make it effective in the present case will require the co-operation of the best, most prominent and earnest members of the profession. By way of example let us suppose that in a certain town of 10,000 to 15,000 population there are twenty teachers who are qualified for their duties, able to pass the tests prescribed by the State Music Teachers' Association. Further, suppose that out of the twenty, three or four have taken examinations and have received a certificate to that effect from the Association. This is a legitimate news item for the local papers, and will give good publicity to the holders of certificates. Besides this the teachers can frame and exhibit the certificates in their studios. They should also take occasion as it is presented to speak of the endorsement which this certificate gives to their work as teachers.

The net result will be that in the course of time the other teachers of the community, or at least the majority of them, will find it advisable to provide themselves with the certificates of the Association, thus placing themselves on a level with their professional brethren and sisters. The public will feel that their interests are properly safeguarded, and will be apt to patronize teachers who have certificates. The moral force will be sufficient.

In this connection far too little thought has been given to the bearing upon this question which is to be found in the growing demand for credit in school courses for music work done under the direction of the private teacher. Recognition is being accorded to this demand, not in one but in several states, not in a few but in a number of cities. There are difficulties in the way, but the solution of the problem will be comparatively easy once school authorities have sufficient guarantee of the efficiency of the teacher who applies for credit for work done in his studio.

Here is where the certificate of a State Association of Music Teachers will have big value. The teacher can offer this certificate to the local school authorities as the guarantee that he has the knowledge and skill properly to educate his pupils in music, thus meeting a requirement of prime importance; for the public school teacher must also pass a prescribed test before securing a position, and being allowed to teach. The natural course of procedure will be for the superintendent of schools to say to the music teachers of the city: "If you wish to have recognition from this department you must show us a diploma from a school of recognized standing or from the State Association of Music Teachers." A very effective argument for the standardization movement, is it not?

This leads us to present to our readers two questions as being of the utmost importance to every teacher of music, namely, the adoption of a standard of essentials for teaching, and securing for the standard recognition from local school authorities, so that the music teacher's work may continue during the years of adolescence instead of being crowded out by press of regular school work—and thus knit into the educational fabric of our social and cultural life.

At the last meeting of the New York State Music Teachers' Association, Mr. John C. Freund, editor of *Musical America*, offered a most valuable suggestion looking toward the elimination of frauds, charlatans, and fakes from the teaching profession, which he considers the first move to make. His proposition is to have a bill introduced in the state legislature requiring that all persons who desire to teach music shall register. The application for registration shall indicate in which institution or under which teachers (private) the candidate studied, which subjects and for how long a period. These statements must be sworn to, and false statements shall be punishable by fine or imprisonment or both. Anyone shall have the right to examine the statements on file; and every registered teacher shall display in a prominent place in his studio a copy of the application for registration.

It is easy to see that under this plan the pseudo teacher with fraudulent claims to have studied with some great teacher will be driven from the state to the great good of the profession.

This suggestion of Mr. Freund is worth the careful consideration of the officers of every state association. It is extremely doubtful if any legislature will enact a law calling for the examination and certification of teachers of music. On the contrary, it is reasonable to believe that any legislature will adopt measures to protect the people and the members of the profession from abuse and from fraud and pretense such as now obtain. THE MUSICIAN heartily endorses this proposition of Mr. Freund as one of the most practical that has been offered.

The SINGER and His ART

THE POSITION OF THE MOUTH IN SINGING

BY D. A. CLIPPINGER

THE singer is confronted with a number of conditions and difficulties which do not enter into any other form of musical activity. First, he must form the pitch of his instrument as he uses it. The voice being an instrument of melody he can form but one pitch at a time and this must be done at the instant it is required. In all keyed instruments the scale is formed by the manufacturer. In the voice nature has formed the scale only potentially. It is there as a possibility, but each pitch must be created as it is used, and the instant it stops it ceases to exist.

Second, the quality of the instrument must be formed at the instant the pitch is created. In all other instruments the quality is established by the maker. The performer is responsible to a certain degree for the quality of the instrument upon which he plays, but his responsibility is altogether unlike that laid upon the singer.

Further, the voice is an instrument of speech, of language. With it the singer is expected not only to awaken feelings and create moods, but to express definite ideas as well, an exaction which is made of no other instrument.

Again, in the playing of all other instruments the hands are used. This is denied to the singer. He is expected to cover the entire range of feeling and intellect, and at the same time form pitch, quality, vowels, and consonants; and all this without even the laying on of hands. In view of this, can there be any doubt as to whether the process is psychologic or physiologic? There is none whatever in the mind of the present writer.

If we admit that the vocal organ is controlled and directed by the mind, it follows of necessity that in order to produce right results the organ must be rightly directed. What does this mean? It means that to be rightly directed for purposes of singing it must be directed by the right idea of pitch, the right idea of quality, the right idea of volume, the right idea of consonant, the right idea of rhythm, the right idea of melody, the right idea of legato, of sostenuto, of contrast, or proportion, of climax, of feeling.

Good singing is the expression of these right ideas. Bad singing is the expression of wrong ideas. The process of training singers is that of developing right ideas of music, voice, and expression.

In the beginning the student's ideas are unformed, indefinite, probably all wrong. Bad taste is nothing more nor less than having wrong ideas. Musical taste is not physiologic, neither is the process of acquiring it. At this point some go wrong. Following is the reason:

The student's idea of vowel, let us say, is wrong. To this class of teachers the most tangible thing is the organ which produces the vowel, hence they begin to work with that. They show the pupil how to hold the mouth, hoping thereby to develop the right idea of vowel. The same plan is applied to tone quality, and from this come all the rules for holding the mouth, the tongue, soft palate, larynx, etc., which are of doubtful value.

This attempt at direct control of the mechanism puts the thought of the student exactly where it should not be, namely, on the throat. It develops tension, the thing he most needs to be rid of. It induces self-consciousness, the singer's arch enemy, and produces a stilted, mechanical style of singing. It approaches the subject from the wrong direction.

If we work from the principle of indirect control, we shall avoid all of this. Indirect control means the automatic response of the mechanism to the idea. The most important thing in training the singer is to help him to form the right idea of pitch, quality, vowel, and all other things which enter into good singing. When this is done and the organ is made free from all resistance, there will be no further trouble. The mouth will respond unconsciously to the thought of quality and vowel in exactly the same way that the vocal cords respond to the thought of pitch. The suggestions necessary to perfect vowels and quality will be few and easily complied with. It is only when the idea is indefinite that it seems necessary to resort to mechanical means.

It is impossible to say how wide the opening of the mouth shall be in forming any vowel, for it is not and cannot be the same in all cases. The mouth cavity and pharynx are never exactly the same in any two people. The lower jaw is sometimes deep, sometimes shallow.

Some persons have a very high palatal arch, others a very shallow one. In some the pharynx is broad, in others it is narrow. These are conditions to be reckoned with in voice training. If twenty of these people were made to open the mouth a half inch the vowel color would by no means be the same in all.

If we insist on perfect freedom of the vocal mechanism, perfect breath control, and perfect tone concept, we shall have no further trouble about how the mouth shall be held, for it will unconsciously assume the form which corresponds to the tone concept or idea. When the mechanism is free there will be no exaggerations, mannerisms, or facial contortions. The features will be in a state of repose that they may respond instantly to the thought, feeling, and imagination of the singer. The tone is the thing, and if the idea or concept is definite it will form the mold with little or no further suggestion from the teacher. Let us not make difficult and uncertain that which should be easy and natural, and which is so when approached in the right way.

THE MOUTH IN SINGING

BY GEORGE CHADWICK STOCK

REGARDING the opening of the mouth in vocalizing and in singing words, one cannot lay down any hard and fast rules.

For example, some writers advise a thumb's breadth opening between the teeth, others say from a quarter to one inch. But I believe that all well-balanced thinkers who suggest these things do not really wish to be taken as meaning that the opening of the mouth is to be a fixed distance apart during vocalizing or singing of words, except as the exact opening influences the uniformity of the vowel or the color of the tone.

It must be remembered that different vowels, such as ā, ä, ō, ē, ĕ, etc., call for different openings of the mouth suitable to the form of each vowel that is being uttered.

I have always found it wise, in this matter, to follow natural habits, or the way that one naturally opens the mouth or lips in pronouncing, for instance, an ä, ō, or ē. My advice to a student is to hear clearly, mentally, the vowel, for example ē, as in thee; this is the only conscious action necessary before uttering the vowel. Notice that in following out this idea the mouth, lips, tongue, and interior of the mouth unconsciously move or form into a correct position for the vowel called for. By no conscious direct influence could this rightly be done. All parts are guided in their movements by the habits of a lifetime.

Bear in mind that these various adjustments of mouth, lips, tongue, etc., which take so much time to describe, are but the operations of an instant.

For the proper and correct activity of these members of the vocal apparatus, mental direction or suggestion is alone necessary. It makes no difference what vowels or what modifications of them are to be used; simply hear them mentally and then, guided by this sense, the entire articulatory mechanism becomes perfect in form and mobile in action in answer to the call made upon it.

I take my views from the point of view of the English language only. A foreigner has different habits, due to accent, timbre, national traits, and characteristics of his speech. These are some of the reasons why foreign teachers find it so difficult to train English-speaking voices to sing in the mother tongue. Unfortunately this is not, as it should be, considered a matter of prime importance and earliest endeavor among American students of song.

I am in favor of vocal training that does not compel any wider opening of the mouth or separation of the lips than is necessary to produce a rich, resonant tone and a perfect sounding and sustaining of the vowel that is being used. This is a matter that calls for individual consideration and purely individual development.

It is of considerable importance to singers that they present a pleasing countenance to the audience; and not one distorted and with mouth continually gaping.

It must be remembered that in singing the change of pitch influences or alters the opening of the mouth. In common speech there is little variation in pitch, hence it is necessary to open the mouth but little. In singing it is wise to yield to a natural inclination to open the mouth wider as the tone goes higher. Obeying this inclination the tones are freer, fuller, and clearer, and, besides, they find their way more surely and without stress into the so-called head quality.

I have just referred to a natural tendency to open the mouth wider in ascending notes. Obedience to this prompting is an assistance to the tongue, soft palate, and larynx in performing their several functions, all of which, in spontaneous and mobile activity, are harmoniously related: in other words, they are inter-dependent.

The proper activity of the mouth and lips is undoubtedly of vital importance in giving to tone its proper quality, for their action affects the sounding spaces or acoustical conditions which it is believed must be in peculiarly appropriate form in order that the tones issued from the vocal cords may have full measure of richness, resonance, and beauty.

The mission of the mouth and lips is to give form to the vowel sounds and also to give various gradations of color to tones.

In different individuals certain vowels yield better tone than others. In other words the resonating conditions or physical arrangements differ in individuals, and a vowel that would yield a good tone in one singer will yield a less desirable one in another. Training does much to equalize natural shortcomings, but it never quite counterbalances physical deficiencies.

The color and quality of tones, as I have intimated, is variously affected by the mouth. The constant aim should be to produce the purest possible musical tone in singing. But this is impossible unless the singer guards against unpleasing mouth habits, such as gasping, lisping, or smacking of the lips. There are various unnecessary noises also, that are induced by bad use of consonant combinations, such as *sh, th, ch, wh,* etc. Over-accentuation of all consonants should be avoided. Over-emphasis of final consonants is distinctly annoying and the musical quality of tones suffer thereby.

Consonants can be used with such grace and skill as to add attractiveness to singing. They give force to the required accent, acclaim and pause in passages of song requiring dramatic treatment. Furthermore, they are most valuable in making words distinct, thereby giving clarity to speech in song. This is the special value of consonants. The mouth and lips and tongue are responsible for a proper delivery of these indispensable elements of English speech.

Once more let me remind the student of song that the mouth and lips are best trained in all their movements in singing by pronunciation, being guided by feelings of utmost clearness, dwelling no longer upon consonant sounds than is required for distinctness and the needs of dramatic expression.

All correct vocal training must be special, inspirational, and individual. It aims to develop and join beautiful quality of tone to pure, distinct, and expressive utterance of words. Avoid cut and dried directions regarding the opening of the mouth, or, in fact, employing in a set manner any part of the vocal mechanism.

Singers must learn to yield to and be guided by the admonitions of the spirit and the feelings. Each one must strive to project his own individuality into his song and not the borrowed expression and interpretation of another.

———*———

CARESTINI, AN ITALIAN SINGER OF THE 18TH CENTURY

Some months ago Mr. W. J. Henderson, music editor of the New York *Sun,* contributed a series of articles on the singers of the old Italian period, from which we take the following account of Carestini, one of the greatest of the male singers of the time:

Carestini was born in Ancona in 1705 (or thereabouts) and lived till about 1760. His début was made at Rome in 1721 in a female rôle, that of Costanza in Bonocini's *Griselda.* Carestini began life as a soprano, but his voice changed to contralto, and it was this which brought him into comparison with Senesino, also a contralto. It is not altogether clear what his contemporaries mean when they speak of his voice, because one tells us that it was one of the deepest and richest contraltos ever heard, while Quantz, the distinguished flutist, records its range as from D to G. In 1723 Carestini sang in Prague at the coronation of Charles VI. Turning to the pages of Burney's *Present State of Music in Germany,* we find this sentence:

"When he performed in Prague his compass was sixteen notes from B in the bass to C in alt."

One thing alone remains quite certain, namely, that he was a contralto and that he sang admirably. The question of the range of voice among the evirati is one that need not give any student serious trouble. The composers of the time wrote for the singers, and therefore their scores furnish presumptive evidence as to the range of the voices. No extremely high notes appear in these old scores. In a brilliant cadenza sung by Farinelli and reproduced in Mr. Krehbiel's *Music and Manners,* the highest note is the upper A. The lowest is E. But in an air from Hasse's *Artaserse* sung by Farinelli we find low B. A cadenza written by Hasse for the famous female contralto, Vittoria Tesi, runs only from D to E, an octave and one tone. We owe the preservation of these records to the taste of the English poet Thomas Gray, who made an invaluable collection of airs of his time. This collection is now in the possession of the present writer's colleague, H. E. Krehbiel.

To return to Carestini, we find all authorities agreeing that he sang rapid passages with remarkable skill, and that in later life he greatly improved his cantilena. A man of excellent appearance, he made a careful study of stage action, and was a master of the pantomimic art. His vocal study was unceasing. Mancini says:

"Although his voice was naturally beautiful, he did not neglect to perfect it by study and to make it suitable to every kind of song, and he raised it to a point so sublime that he established in his youth his fame. He had a fecund genius and a discernment so delicate that despite the excellence of everything he did his great modesty prevented him from being satisfied. One day one of his friends finding him at study and applauding his singing, he turned to him and said: 'My friend, if I do not succeed in satisfying myself, how can I satisfy others?'"

———*———

IMPEDIMENTS OF THE TONGUE

BY BERNHARDT BRONSON

(Read at the convention of the Wisconsin State, Music Teachers' Association, 1914.)

No subject is so vitally and intimately related to the art of singing as the analytical study of language or speech. Speech is the chief factor in the relations between teacher and pupil; the foundation upon which the teacher builds. In this respect he has no choice as to the language he will use. He is bound by circumstances to work in the language spoken and understood by his pupils, regardless of whether he himself is versed in other languages or not.

As a rule teachers are compelled to lay the vocal foundations of their pupils in the language of the country in which they live. Without words all vocal sound is inarticulate and meaningless. Singing is dependent, at every point, upon language. Despite these facts, well known to everyone, there is no phase of the vocal art that has so little consideration in the scheme of the average American vocal teacher. He drills incessantly upon tone placement, breath-control, the various embellishments, interpretation, etc., overlooking the most vital point of all. I say most vital, advisedly, since in singing, any neglected point is most vital. In this case it is doubly so, for it involves the training of the tongue, the most stubborn of all vocal impediments.

Before proceeding I wish to draw attention to the following principles:

1. The fundamental principle of vocal tone is a column of air with its base on the diaphragm, and its top in the frontal region of the head.

2. That in order to set this column in vibration a vowel is necessary.

3. That anything that interferes with or obstructs the flow of this column is an impediment.

4. That the vocal mechanism is complex and therefore in order to build up a useful organ it is essential to secure co-ordination of the various parts.

Since every effect is the result of a cause, it is reasonable to assume that capable teachers concern themselves with causes; that whatever their ideas or method may be, their primary object is to remove wrong causes and substitute right ones in an effort to secure co-ordination.

In dealing with causes we are brought to a realization and a consideration of vocal impediments. Of these the one which gives the most trouble and receives the least attention from teachers is the impediment of the tongue.

We are here dealing with an organ, the control of which is often so baffling that many teachers refuse to consider it. Yet the tongue is the greatest barrier to success in the whole vocal mechanism. It stands in the way of breath control, resonance, and perfect enunciation. It is an impediment in every sense of the word, and without a positive knowledge of what to do with it and how to do it co-ordination is quite out of the question.

But the deliberate obstruction of the vocal column is necessary if we are to sing words. The times have changed since the days when male sopranos sang interminable meaningless phrases upon a single vowel. No wonder they fought so strenuously when composers began to write music which demanded the articulation of a fresh syllable to every note. The tongue, even in that golden age of song, gave trouble enough on the vowels without introducing more consonants.

The general definition of a consonant in singing is an obstruction thrust into the vocal column; a barrier to separate vowels. They are of two general classes: surd or breathed, and sonant or voiced; these being again divided into sub classes according to the organs involved in their production, as lingual, dental, labial, nasal, palatal, etc.

Breathed consonants are those produced by the breath issuing through semi-closed positions of the organs. Voiced consonants are those which have the active assistance of the larynx in their production.

Thus, T, F, and S are surd consonants, which find their sonants or subvocal cognates in D, V and Z respectively.

There are twenty-seven distinct consonant sounds in the English language against the thirteen elementary vowel sounds with their various shades, and the tongue and jaw are involved in the production of every one of them. In spite of this the training of the tongue and jaw is regarded by the average American vocal teacher as of little or no importance.

If there is any characteristic by which the English we Americans speak could be designated I should call it "tonguey." All our vowel sounds are produced with the mouth nearly closed and the tongue in a consequently high position; and when a consonant follows a vowel the tongue anticipates the consonant to such a degree that vowel and consonant sound as one.

This habit of the tongue, acquired in childhood, binds the aspiring singer as with a steel chain. Its evils are threefold: First, it destroys the purity of the vowels; second, it leaves no room for the clear enunciation of the consonant; third, it destroys the poise of the breath column by throw

ing the burden of support upon the muscles of the throat.

Although our habit of anticipation applies to all consonants, it is most objectionable in the case of the letter R, especially in the combinations er, ir, and ir. As these have the same vowel sound their consideration will serve as an example.

In the articulation of the letter R, in English, we make use of more than two-thirds of the forward length of the tongue, which rises, filling the entire buccal cavity. At the same time the jaw rises in a rigidly set, tense position.

In singing a vowel (open or closed) followed by an R, the very thought of the R causes the tongue to leave the vowel position, and so strong is this habit in our speech that we are unconscious of it; in our singing the tongue rises in spite of all our will power to prevent it. Add to the R an l and a d as in the word "world," and we have sufficient food for thought in a single word.

This condition has led to the assumption by many people that in English R, preceded by a vowel, should be considered a part of that vowel. This may do in speech, but it is contrary to both the esthetic and physical laws of singing. If treated as part of the vowel the contortions undergone by the larynx preclude all possibility of a good tone, to say nothing of its ruinous effect upon the organ.

In French, Italian, or German the R is trilled with the tip of the tongue, and does not interfere with the freedom of the larynx. It is a subvocal consonant, and with the assistance of the larynx the tongue disposes of it quickly and decisively. The back of the tongue does not rise. This is the proper method of articulating R in singing in any language.

Because of his habits of speech the American finds this difficult, and often, even after he has accomplished it in the foreign language, he needs special training to apply it to English.

There is a prevailing notion among some members of the vocal profession that a slit wide enough to admit the thickness of a lead pencil and surrounded by a silly expression of countenance, termed the "smiling expression," constitutes an open mouth. How is it possible to develop anything with the elements of strength under such conditions?

There is a difference between relaxation and inertia. There is no hope of controlling an inert or palsied jaw. A smile is desirable sometimes; but should we be dependent upon a smile for good tones?

As a matter of fact the smile has nothing to do with the resonance of a tone. Because certain great teachers of the past advocated in their writings that the lips be held in a smiling position must we needs follow them blindly and stop exercising our gray matter? It is easy to misinterpret the directions of a printed page, and to follow it blindly is a dangerous thing.

It is quite possible to smile with the mouth open; and an open mouth means dropping the jaw from the condyle, the entire floor of the mouth (the tongue) dropping with it and lying comfortably "tucked" away with its tip just touching the gums of the lower front teeth. In this position its presence is hardly noticeable. The lips now come slightly forward. Upon phonation of an open vowel the tongue retains its low position, the soft palate rises, the nostrils are distended, and the posterior nares are thrown open. Under these conditions it is possible to get the tone "into the mask." Moreover, it is always under control of the breath.

These are the generally correct conditions which must vary slightly according to every individual voice. Every individual has his own peculiar formation of the cavities and jaw, and each tone of his voice has its own particular point of impact in the buccal cavity. The point is, to get at the position which yields the best results in each individual.

The general tendency, however, is to mistake inertia for relaxation. This becomes even more apparent in our treatment of consonants. From lack of proper development the articulatory organs fail to deal with them in a decisive way.

In order to counteract the lifelong tendency of the tongue and jaw to become tense in their anticipation of consonants, we should cultivate the habit of considering all consonants or consonantal groups, as preceding the vowel. To express it in another way, all consonants or consonantal groups should be made to stand out against the background of a vowel.

To illustrate we will take the opening line from the introduction to Elijah: "As God, the Lord of Israel, liveth."

With only the phonetic idea of the entire phrase in mind, and without regard to the conventional division of syllables and words, we will mark off the phrase so that each consonant group will stand out against a vowel in this manner: A-sGo-dth-elo-rdo-fI-sra-ĕ-li-veth. This conveys as nearly as is possible by means of cold type the idea of a carefully articulated, well-sustained legato delivery of this phrase, where the tongue is always seeking the repose of a vowel, never leaving it until ready to dispose of the consonantal barrier in a decisive, definite manner on its way to the next vowel.

At first this means careful, painstaking work, but results come surprisingly fast as soon as the mind begins to grasp the true significance of the terms "relaxed jaw" and "tip of the tongue." These results manifest themselves in increased resonance and volume as well as in ease of execution.

Every student should be put upon a course of daily gymnastics for the tongue, jaw, and lips not only to strengthen these organs but to bring them under the control of the will; to make them in truth part of the vocal organ. Unless this is done all time spent upon the practice of tone and breath control is wasted.

"It is a rule of largest application," says Emerson, "true in a plant, true in a loaf of bread, that in the construction of any fabric or organism, any real increase of fitness to its end is an increase of beauty."

This is the end toward which all real study is directed, and if it does not aim to attain this end it is no study, and teaching which does not tend to bring about this "increase of fitness" is no teaching.

The public is beginning to demand its opera in English, but before opera in English can be a success we must mold the English language to conform to the laws of singing.

For this purpose a standard English diction for singing is essential. When all vocal teachers agree on the language and how it should be used we shall have more uniform results even though the methods of imparting knowledge differ.

Furthermore, we need to give attention to the proper training of our children in English speech. English diction should be established as a subject in the grades of our public schools. The children should have daily drill in the proper use of the articulatory organs, under special teachers.

Why give our children a useless smattering of foreign languages when the time could be better employed in teaching them to speak their own correctly? They will have time enough to study foreign languages in the High School.

When this happy state has been brought about our students will not have to go abroad to learn to sing in a foreign language before they can learn to sing their own.

OCEAN'S RHYTHM

For lo, the sea that fleets about the land,
And like a girdle clips her solid waist,
Music and measure both doth understand;
For his great crystal eye is always cast
Up to the moon, and on her fixèd fast;
And as she danceth in her pallid sphere
So danceth he about the center here.

(From *The Orchestra,* Sir John Davies.)

THE COMPOSERS IN AUGUST

AUGUST, a month which really does not exist on our American musical calendar, so void is it of music except for a rare festival, and so averse are small boys and girls to practising during the warm weather, has been a most prolific musical month in Europe. Some of the most important first productions have occurred in August.

August 2, 1774, Gluck's *Orpheus* was first produced in its revised form, at Paris.

August 15, 1865, Franz Liszt's *Saint Elizabeth* was performed for the first time at Pesth-Ofen.

August 25, 1869, Wagner's *Rheingold* had its first production at Munich. Nineteen years before this, on August 28, *Lohegrin* was first performed at Weimar.

August 26, 1846, Mendelssohn's *Elijah* had its first production at Birmingham, Eng.

August 4, 1782, something occurred in the music world which young music lovers might memorialize in many graceful ways. I mean Mozart's marriage, for this was his and Constance Weber's wedding day, and all who love this man's beautiful music should "keep" this day ever green and lovely by playing a program of his music. There were not too many happy days in Mozart's life, children; why not celebrate this one happy one?

MYSTERIOUS MUSICAL TERMS

BY LUCRETIA M. LAWRENCE

NAME a musical term that's part of a fish?
One that is worn by a man?
What most persons desire to do with their wealth?
A ball game term if you can?
Something used by the farmer when selling his grain?
The part of a story we like?
A fee one oft pays for speeding his car?
What one does when riding a "bike"?
Name an ugly remark that everyone hates?
An article used to catch fish?
Some things that belong to every cat?
And something the weary all wish?
Name a message that's often written in haste?
Something told by the old kitchen clock?
The part of a cell the prisoners hate?
And something that goes with a lock?
Name something essential to every bank note?
A streamlet that flows through the land?
A crevice or fissure in mountain or rock?
And what the lame man should hold in his hand?

A MUSICAL CARNIVAL

BY LAURA ROUNTREE SMITH

CHARACTERS AND COSTUMES

Sweet Pea Girls from the Kindergarten Class wear white dresses, and sunbonnets of delicate shades of tissue paper.

SWEET PEA GIRLS

The Singing Boys wear ordinary suits and tall paper fools' caps. They carry old-fashioned singing books.

BOYS' SINGING SCHOOL

Pierrot wears a white suit, with red buttons (covered with tissue paper), on the vest and sleeves, red tissue paper ruff, red paper cap with streamers.

The Jester wears a Brownie suit with red paper cap, and red pointed cambric boots, bells hanging from the waist.

The Queen of Hearts wears a white dress with red hearts pinned upon it, and a heart-shaped hat.

The Fairy wears a white dress decorated with

CARNIVAL SPORT

pink tissue paper cut in points, and white hat with pink rounds.

The Flower Girl wears a white dress, decorated with blue tissue paper, flowers about her hair and neck.

The Merry Maid wears a white dress decorated with hearts or rounds, tall hat decorated with strips of tissue paper.

The recital is given on a porch, the piano may be drawn outside or may be by an open window.

Folk-songs and dances may be introduced at pleasure, and any lively pieces with which the

CARNIVAL GROUP

class are familiar may take the place of the suggested piano numbers.

The children make copies of the program for the guests, and at the close of the nineteenth number bouquets are handed to the guests.

The refreshments should be light, the Queen of Hearts serving heart-shaped wafers, and Pierrot presiding over the lemonade.

If a photograph of children in costume can be aken before the recital and pasted upon the programs it will add to the interest.

(All march in, hands on the shoulders of ne in front.)

. Piano. *Follow the Crowd.* G. H. Warner. (Musician, June, 1910.)

. Folk-song. *Meeting.* (*Folk-songs for Children.*)

. Recitation and Dialogue. *Carnival Folk.*

)ueen of Hearts.

On a midsummer night, when the moon is bright,
High carnival we will keep;
We'll dance and sing, while echoes ring,
And good folks are asleep.
I am the merry Queen of Hearts,
I am not afraid of Cupid's darts!

'ierrot.

Oh, Queen of Hearts, I bow to you,
A carnival we'll hold, 'tis true.
Heigho, what have we here?
A Jester in cap and gown, 'tis clear.

'pierrot

estER.

Oh, Pierrot, with your laughing face,
Your cap and bells and air of grace,
Under the midsummer moon,
A carnival we'll hold full soon.

'airy.

I'm a Fairy, very airy,
I know no song or rhyme;
I dance and sing like birds a-wing,
At happy carnival time.

'lower Girl.

Without flowers none should go
To the carnival, I know;
I bring roses and rare posies,
Singing sweet and low.

Ierry Maid.

A Merry Maid I trip along,
And enjoy your jest and song;
Who would not delight to play
On a midsummer holiday?

Piano. *The Jester.* Bartlett.
At the Carnival. Williams.

5. Folk-song. *The Mulberry Bush.* (Join hands and dance.)

6. Piano. *The Dance of the Dolls.* Gilmour. (Musician, January, 1914.)

(The Sweet Pea Girls dance and sing, tune *Yankee Doodle.*)

The Sweet Pea Girls have come to town,
Upon a summer morning.
The Sweet Pea Girls look shyly down,
We give you all fair warning.

Chorus.

Nodding, nodding to and fro,
Hear our voices ringing,
Nodding, nodding to and fro,
Happy songs we're singing.

The Sweet Pea Girls have come to town,
You'll see them nodding brightly,
The Sweet Pea Girls in dainty gown,
Will bow to all politely.

7. Recitation. *Fairy Song.* (Selected.)

We the fairies blithe and antic,
Of dimensions not gigantic,
Though the moonshine mostly keep us,
Oft in orchards frisk and peep us.

Stolen sweets are always sweeter,
Stolen kisses much completer;
Stolen looks are nice in chapels;
Stolen, stolen be your apples.

When to bed the worlds are bobbing,
Then's the time for orchard-robbing;
Yet the fruit were scarce worth peeling
Were it not for stealing, stealing.

8. Piano. *Fairy Dance.* Grieg. (Musician, January, 1911.)

9. Song. *The Fairies' Lullaby.* Orth. (*Thirty Songs for Children.*)

10. Guitar Solo. *There's music in the air.* (*College Songs and Popular Ballads for Guitar.*)

11. Piano. *A June Rose.* Cadman. *Waterlilies.* Cadman.

12. Recitation. *A French Composer.*

Andre Campra was a French Composer. He was chapel-master of Notre Dame in Paris.

His music had a wonderful rhythm. It has been said of his music that "It saw, and heard, and felt."

He composed serious and light music, among the latter, an opera, ballet and the *Carnival of Venice.*

13. Piano. *Carnival of Venice* (Variations burlesque) Krug.

14. Piano. *The Circus Parade.* Cadman.

15. Piano. *Cap and Gown Polonaise.* Aubert. (Musician, April, 1912.)

16. Piano. *Pierrot.* Di Pirani. (Musician, July, 1913.)

17. Violin and Piano. *Harlequinade.* Bochau. (Musician, January, 1911.)

18. Piano. *Hearts and Secrets.* Kern. (Played by Queen of Hearts.)

19. Recitation. *What so sweet?* (By several children.)

1st.

What so sweet as springtime,
For fairy folk and fay?
For out in the woodland
We all keep holiday.

2d.

What so sweet as summer,
When the moon is bright?
Fairy folk hold revels
On a summer night.

3d.

What so sweet as autumn?
Shorter grow the days,
Asters lift their dainty heads,
We see the bonfire's haze.

4th.

What so sweet as winter?
Quiet we must keep,
For the nymphs and dryads
All are fast asleep.

All.

Spring and summer sunshine,
Autumn wind and rain,
With fairy fun and frolic,
We'll join the glad refrain.

20. Piano. *Harlequin.* Polka. Carl Bohm. (Musician, January, 1913), or Duet. *Just for the Fun of It.* Sudds. (Musician, January, 1909.)

21. Recitation. *An Old-fashioned Singing School.*

Who are we? Who are we?
Jolly boys you will agree.
Keep in time for 'tis the rule,
In an Old-fashioned Singing School!
Since we put on these caps you know,
Singing thro' the world we'll go.

Who are we? Who are we?
Boys of the sixteenth century.
Many old-time songs we'll sing,
Sweet and low the echoes ring.
Sometimes we may cry "April Fool"
In an Old-fashioned Singing School.

(Sing *Annie Laurie, Genevieve,* and other old songs.)

22. Recitation. *Airy Nothings.* Shakespeare.

Our revels now are ended. These our actors,
As I foretold you, were all spirits, and
Are melted into air, into thin air;
And, like the baseless fabric of this vision,
The cloud-capped towers, the gorgeous palaces,
The solemn temples, the great globe itself,
Yea, all which it inherit, shall dissolve,
And, like this unsubstantial pageant faded,
Leave not a rack behind. We are such stuff
As dreams are made of, and our little life
Is rounded with a sleep.

A LESSON ON POSITION

BY CLARA LOUISE GRAY

THE BRIDGE

THERE it was when I first saw it, a delicate little structure supported by four slender posts. It was not made of iron or wood, but nature had tinted it white, and as I saw it gleaming in the sunlight, I thought that I had never seen a prettier bridge. No water danced under it, and rushed away to find its home in old ocean. But, nevertheless, if one listened, they might hear what would seem to be the tinkling of a brook.

The most beautiful music often came from under the shade of this strange arch. As I looked at it wonderingly, I saw a tiny man, or we will so call it, standing in front of the natural way.

He was clothed in white and on his head was stamped in black, a large number, One. When he saw me he turned around with a slow, grim smile, and said.

"What do you wish?"

I hesitated for a moment, because I was only out for a walk, and had nothing in common with this little fellow. When I saw that he was lame, and as he walked kept stumbling, my sympathies were aroused, and I spoke.

"Can I not help you, my poor sir?"

"No, no," replied the ungrateful mite, "don't touch or talk to me, for you only make it harder, and please do not attempt to pass under this bridge, for you are so tall you would injure it. Do you not understand? Do you not see how impossible it would be for you to go under it? It is mine and I find it terribly hard to arrive on the other side. Don't you see how I stumble and fail?"

"But, let me help you," I replied.

"Oh, cannot you understand what I mean? I will tell you and then you must be gone, for I have wasted too much time already.

"This bridge which you see is no common building, but it is what students of music call the arch of the hand. The slender posts are the four fingers, which if they are trained aright, serve to hold it steady. I" and here he straightened himself, "am the thumb, and my duty is to learn to go under the arch. I have to be so careful to go just right. I often get so tired that it makes me lame all over, as the old folks say; but everyone ought to work, and all I can do is to keep on trying and perhaps sometime I will succeed. In fact, I know I will.

"How beautiful it looks on the other side," he went on, "when I get there I will be so happy. Please move on and let me work."

"Just one question more and then I would like to tip you into the ocean for you have not spoken one civil word yet."

"You must forgive an old man and his ways. I am so impatient for success that it often gets into my voice. Yes, I did in the olden days use to be known as the Cross X. I will admit that I was old-fashioned, but now things have changed for the better, and the fingering, I am glad to say, comes from over the ocean. We use a good, big number, One. Perhaps you noticed it on my head? Now, are you satisfied, and will you let me go to my work?"

And as I walked away I could not but help thinking what music was doing for every one in this world, and how many persons, like Master Thumb are struggling and tumbling towards the shining goal.

———*———

POPULAR NAMES FOR MUSICAL COMPOSITIONS

(For the Class Scrapbook)

IN looking through *Der Musiksalon,* a well known German musical magazine, the present writer noticed a very interesting article on *Die Spitzname in der Musik,* which is freely paraphrased in the caption to the present article. It is much too long to reproduce in full, and a number of the compositions included are without interest to American readers. Below we give those that will have value to our readers.

Few, if any, of these names were given to the pieces by the composers. In general they were bestowed upon the compositions after they had won popular favor, and were usually based upon peculiarities of the work in question, suggestions of previous pieces, or the use of themes from other compositions. Among these we may mention the "Trout" quartet of Schubert, the "Meistersinger" sonata of Brahms, etc. The "Governess" scherzo of Chopin suggests that the piece in question is a special favorite with the class of persons indicated by the title.

We have not included in this list pieces with well-known names, such as "Adieu, Absence, and Return," by Beethoven, or the "Raindrops" prelude by Chopin; in addition we have omitted reference to a number of works for strings or orchestra which the majority of our readers are not likely to hear.

Alexander Sonata,
Beethoven, Op. 31, No. 1, 2, 3

Apollo Symphony...Mozart, in G minor

Aurora Sonata,
Beethoven, Op. 53, in C major

Bass Etude,
Chopin, Op. 10, No. 12, in C minor

Bauern (Peasant) Polonaise,
Chopin, Op. 40, No. 1, in A major

Characteristic Sonata,
Beethoven, Op. 81a, in E♭ major

Butterbrot (Bread and Butter) Mazurka .....Abt, Op. 126.

Chasse Sonata,
Clementi, No. 17, in D major

Dramatic Polonaise,
Chopin, Op. 26, No. 1, in C♯ minor

Ehestands (Matrimonial) Sonata,
Beethoven, Op. 14, No. 2 in G major

Facile (Easy) Sonata,
Mozart, Op. 112, in C major

Frühlings (Spring) Sonata,
Beethoven, Op. 24, for piano and violin, in F major.

Geister (Spirits) Sonata,
Beethoven, Op. 27, No. 2, in C♯ minor. Better known as "Moonlight" sonata.

Gouvernanten (Governess) Scherzo,
Chopin, Op. 31, in B♭ minor

Hongarese (Hungarian),
Schubert, Moment Musical, Op. 94, No. 3.

Kaiser (Emperor) Sonata,
Clementi, Op. 47, No. 2, in B♭ major.

Composition of Queen Louise,
Liszt, Consolation, No. 4

Meistersinger Sonata,
Brahms, Op. 100, for violin

Minute Waltz,
Chopin, Op. 64, No. 1, in D♭ major

Nachtwächter (Night Watchman) Fugue,
Bach, organ fugue, in E minor

Octave Polonaise,
Chopin, Op. 53, in A♭ major

Pastoral Sonata,
Beethoven, Op. 28, in D major

Philosophen (Philosopher) Scherzo,
Schubert, 3d movement of the B minor (Unfinished) symphony.

Polish Fantaisie,
Chopin, Op. 13, in A major

Preislied (Prize Song) Sonata,
Brahms, Op. 78, in G major, for violin

Regen (Rain) Sonata,
Brahms, Op. 79, for violin

Riesen (Giant) Sonata,
Beethoven, Op. 106, in B♭ major

Schicksalsmarsch (Destiny March),
Schubert, 4th movement of the B minor (Unfinished) symphony.

Schöne Müllerin (The Miller's Beautiful Daughter),
Raff, Op. 192, No. 2, quartet in B minor

Schwäne (Swan) Sonata,
Beethoven, Op. 22, in B♭ major

Schwanengesang (Swan Song),
Mozart, Op. 45, symphony in G minor

Seufzer (Sigh) Nocturne,
Chopin, Op. 9, No. 2, in B♭ major

Tedesca (German) Sonata,
Beethoven, Op. 79, in G major

Tragische (Tragic) Symphony,
Schubert, No. 4, in C minor

Wanderer Fantaisie,
Schubert, Op. 15, in C major

Wut über einen verlorenen Groschen (Rage on account of a lost groschen*),
Beethoven, Op. 129, Rondo a capriccio

Zauberflöten (Magic Flute) Sonata,
Clementi, Op. 47, No. 2, in B♭ major

*A small silver coin worth two and one third cents

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

THE VIOLIN SCROLL

BY RAY G. EDWARDS

When young violin students begin to take an interest in the workmanship, varnish, and characteristic models of the various schools of violin makers they come to some very hasty conclusions in regard to their own knowledge of violins, thinking they can tell an Italian instrument every time and that no one could possibly deceive them by passing off a new fiddle for a genuine old Cremona. Experience in hunting out old Cremonas in pawnshops will lessen this self-assurance, and in time they will come to the point where they really want to know something about the instrument.

Every little detail of construction tells its story to the expert; each curve seems to be the most important feature as you study it. If you are fortunate enough to own an interesting violin it will be a good lesson for you to observe a connoisseur as you place the instrument in his hands for inspection. With only a hasty glance at the general outline of the body, to see whether it is really worth looking at or not, he centers his attention on the scroll. If it promises well he begins to take an interest in the instrument and having noted that the varnish is of good quality, with a depth and luster peculiar to all good violins, he looks again at the scroll for the characteristic marks of superior workmanship. If it is a genuine old Italian violin he knows that the scroll has been taken off and spliced to a longer neck, but he must decide whether or not one of several forms of deception has here been attempted: Either a new instrument may have been spliced in order to add to its mask as an old instrument, or if really old it may be attached to a new body.

What are the characteristics of a good scroll? To begin with, it would seem as if any wood carver could imitate the curves of so simple a thing as a violin scroll. But as we study these curves we find they are not so simple. They defy measurement and yet the eye will detect the slightest variations of curve and report to the understanding that the two things are not alike. Indeed, scrolls vary to such an extent that connoisseurs see as much difference between them as you see between the handwritings of Englishmen and Italians. And this brings us to another interesting fact: Violin makers have national characteristics as well as individual characteristics, and while we may say almost offhand that this violin is an Italian and that one of English origin, while a third is undoubtedly German, with its humpback and squared-off curves of body, it will take much closer inspection to say what particular maker fashioned its lines.

Generally speaking, Italian violin scrolls have plenty of room in the peg box and yet the throat (up near the A string) is slender and thrown back far enough to allow plenty of room for the scroll. In the German, Dutch, and all other makes except the French and American, the scroll seems flattened against an imaginary line extending from the front edge of the neck. This line is of course the original limit of the piece of wood used in making the scroll, so unless the throat is thrown back far enough the scroll itself it not allowed room to curve freely. The Germans nearly always exaggerate their curves and this weakness gives their violins the full belly and back of the body of the instrument as well as the deep grooves in the scroll. Italian makers had an instinct for cutting the grooves just deep enough for beauty.

The Dutch makers, confident of the tone qualities of their violins, did not look closely at the curves and so, in many ways, they failed to produce instruments that satisfy the eye. Careless as to the depth of grooving, they cut in too abruptly, making sharp edges. The "ears" of their scrolls are either flattened against the head or so cut away that they become sharp, all evidences of having slashed away at the wood without having a clear conception of the true lines, which, in the finishing up, they try to correct, with the above results.

French scrolls show a careful study of the Italian lines. At the same time there is an effort at refinement. The scroll has plenty of room to curve, so is not flattened on its face, but back of the throat the lines of the fluting are inclined to narrow down so that the top of the head is pinched. The French and German scrolls depart from perfect lines in such a way that the defects of neither are present in the other: if the good points of both could be combined we should have the perfect Italian scroll. Dutch scrolls are weak in the same places that we find imperfection in the German makes and are minus the careful effort of the latter. The French ears stand out well and the grooves are as well made as those of the Italian makers.

English makers usually incline to short scrolls, with ears flattened against the head. It has the Johnnie Bull throat, thick and strong, but not much for looks. Thickness again in the peg box, which does not allow sufficient room for the strings. Deep cutting of the grooves also occurs, but this is not without exception. These scrolls would measure up well if the makers started out with the idea of more length. The latter defect detracts from the side view while the thick sides and position of the ears make a clumsy front view. The Englishman, however, blackens the back of his boots, and the back of his scroll shows careful workmanship and design, due to the graceful curve where the fluting rounds off to make room for the neck, and to the rather narrow fluting over the head, the only place where the characteristic English scroll is narrow enough for beauty. That the ears of some English makes stand out, and that the fluting is not always graceful, leads us to conclude that individuality rather than nationality characterizes the English violin makers.

To an even greater degree we should have to admit the individuality of the American makers. Perhaps because we know them more intimately, and have seen all grades of workmanship, it is difficult to point out the perfections and defects as characteristic of our violin makers as a whole, but in the scroll at least, if not in the body of the instrument our best makers follow the perfect lines of the Cremonese masters more nearly than do those of the other schools mentioned. As most of our makers are of European parentage they might be expected to display the characteristics of the old schools, yet we find this not to be the case and can account for it only by the fact that immigration has freed them from the limitations of their ancestors. And may we not conclude, then, even from this study of so small a thing as a violin scroll, that the act of immigration to this country, if not the flag and constitution, assures freedom from conventionality and localism?

If this consideration of the scroll has aroused some thought, and possibly antagonism or approval, you may be interested in later articles on other features of the violin and bow. The model of the plates shows characteristics that are more apparent to most eyes, and their effect on the ear is also of considerable importance. I have mentioned the scroll first in order to accustom the student to close observation, not because the tone of an instrument is effected by the lines of grace and poise seen in the scroll. They were placed there with loving care by the first masters, as if loth to give the last touch —like the bride lingering over the final little touches of her toilet, so the old violin maker carved his scroll.

———*———

A WOMEN'S ORCHESTRA

Theodore Spiering, who plays so broad a part in the musical life of Berlin, will enter upon a new field with the beginning of next season which will surely redound to the benefit of young American musicians in Berlin. Mr. Spiering has accepted the post of conductor of the *Neues Berliner Tonkünstlerinnen Orchester* (The New Berlin Orchestra for Women Musicians), which, by the way, he will proceed to radically reorganize with the commencement of his leadership, limiting it to stringed instruments alone.

Mr. Spiering's object in accepting the leadership of this unique organization is primarily based on his desire to provide his pupils, and young American violinists and pianists generally, with an opportunity for *ensemble* training which would otherwise be quite beyond their reach. Not only will it now become possible for young women violinists from America to join an orchestra and secure all the broad musical benefits of orchestra training, but an opportunity will also be opened up for soloists—pianists or violinists—to rehearse their concertos, etc., with an orchestral body at minimum rates—rates which, to many a struggling young musician, will make possible that which was out of the question before. And this unique privilege will be accorded them under the baton of a first-class conductor—one whose time is already filled almost to the limit with important engagements as conductor of full-bodied orchestras, and who would hardly have consented to conduct an organization still in its struggling stages but for the broad pedagogical possibilities which the undertaking opens up.—*Continental Times.*

SOME SUGGESTIONS TO VIOLIN TEACHERS

BY EDITH L. WINN

THE following works are recommended for beginning violin pupils:

Wohlfahrt, Op. 38. Excellent for those who are very musical. Begin with the exercises on the A string; follow with D and G; teach E last.

Also supplement with Sitt, Op. 32, Book I. Use exercises with two and four notes on a bow. Get correct pitch on the A and D strings before going further. Strive to drill on the A and D strings, while getting uniform bowing. Be very careful about intonation and left-hand position. The first finger should fall vertically, the thumb in advance of the finger resting on the middle joint. The third finger should fall less vertically, the fourth finger being in the same plane as the third, rounding, not placed straight out.

Be very particular about freedom of the left hand. There should be no pulling on the basal joint of the first finger. The child who pulls, or grips hard, should take the weight with the chin. Remove all possibility of a tight left hand, by placing one or two pads under the violin, until the child has learned to hold with the chin on the edge of the chin rest, not on the top. Be very particular about this.

If children in unmusical families have no musical ideals, use Mitchell's *Public School Class Method.* This is valuable in class work. Proceed as before, with the A string first. Do not allow any child to hold the violin down. I have found the Mitchell book very good with young pupils from the country. Kelley's Violin Method may be used. Never teach four strings at once. Pupils who have studied piano and begin the violin late may study the De Beriot, Book I, which has a second violin part.

SECOND GRADE WORK

Sevcik, Book I, Finger Technic; Kelley, Solos in the First Position For string transfers, Sevcik, 4,000 Bowings, Book I.

If bowings are mastered before the pupil reaches Kreutzer, it is a wise thing to eliminate the Massart *Bowings.* In Paris, these are taught in their entirety. They are very useful indeed. Parents have a right to expect some results in two years. Even a little child can play very pleasantly folk songs on the violin.

Use *Harvest of Flowers,* by Weiss. Also *Little Operas,* by Alard. These may be played in first and third positions. I should not teach a child the third position until the third year. A very young child need not play the fourth finger in the first six months. When teaching the E string, do not pull the first finger too tightly. Relax it when the fourth finger is to be reached. Its proper position is with the crease against the neck of the violin. Bend it sharply. When hands are large, make the curve wider. This is particularly true with boys' hands. Don't tilt the finger towards the left, as this makes it impossible for the finger to fall with force. The child should practise the exercises of Sitt. Do not release the first and second fingers, when the fourth is playing. Show the child pictures of great artists, and their hand position. Picture postal cards may be obtained, illustrating the hand position of great artists.

There are some melodies which are good and can be enjoyed by many parents and pupils. I will suggest a few:

Sympathy from *The Firefly; The Rosary,* by Nevin; *Rondo, 18th Century,* by Moffat; *Bourrée Minuet,* by Pergolesi; *Berceuse,* Op. 56, by Drdla; *Slumber Song,* by Essek; *Marche triomphale,* Op. 6, No. 1, by Drdla; *Twelve Dances by Old Masters,* arranged by Willy Burmester; *Träumerei,* by Schumann.

Moffat arrangements: *English Classical Album, Old Masters for Young Players,* First Position, 12 *Classical Pieces* (two books at 50 cents).

The Dances, by Willy Burmester, may be obtained in one book, which is a better way to buy them.

I should also recommend the following:

Kelley Album, No. 2; *Gavotte Album,* F. Hermann; *Fifty Other Melodies,* First Position, by F. Hermann; *Twenty-four Scottish Songs,* arranged by Laubach; *Favorite Tunes,* arranged by Gurlitt.

For very little people, I should recommend the *Happy Jack Tunes* on the open string, by Sawyer; *Six Open String Tunes,* by Winn; *Melodies,* by E. L. Winn, called *Pine Toter Tales.*

Oehmler and Eberhardt have written many open string tunes, which are very good for little children, and splendid examples of rhythm. The little person must be entertaincd from the outset. Technic must not be made a dry thing, but rhythm and tone must be taught from the first.

I should use as many dance forms as possible in the first three grades; use a *Bourrée* in A minor, by Goldblätt.

For second grade, classical work, use a *Concerto,* by Rieding; *Concertos,* by Seitz.

For third grade, use Hofmann, Op. 126, Nos. 1 and 2, *Concerto.* Also two *Concertos* by Schatz; also *Four Little Pieces in sonata form,* Op. 257, by Reinecke; I would also recommend a *Concertina,* by Hans Sitt, Op. 104, in the first position.

These precede in difficulty the *Concertos* of Seitz, in third position, which are excellent. The *Concertina,* by Schatz, is written for two violins and piano. The *Sonatina,* by Bella, for three violins, unaccompanied, is excellent for teaching purposes.

Among pieces for public use, it might be wise to introduce duets, trios, and quartets, etc. I would recommend a *Quartet,* by Mohr, Op. 67; also *Serenade,* by Hofmann, Op. 73; Söchting, Op. 56, *Quartets.* I have used these with great success for young players.

Also for quartets, arrangements by Hermann: *Easy Transcriptions of String Quartets for Young Students.* I have used these with great success, preceding the study of Haydn and Mozart.

For public work: *War March of the Priests,* eight-hand, piano and strings; *March aux flambeaux,* by Clark, orchestra and eight-hand piano; *Prayer and Rondo,* by Weber-David.

These last two are used for little folks. I also take well-known marches, in easy keys, and write an easy part for the young violinist. For instance, I take the double-bass part, and transcribe it, so that the children in the second grade may learn rhythm.

A COURSE IN VIOLONCELLO PLAYING

BY RAY G. EDWARDS

"WILL you please outline some work for a violoncello pupil who is miles away from a good teacher and has no hope of ever going to a great school or conservatory of music?" This is a question that comes to me from a young man in Arkansas.

First I would say to him, and to all other 'cello students similarly situated, take Dotzauer as your ideal of what a player of the violoncello should be; make up your mind to learn all that Dotzauer has to teach regardless of what you know of his work at present. You only know him thoroughly after years of careful study; but let him be your inspiration. Accept him as your teacher if you like, to whom I will introduce you.

Justus Johann Friedrich Dotzauer was born at Hildburghausen in 1783, and died at the age of 76, in Dresden. During his lifetime he saw his studies and duets accepted throughout the musical world. The 'cello student will find more difficult études than those of Dotzauer, by Duport, Merk, Grützmacher, and Klengel, but if he plays well everything in Dotzauer he will become a well-known and much sought after musician.

After a preliminary study, say of Nölck's 32 *Exercises* in the first position, the student should take up Dotzauer, Op. 120. Or he might have begun with Dotzauer, Op. 160, Schroeder, Op. 48, or Lee, Op. 70. Following Dotzauer's Op. 120 he can take the same composer's Op. 47, 107, 54, and 35. This is quickly said, but there is material for two years' study in these books. As an example of the technical skill to be expected I will say that I have had 'cello pupils play the celebrated Popper *Gavotte* in public quite successfully after studying only the first mentioned Dotzauer book, Op. 120.

Not to have too much of a good thing the above studies may be interspersed with special scale studies by Klengel and the many special études of Schroeder, or with an arrangement for the 'cello of 22

If You are in the Market for a
RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work neeessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

violin études of Kreutzer. Then follows Merk, Op. 11.

This will bring the student to Duport's 21 *Studies* and Dotzauer's Op. 70 and 158. Salter's two books, for the bow and left hand technic, fit in well with these studies. As a finishing touch to 'cello technic we come to Dotzauer again in his editing of the *Six Sonatas* for 'cello by Bach. Grützmacher has edited three collections of studies, known as the *Elite Studies, Chamber Music Studies,* and *Orchestral Studies,* all from the best composers.

In duets for two 'cellos we again turn to Dotzauer, his Op. 156, 9, 58, 114, and 159 fitting in with the Op. 120 exercises. Op. 52 and 63 are 'cello duets to go with the *Exercises* Op. 47 and 54. Beyond these duets there are others by Romberg, Servais, Goltermann, Kummer, Grützmacher, and others. An easy set of duets for 'cello and violin by Beethoven is interesting.

The music for 'cello and piano is too extensive for mention, but as we have been considering technical work I will include a few concertos for 'cello, as they add so much to style and breadth.

Goltermann has an immense amount of good music for 'cello and piano, and among the best are the concertos in A minor and D minor. The Haydn concerto in D major, one by Servais in B minor, and the Romberg concerto in B major will round out the technic and make a first class 'cellist. I would recommend the 'cello concertos of Hegner, Popper, Mendelssohn, Schumann, and Klengel, but if the student now sees the way open before him he will go ahead, and master the more difficult compositions when he comes to them. Along the way, however, let him measure up once in a while with his master, J. J. F. Dotzauer. If he has no opportunity for personal instruction he can make believe he is a favorite pupil of the old master, again living in his pupils through his works—and their works.

SONATA PLAYING

BY RAY G. EDWARDS

THE study of sonatas for violin and piano does not receive its due attention in these days of virtuosity; violinists find the playing of solos and concertos more to their liking. But that there are a few here and there who anticipate the pleasure and broadening influence of sonata playing is evidenced by the letter before me asking for a list of violin and piano sonatas in the different grades. I shall not attempt to make anything like a complete list but will mention a few that would be helpful.

The term "sonata" was rather loosely applied by the old composers to any serious composition. It might contain but two short movements, covering only two pages for the violin part, whereas in the modern sonata twelve pages is about the usual number required for the working out of the themes. This working out or development of the themes in a modern sonata is equally divided between the violin and piano and becomes very intricate and interesting. The older composers, however, often applied the term "sonata" to a mere set of variations on a theme, in which the violinist shows off his tricks while the pianist has little more than a simple accompaniment of chords to sustain the solo part. The well-balanced sonata does not have a solo part for one instrument but is written more in the form of a duet.

Each instrument in a sonata for piano and any other instrument should be equally important, like the parts in an orchestra, or in trios, quartets, and other forms of chamber music. Indeed, sonatas come under the head of chamber music. If the performers approach a sonata with the same feeling that they undertake ensemble music for a larger number of instruments they will get nearer to the heart of the work. Instead of the feeling of a soloist who is to show off, and of an accompanist who is to follow and support, the players should have that sympathy and elasticity necessary to adjustment to the thoughts of the composer and to the idea of bringing out the beauty of the work, following the main themes and the weaving of their development from one instrument to the other.

In spite of what has been said of the older sonatas, I shall recommend the Mozart and Hadyn sonatas, and even the earlier works by Biber (the *Passacaglia,* in particular), Vivaldi, Leclair, Nardini, Veracini, Corelli, Handel, Tartini, Vitali (Chaconne), Locatelli, and Geminiani. Some of these old sonatas are quite difficult, but if the players can handle the Mozart and Haydn sonatas they can pick away at these older works until they get most of the meat. But even before any of the sonatas so far mentioned are attempted easy sonatas by Ehrhardt, Kayser, Gurlitt, and Hauptmann can be played. Following the more difficult Mozart sonatas come the sonatas of the 17th and 18th centuries, then Schubert's Op. 137 and Schumann's Op. 118. Weber's Op. 13 sonatas might also come in here.

Both violinist and pianist are now ready for some of the Beethoven sonatas, after which they need be afraid of none of the late works, by Gade, Grieg, Goldmark, Saint-Saëns, Schumann, Schütt, Sinding, Brahms, Rubinstein, Raff, Rheinberger, and a few new works of the last decade. In all of these sonatas the difficulties do not lie so much in technical skill (though that must be considerable) as in understanding; an ability to listen to the work as a whole and to follow it in all its intricate windings and weavings.

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

THE DISCOVERED CHORD

MR. LOUIS C. ELSON, the well-known Boston musician and writer in the *Musical Observer,* says that Miss Procter's poem on *The Lost Chord* undoubtedly refers, today, to the tonic or dominant chord, and he brings her poem up to date thus:

Seated one day at the organ,
I was awfully ill at ease,
I was hard at work inventing
Unheard-of harmonies.

I was heavily perspiring,
And in desperation, when
I struck a chord of music
Such as ne'er was heard by men.

It shivered the golden twilight,
Such a crash was never heard.
Not a chord of the ninth or thirteenth,
But the chord of the twenty-third!

It raised a tumultuous sorrow,
Like many cats in strife.
I can truly say that I never
Heard such a sound in my life.

It was full of discordant meanings,
As it came at the end of the piece,
And I held it for thirty measures,
And then I was loth to cease.

The others will seek it vainly,
That dissonant chord of mine.
It will stump both Strauss and Schoenberg
And in envy they will pine.

I never may hope to hear it
In the symphonies of men;
For it may be that only in Hades
I shall hear that chord again.

PEDAL BOARDS OF VARIOUS TYPES

BY H. C. MACDOUGALL

III

A SYMPOSIUM

IT may be well now to consider some of the objections to the C. R. P. B. (concave-radiating pedal board). It will be noted that these come from some of our most distinguished players. Dr. William C. Carl writes: "I prefer the straight board for two reasons, (1) for certainty in pedaling, and (2) for the legato touch. I have played on both types of board and have had ample opportunity of judging, in Europe as well as in this country. The only advantage of the newer board is that the player can reach the extreme ends with facility. It is not often that one is required to play in the upper register, but constantly in the center and lower portion of the board, where it is necessary to be absolutely sure of the intervals. Therefore if the keys are of the same width and equally far apart, as on the straight board, it is easier to play with a larger degree of confidence and certainty." [In the Willis type of C. R. P. B. two keys an octave apart at the front of the keys measure one foot, four and one half inches laterally; if you go back twelve inches and then measure the distance between the keys, it is less by two inches.—H. C. M.]

"As for the legato touch, it can be acquired in a shorter space of time and more easily, giving the player more facility in smooth passages and sustained work. After playing 40 recitals at the St. Louis Exposition, Mr. Alexandre Guilmant told me that he was never for a moment certain of his highest F or G without looking; and this after having played for years on the new board.

"I am in favor of the straight board primarily because I consider it more practical for general usage and especially for the church service. At the same time I am convinced that the standard works for the organ can be performed with greater ease upon it. No one is more willing than I to adopt new methods and ideas if an advantage is to be gained. After playing upon both boards for years and observing the advantages obtained by students in using the straight board, I vote in its favor."

Mr. E. E. Truette says: "I have as yet seen no advantage in the use of the C. R. P. B. over the other. I do not believe that the standard organ works are easier to execute on the newer board. On the contrary, a perfectly clear execution of many passages, such as the double pedaling on the last two pages of Guilmant's first sonata, are more difficult on the newer board. I also think that students should learn on the straight board.

"A student who has been thoroughly and systematically schooled in pedaling on a straight board can, in a few moments, adapt himself to any kind of a pedal board that he may find. I do not think the reverse is true. In a few theoretical points, such as reaching out either foot from the center to any single key or playing any passage of single notes with alternate feet in which the feet never have to cross, the advantage is with the C. R. P. B.; but in scale passages, arpeggios, all passages where it is necessary to cross the feet, as well as in octaves and all double pedaling, it seems to me that the advantage is with the straight board. With the C. R. P. B. the interval of an octave varies fully three inches in various parts of the board. What concert pianist would tolerate a piano keyboard with such irregularities?"

Mr. Samuel P. Warren writes: "The superseding of the straight by the C. R. P. B. has not in my opinion been of distinct advantage to organ playing. Neither, in my judgment, are standard works easier to execute on the newer board. Theoretically the advantage may lie with the C. R. P. B.; but my experience with both kinds only confirms me in my preference for the straight board."

Mr. Francis L. York: "I do not find that the new form of pedal board has been of any advantage, technically or otherwise; nor do I find that organ compositions are any easier on the new form than on the old. It is possible that with organs running to the high G of the pedals the extreme notes are more easily reached, but I doubt it. At any rate, these notes do not occur in the standard works of the great writers.

"Theoretically the advantage is with the new form, but even here I find the advantage is apparent rather than real, and confined to the ends of the pedal board as claimed. Now, the action of the foot at the ankle is easier, whether one plays with the point or with the heel, if the sole of the foot is *not* inclined at an angle to the floor. In order to take advantage of the curvature of the C. R. P. B. the leg must be twisted outward at the hip joint, increasing largely the tension on the muscles. In the straight form the leg is stretched at the knee, but the tension is scarcely increased at all. The form of the C. R. P. B. requires a position and action of the foot and leg comparable to the position of the hand and arm in piano playing if one swings one's elbows up and away from the body. Such a position no one has yet, to my knowledge at least, advocated."

Mr. J. Lawrence Erb also is opposed to the C. R. P. B. "I do not consider the superseding of the straight by the C. R. P. B. either a distinct gain to organ playing or any gain at all. I see no more reason for a concave-radiating board than for the concave-radiating manuals—and we know that the attempt to introduce them a few years ago failed. I refer to the Clutsam keyboard.

"I do not find standard organ works easier to execute on the newer board—in fact, I find the concavity especially a nuisance, and I feel almost as strongly about the radiation. Possibly the theoretical advantages are with the C. R. P. B.; but the practical advantages are, I think, distinctly with the straight board."

Mr. Charles Galloway: "I do not think the superseding of the straight by the C. R. P. B. has been of any advantage to organ playing, nor do I think that standard organ works are easier to execute on the newer board. Theoretical advantages are, I suppose, with the C. R. P. B. However, lest we forget, theory and practice often clash."

Mr. Gordon Balch Nevin is not so strongly opposed to the C. R. P. B. and adopts a judicial attitude on the whole question. He writes: "I believe that the C. R. P. B. offers some helps to the attaining of good playing, but I do think that until players are produced who are the peers of men like the great Archer, it is foolish to claim that the new board has been an advantage to organ playing. Whether or not standard works are easier to execute on the new board depends, (1) on the design of board, and (2) on the size of the player. I find chromatic scales, such as those in Mendelssohn's first sonata, to be easier on the new board; personally, with my rather unusual height and length of limb, I find no more difficulty in using the straight board than the new one. The theoretical advantages are with the new type of board; whether

or not the practical advantages are with it also depends on the particular player and more especially on the design of board used. To me the 10-foot six-inch radius board is much better than the eight-foot six-inch."

In conclusion, I will quote two letters that seem to sum up the whole matter admirably. One is from Mr. Harvey B. Gaul, who lightens the subject with a little fun. "I certainly believe," writes Mr. Gaul, "that the C. R. P. B. has facilitated organ playing. I have noticed it among my pupils, particularly women pupils. Before the advent of the C. R. P. B. the female of the species was less elastic than the male, that is, found it difficult to reach upper notes. Now even the hobble skirt has no terrors for her. Seriously, I believe it to have been of great benefit. The C. R. P. B. has made many of the erstwhile inaccessible works almost easy to play, to wit, the Bach *Toccata* in F, which carries the pedals up to high F. It is now within reach, while it took almost seven-league boots and a strained imagination to hardly touch it.

"It is far easier to learn to play on a concave-radiating board and then adapt oneself, if necessary, to the older, straight style than *vice versa*. It does not seem to me that there is any theoretical question about the C. R. P. B.; however, I presume that it is a question of taste like suffrage, tango, or cubism. I give my approval to the three, and heartily endorse the modern pedal board."

Mr. Clarence Eddy's letter runs as follows: "In reply to your questions regarding the concave-radiating *versus* flat pedal boards, let me say that the use of the former has been a distinct advantage in the smoothness and facility of pedal playing. The standard organ works are easier for myself to execute upon the C. R. P. B. than upon the flat type of board. There is no advantage to students in learning to play with the C. R. P. B. in mind while playing habitually with the flat type. *It is all a matter of habit!* One can accustom oneself to almost anything, and, after having acquired the habit, many are too conservative to adopt or even consider something which is acknowledged to be better. Practical advantages are always superior to those which are merely theoretical. Some organists consider the straight and flat type more advantageous, others prefer the straight and concave (Guilmant had that idea). Although I was brought up on the former, I feel at present more at home on the concave-radiating type."

ANTHEM SINGING AGAIN

BY CHARLES N. BOYD

A QUARTET choir of trained voices could not possibly be interested in the ensuing remarks, which are offered for the consideration of chorus choirs, the choirs of the people. It is strange that the framers of the Constitution failed to include a paragraph in favor of the quartet choir. Unfortunately it is growing late to propound an amendment, for the chorus, with the quartet in its proper assisting capacity, is rapidly increasing in favor, and there may yet be a return to a more pristine nobility of church music.

The director of the average chorus choir must plan his work carefully and economically. Unlike the director of a symphony orchestra, he cannot call an extra rehearsal or two before the concert. In two hours or less he must get the music for the week in presentable shape. The program will usually include some new selections, which must be promptly assimilated, and some previously given, which should be repeated with increased effectiveness. In order to do this successfully there are some old, old factors which the choir must constantly keep in mind.

The first is accuracy of pitch, especially in chromatic passages. Thanks rather to the steadily improving music work in the public schools than to the voice teachers, our choruses are improving in reading ability. But we still need more readers who grasp phrases rather than the Eliza-crossing-the-ice variety who can only progress from note to note. The director who wishes the anthems absolutely in tune will give careful attention to the progression of the individual voice parts, often rehearsing separate parts in difficult phrases, and the choir will assist by learning to look ahead and to listen carefully.

Next is rhythm. Perhaps it should be first, according to von Bülow's saying, "In the beginning was rhythm." The average student of instrumental music is reminded of rhythms much more frequently than the singer, and this is often one of the choir's deficiencies. If the rehearsals are partially held with piano, or still better, without any accompaniment, the singers will be reminded of the

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS FOR MIXED VOICES

COLERIDGE-TAYLOR, S.
No. 12,616. Lift up your heads $0.12
A short festival anthem, spirited in style, easy yet effective.

RODNEY, PAUL
No. 12,635. Calvary. Arr. by Ross Hilton ..... .12
An anthem arrangement, with tenor or soprano solo, of this favorite song.

CATHOLIC CHOIR MUSIC

GUILMANT, ALEXANDRE
No. 12,607. Ave verum $0.10
An easy and very attractive setting of the hymn; Latin words only.

SACRED MUSIC FOR MEN'S VOICES

GOULD, J. E.
No. 12,642. Jesus Saviour, pilot me. Arr. by C. C. Robinson $0.10
An effective arrangement of the favorite tune.

GAUL, A. R.
No. 12,667. No shadows yonder (Holy City). Arr. by Geo. B. Nevin ..... .10
One of the finest numbers from the favorite oratorio, arranged for quartet or chorus of men's voices, with tenor solo.

ZUNDEL, JOHN
No. 12,650. Love divine, all love excelling. Arr. by C. C. Robinson ..... .12
Zundel's popular hymn tune has been effectively arranged for men's voices, the treatment varying with each verse.

PART-SONGS FOR MIXED VOICES

BLAND, JAMES
No. 12,636. Carry me back to old Virginny .. $0.10
A pleasing arrangement of the old-time favorite; humming accompaniment is used with good effect.

OLD ENGLISH AIR
No. 12,628. Drink to me only with thine eyes .. .12
A four-part arrangement of the old song; always interesting to an audience.

PART-SONGS FOR WOMEN'S VOICES

ARNE, THOMAS A.
No. 12,656. The lass with the delicate air $0.12
A two-part arrangement of this delightful old song.

ASCHER, JOSEPH
No. 12,631. Alice, where art thou? ..... .12
Arranged for four-part chorus or quartet; one of the gems of the old repertoire.

BEHREND, A. H.
No. 12,639. Daddy ..... .12
For four-part chorus; humming effects are very happily introduced.

BLAND, JAMES
No. 12,637. Carry me back to old Virginny .... .12
Arranged for quartet or four-part chorus; the second soprano has the air part of the tune.

BOHEMIAN FOLK-SONG
No. 12,617. The treasure. Arr. by Louis Victor Saar ..... .12
For three-part chorus; a concert number full of fine vocal effects.

BORCH, GASTON
No. 12,611. A summer day. Op. 75 ..... .16
A concert number for women's clubs, with brilliant piano accompaniment.

FLETCHER, PERCY E.
No. 12,651. Softly sink in slumbers golden .. $0.12
A lovely little lullaby for a quartet or four-part chorus; to be sung unaccompanied.

FOSTER, STEPHEN C.
No. 12,627. Come where my love lies dreaming .12
In three-part arrangement; one of this American composer's best songs, in choral form.

HOLST, EDUARD
No. 12,657. Happy birds ..... .12
A delightful two-part song, in waltz rhythm, with effective piano accompaniment.
No. 12,673. The same, arranged for three-part chorus. ..... .12

MARSCHAL-LOEPKE, G.
No. 12,622. The piper ..... .12
Pastoral in style, with a piano accompaniment suggestive of the harp. The tune is piquant, the parts easy. For three-part chorus.

NEAPOLITAN AIR
No. 12,621. Il granatello. Arr. by G. B. Nevin .10
A folk-song arranged for two-part chorus, bright in melody, lively in rhythm.

PORTUGUESE FOLK-SONG
No. 12,614. Love's yearning. Arr. by Louis V. Saar ..... .12
For three-part chorus, with tenor or soprano obbligato; piano accompaniment. A very effective concert number.

SCOTT, LADY JOHN
No. 12,629. Annie Laurie ..... .12
Arranged for three-part chorus with piano accompaniment in harp style; humming accompaniment for the two supporting voices.

SACRED MUSIC FOR WOMEN'S VOICES

SCHUBERT, FRANZ
No. 12,616. The Almighty. Arr. by Louis V. Saar $0.12
For three-part chorus with soprano obbligato solo; a splendid festival arrangement of Schubert's famous song.

PART-SONGS FOR MEN'S VOICES

ASCHER, JOSEPH
No. 12,630. Alice, where art thou? $0.10
A four-part arrangement of this favorite old song.

BEHREND, A. H.
No. 12,638. Daddy ..... .12
This lovely song has been cleverly arranged by Ross Hilton; contains some striking humming effects.

GUCKENBERGER, B.
No. 12,677. In praise of song (Das Lied) ..... .10
A fine part-song in the German style; B flat highest note for the tenor.
No. 12,671. Song of greeting (Begrussungs Chor) ..... .08
Excellent for opening a concert.

RUBINSTEIN-WATSON
No. 12,621. Voices of the woods ..... .12
A four-part arrangement of Rubinstein's popular *Melody in F*.

THOMAS, J. R.
No. 12,633. A jolly good laugh ..... .12
A lively piece, easy to learn, with passages to be given in laughing tone of voice, a very effective light number for concert use.

TOSTI, F. PAOLO
No. 12,625. Beauty's eyes ..... .12
A four-part arrangement of this favorite song; a good number for school glee clubs.

rhythms much better than when rehearsals are invariably accompanied by the organ. The singers should be taught to give the final notes of phrases their proper and exact time, whether long or short. Precision of attack is good, but precision of release is just as important. Be careful also to see that the right proportion is maintained between dotted lines and their followers. Very frequently a choir makes the proportion two to one instead of three to one, that is, a quarter and an eighth making a triplet, instead of a dotted eighth followed by a sixteenth.

Very frequently directors have to put up with a sadly unbalanced choir, so far as the number of voices is concerned. If twenty sopranos are enrolled, and only four tenors can be enlisted, the balance of power will have to rest with the sopranos, at least *pro tem.* In such cases the directors will not, we hope, try to make the tenors magnify their voices threefold, but will restrain the soprano volume to a semblance of balance. Remember that a good composer will give the alto, tenor, and bass interesting parts, as well as the soprano, and let them be prominent on occasion. The shading needs careful attention, for it is remarkable how cheerfully a choir will maintain a pleasant *forte,* and how reluctantly a steady *piano* or *diminuendo* is attained. It would be fatal to many directors if the choir, suddenly and without supplication, should sing an anthem exactly according to the indicated shadings. And yet these same singers admire the beautiful shading of our best singing societies.

There are still many misguided individuals, even in the best churches, who enjoy clear enunciation of words from the choir loft. Some modern composers have made use of voices to which no words are assigned, but their compositions are not yet accepted for ordinary choir use. If the words are worth singing, they should be made intelligible to the average auditor, but constant care is necessary to maintain good enunciation.

Closely allied with this is an interpretation which shall reflect the spirit of the text, granted, of course, that the composer has prepared an appropriate setting. In the *Te Deum* the choir is usually willing to make the phrase "Thou art the King of Glory" brilliant enough, but it is not always ready to change at "We believe that Thou shalt come." Many of the greatest singers have made the most profound impression by their sympathetic interpretation of simple melodies, and the same course is open to any choir that will take the trouble to consider texts and their effective delivery.

Another matter of first importance is that of tone quality. It can hardly be expected that the average choir will contain many singers who enjoy private lessons with good teachers, and who have learned to be alert in the matter of attention to tone quality. But the director can do much by keeping the subject constantly in the minds of his singers; by calling attention especially to good results, as progress toward a high standard; by repeating phrases for the sake of improving the quality, and by encouraging singers to listen.

Every choir should do some unaccompanied singing, at least in rehearsals. Thus there is not only a decided gain in independence, but many of the points named above are brought out more clearly for the attention of the singers. Even a well-written hymn-tune, carefully sung without accompaniment, would be more welcome to many congregations than a pretentious anthem. And when once the choir has gained some proficiency in *a cappella* singing, there are rich treasures available in music of every grade.

When choirs learn to attend to many of these details of performance for themselves, instead of trusting, nay, inviting interminable repetitions of advice from the director, not only will the performances be much better, but the rehearsals will be easier and infinitely more enjoyable.

———*———

THE ECHO ORGAN

BY H. C. M.

PROMPTLY as the months roll around comes the booklet issued by the College of the City of New York tabulating the excellent programs of Samuel A. Baldwin, Professor of Music at the institution.

Mr. Baldwin has now completed his seventh year of recitals, and the fifty-nine programs of this year exhibit his catholic taste and great industry, and form an excellent list of the best current organ literature.

Necessarily the educational side has been kept uppermost, but the programs, according to Mr. Baldwin, "have been constructed with the idea of interesting the many thousands who attend these recitals." A few statistics illustrating this may be significant: 263 compositions were represented (the *Parsifal Vorspiel* was played five times, the *Oberon* overture, *Pilgrims' Chorus* (*Tannhäuser*), Finale to Tchaïkovsky's sixth symphony, Rubinstein's *Kammennoï Ostrow,* Handel's *Largo,* Dvorák's *Largo* from the *American* symphony, Batiste's *Communion* in G,—these all four times each), of which 24 were from J. S. Bach, 38 were sonatas, suites, etc., or single movements therefrom, 132 miscellaneous and 69 transcriptions; six of the Bach works were played four times each.

It seems to me that this forms a remarkable set of programs.

* * *

THE appointment of Mr. Lemare as official organist at the San Francisco World's Fair in 1915 has been sent out through the Associated Press. Just what this means is not apparent. Will Mr. Lemare give all the recitals himself, will he select other organists to assist him, or is his position a purely honorary one? I see that the appointment has already given cause for grumbling. Our contemporary *The Diapason* in its issue of June 1 writes, "Why should an American exposition turn its organ music over for direction to an outsider?"

Let us wait and see what happens.

* * *

ONE hears on all sides of the installation of great organs, but it is seldom that one gets an intimate impression of any one of them. I am therefore glad to print a statement in regard to "the largest organ in the world" from the pen of Mr. Clemson, Dean of the N. E. Chapter of the Guild of Organists.

"During a visit to Hamburg the organ in St. Michael's Church was heard and played on by the writer. Until recently this was claimed to be the largest organ in the world, though Liverpool and Breslau now dispute that position.

"However, it depends on whether the number of pipes or the wind pressure is the standard.

"The organ in question is in a large Lutheran church, and is much too ponderous for any building smaller than a cathedral. When the full organ is played the vibrations of sound are felt unpleasantly through every fibre of the listener.

"The visitor's attention was claimed especially by a novel *crescendo* pedal, which is a horizontal roller, somewhat like a huge rolling-pin used by a cook. Now, as the arc described by the customary balance-pedal is certainly not more than the third of a circle, it follows that over one hundred speaking stops would have to be attached, and crowded very closely; whereas the *crescendo* roller in the St. Nicholas organ describes several circles before reaching its full value. It seemed to the visitor that this invention was worthy of chronicle."—W. J. C.

* * *

"A READER of THE MUSICIAN" writes in regard to a troublesome problem of choir and organ, arising from the placing of the choir in an alcove, under an arch, back of the minister, with the organ at one side. So far as I can gather from the letter, the tone of the choir is smothered by the position and character of the choir loft. The only thing to do in such a case is to remodel the pulpit end of the church. Incidentally, the architect responsible for such a botch might be escorted from town with the choir *en fête* singing

"Believing we rejoice to see the curse removed."

* * *

PLANS and specifications of the San Francisco Exposition organ are already published. The organ, to our great (!) disappointment, is not to be the "largest" organ in the world, but merely "one of the world's large organs." Congratulate the builders, Messrs. Austin, of Hartford, Conn., on their good taste.

No one need think for an instant, however, that this is an instrument of 70 or 80 stops only. There are 113 speaking stops not counting tremulants, divided among four manuals and a pedal, voiced at from five inches to twenty-five inches wind pressure and including 29 reeds, 15 strings, and 17 diapasons. The specification is too long to print, but it may be summarized thus: Great, 23 stops (4 diapasons); Swell, 25 stops (3 diapasons); Choir, 18 stops; Solo, 15 stops; Echo, in the dome above the auditorium, 10 stops; Pedal (4 diapasons), 22 stops.

At the close of the Exposition the organ will be taken down and set up in the Exposition Auditorium Building, where it will remain permanently and be used as a municipal organ for the city of San Francisco.

* * *

It is not often that an organ piece is so striking as to be arranged for other instruments. Imagine Mendelssohn's organ sonatas, for example, adapted for piano. We have, of course, a few almost classic examples, such as Liszt's arrangements of some of Bach's fugues and toccatas, or Busoni's transcriptions of some of the same master's choral preludes. At the other end of the scale of musical worth we have a few pieces like Batiste's *Communion* in G or Lemare's *Andantino* in Db, whose ear-haunting, if sugary melodies, have given them vogue under all sorts of disguises. Seldom, however, has any piece of good, honest organ music, neither a great work of art nor a sweetmeat, attracted any attention from the orchestral arrangers —at least so far as my experience goes. Consequently, I was surprised to read in the latest number of *The Musical Standard* that Guilmant's *Funeral March and Hymn of Seraphs* had been arranged by the conductor of the fine Harrogate (England) Orchestra and played at a high-class concert there in memory of those who were lost when the "Empress of Ireland" sank in the St. Lawrence River. Our repertoire of funeral music, aside from three or four well-known marches, is so small that the striking composition of the French organist may well have recommended itself as a suitable elegy.

* * *

In another column there is printed the third instalment of the symposium on the concave-radiating pedal board. In this connection a few facts as to the history of the pedal board may have some value. They are derived from Audsley's *Art of Organ Building*. In 1834 the principle of radiation in the construction of the pedal clavier was applied by Elliott, an English builder; this is believed to be the first application of the principle. Willis combined the concave and the radiating principles; the St. George's Hall, Liverpool, organ, in 1885, exemplified this type. The College of Organists' pedal board was parallel and concave, with the short keys forming the arc of a circle, middle C of the pedal directly under middle C of the manuals. This was recommended in 1881. This type of board seems to have met with little favor. In America the straight and flat board was used up to 1903.

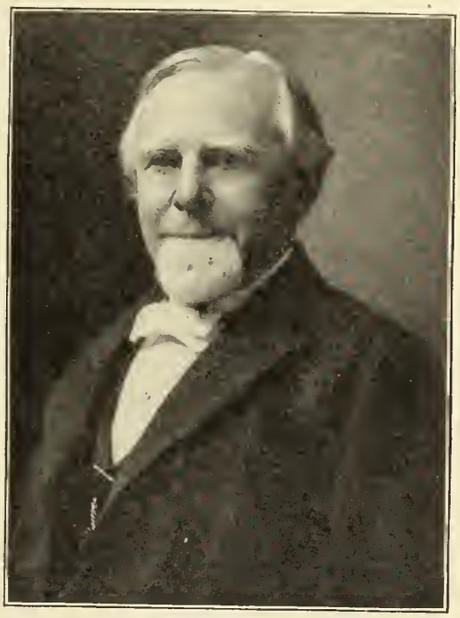
WILLIAM DRESSLER

Mr. William Dressler, one of the older musicians of New York City, died there July 2, in his eighty-eighth year.

William Dressler was one of the last of the old school of American musicians, born in Nottingham, England, of German parents, in 1826. He was graduated from the Cologne Conservatory of Music in 1847.

When a young man, William Dressler played first violin at the opera house in Wiesbaden, where he was afterwards conductor. Coming to America in the early fifties, he traveled through the United States and Canada as solo pianist and accompanist with Ole Bull. In those days he was an intimate friend and associate of Richard Hoffman, S. B. Mills, Geo. F. Bristow, Geo. W. Morgan, and Theodore Thomas. After traveling several seasons in concert companies, Mr. Dressler settled in New York, devoting his time to composing, accompanying, teaching, and organ playing. In his day he was the leading accompanist, and was in constant demand.

His first prominent church position was as organist and choirmaster of the Fourth Ave. Presbyterian Church, of which Rev. Dr. Howard Crosby was pastor. Other churches where he played at different times were St. Charles Borromeo's and St. Peter's Roman Catholic, Brooklyn, and St. Peter's Roman Catholic, Jersey City, being at the last named for eighteen years. His work in the Catholic churches led him to compose and arrange music for that service, which compositions have been used extensively throughout the world. He was, for many years, musical editor of the then well-known houses



THE LATE WILLIAM DRESSLER

of Wm. Hall & Son and J. L. Peters. Of late years he has devoted himself to composition.

Mr. Dressler was married to Miss Mary Hyde of Norwich, Conn., a descendant of the old New England Hyde family, who died in 1899. He leaves three children, one son and two daughters, all of them accomplished musicians; one daughter being Mrs. Theo. J. Geisler of Portland, Oregon, and the other the well-known 'cellist, Miss Mathilde Dressler; the son being Louis R. Dressler, organist and director of music at All Souls Unitarian Church, New York.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

At this season every teacher is giving some thought to the work for the next year, looking over teaching material and technic for the purpose of improving her work. It seems fitting, therefore, to consider the question as to what the piano teacher's real work is in a community? What is her mission, and how best may she accomplish it? Is the main object to teach students to play the piano, or can she go farther than this and lead them along higher paths toward musical understanding and appreciation?

When one stops to consider the number of young persons studying music in this country and the vast amount of money that is put into lessons, one cannot fail to see that few students survive the elementary grades, and that those who discontinue their practice have little or nothing to show for their time and money.

In the large cities throughout this country the interest in music is intense and concerts are almost as well patronized as in Europe. But in the smaller cities, especially west of the Mississippi, there is practically little or no interest in music; that is, the general public can hardly be induced to attend any kind of concerts unless some great prima donna be advertised. Who is responsible for this general apathy in regard to music in these small cities? I cannot help but feel that the responsibility lies at the piano teacher's door.

It is the piano teacher who gets the little ones. She has the opportunity to mold them as she will, and it is up to her to make the study of music a serious study, not merely an accomplishment.

It is my privilege to talk with a great many music teachers at different times in the year, and all complain of the short time which pupils have to practise and how difficult it is to teach the piano when so many other demands are made on the pupil. This is true, all of us know. Then why not give a little more attention to *music* and a little less to *piano* through the years that the schools demand so much attention and time?

For many years I have been trying to make my instruction fruitful and the lesson periods fly by so quickly that I have found it necessary to do the more general music work in classes. The results have been so much better since that work was begun that I would like to urge every piano teacher to consider some such work if they are not already holding music classes.

While it is desirable to hold classes in musical appreciation and history, still ear-training and elementary theory seem to me to be most necessary. There are many books outlining such courses. Some follow the melodic idea, and some the harmonic. To me the most developing, and perhaps the most interesting, is teaching ear-training, not from the standpoint of "pitch," either relative or actual, but from the realm of "tone color." Tone color has a direct bearing on tone production; thus every ear-training lesson, conducted on these lines, helps the piano teacher in her interpretative work.

Ear-training, unless accompanied by elementary theory, is not, as a rule, productive of permanent good; for the ear impression is a fleeting one at best if the mind does not analyze what is heard.

While these music classes take the teacher's time and strength for which she gets no adequate financial return, the returns from the added interest, not only in her work but in the work in music in general, can hardly be estimated. Then when our pupils stop taking lessons, they do not stop growing; their interest in music is still to be depended on, and the musical imagination can be stirred by any good concert. They will form a class of intelligent listeners and will be a constant advertisement of good teaching. It is a great encouragement to me to go to a concert and see in the hall nearly every member of my class, because I then know that they are becoming more interested in music as an art, and more intelligent citizens.

So in laying out the work for the coming season, why not try a class in ear-training and theory combined? Put the little ones in it and ask them to do a little regular work on these lines, taking it, if necessary, from the piano practice time. You will find at the end of the year that they can learn their piano lessons more quickly and more intelligently for this short time spent weekly in the realm of tone.

Let us try this year to do more for the art of music. The late W. S. B. Mathews used to say in his classes that "if you stand up for the truth, the truth in the end will stand up for you."

* * *

I am a great lover of music, but unfortunately am unable to take lessons because we are too poor to afford such a luxury.

We have a piano (a mighty inferior one) and through the aid of a friend I can read notes, know all of the major and minor scales, but I cannot play.

When it comes to reading notes in groups of three I have to stop and figure out what they are.

Would you be kind enough to suggest what kind of music books I could buy that would help me greatly without the aid of a teacher?

I love music so much that I would rather a thousand times practise than eat.

I am 25 years old. Do you think I am too old to learn?

Your letter interests me greatly and I regret that you did not give your address, for it may be that I can give you some assistance as to what and how to study that will prove a help to you, for which I have not space in this column. If you care to write me I will be glad to give you some specific directions.

I have found the book called *Lessons in Sight Reading,* by John Mokrejs, of great assistance in the reading of intervals, which is the beginning of chord reading. As I understand his book, he is working toward the "touch system" for piano-reading, following along the lines of the good typewriter systems, which do not permit the pupils to look at the keys when writing. This book has helped my pupils. Miss Frances Frothingham has a book called *Studies in Sight Reading,* which is also very useful, but I rather think, for what you want, the first named book will be better.

The Master

Just as a Stradivarius responds to perfection at the touch of the master, just so will the Victor typewriter appeal to a good operator.

For its action is delightfully smooth and easy—its speed unlimited—and the work it will do most perfect.

VICTOR TYPEWRITER

MODEL No. 3

Combines visibility with durability; highest possible economy with broadest adaptability; every desirable feature of every other typewriter, together with many vital improvements found in **no other** machine.

BE A TEACHER OF MUSIC!

SPECIAL ONE-YEAR COURSE

Teach music in the public schools. The pay is good and the work pleasant. We are the oldest school in the country offering a complete and thorough course in public school music that may be finished in one year. We also teach Drawing, Domestic Science, Domestic Art, Physical Training, Manual Training, Industrial Arts. Strong faculty, beautiful location, unsurpassed equipment. Also two-year course. Catalogue sent free. For detailed information address

THE SECRETARY: 3017 Grand Boulevard, Detroit, Mich.

When you write to advertisers, mention THE MUSICIAN

Nothing takes the place of lessons, and while we have many good books for self-help, still I can hardly advise you to play until I know more of what you can do. Generally, I should say that an absolute beginner's book would be the best for you in the long run, such as my *Child's First Grade,* for that not only begins at the beginning, but gives many suggestions as to chord work which cannot fail to be necessary in your case. Take music that is too easy rather than too difficult for the very beginning, and consider not the reading so much as *how it sounds.* Take all those simple melodies in my book and imagine words to them, and literally sing them with your fingers. Have the melodies sound smooth without breaks, except where you would breathe naturally if you were singing, and make even those little one-line tunes mean something. Have the left-hand melody just as good as the right-hand, and when you come to left-hand parts where the left hand is serving merely to enhance the melody or to accompany the melody, be sure it is *softer* than the melody. Consider everything as *singing* and use your *ears.* Listen to everything, and you cannot fail to progress. Remember music is not alone learning to read. That is the A. B. C.'s of it. It is what the music *says* that counts.

I will be glad to help you if I can, so do not hesitate to write me personally. Music can help you over the hard places in life as it has helped me and many others. Stick to it.

* * *

I have been teaching Mason's *Fundamental Technics* for the last four years, and some of the other teachers in my town say very hard things about it. What stand should I take in the matter?—L. B.

If you are teaching the *Technic* well, you won't need to do anything; the work will speak for itself. The Mason *Technic* needs no champion, for the pupils who are well taught in this work are its best advertisement. I will say, however, that the Mason *Technic* is no different from any other technic used by artists, only that we use it as a foundation technic, giving different methods of tone production from the very beginning. Our children play with depth of tone and have a real conception of what tonal beauty means, whereas, with other systems, touch is one of the last things taught. Others work for facility at the beginning, whereas we try to blend the elements which go to make up artistic piano playing. The methods of study outlined in the *Fundamental Technics* of Mason are used by all the great artists without exception.

There is only one legitimate criticism of the Mason *Technic,* which is that it was not made in Europe! In the opinion of some teachers this is fatal.

THE SUBJECT OF STANDARDIZATION

(*Continued from page* 520)

In closing, let us say that the coming year is one in which work will count. Every teacher should determine to give support to the movement for standardization, by voice and pen, and particularly by being ready to take the examinations when offered, thus giving the most powerful possible endorsement to the movement. It is nearly three years ago (September, 1911) that THE MUSICIAN published an account of the work on this line done by an association of musicians in France, following it later with other articles showing what might be done in this country. Reprints of these suggestions were sent to the officers of the various state associations with a letter urging the thorough consideration of the question of standardization.

If the next three years show as splendid progress as the past three, we are inclined to the belief that by that time standards for music teaching will be fixed and accepted in many of the states of the Union. May it be so!

GENERAL NEWS ITEMS

NEW SOUTH WALES has taken steps to establish a conservatory of music, under the control of the Department of Public Instruction. The authorities advertised for a director in certain English musical papers, stating that the appointment would be for a term of five years, with a salary of $6,250 per annum, and a traveling allowance of $500 to reach the school.

CARL C. MUELLER, a well-known composer and teacher of New York City, died June 4. He was born at Meiningen, Germany, July 3, 1831, and had therefore nearly completed his eighty-third year. In 1854 he came to the United States and located in New York, with a piano manufacturing firm, later acting as leader in Barnum's Theatre. In 1864 he turned his attention to teaching, making a specialty of piano and harmony. A number of composers with fine reputations were among his pupils.

DAVID BISPHAM has been invested with the degree of LL.D. by his *Alma Mater,* Haverford College, located near Philadelphia. This is probably the first time that a member of the singing profession has been so honored.

THE Toledo Musical Art Society, at a recent meeting, went on record as favoring credits toward graduation for high school students who are under the instruction of private teachers of the city. THE MUSICIAN has urged this plan in almost every issue for a long time past. There is an opportunity for very effective work in favor of this method in many other cities.

THE Iowa State Music Teachers' Association met in convention at Muscatine, June 17-19. Prof. Carl Seashore, of Iowa State University, was one of the prominent speakers, his address being on the subject, *Measurement of Musical Talent.*

FELIX WEINGARTNER has been appointed general musical director of the Darmstadt Conservatory. Other members of the faculty will be: Carl Flesch, the violinist; Wilhelm Bachaus, pianist; and Hugo Becker, 'cellist. Darmstadt is a city of about 80,000

. . . . . *before you purchase any piano*

be sure to read "The Pith of the Piano Problem," the 32-page booklet which we are prepared to send free without obligation to all readers of The Musician who may be contemplating the purchase of a piano.

¶ This booklet tells the important things to look for, and the pitfalls to avoid, in selecting a piano.

¶ Far too many pianos have merely a beautiful exterior finish, while the interior of the piano—the part you don't see, but by far the most important—is slighted or cheapened. The pleasure derived from such pianos is ephemeral and fleeting. Not so the world-renowned

Sohmer

"The Piano of Permanent Tone"

¶ A piano is for a great many people a *life-time* purchase! Why make such an important purchase without knowing for yourself just what you are doing? "The Pith" tells you. It gives TESTS by which you can judge the quality of different pianos.

¶ Write for this booklet if you contemplate, even remotely, exchanging your piano or purchasing a new piano. You will find it not at all dry or technical, but live and interesting.

¶ When you write, we shall consider it a favor if you will mention the make and age of your present piano (if you have one), so that we can classify your inquiry and take proper care of it. Writing for this booklet does not put you under the slightest obligation. Write *today,* mentioning The Musician.

THOMAS KOSCHAT, an Austrian composer, best known in the United States for his arrangement of the Carinthian folk-song, *Forsaken*, died at Vienna, May 19. He was born August 8, 1845.

J. CUTHBERT HADDEN, a British musician and writer on musical topics, died at Edinburgh, June 1. He was born September 9, 1861.

THE annual meeting of the Oliver Ditson Society for the relief of needy musicians was held in Boston, May 31. The president's report showed a large number of cases in which much needed assistance was given. Among the officers are Arthur Foote, who is president, and George W. Chadwick, who is a trustee. This fund is to help in case of destitution, and not for educational purposes.

THE Northwest Music Teachers' Association met in convention at Portland, Ore., June 9-11. The question of the licensing of teachers of music was warmly discussed. Although a bill to require licensing failed in the last state legislature, another effort will be made to secure the enactment of a law to that effect. The next meeting will be held at Tacoma.

CARL ATTENHOFER, a German composer well known in the United States for his compositions for male voices, died May 23, at Zürich. He was born May 5, 1837, at Wettingen, Switzerland.

———*———

WITH THE SCHOOLS AND TEACHERS

MR. HENRY M. RUDESILL, Hutchinson, Kan., assisted by some of his pupils, gave a concert, June 16. Ensemble music for two pianos was quite a feature of the concert. Weber's *Storm*, arranged for organ and piano, was a very successful number.

MR. HERBERT WILLIAM REED, Bryan, Tex., presented a number of his piano pupils in a recital, May 29, assisted by the Lyric Quartet, also made up from Mr. Reed's class.

MRS. ADDYE YEARGAIN STEMMLER, St. Louis, held two closing recitals with a demonstration of the Dunning System, of which Mrs. Stemmler is a representative, June 12 and 13.

THE C. R. Skinner School of Music, Expression, Art and Languages, Bloomington, Ill., gave a Japanese operetta, entitled *Princess Chrysanthemum*, by C. King Proctor, June 5. The regular commencement exercises of the school were held June 9. Seventeen pupils received diplomas and certificates.

THE commencement concert of the Department of Music, Central State Normal School, Mount Pleasant, Mich., was held June 22. Mr. Wm. E. Rauch is director.

MR. WILLIAM H. RIESER, organist of St. Mary's Church, Rondout, N. Y., recently celebrated the thirtieth anniversary of connection with the church. Mr. Rieser makes his home in Kingston, N. Y.

THE tenth annual commencement of the Kroeger School of Music, St. Louis, was held June 18. Twenty-two pupils received diplomas and certificates.

MISS JULIA HUGHES, of Altoona, Pa., gave a public demonstration of the work of her pupils, and of the classes in the Fletcher Method. The little folks proved the value of their training.

MR. ARTHUR E. JAMES, of Everett, Wash., presented a number of his piano pupils in recital, June 16.

MR. HARRY R. DETWEILER'S Repertoire Class at the Columbia Conservatory, Aurora, Ill., gave eight concerts, June 8-12.

PUPILS of the Henneman School of Opera, St. Louis, gave a series of *Scenes from Operas*, in costume, June 17, in the auditorium of the Henneman Hall.

THE commencement exercises of the West Side Musical College, Cleveland, Mr. Stephen Commery, director, were held June 23. Eighteen pupils received diplomas and certificates.

THE Seton Hill School of Music, Greensburg, Pa., held its annual examinations for graduates, June 3. Mr. Adolph Foerster, of Pittsburgh, was the examiner.

THE commencement exercises of the College of Fine Arts of the Syracuse University were held June 6 and 8. Mr. Harold Butler, of the Vocal Department, sent to THE MUSICIAN a number of programs given by himself and his pupils in and near Syracuse during the spring.

THE annual Concert of Sacred Music was given at Wellesley College, June 7, under the direction of Prof. H. C. Macdougall. The College Choir was assisted by the Choir of Appleton Chapel, Harvard University, Prof. A. T. Davison, director.

THE Minneapolis School of Music, Oratory, and Dramatic Art held the commencement exercises June 12. The post graduate and senior classes contained 35 pupils.

MR. WARREN D. ALLEN, dean of the Pacific Conservatory of Music, San Jose, Cal., sends us an interesting booklet about the school and its work.

THE Musical Art Circle, of Brooklyn, pupils of Mr. G. O. Hornberger, gave an interesting program, June 6. This program contained a number of ensemble works.

MR. ARTHUR SCHUCKAI arranged recitals by a number of his pupils, at Branford, Conn., June 4 and 5. With the program Mr. Schuckai sent out an interesting leaflet on the subject of giving recitals.

PUPILS of the New York School of Music and Arts, Mr. Ralfe Leech Sterner, director, gave a concert at the Auditorium, in the John Wanamaker Store, New York City, June 5.

THE Hughey School of Child Culture, teachers' training department, of the James Milliken University, Decatur, Ill., held class day and commencement exercises, May 28 and 29. There were ten graduates.

JUNIOR PUPILS of the Cosmopolitan School of Music, Chicago, gave a recital of music for piano and for violin, June 6.

MR. ETHAN W. PEARSON, Somersworth, N. H., gave a recital by twenty of his pupils, playing a program of interesting numbers.

MR. LOUIS ARTHUR RUSSELL, of the College of Music, Newark, N. J., is giving a summer course at St. Mary's Academy, Columbus, O. He will be there until the middle of August.

MISS JULIA E. SETTLES, of Boston, arranged a recital by 22 of her pupils, June 3. Miss Settles is a pupil of Mr. John Orth, the well-known pianist, of Boston.

MR. W. L. BLUMENSCHEIN, of Dayton, O., resigned as director of music in the First Baptist

Church, and will spend the summer and early fall in Europe.

SENIOR STUDENTS of the Torrey Studio, Boston, presented a program of songs by classical and modern composers, American, English, French, German, and Italian, May 28.

MRS. W. F. RANSOM, of Pasadena, Cal., gave her tenth annual pupils' recital, May 21, assisted by Mr. Leo Ohmler, violinist and composer.

PUPILS of the Marlborough (Mass.) Piano School, Mlle.Leonie La Bossiere, principal, gave the seventh annual piano recital June 30. A large number of pupils participated. Prizes were given for special excellence.

COMMENCEMENT exercises were held by the school of letters at the Pennsylvania Industrial Reformatory. Huntington, Pa., in connection with an exhibit of the industrial departments, June 25. Musical numbers were given by the orchestra, vocal and instrumental quartets, band, etc., with numbers on the organ by Mr. Frank B. Patton, organist and director of music at the Reformatory.

PUPILS of Mr. Lester S. Butler gave an informal vocal recital at Worcester, June 20.

MR. SAMUEL W. COLE, of the New England Conservatory, Boston, attended the closing exercises of the solfeggio department at the Paris Conservatoire. Mr. Cole will spend some time in London studying public school music teaching methods.

THE American Conservatory of Music, Chicago, Mr. J. J. Hattstaedt, director, held its 28th annual commencement exercises and concert June 18. In the post-graduate department 19 pupils received diplomas; in the collegiate department, all branches, 89; in the teachers' department 96 received teachers' certificates.

MR. MELVIN HURD BRYANT, violinist, a pupil of Mr. Karl Rissland, of the Boston Symphony Orchestra, gave a successful recital at Waverley, Mass., June 17. Mr. Rissland's latest concert number, *Caprice caractéristique*, was included in Mr. Bryant's program. This is a piece that will appeal to skilful players.

MISS EVA EMMETT WYCOFF, of New York City, gave a song recital at Hoschton, Ga., June 8. The program was made up of classical and modern numbers.

MISS HELEN LOUISE KELLOGG, instructor of music at St. Francis Convent, Garrison, N. Y., has been elected a colleague in the A. G. O.

Victor Herbert's Orchestra
entertaining Victor Herbert
When this gifted composer hears his celebrated group of musicians on the Victrola, he hears it just as he personally directs it.
And because Victor Herbert realizes that the Victor and Victrola alone bring to you the music of his orchestra as his orchestra actually plays it, he makes records only for the Victor.
Besides Victor Herbert's Orchestra, you can hear in your own home on the Victrola, Sousa's Band, Pryor's Band, Vessella's Band, Conway's Band, U. S. Marine Band, and other famous musical organizations from every part of the world.
Any Victor dealer will gladly play selections by Victor Herbert's Orchestra or any other music you wish to hear.
There are Victors and Victrolas in great variety of styles from $10 to $200.

VICTOR TALKING MACHINE RECORDS FOR AUGUST

HERE we are, again, the midst of the holiday season, when the American people are at their play time. And yet they do not discard music. They want it in their recreation in summer as well as in the winter. Hotels have orchestras, summer parks have bands and orchestras, so have the piers at the great seaside resorts.

And the cottagers want music right at their own firesides. But what are they to do? It is expensive to move pianos, to say nothing of the risk to the instruments; to rent is more or less of a heavy charge. Here is where the Victrola comes in with its ready aid. One can have all the music he wants right at home, songs, duets, opera choruses, pieces for violin, piano, the orchestra, band, etc., and, especially interesting to the young people, all the dance music they may wish.

The issues for August are interesting to the musician, although not quite so numerous as for the

months earlier in the season. Here are a few that we notice in looking over the list:

Caruso, Enrico: *Manella mia,* a fascinating Neapolitan folk-song by Valente, charming and plaintive in quality.

Williams, Evan, tenor: *Beautiful isle of somewhere,* a sacred song which has delighted thousands the world over.

Ruffo, Titta, baritone: *Aman lassir le stelle* (Our love is like the stars), from Franchetti's opera *Christopher Columbus.* The great baritone sings this aria with a glorious outpouring of his noble voice, and with dramatic fervor.

Caruso, Hempel, Rothier, De Segurola: The quartet from the *Masked Ball,* one of the gems of the opera repertoire.

Destinn, Emmy, soprano, and Dinh Gilly, baritone: *Good night,* a beautiful Bohemian folk-song, in a fine duet arrangement.

Powell, Maud, violinist: *Bourrée,* by J. S. Bach, and *Menuet,* by Gluck, two fine numbers from the old classic repertoire. Especially useful to students of the violin.

Gluck, Alma, soprano, and Louise Homer, contralto: *Rock of Ages,* the favorite hymn of the Christian world:

McCormack, John, tenor: *Good bye,* Tosti's popular song, of which over a million copies have been sung.

Miller, Christine, contralto: *Old Black Joe,* by Foster, and *Come out, Mr. Sunshine,* by Paul Bliss, two songs in negro dialect used with much success by Miss Miller in her concerts.

AN UNUSUAL OPPORTUNITY TO SECURE VALUABLE SUGGESTIONS

For Teaching Material of All Kinds

SELECTED BY

THE BEST AUTHORITIES IN AMERICA

Note: You can always easily secure "on sale" the material with which you are familiar, and this we will be pleased to forward in any quantity desired. It is to give you valuable assistance in selecting compositions of real merit and value by Modern Writers that we offer you suggestions and selections prepared by the following authorities:

ANNA CASE—Soprano, Metropolitan Opera Company.

CHRISTINE MILLER—Contralto, Famous American Concert Singer.

ELLISON VAN HOOSE—Tenor, Chicago Grand Opera Company, and Teacher.

FRANK CROXTON—Baritone, Vocal Department, Chautauqua Inst., Chautauqua, N.Y.

OSCAR SAENGER—Famous Vocal Teacher.

A. WALTER KRAMER—Expert Authority on Violin Literature.

FRANZ KNEISEL—America's Famous Violinist.

ARTHUR CLAASSEN—Director of Women's Clubs.

CHARLES B. HAWLEY—Authority on Material for Men's Voices.

TALI ESEN MORGAN—Famous Conductor of Choral Societies.

WILLIAM C. CARL—Noted Organist and Director of Guilmant Organ School.

BLANCHE DINGLEY MATHEWS—The Noted Teacher, Editor and Author.

MENTOR CROSSE—Authority on Piano Literature and Technic.

SIGMUND STOJOWSKI—The Great Polish Composer, Pianist, Pedagogue and Teacher.

In addition to sending our own publications in any quantity desired "on sale," and furnishing our patrons promptly on positive order with any music or musical merchandise desired of any publisher or manufacturer, we place ourselves at your command for special suggestions as to studies and your general course of instruction. Your own requirements for any purpose whatever will be given personal and special attention.

We respectfully solicit your patronage. Catalogs, discounts and further information, if desired, will be forwarded upon request

SIXTY MUSICAL GAMES and RECREATIONS

By LAURA ROUNTREE SMITH

Price, 75 Cents, Postpaid

MISS LAURA ROUNTREE SMITH has brought out twenty books, among which are the famous *Bunny and Bear Books*, *Games and Plays*, *A Language Book* and *Indian Story Reader*. She has made a specialty of writing entertainments for THE MUSICIAN and nearly all the leading educational magazines of the present day. She has edited at various times an Entertainment Department in *The Musical Observer*, *School Century* and *Teachers Magazine*. She is a teacher of wide experience and keenly interested in all musical subjects, having organized several successful musical clubs.

Sixty Musical Games and Recreations for Little Musicians was written in response to the inquiry of teachers who were looking for games and entertainment material.

What Musicians and the Press Say About the Book

ANNA HEUERMANN HAMILTON

I have examined your new book with pleasure. What a veritable treasure-trove for the teacher of little folks.

MRS. SHIRLEY CHRISTY

I am always glad to see such good suggestions as your little book presents.

JOHN B. ROGERS

It gives me the greatest pleasure to recommend it. I have never seen a book more originally or cleverly gotten up, and I consider it an invaluable addition to any one who trains or is interested in the development of children.

MRS. STEINWARD

SELMA, CALIFORNIA

Just what I have thought music teachers ought to have. Children like the work better when it seems like play.

MURIEL B. HUTCHINGS

KINDERGARTEN TEACHER
GERMANTOWN, PA.

I find it in every way delightful. Your selections for recitations embody your poetic taste and insight, and the music is well chosen throughout.

MRS. JENNIE A. HICKS

The finest of its kind.

MUSICAL LEADER

These are really "playable," while in the course of the games much information about the technical side of music is imparted.

MUSIC TRADE REVIEW

For class-room work and pupil recitations this volume will be found almost indispensable. It can be recommended most heartily for its value in stimulating a greater love and knowledge of music among ambitious youngsters.

NORMAL INSTRUCTOR

School teachers and music teachers will find it a bonanza in the help it will afford in arranging a public program for their little pupils.

MUSIC NEWS

An interesting and educationally helpful book.

CALIFORNIA PRESS

A valuable help to the teacher and to all interested in impressing music lessons on the children's minds.

WINIFRED S. HOPKINS

Very interesting and suggestive. I have adapted one of the programs for my next pupils' recital.

LEO OEHMLER

Your delightful book should prove welcome indeed to teachers of young people. I will do all I can to interest other teachers in it.

KINDERGARTEN PRIMARY MAGAZINE

Children love to play games. By making use of the play impulse facts learned in play will never have to be taught in more serious fashion.

CHICAGO RECORD-HERALD

The indicated games and plays include both play appeal and educational value, with special programs for special days, such as Halloween, St. Valentine's Day, Christmas Day, and so on.

WEBB PUBLISHING CO.

The simple manner in which the games are explained we feel confident would be very helpful to teachers in planning entertainment and amusement for their classes.

CLAYTON F. SUMMY

CLAYTON F. SUMMY CO.

The book is to be commended not alone for the interesting amusement which it affords, but for its instructive value, as well.

OLIVER DITSON COMPANY, BOSTON, MASS.

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic Ditson Edition No. 196

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Arnoldo Sartorio: Twelve Melodious Studies in Velocity in Broken Chords Op. 1018, $1.00.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

Ernest R. Kroeger: The Whole Tone Scales. $0.60.

THIS little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

MISCELLANEOUS

James H. Rogers: Five Quatrains From the Rubaiyat.

THE tempting quality of Omar's immortal verses has inspired the composer with most felicitous musical imaginings. For this a set of five song quatrains have been chosen which are in themselves among the most beautiful and which are adroitly contrasted in mood. To meet their poetic content Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more vital, nor his economy of means to produce just the right emotional effect more sure. These songs, the latest product of his muse, may be used as a cycle or singly, and will adorn any artistic recital program.

The price has been fixed at $1.25; until publication we will accept orders at 75 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $2.10.

J. C. Macy: Young People's History of Music. New Edition.

THE notice of the new edition of this work was premature. We shall be unable to publish it for a number of weeks. In the meantime, however, we have a few copies, in perfect condition, of the first edition, which we will send, postage paid, to anyone, upon receipt of 50 cents. This is great value. The price of the new edition is $1.25, subject to usual teachers' discount, instead of $1.00 as quoted in the former notice.

Standard Anthems For Men's Voices. Edited by George B. Nevin. $1.00.

IN this excellent collection are included, besides valuable numbers written originally for men's voices, arrangements of standard and popular works. The majority of these arrangements are from the practised and practical hand of the editor, and all are skilfully done with a view to use by choirs of moderate ability. The subjects chosen and their treatment show wide diversity, so that singers in possession of this collection are equipped to meet the varying requirements of the church year without going outside its pages.

NEW PUBLICATIONS—AUTUMN, 1914

MUSICIANS LIBRARY

ANTHOLOGY OF GERMAN PIANO MUSIC

Vol. II. Modern Composers
Edited by M. MOSZKOWSKI

A superb collection of pieces by German composers of the modern period, with biographical notes and critical comment on the pieces, by the Editor.

100 SONGS OF ENGLAND

High or Low Voice

Edited by GRANVILLE BANTOCK

The most valuable collection of English songs ever issued, covering the period from the 13th to the 18th centuries. The Editor has contributed an authoritative discussion of folk-song and the examples in the book.

60 FOLK-SONGS OF FRANCE

Medium Voice

Edited by JULIEN TIERSOT

French folk-song has charms and beauties wholly peculiar to itself. The Editor has made an admirable and interesting selection, which he has discussed in his scholarly introductory essay. Mons. Tiersot is an authority on the subject.

Price, Paper Cover, $1.50 Cloth, Gilt Top, $2.50 Paper Cover Edition, with THE MUSICIAN, one year, $2.25

DITSON EDITION

ERNEST R. KROEGER

Whole Tone Scales and Arpeggios

Ditson Edition, No. 202. Price, 60c.

(See page 566 for description and special offer)

ARNOLDO SARTORIO

Twelve Melodious Studies in Velocity in Broken Chords, Op. 1018

Ditson Edition, No. 208.

(See page 566 for description and special offer)

MISCELLANEOUS

WILMOT LEMONT

Dream Pictures. Op. 6

A collection of piano pieces which fascinate by their spontaneity and fresh flavor. Mr. Lemont offers an abundance of melody and a pleasingly euphonious harmonic scheme, which always shows refinement and sprightly fancy, and never degenerates into the trite and the commonplace. His moods are not monotonous but various. To those who play for pleasure, to whom music brings joy and relaxation, these facile and effective compositions will be more than welcome.

The cover is a marvel of the printing art, in four colors, tied with silk cord, making the collection a most attractive gift to a musical friend.

Price, $1.25. Special offer in advance of publication, 50c, postpaid. With THE MUSICIAN, one year, $1.85.

F. MORRIS CLASS

Five Vignettes for the Piano. Op. 7

Five short pieces under one cover, with accompanying poems, describing and indicating the moods of the different compositions. These will prove excellent studies for interpretation and portrayal of emotional color. They grade about IV. Handsomely printed with fine art title. A splendid gift.

Price, $1.00. Special offer in advance of publication, 50c. With THE MUSICIAN, one year, $1.85.

HOWARD WELLS

Ears, Brain, and Fingers

A new volume of the splendid MUSIC STUDENTS LIBRARY. Mr. Wells is an authorized exponent of the Leschetizky method and has been a successful teacher of the piano in Berlin for a number of years. The object is to place in the hands of teachers and pupils material which covers the fundamental needs of pupils, and a method whereby "Ears, Brain, and Fingers" are trained to co-ordinate action. The chapters on ear training present much new and practical exercise. Every progressive teacher will want this book.

Price, $1.25. Special offer in advance of publication, 65c. With THE MUSICIAN, one year, $2.00.

Standard Anthems for Men's Voices

Compiled by GEORGE B. NEVIN

Price, $1.00. Cloth bound.

(See page 566 for description of this book)

JAMES H. ROGERS

Five Quatrains from the Rubaiyat of Omar Khayyam.

In two keys, High and Medium.

(See page 566 for description and special offer)

MARIE WITHROW

Some Staccato Notes for Singers

The material consists of short, concise paragraphs on matters connected with singing, technical, artistic and interpretative, the purpose being to help singers to attain artistic freedom and independence. "Staccato Notes" refers especially to the numerous pithy and extremely practical and illuminating sentences which are scattered throughout the book. We predict a big success for this work, which is the fruit of a long and valuable experience as a singer and teacher.

Price, $1.00. Cloth bound. Special price in advance of publication, 50c. With THE MUSICIAN, one year, $1.85.

FREDERICK STEVENSON

Omnipotence

Short Cantata for Men's Voices.
Price, 50c.

LOUIS SPOHR

O God Thou Art Great.

Cantata.
Price, 50c.

A. WALTER KRAMER

Among the younger American composers whose work is rapidly claiming attention is A. Walter Kramer, of New York, whose name is known to many of our readers, particularly those who have followed our Violin and Choir and Choral Departments. Mr. Kramer's work in composition has not been confined to one line, but includes pieces for the voice, violin, piano, organ, and chorus.

His songs, notably *Allah*, have appeared in the programs of such singers as Christine Miller, Anna Case, Mildred Potter, Nina Dimitrieff, Reinald Werrenrath, Charles Norman Granville, George Warren Reardon, and Marcus Kellerman.

His violin compositions have been used by Maud

J. S. BACH SELECTED PIECES

Transcribed for the Violin by Otto Singer; with piano accompaniment

17 pieces from the master's finest works, with a preface on playing Bach, and careful editing of the pieces, by Benjamin Cutter.

10 of the pieces are in the old dance forms: Gavotte, Bourrée, Sarabande, etc.
5 " " " " from the Well-tempered Clavichord
2 " " " " from vocal cantatas.

A FINE INTRODUCTION INTO THE CLASSICAL LITERATURE

MARIE VON UNSCHULD
SCALE PRACTICE
Practical Aid to Pianoforte Technic throughout the Circle of Fifths

A systematic and progressive arrangement of exercising material for the study of Scales, Chords and Arpeggios as used in the Von Unschuld University of Music, Washington, D.C. The principal difference between this and existing material of a similar nature is that all the scales, whether in single notes, thirds, sixths or tenths, are printed individually through all keys with appropriate fingering. In this way the various books offer a complete and reliable guide for all students, particularly in their home work.

PUBLISHED IN THREE GRADES

The numbers contained in the Hinds, Noble & Eldredge new teaching catalogue.

For Piano

GRIMM'S FAIRY TALES
Ten little second grade teaching pieces, each illustrated with a picture of the story on which it is founded.

PIANO SOLOS, by E. R. Kroeger
Nine gems from the pen of this well-known composer, ranging from third to sixth grade of difficulty. The charming melodies and exquisite harmonies will compel the interest of the student, while the instructive features (each number is an excellent study) will appeal to modern teachers.

FOUR TONE PICTURES, by G. Ferrata
A treasure of poetry in tone colors. Styles of touch, melody playing, rhythm and tempo treated in a most original manner.

POLONAISE, by G. Ferrata
A concert number the beauty and depth of which it is difficult to express. We advise you to see this number.

A TRIO OF ORIGINAL DANCES, by G. Ferrata
Brunette Dansante--Minuet--Gavotte
Three models of style, grace and form that will please both performer and hearer. Cheerful and melodious in every measure, and of only moderate difficulty, they well deserve to be called "thankful" numbers.

For Voice

Every one of these songs has character and depth. Vocal teachers and concert singers alike will find them just what they are looking for.

My Heart, and My Soul, and I	Medium Voice
Could I Believe	High Voice
Keeping a Heart	High Voice
Serenade	Medium Voice
Garden Song	Medium Voice
Pierrot	Medium Voice
'Twixt Daylight and Dark	Low Voice
Cradle Song	High Voice
Nevermore	Low Voice
Love's Litany	Medium Voice
Norah, the Pride of Kildare	Medium Voice
Somebody Cares for Me	High Voice
The Prairie Moon	Medium Voice

For Violin and Piano

FIVE CHARACTERISTIC PIECES FOR LITTLE VIOLINISTS, by G. Federlin
Melodious compositions for beginners, so graded as to follow each other in consecutive order. Each has an easy piano accompaniment.

SUITE FOR VIOLIN AND PIANO, by Chev. Giuseppe Ferrata
Awarded first prize in a national competition held under the auspices of the Art Society in Pittsburgh.

VIOLIN AND PIANO INSPIRATIONS, by Alberto Bachmann
Seven numbers---"**Scherzetto**," "**Mazurka**," "**Duo**," "**Serenata**," "**Valse**," "**Evening Song**," and "**Gigue**,"---that violinists will enjoy playing.

Now at the beginning of the teaching season music educators are looking for new instructive material and the numbers contained in this little catalogue, because of their technical exactness, perfection in editorial detail and adherence to the best principles of modern instruction, will make an enthusiastic appeal to progressive teachers. Unlike most of the older teaching material, these new numbers are extremely melodious, so that besides their appeal to the teacher, they will hold the attention and interest of the student.

IMPORTANT WORKS ON MUSIC

PUBLISHED BY

CLAYTON F. SUMMY CO.

64 E. VAN BUREN STREET, CHICAGO

THE VERY FIRST LESSONS AT THE PIANO

By Mrs. CROSBY ADAMS — Price, $0.75

The increasing popularity of this book with the better class of piano teachers bids fair to make it the nationally accepted book for beginners. As supplementary work of a rudimentary and practical nature Mrs. Adams has prepared the **Preliminary Studies** (25c) and **Home Study Books,** Parts I and II (35c each)

GRADED STUDIES, Gathered from Many Sources

By Mrs. CROSBY ADAMS

Books 1 to 7, two hands, each $1.00
Books 1 and 2, four hands, each 1.00

This is a series of Studies of various forms for the piano ranging in difficulty, from easy to advanced medium grades containing material of unusual wealth, interest and attractiveness.
The success of these books is most pronounced showing that Mrs. Adams sensed a present want and knew how to supply it.
Each book contains 48 pages, large sheet music size, and subject to sheet music discount.

PIANO TECHNIC FOR CHILDREN

By JULIA LOIS CARUTHERS — Cloth, $2.00

A work presenting the problem of technic by way of finger plays and rhythmic drills seriously applied in illustration of Mother Goose and other classics from the literature for children. It provides for work away from the piano as well as at the piano. A work suitable for children even of the Kindergarten age and a growing favorite. DICTATION STUDIES IN MELODY AND HARMONY FOR CHILDREN, by Mary Frances Frothingham ($1.25), is an excellent companion book. It presents the theoretical side of music to children in an equally attractive manner.

MUSIC EDUCATION

By CALVIN B. CADY

Vol. I Objects and Processes ..... **Cloth $1.50**
Vol. II Teachers' Material ..... **Cloth 1.50**
Vol. III Home Study Book ..... **Paper .75**

Any teacher of music will be better equipped for work as a teacher by a careful study of these works.

TEACHERS' LOOSE LEAF JOURNAL-LEDGER

A handy Account Book (pocket size) for teachers. The plan provides for the entry of a lesson any day of any month of any year. It provides for the posting of lesson terms; the entry of term payments for either private or class lessons; the charging of music or books and credits for payments. A complete journal and ledger all on one leaf. **Packages of 50 sheets,** 20c, **100 sheets,** 40c. The Binders are furnished in full morocco, levant cowhide, or imitation leather, and are equipped with 6 rings.

Price in full morocco or levant cowhide $1.10
Price in imitation leather (texoderm) ..... .85

MIANTOWONA

A Melodrama by John Mokrejs — Net $0.75

The poem by Thomas Bailey Aldrich.

Readers will find this a rich acquisition to their repertoire. Mr. Mokrejs has given a masterly musical background for the famous poem, and in difficulty it is within the range of the general good pianist.

LITHUANIAN DANCES — $0.50

As danced by the Representatives of that Nationality where they have colonized in Chicago. Descriptions by **Helen Rich Shipps.** Music arranged by **Gertrude Madeira Smith.** These represent the genuine Lithuanian Folk Dances both as to the music and the manner of dancing them. The piano arrangement makes them practical for that instrument, and the description furnished will enable all who understand dance figures to make practical use of them.

IN PRESS

EQUALIZING EXERCISES FOR ALL SCALES

A Scale and Arpeggio Book for Piano Study

By GEORGE BAILHE

These exercises all treat on the chief difficulties connected with the playing of scales, viz.: Passing of the thumb, strengthening of fourth finger, trill work, wrist rotation, etc., etc. Arpeggios are treated in the same manner.
The exercises all lead to the complete Scale in all keys including both forms of the Minor Scale. These Scale exercises are not only unique, but most effective and practical. Mr. Bailhe has the highest endorsements of celebrated pianists for this work. (Ready in Oct.)

AN APPRECIATION OF MUSICAL FORM

A collection of pieces illustrating every variety of Musical Form, compiled by **Jennie R. Smeltzer.**
While not providing a theoretical study of the subject of Musical Form, it furnishes a description which gives the origin and outline of each form. The selections chosen are all excellent examples of their class. A valuable work for Piano Students. (Ready in Oct.)

INVESTIGATE

THOSE who have never investigated our "On Sale" plan should do so **at once,** and become acquainted with a method which has done more than anything else to lessen the labors of the music teacher.

The constantly increasing growth of our "On Sale" plan and the best proof that it meets with the approval of our patrons is the renewal of business relations each new season with customers who have dealt with us in preceding years and applications from many other teachers who have been recommended to us by old patrons, who appreciate our plan as being a very helpful and necessary adjunct in their teaching. All teachers realize the value of having on hand for immediate use available material such as studies, exercises, pieces for recreation, etc., but only those who give our "On Sale" plan a trial really know what a factor it is in reducing their labors to a minimum.

We employ only trained musicians in this department of our business, men who are practical teachers themselves and have made the wants of teachers the study of years. Half the work of teaching, and almost all the worry is due to the selecting of just the right studies and music for the use of pupils; let us relieve you of this by accepting the aid of those who are **specialists** in this line.

Our business is **exclusively** the supplying of music and music books for teaching purposes, and our experience is ample guarantee that we can satisfactorily meet YOUR wants as we do hundreds of your fellow teachers.

Our terms are the **MOST LIBERAL;** our discounts the **LARGEST** and from the educational standpoint, our publications are second to none.

SEND AT ONCE

for our "On Sale" plan and full catalogs

There is no feature of the music teaching profession with regard to which we are not prepared to be of prompt and practical assistance, either by furnishing the necessary material or by giving helpful information and advice at all times.

We are always glad to answer inquiries from, and supply our catalogs and terms to all teachers or schools.

THE FAMILY MUSIC BOOK

THE MOST MARVELLOUS COLLECTION EVER PUBLISHED 800 PAGES; 252 PIECES

THE FAMILY MUSIC BOOK is handsomely bound in flexible cloth, printed from beautifully engraved plates, in the best manner, on excellent paper, and presents an appearance of unsurpassed elegance. It contains music for piano solo, piano 4-hands, piano 6-hands, vocal solos and duets, classified as follows:

PIANO MUSIC

27 DRAWING-ROOM PIECES
18 OPERATIC ARRANGEMENTS
14 EASY CLASSICS
13 SUNDAY MUSIC
12 MARCHES
10 WALTZES
2 POLKAS
2 MAZURKAS
1 SCHOTTISCHE
2 LANCERS AND QUADRILLES
11 JIGS, REELS AND MODERN DANCES
9 FOUR-HAND PIECES
4 SIX-HAND PIECES

VOCAL MUSIC

27 BALLADS
7 CONVIVIAL SONGS
8 PLANTATION SONGS
5 FRENCH CHILDREN'S SONGS
6 GERMAN CHILDREN'S SONGS
20 ENGLISH CHILDREN'S SONGS
10 SACRED SONGS
9 PATRIOTIC SONGS
9 NATIONAL SONGS (Foreign Nations)
12 HYMNS
14 VOCAL DUETS

The name of the book—**THE FAMILY MUSIC BOOK**—implies the purpose which the collection is to serve.

All the material has been very carefully selected, both as to the classifications and the individual pieces. The Piano Music is uniformly of moderate difficulty—within the means of the average player; and the vocal numbers, in addition to being of the same grade of difficulty, possess the special advantage of having easy accompaniments—also within the means of the average pianist.

The vocal numbers throughout are for medium voice, thus being available for all singers.

Among the pieces, both piano and vocal, will be found many old favorites, universally known and loved, and many new compositions—interesting, charming and beautiful.

THE FAMILY MUSIC BOOK belongs in every household. It appeals alike to those who cultivate music seriously, and to those who love it merely for its own sake.

THE FAMILY MUSIC BOOK is also essentially a **GIFT BOOK.**

The aggregate value of the music contained in the book is

ONE HUNDRED AND FIFTY DOLLARS ($150.00)

The price is **ONLY ONE DOLLAR**

Cost of shipping extra: Parcel post, any point within 150 miles of New York, 10c.; any point within 300 miles, 16c.; any point within 600 miles, 27c. Add 5c. for insured parcel post. Further distances by express. All points as far as Mississippi River, 35c.; all points West of Mississippi River, 45c.

Important Fall Announcement to Music Teachers
BY

The B. F. Wood Music Co.

Publishers of Music Especially Designed for Teachers' Use

As space does not permit us to list here our many novelties for the coming season, we invite all Music Teachers who are not now on our mailing lists to drop us a card stating which of the following new catalogues they wish mailed to their studios.

SENT FREE

Latest Fall Novelties Thematic—1914-1915
(Containing the latest additions to our catalogues.)
Complete List of "Edition Wood"
(760 volumes, nearly one-half of which are copyright and cannot be had in any other Editions.)
Complete Pianoforte Catalogue (Just Issued)
(Containing not only the most important standard and classical compositions, but also the best works of the well-known writers of melodious pieces of the easier grades.)
Handbook of Graded Material
(A classified list of easy teaching pieces for pianoforte.)
Teacher's Book of Samples
(Giving the themes of 278 compositions. Grades 1-A to 3-C.)
Supplement to "Teacher's Book of Samples"
(Giving themes of 285 compositions. Grades 1-A to 3-C.)
Complete Vocal Catalogue
(A choice list of standard secular songs.)
Secular Song Thematic, No. 1
(With themes of 30 standard secular songs.)
Sacred Song Thematic, No. 2
(With themes of 30 sacred songs.)
Sample Block of Wood's Pupils' Practice Slips

SEND US YOUR ADDRESS AND THE NAME OF THE FIRM WITH WHOM YOU ARE NOW DEALING AND WE WILL ARRANGE TO HAVE A PACKAGE OF OUR NEW MUSIC SENT TO YOU "ON APPROVAL."

PARTICULARLY SUCCESSFUL NEW SONGS

ISSUED IN THE PAST SEASON BY

BOOSEY & CO.

include the following, which are ***confidently recommended*** to both Singers and Teachers looking for ***new vocal material*** of a high artistic and melodic order. These Numbers will gladly be sent ***for examination*** to any reputable Musician:

A SUMMER AFTERNOON	(D (A-F♯) and F)	Robert Batten
BLACKBIRD AND THROSTLE	(G (D-E or A), A♭ and B♭)	Oskar Borsdorf
MOTHER'S GARDEN	(F (C-D), G, A♭ and B♭)	A. H. Brewer
PIERRETTE'S SONG	(E♭ (B♭-F or G), F and G)	Eric Coates
THE ISLAND OF GARDENS	(C (A-E) and D♭)	S. Coleridge-Taylor
WHEN MY SHIPS COME SAILING HOME	(G (B-E), A♭ and B♭)	Francis Dorel
AUDACITY	(C (C-F) and D)	Vernon Eville
THY VALENTINE	(B♭ (D-E♭) and D♭)	Vernon Eville
O MY LOVE'S LIKE A RED, RED ROSE	(E♭ (A-E♭), F and A♭)	Samuel Liddle
GRATITUDE	(E♭ (C-E♭ or F), G and A♭)	Charles Marshall
WHY HURRY, LITTLE RIVER ?	(C (G-C), E♭ and G)	Ivor Novello
BLOSSOM TIME	(E (E-F♯) and G)	Roger Quilter
FRIEND O' MINE	(F (G or B♭-C), A♭, B♭ and C)	Wilfrid Sanderson
LAND OF DELIGHT	(D (B-D or F♯), E and F)	Wilfrid Sanderson
LORRAINE	(E♭ (B♭-F), F, G♭ and G)	Wilfrid Sanderson
OUT OF THE MIST	(B♭ (B♭-E♭), C, D♭ and E♭)	Wilfrid Sanderson
SPRING'S AWAKENING	(F (B-F or G), G, A♭, A, B♭)	Wilfrid Sanderson
THE EDEN OF MY DREAMS	(B♭ (B♭-D), C and E♭)	E. D. Tayler
SINCE	(D (B-E) and F)	E. Teschemacher
COWSLIPS AND CLOVER	(F (C-F or G), G and A)	Joan Trevalsa
ONLY FRIENDS	(A♭ (A♭-E♭), B♭ and C)	Charles Willeby
ONLY A ROSE	(B♭ (A-D), C and E♭)	A. Woodforde Finden
DAFFODIL SONG	(A (E-F♯ or A) and B♭)	Haydn Wood
DAYS OF GLADNESS	(C (C-G or A) and D)	Haydn Wood
WHITE ROSE ASLEEP	(G (D-E) and A)	Haydn Wood
WAITING	(A♭ (A♭-E♭), B♭ and C)	Cuthbert Wynne

One of the best and most grateful Duets for Soprano and Baritone issued in many years is

Wilfrid Sanderson's "IN A GARDEN OF ROSES"

(Two Keys: D♭ (First voice, D♭-A♭ or B♭; Second voice, A♭-D♭ or E♭) and E♭)

The Song Cycle of FOUR CHINESE LOVE LYRICS, entitled

"FROM THE CHERRY GARDENS,"

by T. C. Sterndale Bennett, is also proving our faith in it. The melodic beauty of these four songs, so quaintly tinged with the atmosphere of the Orient, cannot fail to win approbation.

(Two Editions: No. 1, Low Voice; No. 2, High Voice)

National Graded Course

THE ONLY METHOD OF PIANO INSTRUCTION

Illustrated by America's Most Distinguished Teachers and Pianists

A Practical, Comprehensive and Thoroughly Graded Course

The New Gradus ad Parnassum, Embodying the Latest and Best Ideas in Pedagogy

It Will Help You in Your Teaching

BECAUSE

It embodies the work of the most eminent pianists and teachers in America.

It can be readily adapted to your "method," no matter what that may be.

It is the LATEST work of the kind.

ALL of the studies are carefully annotated, fingered and edited.

It is the most carefully graded of any course before the public.

It begins at the beginning of study.

It saves the time that otherwise would be spent in laborious and often unrewarded search after that which is good and up-to-date.

It covers the entire field of piano literature in an eminently practical, interesting and stimulating manner.

Hundreds of your fellow teachers from all parts of the country have sent us, unsolicited, enthusiastic commendations of these very features.

The "National Graded Course," which is complete in eight books (Primary Grade and Grades 1-7 inclusive), will be sent to any School or Teacher for examination and comparison with other methods, **without any obligation to purchase.** A critical examination and a practical trial with your pupils will convince you that it is the **Only Perfect Method** of Piano Instruction.

NOTE—Facsimile editions (small size) of the Primary Grade and Grade One, complete, together with a pamphlet describing the advantages of Graded Courses and the "National" in particular, which is well worth reading, will be sent **Free** and **Postpaid** to any address on request.

won the favor of such distinguished artists as Katherine Goodson, Cornelia Rider-Possart, Ernesto Consolo, Mrs. Thomas Tapper, Albert von Doenhoff, Clarence Adler, as well as a number of teachers of high standing.

We must not omit mention of *Mirage*, and *The Passing Hours*, two numbers for chorus which have been given with success by choral organizations in New York and Philadelphia.

Mr. Kramer is sure to be heard from in the course of the coming years, and his name should stand high among our distinctive American composers.

AN UNUSUAL OPPORTUNITY TO SECURE VALUABLE SUGGESTIONS

For Teaching Material of All Kinds

SELECTED BY

THE BEST AUTHORITIES IN AMERICA

Note: You can always easily secure "on sale" the material with which you are familiar, and this we will be pleased to forward in any quantity desired. It is to give you valuable assistance in selecting compositions of real merit and value by Modern Writers that we offer you suggestions and selections prepared by the following authorities:

ANNA CASE—Soprano, Metropolitan Opera Company.

CHRISTINE MILLER—Contralto, Famous American Concert Singer.

ELLISON VAN HOOSE—Tenor, Chicago Grand Opera Company, and Teacher.

FRANK CROXTON—Baritone, Vocal Department, Chautauqua Inst., Chautauqua, N.Y.

OSCAR SAENGER—Famous Vocal Teacher.

A. WALTER KRAMER—Expert Authority on Violin Literature.

FRANZ KNEISEL—America's Famous Violinist.

ARTHUR CLAASSEN—Director of Women's Clubs.

CHARLES B. HAWLEY—Authority on Material for Men's Voices.

TALI ESEN MORGAN—Famous Conductor of Choral Societies.

WILLIAM C. CARL—Noted Organist and Director of Guilmant Organ School.

BLANCHE DINGLEY MATHEWS—The Noted Teacher, Editor and Author.

MENTOR CROSSE—Authority on Piano Literature and Technic.

SIGMUND STOJOWSKI—The Great Polish Composer, Pianist, Pedagogue and Teacher.

In addition to sending our own publications in any quantity desired "on sale," and furnishing our patrons promptly on positive order with any music or musical merchandise desired of any publisher or manufacturer, we place ourselves at your command for special suggestions as to studies and your general course of instruction. Your own requirements for any purpose whatever will be given personal and special attention.

We respectfully solicit your patronage. Catalogs, discounts and further information, if desired, will be forwarded upon request

NEW YORK CITY

NEW PUBLICATIONS

FIRST YEAR BACH

20
PIANOFORTE COMPOSITIONS
BY
J. S. BACH
Selected, Arranged and Edited
BY
ARTHUR FOOTE

Price, 75 Cents

(Schmidt's Educational Series, No. 85)

Twenty of the simplest compositions by Bach, carefully edited, phrased and fingered. This collection forms the best introduction to Bach's works and music of contrapuntal character in general.

From Fjord and Mountain

NORWEGIAN SUITE
(No. 2)
FOR THE
PIANOFORTE
BY
TRYGVE TORJUSSEN

Price, 75 Cents

(Schmidt's Educational Series, No. 129)

Contents
TO THE RISING SUN
A LAPLAND IDYL
ISLE OF DREAMS
FOLK SONG
TO THE SPRING
SHEPHERD'S DANCE

6 MELODIC ETUDES

FOR THE
PIANOFORTE
BY
FLORENCE NEWELL BARBOUR

Price, 75 Cents

(Schmidt's Educational Series, No. 131)

Contents
PRELUDE, AGITATO, DUETTO, HUMORESQUE, ELEGANTE, BRAVURA

Specially valuable for interpretation and delicate effects of light and shade. Third and Fourth Grades.

INDEPENDENCE

16
MELODIOUS STUDIES
FOR THE
DEVELOPMENT OF FINGER EQUALITY
BY
FRANK LYNES

Op. 57 **Price, 75 Cents**

(Schmidt's Educational Series, No. 121)

Grades 1-2

Easy studies designed to give independent training for both hands, and melodically interesting in each part. Besides studies for finger development the collection contains a simple pedal study, examples of the various kinds of touch, chord playing, etc.

STUDIES IN MECHANISM

60
ETUDES
FOR THE
PIANOFORTE
Selected from the Works of
A. LOESCHHORN
Augmented, Revised and Edited
BY
OTTO THÜMER

Two Books **Price, 75 Cents Each**

(Schmidt's Educational Series, No. 130 a-b)

Carefully arranged and graded to form a really progressive work for second and third grade pupils. Many of the etudes have been revised and rewritten to make them of the utmost utility and only practical and essential matter has been included.

LEGATO and STACCATO

40
PIANOFORTE STUDIES
BY
H. BERTINI
Selected, Arranged and Augmented with Studies in the Style of Bertini
BY
JAMES H. ROGERS

Two Books **Price, 60 Cents Each**

(Schmidt's Educational Series, No. 132 a-b)

The studies by Bertini serve especially to train the pupil in a quick perception of rhythm, an easy mastery of the various kinds of staccato, as well as offering many opportunities for developing a real singing tone in cantando playing, etc. Some new numbers in the style of Bertini have been added to afford a better grading of the material.

THE EURHYTHMIC SYMBOL

JAQUES-DALCROZE AND EURHYTHMICS

BY ELISE DE MERLIER

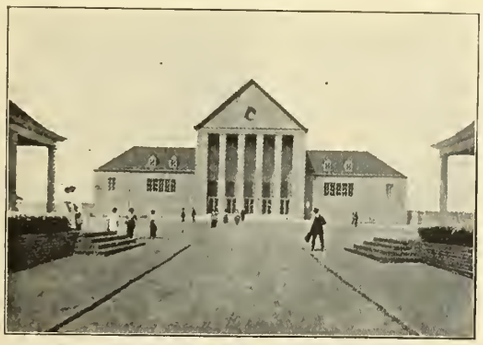
THE world has produced and still produces great composers, accomplished musicians, but there has never been a Jaques-Dalcroze, a Pestalozzi in music, who woke and developed possibilities of music in men and children—up to now undreamed of. There is where his genius reveals itself and singles him out among thousands of productive musicians.

It is his touch of genius which recognized with unerring finger "rhythm" as the vital spring of music. He found it dormant in every human being, weakly developed in many cases, spoiled in others by wrong training, or hampered by nervous defects. One day, while teaching at the Conservatory of Music in Geneva, he had a particularly unrhythmical pupil, quite a grown woman and a good student. In despair he jumped up, saying:

"You see this carpet. Divide its length into four steps—let each step count one full note. Do not reach the end of the carpet before I have played the full four notes." So said, so done. "Now," he continued, "divide the same space into eight steps, to be called 2-4 notes. You indicate the two beats of each note, by dropping both hands down on the first beat, then swinging them up again on the second beat." This also was executed. Then came the 3-4 note. The carpet was divided into twelve steps. The first beat was indicated by arms down, the second by arms sideways, the third, arms above the head. It was a revelation to him how this hitherto so unrhythmical pupil began to understand time value and consequently rhythm.

Based on this and similar experiences, Jaques-Dalcroze built up his wonderful system of rhythmical exercises called *Eurhythmics*, which when applied as in Hellerau and its branch institutes, means the laying of a musical basis, to an education in all arts.

Thinking that young children, fresh to sensations, would react more spontaneously, he formed classes of them for his new system. But he found that some were too slow, others too fast, and a few again unable to change from one exercise to another at the command given. This experience taught him the need of training the brain in connection with the body, to stimulate or slacken according to conditions found, the action of the nerve path which communicates the thought to the muscles. He perceived that upon the healthy and correct function of those three anatomical factors centered all rhythmical order or disorder—either harmony or disharmony—concentration or dispersion—balance or non-balance. So in training the muscles to rhythmical motions until they unconsciously expressed rhythm, Jaques-Dalcroze aimed, first, to subordinate the body to the brain; second, to establish perfect harmony between body and soul, as the fundamental law of musical expression.



THE JAQUES-DALCROZE INSTITUTE

Upon these observations, gained by his own experience and never ceasing researches, he arrived at the following conclusions: That it is against logic to expect a child to play an instrument, or read notes without feeling rhythm, the alpha and omega of music. He therefore worked out exercises, to strengthen the sense for rhythm, to render, so to say, the whole body rhythmic, until the muscles are so supple and subtle that, like wires of the telephone, they transmit the finest shades of rhythm and sound instantaneously.

His pupils do not touch the piano for one or two years, and, by that time, have such an accurate sense of rhythm and sound that they have not the least difficulty in playing well after a short time. This I can prove by what I have witnessed personally at a demonstration in the Gymnasium of Bryn Mawr College.

The pupils of three months, with one hour's instruction daily, half an hour of rhythmic gymnastics and half an hour solfège, were able, with ease, to recognize rhythms, interpreting them by adequate motions, sing at sight any simple melodies or to write down on the blackboard, an improvised theme on the piano.

Dalcroze says: "By music, I understand what the Greeks call such: The sum of our powers of feelings and thoughts, the ever changing symphony of spontaneous ideas, first created, then modified, given form by imagination, ordered by rhythm, and harmonized by consciousness."

This seems so well to express Jaques-Dalcroze's "ideal" of music, that we are justified in calling it his "creed," inasmuch as he desires the individual to be rhythmically educated to the point of being able to express his "true self" through music, independent of the opinion of others. Such music would, therefore, be characteristic and sincere in the extreme, and make up in variety and originality what it might lack in smoothness and finish. On the other hand, if the sense for rhythm and sound can be rendered so fine as may be expected by rhythmic training, the enjoyment in good music will be so sincere and spontaneous that all trashy and vulgar music will eventually disappear for want of an appreciative public.

A REPRESENTATION OF ORFEO AT THE DALCROZE INSTITUTE

And again, if the pupil has mastered sufficiently the motor habits of rhythm, he is free to express music as he personally feels it. With other words, he is able *"to clothe the sounds absorbed with the signification of his inner conception."* This logically means the wiping out of stereotyped, esthetic dances, replacing them by sincere renditions of music, by corresponding

THREE POSES BY MR. MONTOLIU

THE SINGING FLOWERS

correct rhythmical motions which can be "beautifully plastic" at the same time. The one and same composition can in this way be interpreted in as many ways as there are individualities.

If those specially gifted for music, base their first education on *Eurhythmics,* all degrees in time—from *allegro* to *ritenuto,* all degrees in energy—from *forte* to *diminuendo*—depending on our physical sensation and keenness of feelings—could be rendered in so fine a degree that we might well conceive of a new era in music, a sublime rendition, and a true interpretation of the same.

But since following Jaques-Dalcroze, music should be but the sum of our "true self," the next step for him to take, after giving mental freedom through trained rhythmic sensibilities, was to lead his pupil on to improvisation. There is no child in Hellerau, who, after a two or three years' course, cannot improvise simple themes, with tonality given, or compose easy melodies. In fact, no diploma is granted in Hellerau, unless the student has fully mastered all intricacies of harmony, and has proved the knowledge of his theory by improvisation before a select board of the best known musicians of Germany. Jaques-Dalcroze himself, a master in improvisation, has been heard to remark that five-tenths of technically accomplished musicians, standing high in public opinion, lack seriously in rhythmical feeling and could not conceive the simplest theme, if called upon to do so. How true a musician he is himself, he has proved by his volumes of admirable productions. His deliciously fresh *Chansons d'enfants,* to be sung, accompanied by gestures, are the delight of all children, who have the good chance to know them. It is hardly worth while to mention his numerous *chansons,* every one a pearl, and his striking compositions for interpretations, for probably every lover of music has come across an edition of the one or the other some time since.

I would, however, convey only partly, not a full idea of the scope of the Dalcroze work, should I content myself with giving simply an explanation of its system and meaning. It would be like showing the skeleton, not the perfect beauty of the live being, nor the heavenly spark of genius animating it. Nobody can fully conceive the strength and influence of the Dalcroze idea and its enormous possibilities unless they have seen demonstrations or interpretations. Rhythmic exercises, developing gradually into simple musical interpretations, give a clear conception—even to the unmusical mind—to what degree of beauty, material and spiritual, bodily motion can be expressive of. They do not need words to be understood, but are all the more forceful for the lack of them.

Such music, accompanied by corresponding rhythmical motions, is so new, original, striking, even crude—shall I say futuristic?—that there is no doubt that Dalcroze has struck with it a new note in the composing of music. If properly developed and followed by other musicians, it forecasts a democratic, general, popular music, understood and liked by the people who will be able to play a part in it themselves, if popular themes are composed.

If there is the least doubt in anybody's mind as to the power of rhythmic expression by motions, let them observe the Hellerau pupils at one of the huge demonstrations in Hellerau or Berlin—as for instance, singing a canon, seated on graduated steps, 300 arms raised in wave-like continuous motion, while the sounds accompany the bodily movement until body and music mingle in convincing overpowering grandeur.

Or let them witness an interpretation of *Les chansons des fleurs.* Three circles of performers crouch down to the low sounds of a *crescendo,* making alternately rising motions, then with the increasing *fortissimo,* all rise and move rapidly in rhythmic rounds until, with the final chords ringing out, the three circles stand up, stretched up to their full height, heads thrown back, the upturned faces offering, like flowers they represent, their lips to the first kiss of the new born sun.

Or let me give you an idea of a strictly musical interpretation according to Dalcroze's idea, by one of his favorite, well-trained pupils like Placido de Montoliu, and show you three different phases of the composition, that of "expectation," "fear" and "passionate appeal," as shown by the accompanying photos and you will not hesitate to concede that there is as vast a difference between what we call "dance" and Dalcroze's musical interpretation, as between an antique Greek statue and a modern "bibelot."

Allow me further to tell you of Dalcroze's gigantic enterprise in producing *Orpheus,* with its entire chorus, the latter being enacted and sung by Hellerau pupils at one of the *Festspiele.* The masterly representation of *The Dance of the Enraged Shades,* who, whipping the air with furious lashes, defend the entrance to Hades—their gradual quieting down, until finally subdued, they fall back and allow Orpheus to enter. What vividness of action! Proving drastically how "plastic music" can bring out the very soul of a composition.

The accompanying photographs partly illustrate the Hellerau rehearsals of *Orpheus* and may strengthen my statement that the Dalcroze method is the "germ" of a future music, quite by itself. A music which, by its very nature, will appeal to the uneducated, primitive ear, to the people—I mean the "mass"—and to children, for it gives music by object lessons.

It is a pity therefore, that we cannot see and hear Jaques-Dalcroze's latest, great composition, enacted and sung the past summer, in Geneva, at the celebration of the Centennial of Geneva's incorporation into the Swiss Republic. It is said, according to authentic sources, who witnessed the first rehearsals, to excel all his previous compositions. All the pupils of Hellerau will participate in the interpretation of this "Apotheosis." The various *musical tableaux,* will represent the different phases of Geneva's history and be enacted in the open, the beautiful surroundings of the lake. To those who have but witnessed simple demonstrations of *Eurhythmics,* it will give a yearning to be able to enjoy the *Festspiele,* for it will undoubtedly mean another remarkable event in the world of music.

———*———

DO YOU KNOW THESE THEMES?

The *Monthly Musical Record* in its June issue offered a prize for the correct naming of the following quotations from well-known vocal and instrumental works. We wonder how many of our readers can properly identify these themes.

GRADING

BY J. W. HARVEY KNIGHT

ALTHOUGH the practice of grouping together pieces of approximately equal difficulty is not an exact system, it is of great utility to the teacher in his daily work. It enables him to select material suited to the pupil's needs, and to know whether an unfamiliar composition is within the pupil's attainments.

But while the utility of grading is evident, its ultimate object should not be forgotten. A road unites the life of distant points by making travel smooth and secure. Grading, as it were, is the musical road uniting the simple beginnings with final precision. Grading is a positive process, intended (to change the figure) to lead the pupil forward step by step from the easiest beginnings to advanced work. Each new piece of study should present some new difficulty which will enable the student to advance in proficiency by surmounting it. It is not, "What grade is he in?" but, "Through what grade is he passing?"

The ability of a pupil to play pieces assigned to a certain grade is often measured by and confused with his technical skill in some particular style belonging to that grade. Many considerations combine in relegating a composition to a particular grade, and pieces varying in finger-dexterity requirements may be equal in other respects.

However liberal we may be, however constantly on the lookout for fresh and enlarging light, it is impossible to keep entirely from forming a certain general style. The pupil's work is selected, no doubt unconsciously, on this style, and we measure his proficiency by his ability to do what is assigned, forgetting that he has become familiar with his teacher's style. To be master of any grade, if we may allow the expression for clearness, the pupil must have the technical skill and general musical understanding that will make him competent to perform music conceded to be of a certain grade. This is important, since it reveals the danger that music may be selected that has much showy technic, but little real meaning.

How much of your pupil's proficiency depends on the adherence to a general style? This matter may be easily tested by suddenly changing the style of the pupil's music, care being taken not to increase the technical difficulties. Different arrangement of notes, new and unusual chord progressions, and unusual time problems with other similar innovations, often cause some perplexity; while the composition itself may be even easier than the regular work the student has been doing. Without minimizing purely technical skill, it is clear that thorough understanding of the music must go hand in hand with it for the best advance.

In the earlier training grading in key and time marks should be considered as well as technical difficulty. The earlier training should include not only the keys of C, F, and G major, with an exceptional two sharps or flats, but should be carried through many of the keys. In most cases, beginner's books are too much and sometimes entirely in the keys of C, F, and G. If the key of the piece or study more nearly kept pace with the scale work, it is certain the beginner would find the latter more interesting.

The introduction of the various and endless time problems, and, by time problems, we mean the combinations of note and rest values in a measure, should not be, as it is largely at present, a haphazard process, but a gradual and, if possible, a systematic one, to which much attention should be paid. The time difficulties which little endeavorers in the second grade are expected to know as a matter of course are often far beyond them.

If a combination of notes is possible to the fingers, its time perplexities are often overlooked. Thus they go forward into what we consider the third grade without having mastered the business of fitting notes together. The ability to locate the position of each note in a measure, and to form an intelligent time concept of the piece, comes to younger and older learners alike slowly. The lack of it retards playing in many ways, and it should be taught gradually and persistently from the beginning. In the earlier grades, to accomplish this, a large variety of time marks should be used, so that the pupil will become familiar with them and know what to do with the time problems that arise from them when they are presented in more difficult work later on.

Many of our graded books might be better arranged by these principles we have mentioned. Many good books of studies seem to recognize these things, and would have their value greatly enhanced if they had some word of explanation calling attention to the purpose of each separate study. There is much purposeless and perhaps profitless playing from these books, and the books themselves, while of great value, are looked upon as dry and unintelligible, simply because they do not say even in a word what their duty is.

From this grows the consideration that in selecting any set of studies the teacher should have clearly in mind: 1. The pupil's needs. 2. The object of the studies and just what advance they make. 3. Exactly what work they include. Too often the pupil is given some standard work assigned according to the teacher's method which is not in any way intelligible to him, and in no sense related to his needs.

Essential and evident as this question of grading is, it is hampered, though it may be unorthodox to say it, by purposeless music books. The teacher may aid the pupil to advance by explaining the purpose of each study if a book of studies is used, and in the case of the near beginner, make clear the problems in note values as they come up, and give the student pieces in as many different keys as possible. In this way, graded music will open new possibilities to the teacher.

———*———

FACTS ABOUT MUSIC STUDY

[The following pertinent paragraphs were written by Mr. Hans Schneider, of Providence, R. I., for circulation among his pupils. The editor of THE MUSICIAN has secured Mr. Schneider's permission to reprint these "facts" for the benefit of the teachers and students who read THE MUSICIAN.]

The fact that one is poor in earthly goods is no reason why one cannot be rich in accomplishments.

The fact that a child is not a genius is no reason why it should not be able to master the A B C of music and piano-playing.

The fact that piano-playing is ostensibly done with the fingers is no reason why you shouldn't use your brain when practising.

The fact that a piano has no conscience is no reason why you shouldn't have one and occasionally pity your teacher.

The fact that the piano keys are covered with hard material is no reason why you should play with a hard touch.

The fact that your chair is made of wood is no reason why you should sit as though you were made of the same material.

The fact that prize-fighting and piano-playing are both done with muscles is no reason why you should fight your piano with yours.

The fact that a piano has more than one key is no reason why you should occasionally choose the wrong one to play on.

The fact that the pedal is played with the feet is no reason why it should be used as a footrest.

The fact that a hammer is attached to the key is no reason why you should "hammer" the key.

The fact that time is fleeting is no reason why your "time" should not be steady.

The fact that a chord is changed when one of its tones is changed is no reason why you should change your music without the consent of the composer.

The fact that one finger is as willing to strike a key as another is no reason for taking the wrong one to play with.

The fact that a quick passage is called a "run" is no reason why it could not be improved by slow practice.

The fact that a composer is dead is no reason why you should try to kill his works.

The fact that the piano strings are made of metal is no reason why piano-playing should sound as if produced on a tin pan.

The fact that music is a matter of metaphysics is no reason why good, systematic work should not improve your playing.

The fact that the Bible says, "Let not your left hand know what your right hand doeth," is no reason why you should always play your right hand after the left hand.

The fact that you can't hear your own mistakes is no reason why your teacher should enjoy listening to them.

The fact that most persons like cheap music is no reason why you should cheapen yourself and cater to their taste.

GOLDEN RULES

Always practise slowly, and the slower the better.

Practising means repeating what you wish to learn until you can do it correctly and smoothly, no matter how slowly.

As a rule "fast" practising means doing something one day that you will have to undo the next day.

Speed cannot be thought of until you "know" your lesson thoroughly and correctly.

Speed is the result of familiarity with your lesson.

First consider the notes, then the fingering, then the time.

Get these things into your mind "right," and your fingers will play them on the keyboard "right."

Never practise your whole lesson through at once. The smaller the sections you select and the more you repeat them, the sooner you will master them.

One-half hour's practice with your full attention on your work is worth more than two hours' careless work with your mind on something else.

Never continue practice when your arms, hands or fingers begin to stiffen up and feel cramped-like. You are then practising wrongly. Stop and begin over again.

Always practise slowly; the slower the better.

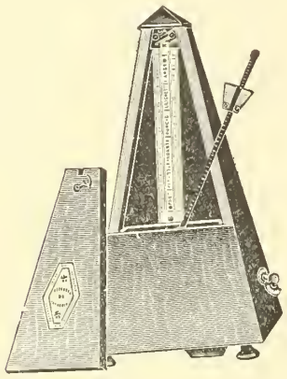
———*———

THE MUSIC LEAGUE OF AMERICA

AN organization has been formed, with headquarters in New York City, the purpose being to help talented young musicians to make headway in their chosen profession, and to improve music conditions in various communities. Save in instances where the capacity of a musician shall be generally admitted, none will be accepted as a candidate for engagement until he or she has been passed upon by a judging committee of impartial experts. Mrs. H. O. Havemeyer, of New York, is president. The headquarters of the League are in Aeolian Hall.

THE METRONOME---ITS USE AND LIMITATION

BY G. MARK WILSON



About the year 1639, a swinging sanctuary lamp in the Cathedral at Pisa revealed to Galileo the principle of the pendulum, a revelation which, needless to say, was used in the developing of clocks, to the family of which the metronome is closely related.

Like the clocks of our forefathers' days, the first metronomes received their motive power from suspended weights. However, in the year 1658, Dr. Hook, an English scientist, brought forth the spiral spring and balance wheel, thereby dispensing with the weights and paving the way for those who perfected the clock and watch as well as the form of metronome in use today.

Credit for this form is generally but erroneously given a Bavarian inventor named Maelzel (1772-1838), who, in the year 1812, claiming an original idea, produced a time-measuring device in many respects similar to the instrument in use at present. Later on, however, Maelzel's design was found to have been copied from a model perfected by a machinist of Amsterdam whose name was Winkel. Winkel had worked three years, planning and experimenting with the device, and when the facts concerning the French inventor's duplicity became known, he sued for infringement and won. Yet the decision of the court availed him nothing, for he received no compensation, and Maelzel is still given credit for having constructed the first modern metronome.

The loud stroke of the clocklike mechanism is produced by the cogs on the check wheel striking against the checks of the pendulum shaft about midway between the start and return of each swing. The resultant vibration being transmitted to the wood shell, which, acting as an intensifier, magnifies the sound thus made, and in turn causes sympathetic vibrations to arise in any stand on which the instrument may rest.

The graded scale of the instrument divides the tempi of ticks into Largo, Larghetto, Adagio, Andante, Allegro and Presto, while the figures on the sides indicate the number of oscillations the pendulum will make in a given time if the governing weight is placed at that particular numeral. Originally the grading was from 50 to 160, but now ranges from 40 to 208.

The standard of time for the grading of the scale is one minute, and the starting point of this grading is 60. So that if the weight be placed in the pendulum notch, covering the scale numeral 60, there should be 60 ticks per minute, or one each second.

As to the time value of the strokes with relation to the tempi notations on the scale of the metronome, they are of quarter value. That is to say, each stroke represents one beat in the particular tempo before which the weight may be stationed.

However, with regard to the metronome tempi terms, composers and arrangers do not confine themselves to the giving of numbers that will place the weight opposite the metronome tempo marking in which the selection is written. But on the contrary, they allow themselves the utmost freedom, and as a consequence we frequently find metronome numbers placed on compositions, the relative metronome tempo term of which comes nowhere near agreeing with that of the composition. A few examples will suffice. Mendelssohn's *Consolation,* Op. 30, No. 3, is marked *Adagio.* In a certain edition of the work a metronome number 66 is given. Glancing at the metronome scale we find 66 under *Largo,* as a guide to the spirit in which he desired the composition rendered. Schubert wrote *Allegro vivace* on his *Military March,* Op. 51, No. 1. On a publication that rests before the writer, the time is indicated by 112. Referring to the instrument we find 112 under *Adagio.* A copy at hand of MacDowell's *Witches' Dance,* Op. 17, gives the *Presto* movement as 126. On the metronome 126 equals *Andante.* One edition of the *Humoreske,* by Dvorák, gives the tempo *Poco lento,* and the figures, 72. Yet under the pendulum, 72 is plainly within the space allotted *Larghetto* and so on *ad lib.*

The explanation of this seeming inconsistency is not hard to find, however, inasmuch as the modern musician, whether composing or arranging, generally chooses a number that will not only give the correct tempo, but one that will moreover agree with the rhythmic form of the composition disregarding the scale of tempi from *Largo* to *Presto* on the metronome. This idea is good, but under certain conditions for teaching purposes should be forced a step further by making each tick as far as possible represent one tone, which plan would undoubtedly be a boon to the young student. Therefore, such a method is recommended to those musicians who arrange or originate exercises and selections classified as easy or medium difficult.

To illustrate this, let us take the case of an exercise marked *Allegro.* Under the customary method in such movements, a metronome number, say 100, is given, which causes the stroke to equal one beat, or in other words, be of quarter value. Now, then, providing quarter tones predominate, this is a good idea; but when halves or eighths are in the majority, whilst it may impress measure value on the mind, the plan is frequently of little assistance to beginners in the proper conception of note and rest value. In other words, it is possible for measure value as a whole to be correct, whilst the individual note and rest values are wrong. Therefore the problem, if problem it may be called, resolves itself into the question—How may this be overcome?

The solution lies in a slight change of the metronome marking as already noted. That is to say, if eighth notes predominate, then let the metronome tick one to a tone. In other words, the marking instead of 100, should be twice as fast, or 200. If half notes are in the majority, then instead of 100, let it be half as slow, or 50. For it is reasonable to suppose that, tempo permitting, there is less difficulty experienced and the results attained are more satisfactory if lower grade students play one note to a tick instead of two, or one note to a tick instead of one to every other tick.

It is also a good plan, even if this method is adopted, to count aloud with each stroke of the machine, in order that tone and rest value may be the more firmly impressed upon the mind. In event of an exercise opening and continuing in eighth note formation and later on changing into quarters, halves, or *vice versa,* the arranger or teacher should follow suit and change the metronome marking, for it is far better that young pupils never play at all than to have them lax in their understanding and observance of tone and rest values; which needless to say is the foundation of correct rhythm.

It is no doubt understood that this idea has its limitation, which limitation is reached when single tones are to be played faster than the instrument can afford single ticks. However, by the time this stage of progress is reached, the pupil will have sufficiently advanced to pursue the more difficult system of doubling, trebling and quadrupling tones or rests to a single stroke of the pendulum, with a thorough understanding of their value Though perhaps not sufficiently advanced to maintain the proper tempo throughout an entire composition on account of imperfect technic, as said before, he will, at least, have a knowledge of the manner in which the work should be rendered and naturally endeavor, with greater energy, to master his deficiencies, than could be expected under the reverse condition.

To be sure, in exercises in which no one particular tonal value predominates, the only course open is the general plan of giving a metronome number that will cause the pendulum to swing in time with each beat or accented beat of the measure. However, the fact should be pointed out that when used this way, it is not only a good plan, but becomes imperative, that the student concentrate his mind on the value of the musical notations he is rendering and at the same time count aloud, thereby not merely being governed by the surface noise created by the machine, which of itself will not lead one to attain true rhythmic sense.

In brief, count alone will not always guide the student properly to recognize and appreciate tone and rest duration. The reason for this being that students, particularly beginners, are very apt to slacken the tempo and likewise the count in difficult passages of an exercise or selection and to hasten the easier portions thereof. Consequently, as before stated, the reliability of count of itself is always questionable; yet there is no doubt that count *plus* metronome will help to impress the inner sense with correct tone and rest duration, and naturally tend to eliminate the alternate quickening and retarding of the tempo.

In making this assertion, it is naturally understood that reference is made to pupils not altogether deficient in rhythmic sense, for of such there is little hope. Yet where plain rhythmic sense is not wholly lacking, the method cited strongly tends to strengthen it; though, truth to tell, the final result is seldom as flattering as when evidence of rhythmic understanding is apparent from the very beginning.

Another aid afforded by the metronome, of which many take advantage, is the assistance it offers in gradually bringing velocity exercises to the proper speed. As is generally known, this is accomplished by first acquiring a possibly good technical command of the study to be rendered, then playing it through a few times very slowly with the metronome—say three fourths as slow as the score is marked, and at each two or three repetitions thereafter, dropping the governing weight one notch, until the correct tempo is secured. By this system of practice the speed is increased so gradually that proper tempi is obtained without apparent effort.

Moreover, in this connection it has frequently been found advantageous to play compositions over repeatedly at a much greater velocity than that indicated by the score marking, thus bringing about a degree of interpretative and technical familiarity which is ever a desirable assistance to worthy rendition. In the matter of practising table exercises, or finger gymnastics as they are sometimes called, the metronome may be brought into requisition with flattering re-

sults; for it not only tends to keep the movement of the hands and fingers in unison, but acts as an elementary course in rhythmic training, and at the same time prepares the pupil to use the instrument in actual piano practice.

Assigning the number of minutes or hours a student shall work with the metronome during his or her practice periods is a matter of no small consequence to the conscientious instructor. Its influence for good is beyond question, whilst the evils that sometimes arise from ignorance, such as mechanical interpretation, poor legato, etc., are self-evident. So, like many things in life, the line between that which will injure and that which will benefit is very finely drawn. Therefore, such matters are best left to the discretion of the teacher, who, observing and understanding the temperament and shortcomings of each individual pupil, knows how best to prescribe the instrument to this or that student's individual requirements during the course of his or her studies.

That the metronome is an aid to students is a fact which cannot be denied. It is to the embryo artist what the ruler is to the rudimentary art pupil. However, the value of the instrument ceases when correct time conception is attained and fluent velocity exercises are possible; for the artistic rendition of a composition is too broad a subject to be encased in the ironclad rule formed by the swing of the metronome pendulum. Moreover, one of the prime factors that give diversity to musical art is, that without the aid of a time-measuring device it is impossible for a soloist to go through a number in exactly the same tempo as he employed on a former occasion. Furthermore, no two soloists can play a composition throughout in exactly the same time, which fact applies alike to both individual note and measure value and not alone as many imagine to certain complete phases or periods of the selection. Of course this difference is not confined to the rhythm only, but is also evident in both tonal coloring and mental conception. Yet that the rhythm does vary to a greater or lesser extent is beyond dispute; a fact, however, which for reasons already quoted, does not detract from the value of the metronome as a guide to the young student.

MY FINGERS

BY ARTHUR SCHUCKAI

It is not often that one has to relate so extraordinary an experience as this. To meet with adventure when in search of adventure is one thing, but to have an adventure right in your own room, at the end of an arduous practice period, is another matter.

But so it was with me. The room should have been quiet, but it was not quiet. I was the only one there and yet I heard voices. Only mildly surprised at first, my wonder grew as the voices became clearer, and I sat down in amazement on discovering that *my own fingers* were talking to me.

"This," I exclaimed, "beats everything!" The chorus of fingers was chanting a song. The song grew louder and louder, and finally I could understand the words. And this is what the fingers sang:

"Of work we sing and weariness,
Of aching backs and sides;
Of muscles over exercised,
Of toil which common sense derides.

"A mournful strain we sing
And words of protest bring,
Dismal objections fling,
Tears from our eyes you wring.

"It seems you have no sympathy
For us poor slaving digits;
You treat us like so many giants,
When we are only midgets.

"A mournful strain we sing
And words of protest bring,
Dismal objections ——"

"Enough!" I cried, my indignation getting the better of my surprise. "You pain me. I am ashamed of you. You are maudlin and without sense. You, above all, should realize that 'practice makes perfect,' that to conquer the great difficulties in music I must drive you with a constant and energetic discipline; that genius is 'one tenth inspiration and nine-tenths perspiration.'"

But the chorus sang on

"Intelligent practice never does harm,
We are willing to do our part;
It's this purposeless work we view with alarm
And there's much besides work in Art.

"A mournful strain we sing
And words of protest bring;
Dismal objections fling,
Tears from our eyes you wring.

"We are willing to do all that's ours to do,
But why don't you use your mind?
There are many things which depend upon you,
To lay them on us is not kind.

"A mournful strain we sing
And words of protest——"

"Enough!" I cried, once more. "Either stop your poetry or stop altogether. If you have something to say, say it in plain English. Don't wail at me."

I was becoming uncomfortable, and it occurred to me that perhaps I might have given them cause for grief, so I said:

"Your singing has greatly distressed me. But I want to be reasonable. If you really have something to say, I am willing to hear it. Don't all speak at once. I shall hear the Left Hand Thumb first."

So the Left Hand Thumb spoke, and his voice was strong and firm.

"We have good reason for complaining. In the first place you work us too hard and, in the second place, your work is not the result-getting kind. You have no system in your practice. The first thing to learn, when studying a piece or étude, is simply the notes. Concentrate on the note study first. If a combination is new to you, make a particular study of that. Then send us carefully over the ground you have prepared and give us time. If you go slowly the first time, we of ourselves will go faster the second time. But if you hurry from the beginning we'll never learn our places."

"That's right!" exclaimed all the fingers in one voice:

"It's notes you must learn, first of all,
Natural, Sharp, and Flat;
And it isn't our fault when you miss;
You really should see into that."

"I'm next," interrupted the Left Hand Second Finger, before anybody else had a chance. "The second thing to learn is the fingering. You have no idea how puzzling it is to be placed on a different note every time the piece is played. If you'd use the same fingering every time, we would know where we belonged and we'd go there. But now we all feel nervous because, however well we know the notes, we can never be certain but that at the very last moment you will put us some place else. Learn your fingering and then stick to it."

He paused for breath and then continued, his voice growing more indignant:

"Fingers have a good deal of sense. If you'd have a little more respect for your fingers and treat us like intelligent people, we'd be ——"

But the chorus cut him short:

"Tell us just where we shall go,
And we'll go there with hearty good will;
But don't skip all over about
In a way to test anyone's skill."

I was becoming interested. I don't mind a lecture when I can learn something. I was even becoming used to the poetry.

"In my opinion," spoke up the Left Hand Third Finger, and he had a booming voice, "the most important matter to study is the rhythm. Before trying to speed things up you ought to make yourself positively sure of the rhythm. Count out loud at first, if need be, but don't work at an étude three weeks before noticing you have distorted the rhythm. Look at the time value of the notes and study the content of each measure. Don't guess. You just said that 'practice makes perfect.' In my opinion" (and here his voice grew louder) "it is study that makes perfect."

"Three cheers for the Third Finger," shouted the chorus:

"For it's study that counts more than practice,
Just as work without thought has no worth;
And if you learn to do both together,
You'll be able to conquer the earth."

"It seems to me the Left Hand is doing all the talking," said the Right Hand Fourth Finger, rather stiffly. "I would suggest to you that the time to think of the tempo is after you have mastered the notes, decided on the fingering, and solved every rhythmic problem. I admit that some rhythmic problems are more or less a matter of speed; that is, their difficulty becomes apparent only when speed is attempted. Nevertheless, if you have in your mind the exact thing you want, you will be a long way in the right direction towards getting it. You seem to think that all good music must be fast music. That is not so. In much good music the problem of speed does not enter at all. Study the slow movements of Mozart's symphonies. It will do you a deal of good. But more important——"

"But more important than the tempo or anything else," said the Right Hand Fifth Finger, and the little fellow spoke so shrilly and quickly that the whole chorus was surprised, "is the expression, by which I mean the interpretation. This you lack amazingly. So many times when we have a beautiful melody, I long to hold the notes which sing, but you drive ahead, chopping everything off scientifically. What's the good of all your note playing and fingering and practice, if you miss the meaning of the music. Some music is like a race, where the best man wins, and little mercy is shown to the rest. But some music comes to be loved, lives on love, and dies without love. It has been said that practice and study make perfect; I say that love makes perfect. If you love your work, all else follows. If you do not love your work, you will fail as a musician, an artist, a man, in everything just as sure as two plus two make four."

I thought that was a grand good speech and clapped my hands to applaud—a foolish act for it spoiled the dream. There were things I wanted to say to the chorus, and I am sure they had more to tell me. I was proud of them, and I did not regret the incident; you cannot be too well acquainted with your own fingers.

SCHOENBERG'S IDEAS ON TEACHING

(From his *Harmanielehre*)

[It may be news to many of the readers of THE MUSICIAN that Arnold Schönberg, the composer, who is a center of such warm discussion today, is the author of a work on harmony, entitled *Harmonielehre,* issued several years ago. It seems a contradiction to think of a composer whose works have been so caustically criticised as have Schönberg's, as a teacher of harmony, yet such was a part of the composer's activities up to a short time ago. The Introduction to the book is most interesting, and we have translated it for the benefit of readers of THE MUSICIAN. Up to the present the book has been published only in German. The price is $2.70 net, paper cover.—The Editor.]

I HAVE learned what is in this book from my pupils. When I taught I never attempted to say to the pupil merely what I knew; rather that which he did not know. But even that was not the principal thing, although, on that account, I was compelled to invent something new for every pupil. But I took pains to show to him the nature of the thing from the ground up. Therefore I had no use for the stiff rules which lay their folds so carefully around the brain of a pupil. All problems were solved by directions which were as little binding upon the pupil as upon the teacher. If the pupil were able to do better without this special instruction he went on without it. But the teacher must have the courage to take the blame upon himself. He must not hold himself up as infallible, one who knows everything and never errs; but as indefatigable, one who is always seeking and many times finds. Why wish to be a demigod? Why not rather the complete man?

My pupils, apparently, never considered me infallible; that is necessary only for a professor of singing. On that account I could always risk saying at one lesson what I might withdraw at the next. So also I could risk temperament, and give directions which were in reality false, if the pupil were assisted thereby. Through this I reached the point of thinking out a satisfactory method of correction and a suitable formulization of principles that the pupils might be practically served.

Thus this book came into being. From the failures of my pupils, due to insufficient or false instruction, I learned to give the correct instruction. Successful solutions confirmed the correctness of my efforts without leading me into the erroneous belief that I had really solved the problem. And I think that both of us have not fared bad. If I had said to them only that which I knew, they would have known that and nothing more. Perhaps they would also have known less! But they learned to know how it came—through seeking!

I hope my pupils will seek. The more so as they know that one seeks only for the sake of seeking; that finding a thing is perhaps the goal, but can easily become the end of the striving.

Our time seeks many things. But above all it has found comfort. This presses itself in all its fulness into the world of ideas and makes it so comfortable for us, to a degree which we have never needed. Today we understand, better than ever before, how to make life pleasant. We solve problems so as to rid ourselves of discomfort. But how do we solve them? And how we think that we have solved them! Therein is most clearly shown what is included in the idea of comfort, namely, superficiality. Therefore it is easy to have a world-view if we look only on those things that are pleasant and skip all the rest. The "rest," the remainder, that is really the point in question; from which it follows that these world-views appear to their possessors as proper, but that the motive to which they owe their existence, namely, before all things to escape effort, exculpates them. For, humorously enough, the people of our time who set up new moral laws (or rather discard the old) cannot live under an obligation. But comfort takes no account of self-discipline, and therefore the obligation is shoved aside or elevated to a virtue, wherein is expressed, for the one who looks into things sufficiently, the recognition of an obligation as an obligation. But the thinker who thinks does the direct opposite. He shows that there are problems and that they are solved. Like Strindberg, that "life makes all things hateful," or like Maeterlinck, that "three fourths of our brethren are condemned to misery," or like Weininger and all others who have thought deeply and earnestly.

Comfort as a world idea! The least possible action, no agitation. Those who love comfort thus will never seek where they are not certain of finding something.

There is a game in which one tries to put within each other three small metal tubes which lie in a box with a glass lid. One can attempt to do this methodically and can keep on trying, generally for a long time; but it can also be done otherwise. One can shake the box at random until the tubes come together. Is that an accident? It looks so, but I doubt it, for there is a thought back of it, namely, that motion (shaking) is able to accomplish what deliberation fails to do. Is it not also true in teaching? What does the instructor accomplish through method? At the best, shaking up. Sometimes it goes good! But it can also go bad, and then he produces only torpidity (deadness). But this condition produces nothing. Only action is productive. Therefore, why not begin with action? But comfort? That gives way before action. And as for that, without giving oneself up to the quest.

One or the other one must do. Whether one begins to seek as a result of action, or goes from seeking to action, is of no consequence. Action also produces what we can really call education, culture, ripe accomplishment. The teacher who does not warm up, who only says what he knows, stirs up his pupil too little. Action must go out from him, his unrest must be transferred to the pupil. Then will the latter seek, just as the former does. Then he will not spread out education, and that is good, for today education means to know something about everything without knowing anything at all. But the sense of this fine word is quite different and, because education (*bildung*) specifies something of no value, it must be replaced by a higher education (*ausbildung*), or a thorough training (*durchbildung*).

Therefore it is clear that the first problem of the teacher is to shake the pupils up thoroughly together, and when the uproar which ensues has subsided everything will apparently be in the right place, or nothing comes of it!

The action of this kind which goes out from the teacher comes back to him again. In this sense have I learned from my pupils what this book contains.

TO ENCOURAGE AMERICAN PIANISTS

THE Chicago Symphony Orchestra, with Glenn Dillard Gunn conducting, gave two programs of American music last season, at popular prices. The purpose of the concerts, as described by Mr. Gunn, was to popularize American music with Americans, and the interest of the public was such that Orchestra Hall was practically sold out for both events.

It has been arranged to continue these concerts next season. At the first, which will take place on November 2, it has been decided that the soloist will be a pianist to be chosen by competitive examination. The work to be performed is the MacDowell concerto in A minor, No. 1 (Revised edition, Breitkopf & Härtel, publishers). Harrison Wild, Felix Borowski, and Adolf Weidig, sitting as a committee, have determined the conditions of the contest as follows:

1. The contestant must have been trained entirely in this country.

2. If more than ten candidates enter, a preliminary contest will be held for purposes of elimination.

3. In addition to the concerto, contestants must be prepared to play some representative larger work by J. S. Bach.

4. Judges for the preliminary contest will be chosen from representative musicians of Chicago, pianists excepted.

5. Judges for the final contest will be chosen from representative musicians of other cities.

6. No judge may be represented in the contest by a pupil or a former pupil.

7. The successful contestant will be awarded the appearance in the concert and a cash prize of $200, donated by Charles G. Dawes.

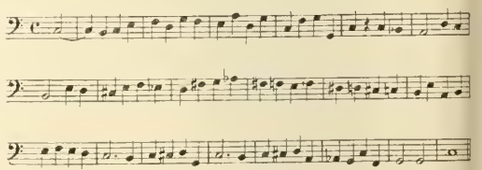
8. The preliminary contest, if necessary, will be held in the Foyer of Orchestra Hall, Chicago, October 15, 1914.

9. The final contest will be held in the same place on Oct. 17.

10. A fee of $5 will be charged for entrance in the contest, money thus realized to be used in defraying the expenses thereof, judges' fees, and hall rent.

11. The names of all who desire to enter the contest, together with the entrance fee, must be handed in to Glenn Dillard Gunn, 431 Fine Arts Building, Chicago, not later than September 15, 1914.

A HARMONIZATION TEST FOR "MUSICIAN" READERS



THE music at the head of this note is a bass to which three other parts are to be added. The student may employ close or open harmony, at his pleasure. Suspensions may be introduced, in fact the full resources of harmony be made use of, the object being to test the student's command of the material he has learned.

The bass was offered at an examination in France and was prepared by M. Eugène Cools. In THE MUSICIAN for October we shall publish the author's harmonization, one by Dr. Percy Goetschius, teacher of harmony and composition, Institute of Musical Art, New York, and author of well-known text books, and one by the Editor of THE MUSICIAN.

Work this out and save your manuscript in order to compare it with the promised harmonizations. In the issue for October we shall offer a bass for harmonization, prepared by Dr. Goetschius for readers of THE MUSICIAN.

THE EXPRESSION OF THOUGHT IN MUSIC

BY H. J. TAYLOR

THE IDEA

We all have ideas of some sort or another, and the most common mode of expressing those ideas is by speech; but there are many other ways, for everything we see around us before it took concrete shape has been simply an idea. Now the composer's idea finds its expression in music, and as a medium by which his thoughts can be reproduced he chooses not only the human voice, but also various musical instruments; the one to which we shall now turn our thoughts especially being the pianoforte.

Just as a poet expresses his ideas in beautiful language, a painter on canvas, or a sculptor in stone, so a composer has many resources whereby he can express himself. There is, however, no written law or book of rules for him to follow, and it is only by instinct, learning, and experience that he will know which means to adopt. It is therefore well for the student to be able to recognize these means, both for his own enjoyment and also that he may be able to convey to others the idea which they express.

A composer's resources may be said chiefly to consist of—

1. Melody. 2. Harmony and modulation. 3. Rhythm. 4. Form or design. 5. Choice of tempo. 6. Choice of key.

1. MELODY

By means of the melody, considerable character can be expressed. For instance, an ascending theme usually suggests elation, hopefulness, joy, etc.; while a descending melody often expresses depression. A quiet spirit is best expressed by a melody of limited range and smooth movement, a more extended compass and wider skips suggesting more animation; elegance and gracefulness in the outline of a melody result in a corresponding impression; appoggiaturas, acciaccaturas, auxiliary and chromatic notes also prove of great utility in this matter of melodic expression.

SCALE NOTES AND THEIR MENTAL EFFECT

It is interesting to notice that each note of the scale produces at least one special mental effect, sometimes by itself, and sometimes in conjunction with the note which precedes or follows it; the effect, also, is sometimes modified or even entirely altered by the harmonies accompanying the note. Thus the *tonic* is called a strong or firm sound, and produces a sense of finality which no other sound does to the same extent; the *supertonic,* when it ascends, is hopeful of rousing; when it descends to the tonic it has a "leaning" tendency; the *mediant* is a calm sound; the *subdominant* is desolate and awe-inspiring; the *dominant* is grand, bright, and sometimes defiant; the *submediant* has a sad or weeping effect and generally resolves on to the dominant; the *leading-note* with its strongly-marked upward tendency is known as a "piercing" sound.

Composers make use of these facts in a judicious and subtle manner, and you must not imagine if a composer wishes to express tranquillity, for instance, that he can only accomplish it by an abundant use of the *mediant.* At the same time, Handel, by the prominent use of this note (which he reiterates five times in the initial phrase) in the *Dead March* from *Saul,* expresses with great impressiveness the stillness and calm of death.

It must, however, be admitted that the composer finds in harmony and rhythm a much greater force for making impressions than in melody.

2. HARMONY

The choice of harmonies is of considerable importance. A grand, massive, or sublime effect is best obtained with full but simple common chords, as in Handel's *Hallelujah Chorus,* which consists of comparatively few chords, and those chiefly concords. The chord of the augmented 6th followed by a second inversion of a common chord on the dominant has an effect like the opening of a door and letting in light, or the drawing aside of a curtain. Discords, also, have their value. The chord of the dominant 7th with its inversions adds richness and beauty, while the chord of the diminished 7th sometimes expresses anger, or sorrow and despair; the Neapolitan 6th chord is generally tragic in its effect. Other discords, when used by an experienced composer, are capable of very distinctive expression. Unexpected progressions, sudden modulations, enharmonic changes, chromatic chords and deceptive cadences, too, are responsible for very striking and surprising impressions.

3. RHYTHM

Rhythm, too, is of great significance, for by the grouping of notes into figures, bars, and phrases, by the introduction of syncopation and special emphasis, many original and realistic effects are obtained; neither must we forget the importance of rests—"silence is more eloquent than words," and, under certain conditions, rests may be more impressive than sounds, for the mind of a hearer is most active during the silence indicated by a rest; it is often like the ominous and silent anticipation which we experience between a flash of lightning and its consequent peal of thunder. Some forms, such as marches and dances, are identified solely by means of their time, speed, and rhythm.

The rhythmic element in music has more devotees than either melody or harmony. Children at a very early age are quite capable of keeping step to a march, or even beating a small drum in strict time, showing that instinctively they possess a sense of regular pulsation. In uncivilized countries the chief musical instrument known is the "tom-tom" or some other simple instrument of percussion, and by such elementary means the natives can be roused to the greatest fury in their war-dance. In rhythm composers have an endless amount of material for expressing an infinite variety of impressions.

4. FORM

Composers find that some forms or designs are better than others for expressing their ideas, and you will notice the appropriateness of this feature. For instance, the introduction of a subject in the form of a chorale at once suggests feelings of solemnity and religious associations; grandeur and ceremony are well suggested in the form of a stately march; a waltz theme at once takes us, in thought, into a ballroom, and so on.

5. CHOICE OF TEMPO

The choice of tempo by the composer will affect the character of his piece immensely. For instance, a melody which, if marked at a slow pace, would make a good hymn-tune, could, if taken at a quicker speed, easily become a dance tune, or at a still quicker rate, a jig; therefore, the composer carefully indicates the speed by means of musical terms and metronome sign to prevent his work being spoiled by its performance at too fast or too slow a rate.

6. CHOICE OF KEY

The choice of key is of greater importance than many imagine; it is not sufficient for a composer to select *any* key at random, he must choose a key which has characteristics in keeping with his idea. Some major keys are best suited for grand, or bright, or calm, or expressive and graceful themes; others for devotional, sentimental, or ever sad music. Some minor keys are more pathetic and tragic than others, and some are often selected for exhilarating, lively, and even humorous music. It might, therefore, be noted here that if we transpose a piece or a song we rob it of some of that subtle appropriateness which is present in the key selected by the composer. A sudden change from a minor to its tonic major key will often immediately alter the character of a piece from grave to gay, from gloom to a burst of sunshine—From *Emotional Technique for Pianists.*

PLAYING BY EAR

BY PERLEE V. JERVIS

One of the most complicated and wonderful processes in life is dependent entirely upon the ear. The infant comes into the world practically deaf and dumb, and in a few years learns not only to converse fluently, but to sing as well. Who teaches the child how to adjust his vocal chords, lips, mouth and tongue, so that he may produce a certain sound? He does it by ear—by trying to imitate his mother's voice, or other sounds which he hears. The ear guides him from inarticulate sounds, through the different stages of "baby talk" to a perfect pronunciation. How does one learn to speak a foreign language most quickly? By ear. No amount of book study can give as perfect a pronunciation of French as will a few months' residence in a French family. A friend of the writer studied French by one of the self-taught methods. When he went to Paris, nobody could understand him—he might as well have spoken Choctaw. The mistake he had made was in neglecting the ear—he had never heard French. Of all the factors that enter into the study of artistic piano playing, the ear is easily the most important. To one who has given it no thought, the connection between the ear and the muscles may not be apparent, but in all his years of experience as a teacher, the writer has never found a pupil who was tone deaf that ever succeeded in developing a fine technic by means of any system or method whatever. The converse is also true; other things being equal, the pupil with a sensitive ear will, with proper training, acquire technic most easily and rapidly.

In the study of piano playing, a musical touch, beautiful tone, nuancing, light and shade, clarity in passage work, artistic pedaling, and general musical effectiveness are dependent entirely upon a sensitive ear and the ability to listen to one's playing. This being so, ear training should be commenced at the first lesson, and carried on in lesson and practice throughout life. Paderewski is reported to have said that he spent hours playing a single note. Whether this story be true or not, it may serve as an example of the striving for the ideal, which is part of the temperament of this great artist. Hearing with his mental ear an ideal tone, he ceaselessly endeavored to reproduce it upon the piano. One need only to listen to the tones of ravishing beauty which he draws from the instrument, to learn what a vital part the ear plays in piano study.

This training of the ear can best be done by music, not mechanics. If mechanical exercises ever have any place and value, for this writer at least, that place is not at the commencement of piano study. Here the child's musical nature must be awakened, and a love for music developed. These results seldom follow a course of mechanical treatment, but disgust for music often does. The pianistic wrecks that strew the land bear eloquent testimony to this fact. When the musical sense and a love for music have been once awakened, technic will often follow in a marvelous manner. Upon the impulse of a strong musical concept, it is surprising how children will work out their own musical salvation, and this without the aid of mechanical exercises. —Bulletin of the Brooklyn Institute of Arts and Sciences.

THE STIFF PLAYING MECHANISM

BY LEROY B. CAMPBELL

ITS CAUSES AND RELIEF

In the reading matter prefacing the Mozart D minor concerto are the following lines about Mozart's playing: "He had small, beautiful hands according to Niemetschek; while playing he moved them so gently and naturally that the delight of the eye was equal to that of the ear in following him." In all probability Mozart was one of the persons who came into possession of these ideal conditions with little or no effort; that is, they came naturally to him. In any case his muscles had to conform to certain conditions which are thoroughly understood today, and set forth in various scientific works along these lines.

THREE ESSENTIALS NECESSARY FOR PROGRESS IN PIANO PLAYING

The three most essential points to which Mozart or anyone else must conform are the following: 1. A clear-cut mental image of the act which is desired to be made; 2. The power to control the muscles which are to perform the act; 3. The power to inhibit all muscles other than those directly used in the performance of the act.

As to the first essential much might be written; but since this article aims more at the exposition of the second and third essentials, only a little space will be given it. Throughout all grades the teachers must lead the pupil clearly to have in mind what he is to do before he attempts to play; in other words, keep the flow of nerve track energy always in the right direction, that is, from the brain outward. For instance, with the beginners, insist on taking each new piece or study with hands alone, and require the pupil to place the right finger over the right key before he plays. This compels the mind ever to go before the fingers; and if the teacher will allow no exception to this manner of work for six weeks only, the process will become fixed and one may rest assured that the results are worth the pains and patience; besides it is a most important step towards making of the pupil a good reader.

Let us return to the second and third essentials, the controlling of the intrinsic muscles in an action, and the inhibition of intrinsic muscles. Mozart and a few pianists of the past and present have been fortunate enough to have a playing mechanism that meets the requirements of the second and third essentials. Thousands of other players, many of whom have fine musical temperament, are truly musical and possess most excellent ideas on interpretation; yet they cannot express their ideas as they feel them for want of a more sensitive and supple playing mechanism. Many of this latter class of pianists began their studies just as young, and had just as good teachers as did Mozart and his following. How can we account then for this varying degree of proficiency among these players? Coming down to our own classes we find the same existing conditions, namely, students with equally good mental and musical grasp, some of whom have arms, wrists, and fingers that seem to work with all grace and ease possible, while others are stiff and awkward.

GENERAL APTITUDE

A great many teachers are willing to explain these existing conditions by "general aptitude" and let it pass at that. Granted that "general aptitude" *does* enter into the question to a certain degree, yet the present writer is strongly opposed to conceding "general aptitude" any other than a small factor in the equation. Before a reader takes issue with this last statement let him think twice, lest he confuse "general aptitude" with a careful beginning, in which the pupil began young, was reared in a musical atmosphere, and was kept regularly at work, with interest always maintained. After hearing in concert one of the greatest boy pianists of his age, several were heard to attribute his phenomenal work to "general aptitude"; but upon questioning minutely the boy himself, it was found that his "general aptitude" consisted in a beginning at five years of age, three piano lessons a week with a most painstaking teacher for nine years, three hours a week, during this same time, in a thorough ear-training class, parents who required regular practice of from two to six hours a day, the playing of accompaniments in a great teacher's studio for several years from two to four hours a day, besides living constantly in the very best musical environment.

Granted once more that a little "general aptitude" may have entered into this case, yet we are bound to concede that regular and careful work under the best of conditions had a trifle (?) to do with this boy's wonderful playing.

DOES PRACTICE MAKE PERFECT?

You ask then, why are there not more players of the Mozart type? Surely there are pupils, and their name is legion, who follow the cut and dried adage that, "Practice makes perfect." Too many teachers use this stock motto; teachers who, although they are excellent players, have given altogether too little study to the all-important side of the science of teaching. They, as well as the public, forget that while music is a fine art, teaching is a protracted and careful study of the mind, muscles, and general disposition of the learner. So in answer to the question, "Why are there not more players of the Mozart type?" it might be suggested that the poorly prepared teacher has much to do with it.

Knowing very little, if anything, of muscles, nerves, psychology, physiology, physics, etc., he is at a loss to attack the direct cause of a mistake, so he uses the stock phrase, "Practice makes perfect," perhaps plays the piece for the pupil and tells him to go and do likewise. Now, as a matter of fact, practice does not make perfect, as we have all seen illustrated, time and time again. Two very important conditional clauses are necessary to this adage before it is safe to follow, viz., "Practice *of the right kind* makes perfect when conditions are favorable."

What the teacher *should* be able to do is to locate the cause of this difference in the easy, graceful pianists, and the heavy, stiff players, of which type there are so many; then the teacher should have a remedy for the same. While many factors enter into this cause, space will not permit of a complete exposition of the subject, so let us consider for a brief time one of the most frequent and harmful sins against the acquiring of the easy and graceful condition in playing.

A BANEFUL MISTAKE IN EARLY WORK

This harmful mistake is in the matter of the movements and exercises given during the first lessons. Through instruction books and the prevailing custom of teaching, the young pupil is required in the very first lessons to practise active and high finger motions. This is like putting the shingles on the house before the framework is erected; it is like teaching the baby to wiggle his toes as his first lessons in walking; it is placing the complex before the simple.

James Sully, the well-known psychologist, whose authority we surely respect, says on page 35, in his *Psychology*: "How pertinent to the wise control of children's movements is a knowledge of the fact that the nearer centers regulating the movements of the nearer joints, as the shoulders and arms, should be developed before those regulating the further joints, as those of the wrist and of the fingers."

Here is what takes place in forcing too early the fingers into activity as in the five-finger exercise; nerve force is sent down to the individual finger, but the finger muscle being as yet unconnected or not ripe enough to transmit the energy to the muscle, the finger in question does not respond. The pupil then, somewhat vexed, sends down more nerve energy which the weak nerve line not being able to take care of, spreads to neighboring muscles and sets them into what is called "sympathetic contraction." Of course, the weak, unused, and hence awkward muscle, also contributes to this fault of the "sympathetic contraction." McDonald Smith once gave as an illustration of this phenomena the example of a man buttoning a stiffly starched collar at the back of the neck. The man really needed only his fingers for the operation, but not succeeding he sends down more and more energy which spreads until nearly every muscle in the upper body is in "sympathetic contraction." Not only this, but words not found in Webster have been used as a result of this extended sympathy.

In the matter of the young pupil, however, this "sympathetic contraction" for the most part takes place in the manner in which Sully explains; and as the pupil practises week after week in this unnatural process, he makes, without doubt, a thousand mistakes a month; mistakes in that muscles other than the ones he desired will contract; mistakes in making motions too large as a result of these unprepared organs being called upon; mistakes in the matter of the nerve lines not carrying directly their message, that is, the energy gets into a habit of spreading, instead of going straight to its required center.

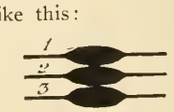
These habits, as a result of the mistakes just mentioned, extend their influence far into the study career of the pupil, who is never able to rid himself of the habit, with the result that his mechanism is never quite so good as it would have been without these wrong impressions having been made. In later life, as a result of these bad habits, he rarely, if ever, gains the control of the second and third essentials mentioned in the beginning of the article.

WHAT CAUSES STIFFNESS IN PLAYING

Such a student often essays to use a certain muscle, when his old habit comes in, and the muscles near the one he desired to use contract sympathetically. This makes the one he wished to use crowd and employ more strength than would otherwise have been necessary in order to make the movement in question. To make this important point clear let us use the following illustration. In the first place here is a muscle relaxed (a); here is the same muscle in a state of contraction (b).

Now, suppose one wished to use No. 2 of three muscles lying near together, thus:

He sends down nerve force, and as a result of bad habit contracted, as previously stated, the nerve force spreads to Nos. 1 and 3. The three muscles now look like this:



But the player wished to use No 2. The room required for the contraction of No. 2 is, however. all taken up by the uninvited contraction of Nos. 1

and 3; so in order to make the required contraction, and hence the desired movement, No. 2 is compelled to crowd and push Nos. 1 and 3 aside. This extra effort and friction on the part of No. 2 *is that which causes stiffness.* This is the cause which must be removed before the playing of the majority will look like the Mozart type of players.

A REMEDY FOR STIFFNESS

The solution of the problem is an easy one. Simply heed Sully's words; do not call upon the over-active finger motion too soon. Give such useful piano motion as the rolling exercise, the arm vibration, the wrist motion thrown by use of forearm activity, the lateral movements, that is, skips of one, two, and three octaves. All these motions will give the brachial mass (the arm) grace, poise, balance; it will learn to carry itself easily and lightly over the keys, and then the more active finger motions may be given with good effect. Many exercises like the following can be given in the first lessons:

Place, for instance, the third finger of the right hand over E and then by a gentle rolling and balancing of the forearm cause the second finger to strike D. Reverse the process, holding the second finger still and playing E. In order to gain the best kind of control, cause the three remaining fingers to hang relaxed off the keyboard. Now proceed to use each pair of fingers of each hand, hands alone, in the same way. You see by this process, while the finger is not called upon for other than a support, still it is used very slightly, and, which is most important, it is used absolutely perfectly in its relations to the other muscles of the arm. The other muscles are all relaxed, and just this one contracts a very little. This is a coaxing, a persuading, a gentle leading of the nerve line on and on until its connection is complete to each finger muscle. The old way is like trying to force the rosebud out sooner than Nature's way. The new way is getting the ground ready and then nursing the action gradually into life instead of forcing it.

For the player who already has the bad habit, who finds his playing mechanism unwieldy, there is just one thing for him to do, and that is, to find some teacher who understands how to give relaxation exercises, or, as a second best thing, get some good work on relaxation such as *Muscular Relaxation Studies,* by Matthay, and follow it out carefully. The pupils who would come up under the régime which has been pointed out in this article will never need any special course in relaxation, for study in the manner already shown, from the very first, relaxes muscles not in use, thereby preserving the proper playing attitude constantly. Care should be taken by those who would by themselves attempt to follow out relaxation exercises, that they do not relax too much, and thereby make their playing characterless.

One practises relaxation that he may be able to relax wherever and whenever he wishes. He desires to gain, as it were, the zero point of relaxation, so that he can have a perfect consciousness of just how it feels to be relaxed. Then, having acquired that feeling, he is also able to make firm wherever and whenever he wishes without drawing into sympathy other muscles.

When pupils are brought up with due attention to the ideas as laid down in this discussion, many more will approach the Mozart type than formerly, at least so far as the graceful and supple arm is concerned. Possibly three pupils out of a hundred might find these ideal conditions by chance; three out of a hundred might never get them; but it is for the ninety-four that this message is written.

GUIDE POSTS

BY MARIE M. BENEDICT

A DEPARTMENT FOR PIANO STUDENTS

It is the intent of this Department to indicate the way to new fields of endeavor and of accomplishment; to direct those interested in the study of the piano to points along the path called Knowledge, from which may be gained clearer perception of the possibilities native to the realm of the pianoforte; broader view, in its entirety, of the world of the tonal art.

These are guide posts for the pupil readers of The Musician; and, also, for those who are compelled to attempt, alone and unassisted, if they attempt at all, the pathway into the land of the piano.

We are to be travelers, student travelers, in the realm of music. Therefore, let us pause, at the outset, to consider what is the material of which that realm is made.

In thinking of music study in the special department of the piano, too many persons are prone to focus attention upon the piano keyboard, with its different groups of black, and its long, smooth reaches of ivory keys; and upon the strongly contrasted black and white of the pages of printed notes, and to give but scanty, secondary consideration to the voices of the strings. But these things, which loom so large in the foreground of the thought of many would-be students, are not music. They are only certain of the media through which music is made to speak to the mind and heart. They are only things which stand for, or which represent music, as photographs represent slight phases of personalities, whose "counterfeit presentment" they are.

Tone is the substance (if term so material may be used in characterization of a thing so evanescent) of which music is made; the medium through which the composer must express his thought, must tell the story; just as the word language is the substance of which literature is made, the medium through which the novelist, poet or essayist must express his thought, must tell his story. Music is the poetry of tone as poetry is the music of language.

Let us next inquire through what special avenue music makes its appeal to the mind and heart?

Evidently, through the avenue called auditory nerves. Music is preëminently the art for the ear; and yet, if the truth were known, it would be apparent that, in the conception of music and in the practice of music common to a vast number of persons, the ear holds but a minor, a secondary place. It is the sense of hearing, through which one distinguishes tone, its pitch and its quality; just as it is the sense of sight through which one distinguishes color, its high lights and its shadows.

This is a truth which I would were graven deep in the mental tablets of everyone who essays even to approach the land of the piano. A truth which is fundamental to any right understanding, any genuine appreciation of the fascinating world of music. Simple it is, as the veriest truism; but how many are there among the piano pupils of America who have any real conception of the premier place which is held by the ear in the study of music? How many have learned to listen in any true sense to the tones which they produce? How many, through the auditory nerves alone, are able to recognize a major or a minor triad, to know surely, and at once, in which of its different positions the triad is sounded, to recognize the unmistakable mood of the dominant seventh and its different positions? How many can be certain, the instant that the tone salutes the ear, that C is C, that G is G, that E is E? They would all, upon the instant, recognize three of the primary colors if presented to their gaze; anyone who could not do so would be considered definitely lacking in the color sense.

Why should not the sense of tone be equally keen? Why should the student who works with tones, which belong exclusively to the world of the ear, which must make their appeal to the mind through the sense of hearing, be unable, by hearing alone, to tell one tone from another? Why should he be unable to recognize, at sound, the strongly individual mood of the different tonalities?

The answer is very simple. It is because he has never acquired the habit of genuine listening; has never developed the latent powers of his auditory nerves.

Do not think that absolute pitch is the natal gift with which the Muse has endowed the favored few, and has refused to the great majority, of which we ordinary mortals form a part. The sense of pitch and of tonality can be acquired through careful listening; through concentration of attention upon the distinctly different individualities of C and E, etc.; upon the strikingly different tonal moods of the chords of Ab major and of B major, etc.

Go to the piano with eyes closed or blindfolded, and let your ear, through often repeated and long continued application of attention, if need be, come gradually to perceive the characteristic quality of each tone as it speaks from its vibrating string.

All this is not to say that the eye is not a most important factor in the work of the pianist; that quickness and accuracy in the reading of printed music are not of superlative advantage to the player. Nor has the writer forgotten that Beethoven not only wrote his orchestral and vocal score, but conducted orchestra and chorus when he was unable even to hear the tremendous applause which greeted the *Ninth* symphony. So absolutely had he listened through all the years in which his auditory nerves were living and active, that, when these could no longer carry the music to his brain, through the power of imagination the genius of the man created new glories in the world of tone. Through the power of imagination the ear of his soul heard all the wonder and beauty of his last great work.

Had it been possible for Beethoven not to listen so completely in the years before his deafness, we should now have no *Ninth* symphony.

That success, that noble achievement in the world of music are not dependent upon the eye's coöperation with the ear has been many times amply demonstrated. Witness the career of Alfred Hollins, English organist and composer; of David Wood, concert organist, choirmaster, teacher, of Philadelphia; of Edward Baxter Perry, concert pianist and lecturer, composer and teacher.

Learn to LISTEN, with absolute concentration of attention, to the tones which speak to you from the strings of the piano. Give to the ear, in your study of music, the high place which Nature and Reason declare to be its right. Give to the ear the premier place, which is your necessity, if you would know one-half the pleasure which awaits you in even very limited study of the piano. But never forget that with this much-needed use of hearing in the realm which is hearing's own must go persistent thoroughness in practice in music reading, in attention to hand positions, and in all technical work.

Consideration will be given to these many different subjects, and to ear training in detail, in subsequent Guide Posts.

Questions concerning any cloudy points will be welcomed, and will receive prompt attention.

THE FIFTH CONGRESS OF THE INTERNATIONAL MUSICAL SOCIETY, PARIS, JUNE 1-10, 1914

BY J. LAWRENCE ERB

IN the ordinary course of events any international gathering made up of voluntary pilgrims, people from regions as divergent as Australia, America, Germany and Russia, would be likely to be of some moment and should demand some attention. Such an event with the Fifth Triennial Congress of the International Musical Society, in Germany they call it the I. M. G. (*Gesellschaft*) and in France the order is reversed so that it is known (and respected) as the S. I. M., but in any case the society is the same.

This event took place in Paris, beginning with a reception on the evening of June 1st, with music by a number of the best Parisian artists, with, as a crowning number, two piano solos by the dean of French pianists, the venerable and still most excellent, Louis Diémer, who bears much the same relation to the Parisian musical world that Joachim bore to the Berlinese.

OFFICIAL RECOGNITION

A most imposing committee was in charge of the program for the Congress, headed by no less a personage than the Premier Louis Barthou, who held in his own cabinet the position of Minister of Beaux Arts, and who made a most effective presiding officer upon the formal public occasions when he appeared. By an unexpected turn of the political wheel, he was unseated a day or two before the Congress met, but that in no wise interfered with his success or his popularity. Other honorary presidents included the directors of the two operas and of the National Theatres and Museums, and other eminent Parisian officials, besides the French composers, Bruneau, Charpentier, Debussy, Dubois, Dukas, Fauré, Paladilhe, Saint-Saëns and Widor, Isidore de Lara, Pierné, and teachers such as Jean de Reszke.

Foreign peoples take such events a little more seriously than we do in America, and it was a truly imposing assemblage which attended the formal opening exercises at the Sorbonne on the morning of June 2. M. Barthou presided, making a most excellent and felicitous address, and was followed by various of the officials of the I. M. S., including the representative of the Austrian government, Prof. Adler, who spoke in French. (The official languages of the Congress were French, German, English, and Italian, and all were likely to be heard in the same discussion, the French and German, of course, predominated). All the European governments, even to little Greece and the republic of Switzerland, sent national delegates, but the United States of America, though six delegates attended from that country, had no official representative, though invited to send one.

THE PROGRAM

In the afternoon began the serious work of the Congress with *Séances du travail,* as they were called, devoted to Secular History, Esthetics, and Bibliography. Besides these there were sections devoted to Religious History, Ethnology, Acoustics, Instruments, and Theory and Notation, all presided over by the most eminent men in their respective fields in Paris. As may be surmised, the I. M. S. is devoted to the theoretical and scientific aspects primarily, and appeals to the musical savants, rather than to the musical performers, though by no means devoid of deep interest to the latter. These séances or sessions lasted from 9 to 12 and from 2 to 5 daily through the week, and there were two special evening séances, one on Acoustics and another on the Photography of the Voice.

To show the range of subjects considered, here are a few chosen at random.

"Music in the Armies and Navies of Europe," "The Problem of the Libretto," "The Works of Bach Arranged for the Pianoforte," "Some Notes on the Musical Relations of France and Poland," "Neumes and Accents," "Church Music in Alsace," "Church Music in England," "Psychological Laws of Musical Composition," "The Esthetics of Song," "Shakespeare and Irish Music," "Popular Armenian Music," "Clavichords with Three Manuals of Cristofori." "Bibliography of the Harp," "Project for the Simplification of Musical Notation," "Notation for the Blind," etc. The American group was represented by papers on "Recent Advances in Comparative Music Science," by W. Van Dyck Bingham, Professor of Psychology in Dartmouth College, an excellent paper, and "Helpful Suggestions as to Teaching of Harmony, Drawn from the Methods of Language Study," by H. C. Macdougall, of Wellesley College, which was not read, owing to the inability of Prof. Macdougall to be present, but which will, no doubt, appear in the printed records of the Congress.

THE MUSICAL PROGRAM

The musical part of the Congress was most excellent and, in many respects, unique. First, was the opportunity to attend as guests, the gala performance at the Opera Comique, in honor of the 200th anniversary of the birth of Gluck. This excellent performance consisted of an act each from *Iphigenie en Tauride, Orpheus,* and *Alcestis,* and was a splendid example of the high ideals and artistic results achieved under the regime of Paul Vidal. Then there was a charming concert of Renaissance Music in the Salle Gaveau, consisting of organ, string quartet, and chorus numbers of the French masters, especially Parisian, and most interesting and illuminating. Then, on Saturday of the first week, a reception by the *Figaro* and a unique opportunity to attend a service of the Armenian Church formed a transition to the second week which was filled with excellent concerts.

The week began with a special service in the Church of Sainte-Clotilde, devoted to contemporary French composers of church music under the direction of Jules Meunier, with M. L. Cazajus at the chancel organ, and Charles Tournemière, pupil of César Franck, and one of the two most highly regarded Parisian organists of today. This service was thoroughly worshipful and at the same time musically most excellent, and consisted of works by César Franck for organ (also a beautiful *Domine non secundum*), Saint-Saëns, Bordes, d'Indy, Fauré and Dubois Then, on Monday, two rare treats, the first a concert of *French Primitive Music* in the wonderfully beautiful Sainte-Chapelle of the Palace of Justice, and, in the afternoon, a concert of *Old (French) Chamber Music* in the gorgeous Galerie des Glaces of the Palace of Versailles. On the way back to Paris the Congressists were treated to a severe hail storm which made the ground white for many minutes after, and made snowballing a popular sport in Paris—on the 8th of June. The same evening the Congressists were the guests of the Boston Opera Co. at a fine performance of Verdi's *Otello* in the Théatre des Champs Élysées, with Felix Weingartner in the director's chair and his wife as *Desdemona,* the part of *Otello* being taken by Ferrari-Fontana and of *Iago* by Vanni Marcoux.

On Tuesday a fine concert of *Religious Music of the Seventeenth and Eighteenth Centuries* was held in the Chapel of Les Invalides (Napoleon's tomb is in the same building) with the Society of G. F. Handel, under the direction of Rangel, the young and most demonstrative chapelmaster of Saint-Eustache, and the excellent organ playing of Joseph Bonnet, organist of Saint-Eustache, and pupil of César Franck. He and Tournemiére are both from Bordeaux, and both Franck pupils, and are regarded as the best organists in Paris today. There is considerable rivalry between their partisans; whether it has reached the two men themselves I cannot say. In the afternoon a rather drab program of *Huguenot Music,* consisting largely of the psalm tunes of Goudimel, was given at the Protestant Church of the Holy Spirit, by its choir, and in the evening came the Grand Banquet at the Grand Hotel (opposite the Grand Opera), which was surely a feast of good things, and was followed by *Les Aveux Indiscrets,* an opéra comique by Monsigny, sung by artists from the Opéra Comique, with the dances by "stars" from the Opera. At the Table of Honor was a perfect galaxy of French notabilities, including ex-Premier Barthou, Dr. d'Ecorcheville, President of the French section of the I. M. S. Saint-Saëns, Gabriel Fauré, Director of the Conservatoire, Bruneau, Xavier Leroux, and many others foreign as well as French.

DIVERSIONS

Wednesday was purposely left free for sight-seeing, while on Thursday there was a most illuminating and unique lecture with copious musical illustrations by Professor Inayat Khan, an eminent Hindu musician, with three assistants. In the afternoon, the Princess de Polignac (of the American family of Singer of sewing machine fame) opened her magnificent home on the Avenue Henri Martin for a closing reception and excellent concert of old French orchestra music, with vocal solos by Mme. Vallin-Pardo, Mlle. Bonnard, and Mlle. de Lisle, violin solos by Jacques Thibaud, and harpsichord solos by Mme. Wanda Landowska, the orchestra being under the direction of Paul Vidal of the Opéra Comique (formerly of the Opera).

The final event of the Congress was a surprisingly interesting program of Brazilian music, with Brazilian soloists, Mmes. Koenig and Rio Branes and Mlle. Bucayuva, and directed by the Brazilian conductor and composer, Pereira.

Not officially on the program of the Congress, but open to such of the Congressists as remained in Paris, was a truly remarkable concert on Sunday evening, June 14th, in the Théatre des Champs Élysées, by the chorus, 'Orfeo Catala" of Barcelona, Spain, under the direction of its founder, Lluis Millet. Absolutely without accompaniment or even an instrument to give the pitch, this chorus of 250 to 300 men, women, boys, and girls did the finest chorus work that it has ever been my lot to hear. And the Parisians must have thought so, too, for I have never witnessed such almost frenzied enthusiasm in my life. The old Paderewski demonstrations were mild in comparison.

The last previous Congress was held in London in 1911, and the next will be held in Berlin. Some day, I hope, New York or Boston may have the honor of entertaining this earnest body of musicians and scholars, and of showing what we Americans have accomplished in music,—and I believe we can open the eyes of many.

So long as the money changers are not driven out so long will the temple of art be no temple. But the art of the future will drive them out.—*Tolstoi*

LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

TEACHING THE BLIND

"The test of education lies less in what one knows than in how one can adjust oneself to society. While it is easy to instruct the young blind, it is difficult to train them so as to hold their own in the world. A reason for this difficulty lies in the tendency of the *seeing* to underrate the capabilities of the blind; another in the natural proneness of the blind to magnify this "prejudice of the seeing" and to minimize the influence of their own exertions in overcoming it."—Edward E. Allen, Director of the Perkins Institution for the Blind, Boston.

"What I would like every music teacher to understand," said Mr. Gardiner, head of the Music Department at the Perkins Institution, "is that the music teacher who would teach *blind* pupils needs only just one thing more than does the teacher who undertakes to teach music to *seeing* pupils, and that is the 'Braille'; and to learn the Braille takes perhaps a month or two."

When Louis Braille invented his system of writing for the blind he made at the same time a system of musical notation; the one is called the "literary Braille," and the other the "musical Braille." This system was invented in 1829, yet so recently as ten years ago blind students were still wearily dependent upon "readers," and this for two reasons: First, because of the small amount of music which had been put into the Braille; and, second, because the students learned the literary Braille *first*, and found the *new* system of dots so difficult and confusing that they balked at using it, and insisted upon depending on the "readers."

Mr. Gardiner has overcome both these difficulties, the first by nineteen years of studying, revising, editing, and printing music in the Braille, until he has, in the Institution's circulating music library, practically every worth while set of studies and thousands of selections both for instruments and voice; and the second, by developing the Musical Kindergarten and Primary School, in which the pupils begin to learn the musical Braille at the same time that they commence to learn the literary Braille, so that the first is quite as much a matter of course with them as is the second; and they do all their own reading, being quite independent of readers.

The story of the teaching of music at the Perkins Institution and School for the Blind is really the story of what is being done all over the country, and, in fact, in England as well, for this was the first school of the kind in America. When Dr. Armitage wished to open one in England he wrote to Dr. Howe for help and for teachers, so that the English schools for the blind were really started by Americans. As the other states of the United States were able to have schools they modeled them on the Perkins Institution. Today there are many noble schools throughout our country in which musical instruction is being carried on and musical circulating libraries in the Braille being daily added to, and in which music teachers with brains are adapting all the modern paraphernalia of music teaching to the needs of these handicapped pupils.

As Mr. Allen said, it is easy to *instruct* the young blind, but difficult to *train* them so that they may, hereafter, hold their own in the world. And it is just this training that the pupils receive under Mr. Gardiner and his corps of teachers, which is really a *better* training than the great majority of seeing pupils receive.

THE MUSIC KINDERGARTEN

The work in the Kindergarten and Primary School is in charge of Miss Helen Hinolf, Miss Tucker, and Miss Gring.

Miss Hinolf has adapted the materials of such courses as that of the American Institute of Normal Methods, and exercises from Weaver's system of solfeggio, to the work of the blind children. Miss Hinolf has absolute pitch and is a splendid pianist, having begun her career as a teacher of pianoforte. She teaches her pupils the musical Braille, sight singing, ear training, and rhythm by means of the Braille tablets and pegs, and has the Weaver exercises printed on strips of aluminum. In Miss Hinolf's singing class the children learn all the fundamentals before they proceed to use them at the piano.

Miss Tucker and Miss Gring teach the first piano work. For this they use the apparatus of the Fletcher-Copp Kindergarten system. The staff is cut into wood, and the pupils place the characters thereon by means of thumb tacks.

Mr. Gardiner installed the system of the *daily* lesson years ago, and the beginning pupils do no work except with the teacher. Just as soon as possible, however, they are made independent, and when ready a lesson is skipped, so that in time they are taking the regulation two lessons a week; but the practice is always done under the teacher's supervision, as of course they all live at the school, and all their practice is done there.

When they are ready for it, a great many pupils receive individual vocal instruction from Mr. Gardiner himself and his assistants.

"I try to have every child have some individual vocal work whether possessed of a pleasing voice or not, as the breathing exercises and lessons in enunciation prove most beneficial," said Mr. Gardiner.

THE CHORUS AND GLEE CLUB

With all this careful training, from the first Kindergarten days through a most carefully graduated course, you can readily imagine what the results are when the pupils reach the age and grade that admits them to the chorus. This is composed of about ninety voices, and does work that is equal to that of any chorus in the state, giving public concerts, singing the chapel services; and it is to this splendid chorus, singing the most beautiful chorals and anthems ever composed, that the pupils of this school listen every morning of the school year. Inspirational indeed!

To those of us who have been accustomed to seeing choruses carried by means of much waving of arms and baton, and much facial expression on the part of the conductor, Mr. Gardiner's conducting of this chorus of blind singers is a revelation.

"But how do you get them to so exactly do what you want them to?" I asked.

"I *tell* them exactly what I want first," he said. "Then a rap of my stick against the music rack or a word is sufficient to keep them straight."

That is it, you see. Mr. Gardiner has that too rare possession of our teachers, the ability to tell his students, *in words*, just what he would have them do; then, having made them self-dependent, he gets his results without wild gesticulations or mad grimaces. The quiet dignity and poise of the work was most pleasing.

And with the same quiet dignity and poise, Mr. Gardiner has carried on his work of teaching music to the blind, and of teaching others how to teach the blind, for nineteen years. He will not allow that this has been a wonderful achievement—"It has been just plain plug," he alleges, with the modesty characteristic of a great man who has sunk self in a great work. Musical America has cause to be justly proud of this man, and grateful for the work that he has done, and is doing, for our musical "brethren in darkness."

I hope that no Beginning Teacher will hesitate to teach the blind if this work should ever present itself to her. Be willing to spend the few weeks that are necessary to learn the Musical Braille, and the State School, in whatever state you may live, will supply you with all the music for the blind that you will need.

The Perkins Institution publishes a catalogue of music in its library which you may obtain by addressing the office at Boston, or the Institution at Watertown, Mass.

"FUNERAL MARCH OF A HERO," BY BEETHOVEN

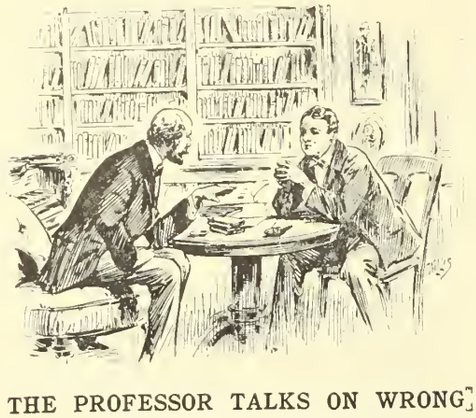
This representation in plaster of the spirit of Beethoven's great *Funeral March of a Hero*, was made by a French sculptor, E. P. Bènet. The Master is represented at a piano, with the fire of creation in his eye, while back of him is a group of soldiers bearing the body of the hero upon their shoulders, marching to the strains of the horn and the drum. It is another example of the hold which the mighty genius of Beethoven has upon the creative spirit of workers in the kindred arts.

———*———

SAYINGS OF DEBUSSY

In 1901 he wrote: "I make music to serve music as best I can and without other preoccupations. My music, then, logically runs the risk of displeasing those who like *une musique*, and remain jealously faithful to it in spite of its paint and wrinkles.

"The primitives, Palestrina, Vittoria, Orlando dl Lasso, employed the divine 'arabesque.' They found the principle in the old Gregorian chant and they propped the frail interlacings with resisting counterpoint. Bach made the arabesque more supple, more flowing, and, in spite of the discipline to which this great master subjected Beauty, she can move with the free fancy, always new, that still astonishes our epoch. In the music of Bach it is the curve, not the character of the melody that moves one; more frequently it is the parallel movement of several lines whose meeting, either accidental or inevitable, compels emotion. I have been reproached because in my score the melodic phrase is always found in the orchestra, never in the voice. I wished—intended, in fact—that the action should never be arrested; that it should be continuous, uninterrupted. I wanted to dispense with parasitic musical phrases. Melody is, if I may say so, almost anti-lyric, and powerless to express the constant change of emotion or life. Melody is suitable only for the song (*Chanson*), which conforms a fixed sentiment. I have never been willing that my music should hinder, through technical exigencies, the changes of sentiment and passion felt by my characters."—*Boston Symphony Program book.*



THE PROFESSOR TALKS ON WRONG EDUCATIONAL METHODS

A GOOD TEACHING SEASON

"HOW do you do, Professor? This is quite a surprise! What brings you to the city so early? I did not expect you back again for at least another month. Nothing amiss, I hope?"

"Nothing whatever; on the contrary, everything in the musical world relative to teaching appears to be more promising than usual. That is really the true reason for my return from my summer work at an earlier date. The gradual awakening of teachers to the need for a higher standard of teaching generally; the consequent agitation among the professional element of the various State Associations of Music Teachers, for better teaching—*ergo* for better teachers; the greater amount of discrimination in the choice of a teacher now beginning to be observed by prospective pupils—who now insist upon being 'shown,' whether from Missouri or not; higher class teaching and higher class teachers are absolutely demanded by earnest students: these are all reasons for a more promising teaching season. Therefore I returned earlier to organize classes for enthusiastic pupils."

"Then, do you augur from that, Professor, that the coming musical season will be more successful than the last?"

"No, my dear Editor, I do not; although I do not well see how it could be less. Recitals, concerts, operas have all shown a decided balance on the wrong side of the box-office accounts, indicating that there is 'something rotten in the state of *Music*.' How to account for it is an easy matter, if we will only be honest and look the matter squarely in the face: *The taste for good music is not implanted and fostered in the minds of the young.* That means that the ear of the people, as a whole, is not trained or habituated to the sound and use of good music."

ABSENCE OF CORRECT MUSICAL TASTE

"Hold hard, there, Professor. Don't you think you are making too severe and too sweeping an assertion?"

"Not at all—*not at all,* Sir," replied the Professor, in his most emphatic manner. "I said 'as a whole.' There are, undoubtedly, many exceptions in our vast country and amidst its enormous population of nearly one hundred million souls. But the many exceptions fade into a negligible quantity by the side of that enormous population.

"Let us look abroad and take some example from other peoples. We need not employ the well-known cases of Germany, France, and Italy, where the people are nurtured in folk-songs (admirably perfect in form) and in operatic airs. But let us consider England, which has long had the unenviable reputation of being 'not a musical nation.'

"England may not be a musical nation in the sense of having produced great composers equal to those of the countries mentioned; although much may be said in favor of the English school of composers of church music. Time fails me to discuss this interesting phase of the question. But there can be no doubt whatever that England is a musical nation from the points of view of the people's love of music, the people's appreciation of the choral works of the great classical writers, and the people's active participation in the performance of those works.

AN ENGLISH EXAMPLE

"Every little village in that country has its glee club, singing, or choral society. Their members meet weekly to study and practise the good old part songs, glees, and madrigals by the best composers, and to join in the singing of the choruses of the great oratorios of Handel, Bach, and Mendelssohn. These singers from the villages will go periodically to the nearest chief city to swell the ranks of its festival chorus, under the baton of some experienced conductor. (Many of Mendelssohn's works were produced for the first time, under his own baton, at some of these provincial cities: *Elijah,* for example, at Birmingham.) Then, once every three years, all these villagers and singers from provincial cities, all over the country, meet in London and, joining forces with the best choirs and choral societies of the capital to the number of some *five thousand chorus singers* and a professional orchestra of about five hundred, perform *The Messiah, Israel in Egypt,* and some of Handel's smaller works, in celebration of what is rightly termed the Handel Festival.

"Nor should we lose sight of the fact that not one of the whole five thousand receives any pay for services or for loss of time."

"That is undoubtedly a marvelous manifestation of music by the masses. Why should we not do something similar here, Professor?"

DESIRE FOR DOLLARS

"We *should,* but we will not; not in my lifetime, at least, nor in yours, my dear Editor,—and that for many reasons too numerous to mention. Two or three of them, however, are worth stating. We are, at present, too materialistic as a people to go in for music *for music's sake*—for the enjoyment we can get out of it. Get together a small society of fifty singers and propose to them to go to some neighboring city to give a concert, and you will probably find the chances are forty-nine to one that the society will be so discordant on the subject that music will be out of the question. Nay, you do not require fifty singers to prove my argument. About the first thing that singing pupils do is to form a quartet, issue cards or circulars, bearing some high-sounding but much-abused name such as *Orpheus, Apollo,* or *Euterpe,* and endeavor to turn their lack of experience and talent into good greenbacks.

"Then again, this state of things is responsible for the fact that very few of our churches possess large chorus choirs. The quartet prevails, to the detriment of fine church music and to the prevention of musical growth among the people.

ELEMENTARY EDUCATION

"But, chiefly, it is the want of the right kind of music training in the schools that is answerable for our stunted musical growth, as a people. We are a composite people, made up of some of the most musical nations of the world: English, French, German, Italian, Polish, Russian, and Swedish. Give us the right music and the right instruction and we will beat the world. Let us have good part songs and good folk songs; if we have none of our own, let us take from those countries. Then give us the right instructors and supervisors of music in our public schools—not those who owe their position to some 'graft' or political pull (for that means ruined voices and stunted musical knowledge), but those whose paramount recommendation to the position lies in the fact that they are first-class musicians and excellent teachers and that politicians are not allowed to tamper with the teaching body.

"So let us begin with our young people and their musical instruction and, in the words of the bard, 'reform it altogether.' Abolish the atrocious popular song of the present day and its equivocal words (the only *vocal* thing about it); give our boys and girls clean and wholesome lines set to clean-cut melodious music and thus lay the foundation for the popular appreciation of good music.

"If ever we succeed in effecting these reforms and a few others similar, we shall become a music-loving nation and a *music-making* nation second to none in the world."

SPEED AND SUPERFICIALITY

"What, in your opinion, Professor, is one of the chief causes of our failure to produce a greater percentage of eminent musicians, having regard to the size of our population?"

"Speed first, again speed, and always speed, my dear boy. Inconsiderate speed, the craving to 'get by' and to 'get there,' to 'get there quick' and enjoy a spurious superficial reputation—a bubble which bursts at its first contact with a thorough musician—or else to rake in the illegitimate gains which the unwary and unsophisticated pay overconfidingly.

"Speed, alias superficiality, is the reason for so many musical wrecks on European shores. The aspiring student—who is, perhaps, talented—goes there with promising natural endowments but with the flimsiest musical foundation, only to find too late that *there* a most solid foundation is absolutely indispensable, and that there is nothing to be done without it—result: disappointment, discouragement and, oftentimes, despair. It might all have been avoided had the preparation been slower and more thorough; less speed and no superficiality. The good old axiom still holds true: 'You must walk before you run.' Before you attempt to cross the road to embark on your musical career, you must look to your safety first.

SAFETY FIRST

"There you have it: 'Safety first.'

"Coming into the city today from my summer school, back in the woods, I was gently roused from my musical cogitations by dimly sensing the existence of sundry signs, bearing the legends: 'Safety first'; 'Don't take chances'; 'Watch your step'; 'Face the front'; '96 per cent of accidents are preventable'; and always 'Safety first.'

"Gradually these sensible recommendations wove themselves into my musical reverie, until I almost believed they had been placed there by some enthusiastic musician, so appropriate were they.

DON'T TAKE CHANCES

"Parents and guardians, pupils themselves should all begin by observing this advice. Don't engage a teacher because he or she charges so little, with the fallacious idea that 'anyone is good enough for the beginning,' and that the higher priced teacher may be reserved for 'finishing lessons.' The latter will say that the pupil was *finished* in the beginning, so much so that any future would be more than problematical! Choose the best teacher available and choose him not necessarily because he is a good performer but because he is a good teacher and trainer of successful musicians. Don't take a chance, but make sure that your choice of a teacher is all right. It is, by far, the most important step in a musician's career. Watch it!

WATCH YOUR STEP

"Not alone in later life, but all the time and from the very beginning—*above all, from the very begin*

ning: *'Watch your step.'* You do not wish to be a bandy-legged or knock-kneed musician, because your first steps were badly trained: watch your *early* steps! Be sure of your foothold before each step in your musical instruction. Don't be satisfied with the 'nearby' but aim at making each step perfect, before proceeding to the next; otherwise you will be building on sand and the whole edifice, if completed, will cave in. 'Perfection should be the aim of every true artist,' Beethoven has said. Perfection in music is a gradual growth, step by step, each made perfect in turn.

It is only in this manner that you can look forward with confidence to the work that lies before you; in this way only can you *'face the front,'* fearing nothing behind. The difficulties you overcome, by the thoroughness with which you watch and consolidate each step, will insure your success in triumphing over those that are yet before you. Face them, 'face the front' boldly and, step by step, you will conquer and attain the success you seek. Ponder over what Schumann said: 'Continuous application, vigor, energy, and *incessant striving for improvement and refinement*—those are the great mainsprings of art.'

"96 PER CENT OF ACCIDENTS PREVENTABLE"

"Just so. Instead of having 96 per cent of pupils who fall by the wayside, who lose interest, whose work is incomplete and who fail—because proper precautions have not been taken in the choice of teachers, because chances have been taken, because each step in the students' careers was not watched—we would have 96 per cent more successful musicians; we would develop the wonderful musical material that exists in the populations of every state of the Union, material that is second to none.

"But the student must make up his mind to avoid any demonstration of speed. The acquisition of art is a slow process; all the slower because art is always progressing. Genius can accomplish more in less time; but, as Hiller says: 'A man may have genius and yet degrade his art; he may, however, have only average talent and yet deserve the respect due to industry.'

"Let all proper precautions be taken to insure sound teaching and thorough, conscientious, step-by-step study and thereby assure the highest musical development to our country.

REMEMBER: SAFETY FIRST

"As these words again appeared before my gaze, I saw also that they emanated from the Boston Chamber of Commerce, and thus I became aware that they were intended for advice to 'passengers.' Nevertheless, the advice is so admirable for music passengers, those who are desirous to travel or are traveling up Mount Parnassus, that I shrewdly suspect that the doges of the city, the 'most potent, grave, and reverend seigniors' of the Chamber of Commerce, are represented by a majority of musicians, having plans for the greater and better diffusion of music among their fellow citizens."

———*———

NOTES ON THE MUSIC IN THIS ISSUE

SEPTEMBER means getting back to work again for many teachers and students, back from play, back from recreation, and, in some cases, back from summer study. This should put everyone at home, ready to take up work with renewed energy, enthusiasm, and intelligence, ready to grapple with the problems of getting a fresh start. With these notes we are adding a wish that all of the readers of THE MUSICIAN may have a most satisfactory and successful season.

The music included with this issue should prove helpful to those who are interested in piano compositions. Most of the pieces are rather easy, and we have especially selected some short, snappy little numbers for use with young pupils, in preparation for the first recital of the new season, and for sight-reading drill for pupils a little more advanced.

BE SURE TO READ THIS

We are making a special effort to interest our readers in the music section of THE MUSICIAN, and hope to have a generous response. This is the offer:

We will place on the subscription list of THE MUSICIAN, for a period of six months, the name of any pupil who plays or sings in concert or recital between the present time and Jan. 1, 1915, any one of the pieces included in the music section of THE MUSICIAN, for September, October, November, December, 1914. Send us a program listing the piece, and the names and addresses of teachers and pupils.

This is a fine offer, one that is made to demonstrate the value of the music included with each issue, as teaching material.

Second valse, in Ab, Op. 86, by Auguste Durand, is by the composer of the very popular *Waltz* in Eb. We think this one is equally attractive and useful for teaching and recital purposes. Treat it as a concert number, the tempo faster than a waltz to which one would dance. The touch is to be light and crisp, and the runs in eighth notes pearly and very legato. Above all do not accent the first beat in each measure unless specially marked. To do so gives a machine-like effect to the movement that kills all real artistic interpretation. In order to get this into the allotted space we were compelled to use a sign for repeating, found on page 595, namely, *bis,* which means play the passage enclosed twice, and in the last measure where one measure is played three times. With this explanation no one should have trouble with the execution of this very interesting waltz.

The pretty Polly, polka de salon, Op. 313, by Carl Wilhelm Kern. *was specially written for this issue of* THE MUSICIAN, and is now published for the first time. If you wish copies of this most attractive piece, one of the best ever written by this very popular American composer, send to us for it. You will want to use it with your pupils, for it is one that they will like to play, and one that parents and friends will want them to play. At any rate we want you to write to us and tell us how you like this piece. Play it in a brilliant style at the metronome time indicated, or at most, only a little faster, the second theme in D minor being made bold and strong, while the third, in Eb, is to be more quiet and legato in quality. We have had letters lately from some of our readers telling us what they think of the music in THE MUSICIAN, and we assure the writers that we are very appreciative of the interest these letters show. Who will be one of the correspondents this month?

Village dance, Op. 31, No. 3, by Emil Rhode, is intended for pupils who are just entering Grade III. The greater difficulty will be found for the left hand in measures 42 to 52 in which the passages are to be played legato and with great sureness. Practise all the measures in which the left hand has passage work in eighth notes, but particularly the measures specified above. Note also the imitations between right and left hand passages.

The spinning wheel, by Percy E. Fletcher, is one of a set which the composer has called *Old Curiosities.* Although this is a delightful piece, it has unusually strong teaching value, both hands having plenty of work in rapid passages in sixteenth notes. The composer has indicated the metronome speed as 112 beats to the minute, a quarter note being the unit of beat; this means that 448 sixteenth notes will be played per minute. Commence your practice at about 60 beats to the minute, and as you learn a phrase, increase the speed uniformly, about 10 or 12 degrees at a time, until you reach your limit. Give the left hand plenty of drill; it will need it and will be profited greatly. Passages like that in the second measure may be played with different fingers, for example, commencing on the first, and third fingers, also alternating as 1, 3, 2, 3, etc., thus drilling the fingers in trill formations.

Light of heart, waltz, Op. 76, No. 3, by Paul Zilcher, is a joyous, fresh, melodious little piece in waltz tempo, the middle section, in C major, being particularly interesting. The theme for the left hand is to be played carefully, and with a little more breadth of tone than in the other section. The pedal can be added, provided the pupil has learned to use it. Generally speaking pupils do not receive much instruction in the use of the pedal earlier than the third grade, although they can be taught the elementary principles in Grade II.

Petite gavotte, by Gabriel Picrné, Op. 14, No. 4, is a four hand transcription of one of the composer's best easy pieces for piano solo. The rhythm of the gavotte is well indicated and the piece will prove an excellent study in rhythm to use with pupils whose playing is dull. The Secondo player has sufficient melody work to make the part interesting.

Hunting Song, Op. 81, No. 3, by James H. Rogers, is a fine example of this successful American composer's happy faculty of making a thoroughly musical piece with simple material. Play it as if you were out with a hunting party, on horseback, with hounds barking and horns blowing, and everyone keyed up to the highest pitch.

The brooklet, Op. 81, No. 1, also by Rogers, is a dainty, delicate little piece, a poetic tone picture showing the ripple of the water and the beauty of the scene. It is a delightful little number for a young pupil with marked musical talent and quick fancy.

Madrigale, for violin, by A. Simonetti, will surely interest teachers of the violin, as well as young players who have had drill in playing in the higher positions. With this exception there are no special difficulties in the piece. Do not overlook that it is to be played with muted strings. Play with pure, full tone, and without heavy pressure on the bow.

In the apple boughs, by Paul Opper, is a charming lively little piece for young pupils just about to leave Grade II. An increase in speed will add a little to the difficulty of the piece. Note the pressure accents in certain measures; the phrasing is to be clean cut and distinct. Here is a good recital number.

Sylvelin, Op. 55, No. 1, by Christian Sinding, the Norwegian composer, is a song that has been used with success in concerts in Europe and will appear on the programs of American artists. It is easy so far as melody is concerned; the expression which the singer imparts to it is everything. As a teaching piece to help a pupil to acquire clear diction, and expressive tone color, we think this an admirable song. Don't forget that this is a sort of prayer for a beloved one, a message of affection and tenderest hopes. The run in thirty-second notes is played *glissando.*

In dreams, by A. Walter Kramer, Op. 29, No. 1, is also an excellent teaching song as well as one which is available for concert and recital use. It calls for warm, sympathetic voice quality, with the intonation colored by a tinge of sadness. It is therefore a fine study in expression, which represents the difficulty of the composition. The air is easily mastered. Published in E minor for high voice.

Springtime of youth, waltz song, by Charles Eggett, is in a style too little used by composers of the present. It will make an attractive and at the same time a useful concert song. In sheet form it is a little larger than as used in THE MUSICIAN, having an additional theme. Try it on your program. For high voice in D.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

For the Season 1914 - 1915

THE MUSICIAN presents the following Sentiments:

A Higher Standard of Teaching
A Higher Standard of Study
A Higher Standard in Business Relations
More Pupils, Especially Boys
More Musical Societies
More Public Interest in Music

EDITORIAL NOTES

"REAL LEATHER—98 CENTS"

THUS read a notice in the display window of a store, the object being a traveling bag of convenient size, the suggestion being that the article and the price represented an unusually attractive bargain. Without discussing the question as to the possibility of selling a real leather, good leather bag for the price mentioned we call attention to the queries that naturally come into the mind at sight of such a placard:

Is it leather? If it is leather is it worth 98 cents? Is it worth more than 98 cents? Does "real" leather mean "good" leather, leather which will wear? Does not the notice suggest that traveling bags, not leather, are sold as leather?

Now for the application: Teachers of music are now thinking about their fall announcements. In making them they should recognize the definite obligation to state the exact truth about their work. The time was when advertisers considered exaggeration, the free use of superlatives, as essential in publicity material. Everything was the "best," the "cheapest," every offer was "extraordinary in value," the "greatest bargain ever offered," etc.

Just recently an organization of advertising specialists, The Pilgrim Publicity Association, of Boston, took an open stand in favor of absolute honesty in all statements made in the public press, giving, as their deliberate conviction based on long experience, that the best advertising is that which the people can believe.

The teacher of music can well afford to take this principle as his guide. Let him offer to the public real teaching, real education in music, the price being the least consideration. Of course, no teacher can give first-class instruction at a low price, but this does not mean that he should ask a high price, either. What patrons wish to be assured of is that they are getting full value for the money they pay.

Therefore THE MUSICIAN urges that teachers carefully consider the work they did last season, and determine whether it measured up to the standard which they would set for themselves. Promise nothing you cannot fulfil.

Real education, real teaching, is a good motto for the teacher. As to the price, let it be 49 cents, 98 cents, $1.98, or more, per lesson, as conditions warrant. But give the best in you, best in thought, best in purpose, and best in knowledge that you can.

———*———

MUSIC IN THE PUBLIC LIBRARY

SEVERAL months ago we printed a note inregard to piano rolls in public libraries, giving space to an account of the method used in the public library of Evanston, Ill. We have learned that within the last month or two the directors of the public library at Gary, Ind., have arranged to add mechanical piano rolls to the equipment of the library, and these rolls are to be circulated among the patrons just as books are. Concerts by an expert, showing the people how to use the rolls properly, and giving them an impression which compositions they would like to have, are to be given under library patronage.

THE MUSICIAN has advocated for a long time the necessity of alertness and aggressiveness on the part of the professional musicians of a community. For example, if they can get more persons to talk about music and to be interested in music and hearing music the field for professional labor is increased materially. In the plan adopted by libraries mentioned above is a suggestion for teachers and music lovers, one that can be followed to the great advantage of the people and those who are working in music.

Get in touch with the librarian. If the number of books on music is small, try to have others added. If the library has no collection of music perhaps the effort you may make will result in establishing a music section. Mechanical music rolls come next in line, with demonstrations by an efficient player.

You need have no fear about this plan. It will not reduce the number of persons who will study music and learn to play the piano. One of the leading educational institutions in New England has several player-pianos as adjuncts to the equipment of the department of music, with a large library of rolls. So far from decreasing the interest in actual playing, the results have been the direct opposite. To say nothing of the greater interest in music as an art product.

We wish to place before the readers of THE MUSICIAN every item of this kind that we can learn about. If you do something for the musical interest of your community write to us, giving the facts. Most of us are imitative, not inventive. You learn about a method used in some town, improve it or adapt it to your own special conditions with success. Then give some other person a chance to follow your plan, perhaps better it. Pass a good thing along. Write to THE MUSICIAN.

———*———

MUSIC FOR BOYS

LOOK over the names of pupils in a conservatory of music and note how small a number of boys are enrolled! Is this to be allowed to continue? If music is a desirable part of the educational, cultural, and spiritual life of our girls, is it not equally desirable as an element in the life of our boys? Surely no one, least of all a teacher of music, will answer the question negatively.

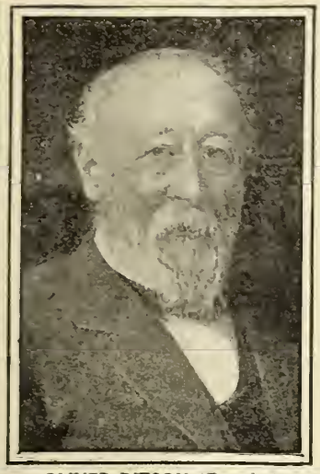
We are led to this reflection by a letter received from a teacher of Youngstown, O. We quote part of it with the hope that other teachers may be stimulated to like endeavor with equally successful and satisfactory results.

"In your issue for June you spoke of music for boys. Since then I have thought to write to you a few facts that may interest your readers:

"Last year I gave three pupils' recitals, one with school boys only, twenty-three in number. This year I . . . . massed the boys and girls together according to their grade. I had twenty-five boys enrolled in my class. Most of them are excellent pupils, and I like to teach them. Since I came here, ten years ago, nearly all my best pupils have been boys."

Isn't that an example worth while trying to equal, if not to excel? Twenty-five boys studying music under one teacher!

Save the boys of your community to music! Don't let so many of them stay outside the musical field. Make an effort to add five or ten boys to your class this year, and feel especially glad if you succeed. Those boys will be a worth while addition to the musical forces of your town. Plan a little how you can get them interested. Give a recital of music that boys will like. Have a musical play, such as those that have appeared in THE MUSICIAN, in which the boys can take part. And speak to the bright boys you know about music. If they are not attracted to the piano suggest the violin or 'cello, even the flute and clarinet. But try to get the boys into music.



OLIVER DITSON (Founder)
1811-1888

1834=1914

An Uninterrupted Business Success of Eighty Years

WE ARE EIGHTY YEARS "YOUNG" and we want you to know it and share with us the satisfaction of having built up in America one of the greatest music industries in the world

CHARLES H. DITSON
President of Oliver Ditson Co., Boston

We Point with Pride to the Following

Achievements of the House of Ditson

The *best* Musical Library extant:

The Musicians Library

(67 volumes issued, containing the masterpieces of song and piano music.)

The *best* Library of Musical Text-books published:

The Music Students Library

(27 volumes, covering every essential branch of musical instruction.)

The *best* Edition of Standard Educational Works issued:

The Ditson Edition

(Comprising 204 volumes, edited and compiled on advanced lines. Absolutely *the best* among the so-called cheap editions.)

The *best* Graded Course for Piano:

Tapper's Graded Piano Course

(20 numbers)

The *best* Graded Vocal Course:

Marzo's Art of Vocalization

(24 books)

The *best* Sight-singing Method:

Melodia

By Samuel W. Cole and Prof. Leo R. Lewis (4 books).

The *best* Fifty Cent Series of Popular Music:

The Half Dollar Series

(57 volumes, of which over 500,000 copies have been sold.)

Oliver Ditson Company Building

Our complete catalogs of sheet music — vocal (4,000 subjects) and piano (8,719 subjects) — embrace every branch of music publishing and **will be sent with descriptive booklets of works referred to free on request.**

We rely on the public appreciation shown us during the past eighty years as evidence of the continued support and patronage of all earnest teachers, students, and lovers of music.

It is such co-operation that enables us to work for the cause of good music and insures the development and publication of new material.

We shall continue to guarantee absolute satisfaction.

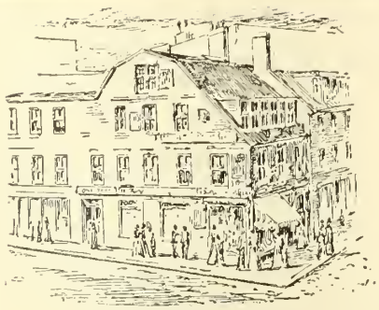
Please read carefully the pages that follow.

Oliver Ditson Company, 150 Tremont St., Boston

Chas. H. Ditson & Co., 8-10-12 East 34th St., New York

Chas. H. Ditson & Co. Building

A BRIEF SUMMARY OF THE ACHIEVEMENTS 1834



OLD CORNER BOOK-STORE
1834

OF THE HOUSE OF OLIVER DITSON COMPANY 1914

HOW few concerns survive and reach the age of eighty years of continuous business success! To do this proves that the man directing the organization is a thorough student with an education that combines broadness of vision, salesmanship, and a merchandising force of extreme calibre.

In 1834, Oliver Ditson, the grand old man of the music publishing industry, began business with the firm name of Parker & Ditson at the Old Corner Bookstore in Boston. In 1840, Colonel Parker sold his interest, and young Ditson, with his tremendous energy and power, made a name for himself and his house that is acknowledged to be, in the field of music publishing, the greatest of any man.

THE VALUE OF SERVICE

Oliver Ditson recognized early in his career the value of Service. Far in advance of his time he gave it in the fullest measure to his customers.

His house has always been conspicuous in two fundamentals:

First—It anticipates the needs of the music profession.

Second—It supplies these needs in the best and quickest manner possible.

The combination of the two is Service. "I like to buy my music at Ditson's, one gets service there," is a common remark and a deserved compliment.

A WESTERN OFFSHOOT

Oliver Ditson's forethought, wisdom and keen vision were best shown in sending George W. Lyon and P. J. Healy to Chicago in 1864. He saw even then the immense possibilities of Chicago, and predicted for it the advancement it has since achieved. Lyon and Healy have kept pace with the wonderful growth of their adopted city and for fifty years have been headquarters in the west for the Oliver Ditson Company publications and this year celebrate their Golden Jubilee.

THE MUSICIANS LIBRARY

The work begun by Oliver Ditson has been carried to greater heights, and in the modern spirit of progress by his son, Charles. That stupendous undertaking, THE MUSICIANS LIBRARY, was conceived by him, and he still gives it his personal supervision, all in the interest of the uplift movement in music in this country. THE MUSICIANS LIBRARY from a small beginning in 1903, has now sixty-seven volumes and many more to come. It has been issued regardless of expense, with the sole object of giving the music-loving public the very best in music, and this includes not only the music itself, but the luxurious nature of the edition. THE MUSICIANS LIBRARY will stand as a lasting monument to the house of Oliver Ditson Company, and an enduring, exalted, and everlasting tribute to the indefatigable zeal, industry, and judgment of the present head of the house, for without his wise council and fostering care, it would not have been possible to issue it. Too much credit cannot be given to Charles H. Ditson for his generosity and public spirit in this enterprise. Mr. Ditson has done and is doing for composers innumerable things to stimulate them in their ambitions and aid them in their work. He is ever ready to give encouragement to them, and many have felt the benefit of his kindly appreciation.

It is not to be wondered that the Oliver Ditson Company of Boston, and Chas. H. Ditson & Co. of New York, comprising the Ditson House, is one of the largest houses of its kind in the world.

THE DITSON CATALOGS

The complete catalogs of Ditson sheet music include considerably over 12,000 subjects, 4,000 of which are vocal and nearly 9,000 piano selections, embracing every branch of music. The musical world is proud of the Ditson achievements, for Oliver Ditson Company has done more for the betterment of music than any other music publisher.

THE MUSIC STUDENTS LIBRARY

Oliver Ditson Company also publishes THE MUSIC STUDENTS LIBRARY, a library of text books widely used in colleges and schools of education. This library comprises twenty-seven volumes, covering every essential branch of musical instruction.

THE DITSON EDITION

For standard educational works the best edition is the DITSON EDITION, containing two hundred and four volumes, edited and compiled on advanced lines. It is the best of the so-called cheap editions.

TAPPER'S GRADED PIANO COURSE

In twenty numbers, is also the product of the Ditson organization. Students here and in Europe use this course more than any other.

VOCAL SERIES

For a renowned vocal course MARZO'S ART OF VOCALIZATION, in twenty-four books, is noted for its comprehensiveness and adaptability, while MELODIA, in four books, is considered by all to be the best sight-singing method.

THE HALF DOLLAR SERIES

of popular music, of which there have been published fifty-seven volumes, are popular in every State of the Union, for over half a million copies have been sold.

THE MUSICIAN

In addition the Ditson House publishes THE MUSICIAN, a musical magazine, that for correct musical information, is considered the leading one of the world. We have only covered the music publishing end of the vast Ditson business.

THE RETAIL STORES

As much can be said about the wonderful retail music stores that are maintained in New York and Boston.

More can be said about the completeness and magnitude of the large wholesale and retail departments devoted to the sale of musical merchandise, to use the trade term, which embraces all musical instruments. Many and many are the violins, 'cellos, violas, double basses, harps, guitars, mandolins, banjos, cornets, trombones, saxophones, clarinets, flutes, piccolos, drums, horns, accordeons, music boxes, drummers' traps, and other musical instruments that are sold by the thousands through this great house.

TALKING MACHINES

The Oliver Ditson Company is also well known as a jobbing distributor of Victor Talking Machines, where, in addition to its wholesale department it maintains elaborate retail warerooms for the sales promotion of these instruments and records.

A STANDARD OF ORGANIZATION

Truly the Ditson organization is immense, and has increased in size and scope by giving a quality of merchandise reinforced by SERVICE that, as a whole, is considered to be the standard in this world of music trade efficiency.

Oliver Ditson Company, 1914, As told by the Camera.

1. Boston Store, Vocal and Piano Music Depts.
2. Boston Store, Octavo, Band and Orchestra Depts.
3. Office of the Editor of The Musician.
4. Demonstration Room. Victor Talking Machine Dept.
5. Office of Editor, Publication Dept.
6. Violin and Harp Show Room.
7. Chas. H. Ditson & Co., Store, New York City.

THE bright sunshine of a morning in early autumn warmed the pleasant room where Mrs. Endicott sat regarding with approval the earnest and comely face of her young visitor. "And so," she said, "you have resolved to finish your vocal studies in Boston. To me this seems wise and fitting, for it was your mother's home in her girlhood, when she and I were such good friends; and surely the city cannot be other than kind to her daughter, though she has been living so long in the West. Let me see," Mrs. Endicott continued, her fine face lit up with animation, "your mother was quite a finished pianist, as I remember. Well, in those days I had persuaded myself that I could sing—not quite like Melba or Sembrich, but with some skill, really—and together we spent many a pleasant hour of mutual helpfulness. You could have had no better accompanist and critic than your mother."

"You have chosen your teacher, you tell me; and the next thing of course is to select the right shop to get your musical supplies. You certainly can't do better than to follow in the footsteps of the generation which preceded you, and get everything you need from the Oliver Ditson Company, the oldest music house in the city. Yes, my dear, the generation before *that* even was well served by the original Mr. Ditson himself; for my grandmother used to buy her music of him in the fifties, and I can well remember coming as a little girl with my mother in the middle seventies, when she bought her music in the old store on Washington Street. Mr. Oliver Ditson in those days had his desk where he could see the entire retail department, and of course every one could see him. He was a popular man, loved by his clerks and friends, and respected by his customers. It was no unusual sight to see his little granddaughter perched on a high stool at his side between him and the sunny-faced cashier. I envied that little girl, and her close companionship with the kindly, lovable Mr. Ditson with his fascinating smile. Now that my own daughter Elsie is taking piano lessons (and doing mighty well too) there are four generations of our family that have bought their music of the same house." The last observation caused Mrs. Endicott to pause for an impressive moment, and Grace Caldwell snatched the chance to hear her own voice once again.

"I should so like to meet Elsie soon, Mrs. Endicott," she said, "we should have so much in common, and"—

"You shall know her at once" interrupted her good-natured hostess, "but I shall put the ban upon unlimited tango teas for both of you. Why, it was only last week we were passing Ditson's window with no intention of purchasing anything, when we were attracted by a picture in the window of the Castles in one of their dances. Of course we wanted to see what the music was like to which they were posturing so gracefully, and my daughter actually dragged me into the store, and before we came out we had charged to our account not only a lot of new tangoes, one-steps, and what-not, but a lot of records for the same for our Victor Talking Machine. Yes, that Victrola in the corner, which was bought at Ditson's last Christmas. The dancing craze has set us all mad, and of course we must have music for it; but I'd rather have my children dance at home to their heart's content than in hotels and tea-rooms."

"It isn't for the sake of tangoing alone that I should like to meet Elsie," said the demure Miss Caldwell, "but I hoped she could take me to Ditson's and introduce me, as I need to get some music at once, and you are doubtless too busy to be troubled."

"Busy! not at all! there's nothing I should like better than to take you there myself; but of course Elsie is more actively interested now than I am, and it shall be as you like. You will find the clerks not only able to find the things you want, but they can bring to your attention just the things you need even before you knew you wanted them. It won't be long before your allegiance to our favorite store will be won. In the song-world for instance—your particular province—you will find everything, from the great standard writers to the wonderful new school we are all learning to love, bewildering masses of good music. All the music from current musical comedies, too, and the popular songs of the day—O no, I understand perfectly you don't like them" (as her guest was about to protest), "but like all the rest of us you'll buy them nevertheless— and not let your teacher know."

"As for the famous MUSICIANS LIBRARY series—I believe that no publisher ever conferred a greater blessing upon the music-loving public than Charles H. Ditson has done in issuing these volumes. Here you have all the finest of our inheritance in song and piano literature up to the present day bound together and helpfully edited with just the suggestions that a student needs. These volumes are so reasonable in price, too, that it is really the cheapest way to buy the standard works as well as the most convenient."

"How are you in the foreign languages," Mrs. Endicott continued. "Have you a good accent?"

"Good of its kind," slyly replied the young girl. "My French makes a sensation in Terre Haute, and my German is a surprise to my grandparents. Would you call that good?"

"Hardly good enough for your new teacher, I fancy," returned the Boston lady laughing. "No one in the city has a higher reputation, and none is more particular. You will probably be obliged to sing for a while entirely in English, even in songs by foreign composers, until your languages are less non-committal and more suggestive of their nativity. In that case the MUSICIANS LIBRARY is absolutely essential, for in the matter of translations it stands head and shoulders above any other edition with which I am familiar."

A fresh idea struck the kindly active mind of Mrs. Endicott before her guest had a chance to speak.

"Are you far enough advanced, my dear, to look for a church position? It might be a modest one at first, but you remember that both Emma Eames and our beloved Nordica, so recently gone from us, sang in church at the beginning of their career, and in this very city."

"I was about to tell you that I have already secured a position—not a very important one, I'm afraid—only as soprano soloist in a quartet which is backed by a chorus choir."

"Already secured one!" returned the astonished Mrs. Endicott. "Well, what cannot Yankee pluck accomplish when backed by Western push! But don't say "only" in respect to a choir so constituted, for with such a combination a good conductor can produce practically anything in church music. Your organist's name?" It was given her. "Ah, yes, I happen to be acquainted with him, and have seen him at the Octavo counter in Ditson's, making generous selections, which it would seem must last him for years."

"Does he use recent works, or stick to the English school?" queried Miss Caldwell with interest.

"Uses all sorts" answered the worthy lady tersely," and that's why he finds Ditson's the most satisfactory place to make his selections. I have never seen the equal of their octavo catalogue for a wide range of works by the best among recent composers and excellent editions of all the standard numbers as well. In building up that catalogue it would seem that all needs have been thoughtfully considered, from the simple wants of the little country church to the most elaborate requirements of a city cathedral; and when, as I think is likely, your organist asks you to join his choral club, you will see what a wonderful array of secular part-songs

Bulletin of New Music = Autumn, 1914

SECULAR SONGS

AVERY, STANLEY R.

The song of the timber trail. Bass in B♭ [B♭–e♭] ..... .60
Rugged with the spirit of the pioneers, buoyant with the breath of great forests, this virile song is splendidly adapted to bass or baritone, weary of pirates and potations.

CLASS, F. MORRIS

Why does azure deck the sky? Med. in E♭ (F-F). Low in C (d-D). ..... .50
A questioning phrase for the piano leads into this tender, contemplative love lyric. The rich harmonic scheme and its close welding with the melody strike the right note of intimacy.

DICHMONT, WILLIAM

A wish. High in A (E-F♯). Med. in F (c-D). ..... .40
A warmly sentimental number with a singable and expressive melody which lies conveniently for the average voice.

Could I forget. High in A♭ (E♭-F). Med in F (c-D) .50
Though its similarity is limited to the title, this song is a worthy rival in its emotional appeal to Cowles' famous "Forgotten," and it has the same natural and appealing charm of melody.

The heart o' ye. Low in E♭ (b♭-E♭)..... .60
A graceful song, somewhat in the English ballad style, with the directness and quaint touches which one finds in folksongs.

My day. High in C [d-F(*g*)]. Low in A [b-D (E)] ..... .40
This brief song has a breadth and directness which carry its triumphant measures in spontaneous flow. Every singer can make it tremendously effective.

To You. High in F [E-F]. Med. in D [c♯-D]..... .50
Warmly imagined and appealingly harmonized is this brief "heart-song."

EGGETT, CHARLES

Springtime of youth. Waltz song. High in D [d-*a*]. Med. in C [c-*g*]. ..... .75
There is always a welcome among vocalists for a brilliant, spirited song in waltz rhythm; and the present example, while wholly without coloratura passages, is vigorous, vivacious, and of infectious swing.

FOSTER, FAY

Sing a song of roses. Med. in D [d-F♯]. Low in B♭ [b♭-D]. .. .60
Happy as are the words of this blithesome song the engaging lilt of the melody is even more spontaneously lighthearted.

HARLING, W. FRANKE

Rose kissed me today. Med. in F [c-F]. ..... .40
The variety of tempo in this song will, if observed, produce the desired effect of rubato. In this key it is exceedingly grateful for baritone, and the light touch of Dobson's verses, no less than the music, makes it an acceptable encore song.

SECULAR SONGS — Continued

HARRIS, VICTOR

Love in spring. High in G [d-g]. Low in E♭ [b♭-E♭] .... .50
Exultant measures, in a six-eight rhythm, carry the happy sentiment of the poem flowingly until it broadens into common time and rises incisively to the ringing climax at the close.

HYATT, N. IRVING

A winter song. Op. 20, No. 3. Med. in C minor [b♭-F]. Low in B♭ minor [a♭-E♭]. ..... .40
The vigor and kindly brusqueness of crisp cold weather sound through these sturdy measures. It is a fine healthy song, teeming with red-blooded life.

KRAMER, A. WALTER

A sigh. (Soupir) Op. 34, No. 1. High in F minor [E-*a* (*g*)]. Med. in D minor [c♯-F (E)] ... .50
This deeply emotional song with its richly colored harmonic background demands the expressive diction so characteristic of the French school. The vocal phrases are really a heightened form of eloquent speech. French and English text.

Come to me. Op. 38, No. 2. High in E [d-F]. Med. in C [b-D]. ..... .60
Here, too, the vocal part is rather parlando, but the phrases are highly significant, and the atmosphere of the song, established by skilful harmonic coloring, is vibrant and engrossing.

In dreams. Op. 29, No. 1. High in E minor [E-g]. Med. in D [d-F]. ..... .50
More lyric than either of its companions, this song nevertheless demands a similar expressiveness of diction to convey, over the pulsing syncopations of the piano part, the sad revery of the poem.

KROEGER, ERNEST R.

O violet, sweet violet. High in A♭ [E♭-g]. Med. in F [c-E] .. .50
The delicate melody of this lyrical tribute is as fragrant as the sweet blossoms of which it sings. It is simple but musicianly, and is an agreeable teaching song.

LOGAN, FREDERIC KNIGHT

Where the purple heather blooms High in A♭ [E♭-F(*a*♭)]. Med. in F [c-D (F)]. ..... .60
As the title suggests this engaging melody has the Scottish flavor and an appropriate simplicity of sentiment. The range and style both make it available for teaching purposes.

MANNEY, CHARLES FONTEYN

Heart of Hearts (*Cor cordium*). High in D [E♭-*a*]. Low in B [c-E (F♯)] ..... .60
A fine concert song of ringing sentiment and fervor, brilliant in general style and accompaniment. There is a dramatic strain for the middle section which affords a distinct contrast to the impetuous rush of the principal melody, which latter builds up to a powerful climax at the close. The words by Fiona McLeod are of exceptional beauty.

SECULAR SONGS — Continued

Since we parted. High in D [d-g]. Med. in B [b-E]..... .40
Owen Meredith's intimate lyric is here most sympathetically interpreted in tone. The accompaniment is richly harmonized, expressively supplementing the melody, and the song may be considered a fine example of sympathetic communion between text and music.

MILLER, WILLIAM T.

Foreboding. Med. in A minor [d♯-F]. Low in F minor [b-D♭]. .40
In the quiet pathos of this song there is no bitter tone and the melody, with its characteristic augmented interval, is very appealing. The song can be successfully used for teaching.

PALADILHE, E.

Psyche (Psyché). High in A [c♯-g (*a*)]. Med. in G♭ [b♭-F♭ (g♭)] ..... .50
One of the most gracious and genial of modern French lyrics and a successful feature of Miss Maggie Teyte's repertory.

RICH, MARIE

Call me "Sweetheart." High in D♭ [E-F]. Med. in B♭ [c♯-D]. .50
A captivating melody, simple but haunting, gives vitality to the sentimental verses. The song merits and will achieve wide popularity.

RYDER, ARTHUR H.

When the last day is ended. Op. 15, No. 2. High in B [d♯-F♯]. ..... .60
Broadly conceived and in free style is this musicianly setting of the impassioned verses by Frederic L. Knowles. For high baritone or a rich mezzo-soprano the song will make an excellent concert number.

SAAR, LOUIS VICTOR

The little day-star. Op. 72, No. 3. High in C [E-g]. .... .60
The bright beauty of this song lies in the very fluent form of its phrases and the glancing touch of the piano part. It is best suited to a light soprano or lyric tenor.

To one I love. High in E♭ [E♭-*a*♭]. Low in C [c-F] ..... .40
The sentiment of this song is too profound for sadness. It breathes, on the contrary, a fine courage. Brief but compact, the music achieves in two pages a wealth of significant beauty.

SINDING, CHRISTIAN

Sylvelin. Op. 55, No. 1. Med. in A minor [E-E]. ..... .30
The delicate beauty of this song is to be found partly in the tender sentiment it so melodiously voices, and partly in the charm of the accompaniment with its lightly brushed *glissando* scales.

STICKLES, WILLIAM

A sea song. Bass in E♭ [G♭-*d*] .60
A vigorous sea chantey, voicing with intoxicating freshness the fascination of the welter and spume of the waves. The voice line lies in the most effective range of a real bass.

SECULAR SONGS — Continued

STRICKLAND, LILY

Because of you. High in C [E♭-*a*]. Med in A♭ [b-F]. ... .50
Brightly rhythmed is this happy little heart-song, which has a well attained climax at the close. Not difficult for player or singer, and useful for teaching.

TAYLOR, DEEMS

Witch-woman. Med. in C minor [b-E♭]. ..... .50
The verses are Celtic in feeling as well as in the dialect touches which give them the folksong quality. "In every particular it is one of the finest songs by an American musician which has come to hand for some time. It should become one of the favorite baritone songs for artists who can appreciate its message."—*Musical America.*

TOWNSEND, STEPHEN S.

The night has a thousand eyes. High in D♭ [E♭-g♭]. Med. in B♭ [c-E♭]..... .40
This is primarily a singer's conception of these much-musicked verses, and the voice line flows with uninterrupted smoothness to a well attained climax and then sinks to a pianissimo close. It rests, however, upon an accompaniment warm in tone and richly massed.

WEBER, CARL MARIA von

Prayer from "Der Freischütz" (*Leise, leise, fromme Weise*). High in E [b-F♯]..... .40
This abbreviated edition gives the introductory recitative and the prayerful adagio of Agathe's great aria. It is often used in this form as a short quiet number.

SECULAR DUETS

SMITH, ALICE MARY
(Arranged by Ross Hilton)

O that we two were maying. Soprano and Alto [A♭]. ..... .75
This favorite duet, originally written for soprano and tenor, is equally effective in this fine arrangement for soprano and alto.

WAREING, HERBERT W.

The sea. Soprano and alto [D].. .75
In the main an exceedingly bright and cheerful number, the effect of which is heightened by a more contemplative middle section.

SACRED SONGS

HAMMOND, WILLIAM G.

O Jesus, every thought of Thee. High in B♭ [E-g]. Med. in G [c♯-E]. ..... .60
Very expressive of quiet devotion is this melodious and simple lyric. There is some emotional heightening to form a climax at the close.

HARKER, F. FLAXINGTON

Easter triumph. High in D [E-*a* (g). Med. in B♭ [c-F (E♭)]. ..... .60
A striking festal song, dramatic in quality at first, but closing with a ringing, joyful refrain in 12-8 time.

SACRED SONGS — Continued

SHELDON, LILLIAN TAITT

The ninety-and-nine. High in E [d♯-F (g♯)]. Med. in D♭ [c-E♭ (F)]..... .60
A fervid and earnest setting of the famous text which it follows graphically, closing with a triumphant climax.

STEANE, BRUCE

O Jesu, I have promised. Med. in E♭ [c-F]. Low in C [a-D]. ..... .60
A quiet number especially effective for contralto. In the final verse it rises to stirring fervor of expression.

WOOLER, ALFRED

The homeland. Low in A♭ [c-E♭ (D♭)]. ..... .60
A new and very melodious setting of a favorite hymn, which has just the qualities of simplicity and direct appeal to bring the sense of the words home to the hearers.

SACRED DUET

HAMMOND, WILLIAM G.

O day of rest and gladness. Soprano and Baritone [G] ... .60
A beautiful flowing composition for this rare but useful combination of voices.

PIANO SOLOS

BOHM, CARL

Throwing kisses. (Mazurka) Op. 327, No. 4. [E♭] IV.... .60
In brilliant style with easy scale passages and some chord work and a vigorous rhythm throughout.

COMINS, DANFORTH W.

Drifting. Op. 6, No. 3 [F] III... .50
In the style of a romanza. The melody is mostly in full chords at a slow pace.

DELBRÜCK, G.

Berceuse [A♭] III-IV..... .40
A graceful melody, variously accompanied, but always demanding a singing touch.

DURAND, AUGUST

Second valse. Op. 86 [A♭] III-IV ..... .75
Scale and arpeggio work beautifully employed to produce the delicate effect of this fluent and agreeable waltz.

FLETCHER, PERCY E.

Old Curiosities.

No. 1. The old spinet. [A minor] II. ..... .40
Two-voiced throughout and with imitative passages, it forms an excellent introduction to the study of the classics.

No. 2. The Dresden shepherdess. [F] II. ..... .50
In a graceful lilting rhythm which suggests the pastoral, this piece is both delicate and expressive.

No. 3. The spinning-wheel. [G] II-III. ..... .60
A useful study piece, in motion which is persistent in one hand or the other, both in slow trill and restricted scale passages.

Three miniature dances.

No. 1. A dainty gavotte. [C] II ..... .40
A light and graceful piece with the melody mostly in double notes.

No. 2. A jolly jig. [D] II.... .40
The melody is in the proper lively rhythm and usefully allotted to both hands.

PIANO SOLOS — Continued

No. 3. A merry hornpipe. [G] II ..... .40
A gay and bright little piece which affords excellent scale practice for both hands.

HARMSTON, ÉDUARD

The bird's message (*Message d'oiseau*) [C] III-IV 50
A gentle melody forms the basis of this piece which is lightly embroidered with easy scale and arpeggio work.

HARTHAN, HANS

Dance of the ladies of yesteryear (*Danse des dames d'antan*). (Minuet) [G] III .... .40
An excellently written little piece, largely two-voiced, in which the melodious second part contributes to the old-time flavor.

HEMANN, CARL

The spinning-wheel. [G] III .. .50
An attractive study in scales of limited extent, with a quieter Trio.

HUERTER, CHARLES

Berceuse. [E♭] III-IV ..... .50
A dreamy and bewitching melody, which appears in various registers, in both single notes and octaves.

Boat Ride, The. [B♭] III .. .30
Graceful, dreamy rhythm pervades these two attractive pages which call for the singing touch and much expression.

Jesters, The. [A] III-IV ... .50
Infectious gaiety of rhythm, which demands some rubato and a light touch, is the main characteristic of this engaging number.

Snow birds. [C] II-III ..... .40
A graceful easy waltz in which the songful second theme is given to the left hand.

Two brown eyes. [A] IV ... .60
An unusually beautiful melody. It demands, and will inspire, an expressive rendition.

KERN, CARL WILHELM

Spring dance (Caprice à la schottische) Op. 278 [E♭] IV ..... .60
A brightly rhythmed melody, largely in octaves and double notes, which affords especially good practice in staccato thirds.

Tarantella. Op. 284 [D minor] IV ..... .60
A very playable, vivacious dance, which instead of the usual Trio, has a novelty in the form of a slow sentimental melody employing chord and octave work.

Valse lyrique. Op. 258 [A♭] IV ..... .60
Rapid, but not too protracted scale passages predominate, though there are melodic phrases employing less motion.

MANNEY, CHARLES FONTEYN

Chansonette. Op. 24, No. 2 [F♯ minor] IV..... .50
A tender, plaintive melody of much lyric beauty, which appears in various registers, with graceful interweaving of inner voices.

Scherzo-Minuet. Op. 24, No. 3 [E minor] V ..... .75
Of concert or recital quality is this brillant composition which demands vigorous rhythm, strong chord and octave work, and the Trio is in songful style by contrast.

PIANO SOLOS — Continued

ORTH, CARL

Big Indian Chief (Pantooset). Op. 1, No. 1 [C minor] IV ... .60
A characteristic melody over an insistent drumming rhythm. Facility in chord-playing is the chief requisite.

Winniwawa (The Indian maid) Op. 1, No. 2 [D minor] III-IV...60
Begins as a lightsome dance of decided Indian character, but contains a lyric second theme very tender and plaintive.

RACHMANINOFF, SERGE

Humoreske. Op. 10, No. 5 [G] IV-V. ..... .75
A highly effective *bravura* piece for recital use. Strong rhythms, trills in octaves, a beautiful lyric melody, all are present.

RETTER, LOUIS

Joys of youth. (Waltz). [G] II. .30
A delicate theme in the right hand, in alternate single and double notes over a simple rhythmic accompaniment.

RHODE, EMIL

Chatterbox. Op. 31, No. 2 (G) II-III. ..... .40
The nimble theme is aptly descriptive of the title. Good rhythm and wrist staccato are required.

The little gypsy. Op. 31, No. 1 (A minor) II-III. ..... .30
A tripping theme which plays from minor to major with good effect.

Village dance. Op. 31, No. 3 [F] III ..... .50
Real charm invests this ingenuous melody. The fluent passages allotted to both hands afford enjoyable practice.

SCHYTTÉ, LUDWIG

Alla Marcia. Op. 26, No. 3 [E♭] IV. ..... .50
Though martial in character, this piece is in ¾ rhythm. The second theme is of *cantabile* nature, but the whole piece demands ready chord and octave playing.

SETACCIOLI, GIACOMO

Canzone-Serenata (Serenade-song) [A] III-IV. ..... .50
Melody of the light and coquettish nature contrasts with a sentimental second theme. It is all dainty and delightful.

STEINFELDT, JOHN M.

Lupita (Mazurka de salon). Op. 44, No. 2 [A♭] IV..... .60
A rather brilliant piece which calls not only for chord-playing but finger facility as well.

STREABBOG, L.

Shower of roses. Op. 186, No. 1 [C] II. ..... .30
A very easy waltz which will yield practice in opposed staccato and legato touches.

VERDI, GIUSEPPE

Miserere and Romance. (Transcribed by D. Krug. Op. 196, No. 8) [A] III. ..... .50
An excellent easy transcription of this famous operatic excerpt.

PIANO—FOUR HANDS

DVOŘÁK, ANTON

Humoreske. Op. 101, No. 7 [G♭] III-IV. ..... .75
The entrancing melody becomes freer and more sonorous in this excellent arrangement for two performers.

PIANO—FOUR HANDS—Continued

SCHUETT, ÉDUARD

A la bien aimée (To my dearest). (Waltz). Op. 59, No. 2[D] IV. 1.00
This popular concert piece so arranged produces an excellent effect with but little effort on the part of the two players.

ORGAN

FRANCK, CÉSAR

Andantino [G minor] ..... .60
A beautiful churchly composition by the great French organist, helpfully edited and registrated.

Verset [F minor] ..... .30
A very quiet and simple piece, suitable for a prelude.

HARKER, F. FLAXINGTON

Liebeslied. Op. 3, No. 1 [D] . .60
A beautiful songful melody over a simple syncopated accompaniment.

Nocturne. Op. 55, No. 2 [G minor]..... .60
This graceful melody has a degree of motion not inconsistent, however, with its quiet character.

SPENCE, WILLIAM R.

Andante pastorale. [A] .... .60
A simple but useful piece which can be used either in church or concert, and has the true organ quality.

VIOLIN AND PIANO

BUSCH, CARL

A la valse. [D]..... .60
This little piece and the six that follow are all in the first position. The waltz melody is winsome and graceful.

Badinage. [A]..... .60
A bright dancing little piece which is a good exercise in bowing.

Evening song. [B♭]..... .60
A quiet appealing melody, calling for a warm tone and smooth legato.

Fleurette. [G] ..... .60
A melody which charms through its grace and pliancy and possesses a pleasing accompaniment.

A little dance. [G] ..... .60
A tripping measure of much rhythmic brightness, with a quieter middle theme.

The little dancer. [G] ..... .60
A quaint spirit animates these lighthearted phrases, which afford a good study in interpretation.

Mazurka. [E] ..... .60
An easy piece which has nevertheless a bright and engaging rhythm. In this entire set by Busch the qualities of musicianship and practicability go hand in hand. They may be recommended as study pieces, which are likewise potent to cultivate good musical taste.

BIZET, GEORGES

Intermezzo. From "L'Arlesienne Suite, No. 2." Transcribed by Karl Rissland [E♭]. ..... .50
This heaven-sent melody, originally written for saxophone, makes a broad and sonorous violin number.

BOISDEFFRE, RÉNÉ DE

By the brook (*Au bord d'un ruisseau*). Op. 52 [A] ..... .75
This is a pastoral melody with accompaniment in arpeggios. A more impassioned second theme gives contrast.

VIOLIN AND PIANO — Continued

CHAMINADE, CECILE

Pierrette (Air de ballet). Op. 41. Transcribed by Karl Rissland [E♭]. ..... .75
One of the brightest and most coquettish of this genial composer's melodies, this makes an excellent concert piece.

CHOPIN, FRÉDÉRIC

Valse (The minute waltz). Op. 64, No. 1 [D]. Transcribed by Karl Rissland. ..... .60
The famous waltz makes a brilliant violin number to be played with bravura and at high speed.

DVOŘÁK, ANTON

Humoreske. Op. 101, No. 7. Concert transcription by Karl Rissland. [G] ..... .50
This beautiful melody, long so popular, is here ingeniously heightened in effect with double stopping and harmonies judiciously employed.

GRIEG, EDVARD

Album leaf. Op. 28, No. 3. Arranged by Hans Sitt. [A] .50
One of the best among the "Lyric Pieces." Makes a playable but effective violin number.

Asa's death. From "Peer Gynt Suite". Op. 46, No. 2. Arranged by Hans Sitt. [B minor.] ..... .40
This elegiac song, so moving for orchestra, is no less appealing transcribed for the eloquent strings.

HOLLAENDER, GUSTAV

Cavatina. Op. 36. [G]. .... .75
A flowing melody, diversified in register and rhythm.

In the mill (*In der Mühle*). Op. 38, No. 4. [D]. ..... .75
Bright and characteristic, though not hard, is this little piece. The accompaniment keeps up its merry motion throughout.

RISSLAND, KARL

Valse caprice. Op. 16. [B♭]. .60
A very graceful and melodious waltz, but depending largely for its effect upon *rubato* playing and careful observance of dynamics.

RUSSIAN MELODY

Song of the Volga boatmen. Transcribed by Franz C. Bornschein. [B minor] ..... .50
This is more a paraphrase than a transcription, for the stimulus of this noble folksong has inspired the transcriber to a most musicianly treatment of the thematic material.

SAINT-SAËNS, CAMILLE

Prelude to "The Deluge". Op. 45. Transcription by the author (with Harmonium *ad lib*). [E] ..... .75
This edition gives the entire prelude, beginning with the dignified fugal movement, as well as the ravishing melody so favorably known.

SCHUMANN, ROBERT

Nocturne. Op. 23, No. 4. Arranged by Henry Tolhurst [F]. ..... .50
This favorite piano piece with its heavenly melody makes an attractive and not difficult violin number.

SCHUSTER, WENZEL

How can I forget thee (*Wie könnt' ich Dein vergessen*). Op. 5. Transcribed by Karl Rissland. ..... .60
Trenchant and incisive rhythm marks this genial gavotte, which is none the less of a rather appealing emotional quality.

VIOLIN AND PIANO — Continued

TCHAÏKOVSKY, P. I.

Chant sans paroles. (Song without words). Op. 2, No. 3. Transcribed by Karl Rissland. [F]. ..... .60
The best liked among this composer's piano pieces is here made available for the pleasure of violinists in an exceedingly effective transcription.

WAGNER, RICHARD

Album leaf. Arranged by August Wilhelmj. [A]. ..... .70
A concert number of rare beauty which, though fairly difficult, should be in the repertory of every well equipped violinist.

OCTAVO EDITION SACRED

Anthems for Men's Voices

BUCK, DUDLEY.
(Arr. by Sumner Salter.)

No. 12,400. Te Deum, in B minor. ..... .16
A brisk and incisive setting of the canticle, with incidental solos for first tenor and first bass.

DOANE, W. HOWARD.
(Arr. by Ross Hilton.)

No. 12,577. Some sweet day .12
A simple hymn-anthem suitable for funeral, memorial or general use.

GOULD, J. E.
(Arr. by Clarence C. Robinson.)

No. 12,642. Jesus, Saviour, pilot me. ..... .10
Sympathetic arrangement of a favorite hymn with much variety of effect.

GOUNOD, CHARLES
Arr. by Ross Hilton).

No. 12,589. Send out Thy light. ..... .12
This useful anthem is so arranged that it may be sung unaccompanied if desired. It is not difficult.

MOIR, FRANK L.
(Arr. by Clarence C. Robinson.)

No. 12,620. Sanctus ..... .12
A melodious and simple setting, wherein the parts run largely in unison.

NEVIN, GEORGE B.

No. 12,619. O be joyful in the Lord (Jubilate Deo) .... .12
A brisk and rhythmic number, not difficult, and with a solo for tenor or baritone.

PARKER, HENRY
(Arr. by George B. Nevin).

No. 12,618. The prodigal son .12
A favorite sacred ballad with a solo for tenor. It rises to a resounding climax at the close.

ROBINSON, CLARENCE C.

No. 12,555. Be strong. ..... .12
Sturdy and vigorous anthem, original in its design. There are solos for bass and tenor, and a freely written accompaniment.

SALTER, SUMNER

No. 12,581. Eight responses .12
All these numbers are of practical brevity, and four, which are in chant form, are arrangements.

No. 12,598. I will lift up mine eyes unto the hills. ..... .12
Devotional in its character, this anthem is entirely practical for the average chorus as the range of the parts is restricted.

OCTAVO ED. — SACRED — Con.

WEST, JOHN E.
(Arr. by Sumner Salter).

No. 12,599. Te Deum, in B♭ .16
A churchly contribution to the liturgy made more widely useful, and very effective for a chorus choir.

ZUNDEL, JOHN
(Arr. by Clarence C. Robinson)

No. 12,650. Love divine, all love excelling ..... .12
The old hymn is treated with a variety of effective devices to produce a number of some length and decided beauty.

Anthems for Women's Voices

GAUL, HARVEY B.

No. 12,536. Two responses . .12
These are really short anthems, devotional in style, and free in the movement of the parts.

SCHUBERT, FRANZ
(Arr. by Louis Victor Saar.)

No. 12,616. The Almighty Op. 79, No. 2. ..... .12
Schubert's magnificent hymn of adoration has been arranged with consummate skill so that it may take its rightful place in devotional services.

Anthems for Mixed Voices

BURDETT, GEORGE A.

No. 12,579. O be joyful in the Lord (Jubilate Deo)..... .12
A vigorous number, full throughout, and useful either as an anthem or a canticle.

CLOUGH-LEIGHTER, H.

No. 12,600. Magnificat and Nunc Dimmitis, in B♭. Op. 58, No. 1. ..... .20
Of festival character in length and elaborateness are these very musicianly contributions to the evening service. They are built on broad lines but the workmanship is finished in every detail.

COLERIDGE-TAYLOR, S.

No. 12,646. Lift up your heads. ..... .12
A short and robust anthem of festival character, gratifyingly free from difficulty.

GILCHRIST, W. W.

No. 12,556. The day is past and over. ..... .12
A beautiful number full of quiet fervor. A soprano solo obbligato adds to the general euphony.

HENRICH, C. W.

No. 12,647. Unto Thee, O Lord, I lift up my voice. ..... .12
This admirable anthem is in the melodic style, and as the soprano and tenor solos are both obbligato, it requires at least six voices for performance.

HOWELL, CHARLES T.

No. 12,565. By the waters of Babylon. ..... .12
A brief recitative for tenor or soprano leads into the body of the anthem, which is also in the melodic style and highly effective.

HYATT, N. IRVING

No. 12,567. Bow down Thine ear. Op. 21, No. 2..... .16
An anthem of sterling worth and beauty, ably constructed through significant thematic treatment.

No. 12,572. Sing unto God. Op. 21, No. 1. ..... .16
Spirited in style is this exultant and brilliant anthem of musicianly character.

OCTAVO ED. — SACRED — Con.

MAUNDER, J. H.

No. 12,423, To Thee, our God, we fly. ..... .12
This anthem is a prayer for our native land, simple but effective, and useful for patriotic services.

NETHERLAND FOLK-SONG
(Arr. by E. Kremser).

No. 12,606. Prayer of Thanksgiving. ..... .10
This magnificent hymn has two verses in unison and the last in harmony. It is of great breadth and dignity.

NEVIN, GEORGE B.

No. 12,590. If ye love Me, keep My commandments. .10
Short quiet and devotional number, with solos for soprano and bass.

No. 12,584. O Lamb of God, I come. ..... .10
In the form of a hymn of six verses and refrain. The parts move with some freedom.

No. 12,591. Thou art my hiding place. ..... .10
A brief anthem in quiet style, with a short solo passage for soprano or baritone.

NICHOL, H. ERNEST

No. 12,566. The shadows of the evening hours. ..... .12
An expressive anthem in quiet style, yet not without points of climax. There is an extended solo for tenor or soprano.

REED, WILLIAM

No. 12,586. Crown Him with many crowns. ..... .16
A well-written and vigorous anthem which is suitable for Ascension or general use. A duet for soprano and tenor is a significant feature.

No. 12,528. My soul truly waiteth. ..... .16
Rather an extended number, with much variety of style, and a triumphant paean of praise at the close.

RICHARDSON, J. FOWLER

No. 12,574. Jubilate Deo, in D. ..... .12
A crisp and compact setting, available for chorus choirs of moderate ability.

ROBINSON, CLARENCE C.

No. 12,661. The King of love. .12
In the melodic style is this appealing number, which has solos for soprano and tenor which are very grateful to the singers.

RODNEY, PAUL

No. 12,635. Calvary. .12
A very effective arrangement from the well-known sacred song. The insistent rhythm carries the melody to fine points of climax.

WARD, FRANK E.

No. 12,488. Lift up your eyes. ..... .10
A short anthem in churchly style and interestingly harmonized.

SCOTT, CHARLES P.

No. 12,562. I cannot find Thee. ..... .12
Of somewhat evangelical character is this melodious and emotional number, which contains many effective passages.

WOOLER, ALFRED

No. 12,602. Te Deum, in F minor. ..... .16
A vigorous number which moves with spirit and makes effective use of incidental tenor, soprano and bass solo passages.

CATHOLIC CHURCH MUSIC

GUILMANT, ALEXANDRE

No. 12,607. Ave Verum. .... .10
A beautifully written, quiet anthem, flowing in harmony and melody.

OCTAVO EDITION SECULAR

Part Songs—Men's Voices

ASCHER, JOSEPH
(Arr. by Ross Hilton).

No. 12,630. Alice where art thou? ..... .10
An effective arrangement of the ever popular melody.

BEHREND, A. H.
(Arr. by Ross Hilton).

No. 12,638. Daddy. ..... .12
A useful arrangement of this pathetic ballad.

BERGH, ARTHUR

No. 12,640. The boog-a-boo. .12
A brightly written humorous number concerning the misadventures of two darky children and a hoot-owl.

BULLARD, FREDERIC FIELD

No. 12,568. Hunting song from "King Arthur." ..... .12
A rousing, jovial lilt, full of high spirits and the feel of the open air.

DINELLI, GIUSEPPE

No. 12,576. Come bring with a noise the Christmas log. . .12
This number has the healthy spirit and merry note of the old English glees.

No. 12,575. There be none of beauty's daughters ..... .10
A very melodious part song is this, calling for refined tone and quiet effects.

GUCKENBERGER, B.

No. 12,677. In praise of song (*Das Lied*). ..... .10
This sturdy song celebrates the joy of singing. Both German and English texts are given.

No. 12,674. Song of greeting (*Begrüssungs Chor*). ..... .08
A stirring song of welcome. German and English texts.

RICHARDSON, T.

No. 12,533. Mary. ..... .10
This is a dainty Scotch song of sentiment in which humming passages are effectively employed.

RUBINSTEIN-WATSON
(Arr. by Ross Hilton.)

No. 12,624. Voices of the woods. ..... .12
An adaptation of the famous "Melody in F" with excellent and appropriate words by Michael Watson.

STEBBINS, G. WARING

No. 12,641. Ode to March. . . .16
A riotous rollicking song splendidly adapted for vigorous singing; it has likewise a sonorous accompaniment.

THOMAS, J. R.
(Arr. by Ross Hilton.)

No. 12,633. A jolly good laugh. ..... .12
The special feature of this number is the laughing chorus, which is fun for the singers and infectious for the audience.

THOMPSON, H. S.
(Arr. by George B. Nevin.)

No. 12,289. Cousin Jedediah. .08
This quaint survival from the New England singing schools possesses real life and is always sure of a welcome.

OCTAVO ED.—SECULAR—Con.

TOSTI, F. PAOLO

No. 12,625. Beauty's eyes .. .12
No song ever enjoyed more popularity than this, and its usefulness is hereby extended to other fields.

Part Songs—Women's Voices

ARNE, DR. THOMAS
(Arr. by Clarence C. Robinson.)

No. 12,656. The lass with the delicate air. ..... .12
This delightful old song arranges in an especially happy manner for trio of women's voices.

ASCHER, JOSEPH
(Arr. by Ross Hilton.)

No. 12,631. Alice, where art thou? ..... .12
A judiciously planned version in four parts of this pretty melody.

BARTLETT, J. C.

No. 12,570. A dream. ..... .10
A useful four-part arrangement of this beautiful and popular sentimental song.

BEHREND, A. H.
(Arr. by Ross Hilton.)

No. 12,639. Daddy. ..... .12
This pathetic ballad is here arranged for four parts. There are effective measures of humming accompaniment.

BLAND, JAMES
(Arr. by Ross Hilton.)

No. 12,637. Carry me back to old Virginny. ..... .12
A four-part arrangement in which the second verse gives the melody to the second soprano while the other parts hum the harmony.

BOHEMIAN FOLKSONG
(Arr. by Louis Victor Saar.)

No. 12,617. The treasure. .. .12
A rarely beautiful melody which is here interestingly arranged in a three-part version.

BORCH, GASTON

No. 12,611. A summer day. Op. 75. ..... .16
A delicate and facile composition, light in its general effect, and with a graceful piano accompaniment. In three parts.

CONCONE, GIUSEPPE

No. 12,509. Concert of nightingales. ..... .12
A flowing melody of Italian smoothness which is in three parts and has an alto solo. French and English text.

FLETCHER, PERCY R.

No. 12,651. Softly sink in slumbers golden. ..... .12
A four-part song of quiet effects to be sung preferably unaccompanied.

FOSTER, STEPHEN C.
(Arr. by Ross Hilton.)

No. 12,627. Come where my love lies dreaming ..... .12
An arrangement in three parts of this characteristically winsome Foster song.

GILCHRIST, W. W.

No. 12,571. Three summer songs. ..... .20
These are for three-part chorus with a free piano accompaniment and are No. 1, A summer morn; No. 2, A summer day; No. 3, A summer night. They are excellently contrasted for use as a group, or may be given singly.

OCTAVO ED.—SECULAR—Con.

GRIEG, EDVARD
(Arr. by Lucien G. Chaffin.)

No. 12,560. Anitra's dance. Op. 46, No. 3. ..... .12
The light graceful quality of this famous instrumental number transcribes very effectively as a three-part chorus.

No. 12,559. Dawn's awakening. Op. 46, No. 1.
This is the first number from the Peer Gynt Suite and is likewise a successful transcription for three-part chorus.

No. 12,558. Spring, lovely Spring. Op. 34, No. 2. ....
A beautiful arrangement for five-part chorus of the melody which Grieg used for his song "The last Spring" and likewise for No. 2 of his "Elegiac Melodies" for orchestra. This is one of the loveliest of Grieg's songs and by this arrangement a new field is opened for its enjoyment.

No. 12,573. A Swan (*Ein Schwan*). ..... .10
A most successful arrangement for six-part chorus of this rare melodic inspiration. German and English words.

HILLER, FERDINAND
(Arr. by Louis Victor Saar.)

No. 12,615. O world, thou art wondrous fair. ..... .12
This delightful number is for three-part chorus with soprano or tenor solo obbligato throughout.

HOLST, EDUARD
(Arr. by Ross Hilton.)

No. 12,657. Happy Birds. .. .12
This is a bright little waltz with a simple but effective piano accompaniment. This arrangement is for two parts and
No. 12,673 is an arrangement in three parts of the same number with the added harmonic enrichment.

LAZARUS GUSTAVE

No. 12,582. The coming of Spring. Op. 164, No. 1. ... .10
Lighthearted and cheery is this gladsome lilt of spring. It is simple in both voice and accompaniment, suitable for schools or glee clubs.

No. 12,583. The stars move in measure. Op. 164, No. 2. ... .10
The quiet atmosphere of this little three-part song is in happy contrast to its companion, and it is likewise available for school or glee club use.

MARSCHAL-LOEPKE, G.

No. 12,622. The Piper. ..... .12
A very sprightly melody with delicate effects in the harmony and in the piano part.

NEAPOLITAN AIR
(Arr. by George B. Nevin.)

No. 12,621. Il Granatello. .. .10
One of the delightfully rhythmic Italian folk melodies which in this two-part version arranges very naturally and simply.

NEVIN, GEORGE B.

No. 12,561. When Portia sings. ..... .10
Both words and music of this little trio are quaintly expressive and it is very easy of performance.

PIKE, HARRY HALE

No. 12,537. Medley from the South. ..... .16
A well planned potpourri for four parts of such favorite airs as "Old folks at home," "Old Black Joe" and "Dixie."

OCTAVO ED.—SECULAR—Con.

PORTUGUESE FOLKSONG
(Arr. by Louis Victor Saar.)

No. 12,614. Love's yearning. . .12
The musicianly quality of this arrangement is gratifyingly apparent. It is for three parts with tenor or soprano solo obbligato throughout.

RENDER, FRITZ

No. 12,585. Song and Echo (Hall und Wiederhall). Op. 30, No. 2. ..... .16
A graceful three-part song with characteristic effects of bell-like echoes. The piano part helps out the suggestion.

SCOTT, LADY JOHN
(Arr. by A. H. Ryder.)

No. 12,629. Annie Laurie. .12
An arrangement for three-part chorus which does full justice to the well-loved melody. There is a flowing piano accompaniment.

VINCENT, CHARLES
(Arr. by A. H. Ryder.)

No. 12,542. Merry June .... .12
This three-part song is in the brisk rhythm of the polka. It is a bright melody and suitable for schools or glee clubs.

WAGNER, RICHARD

No. 12,580. Song of the Rhine-maidens. From Götterdämmerung" ..... .20
This ravishing trio from the third act of the opera needs no applausive word. Here we have an excellent edition suitable for the use of proficient singers.

Part Songs—Mixed Voices

BARTLETT, J. C.

No. 12,569. A dream ..... .10
The melody of this effective arrangement lies throughout in the tenor, the other parts providing richly harmonized effects.

BLAND, JAMES
(Arr. by Ross Hilton.)

No. 12,636. Carry me back to old Virginny. ..... .10
The melody, confided to the soprano, is accompanied by humming in the other voices, except in the refrain.

NEVIN, GEORGE B.

No. 12,592. It was a lover and his lass. ..... .10
A straightforward healthy melody of old-time diatonic character. The parts are interestingly managed.

No. 12,593. Young Love he went a-maying ..... .12
The graceful melody in 6-8 time is followed by a captivating waltz as refrain, the latter largely in unison.

OLD ENGLISH AIR
(Arr. by A. H. Ryder.)

No. 12,628. Drink to me only with thine eyes. ..... .12
By skilful manipulation of the part-writing the old melody attains to a great deal of variety without forsaking the straightforward harmonic scheme.

PIKE, HARRY HALE

No. 12,538. Medley from the South. ..... .16
A well made potpourri of such familiar airs as "Old folks at home", "Dixie", and "Massa's in the cold, cold ground." It is intended to be sung without accompaniment.

OCTAVO ED.—SECULAR—Con.

ROOT, GEORGE F.

No. 12,612. The vacant chair .10
A simple version for choral use of an old home song.

STRAUSS, JOHANN
(Arr. by Ross Hilton).

No. 12,605. Voices of Spring .20
The florid passages of this brilliant waltz are confided to the piano, the voices singing a counter melody. The general effect is extremely brilliant.

STRICKLAND, LILY

No. 12,643. To Anthea. .... .10
An excellent part song for solo quartet as it introduces solo parts for soprano tenor and bass. The well written accompaniment is necessary in performance.

TOSTI, F. PAOLO
(Arr. by Ross Hilton).

No. 12,626. Beauty's eyes .. .12
No song of sentiment ever enjoyed a greater popularity than this and it arranges excellently for choral use.

No. 12,634. Good-bye. ..... .12
The alternately dramatic and lyric passages in this famous song are interestingly brought forward in the arrangement for four voices.

VINCENT, CHARLES
(Arr. by Ross Hilton).

No. 12,541. Merry June. .. .12
This bright part song is in the brisk rhythm of the polka and has a sprightly accompaniment.

MUSIC FOR SCHOOLS

JENSEN, ADOLF
(Arr. by Ross Hilton).

No. 12,609. The mill. ..... .08
This arrangement is for four parts but both bass and tenor are *ad libitum* and may be omitted if desired. The piano part represents the busy motion of a mill-wheel.

RODNEY, PAUL
(Arr. by A. H. Ryder).

No. 12,648. The clang of the forge . ..... .08
Like the above, the bass and tenor parts are here *ad libitum* but the sturdy vigorous character of the composition makes their use highly desirable.

MUSIC FOR SCHOOLS—Continued

SCHRAMMEL, JOHANN
(Arr. by G. F. Wilson).

No. 12,649. Away to the woods. ..... .08
This is really a stirring march tune with a broad melody for trio and will be both useful and effective for school entertainments.

EASTER ANTHEMS

AMBROSE, PAUL

No. 12,603. At the Lamb's High Feast we sing
Op. 33, No. 2. ..... .12
A brief and vigorous number with a pleasing soprano solo which is continued obbligato over the chorus.

BERWALD, W.

No. 12,595. At the Lamb's High Feast we sing ..... .12
A musicianly and interesting anthem introducing a brief tenor solo. A well managed pedal-point at the close builds up to a fine climax.

BRACKETT, FRANK H.

No. 12,587. O King Immortal .16
A stirring composition in the melodic style with a recurring refrain and a violin part which adds greatly to the effect and may be obtained separately for ..... .50

HOSMER, E. S.

No. 12,596. The day of resurrection ..... .12
Strong in rhythm and attractive in melody is this rather simple anthem. A quiet passage for solo voices midway gives needed contrast.

JACKSON, B.

No. 12,564. Awake, thou that sleepest. ..... .12
A straightforward well written number suitable for choirs of average ability.

MAXSON, FREDERICK

No. 12,588. Blessing, honor, glory and power ..... .16
This anthem moves majestically with sonorous and fitting power. Alternating passages for quartet and chorus make it most suitable for a large choir.

EASTER ANTHEMS—Continued

STANFORD, C. VILLIERS

No. 12,604. Why seek ye the living among the dead? .. .05
Of close-knit thematic structure this dignified anthem is worthy of the excellent English school which it represents.

EASTER CAROLS

NORMANDY CAROL
(Arr. by Harvey B. Gaul.)

No. 12,597. The three holy women ..... .10
A quaintly beautiful old tune harmonized with a fine feeling for its medieval character.

VARIOUS

No. 12,613. Six Easter carols
(Ninth series) ..... .05
$4.00 per hd.
A useful collection of carols in varying styles, of which three are in harmony and three are for voices in unison.

MUSICIANS LIBRARY

JENSEN, ADOLF

Forty songs. High and Low voice. (Edited by William Foster Apthorp.)
Paper 1.50
Cloth, gilt 2.50
The songs of Jensen have been increasingly gaining the high place among German *Lieder* which is theirs by right; for it is by his songs that this composer will permanently be known. In this volume are gathered the finest of his lyrics, and they form a collection of rare excellence, and do full justice to his sharply defined musical individuality. Their conspicuous qualities are great elegance, charm and spontaneity of melody, harmonic subtlety, warmth of emotional expression, and a southern richness of coloring; indeed, the glowing euphony of his piano writing has never been surpassed. New and excellent translations, a readable monograph by Mr. Apthorp and an excellent portrait are features of this well-equipped volume.

DITSON EDITION

LINDQUIST, ORVIL A.

Ditson Edition, No. 195. One hundred exercises for the weak fingers. Paper ..... .75
Material of a very useful character such as every teacher needs in his work with pupils. The weaker fingers require special drill and specially prepared exercises, a need which the author has admirably met and filled. Try this work in your efforts to develop strength of attack in your pupils' fingers. It can be used with any method or course of studies..

CANTATA

LAZARUS, GUSTAVE

Hakon the Strong. (*der starke Hakon*). Ballad for Men's Voices ..... .50
A fine concert work with baritone solo, requiring about fifteen minutes in performance. It has markedly the right flavor for the heroic ballad — incisive themes, strong rhythms, dramatic climaxes, but all held in the epic frame. Both English and German words are given, and the translator has caught the proper idiom. Orchestra parts may be rented from the publishers.

MISCELLANEOUS

SMITH, LAURA ROUNTREE

Sixty musical games and recreations. Cloth ..... .75
This stimulating little book is the work of one who understands not only the needs of kindergarten teachers, but the interests of and mode of approach to the child mind. It is, in part, a reprint of material which appeared in "The Musician" department for children, and greatly appreciated. The Games are very simple at the beginning, and in various forms wherein the children can all take part; and they convey in an agreeable manner much valuable musical instruction. The Recreations, or "Recitals," as the author calls them, are more elaborate, and consist of well-planned entertainments wherein recitations, piano pieces, and songs are happily introduced, all bearing on the central idea of the recital. Costumes and scenery may be employed in many of them, there is opportunity for pretty dances, and the scheme may often be elaborated or simplified at pleasure.

"MUSIC HATH CHARMS"—Continued

have been published recently. It will be a liberal education in good music for you when such a man delves at will in a mine of musical treasures such as the Ditson house offers."

"You're not leaving me much spare time to get into mischief," said the girl from the West laughing. "In musical matters Boston is going to prove bigger, better and busier than I even supposed."

"I don't know what you supposed, but you can trust me to look after your spare moments and see that they are filled; and as a move in that direction, I propose to put on my hat at once and take you down town. My daughter doesn't return to the city until to-morrow; why waste this bright cool day in waiting for her, when the lure of the shops calls to us both as true women? We can go directly to Ditson's; I'll introduce you to the obliging clerks, and vouch for you to open an account—that will start you on the right road."

"I shall love to go with you," returned Grace Caldwell, "but as for the account at Ditson's, why, I already have one."

"What? How is that?" came the astonished rejoinder, "who opened it for you? Still bent on getting ahead of me with that Western push of yours?"

"Oh, no, I've bought my music from Ditson's for years—by mail order, you know."

"I didn't think of that," laughed Mrs. Endicott with a hint of relief in her tone, as though her pride had been threatened, "but I might have known your mother would never have severed her connection with the base of musical supplies she had grown so dependent on—just as she has always had a subscription to THE MUSICIAN, whose monthly visits are so welcome. Well, if I can't make a convert of you, it's gratifying to recognize you as already one of the faithful; so all that breath hasn't really been wasted. And don't think me, my dear, a very boring and garrulous old woman; I'm not so enthusiastic and voluble on every topic, I assure you. But come now and browse at your leisure among all the good things you've only known heretofore through the long-distance acquaintance of the 'mail-order'—satisfactory, no doubt, but not so human."

The autumn day waxed and waned; its brightness was gradually withdrawn from the pleasant empty room, while through the fascinating mazes of "down-town" Mrs. Endicott conducted her delighted visitor. Nor did the pair leave the well-stocked departments of Ditson's before a pile of sheet-music was ordered sent to the girl's address on selection, several new volumes of the MUSICIANS LIBRARY were purchased, and a few well-chosen works on theory and history of music from the convenient MUSIC STUDENTS LIBRARY added to her store of text-books.

"Well," said the worthy matron finally, "it isn't my fault if you are not started well for a prosperous and profitable winter. Blessed be the man—I'm sure it must have been a god—who first invented music!"

"Amen!" said Grace.

FREE A Great Music Book FREE

"Something to Play"

45 Pieces for the Piano

"Something to Play" IS NOT FOR SALE. IT CAN BE OBTAINED ONLY IN CONNECTION WITH A SUBSCRIPTION TO "THE MUSICIAN"

Should you purchase in sheet form the music contained in "Something to Play" it would cost, at teachers' prices, not less than $11.00.

There are one hundred and four pages of music in the volume, printed from large-sized plates, representing an issue of nearly two hundred and fifty pages, ordinary sheet music size.

The selections, while light, are not of a trashy type. Pleasing music does not need to be cheap music. We have chosen compositions that are not only suitable for a popular repertoire, but will improve a player's skill and musical taste.

The technical requirements vary for the playing of the pieces. Six are quite easy, sixteen are easy, and twenty-three are moderately difficult, such as the average player can use.

Twenty-one of the compositions are in various dance rhythms—four marches—eleven are character or descriptive pieces, ten have special value in promoting certain phases of technical skill, eight are in classical style. Some of the selections belong to more than one style.

The following composers are represented in "Something to Play": Aceves, Arbanot, Bach, Bennet, Bohm, Cadman, Dandrieu, Dvorak, Engelmann, Gregh, Grieg, Hause, Heindl, Hitz, Hoth, Howland, Kern, Koelling, Kronke, Lazarus, Levine, Mathe, Paradies, Phelps, Retter, Rhode, Sabathil, Scarlatti, Schmoll, Tessarin, Wachs, Warren, Westerhout, Weyts, Wollenhaupt.

How Often You Want "Something to Play"

—Some music for pure enjoyment as well as education, when you sit down casually at the piano to entertain yourself or your friends.

The compositions in "Something to Play" were chosen to meet the fullest needs of amateur, student, or professional.

We predict that any player who masters the compositions in the book will not only acquire a splendid repertoire, but will note an increase in technical skill equal to one grade—certainly a gain worth while.

THE MUSICIAN

150 TREMONT ST. BOSTON, MASS.

The SINGER and HIS ART

THE OTHER HALF OF SINGING

BY MAY LAIRD BROWN

"From the technical standpoint the art of singing is the art of combining speech processes and musical tones in such a manner that both word and tone, both thought and emotion shall retain their full value."— From *Lyric Diction,* by Dora Duty Jones.

Because of its dual character, singing possesses an appeal more intimate and irresistible than all other arts. By the conjunction of word and tone it expresses both poetic thought and the emotion it arouses. The majority of singers, however, devote themselves to tone production to the detriment of the poetic content of their song. This is due less to an inadequate conception than to the acknowledged difficulties of co-ordinating the action of the organs of speech and that of the vocal mechanism. Aspiring artists have given time and effort to the acquirement of a pure pronunciation of the languages required by their repertory only to find that the consonants remained an obstruction to the smooth flow of the voice and that vowels, indefinitely placed by imitation of their sound, either obscured the quality of the tone or were impossible of production on certain notes.

Singing, in the ordinary sense, consists of two separate processes carried on simultaneously, word production and tone production. In stating that the singer's difficulty lies in the co-ordination of these processes we are assuming that each is separately perfect. This is never the case for reasons which will appear.

However correct the pronunciation of vowel sounds, however precise the consonant articulations in ordinary speech, the tongue, without special training, has seldom either the strength or flexibility successfully to execute the same motions when the mouth opening is enlarged and the breath pressure increased for the production of tone. There has been a certain prejudice among vocal teachers against definite training of the speech organs during the early period of voice placing. The reason for this feeling is, perhaps, explained by the erroneous idea, so frequently expressed by vocal students, that the tongue grows out of the throat and is controlled from the back!

The tongue is indeed attached to the larynx at the back, but every effort to control it from that point necessarily results in a stiffening of the muscles which communicates itself to all surrounding parts, causing tightness of tone, and many of the throat troubles which beset the singer. The tongue is *rooted,* however, in the front wall of the lower jaw—below the teeth. From this point the muscles intended by Nature for word production spread upward and outward to concentration in the tip. It has been demonstrated scientifically that when a singer has learned to confine the process of pronunciation to the front of the tongue, the back will remain loose and free, leaving the larynx at liberty to maintain perfect poise and action and insuring the open throat so necessary for the command of sonority and tone color.

It may be inquired whether the awkwardness of unaccustomed motions executed with the front of the tongue is not accompanied by sympathetic stiffness at the back. This is the case only during the first few days. As soon as the focal point of control under the tip of the tongue is definitely located (for which two or three lessons ordinarily suffice), the back of the tongue is freed. Correct vowel and consonant motions practised with a loose jaw, by concentrating attention upon the front of the tongue, preserve the proper relaxation at the back until, in a short time, the entire mechanical effort becomes subconscious and automatic.

By securing muscular freedom at the start, as suggested, vocal development is greatly accelerated; but when technical mastery of the word mechanism has been acquired the tone is not at its best on all vowels, and consonants, such as B, P, V, and F, which require entire or partial closure of the lips are an annoying interruption to the tone. So we are forced again to the consideration of the possible co-ordination of the two processes of word production and tone production if we do not wish to fall back upon the usual inarticulate compromise.

The solution of this serious problem has lain hidden in a fact recognized theoretically by singers who have seldom availed themselves of its practical application. Every tone which impresses the consciousness as an individual sound is nevertheless divided by our "complicated receiving instrument" into a chord, and the beauty of the single note, so called, depends upon the number and strength of the partial tones of which it is composed. This fact has been scientifically demonstrated, and is acknowledged by all singers. Let us see what bearing it has upon the difficulties of voice production.

The fundamental tone of this "voice chord" is the sound made in the larynx which is instantaneously re-sounded or reinforced by vibrations in the upper cavities of the head and face-mask, and also by resonance aroused in the mouth. To the three elements of this primary division are added elusive partial tones generated in other resonators.

Recognizing that the carrying power of the voice depends upon the strength of the vibrations in the upper resonators, vocal teachers have endeavored, by various methods, to direct a larger proportion of tone into the head and face-mask and to overcome its natural tendency to rush out through the mouth. Unless the quality thus created is balanced by proportionate vowel resonance the tone will be nasal or, under certain conditions, hollow. Now the difference between the vowels is the result of changing the size and shape of the main opening through which the tone passes. This concentrates the mouth resonance differently in each case, and thus generates a larger number of partial tones on some vowels than on others. This suggestion points to a broad field of investigation and discussion beyond the scope of this article. It becomes immediately evident, however, that singers cannot afford to postpone the study of a correct vowel formation; for not only is it impossible to produce a complete vocal note without some vowel, but the vowel is a component part of the tone itself.

Vowels not naturally rich in partial tones may be helped out by an intensification of the head resonance; but this upper stream of the divided breath has another office besides that of enriching or adding carrying power to the tone. It is the missing element through which word and tone production may be harmoniously combined. This is easily understood when we reflect that most of the breath directed into the upper resonators passes out by the nose, unaffected by consonant closures of the resonator below. By cultivation of a definite breath pressure this upper stream may be so increased and sustained that it will carry the tone when complications of the speech mechanism interrupt the smooth issue of the lower stream. This insures a perfect legato under all normal circumstances, and offers to the singer a simple and scientific solution of the problem of *articulate* tonal beauty.

The necessary technical exercises may not be suggested here. It is sufficient to state that a perfect adjustment of word formation to the process of phonation can be accomplished by a singer of developed breath control in a very short time, and by a beginner within the period usually required to produce inarticulate and unreliable *tone.*

It is only within the last ten years that the scientific experiments in resonance (made possible by the discoveries of Helmholz, Willis, and others) have brought forth a system of lyric diction capable of dealing successfully with these ancient difficulties. This is the method of Dora Duty Jones, a gifted and cultivated American, whose association with noted singers and long experience, as a teacher of diction in the musical centers abroad, fitted her to put her practical demonstrations into enduring form for the benefit of the musical profession. Her books present a series of tested exercises together with a complete exposition of the ideas here outlined.

The present agitation in regard to opera in English, and the increasing demand for articulate oratorio and lieder singing seem to show that the uncompromising definition at the head of this article expresses not merely the aspiration of singers, but a requirement of the intelligent musical public. Teachers who accept this definition are confident that the achievement of this high ideal is now possible to every singer, and general recognition of this possibility should be an impetus towards a broader vocal art.

THE BYWAYS OF THE ART OF SINGING

BY S. CAMILLO ENGEL

I

THE RECITATIVE

Ars *longa, vita brevis.* This may account for the indifference manifested by the majority of singers towards that important part of the art of singing, the recitative.

Of the many who take singing lessons, only a few study singing as an art which, as one of the many forms of expression of the beautiful, is the equal of sculpture, architecture, or painting. What passes for singing today differs as much from the art of singing as a sign painter's work does from that of a Leonardo da Vinci.

How many are there who consider the recitative of enough consequence to give it that especial study which it requires? Even if weighed from no other point of view than the historical one, it is self-evident that its invention (or, rather, re-discovery) forming, as it were, the cradle of the modern opera, or lyric drama, gives it enough importance to demand a thorough investigation.

But it forms an integral part of the older operas, which are still sung in all the leading opera houses; and it is the root from which has sprung the modern recitative, as employed by Wagner. Consequently, its thorough study, comprising all its phases of development, is imperative. Polyphonic music, proving most unsatisfactory to convey passionate and dramatic emotions, and the desire that the sense of the text, choked and suffocated by the intricate counterpoint of the age, should again, as in their ideal, the Greek drama, assert itself, gave birth to the declamatory recitative, though it was not quite like the ancient Greek method of musical delivery, as hoped for.

The cultivated gentlemen who used to assemble in Count Bardi's house in Florence to discuss matters pertaining to art, principally poetry and music, influenced Giulio Caccini and Jacopo Peri to strive to create a new style of music, different from the then (1600) all pervading counterpoint.

The student should know that in the introduction to his *Nuove Musiche* (1601) Caccini goes so far as to describe the nature of the "new music" with the words: *"nobile sprezzatura del canto"* (noble disdain of singing), wishing it to be replaced by "a musical declamation, natural to the text."

This, then, is the key to the correct interpretation of the oldest style of recitative, which was called *secco* or dry, because it was accompanied only by a few scattered chords (indicated by a figured bass) calculated to prevent the singer to stray from the pitch.

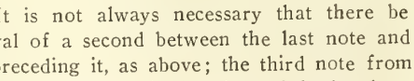
The *recitativo secco* is neither divided into bars nor has a predetermined tempo. It requires the utmost freedom of delivery, influenced only by the sense, the differentiation of the long and short syllables of the words, and the proper emphasis. The first requirement, therefore, for the mastery of the recitative is the study of rhetoric. The definition of the word "rhetoric" is, theory and practice of eloquence. If not eloquent, recitative will miss its mark. Do not pooh-pooh this advice, young student. It does not follow that because you have never heard of any connection between the art of singing and rhetoric, that the latter should not have some connection with the former.

Neither may you be aware that what the alphabet is to reading, tone production is to singing. As little as one can read without a knowledge of the alphabet, just as little can one be said to sing who has not first studied tone production. Modern singing, for the most part but a shameless flaunting of vocal vices, is directly attributable to neglected tone production. Also, how many of the modern singers know harmony? I dare say, only a small number. But many of the singers of the seventeenth and eighteenth centuries were also composers, and all of them had to study composition. Hence, the embellishment of the airs was left by the composer to the singer, who was also called upon to elaborate the hastily sketched outlines of the recitative, especially so of the Italian music. The rules pertaining to it must be observed to this day:

1. If a phrase, or part of one, ends on two notes of equal pitch, followed by one or more rests, the first of the two notes must be sung a half or a whole tone higher, or a half tone lower.

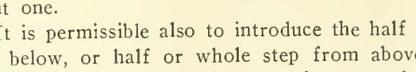
In the last example, it is better to take the half tone from below, as the words convey a question.

2. It is not always necessary that there be the interval of a second between the last note and the one preceding it, as above; the third note from the end may be repeated in the place of the last but one:



and thereby a dissonant ending turned into a consonant one.

3. It is permissible also to introduce the half step from below, or half or whole step from above in the middle of the phrase, if a note is repeated several times:



These are the rules pertaining to the reading of the recitative. There are some editions of operas and oratorios which, catering to the singer's indolence, have the recitative divided into bars and furnished with rhythm. This is as prejudicious to the singer's individuality as the much advertised predigested food is to the health of the teeth.

The rendition of the recitative must be free from monotony. The singer must not indulge in unseemly haste or undue dragging. Above all, the duration and accent of the syllables must be considered. It would be evidently in the worst of taste to dwell on an unemphasized syllable, or hurry over one, that in the spoken language requires an emphasis. Rhythm and accent are governed by the prosody of the text. Its sense, the meaning it purposes to convey, indicates where to hurry, where to retard; and there is no doubt that if the singer succeeds in merging his individuality into the character he portrays, his recitative will be perfection.

It is only natural that over half a century of operas should mean progress for this form of art, which means the creation of new ideas in the minds of the composers. Alessandro Scarlatti (1659-1725) is supposed to have been the first to avail himself of the gradually developed greater resources of the orchestra and to utilize the newer effects, both to write more elaborate accompaniments to the recitative (which in their melodic outline, however, remained unaltered), as well as interludes between them. The usefulness of this new invention to depict impassioned situations was so obvious that it was at once adopted by composers. The works of Cimarosa, Cherubini, Spohr, Rossini, etc., abounded in this kind of recitative called *stromentato, accompagnato,* or *obbligato.* The student will recognize it by the superscription: *Scena* generally followed by an *Aria.* In Scarlatti's invention we find the seed which blossomed finally (through Gluck's fructifying method) into the tree of Wagner's art form.

Just as little as the piano student can be taught to feel what he is playing, in other words, to play with expression, beyond making him familiar with the dynamics of music, just as little can a singer be taught, by mere precept, how to deliver a recitative. If he can have no intelligence to penetrate the spirit of the text and no temperament suitably to express it, he will, after diligently observing its mechanical aspect, at best produce a counterfeit, but not the genuine thing. The teacher may be able to make him understand and observe the rules, as described above, but what teacher can convey to him the truthful, spontaneous expression of the matter? The psychological significance of breathing, too, must be utilized. When it should be audible, when not. When and how it should help illustrate love, excitement, fear, astonishment, in a word, help to illustrate the whole gamut of emotion, from the calm, deliberate attitude of the scoundrel to the violent agitation of a Donna Anna.

Prominent critics have said, and justly so, that in the delivery of the recitatives, the singer shows what metal he is made of. It is the true touchstone of his art.

THE KIND OF WORK TO BE DONE IN THE EARLY YEARS OF VOCAL TRAINING

BY GEORGE CHADWICK STOCK

The achievements of a singer, other things being equal, will be in accordance with the character and thoroughness of his preparation.

Proper preparation is the outcome of intimate and practical knowledge of certain principles of the voice and singing.

The ground to be covered, during the first years of vocal training, includes mental, vocal, breathing and physical preparation; mastery of the points constituting musicianship which are time, rhythm, accent, emphasis, inflection, pitch and tune; the study of songs that they be interpreted, properly phrased, and intelligibly enunciated; the development of musical feeling, expression, taste, and temperament. Of supreme importance is the spiritual growth of the singer. It must not only be constant but must also pervade everything that the singer feels, thinks, or does.

It repays a student of song, incalculably, to grope with, ponder over and finally solve the principles that are involved. Knowledge thus acquired becomes his very own.

The years required to achieve thorough and complete information are not to be taken into account, nor can their number be stated with any degree of accuracy at the outset of a singer's career.

The thought which should be uppermost in the mind of every student of song is this: That he must properly prepare himself and, therefore, be willing to do whatever is necessary toward that end.

A singer who spends the first few years in thus working will come into the possession of ability to sing with real power and merit. One who thus prepares will have no steps to retrace. He will advance constantly, confidently, and surely. His art will rest upon a secure and well-constructed foundation.

DICTION IN SONG

BY ALBERT VISETTI

From *The Musical Times* (London)

It is in song that music and poetry meet. Lyrics of the best kind, such as Shakespeare's, have a certain musical quality, and if they are merely recited in a monotonous voice they lose half their charm. When intelligently read they naturally, and of their own accord, sing on in the mind of the reader. Formerly the lyricist and the composer were one—the troubadours and the minnesingers conceived words and melody simultaneously.

Many recent composers have set indifferent words to beautiful music, but the greatest of modern song writers, Schumann, attached equal importance to words and melody He who has once

heard Schumann's settings of Heine's lyrics can hardly read the latter, although they are poetry of the first order, without thinking of the melody to which they have been set, nor can one hear the melody without thinking of the words. The same thing applies to the folk-song or national song, where words and music are altogether inseparable.

Seeing that the song has a certain literary quality, it is plain that the singer can on no account afford to ignore diction. He must, in fact, be able to recite a piece of verse or prose, and therefore have some knowledge of elocution. Nevertheless there is nothing more common on concert platforms than faulty diction. Many concert singers perform in such a way that the text is altogether unintelligible; but even this is perhaps not quite so great an evil as slovenly pronunciation, for in the former instance the song is merely imperfect, an important element of it being lost to the hearer, whereas in the latter all the artistic refinement, which is one of the first requirements of a good song, is altogether sullied and spoiled. Purity of vocal sound, sharp distinction of consonants are vital to good singing, and they must be studied thoroughly alongside the work of pure voice delivery. Reading practice should be done every day—a *reader* who is syllabically distinct in utterance is almost certain to be an easily understood *singer.* At the same time the rise and fall of the voice as the intelligent reader seeks to give life and meaning to his words prepare him to sing with convincing expression.

Those who are only beginning to sing find some difficulty in pronouncing their words in the usual way, though this is soon remedied by practice; but there can be no excuse for those who give à vulgar drawl to their vowel sounds, or who slur their consonants in a slovenly manner: who say, for instance, "Nymph sand shepherds," instead of "Nymphs and shepherds."

It is helpful to read acknowledged masters of prose and poetry, and to appreciate the niceties of word use—shades of distinction in words that are often looked upon as synonyms, color and sound in imitative words, etc. In such ways the student is induced to pronounce carefully for the sake of the exact meaning, and to train his own ear to catch these delicacies of sound.

The same applies to the singing of foreign texts. French is one of the most beautiful languages in the world, but if pronounced with an English accent it is one of the most hideous. It is impossible to derive esthetic pleasure from the song *La lune blanche luit dans les bois* if the second word is pronounced *loone* and the last *bwa,* especially as in this case the lyric itself is one of the most perfect ever written by the poet Verlaine. Englishmen usually find less difficulty in pronouncing German, but even there a certain breadth in the vowels and an incorrect rendering of the *ich* and *ach* sounds are all too frequent.

In conclusion the words of Gustav Engel may be quoted as summarizing the whole question: "The most natural thing in cultivating the voice is to preserve that peculiarity by which it is distinguished from all musical instruments—its connection with language. Nowadays we demand much from musical lyric and from the poems that form its foundation, and tolerate no opera without a good dramatic plot. In the same proportion we require from a singer his whole attention to the joining of word and tone. In our days a singer can please even if he does not possess a large voice. But he cannot sing satisfactorily the simplest song without an artistic treatment of the language."

SHORTCOMINGS OF AMERICAN SINGERS

"American singers, gifted as they are with splendid vocal material, with a few notable exceptions, in my opinion, only achieve greatness on the operatic stage up to a certain point," declared Mme. Lilli Lehmann, Germany's most famous Wagnerian singer, in an interview.

"The trouble with most American singers," she continued, "is that they will work with great determination, often in the face of heavy handicaps, until they get before the public as professional operatic singers. Then unfortunately they are not inclined to make further efforts to achieve even greater things. This is a mistake. It is not enough to be an 'artiste.' Even an artiste still has things to learn.

"One of the shortcomings in almost every American singer whom I have heard on our operatic stage, to say nothing of those who have come to me for advice or lessons, is their impure pronunciation of the German language. Even when they are able to pronounce the words of an aria tolerably well they generally have such an inadequate knowledge of the language itself that it is quite impossible for them to bring out the deepest meaning of a word or phrase. It is not merely faulty enunciation, it is actual failure to grasp properly the inner significance of the words themselves and their true conceptions. Often they possess splendid vocal and physical equipment for an operatic career. They are unable to speak a complete German sentence correctly, and yet they can sing the entire score of *Tannhäuser* or *Lohengrin* by heart. How is it possible, one naturally asks, for a singer to sing a rôle in a language which one doesn't know thoroughly? My answer is that it is not possible for any singer to do it and bring out the fullest and finest which the work contains."

CARUSO ON HIMSELF

In an interesting series on "How I Began," in *T.P.'s Weekly* (London), Caruso tells graphically of his early struggles, from which we quote the following:

"My good father was employed in Naples as a working mechanic. I fear I was a sad trial to my parents as a child, for I was very, very noisy and lively; my juvenile and piercing voice was heard all day, and often all night. Indeed, at home I was not what you call popular. No. My father chastised me, as I deserved, and desired to make me a sober, industrious mechanic, like himself. In this desire I did not join him. I longed to be a sailor, and haunted the docks for hours, rebelling strongly against my parent's laudable wish that I should learn a trade.

"At the age of eleven I developed a great love for singing, and possessed, I believe, a fine, clear contralto voice! One day the old organist of the church of St. Anna, Naples, heard me singing some popular melody, and my youthful efforts delighted him so much that he engaged me to sing in his choir. And I received for my labors each Sunday the large sum of 20 cents weekly—the first money I ever earned.

"At fifteen I announced my intention of devoting myself to art and music and left my father's house, following his furious ultimatum that I could 'be a mechanic or starve!'

"So I became a wanderer, with no weapons to help me in the fight for success but a remarkable physique and tremendous optimism, which—I thank Heaven—has never failed me. Somehow I managed to pick up a poor livelihood by singing at church festivals and private houses. I was often hungry but never unhappy; and thus I went on until, at the age of eighteen, I was faced by this fearful problem, 'Was I a tenor or a baritone?' My voice at that time was so thin that it resembled the 'wind' whistling through a gaping window, and my fellow students laughed at my hopes of an operatic career. Undisturbed, I worked on until my studies were curtailed by a military duty. The time came for me to serve my king and country, so away I went to be a *soldato,* registering a private vow that Naples should eventually acclaim me as 'El Tenore Caruso.'

"Later, Sonzogno, manager of the Teatro Lirico, Milan, asked me if I would study the rôle of *Marcello* in *La Bohême,* but after a few days I decided that it did not suit me and returned it with many regrets. A little later I visited Milan, and there Sonzogno came to me with a request that I would change my mind, as he was certain it would suit me and that I should make a success in it! Spurred on by his belief in me I learned the rôle, and on Tuesday, November 8, 1898, appeared as *Marcello* at the Teatro Lirico, Milan, and made, if I may say so in all humility, my first success."

A CLASSIFICATION OF SINGERS

There are three kinds of singers, according to Berlioz:

1. Those who have voices and cannot sing.
2. Those who can sing yet have no voices.
3. The most numerous class—those who have no voices, who cannot sing, and nevertheless persist in singing.

I AM

a firm believer in the sentiment that has crystalized into the call—

"American Training for American Singers!"

This sentiment springs from a deeply rooted National desire to preserve in Song and Singers the *American Spirit.*

Whatever measure of success I have had in developing Voices and whatever I know about the Art of Singing is wholly due, outside of twenty years of practical teaching experience, to what I have learned by close observation of the performances of all kinds of singers from different countries and my training under **American teachers in America,** plus love of any work in any line whatsoever that promised increase of real knowledge.

If You are looking for this kind of training, **Write to Me,** I will give you **Full Information** regarding my views and my work with voices.

My pupils from the West and South find New Haven most attractive and advantageous as a musical center, possessing as we do a first class **Symphony Orchestra.** New Haven is also a most comfortable, delightful, and inexpensive place to live in. Population, 160,000.

My Fall Teaching begins Sept. 10. Address

CONDUCTED BY HELENA MAGUIRE

A CHILDREN'S MAGAZINE

In Newtonville, Mass., there is a class of musical children who like The Musician so much that last year they paid it the greatest possible compliment—that of imitation. They conducted, all by themselves, a magazine on the same lines as this our Children's Work Department, and called their little magazine *The Musical Mosaic.* All the stories, games, puzzles and verses they wrote and contributed themselves, and they had the best kind of a time editing it. The verses in this issue on "Felix Mendelssohn" were written for this magazine by one of the children who is only eight and a half years old, and in the next number we will publish a story by another of the class.

Why not follow this bright example, boys and girls, and start a musical magazine among your little friends? And if you need any advice in doing this write to the Editor of this Department, who will be glad to give you all possible assistance.

FELIX MENDELSSOHN

Felix Mendelssohn was born in Germany in 1809,
He used to go into the woods among the shady pine;
When he returned to his home,
At the piano would he sit and roam
Among the keys and then would play
Of what he had seen that day.

Mendelssohn had a happy life,
'Twas full of joy and not of strife;
He worked on his music every day,
Then he would go to the garden and play.
Here were trees and honey-bees,
Here were flowers and pretty bowers.
Mendelssohn has a name that is spread abroad for fame.

He once went on a visit to a man that was a poet,
Goethe was the poet's name; he was also known to fame.
Mendelssohn wrote songs "without a word"
Which pleased all who ever heard;
One loveliest oratorio he wrote,
"Elijah" was the name, you note.
In 1847 he died. I s'pose his friends all cried.
Here is a little rhyme he wrote once upon a time.

"Love the beautiful, seek out the true,
Wish for the good, and best to do."

(These original verses were sent to The Musician by Harriette Patey, aged eight and one half years, of Newtonville, Mass.)

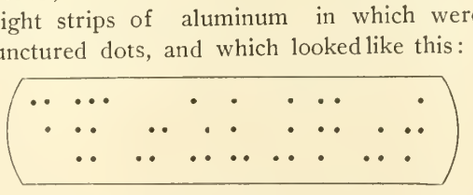
MY VISIT

BY HELENA MAGUIRE

I went in through a side entrance, and, as I walked under the trees, little happy voices and a trill of laughter came to me, although at first, I could see no one. Then, presently, I spied two children under a grapevine, then a little girl in a far-away enclosure was hanging a towel up to dry, and through an open window I heard some one playing the scales on a piano. Children, busy, happy, children were everywhere.

Next I was in a wide hall, lighted from high windows, a fair-haired teacher was playing the piano, and presently, so quickly that I had scarcely noted the entrance, a class of little children was there.

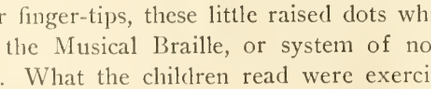
And the children sang for me, a merry chorus; then each one ran her fingers over bright strips of aluminum in which were punctured dots, and which looked like this:



Have you guessed where I was visiting? It was in the Music Department of the Perkins School for Blind Children at Watertown, a suburb of Boston, where little children who cannot see live together in little groups, in cottages, and study their music lessons together in a great beautiful building in which are forty-four practice rooms!

But to go back to the aluminum strips. On these strips the children were reading, with their finger-tips, these little raised dots which are the Musical Braille, or system of notation. What the children read were exercises which I have printed here below.

Ex No 10, Third Series sung by Edna Wilson



Ex No 65, Third Series, sung by Lillian Rissman

These they read, analyzed, and sang to me by finger-sight, and this is the way that the little blind brethren read and learn their instrumental music lessons also; only then the dots are in a long narrow book. They take their books out to the quadrangle where they learn, *memorize,* a page or two pages, then, returning to the practice room they are ready to play this on the piano. If a part proves misty or knotty the busy fingers con it over and over again until all is clear and in this way the lesson is first learned and then practised.

So, children, if you who are blessed with two good eyes ever are tempted to complain that practice is difficult for you, please remember these little brothers and sisters of yours who live in perpetual darkness and yet steadily, perseveringly struggle to overcome their dreadful handicap and who learn their music lessons despite hardships which we can only dimly imagine.

THE LESSON OF THE MONTH

BY HANNAH SMITH

OPERAS

"You remember," said Miss Browning, "that the words of the Greek play which Creos and Philo heard in the great theatre of Dionysius at Athens were all recited, or intoned, to musical sounds, with accompaniment of lyre and flute, and with interludes of hymns and odes sung by the chorus. Well, it is from these ancient Greek dramas that the modern opera has been developed.

"The poetry of many of these wonderful old plays has been preserved, but not a single note of the music to which the words were set has come down to our time. All that we know of that music is from what Greek writers have told us about it; nothing at all from the music itself. But these writers have described very exactly the method of its notation, the manner of its performance, and the great effect it had upon its hearers.

"Although, as I have said, the text of many of these old dramas has been preserved, for many centuries—throughout what are called the Dark and Middle Ages—these manuscripts were carefully hidden away in the old monasteries to whose care we are indebted for the preservation of most of what we have of ancient history and literature, and were utterly forgotten by all excepting a few scholars.

"But in the fifteenth and sixteenth centuries in the remarkable revival of learning which is called the Renaissance, these long neglected works were again read and admired, and a great enthusiasm for everything classical began to dominate all the arts. The invention of the modern opera—which is a poetical drama the words of which, instead of being spoken are sung to the accompaniment of musical in

struments—was the result of an effort on the part of some highly cultivated Italian scholars and musicians to imitate what they supposed to be the classic drama of the ancient Greeks. And this—a little over three hundred years ago—was the starting point of modern music.

"Until that time, although there were, of course, popular songs and dance tunes for the common people what was considered to be really high-class music (which was mostly for the services of the church) consisted altogether of contrapuntal compositions; that is of music in the style of fugues and canons. This kind of music, though beautiful enough in itself, and entirely appropriate for a religious service, was quite incapable of expressing the emotions of a drama; so, recognizing this, the founders of the modern opera invented a new style which they called homophonic, or monodic (one-voiced) to distinguish it from polyphonic (many-voiced).

"Any music in which there is one prominent melody supported and intensified by an accompaniment of the other parts (any modern song and most pianoforte pieces) is homophonic, or monodic; and it was the introduction of this new kind of music that gave such importance to the invention of the opera.

"The music itself was at first very monotonous and quite uninteresting. These early opera composers had no desire to make tunes, but only to render the words of the poetical drama more expressive by declaiming them to musical sounds. But this new style of music rapidly developed, and before long assumed such importance as entirely to overshadow the drama which it was intended to illustrate, and to obscure the words of the poetry the meaning of which it was intended to intensify. And the great singers who abounded in the eighteenth century cared only for opportunities to display their own art, and would sing only in works which provided such opportunities; so that the opera degenerated into a mere collection of brilliant and difficult arias connected by a slender thread of recitative—that is, words not exactly sung, but recited to musical tones.

"But about the middle of the eighteenth century there lived a composer named Gluck,* who became convinced that in the opera music should be used to increase the interest of the play—not to hamper its progress or to gratify the vanity of singers. And he not only clearly expressed in words his ideas about the true principles of operatic art, but also composed according to those principles such beautiful operas that the triumph of his ideas was complete.

"A century later came Richard Wagner, who, being both poet and musician (he always himself wrote the poems for his music-dramas), carried out to their fullest development not only the principles formulated by Gluck, but also the ideas of the Italian founders of the modern opera, and, as nearly as it is possible to know them, the ideals of the masters of the classic Greek drama.

"It was Wagner, Dorothy, who composed the *Meistersinger,* which you enjoyed so much and also many other wonderful and beautiful works which will, I know, give you equal pleasure."

"Uncle Frank said he would take me to hear *Lohengrin* for my birthday present, but, if I would rather, I might have the ticket money to buy something with. Polly Rich said she'd take the money and buy a gold bracelet, or a ring with a stone in it. But if I did and then lost it, there wouldn't be anything left at all; and now, when I shut my eyes I just can see and hear all those lovely things, and they can't get lost—can they, Miss Browning?"

"No, indeed, Dorothy; and a lovely thing in one's mind and memory is certainly a far greater and more lasting delight than the most beautiful ornament that can be found in any jewelry shop."

CHARLES BANCROFT, JR.

PLAYING FROM THE APRIL MUSICIAN

HERE are two pictures of some of the readers of THE MUSICIAN. Charles Bancroft, Jr., lives in Philadelphia, and his father, who contributes to THE MUSICIAN, claims he is the youngest reader. The picture of the two girls was sent in by Miss Laura Rountree Smith, who has written so many delightful musical plays for THE MUSICIAN.

A BACH ANECDOTE

BY ADA M. PIAGET

(A TRUE STORY)

MARIAN is one of my dearest and brightest little pupils.

One day during the lesson I had read her the story of the life of John Sebastian Bach.

When she came again I wished to find out how much she remembered about the great musician.

"Tell me the name of the great musician about whom I read to you at our last lesson," I said.

Quick as a flash came the answer:

"Oh, I know—his name was—John-the-Baptist Bach!"

Needless to say, Marian is an excellent church member.

MUSIC CLUB DIVERSIONS

BY JESSICA MOORE

THE GAME OF "THE MISSING NOTE"

THIS is a *Musical Donkey* game, with a note to be placed blindfolded, instead of a tail.

With black crayons make a double staff on a sheet.

Cut out of stiff paper as many squares as you expect to have players, and on each square make a note.

Tack the sheet to the wall, and hand each player a square of the paper. Each is then blindfolded in turn, turned about and left to pin the note where he feels it belongs. It is left where he has pinned it until the end of the game, when a prize is given to the one who placed his note nearest upon middle "C" line. Those who have pinned theirs the wildest should be made to sing them in the position in which they have placed them. As some are not placed upon the staff at all, the merriment caused by their attempts is great.

———*———

A VIOLINIST'S PRACTICE

HELEN WARE, a young American violinist, writes as follows in regard to the routine of practice exacted by certain famous teachers:

"Of my four years' study in Europe I have spent almost three years with Prof. Sevcik, the other year in concertizing and studying with Prof. Hubay. During that time I have worked on my violin day after day, with a burning ambition within me to master all the difficulties of the instrument so that I may make it serve me as the natural mode of expression. During my student days at Pisek, we would often practise eight hours and more a day. Now you will understand what a trying effect it is for me to lay my violin aside for the vacation months and build up for my strenuous work of the season, by athletics and care of my little garden patch. There are times when I feel as if I simply could not go on another minute without my usual routine of practising."

THE QUEEN'S MUSIC CLASS

BY H. M. BROWER

It was just at dusk. Mildred sat at the open window looking out into the quiet street. This was the hour for her piano practice. She had played each of the scales once, the three études and her new piece. The hour was not over, but Mildred thought she heard the sound of a street band somewhere and had run to the window to listen. The music sounded faintly in the distance; one could hardly tell just where it was. Mildred put her head out of the window and looked this way and that. A nearby street lamp blossomed into a pale yellow flame. By its light Mildred saw the figure of a little girl near the doorway, a pretty little girl of about her own age.

"Do you know where the music is?" asked Mildred.

"Yes, I know," answered the little girl, and her voice itself was like music; "would you like to come with me and hear it?"

Mildred slipped out of the room, through the hallway and down the steps. The little girl put a soft hand in hers, and together they went up the street, in the deepening twilight.

After awhile they stopped before a small, low, wooden house. Mildred had often passed this little house in the daytime, on her way to school, and had sometimes wondered who lived behind those closed blinds. The little girl drew her companion up the two or three low steps to the doorway, and, lifting the heavy knocker, gave three peculiar little raps.

* * * * * * * * *

Mildred was almost blinded by the dazzling scene that greeted her. She put up her hands to shield her eyes from the radiance of it. It seemed several moments before she could recover sufficiently to look timidly about her. Then she saw a large and elegant salon.

In the center of the salon stood a beautiful piano with a case of pure gold. Near it sat a lady of the greatest beauty of face and form. Her blond hair was held by a fillet of brilliants, which made her look like a queen. Soft filmy draperies fell around her and she sat in her golden chair as though on a throne. Girls of her own age, in simple white, sat in rows of seats, as though in school. There were boys among them, too. All the children had such happy expectant faces, that it seemed they must be doing what they loved to do.

Mildred's companion explained that the queen interested herself deeply in music. She was an eminent musician herself and had the ladies of her household thoroughly trained as players and teachers. She did not think they understood the art themselves unless they were able to instruct others. So each of these young musicians was required to teach a class of pupils. The Queen summoned these children to her salon at stated intervals, and examined the work done, criticised, commended or encouraged each pupil, counseled their teachers, and looked after everything. The visits to the Queen's salon were events of the highest importance in the children's lives; mild censure from her lips caused them to work doubly hard to please her, while her praise raised them to the seventh heaven of happiness.

The Queen had just called for technical exercises as her little companion led Mildred to a seat. Several children were asked to go to the piano, one after another, and play certain exercises in chords which they all seemed to know. The Queen listened intently, and corrected slight faults here and there. Mildred noticed how exactly the exercises were played, how the fingers were prepared for the notes, and how interesting the exercises sounded, as pretty as pieces. Each pupil seemed playfully ambitious to do better than the others, and so win the gracious Queen's approval.

When all had finished one of the young teachers sang a lovely song by way of variety.

The Queen then called for scale playing. The whole class was all alert at once. She lifted a book from the table beside her and held it up. "This is for the boy or girl who can play the best scales for me today," she said: then, looking in Mildred's direction, she continued:

"I see a little visitor here, and as she is studying music, she may like to try for the prize also. She is our guest, so she may play first; will you come forward, my dear?"

The request was a gentle command; Mildred did not dare refuse. She came toward the Queen, who graciously motioned her to be seated at the piano.

Now Mildred had never been a lover of scales; as a small child she had fairly hated them. With her present music teacher she had learned them over again, both majors and minors, and played some of them in two octaves every day. So she felt quite virtuous on the subject.

"At what tempo do you play your scales, my dear?" inquired Her Majesty, laying a hand on the jeweled metronome standing near.

"I—I don't know," stammered Mildred.

"Well, play them your way, and as beautifully as you can."

Mildred began by playing the scale of C two octaves up and back.

"Play it four octaves up and down, and much faster," commanded the Queen.

The girl began again, but it went worse than before; her fingers were all tangled up and nothing went right.

"Ah, I see, you have never really studied scales," remarked Her Majesty, as Mildred went back to her seat.

One and another were now called upon, and Mildred listened with growing amazement. Were those really the despised scales, those beautiful things, that rippled up and down the keyboard—now with power and brilliancy, and now with velvety softness and lightness? Sometimes they were all swells and diminuendos, like waves of the sea; then again they tripped up and down in the most delicate of staccato. She felt she had never heard scales before.

The prize was won by the little girl who had acted as Mildred's guide, and both girls looked over the treasure together.

"I'm so glad to receive this, for I love pictures and I've worked so hard over the scales," said the little girl. (The book had proved to be a set of paintings by great artists, and was bound in gold brocade.)

"I never liked scales, nor thought them pretty," said Mildred; "but I do now, and I mean to practise them all every day, till I can play them as you do."

"We have to know just how to study them in order to make them sound as we do,—but I suppose your teacher can show you," said the little girl.

"I suppose so," said Mildred, a little doubtfully.

At the close of the technical contest many beautiful pieces were played, with great intelligence and expression, and with fine tone. It was plain even to Mildred, that these pupils studied intelligently, and applied their technic study to their pieces. She liked it, too, that all the compositions were played from memory, as they could be interpreted with so much more freedom. She mentally resolved to learn her favorite pieces by heart, from now on, though her teacher did not require her to do so.

As these thoughts came into her mind a strange thing happened. The beautiful salon with its exquisite pictures, its lights and flowers, its perfumes and music, its lovely Queen and the gay company of dancers seemed to fade into a gray mist, and as Mildred strained her eyes to catch a last glimpse, she found herself trying to pierce the dusk of the May night. She raised her head and the light of the street lamp shone in her face.

Mildred pondered on the experiences of the vision she had had.

"If that was a dream," she thought, "it was the most beautiful and the most sensible one I have ever had. I hope I can profit by it lessons. I am going to try to make my scales ripple and flow as those did,—my chords ring and 'kling' like theirs, and my tone sing, too. My! but it was all beautiful! I don't think I ever heard a piano sound like that before. And the little girl said it was because all the children practised the technical exercises so well that the pieces were played so beautifully.

"Won't my teacher be surprised to find me really practising scales and such things?—for I can see that I never really studied them before. I shall work very hard, and then perhaps the little girl will come and fetch me for the next audition."

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

INDIVIDUALITY IN TONE

BY RAY G. EDWARDS

THE violinist has so many important things to remember every time he plays a great concert solo that one ceases to wonder how it is possible for chess champions to play twenty games simultaneously and win them all. The mental equipment of a master violinist must be equal to that of the master of chess. The playing of six thousand notes in a single composition requires more than the directing of the fingers of the left hand and bringing the notes into their proper order. The slightest change in pitch of a single string will necessitate changes in the position of the fingers. This would seem quite reasonable to any casual observer; and then they would be apt to conclude their statement of the difficulties of violin playing by saying that all you have to do is to draw the bow and make the strings sound; if you have the fingers right on the strings the bow will do the rest.

A moment's consideration of the matter should convince anyone that there really is something missing in this statement of the difficulties. The very person who thinks the violinist's art is all in the fingers of his left hand has probably remarked more than once that he recognized so-and-so's playing every time by the tone, just as one distinguishes the voice of a singer or the touch of a pianist. Some violinists can be recognized by their muddy tone while others, whose left hand work may be identical, produce a tone as clear as a flute. And if you listen to ten violinists play the same solo you will not need a particularly acute ear to note that one violinist has a liquid tone, another is habitually harsh, a third fills the hall with volumes of tone, while the fourth has a silvery tone. No two are alike.

This is in part due to the qualities of the instruments they play; but let them change instruments and it will be seen that it is utterly impossible for them to change tones. Each has his own manner of pressing down on the strings with the fingers that help to make the tones; but most of all the difference is in the distinctive and individual manner of holding and manipulating the bow.

Even pupils studying under the same teacher will hold to their individuality and quality of tone to a degree. May this not be accounted for by the fact that in the earliest efforts to master the violin it is the bow arm that calls forth the greatest energy and upon which the pupil concentrates so earnestly that he acquires a "voice" in his bow stroke that is seldom changed to an entirely different "voice" in all the after years of training?

This I think is especially true when the teacher has not had sufficient experience in whipping pupils into line, in getting right at the root of the trouble, and giving special work for overcoming errors in tone production. With a violin tucked under his chin the pupil is in no position to know that a swift and light stroke has more musical quality and carrying power than a slow and heavy stroke, because both sound equally loud and pleasing to the untrained ear. Degrees of loudness are about all that the young player distinguishes in tones, aside from the pitch.

When he finds out the way of varying the tone by tipping the hairs on the strings, or by the speed of stroke and direction across the strings, or by bringing the bow closer to the bridge or playing down over the fingerboard, as well as the quality of voice of each string (the same notes on different strings in different positions having qualities all their own), it begins to appear that the violinist has a thousand things to think of as he stands calmly before an audience and plays two or three big concertos; even barring accidents to his violin or the necessity of changing his entire conception of the music to meet the limitations of an unfamiliar accompanist, and even though he has a never-failing memory, he cannot be any too sure that the performance will go off satisfactorily. And yet persons wonder why violinists are not always gracious and willing, at a moment's notice, to play, even before a small gathering, some great composition that taxes all one's powers when in the mood and in good practice, which is seldom the case in these impromptu affairs.

—*—

THE VIOLA: A TOO LITTLE KNOWN INSTRUMENT

BY A. WALTER KRAMER

THE general public's interest in things is rapidly becoming the determining factor in their chances of popularity, for what the masses believe to be so plays a much larger part from year to year. That portion of mankind which considers itself guided only by the things designated as "ultra" in matters of culture and the like would deny the influence of the general public. But the contention is poorly grounded and a strict observance of the growth of those things which receive unanimous popular approval will quickly demonstrate the contrary.

Orchestral instruments are among the things about which the public knows little. To be sure, it knows a violin, a 'cello, a flute, a trumpet (though it insists on calling it a cornet, which, in truth, is a very much inferior instrument), but ask the "man in the street" what an oboe or a bassoon is, or a viola, and he will stare at you! Perhaps it is not his fault. The instruments mentioned above as being known to him are known because they have been used as *solo* instruments. It would seem then that this is what makes the public familiar with the nature and characteristics of an instrument.

The viola is one of the instruments in the orchestral ensemble about which none but musicians can tell you anything. Mr. Wm. J. Henderson, in his admirable book on the orchestra, gives a very plausible reason for the public's lack of interest in what the viola is, namely, that for many years viola players were recruited from the ranks of broken-down violinists. And this was true, though it is not so today. The violists (to give performers on this instrument their just title) in a modern orchestra must be men who have studied it with the care that an able violinist or 'cellist devotes to his instrument. In the early days of classicism, Haydn and Mozart used this instrument in their symphonies quite as they did the second violins. In other words, its function was to fill in the inner harmony, between the melody of the first violins (plus whatever woodwind the composer was employing) and the bass of the 'cellos and double basses. Berlioz and Wagner, and, to a lesser degree, Weber, discovered the true nature of the viola, and in their works wrote significant passages for it, passages which have attracted attention from laymen as well as musicians. And the interesting thing about it is that it soon became apparent that to play such things on the viola a careful study of the instrument was absolutely necessary.

Modern composers have never forgotten the instrument in their orchestral works. In fact there is cause for complaint in that, only too often, in recent years, have they assigned things to the violas in such abundance that the poor instrument has been overburdened. As in other cases here is an extreme, and they have often arrived at it in their desire to give the instrument a chance to make itself heard. I know of a string quartet by a contemporary composer in which the themes of all the movements appear in the viola first, not always to advantage.

For the viola itself is not an instrument capable of expressing the many emotions which the violin can. It is sombre and pensive in its two upper strings—the D and A—and its lower strings, C and G, which are tuned one octave higher than the corresponding strings of the 'cello, have a certain thickness which makes them also far from bright, though the sonority of the G string is remarkably fine. Yet the viola can be made interesting even as a solo instrument by a composer who understands its nature. Anton Rubinstein, though far from a great composer, realized this and in his F minor sonata, for viola and piano, he put to his credit one of his finest works. Certain musical ideas can be expressed capitally by the viola. But to attempt to treat it in a universal way, as one does the violin, is unwise, to say the least.

This instrument, about which the public knows so little, has a literature of its own and it is not so small. Apart from the numerous transcriptions of violin compositions made for it, effected by transposing the composition one fifth lower, there is a vast array of original works. Clemens Meyer, a German musician of no especial distinction, is responsible for some of the best transcriptions. Hermann Ritter did a great deal for the instrument by making numerous transcriptions and also writing much original music for it. Of the older Italians, Campagnoli alone left a set of studies, forty of them, which are to the viola what Kreutzer's *Forty-two Studies* are to the violin.

Having for a number of years played the viola, not only as a member of a string quartet made up with three friends, but also as a solo instrument, I have gathered together a large list of solo viola works. They have been chosen not because of their composers' standing but chiefly because they are written for the instrument in an effective way. Some of them may not be very notable *as music*: as *viola music* all of them are worth while. They are.

Alfred Bruneau, *Romance;* Hans Sitt, *Concerto* in A minor, *Concertstück* in G minor, *Romance* in G minor; Cecil Forsyth, *Concerto* in G minor, *Chanson Celtique;* Vincent d'Indy, *Chorale varie;* Cyril Kistler, *Serenade;* Liszt, *Romance oubliée;* Svendsen, *Concerto* in D major; York Bowen, a concerto and a sonata; Hummel, *Fantasie;* Campagnoli, *Romance;* Mozart, *Concerto;* Kalliwoda, *Six Nocturnes;* Ludwig Maurer, *Divertimento;* George Onslow, three sonatas; Thomas Taglichsbeck, *Concerto* in C minor; M. Enrico Bossi, *Romance* in Ab; Chevillard, *Four Pieces;* Joachim, *Hebrew Melodies;* Paul Juon, sonata; Lalo, sonata; Leoncavallo, *Serenade* in F; Philipp Scharwenka, *Sonata* in C minor; Taneiew, *Feuillet d'album;* Svendsen, *Andante funébre.*

THE AMERICAN ACADEMY OF VIOLIN MAKERS

BY RAY G. EDWARDS

THAT violinistic matters in this country are becoming fairly well established and organized is evident from two different viewpoints. The violin makers have recently organized themselves into an association known as the American Academy of Violin Makers, and the teachers and players have their American Guild of Violinists, a later development of the American College of Violinists of which, as then editor of *The Violinist,* I had the honor to be the organizer, some ten years ago.

In the beginning there are always those so constituted that they scoff at these academies, colleges, and guilds, but in whatever craft or profession they are organized they are a great help. None are too wise to learn, and the majority are so human that they profit by fellowship, association, and the interchange of thought. The few who have not the human attributes necessary for progress and comradeship, who are sufficient unto themselves, would be lost in any of these organizations. And this may seem queer, yet it is true, that those who would find themselves must lose themselves in service and fellowship.

This I know has happened to the violin makers; for I have known many of the men in the Academy for years, and I know that they must have grown in human kindness as well as in skill, to have entered into this organization with others in their exquisite, ennobling craft. For if man is the noblest work of God, so is the violin the noblest work of man. Nothing that man made three hundred years ago is perfect today, as the violins of the old Cremona makers are perfect. But the art and cunning are not lost, and have not been, through the generations of men since Amati, for there are today, in America and Europe, makers of violins who are creating just such perfect instruments as were known to Paganini, Ernst, Spohr, Wieniawski, Vieuxtemps, and other masters of the bow and violin, fifty, one hundred, and two hundred years ago. Only the bow of that earlier time was not the bow of today; it is a more recent development. The old Strad and Guarnerius were yet old and cracked even before the first perfect bow was born, in the mind of that immortal, the French bow maker, François Tourte, about the year 1775.

And so it is proper that violin makers in America should have their Academy, and I hope every maker of repute (or even of skill and sincere mind, striving upward in his creative work) will catch the spirit of comradeship and progress. The Academy is yet new, yet a-borning, and this is the time to clasp hands across from one bench to the other. Yes, and take off your leather or green felt apron, and go to the conventions. More than that: With a case of violins in one hand, a suit case in the other, and a spirit of receptivity, kindness and fellowship in your heart, go to the conventions of the Academy, and if there are those who make violins not so good as yours, or who stir the glue pot the wrong way (as you see it), or mix not enough brains into their varnish, let not that send you off to the railway station in a huff. Stand by, even as every captain of a vessel will stand by another in distress. Just the other night, out in Tampa Bay, the captain of our boat, with a heavy load and anxious to get in before the storm, stood by a barge and for an hour transferred gasoline (a dangerous operation by lantern light), that the barge might have power to get to port instead of drifting out into the Gulf. Our own gasoline supply was low, but nobody "cussed" the captain for not being well supplied.

So with the faults of your brother violin maker. Correct them in kindness if you can, and if there is not yet sufficient kindness in your heart, or in his, correct him by example and say nothing; show him your instruments. And, too, although there will be inferior instruments there will also be violins just as good as yours, and among the best will be those that excel in one point or another. Every man can learn if he will. Go to the conventions and find out what a fine body of men you are. Most of you have never visited the other fellow's shop. You little realize what you are missing. Even if you are satisfied with present attainments, there is something in creative work, in being a co-worker with God, and with your fellows; in responding to the desire to manifest, to the outward pressure of the creative will that inspires a man and makes him wonder at his own power. The creative work of the violin maker is on such a high plane that he is in danger of bestowing too much self-praise and of marveling in an unbecoming manner at the productions of his own hand and brain. To such the need of this Academy is great, even as great as to those who need the example and inspiration of his work.

And now a word as to the oganization: Its objects, as stated in the constitution, are: "First, to advance the interests of modern violin makers as individuals and as a class. Second, to champion the demonstrable merits of modern American violins as compeers of the violins of any other generation or any other nationality. Third, to encourage the art and science of violin making, and the use of modern violins."

Active membership is confined to those makers who practise their art as a profession, and who have made and sold under their own individual label twenty-five or more instruments of the viol family, namely, violins, violas, violoncellos, bass viols. Professional and amateur players, and apprentices under the age of twenty-one who have served at least one year in the atelier of some reputable violin maker, may become associate and apprenticeship members.

Conventions will be held annually, the first one taking place in New York City during May of the present year. A permanent exhibit is to be set up of instruments made by the members. The first year this exhibit will remain in New York City, but ten days before the next convention it will be removed to the city selected for that convention, and there remain until ten days before the third convention, and so on. At each city a competent person will have charge of the exhibit, which will be open to visitors daily through the year. Sales will be made from instruments exhibited. There are other advantages. For example, a list of persons who, evidently from curiosity, have instruments sent for trial with no evident intent to purchase, or having purchased become delinquent to such a degree as to seem fit subjects for the Academy's attorney, will find it rough sledding to try to deal with members of the Academy.

The first president is Knute Reindahl, Chicago; vice-presidents, Walter S. Goss, Heinrich E. Knopf, and E. Oscar Schmidt; secretary-treasurer, August M. Gemunder, New York. The list of members as first announced included the names of twenty-five makers, with six more applications waiting and the probability of doubling the membership before the first convention.

PAGANINI'S VIOLIN

WHAT is to be done with Paganini's violin? He left his famous Guarnerius to his native town of Genoa on condition that the instrument should be preserved perpetually. Now the worm has got hold of it and threatens its destruction.

It appears that the presence of the little creature has been suspected before. But experts exonerate the worm, which may be said to have left the court without a stain on its character. Now, however, has, so to say, been caught red-handed.

If You are in the Market for a
RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy,

LYON & HEALY, 19-31 E. Adams St., Chicago
The world's largest music house. Owners of the famous Hawley collection.

LA FAVORITA STRINGS
Italian Gut. Best in the World. Warranted
VIOLIN
E, 4 lengths; A, 2½ lengths; D, 2½ lengths; each in separate envelope; and single lengths tested, each string with tag "La Favorita." For sale by Leading Music Dealers. Ask your dealer but insist upon "La Favorita."
Trade Supplied by M. E. Swaboda, 26 E. 22d St., New York

ARE YOU INTERESTED IN NEW VIOLINS?

The Thoma Solo Violins

are highly recommended by leading Violinists and Musical People who are using them. And why? — Because of the fine tone quality which they produce.

The good Genoese naturally value the historic iddle of their great fellow-townsman. But they are aced with a dilemma. These same experts say that Don Worm will cease his inroads if a violin is played

PAGANINI

n regularly, as the vibration evicts this undesirable enant.

But who is to play on Paganini's? It is regarded s a super-violin from the fact that the renowned aestro by its means haled the souls of men and omen whither he would, and to evoke its divine ounds by a common mortal would be nothing short f desecration.—*Pall Mall Gazette.*

THE HOTEL ORCHESTRA PLAYER

BY EDITH LYNWOOD WINN

It is not all roseate, although you have the satisaction of knowing that you have been accepted ver about fifty other applicants. Of course you el complimented—anybody would, but your cup of appiness is not full to the brim. Every student, rom Berlin to Chicago, who can play the piano at ll, and who needs a little money for the winter iat is to come, applies for an orchestra position. Ir. —— of a certain Boston agency, says:

"They sit around my office and talk like magpies rom March until June, then they give it up, when ey see there is no chance for them. One fellow rote one hundred letters and received three replies om hotels. He had never played in a summer rchestra, and he couldn't even play a hymn in rict time. The average piano student can't read at ght, and when he can do so, he finds himself terly at sea with orchestra signs. No, there is no oom for the inexperienced orchestra player.

"But where is he to get his experience? I'll tell u where. He must begin at the foot of the ladr and play for dances during the winter. Let m go into a dancing academy and learn how to ep strict time, the proper tempo for all dances, d general rules of accent. Only yesterday a lady anist came here, who is down and out. I asked her to read a waltz of ordinary difficulty—I think it was *The Blue Danube.* Why, she didn't know a thing about repeat marks, and, would you believe it, when I put a 'cello and violin with her, she played the first beat of the measure only and let the last two go? What kind of playing is that? The average violinist and pianist, even those who have studied abroad, can't play ordinary orchestra music as well as a child. The pity of it is that when you tell them they must not play legato in dance music and the popular selections, they elevate their eyebrows and say, 'But I was never allowed to chop off notes, as you say, in Berlin and Paris. I can't afford to injure my touch and my tone by hammering out the time.' They are hopeless, as you know, because they are too conceited to learn anything and they feel above their calling. They are soloists, pure and simple."

A short time ago a lady who may be an excellent musician came to me with the request that she be allowed to play some sonatas with me, at a summer hotel. I listened to her long story of study here and there, and we began. When I reminded her that she was not following well, she seemed hurt, and so I let things go along as they were going. Then she asked if she might play some "easy music" with our orchestra. She failed on this ground: only the first beat in waltz time was heard at all. I could not tell her just what was wrong. She would have been highly offended. She will never know why she cannot play with an orchestra.

Harold Bauer, who knows a great deal about dance rhythms, says: "In playing a simple waltz, accent the first beat, have the right hand ready for the first (second beat) chord, then raise it for the third beat, or chord, of the right hand. Thus the second beat is *pressed* and the third beat is *struck.* You will always be able to make the accompaniment *definite* in this way. Many players never sound the third beat at all."

The summer orchestra player must make up his mind to many irritating experiences; for instance, in the smaller hotels, at the Sunday evening concert, which lasts only one hour, the players who have prepared a serious program are annoyed if people talk and laugh during the performance. If the manager of the hotel has not enough courage to put up notices, enjoining silence on Sunday evening, while the concert is going on, the members of the orchestra must be contented to change the program already arranged and play very noisy pieces like the selection from *Rienzi, Poet and Peasant* overture, *Raymond* overture, and other works of this class. During solos (for one member of the orchestra must play a solo every Sunday evening), there must be, and usually is, some kind of attention. Older people make quite as much noise as children, and often the orchestra is surrounded by people screaming in unison.

The orchestra leader must be very courteous and obliging. The members of the orchestra must also appear very anxious to please the guests. Programs must be made out and conformed to, if possible, but most of us find it is never possible. Frequently some guest in the house, who happened to arrive after the "hop night," requests that dancing be allowed. The members of the orchestra usually submit with apparent good will.

MATERIAL FOR TEACHING VIOLIN CLASSES

We have just had brought to our attention *The Farley Violin Class Method,* which consists of 40 elementary studies for beginners on the violin. These studies are bowed and fingered, and furnish fine material for the purpose. The first are in the keys of A and D, then in G, C, F, and B♭ in succession; various rhythms are introduced and the elementary bowing principles well worked out. Interest is obtained by the use of familiar melodies in connection with studies in bowing and intonation.

ATTENTION, VIOLIN TEACHERS
THE FARLEY VIOLIN METHOD
Consisting of forty separate elementary studies pronounced by teachers to be the **simplest and most practical** work published for **private** or **class** use. Sample copy 25 cents.

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

PEDAL BOARDS OF VARIOUS TYPES

BY H. C. MACDOUGALL

IV

AN AFTERMATH

THE readers of this page of THE MUSICIAN by this time will have noted the outcome of the symposium on the various types of the pedal board and will have some general notion of the state of opinion among the leading American organists as to the best type of pedal clavier.

There are several things that came to light in the progress of the discussion, things that were not germane to its main points, but important for all that. I purpose taking up some of these ideas in a simple way in order that valuable suggestions shall not be lost.

It was about 1898 that the firm of Hutchings Organ Co. built a new organ for Harvard Church, Brookline, Mass., where I was organist. I had taken a degree at the English Royal College of Organists and was very much interested in the C. R. P. B. (concave-radiating pedal board). I had my mind made up to have that type of pedal clavier put into the new organ, but was finally dissuaded, the principal argument being that, as American organists had not then and probably never would have any interest in or liking for the C. R. P. B., the organ would be disliked by other organists than myself and would be considered a freak. At that time Mr. Skinner had not devised a movable key-desk that would allow of the C. R. P. B. There were two stock arguments brought forward every time that I advanced the C. R. P. B. idea to my brother organists or to Mr. Hutchings, and these arguments were supposed to give the new pedal board its quietus.

One of these was based on the fact or supposed fact—I never learned which—that Mr. B. J. Lang had imported a concave pedal board from some part of Europe—particulars were missing here—and had tried it in the South Congregational Church and *had returned to the old-fashioned model!* The conclusion, of course, was that the new had been tried and proved wanting. The second argument was that if the principles implied were sound they were equally applicable to the manuals! If concave-radiating pedals were a good type then concave-radiating manuals logically followed; but since concave-radiating manuals were manifestly an absurdity the C. R. P. B. was also an absurdity! The result of all the discussion and action was that Harvard Church organ had a flat pedal board. In a few years, however, largely if not entirely through Mr. Lemare's influence, the American Guild of Organists declared in favor of the new type of board; since that time—about ten years ago—American organists have agreed, with what approaches unanimity, that it is quite perfection.

One curious feature of this sudden distaste for the old and sudden conversion to the new is that many of our older virtuosi, Mr. Clarence Eddy, for example, were trained in Germany on the flat board; many of our younger men, like Messrs. Truette, Carl, Kraft, and others, had their schooling in Paris. The English organ school, with its Willis board, has never had any appreciable influence on American playing; I believe the influence of English organ *building* on American building ideals has always been rather strong, despite the weighty example of the German (Walcker) organ in Boston Music Hall. In other words, it is surprising that the flat board was suddenly thrown over for a pedal board for which neither through training nor use had we any preparation.

In view of the fact that the "absurdity" of the radiating-manual was given as a reason for the non-adoption of the equally "absurd" C. R. P. B., it is interesting to note that several organists contributing to the symposium referred to the principle of radiation as adaptable in whole or in part to all details of the organ or piano keyboard. Mr. Federlein touches on this when he points out that the pedal board and the base board are both radiating; this also involves the radiation of the toe-pistons placed on the base board. But all builders, save one, build their balanced swells straight; the farther one goes to the right, where there are often four swell pedals, the more uncomfortable it is for the player, since he has to put a kink in his leg, so to speak. Why should not swell pedals present their surfaces always to the center of the organ bench? If one thing pertaining to the feet is concave-radiating, why not all things?

Mr. William Benbow thinks that some day, before long, we shall have an organ bench curved at the inner edge of the seat to conform to the natural curve the leg makes when the foot reaches for a far key. Unless I am mistaken, I have seen this type of bench in use.

That the idea of the radiating *manual* keyboard is present in many minds as a logical outcome of the radiating pedal board is evident from the question with which Mr. C. G. Hamilton closes his letter: "When shall we adopt the natural companion to the new pedal board, namely, the radiating keyboard for pianos and organs." Mr. G. A. Burdett emphasizes the idea without championing it in calling attention to the fact that in Europe the same principles of radiation have been applied to the piano keyboard; and one of our visting virtuosi (Rudolf Ganz) has made enthusiastic calculations of the gains in every aspect of piano playing resulting therefrom.

There are fewer complaints of the lack of uniformity in pedal boards than one would expect. One organist only, Mr. Carl Grimm, makes a definite protest against varieties in console: "It is absolutely necessary for the furtherance of good organ playing that a standard form of organ board be established and maintained." The American Guild of Organists' pedal board comes in for praise either direct or by suggestion from several persons. Mr. Clifford Demarest writes: "The A. G. O. adopted a radiating board some years ago which was the pattern made by the Hutchings Organ Company of Boston. This was considered the standard, but it has been found that other builders do not adhere to this always, which is both discouraging and annoying to organists." Mr. Frederic Maxson does not believe in the A. G. O. board unqualifiedly: "I should never recommend a new organ to be built with other than concave-radiating pedals of the type recommended by the A. G. O., with possibly some slight modifications in the gradual increase in height of the pedals from the center towards each end."

The unwisdom of any set of men attempting to dictate to the entire body that they more or less directly represent is seen from the two opinions just quoted and from the one to follow. In practical matters there will be as many minds as there are men. I am one of the founders of the Guild and an ex-Dean of the New England Chapter, but if I did not like the Guild pedal board (it happens, as a matter of fact, that I do like it) I would not use it, if I could help it. The Royal College of Organists made a great mistake in attempting to legislate a certain kind of board into sole use in England and our own Guild of Organists ought to profit from that unfortunate example. As we have seen, during the progress of this symposium, the C. R. P. B., excellent as it is, has a small though influential minority of opponents; further lines of cleavage will be apparent so soon as one discusses the different types of the new board. Mr. H. J. Stewart makes this very clear. "I received," he says, "my early training as an organist in England upon instruments fitted with the Willis radiating-concave pedal board, which was then regarded as a doubtful or dangerous experiment. Later on, both in this country and abroad, I had wide experience with the straight pedal board, so that I can speak without prejudice when I say that for personal comfort and for facility of execution I much prefer the radiating type of pedal board. There are several varieties of this type, some of them presenting drawbacks on account of extreme radiation or extreme concavity, or both. The best pedal board, all things considered, is the radiating-concave (Willis, new style), and I think even the most ardent advocate of straight pedals would concede the advantages of this new type after fair trial."

Two other things have developed during this discussion which I must briefly allude to. Some years ago I was unfortunate enough to have an engagement to play a recital upon an instrument with very narrow, close-together pedal keys. The discomfort of playing upon this board was much increased on account of its radiation. It was impossible for me to play without putting down two keys at once; misery and chagrin were my lot during the hour and the builder of the organ was consigned many times to the limbo prepared for bad or indiscreetly experimental organ builders. I was glad to note Mr. Charles Galloway's protest on this point: "One is unquestionably at a distinct disadvantage when forced to use radiating and concave pedals with a very narrow scale in which the foot cannot press down one key without sounding the pipes of the contiguous keys. I believe I rather favor the full-sized concave pedals, although I could get along very well indeed with straight and parallel pedals."

And, finally, the "hair-trigger" action! This has een modified since the first days when an organ- t could hardly approach an instrument without it laying. A vigorous protest is that of Mr. Gordon alch Nevin:

"I would like to register a strong 'kick' against ne ridiculously light touch on many of the new lectric organs, and particularly the touch of the edals; in this church I have a magnificent organ, nally splendid, action good, but with a touch of bout 2 ounces on the manuals, and not more than ounces on the pedals. It bothers my pupils a great eal, and to me is at times a source of much an- oyance. Can't you start a wave of protest against uch touches? It is all right to make the touch ght, and the light touches are making it possible or the ladies to become good organists, but there a limit to everything, and I feel that that limit as been much overstepped in the matter of touch n electric organs."

One thing must be said in favor of this abomination of an unreasonably light touch and that is at it has taught organists habits of finger neatess; the "duffer" has realized what a slovenly layer he is, has taken piano lessons, developed a ecent manual technic, and found out that the fingers ould be and must be controlled as much in refrain- g from depressing keys as in pushing them down.

In concluding the symposium hearty thanks are ue and are hereby given to all those who so romptly, fully, and interestingly replied to the uestions asked.

A WORD FOR THE CHURCH MUSIC COMMITTEE

BY CHARLES N. BOYD

[This good-humored discussion of the music ommittee may be compared with that of the rticle "Why Bad Anthems?" on page 634 i this issue; both articles call attention to serius faults in our system of church music mangement.—H. C. M.]

SHALL we church organists and singers have a ood word to say for the church music committee? Yes, perhaps, when a new position is in rospect, or a raise in salary is desired. But not therwise, for are not those persons purveyors f evil tidings, the non-musical meddlers in musial affairs, the flies in what might be perfectly ood ointment? Who but the church music committee turned down seventeen good sopranos, ourself included, and engaged that girl with the wful voice and ridiculous hat? Who turned a eaf ear to your Bach fugue and extended the lad hand to that upstart patron of the *Vox Huana?* Who decided that the anthem upon which ou had spent so much time and labor represented class which "our people don't like, and had best e avoided in the future"?

Stung by the remembrance of encounters with bdurate committees many musicians draw their igh-pressure reeds in denunciation of such hurchly inventions, and prefer to pin their faith o the tender mercies of the clergy. But in some enominations at least we shall probably have the usic committee always with us, and it might ot be a bad plan to invent some sort of Assoiated Charities for their special benefit.

They are not a wholly bad lot, as people come nd go. A church is not apt to elect an openly rascible, mutinous, misanthropic person to the esponsible position of music committee mem- er. On one side is the deep sea, represented by ne congregation, and on the other the choir, and he person who has to negotiate between these hould not be of too nervous a disposition. No ne thanks the music committee, save for dismissing a choir, and no one praises the committee; for if the choir is good it is because the singers and organist are so capable. There is no particular honor attached to one's election, even as chairman of a music committee, and the salary attached is not usually named. Save in very rare, sporadic cases, no member of a congregation runs for this office, and our literature contains no speeches imploring constituents to support the orator at the next music committee election.

But there is, now living in this country, one specimen of a successful, worthy chairman of a music committee, beloved alike by choir and congregation, and he should be held up as an example to all others in his position.

He is not, in the common acceptation of the word, a musical person, though he enjoys music in church and at occasional concerts. His unaided ear might not be depended upon to distinguish a cornopean from a harpsichord, but his native good sense would help him greatly in relegating each to its proper place. Of his own accord he has investigated the rather scanty literature of church music, and he has visited many churches to become acquainted with the musical doings of each. With him the question is not whether the music pleases people, but whether it is appropriate to the service in which it is found. He makes the distinction, so often overlooked, between church music and that which is merely set to sacred words.

This amiable gentleman was elevated to his present position some years ago, at a time when his church was quite thoroughly disgruntled with the offerings of a series of choirs and directors. It was a rather less enviable distinction than the ordinary election. Having settled the personnel and policy of the choir, the new chairman began a novel method of procedure, namely, the church music education of the congregation and minister. He lost no opportunity to discuss the matter in public or private, but always with a tact that impressed even those who were not of his way of thinking. It was not long before he was regarded as a person who had really studied his subject, and whose views were entitled to consideration. Then his course became easier, and now no one is disposed to question the wisdom of his plans. Purely musical questions he leaves to the musicians for solution, and he is only interested in the results. It may be added that contentions are unknown in the choir of this church, and that the relations between choir and congregation are consonant to a remarkable degree.

Not much can be expected of a music committee which is guided only by a vague policy, and the unauthorized remarks of the congregation, especially when musical knowledge is completely lacking in the committee. If organists and choirmasters would make some effort to acquaint their committees with the subject they are chosen to administer, not in the sense of teaching them music, but rather putting them in touch with non-technical information, the musicians would do themselves a favor. It is important that the attention of the committee should include the congregation as well as the choir. The best service music will fail to impress an unsympathetic audience, and a great mistake is made if the committee thinks that the provision of a capable choir serves all the problems for a coming year. Purely technical and musical matters should be left to the musi-

HEADQUARTERS FOR EVERYTHING IN MUSIC

SERVICE UNSURPASSED

The House of Oliver Ditson Company has always been conspicuous in two fundamentals:

1. **It anticipates the needs of teachers, choirs, and music lovers.**
2. **It supplies these needs in the best and quickest manner possible.**

SELECTIONS are made by experts of experience covering every field of musical activity.

We guarantee now, as always, ABSOLUTE SATISFACTION.

PIANO and VOICE TEACHERS and all music lovers should ask to have their names placed on our mailing lists.

SCHOOL SUPERVISORS, who send us their names and addresses, will receive free samples of new Octavo Music for Schools.

CHOIR LEADERS and ORGANISTS, who send us their names, will have Bulletins of New Music and Books sent as published.

We point with pride to the following

ACHIEVEMENTS OF THE HOUSE OF DITSON:

The Best Musical Library extant
THE MUSICIANS LIBRARY (67 volumes)

The Best Library of Musical Text-books published

cians. Attendance at rehearsals, not for detective or dictative purposes, does much to establish closer relations between musicians and committee members, which in the last analysis means also the congregation.

The four principal factors in the music of the average church are, numerically, congregation, choir, music committee, and clergyman. The more closely these factors agree, the more satisfactory and enjoyable the results. Of the four the committee, rather than the minister, can often do most to bring about the *entente cordiale*. Let us extend the helping hand to the committee.

———*———

WHY BAD ANTHEMS?

BY A. WALTER KRAMER

STRANGE as it may seem, there has been all too little written about one of the sorest needs of present-day musical conditions, namely, the music of our churches. Occasionally, to be sure, one hears a protest against the sentimental kind of twaddle which so many well-known musicians publish as anthems. Anthems, they call them, but those who know what the music of the church should be call them any and everything else! The American church organist has fallen prey to the habit of writing succulent *morceaux* for his choir. Sometimes he calls them "anthems," sometimes "hymn-anthems," and frequently they are set as "sacred" songs for solo voice. As far as their quality is concerned they are all the same, all cut out of one piece of cloth.

Church music in this country—and here the music of the Protestant churches is referred to—has gotten into its deplorable condition by reason of the existence of three evils. 1. The Music Committee. 2. The Rural Organist. 3. The Lack of Musical Understanding among Churchgoers.

THE MUSIC COMMITTEE

Some will doubtless consider it bad taste to mention the faults of a church music committee. The argument will be advanced that the members of such a body are not salaried, that they give their services gratis, and because of their interest in music; therefore they should not be subjected to criticism. This is, in a measure, true. But why should members of such a committee be salaried? What have they to offer that the church should pay them for?

The man who joins a music committee in our churches does so, nine times out of ten, because he wants to have something to say. He likes to assert himself and is equally willing to have a say about the music of the church as about anything else. To be sure, there are exceptions, and one occasionally encounters a man on a music committee who knows something about the art of music. But this is not often the case. The music committees of our churches, for the most part, are a real hindrance and block the plans of the organist and choirmaster quite successfully. They have a vote on the choosing of singers and often lend their aid to the engaging of singers less well equipped than applicants who have no "friend on the committee." They suggest to the organist that he play and have his choir sing "sweet" music, music that is generally as far removed as possible from what the music of the church ought to be. In short, they make themselves a power in the music of the church instead of acting in an advisory capacity. Ask any organist in America and he will tell you that his life would be happier and the music in his church better were he allowed full rein and were he not subject to the dictates of a committee.

Accordingly, Mr. Organist, working under such conditions, has to compose after a certain manner. And this requires that when he writes an anthem he make it suitable to the taste of the music committee, if he desire that it be approved by it when performed. That the organist desires approval for his work goes without saying. The result is that he writes "twaddle" when he might be writing a piece of ecclesiastical music that would have value *as music*.

THE RURAL ORGANIST

Can anyone doubt that a portion of the trouble is due to the inefficient country organist? That organist, who is neither a musician nor a member of any other profession, but who plays the organ on Sunday and "clerks" in a store or works in a bank during the week, is the man who is in a large measure responsible for the hundreds of pernicious anthems which are published annually. This gentleman studied the piano in a leisurely way in his youth and later decided that it might add to his prestige in the community to play the organ in church. Summoning up his courage he has applied for the position, has brought along a few piano pieces which he plays on the organ, by injecting a pedal on a bass note here and there. The result: Immediately engaged by the music committee, an assemblage of men in the town, which considers itself capable of passing on his ability.

What kind of music does a man of this type perform? Music that is within his understanding. And the only music that falls under this category is the kind of music of which the sugary anthem is made. His choir is made up of volunteers and cannot sing difficult music. He therefore makes use of all the simple anthems which he can find. And in this case the simplest ones are the worst ones. Thus flourishes the art of music in such a community.

THE CHURCH-GOER'S MUSICAL UNDERSTANDING

What does the average church-goer understand about music? Would a performance of one of the Bach church cantatas give him as much pleasure as his listening to a theatrically conceived cantata of which the musical value is virtually *nil?*

The church-goer of today is a comfortable person who likes calm, who flourishes on peace and quiet. Why should he trouble himself about musical values? Why should he raise a voice to check the constant singing of pleasing but banal "sacred" songs? In the majority of cases he would not be able to recognize them as banal, for they please his ear and he is quite as anxious to have his ear pleased in church as in the theater. If his minister can introduce the feminist movement (surely a worldly subject) in a sermon, why cannot his organist perform a secular composition, which has been "doctored" up to scriptural words?

The situation seems difficult.

THE SOLUTION

Place the music of our churches in the hands of tried and reputable musicians. Give them complete authority. Let them engage the singers, let them choose the music that is to be sung and played, let them control the situation rather than be controlled by a committee which neither understands music nor anything else pertaining to the subject with which they are concerned.

An organist who has complete authority over the music in his church, provided he is a well-equipped musician, will produce good music in his church. Reference could be made to some of the larger churches in New York and Boston where this almost-Utopian state of affairs exists. And at these churches the sickly-sweet anthem is never heard. Dignified ecclesiastical music is sung there and the organists play Bach, Rheinberger, Merkel, Piutti, and other composers of real organ music. The congregations are representative of the best serious-minded persons in these several committees and they enjoy the music which is offered them. They appreciate that it is serious art and are uplifted by it.

INTRODUCING MUSIC OF THE RUSSIAN CHURCH

An experiment has been made during the past year by a young American musician of serious purpose. He has tried to raise the standard of music in his church, St. Mary's in Brooklyn, N. Y. N. Lindsay Norden is his name and he has organized an organization, known as the Aeolian Choir, for the purpose of singing *à cappella* music of the Russian Church. Into this literature, which is a vast one, he has made serious research and has brought out numerous compositions of extraordinary beauty. He has performed them at his church—he has also given concerts for the public—and has won the respect and admiration of his hearers.

Yet he confided to the present writer one day this spring that he feared that the congregation of his church might some day resent the introduction into their service of music of another church. The Russian Church differs in doctrine from our Protestant churches. But is its music less fitting in the last named than in its own church? Such a situation has presented itself to Mr. Norden and he has not yet been able to solve it. The dignity, the spiritual beauty of the music of the Russian Church composers—such men as Gretchaninov, Rachmaninov, Kastalsky, Cui, have written for it—has appealed to him to such an extent that he has devoted himself unselfishly to its furthering. He has proved that it is possible to sing good serious music, pleasing many persons and uplift many more.

Mr. Norden's achievement might be held up as a model for our American organists. It will require courage for them to stand up and assert their rights as to the kind of music they wish to produce in their churches. The literature of the Russian Church is replete with masterpieces in miniature, works that can easily be adapted to texts that are appropriate for our Protestant

churches. Mr. Norden has had some of his adaptations issued by the Boston Music Company, while others of them he has published himself. But this music need not necessarily be drawn upon. There are enough fine, healthy examples of real church music to English texts by Americans like George W. Chadwick, Horatio Parker, William Arms Fisher, and Homer N. Bartlett, and Englishmen like Sir Arthur Sullivan, Sir Edward Elgar, Dr. C. Villiers Stanford, Mackenzie, *et al.* to supply the needs of all of our churches. Add to these such portions of the standard oratorios as are possible of performance and you will have a literature of formidable proportions.

Some of our American composers—the younger men especially—are today devoting themselves to serious church music. Among these is a young New Yorker, Philip James, who put forward last year a *Te Deum* for mixed voices with organ accompaniment which redounds to his credit quite as much as though he had composed a fine symphony. In reviewing the work in *Musical America* at the time of its publication, the present writer called it the best *Te Deum* in ten years. Today the same may be said of it. It is a memorable work, a good work that has a *raison d'être;* it is music that goes straight to the hearer, conveys its message without descending to that compromising state where the element of "Will they like it?" enters. Perhaps it has not been sung a great deal; perhaps the generality of organists thinks it too difficult. Be that as it may, it is one of the most significant contributions made in a decade by an American musician to the literature of the church. In fact, it is one of the great works in American church music. And this is music *of* the church. Not music *for* the church, or the church committee, which prefers chocolate-coated bits to real, serious music.

The readjusting of the province of the church music committee or, better, the abolishing of it, the installing of better equipped men on our rural organ benches, and finally the musical educating of our public so that that part of it which goes to church will understand good and bad music when it hears it, these are the means whereby the standard of our anthems and sacred songs may be raised.

THE ECHO ORGAN

BY H. C. M.

If, occasionally, we are amazed at the self-seeking and professionalism of some choir leaders, we are often, I am glad to say, convinced of their sincerity and really religious purpose. I have an example of the earnest, conscientious, devoted type in mind in the person of a lady organist in a Western church who expresses herself quite freely in a letter just received. I quote: "For fear of a concert or social atmosphere at our church last Sunday at our festival service, coming as it did directly after a series of concerts in a municipal music festival, I did all I could to imbue the congregation with the *service idea.* I believe the congregation came in a worshipful spirit, but a screaming child, who was allowed her own way for what seemed years before her mother took her out, quite altered the 'pull' of the service and my 'nerves,' too! However, my share was done and it was not my place to act as usher. I had a great deal of happiness mixed with anxiety in the preparation of the service and the results are not in my jurisdiction. If I did not love choir work no amount of money could tempt me to do it."

* * *

From a service list of a non-liturgical church I take the following note illustrating the proper spirit in the preparation and performance of church music. "The occasion of our festival service tonight is the completion of four years of service by the present organist. The service itself is offered as a tribute of praise to Almighty God. May we have from the first note of the organ (played after congregation and choir are seated) to the close of the service, quiet, reverent worship of the Great Creator of all Harmony."

* * *

I have often been struck with the "great gulf fixed" between the pastor of a church and the organist and choir. This may be the fault of either or both sides. Is the average organist interested in the minister's sermons or public addresses? Does he give them an intelligent and helpful criticism by praising them when he can honestly do so? Is he not looking for praise of his own efforts rather than for good qualities or good results in the parson's work? Is the latter, on his side, interested in the work of the organist and choir director? Does he attempt to find out what their ideals are? Does he sympathize with their artistic aspirations? Does he help the choir director to realize them? Does he give intelligent praise to the music when it is obviously done with sincerity and earnestness? Does the minister greet the organist and choir before service and does he say good-by to them after service?

Is there, in other words, a reciprocal spirit of cordiality exemplified by good fellowship and honest appreciation? As things go, I am inclined to believe that organists get this more often from ministers than ministers from organists.

Just as I had finished the last paragraph I happened to read in a contemporary that "Dr. Hugh D. Atchison, Dubuque, Iowa, who is as good a pastor as he is an organist, played at the First Methodist Church of Galena, Ill., pieces by Lemaigre, Salomé, Bach, Rossini, Guilmant, Jensen, Batiste, Malling, Dubois and Handel." It is presumed that Dr. Atchison's organist is sure of one sympathetic listener and that the organist, in his turn, is willing to compliment the Doctor when he preaches a good sermon. I hope this happens often, for nothing helps to satisfactory intercourse like mutual respect and good will.

* * *

By this time some of my organist readers are grumbling loudly and saying, "Deliver me from a minister who is musical or thinks he is musical; he's all the time interfering and fussing, usually succeeding in 'putting his foot into it.' Give me a minister who, knowing his own business, realizes that I know my own business, and lets me attend to it."

Yes, my good friends, but *do* you know your own business? Or, knowing your own business, *do* you attend to it? Those are two very delicate and not necessarily sequential operations. Granted that you know your own business and attend to it, do you think it would hurt you any if the parson told you that he was perfectly well aware of the two facts? Would it not make you feel rather comfortable?

I hear you replying: "O, that's all well enough, but do I get a salary raise? Talk is cheap; money counts."

Dear me; if that is your calibre there's no use in saying anything more!

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

While this country is making great strides in music, much more could be done if the piano teacher would work a little harder to get the boys interested in piano study. In the smaller cities one finds only occasionally men who are deeply interested in music, and this is unquestionably due to the fact that so few mothers have thought it wise or worth while to give their boys music lessons.

Twenty years ago it was thought that only those who showed a decided talent for music should be given lessons, with the result that most of our young men grew up without the artistic side developed at all. Most persons think that the average American man is fascinated with money making and completely wrapped up in business life, because of the tremendous demands wives make on husbands for money in order to keep up their end socially. This is surely one side. But couldn't this condition also come about through the lack of education in the arts at the time character is being formed? The more I see of young men the more deeply I feel that if music were part of their early education, it would be impossible for them to miss the refining influence which the serious study of music must bring.

Music has an influence on character, as well as on the mind and heart, and I feel justified in urging mothers to give me their boys for this special training.

In getting pupils for the next season, why not consider the boy? Ask for some among families who can afford such work and see if the response and interest shown in cultivation isn't a good social leavener.

* * *

"Is harmony work necessary for piano pupils? I notice in conservatory courses a certain amount is required. Should the private teacher be able to teach it?"—K. H.

It is certainly advisable for piano teachers to understand and be able to teach harmony, although a teacher who has made a specialty of this branch would be much better for the pupil. I know of no single branch of music which is so ineffectively presented as harmony. In many of the conservatories where pupils have taken the harmony courses, it is found on examination that they cannot distinguish by ear the difference between a minor and a diminished chord; in fact have little or no sense of pitch, either relative or absolute, and are unable to harmonize a melody with any freedom at all.

The writing of figured basses, which passes as harmony study in so many schools, is only a small part of harmony study and is of comparatively little value to the student, unless such work is made a part of her general musical equipment. She should be required to know a good progression when she *hears* it as well as when she *sees* it.

Every piano pupil should be able to modulate freely, transpose at sight accompaniments of medium difficulty, which includes, as does modulation, a good working knowledge of tonalities.

To do this, harmony study is necessary; but, if possible, give the pupils the opportunity of taking the work with a composer rather than with you, for there are so many different ways of doing things that only a teacher who is constantly working at this branch of music is effective and inspiring in such work.

* * *

"I have never studied anything of Brahms but am anxious to do so. Will you give me some suggestions as to what is best to take up first? I have played a good deal of Schumann and am in the seventh grade."—A. M.

I generally give first the slow movement from the first sonata of Brahms. It is short and very beautiful. It is an air (an old *Minnesong*) with three variations. Follow that with the *Rhapsodie* in G minor, Op. 79, No. 2. Then the Op. 117, especially Nos. 1 and 2.

* * *

"Am using a book entitled *A System of Fundamental Technics for Modern Piano Playing,* by Wm. Mason. On pages 60 and 61, chapter on *Interlocking Octaves,* Part 1, he refers to *Tables B, C, D,* etc. These are also referred to on pages 37 and 40, besides other places in the same volume. If you can enlighten me upon this matter I should greatly appreciate it."—A. L. G.

The tables are explained in a note at close of Section 59, page 100, Mason's *Fundamental Technic.* It is simply a method of transference of accent by different groupings with the measure. For instance: If you have six notes in a measure of equal length, the group can be accented in three different ways: First, one note to a beat (Table A), when the count in this case would be six, as we have six notes in the measure.

Second, two notes to a beat (Table B), when the count would be three.

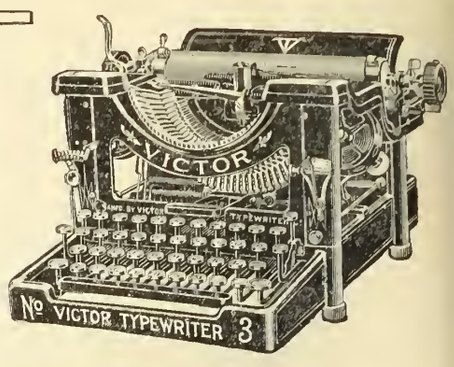
Third, three notes to a beat (Table C), when the count would be two.

This changing of the groupings is one way of throwing the accent on different fingers, thereby evening up the passage in question more quickly than by keeping it always as written. Remember that it is a method of practice useful in any difficult passage or cadenza.

* * *

"I am making my plans for next season's work and am anxious to develop as much as I can. Would it be possible for you to tell me how much I should practise, and what the proportion of technical work should be for best results?"—H. B.

I can only tell you what I do myself, and you must take into consideration that I am a busy teacher and therefore can only do about so much; but I presume your conditions are about the same. In



Harmony Appeals
---Discord Repels

Music from a beautifully toned, perfectly tuned instrument, never fails to appeal to the music lover.

Likewise a beautifully typed letter never fails to create a good impression with the reader. And like the artist, so the business man, or anyone needing a typewriter, ought to be particular in his choice of a machine.

"Will it turn out perfect letters and will it do it fast and easy?"—That is the question.

VICTOR TYPEWRITER

MODEL No. 3

PERMANENT ALIGNMENT, which means perfect work, can only be obtained from a machine that has a non-vibrating typebar and a firm carriage. Both of these features have reached their highest state of perfection in the Victor.

The Victor will do better work, for a longer period, and with greater ease than any other typewriter.

THOMAS NORMAL TRAINING SCHOOL

ıe first place, I am a very early riser. I am at the ano at seven in the morning and practise an hour ıd a half before I see the first mail. That is the ıly time in the day that I am sure of. I permit ɔ interruptions, but lock my door and take my ɔmfort. In my own work I practise technical ex-ɔises only twenty minutes; new memorizing gen-ɔally about 45 minutes, and the rest of the time ı repertoire. What other time I can get during ıe day I spend on interpretation. Sometimes it is ı hour, and sometimes only half an hour; but I y to use my spare moments to good advantage. his morning time I permit nothing to interfere ith. One morning in the week, generally Monday ɔrning, as it is my freest day, I spend the early ɔurs on my teaching for the week, reviewing ma-rial which I am to criticise.

While I realize that this is by no means an ideal ɔndition, still it is the best I can do with so much aching. It necessitates giving up late hours and icking to knitting, but it pays well in added effi-ency and musical freshness.

* * *

"Will you tell me if there is any difference be-veen a hand staccato passage and interlocking ork? Is there any difference technically?"—L. G.

I have always considered them different techni-ılly, although I can easily conceive that there are any passages in which hand staccato is used that ight be played as an interlocking passage. Most ıterlocking work has a melodic thread which is ivided between the two hands. If this melodic ıread is to be brought out effectively without les-ening the speed, it must be done by throwing the eight of the arm on that part of the hand which ırries the melody. This necessitates the carrying f the whole playing apparatus on the melody ngers, and the fingers themselves are generally gid, although the wrist is always responsive, and ıe effect of brilliancy is due to the arm.

* * *

"What is meant by the 'lifted' staccato? When it used?"—C. S.

A staccato touch in which the finger is raised efore the tone is produced, working as if it were n a spring. That is, the finger flies back after laying into the same position it had before play-ıg, remaining on the key the smallest fraction of second. It is seldom, if ever, used in playing, but a very valuable technical exercise, as it helps to evelop a firm finger, as the nail and second joints re not expected to move at all during the stroke. ction comes solely from the knuckle joint. It lso improves the tone quality and helps to give rilliancy to running work.

BOOK NOTES

Vagner as Man and Artist, by Ernest Newman. E. P. Dutton & Co. Price, $3.50, net.

Every year witnesses additions to the large amount f Wagneriana. The point of view of the author stated as follows: "There are three great falla-ies that it is the business of the student of Wag-er to avoid. The first is seeing him through his wn eyes; the second is seeing him through the yes only of his friends; the third is seeing him ırough the eyes only of his enemies. The present ıthor has tried to sift out the real truth from the reat mass of material now available, and to paint portrait of the composer, as a man, that shall eer equally clear of too much extenuation and o much setting down in malice." It is apparent nat Mr. Newman has dwelt at some length upon the ss pleasant aspects of Wagner's character. He as not made him out a hero, and yet he has not failed in discriminating praise when occasion required. We are inclined to think of this book as one of the most satisfactory biographies of the composer, particularly because of the material in the form of letters which has become available of late years.

For the musician and the student the special interest and value of the book centers in the two sections, *The Artist in Theory,* and *The Artist in Practice,* which consist of a fine presentation of the ideas of Wagner and their working out musically. This book should go into the private libraries of musicians and into the music section of all public libraries.

A Scheme of Study for Country Violin Students, by L. Henderson Williams. Charles Scribner's Sons.

A practical work for students and teachers. The contents consist of twelve lessons, the subject material being Kreutzer's and Leonard's studies, analyzed and full directions given for playing them; added to this are between twenty-five and thirty short articles discussing such topics as Fingering, Playing at Sight, Importance of Bowing, The Dull Pupil, Formation of Musical Style, etc., in which the author offers most excellent suggestions. It has been a long time since we have seen an equally useful book for the student or young teacher who is trying to make progress without the help of a special instructor.

Harmonielehre, by Arnold Schönberg. Price, $2.70, net. Universal Edition, No. 3,370.

A work prepared for the author's harmony classes. An extremely interesting work for all who are interested in advanced ideas in music, especially as presented by one of the most radical composers of the day. (See article on another page in this issue.) In German only.

The Music of the Bible. With some account of the development of modern musical instruments from ancient types. By John Stainer. New edition, with additional illustrations and supplementary notes by Rev. F. H. Galpin, Novello & Co. Price, $2.50.

It was in 1879 that this book was first issued in England, becoming a much appreciated discussion of the subject. For a number of years past it has been out of print and therefore unavailable for many who were interested in the ancient musical instruments. In the nearly forty years which have elapsed since the book was written our knowledge of the subject has been greatly extended largely through the results of the excavations in Assyria and Egypt. It is a genuine contribution to the story of music and musical development to have this book rewritten and brought into accord with later discovery by so eminent an authority as Mr. Galpin. Personally we wish the editor had expanded the book by discussing not only the instruments but the music of the early Bible period.

Students of the history of music will find this work a valuable adjunct to their reading, and an illuminating record of the ecclesiastical music of the period when all musical forces were used in religious service. We also recommend the book for addition to the libraries of musical clubs.

The Organ Viewed from Within. A practical handbook on the mechanism of the organ, with a chapter on tuning. By John Broadhouse. Charles Scribner's Sons.

Every organist should have at hand a manual of the instrument he plays, and post himself, as thoroughly as his inclination toward mechanical matters will admit, upon the essentials of the mechanism. A knowing hand may often save dismay and confusion when the organ is just a little out of condition, obviating the necessity of sending for a repairer or tuner.

. . . . . before you purchase any piano

be sure to read "The Pith of the Piano Problem," the 32-page booklet which we are prepared to send free without obligation to all readers of The Musician who may be contemplating the purchase of a piano.

¶ This booklet tells the important things to look for, and the pitfalls to avoid, in selecting a piano.

¶ Far too many pianos have merely a beautiful exterior finish, while the interior of the piano—the part you don't see, but by far the most important—is slighted or cheapened. The pleasure derived from such pianos is ephemeral and fleeting. Not so the world-renowned

Sohmer

"The Piano of Permanent Tone"

¶ A piano is for a great many people a *life-time* purchase! Why make such an important purchase without knowing for yourself just what you are doing? "The Pith" tells you. It gives TESTS by which you can judge the quality of different pianos.

¶ Write for this booklet if you contemplate, even remotely, exchanging your piano or purchasing a new piano. You will find it not at all dry or technical, but live and interesting.

¶ When you write, we shall consider it a favor if you will mention the make and age of your present piano (if you have one), so that we can classify your inquiry and take proper care of it. Writing for this booklet does not put you under the slightest obligation. Write *today,* mentioning The Musician.

NILES BRYANT SCHOOL OF PIANO TUNING, 236 Art Institute, Battle Creek, Mich., U. S. A.

Aesthetic Dancing. By Emil Rath. A. S. Barnes Co. Price, $1.50, net; postage, 10 cents.

The present time witnesses a most remarkable interest in dancing, aside from the so-called "popular" or "society" dances, with their sensational movements. In all countries there seems to have taken place a feeling for dancing as a matter of rhythmic movement, a veritable renaissance of the art. This spirit, if developed, will lead to individual, to self-expression through the medium of the dance, as much as through color, tone, modeling, poetry, etc.

Aesthetic Dancing is by the director of the Normal College of the North American Gymnastic Union, at Indianapolis, and is intended for teachers and students of physical education, of which this form of dancing is now considered an essential. The various steps are fully analyzed and carefully explained, with illustrations and, in some cases, appropriate music. We suggest that music teachers who have children in their classes make a study of the book in connection with some teacher of physical education, and offer public demonstrations. The result should be satisfactory in every way.

A History of Russian Music. By M. Montagu Nathan. Charles Scribner's Sons.

The author adds, explanatory to the title, "Being an account of the rise and progress of the Russian School of composers, with a survey of their lives and a description of their works." This really tells very clearly the character of the work, and the author is to be congratulated upon the admirable manner in which he has worked out his thesis. The division of the material is I. The Pre-Nationalists. II. The Nationalists. III. The Decline of Nationalism. IV. The Present Movement. In the latter, Scriabine and Stravinsky come up for consideration, much to the satisfaction of those who find the literature in regard to them rather meager.

We commend this work to our readers, particularly those who are interested in music for the piano and the stage, phases in which the Russians are now specially prominent.

The Russian Opera. By Rosa Newmarch. E. P. Dutton & Co. Price, $1.75 net.

A most valuable addition to the literature of Russian music, especially timely in view of the present interest in and production of operas from the Russian repertoire. Glinka, Dargomijsky, Serov, Rubinstein, Balakirev, Moussorgsky, Borodin, Cui, Rimsky-Korsakov, and Tchaïkowsky are the subjects of special chapters. The stories of their operas are given in considerable detail.

The Organist's Journal. Vol 20. Parts 5 and 6. Wm. E. Ashmall & Co. Price, 75 cents each.

Contents, No. 5, *Prayer from "Rienzi"; Postlude (Alla Marcia)*, Dorey; *Reverie*, Beebe; *Cantilene*, Meale; *Hymn*, Francis; *Benediction*, Lefébure-Wély; *Prelude in F*, Bossi; *Alla Pastorale*, Voderinski. No. 6, *Canzonetta in Eb*, Spencer; *Processional March*, Hosmer; *Come, ye disconsolate* (Paraphrase), Ashmall; *Ronde d'amour*, Van Westerhout; *Moderato Cantabile*, Chopin; *Andante Grazioso*, Lee; *Prelude in Eb*, Lefébure-Wély.

Four Indian Love Lyrics, for the piano, by Amy Woodforde-Finden. Boosey & Co. Price, $1.00.

A transcription of these favorite songs, made by the composer.

The Bells. A Madrigal for chorus, by Clarence Lucus. Boosey & Co. Octavo form. Price, 25 cents.

A fine choral number for Sop., Alto, Ten., Bar and Bass, dedicated to and sung by the Mendelssohn Choir, Toronto.

Browning Song Cycle, by Louis Victor Saar. Carl Fischer. Price, $1.25, net.

Five songs for high voice set to texts written by Jessie Andrews, based on sentiments contained in letters which passed between Robert and Elizabeth Barrett Browning during their courtship. As to the music we are glad to say that Mr. Saar has given adequate musical expression to the poem and, we think, produced songs equal to anything he has hitherto written. They are distinctly in the modern vein, full of color to indicate which Mr. Saar's command of harmony is ample. These songs are worthy the attention of teachers and singers who are looking for new works of striking character.

GENERAL NEWS ITEMS

Xaver Scharwenka has withdrawn from the Klindworth-Scharwenka Conservatory, Berlin, and opened a school of his own under the name Master School of Piano Playing. It will also include a teachers' seminary. The term opened September 1.

Edward Mollenhauer, a violinist of distinction in years past, died at Owatoma, Minn., last May. He was born at Erfurt, Germany, April 12, 1821. He and an older brother were very successful as concert violinists and appeared with such artists as Clara Schumann, Clara Novello, and Jenny Lind. Edward Mollenhauer finished his studies with Ernst. In 1853 he came to the United States. In 1860 he founded a conservatory in New York City, which had a fine success. His later years were spent in the United States, Germany, and South America.

The remodeled auditorium of the Century Opera House, New York, has a seating capacity of 1,000 seats more than last year, added in sections in which the prices ranged from 25 cents to $1.50 at night and Saturday matinee performances.

At a sale of violin and other stringed instruments in London last June some interesting prices were recorded. Vuillaume violins sold at $150, $190, $200, and $220; a Lupot, $725; Italian violins as follows: Ferdinand Gagliano, $800 and $350; Nicolo Gagliano, $525; Pressenda, $400, $300, and $220; Guadagnini, $500 and $1,200; Ruggeri, $875; Nicolas Amati, $1,050; other Italian makers represented were Camilli, $225; Rocca, $400; Carcassi, $170; Storioni, $450; and Marchi, $300.

Irma Seydel, the young Boston violinist, will play with the Boston and New York Symphony orchestras the coming season.

The Edward MacDowell Memorial Association held a musical and dramatic festival at the pageant stage in the woods on the MacDowell estate and in the town hall at Peterborough, N. H., August 19 to 23. Haydn's *Creation* was sung by the Festival Chorus. *Youth will dance*, a play introducing a series of old English morris dances, and *Pan and the Star*, a pantomime by Edward Burlingame Hill, of Boston, were features of the festival, as also Interpretative Dances, by Lada, with orchestral accompaniment. In addition compositions by a number of noted American writers were given.

IS OPEN TO WOMEN WHO STUDY

THE FLETCHER MUSIC METHOD

The Fall School for Teachers Opens Monday, October 12th Brookline (Boston), Mass.

The demand for this method is steadily increasing. Last Summer's School was the largest since the Method was introduced into this country, fifteen years ago

Dr. Lyman Abbott says: "Mrs. Copp teaches children to think and to express themselves in terms of music. She converts it from a blind, mechanical copying, into a vital self expression. It seems to me more than a method, it is a revolution, and converts musical education from a mere drill and drudgery into an inspiration and a life."

Harvey Worthington Loomis says: "How any music teacher could ever allow young pupils to struggle on in the old stultifying grind, after seeing your ingenious invention, is beyond my comprehension. You are indeed the Froebel of music, and the importance of your educational work cannot be over-estimated."

In spite of the many cheap copies of this system it stands unique in its aim and its accomplishments. For full particulars apply to

EVELYN FLETCHER COPP

QUSICAL Publicity in the form of Prospectuses, Announcements, Concert and Recital Programs, artistically done at The Wood, Clarke Press 105 Summer Street, Boston

splendid number by two of the great artists of th day.

Amato, Pasquale: The *Te Deum* scene in *L Tosca,* with the aid of the Metropolitan Opera Hou Chorus.

Destinn, Emmy, soprano: *Vissi d'arte,* th beautiful air in Puccini's opera *La Tosca.* A ge from the modern opera repertoire.

Bori, Lucrezia, soprano: *La Paloma* (The dove by Yradier, one of the most famous songs fro the Spanish repertoire.

Gluck, Alma, soprano: Liuba's air from Rimsk Korsakoff's opera *The Czar's Bride,* sung in Ge man. A plaintive air, without accompaniment, sa for a few chords at the beginning and end.

Williams, Evan, tenor: *Total Eclipse. No Su No Moon,* from Handel's oratorio *Samson,* sung English. This is Mr. Williams' finest effort; other tenor can compare with him in the rendition this magnificent aria.

Martinelli, Giovanni, tenor: *Donna non v mai,* from Puccini's *Manon,* the finest air in this vorite opera, by one of the best of the young Italian artists.

McCormack, John, tenor: *Ave Maria,* Schube great song, with violin obbligato, by Kreisler. A *Who knows?,* song by E. R. Ball.

Paderewski, Ignace Jan, pianist: Schuman finest short piano piece, *Warum?,* in which pianist reproduces the mood perfectly.

Powell, Maud, violinist: *Valse triste,* by belius, the celebrated Finnish composer, a com sition of weird character, based on an exqui waltz motive.

Althouse, Paul, tenor: *Celeste Aïda,* from Ver opera *Aïda,* and Schubert's lovely *Serenade.* Reco by one of the most promising of the younger Am ican violinists.

There is also a wealth of new dance records wh will attract the general public, covering the popu steps now in use.

Did you know that the "Musical Observer" will be published in large size beginning with September and that it has decided to "kick up the dust" and make you music lovers who like a live, snappy interesting yet educational music monthly take notice?

Do you know that the September issue will be one of the greatest issues ever published of any musical monthly—that besides the twenty-one compositions listed below you will receive valuable contributions from America's best writers, some with a moral, some with a suggestion, a few with a friendly smile, and others of splendid technical value? Glance over contents, send fifteen cents for September issue, and then sit back and enjoy a bully good musical monthly that "touches the spot."

HERE ARE SEPTEMBER'S CONTENTS

A. WALTER KRAMER....."Why Bad Music for Teaching Beginners?"

SECULAR SONGS

HIGH VOICE

KRAMER, A. WALTER
Come to me. [E♭] [d♭-F♯]....$0.60
Modern in style and workmanship, making considerable demands upon the singer in interpretation; somewhat elaborate in accompaniment.

In Dreams. [E min.] [E-g]....50
An effective song for teaching or recital use; it contains some fine work for the voice, at the same time with no difficulty in technical demands.

MAR, LOUIS VICTOR
Rose immortal. [E♭] [F-g]....50
A song of musicianly character and rich, melodic content; useful as a study in expressive singing.

STICKLES, WILLIAM
Expectancy. [E♭] [G-a♭]....50
Broad in style, with a fine climax in which the voice can show its quality and worth; can be used with first year pupils.

Thoughts of you. [C] [E-g]....40
A short lyric, with attractive melody and text; particularly good for encore use, and as a song for first year pupils.

MEDIUM VOICE

RICHMONT, WILLIAM
Could I forget. [F] [c-D]....50
In the simple ballad style, suitable for use with young pupils, quite easy.

MAR, LOUIS VICTOR
Rose Immortal. [C] [d-E]....50
(For description see Secular Songs, High Voice.)

SCHUMANN, ROBERT
Silent tears (*Stille Thränen*). Op. 35, No. 10. [G] [d-F]....$0.50
A favorite song from the classic repertoire.

STICKLES, WILLIAM
Expectancy. [C] [E-F]....50
(For description see Secular Songs, High Voice.)

Thoughts of you. [A♭] [c-E♭]....40
(For description see Secular Songs, High Voice.)

LOW VOICE

FOSTER, FAY
Sing a song of roses. [B♭] [b♭-D]....60
A tuneful song, semi-popular in style, particularly good to show the lower notes of the contralto; not difficult.

PIANO SOLO

BRAHMS, JOHANNES
Rhapsody in G min. Op. 79, No 2. V....75
A new edition, by Rafael Joseffy, carefully prepared for concert and teaching use.

FREY, ADOLF
Cantique d'amour. IV....50
A delightful number for use in recital or teaching, promoting a light, graceful, polished style of playing.

Canzone in A♭. IV....60
A fine study in melody playing, with florid accompaniment; the song element is very distinctive and noticeable.

Mazurka in D. III-IV....60
Good for teaching, on account of its catchy themes and lively rhythm. Try it on your next recital program.

Valse in A♭. IV....60
Charming in themes, and dainty in style, generally; requires fluent fingers and light, firm touch.

SARTORIO, ARNOLDO
À propos (*Intermezzo*). Op. 1040. III-IV....$0.60
A brilliant piece for teaching and recital use, with sharp, clear cut rhythmic character; the themes are melodious and interesting.

Caprice brillante. Op. 1035. IV-V....75
A brilliant work for advanced players, having some of the etude style; both hands must meet somewhat exacting technical demands.

The little coquette (*La petite coquette*). III....50
The composer has given us, in this little piece, an excellent number for teaching; the movement is largely in sixteenth notes in a rapid tempo; also calls for sharp, clean cut phrasing.

March of the Bersaglieri. Op. 1028. III-IV....60
Bersaglieri is the name of a corps of Italian army sharpshooters; hence this is intended for a military march. The rhythm is strong, vigorous, and the themes are broad and melodious. It should prove a good piece for a recital or for a boy who likes movement.

Marcietta in D. Op. 1036. IV....60
In a gavotte rhythm, with broad, pleasing, and melodious themes, in all, a stimulating piece for the average player; a good number to accompany gymnastic drill.

Valse de concert. Op. 1027. III-IV....75
A striking technical feature of the piece is a motive of four rapidly repeated notes played by changing the fingers, also a passage in which the notes are grouped in twos, slurred. We find this not only an interesting composition musically, but one of special technical value.

SCHUETT, EDUARD
By the brook (*Au ruisseau*). Op. 55, No. 8....60
Edited by Mr. John Orth, of Boston, and carefully prepared for the use of teachers and players.

ORGAN

FAULKES, WILLIAM
Melody in E....$0.60
A pleasing melody with interesting treatment as to accompanying figures, and careful registration. It will prove a useful recital number.

HENRIQUES, FINI
Andante commodo. (Arr. by H. B. Gaul)....50
An interesting work by a Danish composer, modern in style and workmanship.

TOFFT, ALFRED
Sunset. Op. 46, No. 2. (Arr. by H. B. Gaul)....40
A charming piece, full of color, calling for free use of solo stops. It will make an effective recital number.

VIOLIN AND PIANO

RISSLAND, KARL
Chant romantique. Op. 16, No. 2....60
A concert or recital piece of unusual beauty and interest by one of the Boston Symphony Orchestra players.

'CELLO AND PIANO

RISSLAND, KARL
Chant romantique. Op. 16, No. 2....60
A good number for concert or teaching use; broad in melody and harmony; very effective.

Danse antique. Op. 16, No. 3....60
A dainty piece in minuet rhythm and the classic style. It will make a hit as a concert number.

CANTATA FOR WOMEN'S VOICES

BORNSCHEIN, FRANZ C.
Zorah. (Text by F. H. Martens)....30
A short work for concert use, requiring about ten minutes for performance; calls for a soprano solo voice. The chorus parts are for two sopranos and alto, not difficult, and an effective composition.

1834 A FEW SUGGESTIONS OF USEFUL MUSICAL GOODS 1914

WE HEREBY PRESENT SOME OF THE INSTRUMENTS AND ACCESSORIES IN DEMAND. OUR STOCK IS VERY LARGE AND COMPLETE. LET US MAIL YOU CATALOGUE OF THE GOODS YOU ARE MOSTLY INTERESTED IN.

EUGENIO DI PIRANI

PIANO COMPOSITIONS

OP. 107

No. 1. Gavotte Rococo	$0.50
No. 2. Pierrot (Scherzo)	.50
No. 3. Sleep, Little Angel (Lullaby)	.40
No. 4. At the Ball	.60

¶While Mr. Pirani has written in all forms, his piano works have well established his fame as a composer. That they are in demand by the most eminent teachers is evident by the appreciative comments lately received.

Comments of Educators

¶Your Four Piano Pieces are masterly composed. I take special pleasure in recommending them most warmly. — **Cornelius Rubner,** Head of Department of Music, Columbia University.

¶I have enjoyed playing your compositions, which are very pleasing, especially, I think, the "Gavotte Rococo" and "Lullaby." — **Gertrude Campbell Clark.**

¶They are charming both for recital work and for teaching, and I expect to make use of them. You are one of the few composers of pianoforte today who are not led astray by "false gods" in composition. — **Ernest R. Kroeger.**

¶I find them both charming in musical interest and practical for teaching and shall make use of them in my work. — **Wilson G. Smith.**

¶The work of the sterling musician I know you to be. I have used your Etudes a great deal. Your compositions are always well written for the instrument, not too difficult, technically or intellectually, to become as popular as they deserve. — **Fannie Bloomfield Zeisler.**

BOSTON: OLIVER DITSON COMPANY

NEW YORK: CHAS. H. DITSON & CO. CHICAGO: LYON & HEALY

Sung by Mme. Schumann-Heink and Mme. Gerville-Reache

THREE SONGS OF THE DESERT

WORDS BY
FAITH BOEHNCKE

MUSIC BY
GERTRUDE ROSS

1. SUNSET IN THE DESERT.....$0.60
   Medium Voice (c-E or g)
2. NIGHT IN THE DESERT..... .60
   Low Voice (a-F). High Voice (F-a)
3. DAWN IN THE DESERT ..... .60
   Low Voice (c-E). High Voice (d-F)

Press Comments

Mme. Schumann-Heink concluded the program with "Dawn in the Desert," by Gertrude Ross. . . . The audience seemed electrified, and so spirited was the applause that Mme. Schumann-Heink repeated the number with even greater brilliancy and effect. — **Clarence Eddy in Chicago Daily News.**

One of the most beautiful full-voice tones was the high E at the close of Gertrude Ross' song "Dawn in the Desert."—Baltimore Sun.

NEW PIANO WORKS

Isidor Philipp: Exercises for the Development of the Higher Pianoforte Technic Ditson Edition No. 196

ISIDOR PHILIPP is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves, octaves with intervening notes, etc.

The price has been fixed at $1.50; until published we will accept orders at 50 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.85.

Arnoldo Sartorio: Twelve Melodious Studies in Velocity in Broken Chords Op. 1018, $1.00.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

Ernest R. Kroeger: The Whole Tone Scales. $0.60.

THIS little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

MISCELLANEOUS

James H. Rogers: Five Quatrains From the Rubaiyat.

THE tempting quality o Omar's immortal verses ha inspired the composer wit most felicitous musical imaginings. For this a se of five song quatrains have been chosen which are in themselves among the most beautiful an which are adroitly contrasted in mood. To mee their poetic content Mr. Rogers' melodic vein wa never more fluent, his harmonic scheme more vita nor his economy of means to produce just the righ emotional effect more sure. These songs, the lates product of his muse, may be used as a cycle o singly, and will adorn any artistic recital program

The price has been fixed at $1.25; until publicatio we will accept orders at 75 cents per copy.

SPECIAL SUBSCRIPTION OFFER:—Wit The Musician, one year, $2.10.

J. C. Macy: Young People's History of Music. New Edition.

THE notice of the new editio of this work was prematur We shall be unable to publis it for a number of weeks. the meantime, however, we have a few copies, perfect condition, of the first edition, which we w send, postage paid, to anyone, upon receipt of cents. This is great value. The price of the ne edition is $1.25, subject to usual teachers' discou instead of $1.00 as quoted in the former notice,

Standard Anthems For Men's Voices. Edited by George B. Nevin. $1.00.

IN this excelle collection are i cluded, besides va able numbers w ten originally for men's voices, arrangements standard and popular works. The majority of t arrangements are from the practised and practic hand of the editor, and all are skilfully done wi a view to use by choirs of moderate ability. T subjects chosen and their treatment show wide versity, so that singers in possession of this colle tion are equipped to meet the varying requiremer of the church year without going outside its page

NEW PUBLICATIONS—AUTUMN, 1914

MUSICIANS LIBRARY

ANTHOLOGY OF GERMAN PIANO MUSIC
Vol. II. Modern Composers
Edited by M. MOSZKOWSKI
A superb collection of pieces by German composers of the modern period, with biographical notes and critical comment on the pieces, by the Editor.

100 SONGS OF ENGLAND High or Low Voice
Edited by GRANVILLE BANTOCK
The most valuable collection of English songs ever issued, covering the period from the 13th to the 18th centuries. The Editor has contributed an authoritative discussion of folk-song and the examples in the book.

60 FOLK-SONGS OF FRANCE Medium Voice
Edited by JULIEN TIERSOT
French folk-song has charms and beauties wholly peculiar to itself. The Editor has made an admirable and interesting selection, which he has discussed in his scholarly introductory essay. Mons. Tiersot is an authority on the subject.

Price, Paper Cover, $1.50 Cloth, Gilt Top, $2.50 Paper Cover Edition, with THE MUSICIAN, one year, $2.25

DITSON EDITION

(See page 566 for description and special offer)

ISIDOR PHILIPP
Exercises for the Development of the Higher Pianoforte Technic
Ditson Edition, No. 196. Price, $1.50.
(See page 566 for description and special offer)

ARNOLDO SARTORIO
Twelve Melodious Studies in Velocity in Broken Chords, Op. 1018
Ditson Edition, No. 208.
(See page 566 for description and special offer)

MISCELLANEOUS

WILMOT LEMONT
Dream Pictures. Op. 6
A collection of piano pieces which fascinate by their spontaneity and fresh flavor. Mr. Lemont offers an abundance of melody and a pleasingly euphonious harmonic scheme, which always shows refinement and sprightly fancy, and never degenerates into the trite and the commonplace. His moods are not monotonous but various. To those who play for pleasure, to whom music brings joy and relaxation, these facile and effective compositions will be more than welcome.
The cover is a marvel of the printing art, in four colors, tied with silk cord, making the collection a most attractive gift to a musical friend.
Price, $1.25. Special offer in advance of publication, 50c, postpaid. With THE MUSICIAN, one year, $1.85.

F. MORRIS CLASS
Five Vignettes for the Piano. Op. 7
Five short pieces under one cover, with accompanying poems, describing and indicating the moods of the different compositions. These will prove excellent studies for interpretation and portrayal of emotional color. They grade about IV. Handsomely printed with fine art title. A splendid gift.
Price, $1.00. Special offer in advance of publication, 50c. With THE MUSICIAN, one year, $1.85.

HOWARD WELLS
Ears, Brain, and Fingers
A new volume of the splendid MUSIC STUDENTS LIBRARY. Mr. Wells is an authorized exponent of the Leschetizky method and has been a successful teacher of the piano in Berlin for a number of years. The object is to place in the hands of teachers and pupils material which covers the fundamental needs of pupils, and a method whereby "Ears, Brain, and Fingers" are trained to co-ordinate action. The chapters on ear training present much new and practical exercise. Every progressive teacher will want this book.
Price, $1.25. Special offer in advance of publication, 65c. With THE MUSICIAN, one year, $2.00.

Standard Anthems for Men's Voices
Compiled by GEORGE B. NEVIN
Price, $1.00. Cloth bound.
(See page 566 for description of this book)

JAMES H. ROGERS
Five Quatrains from the Rubaiyat of Omar Khayyam.
In two keys, High and Medium.
(See page 566 for description and special offer)

MARIE WITHROW
Some Staccato Notes for Singers
The material consists of short, concise paragraphs on matters connected with singing, technical, artistic and interpretative, the purpose being to help singers to attain artistic freedom and independence. "Staccato Notes" refers especially to the numerous pithy and extremely practical and illuminating sentences which are scattered throughout the book. We predict a big success for this work, which is the fruit of a long and valuable experience as a singer and teacher.
Price, $1.00. Cloth bound. Special price in advance of publication, 50c. With THE MUSICIAN, one year, $1.85.

FREDERICK STEVENSON
Omnipotence
Short Cantata for Men's Voices.
Price, 50c.

LOUIS SPOHR
O God Thou Art Great.
Cantata.
Price, 50c.

AMERICAN CONCERT ARTISTS USING DITSON PUBLICATIONS

LUTHER CONRADI

Among American pianists whose work is winning the attention of the public we must count Mr. Luther Conradi, of Philadelphia. His native city is Baltimore, where he studied under Asger Hamerik and Richard Burmeister, at the Peabody Conservatory. At the age of ten he made his first public appearance. At the close of his period of study in the Conservatory he went broad for several years to gain experience and contact with musical life in Europe. Since locating in Philadelphia he has played as soloist with the Philadelphia Orchestra, and other prominent organizations, and has won success as a teacher. In this latter phase of his professional work Mr. Conradi has made considerable use of the collection of Russian piano music recently issued in sheet form by the Oliver Ditson Company. He finds them "splendidly edited, quite modern in fingering, and free from all pedantry."

CHARLES NORMAN GRANVILLE

Prominent among American singers now appearing in concert and recital in various sections of the United States is Charles Norman Granville, baritone, of New York. His personal recitals in Aeolian Hall have been well received, and he has also filled important engagements with leading choral organizations. In his programs he has introduced with much success A. Walter Kramer's song, *Allah*, which he delivers with a high G at the close with telling effect. He has also used William Arms Fisher's *Gae to sleep*, an unusually pleasing slumber song.

ESSENTIAL

A knowledge of the stories of the great Operas is essential to the student who desires to be well versed in Operatic Literature.
Our Opera Librettos, famous for more than half a century, give these stories comprehensively. They are not as condensed or abridged as those found in the books in which stories of dozens of Operas are contained but are satisfactory and entertaining.
Will send complete list on request.
Liberal discount to Teachers.

SCHOOL OF SCALES AND ARPEGGIOS

FOR THE PIANO — By JOHN W. POMMER, Jr. — PRICE $1.20 POSTPAID

THIS new instructive work for the Piano offers the most direct course for mastering the scales and arpeggios and is planned throughout upon the most modern accepted theories regarding hand position, finger action and general method of study.
It is adapted to pupils of all ages and grades and will form an authoritative guide for every conceivable form of scale and arpeggio playing—from the easiest and most elementary to the highest and most difficult varieties.
Indispensable for serious students and extremely useful to teachers who wish to use the most direct and up-to-date method for teaching the scales and arpeggios. A new course based upon the principle that the more ways a scale or an arpeggio can be studied the sooner it will be mastered and one which covers the whole field of scale and arpeggio work in progressive order.

John W. Pommer, Jr., the author, is director of the Hyperion School of Music, Philadelphia, studied at the Royal Conservatory of Music in Munich, and the Royal High School of Music in Berlin. He is a pupil of Heinrich Ehrlich, Dr. Hans Bischoff and the eminent Polish pianist Leopold Godowski.

The First Ten Weeks
AT THE PIANO

A Preparatory Course, leading up to Koehler's Studies, Op. 151; Gurlitt's Melodious Studies for Beginners, Op. 198; and Clementi's Sonatinas, Op. 3, Nos. 1, 2, and 3

By ROMAINE CALLENDER

Price, Net, 30c. postpaid

The appearance of this new instructive work for young piano students will solve many a perplexing question for teachers in the future, as it will enable them to achieve the best results from the very outset.
Clear-cut, practical, systematic and absolutely progressive, this preparatory course supplies the most satisfactory solution ever published of *how to begin correctly.*
The attention given to hand position and finger action will prove invaluable to the teacher in avoiding that common fault in first piano study—stiffness and rigidity of wrist and fingers; while the fact that the work provides all material needed for the very first beginning, should make it widely acceptable as a preliminary course leading up to any good method or system of piano study.

Supplemented by a Teacher's Manual for directing the study of the keyboard, notation and time, table exercises, hand position, finger action, scale construction, the use of the metronome and analysis.
Provided also with schedules showing progressive metronome speeds for scales, studies and sonatinas; an outline of a systematic course for the year following. "The First Ten Weeks," a list of recreative pieces, and copious notes for the practical teacher.

CARL FLESCH **Urstudien** BASIC STUDIES

FOR

VIOLIN

WITH

English, French and German Text

Price, 80c. postpaid

The last word in Violin Technic as applied to modern requirements. The studies provide a short, infallible method for mastering every possible technical difficulty.

Write for Thematic Catalog of Music and Descriptive List of Books. Music sent on sale to all parts of America. Terms so liberal that distance should be no hindrance.

THE WILLIS MUSIC COMPANY 137 W. 4th St. Cincinnati, Ohio

MILDRED GRAHAM REARDON

CHOIR singing in New York is often a good stepping-stone to the concert field. Among the younger singers who are working to the front is Mildred Graham Reardon, soprano of Calvary M. E. Church. Her voice has unusual range and quality and is excellently adapted for oratorios and church work. She commenced her work at the age of 14 at her home in the city of Buffalo and later came to New York, where she studied with Georg Henschel, Mme. Matja Niessen-Stone, and others. In her church work she uses with much success H. Wakefield Smith's *Gates of Pearl.* Mr. Smith's *Had I but known* is also being put on recital programs.

Ask One of These Music Dealers to show you the HINDS, NOBLE & ELDREDGE NEW SHEET MUSIC

Representing the best efforts of the foremost present day composers and especially edited and published to meet the requirements of twentieth century educational methods, which have discarded the dry, uninteresting studies for instructive works that are recreational and entertaining in character, the numbers in this new catalogue well merit the serious consideration of teachers, students, and music lovers.

The catalogue includes piano, vocal, and violin and piano numbers, graded from easy pieces for beginners to concert selections.

Whether you're a teacher, or student, or just a lover of good music, you will be interested in some of these new numbers. For piano there is something of real interest for everyone, from the little tot just beginning to the public concert performer. Every number is published in most attractive form—in the simple selections novel features have been introduced, as, for instance, a picture and story of each Grimm's fairy tale, to increase the interest of young students and hold their attention. The vocal numbers embrace songs that are worth while for concert or home use, and because some one educational feature is emphasized in each number they will prove particularly desirable for teaching purposes. There are several numbers for each voice.

The violin and piano selections include little teaching pieces by Gottlieb Federlein, educational numbers suitable for recital purposes by Alberto Bachmann, and a splendid suite ideal for public concerts (a prize-winner in a nation-wide contest) by Chev. Giuseppe Ferrata.

For sale by the following dealers in the United States. If your dealer's name isn't here, send it to us and we'll forward free of charge a complete thematic catalogue, also a music dictionary, pocket size.

TEACHERS' LOOSE LEAF JOURNAL-LEDGER

A handy Account Book (pocket size) for teachers. The plan provides for the entry of a lesson any day of any month of any year. It provides for the posting of lesson terms; the entry of term payments for either private or class lessons; the charging of music or books and credits for payments. A complete journal and ledger all on one leaf. **Packages of 50 sheets,** 20c; **100 sheets,** 40c. The Binders are furnished in full morocco, or imitation leather, and are equipped with 6 rings.

Price in full morocco **$1.10**
Price in imitation leather (texoderm) ..... **.85**

MIANTOWONA

A Melodrama by John Mokrejs. ..... Net $0.75
The poem by Thomas Bailey Aldrich.

Readers will find this a rich acquisition to their repertoire. Mr. Mokrejs has given a masterly musical background for the famous poem, and in difficulty it is within the range of the general good pianist.

LITHUANIAN DANCES $0.50

As danced by the Representatives of that Nationality where they have colonized in Chicago. Descriptions by **Helen Rich Shipps.** Music arranged by **Gertrude Madeira Smith.** These represent the genuine Lithuanian Folk Dances both as to the music and the manner of dancing them. The piano arrangement makes them practical for that instrument, and the description furnished will enable all who understand dance figures to make practical use of them.

IN PRESS

EQUALIZING EXERCISES FOR ALL SCALES

A Scale and Arpeggio Book for Piano Study
By GEORGE BAILHE

These exercises all treat on the chief difficulties connected with the playing of scales, viz: Passing of the thumb, strengthening of fourth finger, trill work, wrist rotation, etc., etc. Arpeggios are treated in the same manner.
The exercises all lead to the complete Scale in all keys including both forms of the Minor Scale. These Scale exercises are not only unique, but most effective and practical. Mr. Bailhe has the highest endorsements of celebrated pianists for this work. (Ready in October.)

AN APPRECIATION OF MUSICAL FORM

A collection of pieces illustrating every variety of Musical Form, compiled by **Jeannie R. Smeltzer.**
While not providing a theoretical study of the subject of Musical Form, it furnishes a description which gives the origin and outline of each form. The selections chosen are all excellent examples of their class. A valuable work for Piano Students. (Ready in October.)

CLAYTON F. SUMMY CO., Publishers

64 E. VAN BUREN STREET, CHICAGO, ILL.

CLARENCE C. ROBINSON

CLARENCE C. ROBINSON is rapidly making a name for himself as a composer, particularly in the line of songs, part-songs, for male voices and anthems. He was born in New York City in 1879 and began musical work as a chorister in St. Andrew's P. E. Church. His first educational engagement was at the University of Oklahoma as director of the vocal department. He studied with the late Emil Liebling and with F. W. Root, of Chicago. In 1912 Mr. Robinson was appointed director of music at the Pennsylvania State College, which position he still holds, and also acts as organist and choirmaster of the First Presbyterian Church, State College. The following songs, published by Oliver Ditson Company, show Mr. Robinson's fine skill as a composer: *Elusive Love,* 2 keys; *Entreaty,* 2 keys; *Love Dreams,* 2 keys; *A Sweetheart at Every Port,* for bass; *A Token,* 2 keys.

NEW FIRST AND SECOND GRADE MUSIC

Pet Waltz, Joyous Youth Galop, Twilight Reverie, Fairyland Barcarolle, by W. M. Treloar; Sunset Nocturne, Springtime Mazurka, Maurine Waltz, Newtonia March, by C. C. Crammond. These new easy pieces are just off the press and teachers will be more than pleased with them. Price $2.80. For a short time the special introductory price is only 70c. Send 70c for these eight pieces and if you mention *The Musician* we will include a *free* copy of our great "KID BAND MARCH." Dealers write for catalogue and special prices to the trade.

THE TRELOAR MUSIC CO., Box 494B Kansas City, Mo.

RECENTLY ISSUED

FOUR NEW ELEMENTARY WORKS FOR THE PIANOFORTE

Important and Interesting Material for the Modern Teacher

A. B. C. of Piano Music

By Mrs. H. B. HUDSON

Price, 50 Cents

A little book, which is intended to precede any piano method. It is based on the principle of familiarizing the pupil with the piano keys before taking up notation. After the hand has been shaped and placed upon the keyboard, the young student begins playing at once, playing from large capital letters instead of from notes. It is not even necessary to count time, yet the pupil is able to form melodies and become familiar with the keys. The pages are all illustrated and the exercises have appropriate names.

10 Five Note Recreations for the Pianoforte

By Mrs. C. W. KROGMANN. Op. 110

Price, 75 Cents

These excellent little teaching pieces are about as easy as it is possible to make them. Throughout all the pieces each hand lies in the five-finger position. In spite of the technical limitation that this places upon the composer, the pieces will be found to be decidedly interesting and attractive. They are in their various characteristic rhythms and each piece is accompanied by appropriate verses which may be sung if desired. Mrs. Krogmann is one of the best known writers of educational pianoforte pieces.

Rhyming Tunes for Little Players

By HANNAH SMITH

Price, 75 Cents

These little first pieces are chiefly melodic, with the work divided between the hands, introducing both clefs. Each piece has appropriate verses for singing. In the engraving a special large note has been used, thus avoiding any strain on the eyes and aiding sight-reading. Books of this nature have become very popular in elementary work and this new specimen is one of the best. The composer is a well-known musical educator and writer.

New Rhymes and Tunes for Little Pianists

By H. L. CRAMM. Op. 20

Price, 75 Cents

A most interesting book for elementary students, which may be taken up in connection with any primer or instructor, and be used while the young students are still learning the staff notation. The pieces are as simple and as tuneful as it is possible to make them; most of them have verses accompanying them which may be sung. The music throughout is pleasing and appropriate and at the same time the book is really helpful and instructive.

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music, selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal, marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality.

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription.

Subscription price $3.00 a year. Sample copy 25c.

The Organist's Journal and The Musician—value $4.50 } Both for one year $3.75 { Postage additional on Canadian and Foreign Subscriptions

TIEPKE MUSICAL WRITING BOOKS

The Musical Writing Books (Vols. I and II, 30 cents each; and Vols. III and IV, 25 cents each) constitute a remarkably effective set of exercises for developing knowledge of every necessary detail of rudiments and a practical experience in placing these on the staff, and is the best elementary modern method in use. Invaluable for making children accurate, of great service to pupils of all grades and degrees of development, and is indispensable to both teacher and pupil.

THE VOICE

This is the title of a most readable volume by E. J. Myer ($1.25), the subject being treated from a practical standpoint, and includes interesting chapters on "Voice Culture as a Dual Science," "Vocal Form and Action," "Artistic Respiration" and "The Method of Teaching." Supplementary to the book there is a set of exercises in sheet music form ($2.00) which illustrate fully the points of the book, and which provide much necessary and useful material.

Two of the Latest Songs to Captivate the British Public
ARE BY THE WELL-KNOWN COMPOSER
W. H. SQUIRE

"In an Old-Fashioned Town"

is a truly great Heart Song which has met with Instantaneous Success. The phenomenal demand for this song is almost unprecedented, while the companion song,

"When You Come Home"

is probably the biggest Selling Song in England today

For Sale by All Music Dealers Price 60c. Each

"IN AN OLD-FASHIONED TOWN" is issued
in four keys: D♭ (B♭-E♭), E♭, F and G
Orchestral accompaniment being also published for each key

Mr. DAN BEDDOE, the eminent Welsh Tenor, is highly enthused over this song. He has already rendered it in recital programmes with conspicuous success.

"WHEN YOU COME HOME" is also issued
in four keys: D (A-D), E♭, F and G
With orchestral accompaniment for E♭, F and G

These two songs with their distinctive melodies, desirable range and suitability for all voices should become

POPULAR FAVORITES WITH AMERICAN MUSIC LOVERS

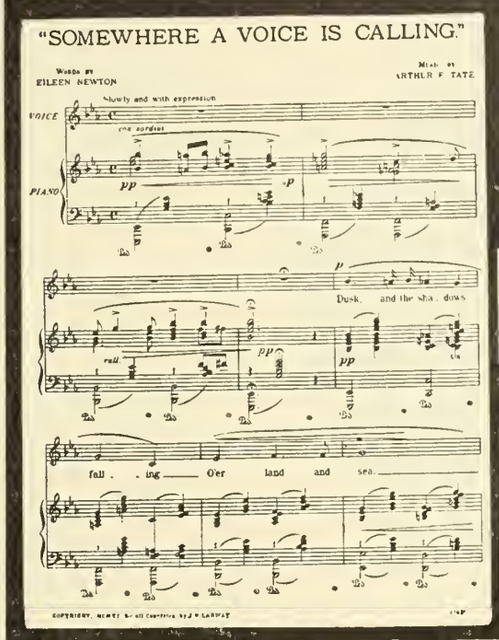
LOUISA TETRAZZINI AND HER FAVORITE ENCORE SONG



Somewhere a Voice is Calling

Lyrics by EILEEN NEWTON
Music by ARTHUR F. TATE

Easy to sing, but of such unusual beauty as to make it a great favorite with the world's most famous singers.

JUST THE SONG FOR YOU

Extract from the "Altoona Times."
Louisa Tetrazzini, one of the leading singers in the world, during her present engagements, is using one song, "Somewhere a Voice is Calling," and the beautiful melody has scored a greater triumph than any of the numbers that have been recently introduced and which depend largely for subject matter on themes which, to say the least, are not conductive of the highest and purest thoughts.

A name associated with church music perhaps as closely as that of any American composer.

STANDARD ANTHEMS FOR MEN'S VOICES

EDITED BY GEORGE B. NEVIN

PRICE, $1.00 POSTPAID

IN this excellent collection are included, besides valuable numbers written originally for men's voices, arrangements of standard and popular works. The majority of these arrangements are from the practised and practical hand of the editor, and all are skilfully done with a view to use by choirs of moderate ability. The subjects chosen and their treatment show wide diversity, so that singers in possession of this collection are equipped to meet the varying requirements of the church year without going outside its pages.

LEOPOLD, WOLFGANG, AND NANNERL MOZART

IN THE FOOTSTEPS OF MOZART

IN VIENNA

BY EDWIN HUGHES

THOSE stray tourists whose way happens to lead them to that quaint little German border town of Passau, at the junction of the Inn and the Danube, can easily picture to themselves Leopold Mozart, his daughter Nannerl, Frau Mozart, and little six-year-old Wolfgang, journeying through the narrow medieval streets of the town on their way to the landing place some hundred and fifty years ago. Vienna was their destination, and Wolfgang's first entrance into the Imperial city was to be preceded by that most beautiful river journey in Europe, a trip down the Danube. To those who know the trim little steamers which ply the swift stream today, traveling by boat a hundred and fifty years since would have little to recommend it. To leave Passau and land in Vienna on the same day was an undreamed of possibility, for progress down stream was dependent on the current. The *Strudel* and the *Wirbel*, the rapids and whirlpool in the river below Linz, were real dangers to the craft of the time, but there was more leisure for the enjoyment of the romantic beauties of the river and to re-tell the many sagas which cluster about the numerous castles on each bank. Here a robber-baron terrorized the whole country round about his eyrie, perched high above the stream, on some unscalable cliff; there Richard Cœur de Lion was held prisoner on his return from the Holy Land.

The four Mozarts reached Vienna in the early fall of 1762, and the first person in the town to recognize the remarkable talents of the young musician was, according to tradition, the customs inspector at the wharf, who was so entranced with Wolfgang's violin playing that he let the whole party through without any further parley. There are no visible traces of this early visit to Vienna, except the palace of Schönbrunn, which had been completed not many years before and which was the palace where Wolfgang played for Maria Theresia. Leopold Mozart, that clever "concert-papa," but for whom the world would never have known of the genius of Wolfgang Amadeus Mozart, was wise enough to find ways and means for his gifted little son and his daughter Nannerl always to appear before any crowned heads or princely potentates who happened to be near at hand, and so we find the family "commanded" to appear at Schönbrunn in October, 1762.

The royal listeners were particularly carried away by the young musician's playing on the harpsichord with the keys covered, by his tricks with one finger, and so forth. The Mozart children were apparently quite unabashed at the royal favor which was shown them, and the young princesses, among them the unfortunate Marie Antoinette, happy to find for the time two such clever play-companions, romped with them about the rooms of the palace.

A hundred ducats was presented to the musical entertainers, and Wolfgang received a gala costume complete with sword and cocked hat from the Empress, having thus an early opportunity to indulge his taste for fine dress, which was one of his characteristics.

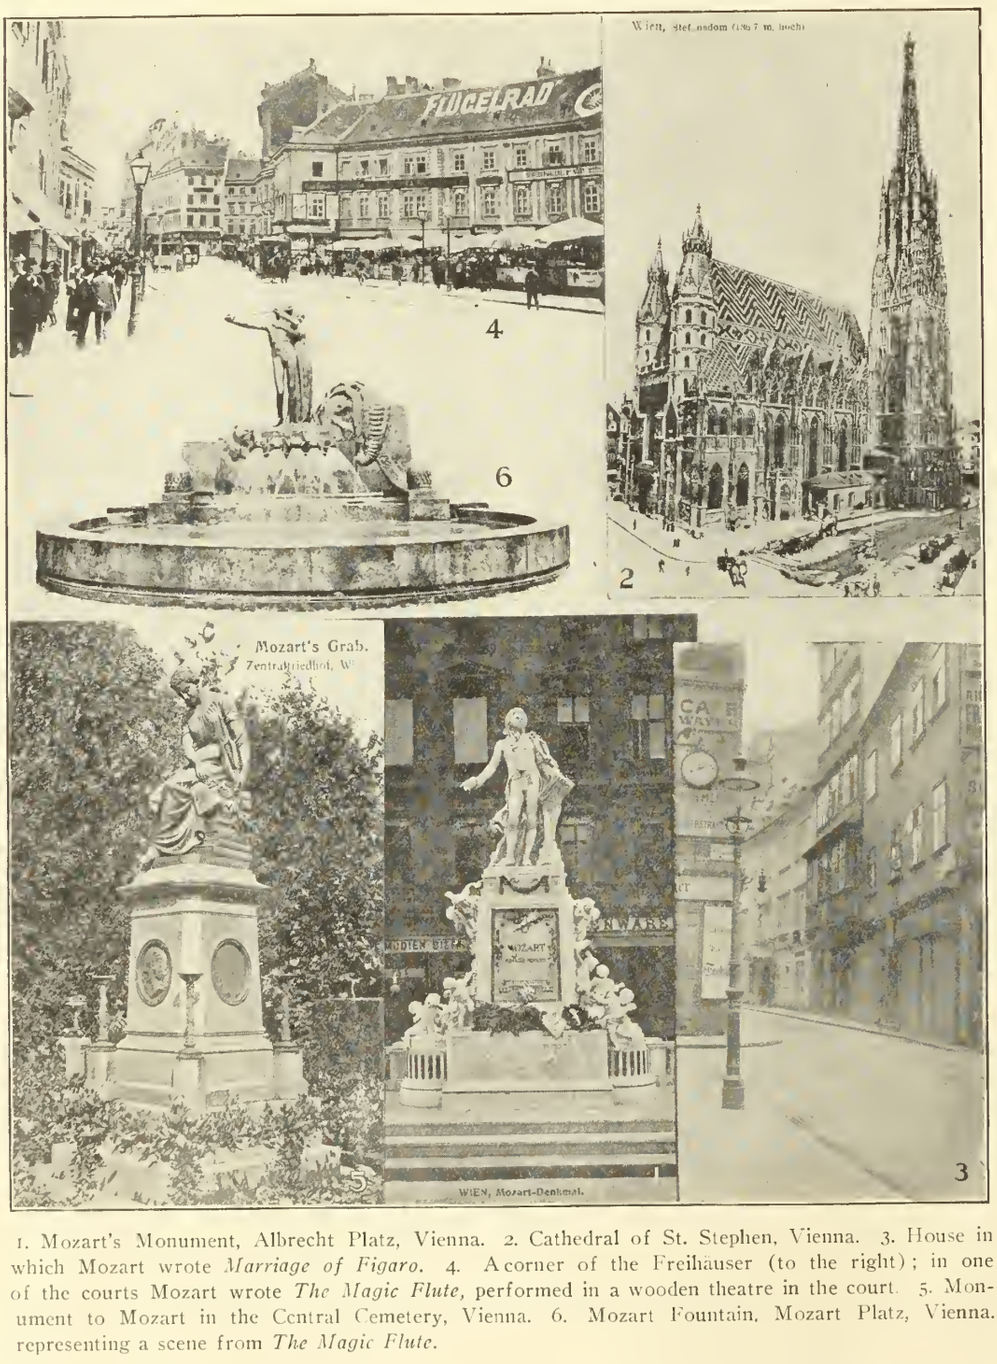
The next visit to Vienna occurred five years later, and the little party left Salzburg full of hope for the outcome of the second visit to the gay imperial capital. But, alas, they were to experience little but disappointments this time. An epidemic of smallpox broke forth in the city soon after their arrival, and they were obliged to flee, taking refuge in Olmütz, and taking also the malady with them. Both Wolfgang and his sister Nannerl were sorely smitten, and it was not until four months later that a return to Vienna could be considered. Things had changed in the Kaiserstadt during the five years of their absence. The court had become economical to an extreme with regard to musical entertainments, the public at large was no longer inclined to look upon Wolfgang as the child-prodigy, although he was now but just twelve years of age, and the Viennese musicians were openly jealous of the fame of the musical youngster, whose triumphs in Munich, London, Paris, The Hague, and elsewhere had been the talk of several seasons past.

Finally Kaiser Francis was induced to give the twelve-year-old boy a chance to prove his musical worth in the production of an opera for performance at the court theatre. Mozart's first opera, *La Finta Semplice*, was the result of this commission, but the expected performance in Vienna was not forthcoming. The intrigues against the young composer, which later made his whole life a series of disappointments, offset by two or three brilliant triumphs, had already begun. The performance of the opera in Vienna was indefinitely postponed, and finally given up entirely by the Mozarts, who returned to Salzburg, in December, 1768. Before leaving Vienna, however, the strain of the long hope and ultimate disappointment was relieved to some extent by the performance for the first time of the youthful composer's operetta, *Bastien und Bastienne*, which was given in the private theatre of a cultured Viennese admirer of Mozart, Dr. Anton Meszmer.

HOUSE IN WHICH MOZART LIVED WITH THE WEBERS

The third visit to Vienna came in the early summer of 1773. The intervening years had been eventful ones for young Wolfgang. They were the years of the Italian journeys, of the well-known episodes of the writing of Allegri's *Miserere* from memory after a hearing of the composition in the Sistine Chapel, at Rome, of the bestowing on the youthful composer of the cross of the Order of the Golden Spur by the Pope, carrying with it the title of *Cavaliere*, and of his election in Bologna as member of the *Accadémia dei Filharmonica*, the highest academical honor in the musical world of the time. The feats of Mozart in the various Italian cities were the opening wedge for the recognition of German music in Italy. Italian music and musicians dominated the whole musical world at that time, and the attitude of the Italian musician towards any attempts at music making by persons of any other nationalities was marked by that patronizing indulgence, or rather by that lack of indulgence, which characterizes the German musician of today in his regard for the composers of other countries.

The Meszmer family and Mozart's other Viennese acquaintances gave the young artist a most hearty welcome on his return to the Kaiserstadt,



1. Mozart's Monument, Albrecht Platz, Vienna. 2. Cathedral of St. Stephen, Vienna. 3. House in which Mozart wrote *Marriage of Figaro.* 4. A corner of the Freihäuser (to the right); in one of the courts Mozart wrote *The Magic Flute,* performed in a wooden theatre in the court. 5. Monument to Mozart in the Central Cemetery, Vienna. 6. Mozart Fountain, Mozart Platz, Vienna. representing a scene from *The Magic Flute.*

and even the Empress graciously received him. Recognition there was a-plenty, but no chances of any sort of a steady income, so in the autumn the Mozarts returned again to Salzburg.

In the middle of March of the year 1780, Hieronymus, Count Colleredo, the princely archbishop of Salzburg, paid a visit to Vienna in his capacity as absolute monarch of his little domain, in order to make his obeisances to the new emperor, Joseph II. The bombastic bishop, anxious, no doubt, to make as much of a splurge as might be in the imperial capital, ordered the immediate presence there of his Salzburg "concert master," Mozart, who, at that time, was in Munich, just through with the initial presentation of his first operatic masterpiece, *Idomeneo.*

In Vienna, as in Salzburg, Mozart met with the most ignominious treatment at the hands of this pompous prelate. He was ordered to play in the salon of this or that aristocrat, and at the same time kept by his priestly employer from accepting other invitations. His place at meal-time in the household of the bishop was with the body-servants of the establishment. Finally the arrogance and vile temper of the holy gentleman became too much for Mozart's good nature, and after a stormy scene the latter applied in a formal note for his discharge from the episcopal retinue. The same was not immediately forthcoming, and, anxious to make an end of the whole humiliating matter, Mozart presented himself at the archbishop's apartments with a new letter of petition. He was met by the chamberlain, a certain Count Arco, who heaped the vilest sort of abuse on him and finally took him by the scruff of the neck and actually kicked him out of the door. Although the pious Hieronymus was not a party to this scene, he was certainly connected with it. He made himself infamous through his countenancing of this notorious act, and his name will go down through musical history covered with ignominy for all time.

Mozart lost at once his room in the bishop's apartments, his position in his retinue, and also the modest income which this had brought him. He was completely thrown on his own resources in the big city, but was lucky enough to have some old friends near at hand, the Webers from Mannheim, with whom he now took lodgings. The house in which the Webers lived at this time is still to be seen in Vienna. It is number 7, Peter's Platz, or, as the place is more familiarly known in Vienna, "Am Peter," just off the busy Graben. The baroque St. Peter's Church occupies nearly all of the small "place" by itself, and across the narrow street is the house entrance to Number 7. The style of the house indicates that this must have been one of the elegant quarters of the city some hundred and thirty odd years ago, and the façade is certainly one of chaste beauty compared with the tasteless fronts of most of the Viennese apartment houses of later date. Entering the doorway one comes to a fine old courtyard in the rear of the building. Formerly the house bore the inscription.

"ZUM AUGE GOTTES"

The unhappy outcome of Mozart's love affair with Aloysia, one of the four Weber daughters, in Mannheim, had evidently not disturbed his cordial relations with the remaining members of the family. Aloysia had married an actor in the meantime, and now that Weber *père* was dead Frau Weber moved with her three remaining daughters, Constance, Sophie, and Josepha, to Vienna, taking roomers in order to eke out a livelihood. Father Leopold, hearing in Salzburg of the trend which things had taken, was in great anxiety lest his son should lose his heart to one of the three sisters, and Wolfgang, at his behest, finally changed his lodgings in September. The father's heart's wish was to see Wolfgang in a secure position ere he so much as even dreamed of marriage, but alas, such events seldom arrange themselves according to fond parents' dreams, and long before the move was made away from the *"Auge Gottes,"* a more than passing liking had sprung up between Mozart and Constance Weber.

The sympathy of Constance with his woes (she was musical and had formerly been Mozart's pupil), the sweetness of her disposition, and the fact that quarrels in the Weber household were of frequent occurrence extended to bring the two closer together, and finally, in December, Mozart wrote his father of his intention to marry. He was twenty-six, his temperament inclined toward a more quiet life, and, never having given himself a great amount of trouble in attending to his own affairs, he was really in need of a guiding, loving hand to bring order into his life. Such one he found in Constance Weber.

Thus he writes to his father of her: "She is not ugly, but also not beautiful; in fact her whole attractiveness lies in her black eyes and her splendid figure. Of wit she has little, but of the knowledge of humanity enough at least as is needed to fulfil the duties of wife and mother. She is not extravagant, is a good housekeeper, and possesses the best heart in the world. I love her and she loves me. Tell me, how could I wish for a better wife?"

Father Leopold, Frau Weber, and Constance's guardian, Thorwarth, all were against the marriage which finally came off however in the historic old Cathedral of St. Stephen, in August, 1782. Mozart was at work during the time of his courtship on the opera, *The Elopement from the Seraglio,* and as the heroine of the piece was also a *Constance,* there were jokes about the "Elopement from the *'Auge Gottes.'"* There is genuine love music a-plenty in the score of the opera, coming as it does at this important period of the composer's life, when Mozart was the bridegroom of his own composition.

From now on Vienna was to be Mozart's permanent home. The chief city, politically, of Germany Europe at the time, it offered also inducements second to none for the ambitious young composer.

Most important of all, however, it was here that a new spirit in the art of music was just awakening, a real national German music, which was to tear itself loose, at last, from the long borne yoke of Italian domination.

After Haydn's muse had given birth to the symphony and aroused German musicians to a feeling of their own possibilities, it was Mozart who was to attack the Italians in their best entrenched stronghold, the opera. *Die Entführung aus dem Serail*, the first successful opera in German, marked, in fact, the elopement of the opera from her Italian house of bondage. Mozart's new work, which had its initial performance just a month before his wedding, was a great success, in spite of the strong cabal of Italian composers and sympathizers, who, with Salieri at their head, carried their intrigues against the rising German opera composer right into the performances of the new work itself.

The house in which Mozart lived in 1782 stood until 1898, when a new building was erected on the place, Number 25, Wipplingerstrasse. A tablet commemorates the fact that the composer once lived and worked there.

The next years were passed in composing, concert-giving, and teaching. There seemed to be no opening at all for a permanent post in the service of Joseph II, and meanwhile family cares were coming fast and thick. Little Mozarts were beginning to put in their appearance, Constance's health was anything but the best, and there was, in short, a constant struggle to keep the wolf from the door.

Some of the finest of the piano concertos, the set of string quartets dedicated to Haydn, and a number of pieces for the Masonic lodge, of which Mozart had recently become a member, date from these years. In 1785 Mozart saw his father for the last time, the old gentleman coming for a short visit from Salzburg, where he died two years later. Haydn, Leopold Mozart, Wolfgang, and a number of congenial friends came together at the Mozart home in the Judenplatz. This house has unfortunately also disappeared along with most of the Vienna habitations of the master, but the house in which he lived in 1786 and in which he composed that splendid masterpiece, *The Marriage of Figaro*, is still standing, Number 8 Schulerstrasse, not far from the mighty Gothic tower of St. Stephen's. As one enters the street from the back of the Cathedral, one comes upon a very tall, narrow building to the right, its second story jutting out, bay-window fashion, into the street. A somewhat belated tablet at length found its way to the house-front in 1906, thanks to the Vienna Männergesangsverein.

This is the second of the two authentic Mozart houses in Vienna which are still to be seen; but so many have been the changes in the down-town district of the city since Mozart's time that one may well wonder that even these landmarks still exist. Mozart was evidently fond of being near the center of activity in the city, for he lived nearly the whole of his life in Vienna within five minutes' walk of the metropolitan church of St. Stephen. The two houses in the Petersplatz and the Schulerstrasse were both five story apartment houses. The modern indwellers know little of and care less for the persons who inhabited them during the last quarter of the eighteenth century, and the visitor has the feeling that he cannot today become very intimate with the domestic surroundings of Mozart. Of Beethoven's dwelling places there is much more to be seen, not to speak of the Schubert and Haydn houses in Vienna, where one feels a real intimacy with these former citizens of the Kaiserstadt in their modest quarters.

In the Währingerstrasse, at Number 26, one finds the Mozart tablet on the house-front—but the house is, alas, a new one. This was probably the furthest point from St. Stephen's at which Mozart ever lived in Vienna, and the place was doubtless half country at the time.

One feels that Vienna, the home of Mozart from the time he reached ripe manhood until his death, has not been well taken care of in the way of "Mozart houses"; for Salzburg has its interesting museum in the room where he was born and adjacent rooms belonging formerly to the Mozart family, and even Munich, a city in which he stayed only temporarily, has its Mozart house in the narrow Burg Strasse, where the corner room is pointed out in which he put the finishing touches on his *Idomeneo* before its first performance at the dainty Residenz Theatre, in 1781.

Figaros Hochzeit was followed the next year by Mozart's *chef d'oeuvre, Don Giovanni*, which was performed for the first time at Prague, in October, 1787. The success of the piece was phenomenal, and the enthusiastic reception of the master and the new child of his genius by the inhabitants of the Bohemian city may well be looked on as the

MOZART COMPOSING HIS OPERA "DON GIOVANNI"

culminating moment of his public career. In December, after his return to Vienna, he was at last given a position in the imperial Austrian service, that of "chamber composer" to the court, a belated honor, but one which carried with it at least the certainty of 800 florins per year.

During the spring of 1789 Mozart was in Berlin, where he was most warmly received by King Friedrich Wilhelm, who was so anxious to keep him at his capital that he offered him an excellent musical post with an income of some $2,200 yearly. But such was Mozart's love for life in Vienna that he refused what was, for the time, a brilliant offer and decided to stick to his own emperor in spite of his meager emolument.

During the last year of Mozart's life were produced two of his finest works, *The Magic Flute* and the *Requiem*, together with his final opera, *La Clemenza di Tito*, which achieved but little success at its first performance in Prague, September 6, 1791.

Mozart's financial resources were at a low ebb, and as luck would have it, so were those of an old Salzburg acquaintance and brother Mason, Schikaneder, a theatrical manager who had been the possessor for several years of a little wooden theatre within one of the courts of the *Freihäuser*, a complex of houses belonging to Count Starhemberg, and still to be seen, just back of the present Naschmarkt, in Vienna. In spite of Schikaneder's bankrupt finances he was still in possession of one or two good schemes among them the notion of getting Mozart to write the music for a "magic opera," of which he himself was to be the librettist, and whose performance under the composer's leadership, in his little second-rate theatre, would set Schikaneder on his feet again financially, and at the same time make an important person of him in the German theatrical world. It was really a fine piece of impertinence on Schikaneder's part to venture to ask the composer of *The Marriage of Figaro* and *Don Giovanni* to collaborate with him in the production of a "magic opera." Schikaneder wanted to put something "different" before the Vienna public, and was perfectly willing to risk playing to the gallery in order to have packed houses. He knew the world, however, and also he knew Mozart and how to interest him for his new scheme. Finally the bonds of friendship and of Masonic brotherhood prevailed.

With the aid of a certain Gieseke, a member of Schikaneder's troupe and a man of some education, the old popular tale of *Lulu, or the Magic Flute*, was transformed into an allegory and given such an atmosphere of profound symbolism—Masonry, it is said, playing quite a prominent part in the work—that Mozart was quite delighted with the subject, and set to work immediately with great enthusiasm to furnish the musical setting to the piece.

Schikaneder had a little summer-house in one of the courts of the *Freihäuser*, set aside for Mozart's use, and here amid the trees and shrubs *Die Zauberflöte* was written, during the summer of 1791.

The little wooden pavilion remained in its original place until 1874, an object of much interest to all musical pilgrims in Vienna, and was then made a present of to the Mozarteum in Salzburg, in which city the tourist may now find it, perched on the Kapuzinerberg.

The illness of Mozart's wife, who was seeking recuperation in Baden, near Vienna, together with Mozart's pecuniary difficulties, which had come to such a point that borrowing from his friends became necessary, had a most depressing influence on the spirit of the composer, and in order to bring him into the mood for the successful completion of the score of *The Magic Flute*, Schikaneder took every opportunity to have Mozart come together with the gayest sort of company he could gather about him, where wine flowed freely and mirth was unconfined. This gave rise to rumors that Mozart's whole life was a fast and free one, but letters of the time written to his sick wife in Baden indicate how little of his inner life was in these gaieties.

Mozart's enemies, principally his musical colleagues, who imagined themselves big figures in the world of art at the time but who have now so completely disappeared from the ken of man that a very thorough search of the musical lexicons is necessary to unearth them, were always ready to set going the most exaggerated tales of his licentiousness whenever they could find the most flimsy sort of foundation for their inventions. The fact of the matter seems to be that Mozart never gave himself over to any sort of excesses, except when induced by Schikaneder during the summer of 1791, and that these little overflows of Viennese *Gemütlichkeit* were magnified out of all proportion by his detractors.

He was by nature of a gay, cheerful disposition, as lacking in any artificial *raffinement* as his own compositions. He was extraordinarily fond of

fine dress, of dancing and of masquerading, liked a game of billiards and a good joke, and was what we would term a "good fellow" when in congenial company. He was inclined to be a spendthrift, had little idea of the value of money, and absolutely no business ability whatsoever.

In his personal appearance there was nothing to indicate the man of genius. In fact, people were in the habit of taking him for a traveling mechanic or for a small tradesman, which mistakes he resented very bitterly in spite of his usual good humor. It was probably largely to avoid such unpleasant incidents that he was so particular about his dress on public occasions. His appearance was at times a trifle loud, and at one memorable function the pianist Clementi mistook him for one of the court chamberlains. Or perhaps this was merely a little joke on the part of Mozart's pianistic rival, called forth by the lace, gold chains, and pendants with which Mozart was used to adorn himself on such occasions. When conducting Mozart always wore a red evening coat, which was the customary costume among musicians at the time. In spite of his fastidiness, however, Mozart never cultivated any of those would-be outward marks of genius which are so popular with many musicians.

As in the case of all the older musicians, the portrait of Mozart has been ridiculously idealized in modern pictures which are held by their publishers perhaps as improvements on the original paintings and engravings made during the master's lifetime.

He was below middle height, and inclined to stoutness in later years. His head was large out of all proportion to his body, but he had small, well-formed hands, of which he was exceedingly proud. His eyes were blue and rather expressionless on account of his short-sightedness. He was of pale, rather yellowish complexion, had blond hair, and an exceedingly long nose. His ears had a slight malformation, and have even been the subject of an essay by a learned German gentleman in one of the medical weeklies of the Fatherland. Of his internal ear, however, there has never been very much need of discussion.

Mozart's work on the score of *The Magic Flute* was interrupted one day in July by the unannounced appearance of a somber looking person in gray, tall, and haggard of feature. He had come, so he said, to inquire the composer's fee for a *Requiem*. At length, at the urging of his wife, Mozart named a sum of money, and the mysterious stranger handed him fifty ducats as surety. One condition of the arrangement was that no attempt was to be made to discover the giver of the commission, the gray-garbed stranger declaring himself to be only an intermediary. The whole matter made a deep impression on the composer, in whom the germs of a lurking illness were already present, and he was plunged for a time in gloom, seeing in the whole matter a premonition of his own early end.

The Magic Flute had its première in September, 1791, and although the music to the overture and first act seemed over the heads of the audience, there was increasing applause toward the end, and the piece became immediately so popular in Vienna that by November of the following year it had reached its hundredth performance.

Schikaneder was saved, but with Mozart the decline in health had set in with more alarming symptoms, which the ill-success of his *Tito* in Prague did little to diminish. Work on the *Requiem* continued, but the thought of the somber stranger in gray haunted him continuously, and at last overpowered by an uncontrollable emotion, he burst into tears and said to his wife, "I shall not be with you much longer. I believe someone has poisoned me. I cannot get rid of the idea."

He was soon compelled to take to his bed. The little family was living at the time in the tiny Rauhensteingasse, at Number 8. The large house now occupying the place bears the name of the master and a bas-relief head on the façade, but in the neighborhood are few if any houses still standing which date back to Mozart's time.

The sick man grew daily worse. Finally on the afternoon of December 4 some musical friends, artists from the Schikaneder troupe and his faithful pupil, Franz Süssmayer, gathered at his apartment, Mozart having expressed the wish to hear his *Requiem* sung as far as it had been completed. When the *Lacrymosa* was reached Mozart laid aside the score and burst into tears.

In the evening Sophie, his sister-in-law, came, Constance being also ill at the time. At his bedside was young Süssmayer, to whom he was giving directions for the completion of the *Requiem*. Sophie was to remain with him through his last night. By one o'clock the next morning he was dead.

The physicians were of varied opinions as to the cause of his death. According to one it was malarial fever, another diagnosed it as dropsy, a third as meningitis. Sure it was at any rate that the years of disappointment, of worry over the poor health of his wife, and of constant, bitter struggle to keep poverty from the door, had not added anything to Mozart's physical well-being, and when illness at last overtook him he had, although he should still have been in all the strength of his young manhood, no reserve power with which to overcome it.

And now comes that most incomprehensible chapter in the whole history of music—Mozart's burial and the absolute disappearance of any trace of his remains or the spot where he was last laid at rest.

The sixth of December, 1791, was a day of fearful storm; snow and rain descended in a perfect deluge from the sky, and the wind blew as it can only blow in Vienna. The total amount of money to be found in the Mozart household on the death of the master was 60 gulden (about $25), so the funeral was a most simple one. Two carriers bore the cheap pine coffin from the house in the Rauhensteingasse, followed by a few, perhaps half a dozen, of Mozart's most intimate friends, among them Schikaneder and Süssmayer. Constance was so ill that she was unable to leave the house. By the time the little procession of mourners had reached the Stubentor (the gate in the former city walls at the point where the present Wollzeile meets the Ringstrasse), the storm had developed into a regular blizzard, and all except the carriers of the bier turned back, unable to proceed farther. Finally the remains reached the cemetery of St. Mark's, where they were deposited in a dismal waiting chamber. The day after they were lowered into a common grave dug for sixteen bodies, in which the poorest of Vienna's citizens found their last resting place. These common graves were left for ten years, at the end of which time their contents were removed beyond the knowledge of man and the ground used anew, and there is no trustworthy information to indicate that Mozart's remains received any different treatment than those in whose close companionship they had him for a decade.

It is simply unbelievable that his own wife, who was well enough the next week to have an audience with the Emperor Leopold, never even gave herself the trouble to visit the cemetery at her first opportunity to see at least that the grave of the man who had loved her so well was marked in some manner so as to render later identification possible. Even more unbelievable is the fact that it was not until nineteen years after Mozart's death that she finally made a visit at St. Mark's cemetery, urged by her second husband, George von Nissen, and embarrassed at length by the frequent questions of strangers about the matter. It was then, of course, too late. The former sexton was dead, and not the slightest trace of the grave could be discovered. There is no adequate proof whatsoever that the skull exhibited in the Mozart Museum in Salzburg is that of the master.

In 1859 the city of Vienna erected on a quite arbitrary spot in the St. Mark's cemetery a memorial to one of the noblest of her sons, which has of recent years been removed to the newer Central cemetery, where it now stands conspicuously in the center of that plot of "honor graves" devoted to musicians and other artists. Just opposite lie the remains of Beethoven and Schubert, while a few steps away are the graves of Brahms, Gluck, Hugo Wolf, and Johann Strauss, father and son.

Later honors have not been lacking in Vienna; there is a *Mozart Gasse,* a *Mozart Platz,* with a fine modern fountain representing a scene from *The Magic Flute,* and behind the Opera House (people have asked, "Why *behind* the Opera?") there is a finely executed, if idealized statue of the master.

At the museum of the Royal Conservatory one finds the manuscripts of the D minor piano concerto and the G minor symphony, and other manuscripts may be examined in the Royal Library on the Josefplatz.

THE WAR IN FRANCE

BY ARTHUR DE GUICHARD

An article appeared in the columns of The Musician for June of this year, which gave a graphic and fully detailed history and description, together with an account of the pedagogic advantages of the Ecole Niedermeyer, at Boulogne-sur-Seine (France), "a music school which makes musicians."

Although written purely from an educational point of view to show the benefit to be derived from serious, systematic study under the guidance of specially trained and competent teachers, it was not long before the article resulted in the registration of several of our readers as pupils of the Ecole. Some of them went to Paris, interviewed the Director, Monsieur Heurtel, visited the Ecole, made all their arrangements to become boarders and begin their studies at the coming fall term, and then started off again to enjoy their vacation by a little continental tour.

Among the number were two young American women—one from New Jersey, the other from Baltimore, Md.—who went off to Switzerland with the intention of returning to the Ecole by the first of September. Where are they now? Have they safely reached "home" again? Let us hope so. The Director has written me in a very anxious mood stating that he has received no news of them.

The spacious halls of the Ecole have been transformed into an auxiliary hospital for the wounded, and its lovely grounds, in the Bois de Boulogne at the very gates of Paris, which until quite recently re-echoed to the merry mirth of the students and their teachers, are now the silent witnesses of the sufferings and sorrows of the stricken soldiers.

The letter of M. Heurtel is curious for the great optimism displayed, for he says: "All these events augur well for the future, and I do not believe that the war can last beyond the end of October." He adds: "As soon as the date of our reopening is fixed, I will let you know. Is it the divine art of music that inspires such roseate a hope? Perhaps. Its single-minded, whole-souled study removes us far from politics, strife, and war of every kind, and makes difficult for us to realize that civilized man is so little removed from the barbarian. "Scratch the man and you will find the savage" has not yet lost any of its cynical truth, more's the pity;

THE WELL-EQUIPPED PIANIST

A SYSTEM OF TECHNIC, BASED ON NATURAL FACTS AND LAWS

BY ROBERT W. WILKES

III

RÉSUMÉ OF PRECEDING ARTICLE

THERE is no action without a re-action.

The activities of the fingers or hand *downward* against the keys produce a re-action *upward.*

This re-action must be balanced by resistances or bases appropriate to the touch required.

There are three distinct finger touches, which differ according as the basis is, 1, the weight of the hand; 2, the inertia or a part of the weight of the arm; 3, the full weight of the arm.

OTHER FINGER TOUCHES

These are the finger touches most often used; but there is also a touch in which the basis is the rotary turning of the arm.

There is also a finger touch in which the fingers of themselves do not exert any force against the keys, but in which they transmit to the keys the weight of the arm. Such a touch, which gives a tone quality very similar to the weight arm touch described in the first article, produces very beautiful effects, but it can only rarely be employed.

A DISTINCTION NECESSARY

Some pianists may maintain that there is no necessity for discriminating between the various finger touches. They may say that it is sufficient to divide the touches into arm, hand ("wrist"), and finger touches. But to group all finger touches together is certainly a great mistake.

For instance, with the third species of touch it is possible to play *ff* an ordinary scale passage at a speed of about nine notes to a second. But it is impossible to play any faster with this touch; if a greater speed is required, the second species of touch must be used, although by this species the passage cannot be played *ff,* only about half the volume being attainable. So that any pianist who tries to play *ff* beyond a certain speed will inevitably meet with disaster.

Indeed there are "breaks" in the finger touches just as there are "breaks" in most untrained voices; and although good vocal instruction will eliminate these defects altogether, no amount of technical training will do away with them in finger touch.

I might say here that many composers seem to misunderstand the limitations of the finger touches and mark a rapid passage *ff* when it cannot be played any louder than *f* or *mf.* Indeed some composers even require the most rapid finger touch, which cannot be played louder than *mp* or *mf,* to be executed *ff.* Many players will waste a wonderful amount of time and patience trying to produce an impossible effect, while the well-equipped pianist will understand the mistake of the composer and, notwithstanding the dynamic marks, will use the only practical touch appropriate for the passage.

Before treating of the touches in detail, some observations and rules concerning the finger touches in general will be given.

Whenever muscular force is employed, it must be used with intelligence if the best results are desired. But what an infinitesimally small number of pianists use muscular force intelligently!

For instance, whenever most players see an *f* or *ff,* they immediately think of using more muscular force, though the choice of muscles and the correct manner of using the ones selected does not seem to bother them in the least.

Most players, I believe, use about three or four times the energy required, and some waste even more. Pains in the fingers, wrist, and arm are often the result; sometimes indeed the muscles rebel so strenuously under such abuse that practising has to be discontinued for a long time, if not altogether.

Now to use muscular force with intelligence we should above all be careful, 1, to use the correct muscles and no others; 2, cease to use the muscle after its work has been done.

I. CORRECT MUSCLES TO BE USED

In playing the piano, as well as in doing anything that requires the use of the muscles, it is very necessary to use only the muscles needed and not to call upon the surrounding ones. While the theory is so simple that anyone can understand it, the practical application is often very difficult.

I might remark that some persons naturally have good control over their muscles and are able to use one or more muscles and still leave the other muscles loose; while other players, who indeed are often talented, have great trouble in controlling their muscular actions and conditions.

Some teachers are continually telling their pupils to relax; but it must be borne in mind that relaxation—unless it is preceded by a contraction—never yet produced any effect, either musical or mechanical; and as results are only obtained by a positive action of the muscles, it would be much better to say: Use certain muscles and leave the *other* muscles relaxed.

It is often troublesome enough to play a long and difficult piece well if no force is wasted; but if three or four times more muscular energy is used than is required, it is almost impossible to finish the piece with the proper speed and brilliancy.

The use of muscles not required for the effect intended not only tires the player, but, which is still worse, often greatly interferes with the work of the proper muscles.

The following little experiment will help one to realize this truth: Hold the hand in the air, set the muscles of the wrist tight, and see how fast the fingers can be moved up and down. Repeat the experiment, but with a loose wrist. The action of the fingers in the second case is at least twice as fast as in the first case.

II. MUSCULAR ACTION MUST CEASE WHEN ITS WORK HAS BEEN DONE

Those who have read the first article of this series may remember that in the arm touch, the weight or downward exertion of the arm should be discontinued as soon as the key reaches the key-bed. If a *legato* effect is desired, the keys are kept down by the weight of the hand alone.

The action of the fingers in finger touch should be similar. The finger should exert force upon the key *only when the key is actually descending.*

This rule is most important; and although great pains and patience are necessary to acquire the facility of ceasing the exertion of the finger at the proper time, no rapid progress can be made in piano technic until this rule is either consciously or unconsciously obeyed.

An illustration may help us to realize the importance of this rule.

Suppose that a number of chairs are arranged in a row, each chair being about two feet away from a wall. Now, if we should wish to push each chair back against the wall, we would naturally use the force of the arm only while the chair was moving, and would discontinue the motion of the arm as soon as the chair reached the wall, or even a little before that time. If the force of the arm was still being exerted as the chair struck the wall, a distinct jar would be felt and a sensation of pain in the arm muscles would soon be experienced. If the force were continued even after the chair had touched the wall, the result would be a great waste of effort, besides a strain on the arm muscles trying to *push down the wall!*

Now, the jar and strain on the arm muscles in such a case are exactly the same as the jar and strain that the finger muscles suffer, when the exertion of the finger is not ceased at the proper time. Imagine that instead of driving keys against key-beds, you are driving chairs against a wall. Of course the jar and strain that the fingers have to endure in one case are not absolutely as great as the jar and strain that the arm would stand in the other case; but when the strength of the muscles of the finger and arm are compared the relative strain is nearly equal.

But besides straining the finger muscles, the wrist is also greatly stiffened if this rule is not observed.

It is hardly necessary to remind the reader that, although piano pedagogues disagree about many points of technic, there is at least one point concerning which they are practically unanimous, and that is, that the wrist should always be as loose as possible; so that, if any action of the finger muscles unnecessarily tightens the wrist, such action must be immediately condemned and assiduously avoided.

As I tried to show in the illustration of the chairs, if the muscles effecting the downward motion of the finger are not relaxed immediately, or indeed just before the key has been completely driven down, we will find that we are *pressing upon the key-bed.* In other words, the muscular force which produced *motion* as long as it was applied to something *movable,* became a *pressure* when it struck something *immovable.* (It is hardly necessary to state that such pressure exerts absolutely no influence upon the tone.) Now, such pressure cannot be exerted unless the wrist is stiffened, and the greater the pressure the stiffer must be the wrist to withstand the strain.

It will then be seen how important it is to see that the muscles which move the finger down are not used after the key has been fully depressed. Indeed, as pointed out by Tobias Matthay, the action of the finger muscles in *legato* should be just as short as their action in *staccato,* and the only difference between *staccato* and *legato* is that in *staccato* the fingers ascend as soon as the key has been depressed, while in *legato* a sufficient weight is kept on the keys in order than one key may be held down until the next is played.

OUR CREED

[The following "Creed" has been printed in leaflet form for circulation among the teachers, pupils, and friends of the Boston Music School Settlement, Mr. Daniel Bloomfield, director.

We Believe:

In art for the masses; in giving children and adults an opportunity to learn, play, and hear the masterpieces of music.

In the development of personal and social resources through music.

In the development of artistic talent in children of limited opportunity.

In the value of education in music as a defense against the degrading pleasures and interests which abound in the congested districts of cities.

In the spirit of social service which stands for the encouragement of what is best in children and adults without distinction of class, race, color, or creed; for the multiplication of opportunities to improve personal character and capacity, and for the promotion of intelligent and effective citizenship.

(Copyright 1914, Boston Music School Settlement.)

BREITHAUPT'S IDEAS ON PRACTICE

BY ARTHUR ELSON

I

Dr. Rudolf M. Breithaupt, whose methods and ideas on piano study have become so prominent in recent years, is now well known by reputation in this country. He has taught many pupils, who in turn are now spreading his principles among our music students. He has himself given an outline of his technical procedure in The Musician; but for the most part his writings have been promulgated in somewhat scientific German, which is usually hard for the beginner.

It is proposed here to treat of Breithaupt's ideas on the "Psychology of Practice," under which title he has set forth principles found in the theoretical part of his *Natural Piano Technic.*

What we call soul is, in a physiological sense, a summation of all the known and unknown activities of our mental make-up. The central organ of consciousness, the brain, is in close union with sensation apparatus, nerves for transmission of the sensations, and nerves for the outward transmission of orders for movements of various sorts.

Every activity is in part impulsive, uncalculated, a matter of instinct or will, and, in part, imagined beforehand, calculated, and based on experience and association. The former characteristic is found in our simple desire to do something; while the latter factor shows itself in the amount of skill we employ. Technic is therefore based upon two factors,—the desire for it, and the experience gone through.

The cultivation of control in the human brain is a very slow affair. A very large number of trials are needed to enable a child to master even the simplest things. The process of action required is not in its consciousness at first; and after being mastered, it is gradually dismissed from consciousness to the realm of reflex action. In the same way technic should become a matter of unconsciousness, and not be thought of with any definite effort by the finished performer. Our adaptability fo developing reflex action thus spares us much effort of mind and body.

Practice, on the whole, must therefore consist of the proper schooling of mind as well as body. Breithaupt calls it a mental procedure, based on experience and remembrance; it is a "fitting for a definite purpose," with constantly increasing suitability and adaptability of the conscious and unconscious sense-impressions and nervous and muscular procedure. It is the means for refining our native and acquired abilities.

But it may be looked at from another point of view. Like every action, it is simply the overcoming of obstacles, or the development of the utmost possible ease in overcoming them. This necessitates experience,—the development of a proper conception in the brain, through various sensations of numerous attempts, and the development of the proper activity in the nerves that govern the muscles used for the desired action. Practice is psychological as well as physical.

Thus, if we were made with the mechanical precision of a perfect machine, we should be able to carry out any desired action correctly the first time, from both a mental and a physical point of view. But we are so far from this machine-like condition that many efforts are needed to bring us to our highest efficiency. The obstacles met with come from within as well as without. The hand, arm, and finger of the pianist, or the larynx of the singer, need to be exercised thousands of times before they can be trained to do their work without needless effort. Assuming that the earlier stages of practice are a conscious or unconscious imitation of others, we may meet with difficulties in any of the following departments of activity:

1. The sensory apparatus receiving the impression of what is to be imitated.

2. The nerves and nerve centers that transmit the desired impression.

3. The physical members used in execution and the muscles governing them.

4. The actual conditions of the instrument used,—an external matter for the pianist, but a physical one still for the singer, whose instrument is the larynx.

The purposes of practice are therefore:

1. The attainment of a quick and accurate mental picture of the optically or aurally conceived tones.

2. The attainment of free action of the requisite nerves.

3. The attainment of correct movements of the physical members used in execution, with due regard for the proper use of the muscles.

The chief lack in beginners, according to Breithaupt, is the absence of strict and accurate attention, or concentration. There is also a physical lack of control, an inability to perform lightly and accurately the special actions desired. The first attempts are usually failures. Even after some time there is still a tendency to over-action in movement; instead of making only the needed motions, the student will accompany them by many superfluous movements. It is true in addition, especially among singers, that many are physically unfit for the best development. This lack of capability is accentuated by the usual educational methods of training the brain at the expense of the body. The result is that very few persons breathe correctly, while all should be taught to do so. The Dalcroze School for Rhythmic Gymnastics is thus a step in the right direction.

The Breithaupt method, as described in The Musician some years ago, does its best to remedy the defect of over-action. It is based on the principle of the use of weight when possible, and a relaxation that does away with the tendency to use superfluous muscular action. This makes it especially suitable for children, whose motor activity is not so well controlled as that of adults. Here it is claimed that young girls are better able to learn than young boys, for the latter are more given to the excessive muscular activity that results in stiff and cramped conditions. The girls are more apt to be endowed with the light freedom of motion that is necessary in good playing.

Child prodigies possess this ease, which is the indispensable quality of their success. It is not so much a matter of absolute strength with them, but rather a freedom from those adverse conditions that prevent clean-cut and delicate control, both mental and muscular. They are the product of favorable circumstances. Their ripeness of mental conception is the unusual factor.

Lightness and looseness are the most important qualities to be sought for in practice. The root of all troubles is the inability to use the muscles properly, without over-straining and needless motions. A proper amount of relaxation should always be present. Whatever the needed muscular activity may be, the student should see to it that he uses only this amount of effort. A smaller amount will mean inefficiency, while a greater amount will bring the cramp-like stiffness, and probably cause needless motions of other muscles. Relaxation should be used until only the needed muscles are called into play; then, and only then, can they be trained and strengthened properly. The amount of relaxation required before the strengthening process can be undertaken with benefit will vary with the individual pupil; it is therefore a matter which demands special attention on the teacher's part.

On the mental side, the chief trouble, as already stated, is a lack of attention. Incapability of concentration is usually the difficulty with those who seem devoid of talent; for talent is not only diligent, but attentive to the point of curiosity, and always on the watch. The chief value of this quality lies in the gradually increasing understanding of one's own capabilities and powers. Practising without trying to understand what it means will not produce good results. Attention to conditions and their results is the only way in which one can learn to be at his best in performance. The will to master technic is of course a necessity; but there must also be an increasing ability to judge oneself with delicate accuracy, and understand what details of action, no matter how trifling, will gain the best effects. The more this ability is developed, the quicker will the student reach the goal of his ambition. Breithaupt illustrates this with the case of a certain singer, who once told him of an unusual success that she achieved. He asked many questions about her procedure on the occasion, and was able to show her which details of breath management had brought about the result; also his suggestions enabled her to repeat at will a success that had been unusual before that time. His advice has brought about similar development among his piano pupils.

The piano student will always find such conditions applying to himself. He will note that on certain days everything goes well; mind and decision are fresh and strong, arm and finger overflowing with strength, and nerves freely active. This light freedom of action does not depend upon the nature of the exercise used, but is rather the result of strength of will and imagination, combined with a free action of nerves and muscles. One should strive to reproduce such physical and mental conditions as often as possible. Here again individuality plays a large part.

———*———

THE MUSIC CLUB IN A SMALL TOWN

It is one of the misfortunes of living in some of the smaller towns that the social life is somewhat limited as to variety of attractions it can offer. Any town that successfully solves the problem how to get the maximum proportion of the people to engage in common social life has done much to make the town a delightful one in which to live. In fact, it is possible for a town of two or three thousand inhabitants to have greater social and cultural activity than neighboring communities of double size. Not how many people live in the town, but what they do for each other is the reflection.

The Musician received from one of its readers, Miss Christel M. Cooledge, of Ludlow, Vt., a report of an entertainment given there by a club under her direction, which indicates how useful the activities of an enthusiastic, aggressive music club may be.

Ludlow is a town of 2,000 inhabitants, not in the vicinity of any large city. Therefore it must depend upon its own people for what is to be done. Each of the five churches has a choir of volunteer singers which furnishes a strong and active nucleus for a musical organization. This club, known as "The Frolickers," gives a series of entertainments, and does much to develop the talent of the young people and to afford delightful and worthy recreation to the townspeople.

If some reader of The Musician feels the wish that something similar might be done in his or her town, the reply is ready. Someone must make a start. You be the one. It is not how many available persons your town has that makes the problem but how well you do the work and use the material offered.

STANDARDIZING PIANO TEACHING

BY HARRIETTE BROWER

(All rights reserved)

Said a prominent music lover to me recently, "I think a standard for piano teaching should be established in America; this is what we need here, and I am going to do all I can to further this end."

It has always been the present writer's thought that it would never be possible to work out such an idea, owing to the great diversity of ways and methods of teaching the instrument. That the principles upon which correct teaching and effective playing rest should be more generally understood is a state of things greatly to be desired, and one which would bring order out of confusion and uncertainty.

Consider the thousands who play the piano with considerable proficiency. Hardly two of them hold their hands in the same way, or draw the same quality of tone from the instrument, or make the same effects. One might almost make the same statement of the artists themselves. As for the army of piano teachers, what shall be said of them? Are there not about as many ways and methods of teaching the piano as there are instructors? The effort to bring order out of this musical chaos, and harmony out of the diverse ways and means of teaching music seems a herculean—it may be an impossible—task. And yet there is, as one has said, a right way out. The time will surely come when teaching systems will become more harmonious and logical.

What has led to this wide diversity in the manner of teaching the piano and its music?

Two causes might be quoted: First, fake teachers. Second, failure to grasp the essential points in piano technic and performance.

FAKE TEACHERS

America, especially, has suffered from this particular kind of trouble. There are so many varieties of the fake teacher ever among us! The girl with a little smattering wishes to increase her pocket money by giving a few music lessons. The young woman who has suddenly lost her wealth, tries to turn her dilettantism to account by "teaching music." Then there is the foreign "professor," who may be as hopelessly "old fogyish" and archaic as the veriest country tyro.

But we need not enumerate further. The name of the fake piano teacher has been legion. We are thankful to know that our land is rapidly emerging from the thraldom of such teaching; we are becoming enlightened as to the kind and value of the piano instruction we are getting; we are fast becoming progressive. There still lurks the danger that the fake music teacher, seeing our inclination to take up "new methods," will try to attract our attention with a variety of these which are not founded on true principles, and therefore will not bring about the results we desire.

TRUE ESSENTIALS OF PIANO TEACHING AND PLAYING

This diversity of method is doubtless caused by the failure of many a teacher and student to grasp what really are the true essentials of piano teaching and playing.

Let us look for a moment at these essentials, and why they are not more generally regarded. Why is it, for instance, that some teachers believe in cramming the pupils with études, while others do not. Some teachers think it essential to study technic outside of pieces, while others seem to think there is sufficient technic in the pieces themselves.

In hand position, in the manner of moving fingers and keys, in arm movements, tone production, relaxation, there is great diversity of opinion as to the manner of teaching these things and their value. One artist will tell you the whole secret of good tone lies in relaxation. But relaxation, without sufficient firmness at the proper points, will only result in flabbiness and uncertainty. So the advocate of relaxation has missed the opposite essential which must accompany it.

Another artist tells you it is absolutely essential to keep the fingers close to the keys in playing. Then all the little teachers and players hasten to follow this precept; the result is general indistinctness, mussiness, and weakness. This same artist, however, has a distinct delivery, and all the power he needs. How did he acquire these? Not by habitually holding his fingers close to the keys. In the earlier stages of his study, he used exact, even exaggerated finger movements, to acquire the necessary development and control. When these were secured, he could then make less finger exertion, for he had gained the ability to play with a minimum of effort.

It would be of lasting benefit to the profession of piano teaching and playing, if the essentials of the art were better understood. It is in this line that some sort of unity of purpose should be reached. Those who teach the piano and its music should be expected, nay, required to know what the essentials are. They should also know the mechanism of their instrument, a point sadly neglected by most teachers and students.

VITAL POINTS IN PIANO TEACHING

While it can be granted there are no fixed and fast ways and methods for teaching and playing the piano, there are certain principles of hand position, finger and arm movements, and tone production, of which every teacher should have a working knowledge. These are the things which should form a standard; the things by which the claims of a teacher can be judged.

1. A Knowledge of the Instrument. How many teachers study the inside as well as the outside of their piano, so that they know what happens when they depress a key? Do they know that the more swiftly the key is depressed the louder and more brilliant the sound; the more gradual the movement, the more beautiful the sound? Do they know just what effect the action of the pedals has upon the mechanism and upon the tone? Harold Bauer has in his Paris studio a model of key mechanism, by means of which he explains to his pupils just what happens when the key is depressed, as well as the different ways of doing this. He feels it imperative for the player to look into his instrument, and make a study of the inside of it.

2. Hand Position. It is essential to know the laws governing hand position. A normal hand should assume a rounded and arched form. Small, stiff hands may need a higher, more vaulted position than flexible ones. This rounded form is the normal one, and is first taught to a beginner; it is used for trills, scales and passage playing. For cantabile playing, the hand assumes a flatter, lower position, with more relaxed arm weight and pressure.

3. Finger Movements. The first finger movements taught a beginner are free and light, from the knuckle joint; these establish finger development, cleanness and clearness of tone, precision and accuracy. The best teachers agree it is a mistake to begin with any other touch, for a sacrifice of clearness and accuracy is sure to be the result.

4. Arm Movements. As soon as the hand has acquired sufficient firmness to "stand alone," arm movements are introduced. Here the principle of firmness and relaxation are the essentials, viz.: firm fingers, prepared to take the notes of the chord, and arms relaxed to give weight and sonority to the tone. Later on various touches for chords are used; each touch illustrates a principle of variety of tone color; these points must be understood by the teacher who attempts to teach chords.

5. Scale and Arpeggio Playing also depend on principles for their correct and artistic performance. All teachers of the piano occupy themselves with giving scales to their pupils, but how seldom are these things correctly taught! I can truly say that in all my experience I have never had a new pupil who understood the principles of the scale and arpeggio, or could play such passages with smoothness, velocity and good tone. Yet the principles are really simple: The necessary slant of the hand, the adjustment of the hand to the keys, even and exact finger movements, and the freedom of arms from the shoulder. Not so many points to teach, but how few teachers understand them, or insist on their being carried out.

It is the same with octave playing. The few essentials are ignored because not understood, and the result is a lamentable failure to produce clean-cut, rapid octaves. The pupil is usually anxious to do them, and it is not difficult for the teacher who *knows* to secure good octaves, if a vaulted hand, firm fingers, loose wrist and properly controlled arm are explained.

As has been said, these essentials, these fundamental principles underlie all correct playing and teaching; they are among the things that must form a standard of musicianship in teaching piano technic.

The suggestion to standardize piano teaching should act as an impetus to those who are teaching the instrument and its music. It is a call to investigate our manner of presenting the technical side of study, a call to greater vigilance in making sure that the essential principles of piano technic are understood.

Ask yourself: Am I teaching with the utmost thoroughness? Do I understand the principles of key mechanism, of touch, of tone production, of finger, hand and arm movements; of trills, chords, scales, arpeggios, and octaves? Am I presenting these in a way to interest my pupil, and at the same time to develop what talent he may have?

If you are doing so you will welcome the time when these principles will form the teacher's standard, when they will be understood and acknowledged wherever there are teachers to teach and students to study the piano.

Standardizing the teaching of the piano may be some distance ahead; establishing a standard for piano technic ought to be possible now! The principles of correct technic we learn from great artists and teachers, through their playing, their writings, their interviews and their teaching. I have briefly sketched some of them here. It only remains for these principles to be generally understood, accepted and demonstrated.

*

Heinrich Dorn, the composer, used to relate the following anecdote of Friedrich Wieck, the father of Clara Schumann: It was in 1849 that I met Wieck in Berlin. He had with him his two daughters, Clara and Marie, who were to play in that city. The Wiecks had brought with them a piano made by Tomaschek, of Prague, made in the Vienna fashion, and rather light in its construction. I made the remark that the instrument would fall in pieces if Liszt played on it for a quarter of an hour.

"Yes, my dear friend," said Wieck, "for several years I have said that Liszt would be the greatest pianist of his times, if he had only had a good teacher."

A LETTER TO A FORMER PUPIL

[The Musician is pleased to give space to the following letter which is, with slight exceptions, an exact copy of one which was sent by Mr. Constantin von Sternberg, of Philadelphia, to a former pupil who sent some compositions for examination and criticism. The letter admirably presents most valuable ideas on the subject of modernism, and the lasting bases of musical art. We commend the letter to all of our readers and particularly to those who feel that they have "passed beyond" the stage at which one believes in the living quality of our classical literature.—The Editor.]

Dear Friend:

Let me thank you for sending me the manuscript of your sonata for the piano. Since you asked me to express my opinion of it without reserve or as you put it—"unvarnished and straight," I am happy to say that—but for a few small matters—I like it very well, indeed. It is definite in its principal mood and equally so in the many and varying transient ones. It is also unquestionably original in the themes and motives as well as in their development and general handling, not to speak of your form.

If the "few small matters" I exempt from my praise impress me as being not really your own, you must not think that I refer to the two brief strains which—though only distantly—suggest a thought of Brahms and Schubert; they are mere chance resemblances which do not in the least militate against your originality. The two little melody blossoms occur so naturally as to convince even an ill-willed critic (lest he be also superficial) that they have grown in your own garden. They are too closely in keeping with the mood, prevailing in their respective places, to be foreign to your own mind.

From the days of your studies with me you remember, perhaps, how thoroughly I despise "reminiscence-hunting" in musical criticism. I still regard it as a vulgar "sport" and as a reflex of a mean disposition. It is only the superficial who cannot distinguish a chance resemblance from a steal.

No, no, my friend; what I refer to by "not being really your own," are a few rather discordant harmonic progressions which I dislike, not for their own sake, but because they impressed me as uncalled for where they occur. It was, alas, not left to me to discover that, like life itself, art cannot do without discords; this discovery was made nearly twenty-five centuries ago by the late and much lamented Plato. He, however, regarded them as "servants," as a help to heighten the resultant concord. We have, since his day, employed the element of discord in many ways; to express the gruesome, the eccentric, terrible, grotesque, even the funny, also to voice hatred, vengefulness, and so on; but whatever the use might be—discord is never a *purpose*, but only a *means* to one. Yet, those few discordant progressions in your sonata seem to be there for no better reason than that you deemed it your duty to do something "modernistic."

In my mind I see you smile at these last words; your smile of indulgent friendship mingled with regret seems to say: "What a pity that this Arch-progressive has turned conservative! He—too!" Ah, my dear boy, do not judge too hastily. Remember, that by being an "arch-progressive" all my life I have unconsciously developed the faculty of meeting the new in art with an open mind, one that brings no preconceived expectations to bear in judging an artistic product of any kind. Remember also how closely I keep in touch with the new music of Germany, Russia, America, France, Italy, and even England, what little there is of it there. You know, besides, from a rather recent experience that whenever I find something genuine, something that came honestly from the heart—be it a poem, a picture, or a work of music—my joy over it, very far from the austere approval of an age-calmed censor, vents itself in an enthusiasm so fervent and overbubbling that Mrs. Grundy would regard it as "unbecoming my years." And as to your case, I have no thought of advising you to play the musical teetotaler and to abstain from new, strange, and discordant progressions, from chords of the ninth, eleventh, thirteenth, if you please. Use them as well as *hexa-, omni-,* or *nulli-tonics,* cowbells, and automobile horns, if you will, but—mind well—*use them only for a purpose that requires them; never for their own sake!* Desist from these things whenever you do not feel the inward, esthetic necessity for them.

The first movement of your sonata has three pronounced themes, while the *Adagio* has only one and an episode. All right, my boy; if that is the way the form came to you, carry it out by all means! Your forms are perfectly organic. There is periodicity in them and the somewhat strong contrasts between the themes of the first movement are mellowed by recurrences frequent enough to make for unity. You see, I do not insist upon traditional forms. Why should I, when Mozart and Beethoven—who really established and developed the sonata-form—have so often set it aside, not to speak of Liszt, Brahms, Tchaïkovsky, and MacDowell, who changed it as suited their purposes? Now, whether traditional, or partly or entirely new, *form there must be!* And I am glad to see that in this respect you are faithful to my teachings. Stick to it, my dear boy, and let the modernistic fellows have their day—it won't be long. Do not covet their brief sensational success, procured by more commercial than artistic methods. Keep away from their poorly veiled artificiality. When you write, write as *you* feel, not as *others pretend* to feel. However modest or proud a place your compositions may deserve in the musical world, they will find and occupy it in spite of a thousand modernists.

You cannot fail to notice that the world just now goes through a period of unrest more general, perhaps, than ever before. Of such turbulent times it is characteristic to turn the mind of humanity from its nobler, ideal, spiritual possessions to the shallow externals of life. Little wonder that musicians of low ethics make it their "business" to re-echo the feeling or spirit of such a time without considering its transitoriness, without regard for the durability of their work, in the frivolous mental attitude of "after us the deluge," forgetting entirely that even the biblical deluge lasted only forty days. Of these mercenary time-servers each one is a specialist; one of them coerces public attention through his orchestration in which he smears the tone-colors of the various orchestra instruments together in such a manner as to obliterate completely their individual characteristics, which it has taken centuries to develop; another one writes everything in hexatonics, a third one wipes out all tonality; a fourth one declares melody to be an "outlived idea"; a fifth one sneers at form, the very life organ of music; and so on and so forth without unity of purpose, like a lot of blind ants running in every direction and expecting the beholder—the public—to follow every one of them. Each one does his particular stunt in which there is no trace of an ethical element and the people—? Why, the people go to vaudevilles, "movies" and kindred uplifting(?) entertainments because this modernistic stuff is neither responding to the feelings, nor arousing the imagination of sane and normal people. Do not point at the "vogue" of these musical externalists. It means only money and not so very much of that. Let them make their little pile and you will see them retire in good philistine fashion, like French janitors who have reached their "compétence." In the meantime the world of music remains for a short while just a little "out of joint." It is the day of those who live *from,* not *for* music. The momentary flurry of being *à la mode* must not mislead you.

You may inwardly accuse me of dwelling upon faults rather than suggesting a remedy, but you may dismiss such a thought if you had it, for I am just about to say that the most pressing need of the musical present is a Tolstoi-ish passive resistance against that scientific looking dilettantism which struts about in the pose of creating a "new art" and begins by snubbing everything that is sane, natural, and heartfelt. To bring this passive resistance about, it is necessary only to wake the general public up to the fact that it is being fooled by a lot of—supposedly "esthetic"—twaddle, talked and written solely for the purpose of making the talker or writer appear to be up-to-date and—sometimes for even lesser, but perhaps more nourishing purposes. The public is being fooled by those who profit by the present hiatus in the sequel of master-geniuses; fooled by those who find such a period propitious for their mercenary purposes and who pounce down upon everything that the greatest and sanest thinkers of the past have evolved for us. Quite human; in fact—as Nietzsche says—"all too human" that, since they cannot grow naturally into greatness, they should try to attain it by lowering and belittling their superiors. Just so do our little modernistic midgets like a savage horde, try to trample down the very fundamentals of art and to destroy the glorious gifts of a great past, to force us to believe what—after all—our heart and mind reject as untrue.

Unfortunately, these fellows caught just the right moment: a period of political, social, and religious unrest (due, perhaps, to purely cosmic causes) which explains the pause in the succession of musical men of genius; the right moment for an attempt to alienate our love and respect for genuine art, for honest ability, for painstaking thoroughness and for broad and exact learning. In exchange for these "old-fashioned" things they try to force upon us—by Barnum's Circus methods—their artistic impotence and dilettantic externalism clothed in a freakish, pseudo-scientific garb of extremeness and alleged "novelty." What with futurists, cubists, etc. in painting, and modernists and pointists in music—how long and how futile is their search after the chimera of a "new art"! How frantic their efforts! What frightful grimaces they produce! And how disgusting and pernicious their persistent portraying of perverted, abnormal and frenzied passions! Now honestly, my boy, is this art? Is it "progress"? Is it not rather an advanced stage of degeneration?

Is it not the aim of the productive and reproductive artists of the day—with very few noble exceptions—to be *new?* *New,* first of all? *New* at any cost? To produce the unheard-of, the incredible, the "dumbfounding"? To cut loose from the best models, not at maturity, but from the very start? To fly in the face of all that is logical and human? Such an aim—brazenly admitted by some of them—sailing under a counterfeit flag of "freedom"—lowers the sacred mission of art to the sillharlequinade of "fashion." This, my dear friend, this is the hysteria, the insanity which poisons many young talents, and through them most of the art production of the present; it is militant suffragettedom, anarchism in art; a mania, an *idée fi* which has become a deplorable reality.

As for the "novelty" of their new art, it is tragicomical to behold; because all that is so loudly acclaimed as new, is, in reality, very, very old; or misused and painted and powdered up into unrecognizability. The few new harmonic progressions that are worth anything and the few reasonable advances in the technic of orchestration would have come of their own accord in the normal course of natural expansion of musical culture; they require no frantic searching and no freakish subjects to which to be applied. The forsaking of form tonal and melody; the abandoning of logical thematic development corresponding with an intelligible course of human emotion—these things are an outrage

price to pay for so small a harvest which, to boot, would have come to us without any sacrifice on our part. What is really new in the "new art" (Heaven save the mark) is the *absence* of organic unity, the *absence* of such subjects as would require the much vaunted "atmospheric music," the *prevalence* of non-musical or extra-musical inspirations (if this term is not altogether too dignified for the works of this "new art") and the pernicious *striving* for "effect without cause," as Wagner so tersely said. If these things are novelties their place is not in art, but in the dime-museum or — the sanatorium.

You should, once for all, turn your back to the fallacy that progress in art requires the deliberate inventing of a "new art." Recall to your mind that progress is a general—and a biological—principle which applies not to any particular field of endeavor, but to all lines of human thought and effort alike, be they artistic, scientific, technological, mechanical, or whatever. Progress in any line is possible only through those who have completely mastered the material which the past has accumulated; who, so to speak, stand on the summit of a mountain, their eyes encompassing the whole toilsome path the past has hewn for them and who now, perceiving a still higher peak, build—though with, perhaps, improved tools — a *continuation* of that path, by which not only they, themselves, may reach the discovered heights, but on which others may follow them. How foolish it would be for them to destroy the path of the past on pretext of "progress"! Yet, this is just what the present freak musicians and freak painters are trying to do, and in which—unfortunately—they are unconsciously aided by fashionable society to which nothing is ever too sacred to be flung away for a new toy; who care as little and have as little understanding of the new as they had for the old, and whose appreciation—with few exceptions—consists of a few catchwords and slogans.

Such, my friend, is just now the sad condition of painting and of music. If you feel that you must go with the crowd"—do so; I shall not dissuade you because—oh, because water finds its own level. If, induced by material necessity, you would join the crowd, I advise you to refrain. You will be wiser and do materially better if you renounce the plaudits of the thoughtless and insincere, and write in your own way and style, without a care whether it is *modern*—which it can hardly avoid to be—or *modernistic*, for which there is no necessity. Hold a broad view of music; bear in mind its history, its function and place in life and you will not stray on your way to the summit of art.

If I thought that you would measure the love I bear you by the length of this letter I should never cease writing; but I close because you know that my feeling of musical fatherhood and my love for you and your talent can never cease while I live. I expect you to write not only different from me but also better than I did. I expect it decidedly. It was with this expectation that I lifted you upon my shoulders so that you might enjoy a wider horizon than was mine. But, however wide it may be and however far beyond your horizon your pupils may look some day, the fundamentals of art will be ever the same; the true, the good, and the beautiful. They can change no more than can the Power that keeps the heavenly bodies in their balance.

Let me close by reminding you that the function of music is neither the description nor the portrayal of *things* and *events;* its sole province is the interpretation and expression of our inner life. Millenniums of experience have proven that the ultimate secrets of life are not revealed through science, but through art and best of all through our beloved music.

With a friend's and teacher's love,

C. von Sternberg.

EARS, BRAINS AND FINGERS

BY HOWARD WELLS

HOW TO GIVE AND TAKE A PIANO LESSON

[The following is taken from the text of *Ears, Brains, and Fingers,* by Howard Wells, a new volume of the MUSIC STUDENTS LIBRARY, which is now in the author's hands for proof-reading. Mr. Wells is an American, a pupil of Leschetizky, who was located in Berlin for a number of years, as artist and teacher, where he had a high reputation as a musician and one who could impart knowledge. *Ears, Brains, and Fingers* will prove a most valuable work to the teacher, in helping to arrange and systematize his ideas and knowledge, and especially in furnishing much new and important material and methods. Mr. Wells is now in the United States, having been compelled to leave Berlin, at the outbreak of the war. He will open a studio in Chicago.—The Editor.]

THE various books that have been written to help teachers and pupils deal with the best ways of *giving* lessons, and offer useful hints regarding practising, but none give any advice to the pupil as to the way he should *take* a lesson.

One requisite at a lesson is undoubtedly concentrated attention.

The absent-minded, dreamy pupil who only half hears what the teacher is saying, and lets the hints and corrections go in at one ear, and out at the other, is well known in every studio.

If the teacher questions such a pupil regarding his understanding of some explanation that he has been making to him, he finds either that no impression has been made on the pupil's mind, or that the idea conveyed was so vague and confused as to be worthless.

Mental alertness, and the desire both to understand and retain an explanation must be as strong in the pupil, as the determination on the part of the teacher to make his explanations adequate.

The pupil should be certain at the end of each lesson that he has a definite idea of the weak points and mistakes that were mentioned to him, as well as an understanding of the best way to correct them.

He should have the determination to arrange his daily practice program in such a way that a certain amount of time is devoted every day to the correcting of these mistakes, and the building up of his weak points.

In this way the teacher will not be obliged to make the same criticism in several lessons.

There can be no vagueness in the understanding or plan of work if there is to be anything definite in the results achieved.

The pupil who shows a determination to concentrate his mind entirely on the lesson while he is taking it is in the minority. The introduction of outside matters for discussion and conversation is by no means unusual, and when a pupil changes teachers, it is generally the case that he devotes much of the time of his first lessons with the new teacher to narrating how his former teacher wanted this or that done.

On the other hand, some pupils are so fearful of the lesson time being wasted that they look upon an explanation as an interruption. Their idea of a lesson is to keep the piano "going" all the time. The natural result of this attitude on the part of the pupil is that the teacher feels he must limit himself to what actually must be said; what he has to offer the pupil cannot be given freely and spontaneously.

Of equal importance with the concentrated attention at the lesson is the teachable spirit of the pupil.

A teachable spirit is not easy to define. It might be said to be a willingness on the part of the pupil to accept what the teacher has to give him.

No good teacher wishes to have a pupil follow him blindly, without using his own intelligence. No broad-minded teacher desires to impress a pupil with the idea that his is the only method; but when the mentality of the pupil is being used to argue with the teacher, then much of the lesson time must be devoted to convincing and persuading the pupil, instead of giving him the instruction which he is supposed to be seeking.

Such pupils are generally unconscious of this spirit, as it is an inherent characteristic; but naturally there can be no co-operation between the teacher and pupil in such a case.

There is a class of so-called "advanced pupils" who like to go from teacher to teacher "getting ideas," as they express it. They almost invariably speak of their studying as "coaching," and generally desire to plan their own work.

Lessons in such instances are always a farce. No teacher can do anything worth while for a pupil of this type. The higher the ideals of the teacher, the more difficult does he find it to sympathize with the viewpoint of such a pupil.

In direct contrast is the pupil who is over-zealous in his desire to follow his teacher, and so distrustful of himself that he will not venture to do anything without the minutest directions. This over-doing of docility hampers both pupil and teacher. Such a pupil will always play like a "careful student," and, no matter what his age may be, will be spoken of as a "young pianist."

Then there is the "discouraged one" who must always be braced up. His motto is "I can never learn to do that." With pupils of this temperament the teacher has to spend a great deal of the lesson time in the cheering-up process. This pupil is a heavy burden even for the most hopeful teacher to carry.

Each studio has a "sensitive plant," a pupil who must be criticised very carefully. He often announces "You are the teacher, I am the pupil," "You need not be afraid to tell me exactly what you think, that is what I come to your studio for." But alas! for the teacher who takes him at his word! This pupil is the very one who is not willing to stand anything but the most guarded criticism.

The "silent pupil" is another type. His attitude acts as a damper on a teacher's zeal. When the teacher seeks for some indication of being understood by a pupil of this character, he is met by the most discouraging unresponsiveness. Just as a pupil must be encouraged in order to keep up his interest, so must a teacher meet with some encouragement in order to be able to put forth his best efforts.

The artist before an audience is not more sensitive to the attitude toward himself than the teacher with his pupils. It is only when he feels that they are "with him," understanding and sympathizing with his efforts that he can give them his very best work.

GUIDE POSTS

BY MARIE BENEDICT

II

THE KEYBOARD; ITS PRIMARY TONAL RELATIONS

The first guide post on the highway which leads into the land of the piano drew attention to the truth that the wonderful something which we call tone, in all its marvelously varied individuality, all its fascination of color and mood, is the magical substance of which the realm of music is made, to the truth that this magical medium of creations of beauty ineffable must be recognized through the avenue of hearing.

If we are to enter this land of the piano, if we are to know for ourselves something of its infinitely varied charm, the first thing for us to do is to acquire thorough knowledge of this entrance way, of its many movable parts, and of their fundamental relations to each other. It seems this entrance way, a far reaching bank of ivory, interspersed, at regular intervals, with ebony elevations, in twos and threes, is a place where the fairies, gnomes, and nixies of music's realm may disport themselves, may play their merry tricks upon steady-going humanity.

Each individual movable portion of this fairies' playground is connected with a sensitive string, which is set singing by the depression of that particular piece of ivory or of ebony. For convenience the term string is used in the singular, but it is understood that the keys of the piano are connected, sometimes with heavily wound single strings; sometimes with two, sometimes with three lighter, cable-like strings, or individual wires tuned in unison, sounding as one tone.

Each tone is given its distinct personality by its difference of pitch from any other tone in the entire range of the piano. In other words, its tonal personality is due to the difference in rate of vibration per second of that particular string, from the vibration rate of any other of the great family of strings upon the piano harp. The more rapid the vibrations the higher will be the tone. The pitch is lowered in exact proportion to the diminution of vibrations, which diminution is in mathematical ratio; the lower tone of the octave interval having just half as many vibrations per second as has the upper; the intervening tones having each its proportionate number.

Now, if we examine the relative position of the ivory and ebony piano keys (or "digitals") we shall find that the tone C belongs to the ivory key (or "digital") which, in each octave, lies just at the left of, that is just below, the ebony group of two. We begin with the lowest C (contra C) in the deep bass, and we find (sounding the ivory keys only) a definite order, reiterated in each octave: C D E F G A B in the Contra octave; C D E F G A B in the Great octave; C D E F G A B in the Small octave, C D E F G A B in the One-lined octave; and the same order of progression, always on the ivory keys only, through the Two-lined, Three-lined, and Four-lined octaves.

These seven tones, which come from the seven ivory keys (C D E F G A B) are the natural, or primary tones; as the seven colors of the rainbow, red, orange, yellow, green, blue, indigo, violet, are the seven primary colors. As the varying tints of color are derived from the seven primary constituents of the rainbow, so the sharps and flats, the varying tints of tone, are derived from the seven primary, or natural tones.

Now let us examine the keyboard in slightly different fashion; taking a complete octave, from C to C. Still considering only the ivory keys, we shall find that E and F and B and C are tonal pairs, the members of which stand in closer relative position than do the members of any other immediately connected pair of the octave. Between E and F there is no intervening ebony key, consequently, no intervening tone. Between B and C there is the same intimate relation. The tones E and F, and the tones, B, C lean toward each other; are distinctly closer together than are C D, D E, F G, G A, or A B. Sound these different pairs of tones, again and again, and teach the ear instantly to recognize the indefinitely closer relative position of E F and of B C; the definitely wider space between C D, D E, etc.

The difference in pitch, in other words, the sound distance between any two tones is called an interval, a space between. We have tonal intervals, as we have intervals of space and of time. The interval between C and D is called one step. D E, F G, G A, and A B are pairs separated by the same difference in pitch, that of one step. Between E and F there is a half-step, and the same close relation exists between B and C.

In the music alphabet, there are but seven letters. In the diatonic scale there are but seven different tones; for the eighth, which completes the octave, is but the higher repetition of the first of the seven diatonically related tones.

An octave is the distance from any tone to the next tone having the same name. For example, from C in the treble, to the next above, or to the C next below.

Now let us note the relation between C, and the tone which speaks from the ebony key that touches it upon the right. It is the same as that existing between E and F, and between B and C. In other words, the difference in pitch between the tone which speaks through any ivory key and that of the tone which speaks through the ebony key which touches it, is a half step. Keeping this in mind, the location of the sharps and flats is the simplest matter imaginable. The sharp, which derives its name from any primary tone, is always found one half step above that primary tone. The flat, which derives its name from any primary tone, is always found one half step below that primary tone. Thus, C sharp speaks from the string, if we depress the ebony key, which stands just at C's right. The tone which we call D flat, speaks from the string, when we depress the ebony key, which stands just at D's left.

Just here, we come upon an interesting fact in the life of the piano, and of all keyboard instruments, viz., that the same string (or pipe) and as its outward representative, the same ivory or ebony key, must be more than one enharmonic character. That C sharp must sometimes take the name of D flat; that D sharp must now and again be known as E flat; that E natural sometimes masquerades as F flat; and so on through the list.

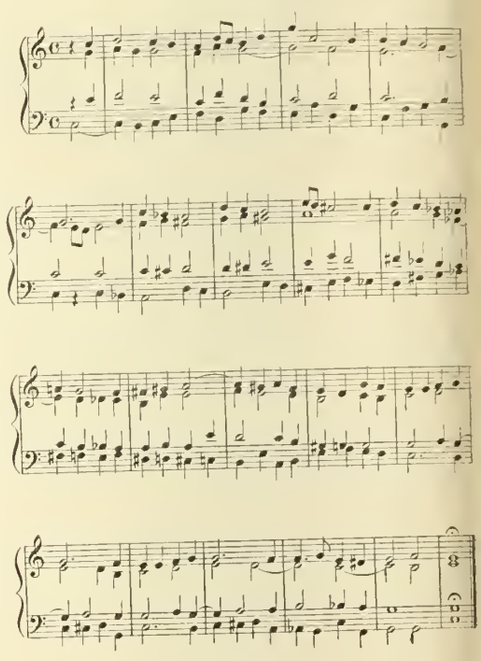
In the absolutely true scale, there is a slight difference in pitch, about a quarter step, between C sharp and D flat. In attempt to give to the harpsichord or clavichord (the piano's predecessors) this absolutely true scale, the instrument makers of the sixteenth or seventeenth centuries devised a keyboard, in which the keys corresponding to our ebonies, were divided each into two separate and independent keyboard members, each having its own string; one of the two sounding the sharp, the other sounding the flat. This keyboard proved too complicated for practical use, and was abandoned for the former mode, which is still in use.

This necessity that the same string shall appear in different enharmonic rôles, that F sharp must sometimes sign itself G flat, and so on through the list, makes it impossible to put the piano in perfect tune; and develops the skill of the tuner in so adjusting the temperament, so dividing the inevitable balance of discord, that the most effective result shall be obtained.

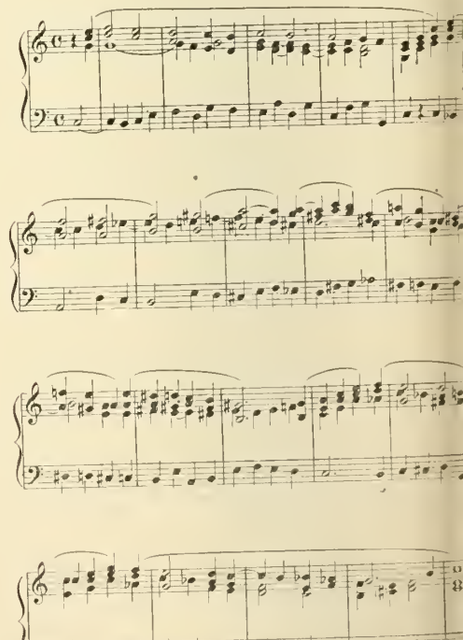
A HARMONIZATION TEST FOR READERS OF "THE MUSICIAN"

On page 580 of The Musician for September we printed a bass which was put before a class of French pupils at an examination last summer, and asked our readers to harmonize the same, stating that in The Musician for October we would give the harmonization by the author, Mr. Eugène Cools, one by Dr. Percy Goetschius, of the Institute of Musical Art, New York City, and one by the Editor of The Musician, the idea being to show the differences in treatment which will occur to various persons. The harmonizations follow:

EUGENE COOLS



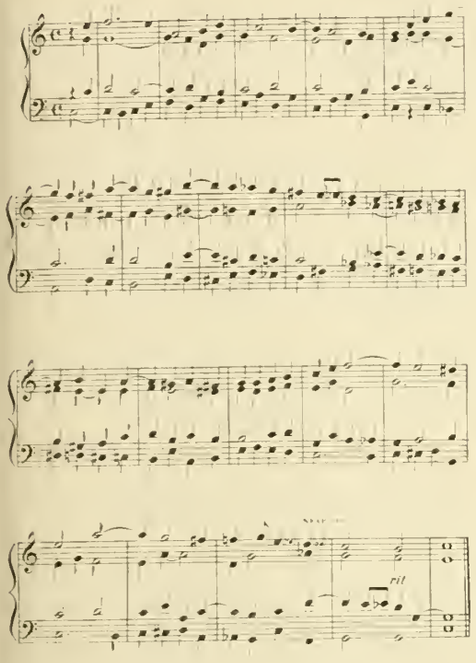
PERCY GOETSCHIUS



In the next to the last measure, second brace, sharp before the D, in the alto, should be omit Do not overlook that the soprano note is F♯. sharp enclosed in parenthesis in the next to the measure is optional.

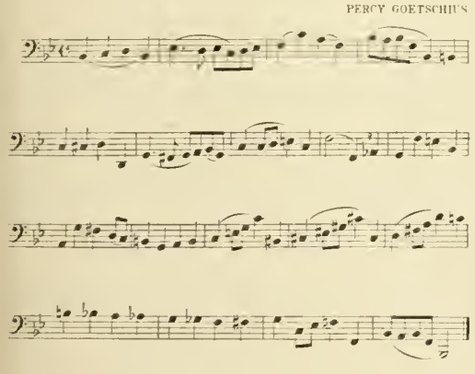
The third version, by the Editor of The Music has two harmonizations in the next to the last m ure, that is the last two notes may be E and D Eb and Db, the last chord in the measure forn what is commonly known as the Neapolitan S progressing to the Tonic, second inversion.

W. J. BALTZELL



The following bass is offered for harmonization by Dr. Goetschius. Only one chord is to be written to a group in the bass marked by a slur. Note the sequence in measures 12 to 14.

PERCY GOETSCHIUS



LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

PAGEANTS, THE TEACHER'S OPPORTUNITY

Now that our country is fully awakened to the possibilities of the pageant in civic reform and rural community betterment, the importance of the rural music teacher cannot be exaggerted.

Music, the dance, and costuming, these are the three absolutely necessary essentials for the presentation of that series of dramatic scenes or incidents in the history of a community which makes the pageant drama and nothing is more pleasing to the pageant master, when he enters a town to study its possibilities for a pageant, than to find, in that town, music clubs whicl have been started by the teachers. For the clubs and the schools are the avenues through which he approaches his end.

Many of our towns have already had pageants. Eventually every American town will have its pageant, out of which will grow co-operation of many new and unexpected kinds. Indeed, so helpful has the pageant proved in bringing about better conditions in rural districts that the agricultural colleges have instituted courses in pageantry, and one of the strongest appeals made to the students in these courses is that the music teachers in the rural districts everywhere will organize and keep up music clubs.

To make her work a factor in improving conditions for the farmer, the dairyman, the storekeeper, may be a new idea for the music teacher, yet this is what we can do.

WHAT THE AMERICAN PAGEANT DOES

Our American pageant differs from the English in that the English pageant always stopped one or even two hundred years back, believing in presenting only historical incidents which had been well mellowed by time. Our American pageant brings town history right up to date, and even beyond, pressing into the future, presenting dramatic pictures of those things which we *hope* for, and are trying to bring about, as well as those things which have actually happened.

The dominant element in our present is Hope, and we are using the pageant to encourage the accomplishment of the live things; for, as Mr. W. C. Langdon, president of the American Pageant Association, said the other day.—"Anything that is once put into a distinct form actually *happens.*"

It is good for the pageant faithfully and artistically to depict the past history of a town, its growth and development; but better still for it to go further and present new ideas for still greater growth and development in the future To prove this Mr. Langdon told of five different pageants which he said were typically pageants of the "new country life," each of which accomplished for its community some definite thing of which that community was greatly in need.

The first, at Thetford, Vt., Mr. Langdon called the "Farmers' Pageant"; the second, at Saint Johnsbury was "The Pageant of the Metropolis"; the next was at Meriden, N. H., and an "Educational" one; that at Darien, Conn., was devoted to "The Commuters"; and the last, at Cape Cod, in August he called "The Pageant of Unification." Each of these pageants had something definite to accomplish, and, by the careful combination of music, dancing, and costume, accomplished it.

THETFORD

Thetford was one of the least prosperous towns of its state, and it was chosen just because of its way of living and doing, as a test of what the pageant could do for a town. The first appeal which the pageant made was through the depicting of the industry of those forefathers who had settled the town, and the splendid dreams of these long-dead ones of what the town would one day grow to be. Then was made the appeal to the slumbering ambitions of those present by visualizing for them an idyllic Thetford, a Thetford possessed of all the modern and progressive qualities which the real Thetford did *not* possess. Chiefest among these was "The Town Day." That was in 1911, and each year since then Thetford has had a real, busy, bustling "Town Day." The pageant had "put it into a distinct form" for them and it *happened!* This is the way in which the rural music teacher is helping her community.

ST. JOHNSBURY

St. Johnsbury gives us a musical instance. When Mr. Langdon began to work on the pageant for his city there was no orchestra available. There were, in the place, seven or eight little "dance orchestras," among which existed much of the petty jealousies common to their kind. Each disliked the other, each leader was ready to score a "beat" on the other leaders; there was constant underbidding, sometimes even one band would "do a job" for nothing rather than let one of the others have it. Wonderful as it seems the pageant brought all these factions together, made them into one excellent orchestra, and now St. Johnsbury has a permanent Symphony Orchestra, in which the members work together in perfect harmony. I think nothing else could have accomplished this.

In this same pageant Mr. Langdon proved that local talent is to be given a chance. One day Mr. Langdon went to an entirely unknown, untried musician in the town, and said to him, "I want you to write the music for this pageant." Young Mr. Peters first laughed, then got scared, declared emphatically that he simply *could not* did not know the first thing about writing pageant music, and considered it silly even to say he would try. Mr. Langdon quietly laid the scenario before him and said—"I'll be back tonight to see what you have done on it."

On his return he said Mr. Peters grinned and held out to him the now well-known "St. Johnsbury Pageant Hymn," one of the most beautiful ever written.

The rest was "plain sailing." Knowing the townspeople, its history, customs, and needs, a scenario made on these by a master hand is inspiration enough, and the music comes. So that, in these music clubs of yours, you may be cultivating that very talent for composition which will be ready for *your* pageant when the pageant is ready to use it. Always encourage writing music among the young people of your clubs. It is a charming way of celebrating local events, of paying tribute to old age, or observing birthdays. Let it be a feature of your clubs next year.

The rural music teacher can help too in the vocal work. It is generally agreed that the rural volunteer choir is the most difficult proposition in the world. Perhaps the greatest triumph of pageantry is bringing these small choirs together, helping them to lose sight of all pettiness in the larger issue, giving them the strength and importance of the greater work, and broadening the outlook of each by the sinking of the individual in the big and beautiful whole. Fifteen hundred people took part in the Cape Cod Pageant (truly a unification). Dance rehearsals were held in four different places on the Cape; and choral rehearsals in every single town in preparation for the grand work together.

It is work like this which gives music its true place and dignity. Music should not be held a thing apart, or be relegated to the idle hour. Do all you can, through the pageant, to prove to the unmusical how very necessary and helpful music is, and that it is one of the strongest factors in civic reform and in rural community betterment. There is no reason why music should not go hand in hand with farming and shop-keeping and the rest, just as well as science. It is best for music as well as for the others that this should be so, and it behooves us to watch for every possible opportunity to bring this to pass.

The following books on pageantry will interest the readers of THE MUSICIAN:

1. The Pageant of the Little Town of X—, published by the Civic League, 3 Joy Street, Boston; price, five cents. 2. The Celebration of the Fourth of July by means of Pageantry, Russell Sage Foundation, New York; price, fifteen cents. 3. Pageantry of Independence, by Stevens, Actors' Guild, Railway Exchange Bldg., Chicago; price, thirty-five cents. 4. Patriotic Plays and Pageantry for the Young, by McKay, Henry Holt, New York. 5. Several books on pageantry, by Percy Mackaye.

WHAT is the art of reading at sight? In this: To play the piece in the proper tempo; to give out all the notes, ornaments, etc., with the appropriate expression and taste, just as they are, so that the hearer will believe that the artist himself composed what he is playing.—*Mozart.*

THE PROFESSOR TALKS ON A TEACHER'S ACQUIREMENTS

"Well, Professor, I am very glad to see you," said the Editor; "glad that you have not hearkened to the call to fight for the cause of *Vaterland,* or of *Patrie,* or of 'Hearths and Homes,' as the case may be."

"Halt, there! my dear boy; do not, I beg of you, cast any doubt upon my nationality and sympathies. My nation is the U. S. A., my sympathies are with all who suffer, and the one unique cause for which I am ever ready to fight is Music. So, begin; tackle me as you will and I will defend the good cause. What is the topic today?"

"What, in your opinion, Professor, are the principal requirements for a pianist—artist or teacher?"

A good natured smile lit up the Professor's face as he replied: "I really expected you to ask me something harder, for the answer admits of no doubt. Whether for an artist (that is, a solo performer on the piano) or for a teacher the requirements are absolutely the same, namely: Talent, technique, intellect, medical knowledge, emotion, and imagination. In the case of the teacher a knowledge of musical pedagogy should be added."

"Do you mean me to understand that, to be successful, all teachers of piano must possess all these acquirements?"

"Not at all, my dear boy. Every kind of teacher may be obtained by forming various blends of these acquirements. Everything is relative. The best teacher will possess them all in the highest degree. Since he is a master of technique he will be able to play difficult passages and to analyze compositions at the piano for the pupil's guidance. A teacher who cannot do so must, perforce, have recourse to a player-piano to illustrate to the student how it is done! I have heard of some who do this! A rather risky proceeding; for the pupil who can reason will inevitably come to the conclusion that it is expensive and unnecessary to have both the mechanical piano and the untechnical teacher. Besides which, he will quickly perceive that, while the player-piano can illustrate how the passage should sound, it cannot show how it should be fingered: and the smooth playing of the passage depends upon its fingering."

PROFESSING IS NOT DOING

"But you are probably aware, Professor, that there are very many teachers who are unable to play, just as there are many teachers of singing—a vast number of them—who are unable to sing?"

"Of course," answered the kindly pedagog in what, for him, seemed to be a most cutting tone, "I know quite well that there are a great many persons who *profess*"—and on this word he concentrated all his scorn—"who *profess* to teach, without being able to play or to sing, as the case may be; but," he continued, bringing down his hand emphatically on the table, *"they can't do it."* Then he added, maliciously: "Just think one moment; is there anything under the sun that *can* be taught *perfectly,* without showing how it should be done?" The Editor, after a pause, admitted he could think of none. "Very well then," said the Professor conclusively, "pianoforte playing and singing are not exceptions to the rule."

"But," again objected the Editor, "surely you will allow that talking machines or graphophones are of immense service to singers?"

"Most decidedly they are. They give various renderings of songs and operatic arias by various popular singers, each giving his or her own interpretation; they supply the inexperienced student with varying models of style and interpretation. But that is all; the records do not teach how to sing or how to play. If they did there would soon arise a generation of singers having a peculiar quality of voice caused by imitating the sound of the machine; so that when some one asked: 'What is the matter with Jones tonight?' instead of receiving the reply, 'He is singing too nasal,' the answer would be, 'He has got the needle'! But do not let us become frivolous.

INTELLECT AND IMAGINATION

"Moreover, it should not be forgotten, except in cases of respect for classical traditions, that style and interpretation are entirely personal attributes, depending upon the artist's intellect and powers of emotion and imagination. In like manner also the teacher's success depends very greatly upon his intellect and power of imagination. You may observe that I do not mention emotion again, for the very good reason that it is included in imagination; so that it may be said that the power of imagination is always greater in those who are more susceptible of emotion."

"It is easy to understand that he who possesses all the endowments and acquirements you have mentioned (namely: Talent, technique, musical knowledge, intellect, and imagination) ought to prove an excellent teacher or an artist of the first rank, but there are surely many capable teachers who are not equally endowed?"

"That is what I meant just now, when I said that every kind of teacher may be obtained according to the degree in which these endowments and acquirements are possessed. Take, for instance, one who has talent and technique; I can easily imagine him to be a showy performer of the pyrotechnic class, but neither a musician nor a teacher. Many combinations may be formed; few of them satisfactory. The teacher without talent (here meaning special fitness and taste for teaching) cannot produce successful results; one without intellect—that is, musical intellect—might love the art but be unable to teach it; and so forth. The greatest of all teachers will be he who combines talent with intellect and imagination and who has a fair amount of technique."

IMAGINATION THE GREATEST GIFT

"The part that imagination plays in the art of musical composition is readily understood; but Professor, I would like to hear what it has to do with teaching—elementary teaching. Do you mean that it is necessary to arouse imagination in the mind of a child—say, between five and twelve years of age?"

"Most certainly," replied the Professor, with great decision. "That is the right age to awaken the dormant faculty which exists in every child's mind. But the very first requisite to accomplish that is that the *teacher shall possess the gift of imagination.* There are a great number of confectioners who make candies, who do not like them and who never eat any; and there are a great number of music teachers who give lessons without liking music and without ever playing or singing or going to hear its performance. Such teachers, like the candy makers, are merely practising an occupation which they try to make as profitable as possible financially. Instead of trying to do well for music, they are trying to do their pupils well for themselves. To do this a musical imagination is not necessary; whereas to do well for music and for the pupil is the chief need.

"The teacher has to employ all his intellect to endeavor to fathom the mind of the young beginner, to discover its turns and twists, its likes and dislikes, to learn the kind of language (of metaphor, of simile, of parallel, of descriptive story or illustration) that appeals most to his imagination; then, having found the diapason of the child's mind, he must tune his own imagination to it; he must imagine explanations and invent attractive stories and picturesque phrases in tune with that diapason, so that even the dry skeleton of technical studies—five-finger exercises, scales and what not—may take on life and color and attractiveness.

CAPTURE THE CHILD'S MIND

"And the teacher must have so fertile an imagination that he may invent the exact imagery that can be thoroughly enjoyed and understood by that particular child. It may not be appreciated by another. Other images have to be conjured up, like the constantly changing figures of a kaleidoscope, always different yet always with the same materials. Herein lies the whole pith, the vitally essential part, of the successful teacher's art."

"But what about the other musical attributes?"

"Of course, he must have them. You cannot build a house without the materials and you cannot cook a dinner without the ingredients. But if you possess not that invention which the power of imagination gives you, your house will be unsymmetrical and your dinner tasteless. Therefore, the teacher must have *talent* (or aptitude and taste for teaching), *intellect* (that is, intellect trained in musical knowledge), some degree of *technique* and *imagination*—and the greatest gift of them all is IMAGINATION."

"Do you think, Professor, that the teacher's power of imagination is productive of any other benefit to the child?"

"I do not think about it, my dear Editor, I know it is. Imagery properly expressed in fitting figures and by picturesque phrases acts upon the youthful mind—yes, and upon the adult mind—like a lighted match upon inflammable matter. The teacher's inventions will invest each new study with added interest, not before seen by the student; the latter's own imagination will take fire and, ere long, will flame forth with its own individual force. Then the teacher will have accomplished the *summum bonum* of his art: he will have lighted the torch of art in the student's mind which, properly fed, will never be extinguished."

TO EXCITE IMAGINATION

"That is all very beautiful and undoubtedly correct, my dear Professor; but how, for example, would you put it into practice with very young people? How would you communicate to their young minds precepts and practice against which they are prejudiced in their childish way?"

"It must be confessed, my dear boy, that I much prefer the virgin soil of their youthful intellects in which to plant the seeds of knowledge. Children like novelty. Anything new easily captures their wandering imagination. Music introduced to them in the way I have indicated may be made an amusing change from their regular studies. Of course, I speak only of those who have what is termed 'a taste' for music: those who have none should not be subjected to the torture of having it forced on them. After having captured their psychical personality, as already described, entertain them with the first attempts of our great masters at musical

utterance. Give them the example of Mozart expressing the joys of his mind and the first outpourings of his heart in radiant melodies. Then play and sing the young Mozart to them—a child like them, a composer of only eight years of age—and bring home to them all the grace, lightness and charm of the music.

"Explain to them that music can express all our joys and sorrows. Do not fear to contrast Mozart's graceful gaiety with a painfully pathetic movement by Beethoven. Being ignorant of the subtleties of the mind, children are more alive to the value of contrasts than to the force of argument or the wisdom of axioms. Antitheses appeal to them with peculiar power. Under the ægis of the true masters of music their intellects will soon become acute enough to perceive the principle of the universality of musical language.

AVOID VULGAR, RAPID STUFF

"Frequent examples must accompany the lesson, great care being exercised in the choice of subjects. By the use of similes and metaphors, show them how pleasant and yet how powerful is musical expression; let them see the heights and depths, the enchantment and enthusiasm and the wonderful uplift of the mind, all made possible by musical imagination. But keep from the vulgar, rapid, ill-written stuff which arrogates to itself the name of 'popular music,' only to trail music in the mud. If

(*Continued on page 707*)

NOTES ON THE MUSIC IN THIS ISSUE

HERE we are again, just getting into our stride in the matter of musical education. Some of us have seen this period come quite often. Have we learned the lessons this recurrence can teach us? Are we better and stronger in our work as teachers from year to year? Have we revised and increased our teaching material as the course of years has rolled on? As students, have we tried to better our skill and increase our knowledge?

Whatever we may think as to our successes and our lapses, the fact remains that we now have a fresh opportunity to work out the best that is within us. This year we may make an effort to add new and better material to our teaching repertoires. We should be alert to every chance of this kind.

Have you ever tried to find the value which the music section of THE MUSICIAN has to your work? If not you are missing a big part of the value of the magazine. Our effort is to present to you helpful and interesting material to use with the great number of pupils of average skill and moderate musical ideals, those whose executive ability is comprehended between the latter part of Grade II and Grade IV. The latter level of attainment represents about where perhaps eight out of ten pupils discontinue lessons.

If we were asked to indicate where teachers can best afford to work for their own interests as well as for the good of music generally, our answer would be: Try to keep your advanced pupils at work another year. But in doing so you must show them indubitably that they will make progress by keeping on with their instruction. The material used must be such as to induce progress.

Now just a few words about the musical numbers included in the present issue:

Autumn, Op. 81, No. 1, by Frederick A. Williams, shows this successful composer in a somewhat new light. Generally his pieces have had marked technical features. *Autumn* emphasizes the poetic, descriptive side of composition. It is really a tone-poem, and is intended to strengthen the pupil's feeling for expression in music. The melody is to be brought out very clearly, not always an easy matter when the chords are full, as is frequently the case. Use a broad tone, full and resonant in quality, especially in the louder passages. It will pay to observe carefully the fingering as given. Use the pedal to broaden and sustain the harmonies.

Chatterbox, Op. 31, No. 2, by Emil Rhode, is a light piece for young players, mostly in two and three-part harmony, with much staccato. Hold the arm weight lightly and easily balanced. Commence rather slow and increase the tempo as you learn the piece by sections. Then when you put the different sections together you will have the piece almost up to the suggested tempo. Note that the time mark calls for *two* beats to the measure, the beats following each other *allegretto.* Don't make the mistake of thinking that a quarter note gets one beat.

Gipsy dance, Op. 149, No. 6, by Lichner, is selected from the standard teaching repertoire. It is particularly useful to train the fingers of the right hand to rapid playing. Generally each phrase is within a five-finger position, with perhaps a few extensions or contractions necessary. The piece has been carefully fingered with a view to working up high speed. Commence slowly and then increase the tempo regularly, say one-third faster at each higher speed, and, as mentioned before, do this by sections, so that the fingers may profit by repetition. Pupils can well afford to spend several weeks on this piece.

Light of heart (*Coeur leger*) (*Chanson humoristique*), by Paul Waehs, is for four hands, and should prove an attractive number to use with the ensemble class. Both *Primo* and *Secondo* players have interesting parts, the opening melody being assigned to the latter. The *Primo* player must be careful to play the chords, in the opening passages, with a light staccato touch, the two notes to each hand exactly together. Yet these chords must not be loud, as they are only accompaniment, and not tune. The *Secondo* player, on the other hand, is to use a full, broad tone, as if a 'cello or trombone were delivering the theme. Don't forget the spirit of the piece as indicated by the title. You must have in your mind something you wish to realize in your music. A light, joyous heart or mood is easy to portray. Here is a good piece for a recital program.

The sylphs (*Les sylphes*), Op. 2, No. 1, by R. Spaulding Stoughton, is a clever little drawing room waltz for moderately advanced players. The music generally lies easily under the fingers, although rapid, facile action is demanded of them. If you have a pupil whose playing is rather heavy and logy, try him with *The sylphs.* The title itself suggests so much lightness, sprightliness, and grace that any pupil will be reasonably certain to catch the correct mood at once. The passages in eighth notes, as in the first, third, and fifth measures, etc., are generally within an unchanged hand position, that of the octave. Only one impulse in the way of attack is required for the full phrase. This is what promotes the required lightness.

Shepherd's song, by J. P. Ludebuehl, is for the youngest players. It is simply a pleasing little tune for the right hand, with a plain accompaniment for the left hand. In measures 9-12 notice that the thumb plays the dotted quarter note; pass it from one key to the other smoothly, and without a "thump," as the new key is struck. This is a charming little piece for a Junior Recital program.

Evening song, by J. P. Ludebuehl, is a companion piece to the one just reviewed. The melody is played by the left hand in a number of measures. Do not take this in waltz tempo, but somewhat slower, and give the shorter notes their full value. The other pieces of this useful little set of very easy teaching pieces are: *Album leaf,* in G, *The gipsy band,* and *Tarantella,* in D minor.

Dream of the shepherdess (*Traum der Sennerin*), Op. 45, by August Labitzky, is not a new piece to some, nevertheless it has the merit of special attractiveness and consequent usefulness as lesson material for pupils who are not familiar with it. It is in the popular Tyrolean style. Incidentally we may add that very good talking machine records may be had of this number, as played by instrumental combinations.

Petite valse, by Wassilli G. Wrangell, a Russian composer, is for use with advanced players who have developed a facile finger technic. The editor, Mr. John Orth, a well-known pianist and teacher of Boston, has set the tempo at 80 dotted half notes to the minute, which, in this case means 80 measures to the minute; as there are only 92 measures in the piece, performance will require only a little more than a minute, since the *meno mosso* in the middle of the piece is balanced by a corresponding *accelerando.* This speed is rather high. Commence at one-half the marked rate and increase it by phrases.

Throwing kisses (*Kusshändchen*), Op. 127, by Carl Heins, is a typical example of this popular composer's fine handling of dance rhythms, in this case, the mazurka. The piece is full of interest from the point of view of the player as well as the hearer, and will repay careful study. Technically it calls for fast finger work, broken chord playing, and broken octaves, all useful drill for modern music. This makes an attractive number for the pupils' recital program.

Sunset, Op. 46, No. 2, by Alfred Tofft, arranged for the organ by Harvey B. Gaul, is the work of a Scandinavian composer. It is intended to show the resources of an organ in the way of solo stops, and therefore can be made a study in frequent changes in the way of registration. We recommend it as a good number to use in a concert or Sunday evening recital program.

O Jesus, every thought of Thee, a sacred song, by William G. Hammond, is the work of a popular composer, in every way equal to compositions previously issued. It is a setting of a favorite church hymn, marked by simplicity of style and sentiment. The church singer who aims to bring out and emphasize the thought of a text will find this a song in which she can please a congregation. And best of all the words can all be sung clearly with ease. This song can be had for medium voice in G.

Sing a song of roses, by Fay Foster, is a bright, piquant song, somewhat in the old English style, with charm of melody and sparkling rhythmic effects. It is an excellent teaching song for first year pupils. In one or two measures, the higher notes must be taken without straining, much as the voice makes a rising inflection and consequent higher pitch without increase of effort. Keep this principle in mind when you have trouble in singing your higher notes without forcing. For low voice in Bb.

Thoughts of you, by William Stickles, is a lovely little song, easy and singable; makes a desirable encore. The climax near the end can be made admirably effective if well managed, and sung with appropriate breadth. For medium voice in Ab.

BE SURE TO READ THIS OFFER

We will place on the list of THE MUSICIAN, for a period of six months, the name of any pupil who plays or sings in concert or recital between the present time and Jan. 1, 1915, any one of the pieces in the Music Section of THE MUSICIAN, September--December, 1914. Send us a program listing the piece, and names and addresses of teachers and pupils.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

THE AMERICAN OPPORTUNITY

INDUSTRIAL America has been told that a great opportunity is before it. American products, from the farm and the workshop, will be needed by Europe. Our shipping interests have been told to wake up and try to regain the once vast overseas trade which our country once possessed.

When we turn to the musical field the condition is somewhat different. We have nothing in the way of music—except possibly a certain number of artists, which Europe will need. The question now is for us to show that an enforced isolation from European musical influences will not hurt us. Let us examine the conditions as they are likely to affect us.

Germany, Austria, France, and Russia, nations which supply much of the foreign music, musical instruments, and many of the opera and concert artists for our musical seasons, are in a state of war, in which the interests of the art are bound to suffer. Between the time of writing this note and when it reaches the eyes of readers, Italy, once the home of music and still an art-producing nation, may be joined in the conflict.

Here are some points in which the conditions which have prevailed for the past few years must be greatly affected:

1. American music pupils, studying in European conservatories and under private teachers, numbering thousands, have been compelled to return home.

2. American pupils, also numbering thousands, had planned to go abroad this fall to place themselves in schools of music and private teachers. These will naturally remain at home.

3. American teachers—not a small number, either—who have made a place for themselves in European cities as successful pedagogues, will find it advisable to return to their own country.

4. Foreign artists, men particularly, may find it difficult to get out of their country, even granting that patriotism does not prove powerful enough to hold them there.

It really seems almost unnecessary to enlarge on the thought in the four paragraphs noted above. Every thoughtful and observant musician will readily see the bearing of the conditions cited upon American musical education. The special thought to which we wish to call attention is the golden opportunity to set ourselves more nearly to realize that musical independence which has been preached to us of late, an independence which all true American musicians must wish to see come about.

By independence we do not mean that American musicians, artists, music, composers, etc., shall be, under all conditions, sufficient for the needs of the country, but that we shall never again feel so dependent upon European art as we did in past years. We shall receive it with delight when it is genuine and has something to teach us; we shall honor the true artist, but we shall not make a hero of him to the injury of our own.

But to return to the conditions in education that confront us. The pupils who return from abroad, at least a considerable number of them, will want to keep on with their studies. They will therefore seek the studios of American teachers whom they once overlooked in their eagerness to seek the much vaunted musical atmosphere of Europe, or in their blindness due to the glamour of the prestige which was attached to a pupil of Herr A—— of Berlin, B—— of Vienna, Mons. C—— of Paris, and Sig. D—— of Italy. Perhaps a year from now many of those pupils will be thankful for having been obliged to put themselves under American instruction.

The pupils of the second class will, in a measure, remain another year under home teachers, a certain proportion going to the larger music centers such as Boston, New York, Philadelphia, Chicago, etc. This will represent a distinct gain and a magnificent opportunity for American schools and teachers. If the work is done with thoroughness and with the clear insight which distinguishes the best American teaching, we need not fear the comparison. As a result, when next fall comes, pupils may say, "What's the use of going to Europe now?"

It will be a gain to us if those Americans who have won high reputation abroad come back to us and add their force and teaching skill to the cause of American education. An improvement such as we all hope for will keep them here.

If the number of foreign artists is decreased, we hope that American audiences will be disposed to give a fair, unbiased hearing to our own artists. The difference in merit may prove to be less than many have thought; in many cases it has ceased to exist. Our wish is for a splendid success for the American who takes his art seriously and always labors to add to his artistic stature.

One word more: Progress in American music education finally rests upon the work done in the smaller communities. The need here is for some man, some woman, or several, for that matter, to make up their minds that they will be leaders in their community, and do such splendid work that local pupils will be slow to think that they must go elsewhere to finish. New York is a great center, but not all those artists who hail from New York were "finished" there. Chicago is a great center for music education, but other Western cities have sent of their best to the metropolis on the lake.

The cities of 200,000, 100,000, even 50,000 population, must set to work to strengthen and extend their artistic borders. The ambitious, sincere musicians of such cities must set to work to improve their technical skill, their professional knowledge, their teaching power, their personality, so that their towns may become real, progressive, and satisfactory centers for educational and artistic work in music. They must never cease to study, for that is the key to growth.

WHAT MEN LIVE BY

EVERY man and every woman with a thinking brain and a capacity for finding meaning in life will want to know how life can be made more useful and beautiful. The writer of this note wishes to tell to every reader of THE MUSICIAN of a book, bearing the title which appears at the head of this note, by Dr. Richard Cabot of the Medical School of Harvard University. It is a physician's contribution to the conduct of life. Out of the cures tried by men and women in all ages, Dr. Cabot selects four: Work, Play, Love, and Worship. These should run side by side through the whole span of life, like four colors in the rainbow.

For the purposes of this review the writer will restrict himself to Dr. Cabot's discussion of the first two sections, Work and Play, as being specially applicable to the musician, and still more so to the music teacher.

Music teaching is work; to call it a noble work, as some do, does not lessen the actual troubles, physical and mental, that arise. It simply gives an attitude of mind through which one minimizes the unpleasant features of his "job," to use one of Dr. Cabot's terms. Here is a happy definition of three terms which represent the dominant elements in our lives: "In play you have what you want. In work you know what you want and believe you are securing or approaching it. In drudgery no desired object is in sight; blind

The SINGER and His ART

A FEW SIMPLE STATEMENTS ABOUT THE VOICE AND ITS CULTIVATION IN AMERICA

BY GEORGE CHADWICK STOCK

I

THE great material want of nations is food, shelter and raiment. The supreme spiritual want of nations is God and music. God is in music. God is in the heart of humanity. He is the truth; He is the source of all life, of all rhythm. He is the source of all inspiration and of highest worship.

In music individuals feel influences that impel and encourage advancement towards ideals; in the case of nations, towards ideal civilization. Music is the handmaid of God, the monitor of worlds and of nations.

The American people, like other peoples of civilized lands, feeling the all-powerful and irresistible appeal of spirit to spirit, of music to morals, and of music to human love for it, are moving in mysterious ways, yet with certainty toward a more perfect morality and a deeper love and appreciation of music.

We are in tune with the Infinite, and so, notwithstanding the shock of worlds, the clash of nations, of systems, and of opinions, the trend of human travel is eternally upward.

MUSIC IN EARLY AMERICAN HISTORY

In the early history of our national existence we were occupied with swords, bullets, and the making of our daily bread. We had no spare time in which to arouse, strengthen, and develop the latent capacity for music that existed in the nation's heart. Consequently music received very limited attention and the teaching of it was primitive and fragmentary. Nevertheless, the kernel of love for music, implanted in human hearts, though no larger than a mustard seed, contained *the Life*. It could afford to wait until the rush was over.

When national growth, wealth, and leisure permitted the turning of attention from rigid commercial pursuits to the fine arts, music was the first of the arts to receive attention. It was taken up with an enthusiasm characteristic of the American spirit. Subsequent developments have proved that we are not only a music loving people, but one giving promise of becoming foremost among the musical nations. Our musical interests have scarcely kept pace with our material development, nevertheless our advancement musically has been encouraging and on a sure foundation.

A quarter of a century ago music took deeper hold in America, and from that time on progress in music has been remarkable.

"It is generally supposed that program concerts in America were unheard of until well along in the nineteenth century. In view of such belief, it is a matter of considerable interest to know that London gave its first public concert in 1672, but it was not until 1728 that a continental city, Vienna, followed its example. The earliest public concert in our country, of which we have record, took place in 1731, a date which proves that our interest in professional musical performances is practically as old as that of any of the great continental cities of Europe. This interest may not have kept along with the material growth of the country, but its development has been both healthy and substantial."

It is not within the province of this article to relate in detail the growth of musical interests in America. The purpose of it is to make clear to music students and to vocal students in particular, that splendid advantages for instrumental and vocal study are obtainable in our own United States.

As musical matters stand at the present time in America, all departments are as ably represented here as in Europe. How fortunate that such is the situation.

A terribly unfortunate and uncalled for European war makes it impossible for music students to go to Europe or to remain there probably for some years to come. There is but one country of first importance left for the music students of the world to turn to for musical education, and that is the United States. Doubtless many who will visit America for the first time have heretofore considered Europe as the only place affording the advantages of a thorough and liberal musical education. They will find that they have been laboring under a wrong impression, for in America will be found every want in music ably supplied.

Twenty-five or thirty years ago the vocal branch of music in America was in its early stage of development. The comparatively few Americans who taught singing exclusively were doing excellent work, but they had opposed to them a superabundance of opinion and inclination in favor of European vocal training. The yearly failure of great numbers of naturally well-endowed American singers to "make good" abroad finally brought about a revulsion of feeling in favor of the American teacher.

American standards of vocal performances and vocal training today are easily equal to the best. For American singers the American vocal teacher is incomparably superior to the foreign. This fact is not new to men and women who keep in close touch with the condition of vocal matters of the world, but it may be to some of the younger American aspirants for vocal honors who credulously listen to the faint echo of a call that once beat loudly and ceaselessly in American ears: "European training for voices!"

For the sake of those who may yet entertain lingering doubts about the efficiency of American training for our American singers, they believing that foreign methods of vocal training are well-nigh faultless, a few truths are herewith presented for thoughtful consideration.

THE GOLDEN AGE OF SONG

In the first place: There is or was a world-wide notion prevalent that during the so-called "golden age of song" in Italy no blanks were ever drawn. That is to say, everyone who studied with the old masters sang perfectly or gloriously, achieved distinction and all the rest of it. The ancient method of training was supposed, or asserted, to be so complete and so unfailing in its application as to preclude the possibility of failure. It is to be stated in this connection that only those whom the old masters considered as having exceptional gift of voice and musical talent were accepted by them as pupils. Furthermore, the best voices from all over the civilized world flocked to these old masters. They had, then, the choicest vocal material to work with. This is more than a considerable help to any teacher or any method. The story runs that quite all of these pupils became able to do the most wonderful things with their voices, astounding the populace by marvelously skilled performances, executing trills, roulades, and cadenzas *ex tempore* at an astonishing rate. The high notes sung by singers of olden days were said to be extraordinary and far beyond the capacity of modern singers. Furthermore, the beauty of quality of the tone of these singers, it is recorded, "surpasses description."

In such laudatory strains do we find the condition reported as regards the "golden age" of song. The truth has no doubt been told, but not the whole truth. In all ancient chronicles fact and fancy are about evenly divided. Despite the many points of attractiveness of the art of singing at that time, its development was along narrow lines and within a limited sphere of action as compared with the boundless reach and comprehensiveness of modern views on singing and vocal training. Of this more will be said later.

Let us look a little more closely into some of the ancient writings and traditions, for there is information not ordinarily touched upon that will throw a stronger light upon ancient singing times, revealing conditions as they actually existed in the days of the so-called lost vocal art, that period of song once commonly thought to be unalloyed with mediocre teaching and inferior singing performances.

"About 1659 Francisco Pistocchi established his great school of Italian singing at Bologna. Before this, says an old writer, 'they used to howl like wolves.' The singers of present times are at least some hundreds of years distant from the influence of such crude vocalizing."

"It is a situation lamentably to be recorded that the number of really excellent artists is diminishing from year to year. Interest in the heavenly art of song seems no longer to be on fire with enthusiasm. Voices do not prosper, some fail miserably."

"Superb natural voices founded on great natural feeling for music succeed with little training. The weakness of masters is revealed in inability properly to direct and bring to full fruition the voices of singers of lesser gifts and talent."

"Singing as a fine art is disappearing. Among the many who study, few appear as artists."

Statements of this character are found among old records; those above quoted are translations of writings made in the latter part of the seventeenth century.

The chronicles of old have a familiar ring, for they are not unlike the tales that occasionally emanate from the lips of dubiously inclined lecturers, and from the pen of fault-finding critics of present times, who furiously fire fatuous fusillades of denunciation upon modern vocal training and singing.

(*Continued on page 707*)

PET PHRASES OF TEACHERS

BY BERNHARDT BRONSON

THE singing teacher's profession in America, partly through carelessness, partly through the influence of rank charlatanism, has become cluttered up with innumerable terms and phrases supposed to have a true bearing upon the technic of the art. Some of these are more or less individual or personal in character; others have crept into the general terminology.

"GROOVE THE TONGUE"

While many of them are merely figurative and do no real harm, others again have a decidedly pernicious influence in that they convey erroneous impressions to the mind. They magnify the importance of something purely non-essential. Let us take for instance the well known phrase "groove the tongue." As this is a specific direction the pupil conceives the idea that there must be a groove or depression in the center of the tongue, and his mind becomes occupied with the thought that he must bring about this condition. He may find it easy or he may find it difficult or impossible. Still the thought will persist and harass him, perhaps for years, until reason comes to his rescue.

He then begins to realize that the groove or depression in the tongue so long sought and to him so desirable in his case means absolutely nothing; that his struggles to attain it have been decidedly detrimental to his progress as well as injurious to his voice.

Observation on the part of his teacher would have saved him all this had not he too been obsessed with the importance of it. When will teachers learn this lesson? Common sense is too often thrown to the winds.

The "groove" in the tongue, when it does exist, is a purely spontaneous condition and varies in shape and size in different individuals. In some it assumes a "cup shape," while in others it is a straight groove.

Where the "groove" occurs spontaneously it is desirable, for the simple reason that it is the natural condition of quiescence in that particular tongue. It would be just as foolish to attempt to remove the groove in this tongue as to try to produce the "groove" in the tongue which lies flat when in a natural state of repose.

As a means to an end the "groove" means nothing. In itself it has no bearing either on tone quality or resonance. The wise teacher excludes the term from his teaching vocabulary.

The ideal position for the tongue on open vowels is the low position of repose where tongue and jaw drop together as one. The edges of the tongue do not spread themselves over the upper surface of the molars, but the whole tongue is gently depressed within the oval of the lower teeth. Its upper surface is about even with the tops of the molars. Its tip rests gently against the backs of the front teeth.

In this position it lies compact but flexible (grooved or flat as the natural case may be) ready instantly to obey the command to form consonant or changing vowel. Investigating fingers beneath the chin should find relaxed but flexible muscles, yielding to the touch but not flabby and inert. Inertia is as bad as extreme tensity.

The problem for both teacher and pupil is to bring about this condition; for the pupil to experience a conscious sensation of the correct position of the tongue and the conditions attending it.

There are various ways of accomplishing this, one of which is to use a hand mirror, first visualizing it, and then looking off and allowing the mind to study and *dwell upon the sensation.* Then reverse the order and try first to experience the sensation, afterward verifying it in the mirror. Gradually the pupil gets *mental* control of the muscles which govern the tongue and it comes under the domination of the will. When, after a few days of silent work with the hand mirror, sufficient mental control has been acquired so that the tongue will obey the thought of relaxed quiescence, the pupil may begin trying tones.

The vowel shade "aw" is good because it requires a low position of the tongue and an open mouth (dropped jaw), and is round enough in character to insure against "whiteness," which in singing is a term used to define lack of *color* (French, *timbre*).

It is assumed that the pupil has been instructed regarding the principles of breathing.

Upon phonation of the vowel "aw" it is important that the tongue should *not* rise. Its duty is to do *nothing.* If it rises the conception of attack and support is wrong. The cause of a bad tone here is a tense tongue, but the causation (the cause of the cause) lies in the wrong conception of attack and support, and the attention should now be directed *away* from the tongue and *centered* upon the breath. Gradually co-ordination is gained, and the tone improves. Better and broader conceptions of what good tone really is and what the ultimate result should be take possession of the pupil. He becomes self-critical. He begins to develop himself. He knows that effects are the logical results of causes.

In this way does psychology help the teacher, not in having his pupils indulge in vague imaginings of effects that are perhaps impossible of attainment, but in helping them to realize the necessity of common sense and reason.

The use of technical terms is of inestimable value to the teacher, provided that they really have a vital significance.

OTHER TERMS

The phrase "in the mask" is better than the word "forward" in referring to tone placement, because it conveys a sense of location. It expresses exactly the idea of *where* the tone should be placed.

The words "place" and "placement" have been objected to on the grounds that they convey the idea of "doing something with the tone." Of course they do. A singer *should* be able to do things with his tones. What does he train for? Why does he spend years in acquiring a technic? A finished singer "does wonderful things" with his tones. The use of the term "place" is therefore justifiable.

The term "color" has likewise been condemned because "it is ridiculous to say that sounds can be red, or blue, or yellow." Of course it is. But the term "color" in music is quite different in meaning. It applies to the aural sensations produced by different sound waves.

Tones are characterized as "dark" (French, *sombre*) or "bright" (French, *claire*) or "white" (French, *blanche*). Visual sensations of color never enter the mind of the musician in connection with music.

Teachers of singing find technical terms indispensable, but they should be careful not to make use of terms, the exact significance of which they cannot explain.

THE TREMOLO AND A REMEDY

[The following question was received at this office and forwarded to Mr. H. W. Greene, with the request that he give it his attention.—The Editor.]

"WILL you please explain the cause of the tremolo and its remedy? Proper placement of the voice and breath control does not seem to help. I have a pupil with a strong mezzo soprano voice, who is unconscious of the fact of a very decided tremolo. What is to be done in such a case?"

The cause of the tremolo cannot be found to be identical in all cases. Primarily we must take up the nomenclature. The word "tremolo" does not mean to one person what it means to another. We must select carefully our use of the terms which describe the fluctuation of the vocal tone. They are: Tremolo, vibrato, flutter, and wave.

There are many who do not differentiate at all when they hear a tone that is not steady, but dispose of it by employing "tremolo" as a generic term covering all irregularities of tone. The members of the vocal profession are becoming more clear as to causes and effects of tone irregularity, and are beginning to employ the terms that more nearly describe the effect from the standpoint of the cause.

Let us begin with the flutter of the voice. It is a disagreeable jarring effect that indicates utter ignorance as to the emission of tones, accompanied by a pressure that corresponds with the desire to produce a tone as loud as possible. One rarely hears that irregularity in a professional singer.

Next the tremolo. The cause of the tremolo in the majority of cases is similar. Success in correcting it is elusive because its nature is not understood. In fact, it is a combat between right and wrong, or, differently expressed, it may be said that it is caused by two groups of muscles attempting to perform a duty that should devolve upon but one. Again, differently expressed, a tone that is making a sincere effort to assert itself through its most natural control is made irregular by the involvement of muscles that have no right to be employed in the making of the tone. An illustration of this could be given in the part of a tenor who is singing an "E" flat. The voice left to itself might sing it somber, or somber clear, or open, according to the natural pitch of the voice. The muscular control for the open is entirely different from the muscular control of the somber clear or covered. Purely somber the tone would be steady; entirely open the tone would be steady; but with a mixed employment of muscles in that place there might easily result a pronounced irregularity of the voice which would be properly called the tremolo.

The vibrato is the term that should be employed to describe the effect which one hears in all professional singers. It is the result of freedom of the vocal organs, and usually accompanies what is known as correct tone emission, or a good method. Because it is associated with the freedom of the organs it is very liable to swing too widely, often times to such excess that one gets the impression of a faulty intonation. This can be easily corrected when the method is being formed, by the pupil taking the matter in hand and allowing the tone to vibrate but little.

The wave of the voice is almost identical with the vibrato, except that the curve of the vibration is very much longer and less abrupt. In some voices this effect is fine. The wave or the vibrato, which we consider the artist has the right to employ should be as much a part of his equipment, and as definitely under his control as stress or pitch.

Nothing tends to weaken the voice so much as an over-use of the vibrato; nothing can be worse for the voice than the tremolo, but the vibrato, controlled that it can portray the thought or mood is one of the singer's most ideal vehicles of artistic expression.

The pupil in question can only be corrected of the tendency to too much tremolo through her own initiative. Five minutes at a time once or twice a day, attempting to sing a perfectly steady tone on different parts of the voice on different vowels if persisted in, will correct the tendency and bring the vibration under control. If the pupil's method is not fixed and safe the effort to correct it will fail.

THE BYWAYS OF THE ART OF SINGING

BY S. CAMILLO ENGEL

II

ORNAMENTATION (EMBELLISHMENT)

LEST the gentle reader think that the trill and other embellishments are antiquated and need not be studied any more, let me remind him of the long trill at the end of the third act of *Siegfried*.

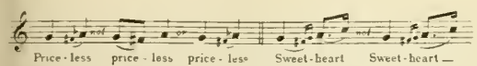
I also call attention to *Die Meistersinger*, the pages of which abound in ornaments of all sorts. This fact, I believe, sufficiently proves the undying vitality and importance of the embellishments, and, such being the case, their study is self-evident.

The embellishments used in singing are the accented *appoggiatura* preceding a note, the unaccented one following it, the double *appoggiatura*, the turn (*gruppetto*), and the trill.

The sources of my information will be found in the works of Agricola and Philipp Emanuel Bach, both of the eighteenth century. According to these authorities, the accented appoggiatura is either long or short. If long, it is variable; if short, unvariable. But, be it well understood, it is they that receive the accent and not the note to which they belong.

I. THE ACCENTED APPOGGIATURA

Being part of the value of the principal note to which it is united, the syllable underlying the main note must already be sung on the appoggiatura if it precedes, and extended to it, if it follows.

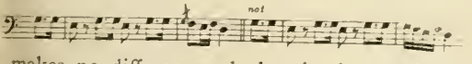


1. The short, or unvariable, appoggiatura, also called *acciaccatura*, stands, as a rule only before short notes.

2. Likewise must the appoggiatura be a short one before a note on the unaccented beat. In both cases it must be sung very short taking away as little as possible from the value of the principal note.

3. Before triplets, too, the appoggiatura is invariably short.

In the air of Figaro, *"Non più andrai"* sing:

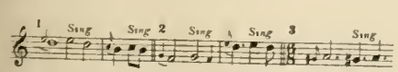


makes no difference whether in the vocal score the appoggiatura has a dash through the stem or not. Under the above three conditions, it is always short, just as it is always long (though of variable length) if found under the following conditions:

1. Placed before a note the value of which can be divided by two, it receives one half the value of the principal note.

2. If the principal note is a dotted one, the appoggiatura gets two thirds of its value and the principal note gets the value of the dot.

3. But this does not apply to the dotted half note in 6-8 or 12-8 (which is duple time), in which case the appoggiatura gets again half the value of the principal note.



In singing a long appoggiatura, always use a delicate portamento from it to the principal note. Exceptions to this rule are:

1. If the melody consists of two consecutively rising thirds, the appoggiatura is always short.

2. But if followed still by another one, the last appoggiatura is long.

II. THE UNACCENTED APPOGGIATURA

On account of its resemblance to the slide, the student must be very careful not to mistake one for the other.

Whilst the unaccented appoggiatura forms part of the preceding note, from the value of which it takes away as little as possible, the slide belongs to the note before which it stands, and though also to be sung very rapidly, its first note is emphasized, comes *on* the beat and not *after*, as in the unaccented appoggiatura.

The music of Bach and Handel abounds in this kind of ornaments.

III. THE DOUBLE APPOGGIATURA

The double appoggiatura is formed by an accented appoggiatura from below, followed by an unaccented one from above at any convenient interval.

IV. THE TURN (GRUPPETTO)

There are three kinds. 1. Starting with the lower auxiliary note.

2. Starting with the upper auxiliary note.

3. Starting with the principal note.

V. THE TRILL

Besides the generally known, rapid, and even reiteration of two tones extending over the time value of the principal note, there are four other kinds.

1. The Mordent.

2. The Double Mordent.

3. The Mordent with unaccented appoggiatura (after beat).

4. The chain of trills, that is, a trill extending over several successive notes:

Observe well the difference between the *tr* and the signs above the note, as there is a difference in the meaning of the two.

Frequently the trill will be introduced by a slide, in which case the trill starts with the auxiliary note:

or a double appoggiatura, when the trill begins with the main note:

In the older music, mostly all long trills start on the auxiliary note.

In conclusion, I may recall Schiller's noble words, "It is death to stand still in any human endeavor, but most surely so in art."

To **build up** and bring to full fruition the latent *talents* and *powers* of the vocal student it is *essential* to bring *intelligence* and *reason* to bear upon a *consistent* and *practical* course of training.
On the physical side this means preparation leading to *strength* and *endurance* so that the voice *will meet uninjured* the demands made upon it by the *works* of the *great masters*.
On the æsthetic side it means the training of the ear to appreciate the beautiful; the acquirement of skill and taste in the use of *tone color*.
Altogether it means the training that wins a *mastery* of the *technique* of the *art*.
I want to *hear* from *earnest students* who are in *search* of *this kind* of training.
Milwaukee is a city of 400,000 and offers exceptional musical advantages.
Symphony Orchestra of its own.
Three great Oratorio Societies.
Series of 10 concerts by Chicago Symphony Orchestra.
Season by Chicago Grand Opera Company.
Is visited by nearly all the great artists.
If you are interested write to me *now*.

THE LITTLE PIECE AND THE LITTLE SCALE

BY MATHILDE BILBRO

A PERT little Piece, with ruffles and frills,
And ribbons, and laces, and warbles, and trills,
Put on many airs,—was rude without fail,
And turned up her nose at a plain little Scale.

The little Scale smiled as she went to her play,
And said "Little Piece, who are *you,* anyway?
You may think you are Something, and make much ado,
But I'm very much more important than you!

"You haven't a sign of a family.
And twenty-five Scales are related to me!
One Scale can make Pieces like you by the dozen.
Why, child, you were built from my own First Cousin!"

TWO MUSICAL GAMES

BY LAURA ROUNTREE SMITH

No. 1. TO TEACH POSITION OF NOTES ON THE STAFF

The children stand in line.

The Leader stands by a screen on which is a staff containing the treble clef.

On a table near are black paper notes to be pinned on the staff.

The Leader nods to any child in line and says,

"The note is 'C,' find its place,
On the staff, in line or space."

The child goes up to the staff and pins the note on line or space. The children all say,

"'Tis a pleasant thing to place,
Singing notes on line or space."

The Leader has the same note placed again and again until it appears on the staff and on added lines or spaces above and below.

When a child fails, another is called on.

The Leader may call for notes until the children have built up a whole scale.

Notes may be placed on the bass cleff in a similar manner.

No. 2. TO TEACH NOTES ON ADDED LINES

The children stand in two lines. They march forward and back singing to the tune *Comin' Thro' the Rye*:

If you ever chance to journey
Far in Music Land,
To the staff some lines are added,
You must understand,
See the treble clef above,
On lines read, A, C, E,
Below the bass clef on the lines
E, C, A, you will see.

The Leader goes through the lines carrying a banner on which is a staff, containing letters, A, C, E, on added lines above the treble clef, and E, C, A, on added lines below the bass clef.

The Leader points to any child in either line and asks quickly for notes above the treble clef on added lines or notes below bass clef on added lines.

The child must answer correctly or go across to the opposite line, or out of the game. The Leader at any time may call another child to take his place.

Call attention to the fact that the notes on the added lines above the treble clef are the reverse of the notes on the added lines below the bass clef.

THE SAD LITTLE SCALE-SPIRIT

BY ELIZABETH A. GEST

FAR away in the land where the Spirit of Music lives, and where the Spirit of Melody lives, there is another little elf called the Scale-Spirit, and his name is Scalia.

He is a very sad little spirit, for he thinks that nobody loves him. "Oh," he would say, "if people only loved me, as they love Melodetta, the Spirit of Melody!"

He did not see the Spirit of Melody behind him, and thought that he was alone. But Melodetta heard his complaint, and felt sorry for him. "Of course people love you," she said.

"Oh no, it is not true," answered Scalia. "Everybody on the earth loves you and the Spirit of Music; for everybody loves to play and hear beautiful music, but no one likes to practise scales," said Scalia, sadly.

"But just think how important you are," said Melodetta. "No one could ever learn to play such beautiful music without you. Think of all the wonderful piano players in the world, and all the violinists, and the singers—they all love you because it was you who helped them to become what they are."

"Oh yes," said Scalia, "but think of all the children! They do not like me, and they are the very ones I love, and want to help. That is why I feel so sad."

"What makes you think they do not love you?" asked the Spirit of Music, who had been listening to the conversation.

"I have heard them say so, over and over again," answered Scalia. "I heard Betty Blue tell her teacher yesterday that she just *hates* scales; and Billy Brown says they are worse than measles; and Miss White says every day that she can not get any of her pupils to practise scales. And I would love to help those children, if they would only let me. Now, do you wonder why I feel so sad? Indeed I do not know what to do about it."

"I tell you what we will do," said Musica. "Tomorrow when we go down to earth to take the songs to the lark and the music thoughts to the composers, we will whisper in the ear of every child we see, and tell them to practise their scales, and promise them that if they do that Scalia will love them, and help them to become wonderful players when they grow up."

"Oh, I will be so glad if you will tell them so," said Scalia, smiling.

"Indeed we will," said the Spirit of Melody, "we will whisper in their ears, as we go by, and they will not see us, and will not know who spoke to them, but they will go home and practise faithfully, and you need not feel sad any longer."

And Scalia felt so happy he could not speak, but went away singing to tell the stars; and the Spirits of Music and Melody filled their arms with lark songs and beautiful music, and jumped on a cloud boat and came down to earth.

And they whispered a tiny whisper in the ears of each child, and told them how the sad little Scale-Spirit loved them, and wanted to help them.

JOHN SEBASTIAN BACH

[This is an essay prepared and read at the Music Club by Veda Leonard, aged nine, Newtonville, Mass.]

JOHN SEBASTIAN BACH was born in Germany in 1865.

His father was a musician, and John dearly loved music. When he was ten years old his father died and John went to live with his brother, who was an organist. This brother gave John lessons on the piano; he learned

very rapidly and could soon play as well as the organist himself. His brother had a book of fine compositions, which he kept on the shelf and would not allow Bach to touch. But Bach thought that if he could only use this book he would learn all the faster. One night when the house was still John rose and tip toed downstairs and got the book. He scampered back to his room delighted with his good fortune. He wanted to copy every note of the music, but he had neither lamp nor candlelight, and as he could only work by the light of the moon it took six months to finish copying it.

Although he played well on the violin and piano he was most skilful on the organ.

Before Bach's time people had only used the three middle fingers in playing, but Bach introduced the use of the first and fifth fingers as well.

His best known work is the *Well-Tempered Clavichord;* and he is the best known writer of fugues. He was called "the father of Muses."

Bach died in July, 1750, and left behind him the most perfect organ compositions the world can ever hope to possess.—Veda Leonard.

MASTER HARRY ALLEN

This is a portrait of a little boy who learned to play the cornet before he learned to read or write, who learned to read notes before he learned his A, B, C's. He has appeared in public many times, plays for clubs most difficult selections, although he is still so small that a cornet is really heavy for him to hold. He likes best to play with his cornet resting on his father's knee.

WITH THE MUSIC CLUBS

THE MUSICIAN'S CATECHISM

What do you seek?
Fortune. (For tune.)
How do you weigh your motives?
In scales.
What medicine do you take?
A tonic.
What do ambitious aspire to be?
Dominant.
What note helps you in the dark?
The leading note.
What do you use at dinner?
A (tuning) fork.
What kind of work is yours?
Manual.
Which note unlocks your door?
The keynote.
With what do you secure your boxes?
With chords (cords).
What is your advice to boys?
B sharp.

MORE TALKS BY MISS BROWNING

ORATORIOS

"So you went to hear *The Messiah*, Dorothy?" said Miss Browning. "I am so glad you had the chance to hear that wonderful music."

"Yes, indeed," said Dorothy, "it was wonderful and beautiful. But why do they call it an oratorio? Isn't it just a concert where people sing and the orchestra plays?"

"If you can stay a while after your lesson, Dorothy, I will try to tell you about it. Marion has gone away for a week, and so I have nothing to do in this next hour."

"Of course I can stay," said Dorothy. "I do love stories, and if you tell it, Miss Browning, I am sure it will be just like a story, even if it is all true."

"Well," said Miss Browning, when Dorothy's piano lesson was over, "a thousand years and more ago there were a number of centuries which are sometimes called the Dark Ages, when almost the only persons who knew how to read or write were the monks who lived in the great convents which flourished at that time in all the countries of Europe. Even the kings and great nobles usually could only put crosses or other marks for their names when they had to sign important papers; and, indeed, if they had known how to read, the only books were the rare and precious manuscripts which were kept safely locked up in the monasteries, and of which copies were slowly and carefully made with ink and pen by talented scribes, who often spent their whole lives at this kind of work.

"Printing was not yet invented, and outside of the monasteries the only way the people had of learning anything was through the preaching in the churches and the stories and legends which from generation to generation were told by the old to the young. The royal courts had their minstrels, who put into verse and recited histories of the great deeds of the nation's heroes, and the common people also had their singers and story-tellers, who were always certain of interested listeners.

"But to uneducated audiences a story acted out before them on a stage is much more impressive and entertaining than the mere recital of events or description of scenes and personages; and from the earliest times of which we have any records there seem to have been some sort of attempts at dramatic representations. In those so-called Dark and Middle Ages there were companies of strolling players who wandered from city to city and set up movable theatres in the streets, where a crowd was sure to gather, or acted out their scenes in the courtyards of old inns, where the guests and travelers could command a good view of the performance from the surrounding galleries.

"These primitive plays were on all sorts of subjects, and were often very coarse and vulgar, as well as grotesque, in spite of the fact that they were frequently founded on stories from the Old and New Testaments and the lives of saints, or were allegories designed for instruction in religion and morality; showing the punishment of evil and the rewards of uprightness and good living.

"The Church soon realized that these performances were a much more effective means of teaching the people sacred history, and of putting before them examples of morality and good behavior than the mere reading of the Scriptures in the churches and the preaching from the pulpits by the monks; and so the Church early took these primitive dramas under its protection, purified them from the absurd stories and traditions, the comic personages and vulgar dialogues, and made them a means of education and moral training.

"These early religious plays were called *Mysteries, Moralities,* or *Miracle Plays.* They were usually associated with music, and it is from these primitive performances that the modern oratorio has been developed."

"But why," said Dorothy, "are they called oratorios?"

"Oh! yes," said Miss Browning, "that was the question you asked. Well, it was because a good monk, who was a great preacher and a devoted lover of music, thought so highly of them as a means of instruction that he had them regularly performed in the *oratory* of his church; and so they came to be called oratorios.

"These early oratorios were, even when given in the churches, performed with scenery, costumes, acting, and even dancing on a regular stage; for at first an oratorio differed from an opera only in the fact that a Biblical story or moral allegory was taken for its subject, instead of a tale of love or heroism, as in the opera. Have you ever heard an opera, Dorothy?"

"Oh! yes, indeed," said Dorothy, "two—*Pinafore* and *Die Meistersinger*. Uncle Frank took me both times."

"Well," said Miss Browning, "and which did you like best?"

"Both," said Dorothy promptly. "They were both best."

"I think so, too," said Miss Browning, laughing. "Now, some Saturday afternoon when all the girls are here I will tell you something about the opera; but this is enough for today. So, goodbye."

A HARMONY PARTY

BY ELIZABETH A. GUEST

ONE night, long after midnight, when the rooms were dark, and the pianos were all closed, the chords had a tea party. They had been very busy all day and were tired and wanted to have a good time.

Tonic Chord came first—Tonic Chord always was good at starting things—and then the other triads soon followed. Tonic Chord had a lovely disposition, and every one loved her, but tonight she was *so* tired. Willie Smith had treated her badly at his lesson, and she really had a headache. "Willie Smith is so stupid, anyway," said Tonic Chord.

"He certainly is," said Dominant; "he doesn't know the difference between me and Subdominant yet, and Miss Brown has told him over and over again. Really it is distressing to be confused with Subdominant. We are not at all alike, are we, Subdominant?"

"Not in the least," answered Subdominant. "I never did like Willie Smith, anyway, for he told Miss Brown that I reminded him of pink lemonade, and I considered it an insult."

"Oh, that's nothing," said Diminished Triad; "Tommy Green told his teacher that I reminded him of cheese, because every day you think you will like it, only you never do. These children certainly are hopeless. I will be so glad when they grow up and treat us with respect."

"Well, I don't know," said Supertonic. "Strauss is grown up and he does not treat us with respect."

"Oh yes, he does," contradicted Leading Tone; "he does make us work very hard, but it is rather interesting. He even makes us meet harmonies face to face that we never used to associate with at all. It is rather wearing on one's nerves, and I am always worn to a frazzle after he is through with me, but it is rather interesting, after all."

"Yes, that is true," said Augmented Fifth; "he does make us jump around, but you know it is getting to be all the style now. Everybody is doing it, and it is lots of fun."

"Maybe you think so," said Dominant Triad; "but you always were very modern in your views. Now I am more conservative. I do hate to have my third doubled in the bass, and every first-year pupil I know does it to me. I'm sick and tired of it."

"Oh, well," said Subdominant, "it is much better to have your third doubled in the bass than to be mixed up in parallel fifths and octaves."

"No it is not, either," contradicted Dominant.

"Well, I think it is, anyway," said Subdominant. "There is nothing worse, in my opinion, than to be mixed up in parallel fifths. It always causes feeling on some one's part."

"It is a hard life we have to lead, is it not?" said Diminished Seventh. "But it does not pay to get mad every time our feelings are hurt, or we would be mad 'most all the time."

"I should say we would," said Lowered Third; "for I just hate to be moved up instead of down."

"And I just hate to be moved down instead of up," said Leading Tone; "so you see we are just opposites. But I suppose it would be rather tiresome if everybody always wanted the same thing."

"Dear me," said Diminished Fifth; "it is almost daylight, and Tessie Green will be here for her lesson in less than four hours. I really must go and get some rest, for I know she is going to treat me badly today."

"And I must go, too, for as I said before, I have had a headache all day," said Fundamental Triad. (Fundamental Triad is the same as Tonic Chord, you know.)

So the chords all went away to rest, before sunrise and daylight, when the pianos would all be opened again, and the lessons would begin.

Are you going to treat them badly at your lesson today?

THE REAL MEANING OF "ALLEGRO"

THE actual meaning of the term *allegro* is "cheerful," from which you can form some idea of its application in musical expression, but its proper significance relates to the speed to be used in playing any portion of a piece of music which is marked *allegro*. The *tempo*, time, of such portions is between *andante* and *presto*. Various words are combined with *allegro*, as *molto, con brio,* which indicate a quickening of the time; then *allegro moderato,* or *non troppo,* meaning a slower time. Perhaps you never thought of it, but with an orchestra the size of the hall in which it plays, and the number of instruments playing influence the time at which *allegro* is taken.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

HEINRICH WILHELM ERNST — 1814-1865

BY A. WALTER KRAMER

We allow all too many centenaries to go unnoticed. We are apt to pay homage only to those men who through epochal symphonies or vitally gripping music-dramas have made their names household words. The men who, in special fields, have been the greatest representatives of their particular period, are often forgotten except by the few who chance to be working in their field years after.

The present year is the hundredth anniversary of the birth of one of the greatest violinists the world has ever produced. For on May 6, 1814, Heinrich Wilhelm Ernst was born at Brünn, in the province of Moravia (Mähren), Austria. How often does one hear him spoken of as the "German Paganini!" But Ernst was not a German; he was an Austrian and though he spent his life traveling all over Europe, and died at Nice—Henri Guillaume Ernst, the French delight in calling him—he was essentially an Austrian.

It is said that he heard Paganini in 1830, and was so enthusiastic about him that he followed him from city to city with the desire to study his style. In 1832 he settled in Paris for six years, appearing in public there with great success. Schumann wrote of his art with praise of the highest kind when he appeared in Leipzig. London became his home for very nearly the remainder of his life, after he played there in 1844. But he was the nervous type of artist, the type subject to all the varied emotional changes which abound and some years after he had to give up playing in public. His playing, if we are to believe those who heard him, was notable for a technical excellence of the highest order, a splendid deeply-felt tone and a truly passionate style. Virtuoso alone he was not, though he surmounted every obstacle that lies in the path of the supreme performer with success.

Ernst's musicianship is proved by the fact that Joachim thought well enough of his music to perform one of his two string quartets, now never heard, at one of his "Pop" concerts in London, in 1864. From his violin music it is difficult to ascertain just what style was most sympathetic to him. He composed much and in all forms. Best known are his *Fantasy on Hungarian Airs,* his fantasy on airs from Rossini's *Otello* and his *Concert pathétique* in F♯ minor. This last-mentioned work is still to be heard from contemporary violinists of the Kubelik or Elman type. Our real masters no longer play this music, not because they are not aware of its importance in the development of violin music, but because it no longer satisfies a musical audience.

The *Elégie*—a superb melody in C minor—is perhaps the work with which Ernst's name will be always most closely linked and by which he will be remembered. It stands out as a violin composition of real importance. Even with all our modern development, harmonic freedom, and disregarding of conventional forms, this composition remains a worthy contribution to the literature.

These then were the works he created, his contribution to the literature. For, like all *virtuosi* he was anxious that his name go down as a composer, in addition to a performer. Perhaps a hundred years from now his list of compositions will be more faded, less performed. His *Elègie,* I would say, has enough humanity in it to last down the ages. It is the cry of a soul in suffering, the expression from within of sorrow in terms of lovely tonal melancholy. I think it was Otto Ruppius, who is responsible for the following word-picture of the *Elégie.* To me it has always been both an intelligent insight into Ernst and a splendid background through which the composition may be more fully understood.

It was in the year 1831, in the richly furnished parlor of a Viennese mansion, two children were sitting together on the sofa—at least anyone would have called them children who saw their youthful faces, in which no impure thought could have been reflected, and which intimated no premonition of the care of this world. From his physical development the young man might have seen seventeen years; his finely formed head was poised on a pair of well-turned shoulders and his eyes was sparkling with the emotion evidently evoked by the conversation. The maiden, of surely not more than fifteen summers, a bud just beginning to unfold, had rested, while gazing up at him, both arms on his knees, and followed his words with such absorbed interest that her countenance seemed to mirror every changing shade of meaning.

The door opened noiselessly and a tall man entered the room. . . . "Leave us alone together for a moment, child," said the intruder to the abashed maiden; and when, after casting a half-anxious glance at the two remaining behind, she had withdrawn, he beckoned the young man to resume his place on the sofa.

"How old are you, William?" he began, taking a seat beside him.

"Seventeen," was the slightly hesitating reply.

"And you are fully aware of what you still have to learn before attaining that artistic rank which alone can render a man, who devotes his life to a musical career, a person of consequence in our circle? You are a young man of great talent, William; I have permitted your frequent visits to my family with pleasure, and have observed without interference the growing mutual inclination between my daughter and yourself; for I consider the aristocracy of genius as the peer of that of birth and I know your uncontaminated soul. But where can this lead to now? . . . As yet, William, you *are* nothing. Go, work, and study, devote your best energies to your years of apprenticeship, become the artist who, ennobled by his genius, may rank with the best; make a name for yourself and then come back; if your youthful inclination be not dissipated, my door shall again be open to you—and I, in the meantime, will not persuade my daughter to any other alliance; do you agree to this, William?"

The youth raised his head: in his eyes there beamed a marvelous light. With a deep breath he laid his hand in that extended toward him. "I do —and I thank you!" he responded with a voice, which, despite the strong resolution apparent in its tone, had a tremulous sound.

"Good! But in that case you should leave the city tomorrow. I am inclined to think, in any event, that you have been quite long enough in our conservatory here for your own good."

"Tomorrow morning I shall leave for Paris—I have long intended to go there; but may I not —"

"Come to see us this evening, when your preparations for the journey are finished, and take leave of us then."

* * * * * * * * *

Seven years had passed. Not only Paris, but the whole of Europe, was familiar with the name of the young violin virtuoso, whom even Paganini had deemed worthy of peculiar attention. . . . Not even a letter had he been permitted to exchange with her whom he proposed to celebrate in his first great composition and for whom no thought had yet appeared to him grand or beautiful enough. Only indirectly had he received greetings from or tidings of her; and the messages which he himself sent were nothing further than newspaper notes concerning his work and progress. . . .

Two days before the end of the seventh year he was ready to journey homeward, so that he might not reach Vienna an hour later than the time set by her father. Day and night he traveled with extra post and at nightfall on the second day he arrived at Vienna. Hardly taking time to doff his traveling garb, he strode with eager haste to the house whose walls held all of happiness for him.

The street door stood open, but within all was dark and hushed. A feeling of dread, like a sudden foreboding of a great misfortune, seized upon him. He ascended the well-known stair, opened the door of the parlor—and stood as if turned to stone; a pang, as of the death-blow to his heart, pierced his breast, his vision grew dim, and he swooned away.

In the middle of the room stood an open coffin, surrounded with candles; and in the flower-decked coffin there lay, herself a broken blossom, the maiden for whom he had striven, labored and patiently hoped. One glance showed him that every hope, every fresh flower of his young life, was withered forever.

She was buried — but he knew nothing of it; prostrated by brain fever, he himself lay at death's door, and it almost seemed as if the dead bride would not have to await the bridegroom long. But

his unenfeebled natural strength won the victory. Two months later, he reappeared for the first time among men—but as a man utterly changed; his eye seemed to glance aside from outward things, as if turned introspectively upon his own melancholy moods.

His violin became his sole familiar friend; in the silence of the night, tones of immeasurable grief sounded from its strings; he wrote a dirge for his dead love, this very *Elégie* which moves every heart with so potent a spell and which is known throughout the length and breadth of the musical world. For the man whose story we have told was the violinist Heinrich Wilhelm Ernst.

Heinrich Wilhelm Ernst — man, violinist, composer—a hundred years have passed; yet we rejoice in paying him that homage which befits a member of that royal line of men who have made the violinist's art the superb calling which it is today!

THE FLORIDA MUSIC COLONY

With the tide of music students turned away from Europe, new centers of musical life will develop in America, and as the winter tourists will, in large numbers, seek out the beauty spots in our southern peninsula of Florida, it is quite in order that a new music colony is announced on the west coast, near Tampa, in the college town of Ruskin. Musicians, and especially amateur and professional performers upon the instruments of the orchestra, and lovers of chamber music and ensemble playing, are invited to Ruskin to spend January and February.

With the nucleus of stringed instrument players under the leadership of Ray G. Edwards, director of the School of Music, Ruskin College, an orchestra will be formed for daily practice. There will also be divisions of the players into piano trios, string quartets, etc., and lectures on harmony, composition, musical history, and the needs of musical art in America, while in the evening all may join in a "songfest."

A music colony should be far reaching in its influence and encourage not only better performance among ensemble players in chamber music, orchestra, and chorus, but helpful as well to American composers. One of the important events of the music colony at Ruskin will be the celebration of American Composers' Day, February 6th, 1915, by the performance of works for piano, violin, voice, quartet and orchestra by composers born in America or resident here for ten years. It is to be hoped that the musicians in every city in the country will also celebrate the day in like manner. Amateur and professional musicians and lovers of good music intending to visit the music colony at Ruskin should write to Mr. Ray G. Edwards regarding musical ability, instrument played, etc., also for accommodations during January and February, or for a part of that period.

TO THE YOUNG VIOLIN PLAYER

BY RAY G. EDWARDS

Take two lessons a week during the first two years if you can possibly do so. No sacrifice of time or money is too great at the beginning if you have serious intentions of mastering the violin.

Do not get in the habit of missing lessons; even if your teacher does not charge up the lessons (which he should) you cannot afford to get into careless habits. When a pupil misses lessons he is on the down grade, and after a time will drop out entirely.

Get the best violin and bow you can afford, and keep them in good condition. A cheap bow is even worse than a cheap violin.

Practise any finger gymnastics that will strengthen the fingers without straining them. One of the best exercises is to bend slightly the fingers and then spread them apart. Shaking all the joints loose from the wrist is also helpful.

Hear all the good music possible; attending concerts frequently is almost as important as taking lessons. Keep your programs and make notes of the performance and of the compositions, in this way becoming familiar with the compositions of various grades and styles. Your analysis will be interesting to look back upon, and in time you will acquire a habit of looking deep into the compositions for things you would not otherwise notice. Your estimates of the performers may be wrong at first, but in this too you will learn to distinguish proper relations. If you are in a large city you can compare your notes the next day with the newspaper reports by mature critics. With these you may not agree, but hold to your ideas and opinions just the same, until you can honestly change them.

If you can hear a large symphony orchestra do so by all means; but unless you have attended many concerts you may not enjoy your first symphony. A certain intellectual understanding is necessary, and this will come by the analysis of smaller musical forms. This should be done in your own way, the main thing is to do something. Make notes of whatever seems interesting or important.

This understanding and appreciation of music will come more rapidly if encouraged by some slight knowledge of harmony and composition, and of musical history and the lives of the masters.

This suggests that a dictionary of musicians, and one of musical terms, and a short history of music, should be purchased and referred to frequently. The next purchase should be a musical encyclopedia of several volumes. After that books may be added on special musical topics.

Unfortunately the law allows anyone to attempt to teach music, whether prepared to give valuable advice and instruction or not. This is the greatest problem for young players and their parents. The latter are often poor judges in such a matter. It is only by careful inquiry among disinterested persons whose opinions are worthy of consideration, that a young player can have any reasonable assurance that he is choosing wisely in the selection of an instructor in music. Usually the best way, if you have to depend upon yourself, is to hear the pupils of different teachers.

After studying a term or two with a teacher, if you have not acquired a comfortable position with the violin, ease in drawing the bow straight across the strings, and accurate intonation of a few scales, it will be just as well to stop taking lessons; either the teacher is not capable of imparting knowledge or you have not the required talent. In either case further study with the same teacher will be an utter waste of time and money.

If at the end of a term or two your teacher plays duets with you, and you are able to keep your part going to the end, without glaring faults of intonation, you may be justified in going ahead with your musical education.

Do not attempt difficult music when called upon to play before people. Confidence is not easily regained after a failure in public. Do something easy and do it well to begin with, there will be other occasions for displaying your ability.

When you find young players of your own age and ability do your best to establish friendships and when there are several such players have a time appointed for meeting at each other's houses to spend a musical afternoon or evening. Such meetings may result in the exchange of much valuable information about art matters and continue through long years of musical study.

Avoid jealousy. When there are parts to play in a quartet, duet, or orchestra, take the second violin part if you can get it. Others will be anxious to take the first, but you will have a part from which there is much to learn, and at the same time you will become important and necessary to the ensemble.

ELEMENTARY VIOLIN TEACHING

BY FRANZ C. BORNSCHEIN

III

The two preceding articles on *Violin Teaching* give the novice teacher some pedagogic knowledge and suggest plans for imparting the fundamental requirements of holding the instrument and the bow. As yet the beginner has not been required to busy himself with the problems of notation. Instead he has been gaining correct mental impressions through the physical suggestions as given by the assisting teacher, who has molded the pupil into a free position of the body, adjusted the instrument correctly and aided in the forming of strokes. Through this process much has been absorbed subconsciously, and his mind will have been trained to control certain muscular actions necessary for the work.

Before advancing to the use of the printed page the beginner should be taught the importance of associating the tones of the open strings with the respective characters used to designate their pitch. Even a child who does not know the alphabet will soon associate the letter names of the strings and recognize the appearance of the corresponding notes

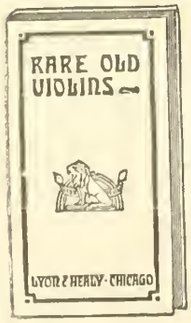
If You are in the Market for a
RARE Old VIOLIN



This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

pon the page. In fact, with the mere mention of ny open string their should rise in the pupil's mind picture of the staff showing the corresponding ote. Try to have the pupil imagine the four open ring notes like a flash. But before attempting this eat of the memory, be certain that he is not con- used and is able to associate each string with its espective note, calling it by name, stating its order pon the violin, and describing its position upon ie staff. From these four "landmarks" his eye 'ill be able to build the system of notation, first y adding neighboring letters, upward from one ring to another, filling in the gaps on the staff. Re- ember that the old way of insisting upon a long nd puzzling array of notes being memorized, merely y rote and without some particular association, as been found impracticable by modern teachers. After some little practice in forming mental pictures f the four "landmarks" the pupil will be prepared or actual sight work.

From now on it will be the teacher's object to rain the pupil's eye so that it quickly recognizes ie various characters as they occur upon the rinted page. Have him perform the bowing actions, old the instrument and attend to all other physi- al adjustments with an ease which proves that the ubconscious mind is directing these matters for him. 'he player's position must be such that he can see *ll* that is happening,—the motions of the right arm, ie position of the left hand, the violin, and the iusic on the rack, which must be in the center of his ight. This quick use of vision as a form of sense- erception is what enables many pupils to make peedy progress. The teacher must carefully ob- erve just to what extent the pupil can center his ttention upon the page, and note when there is ny digression of the mind toward some particular lement of the task in hand. Such side glances will ndicate that the proper co-ordination has not been stablished, and by observing to what special feature he pupil's sight is directed there will be disclosed ome problem of control which has not been thor- oughly comprehended. Such faults should be leared away if they seem to halt bowing activity y going over the process of stroke formation again nd again, patiently showing the three fundamental ositions of the arm and correcting any latent tiffening of the joints or muscles.

THE MODERN TEXT-BOOK

The choice of a modern text-book is a point worthy of the fullest consideration. The inex- erienced teacher may not be acquainted with what as been published recently, or, for means of better nformation, may rely upon his recollection of early tudent efforts and adopt some antiquated method which may have been of excellent service to him but ot be suited to the present needs at all. Some of ie distinctive qualifications which a modern text- ook must have are: 1. Logical presentation of ie subject in which a collected endeavor to train the ye, the ear, and the physical faculties is made so iat correct thought will quickly result. 2. Theoreti- al knowledge given concisely, but always practi- ally applied. 3. The merely mechanical problems reduced to a minimum. 4. Instilling analytical ideas, tending to develop the natural instinct, and forming correct habits through well-directed material having imaginative appeal, elucidative and stimulating anno- tations, and, above all, appropriate melodic sub- stance.

The old-fashioned method, with its many pages of technical drill unbroken by any attractive melody, has been cast aside long ago. We have seen how much more important it is to form habits which lead directly to musical appreciation, even when the little melody is limited to the use of the open string tone with perhaps the neighboring first finger tone occasionally interspersed (see Kelley, *Fifty Easy Melodies* for violin and piano, Ditson Edition, No. 40, and Fyffe, *Eight Violin Pieces,* Ditson Edition, No. 137), than to grope through the mysteries of "systems," theoretical methods, and other pe- dantic courses of instruction. True enough there are in existence and perhaps in considerable use some works which attempt to represent the alpha and omega of violin knowledge. The reason for not indorsing such material is that its bulk of over- whelming substance does not inspire the prospective violinist. Immediately upon seeing such volumi- nous matter there arises the thought, "How long will it take to conquer this endless task?" It being the desire of the young teacher to create enthusiasm in the beginner, to spur him on to real musical effort, a more successful manner of proceeding will be to select a text-book that at first sight shows its attrac- tiveness to the aspiring student. However, do not expect to find in such a text-book every subject of violin technic, for not only is it impossible to crowd between its covers lengthy descriptions which at best do not come in for the beginner's immediate consideration, but it remains for the teacher to elaborate, demonstrate, and further augment by supplementary material upon the frame work which has been outlined in the text-book.

Let it be understood that the selection of the text-book must be based upon the deductions which the young teacher has formed of the beginner's in- telligence and mental characteristics. To use but one text-book in all cases has serious objections. The pupil of philosophical mind or phlegmatic na- ture will have to be approached with different mat- ter than the more alert and highly temperamental student. During the preliminary lessons and while the explanatory advice has been given to the begin- ner the teacher will have had sufficient opportunity to gauge the temperament of the individual. This is absolutely necessary so that suitable instruction

CONDUCTED BY H. C. MACDOUGALL

THE PIPE ORGAN IN THE HOME

BY E. I. FARRINGTON

THERE is no instrument to compare with the pipe organ. Not only does it possess peculiar and wonderful characteristics of its own, but with it may be simulated—and with remarkable accuracy—the best effects of many other instruments, reed, string and wood. By means of the improved Vox Humana stop the tones of even the human voice are closely imitated.

Always popular, it is only of late years that it has been possible to enjoy pipe organ music in the home. When the demand for such music began to be appreciated by the organ builders, the development of an instrument fitted for use within the limited confines of a music room in a private residence was undertaken. The result has been all, and more, than was to be expected. Now pipe organs are being installed everywhere. They are found in new houses built by men of means and a fondness for music, as a matter of course. Many of them are being placed, too, in houses already built, for the ingenuity of the modern organ builder is able to master almost any difficulty in the matter of location and space.

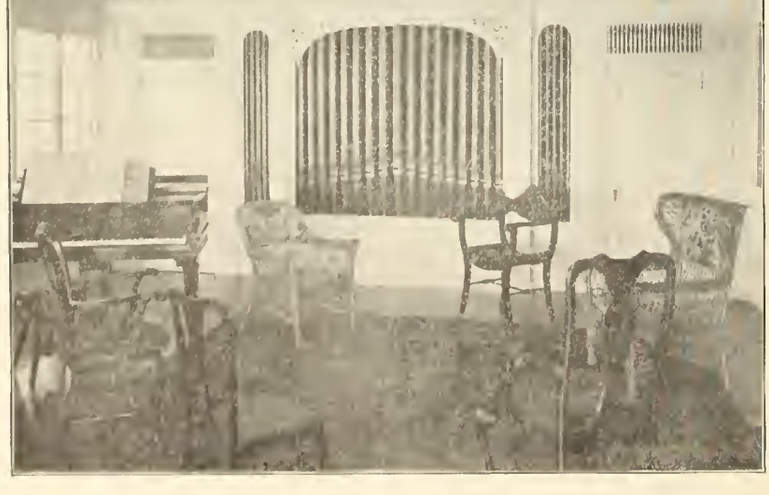
ORGAN IN SPECIAL MUSIC ROOM

It should be said that the pipe organ is not a luxury to be found only in large houses or to be enjoyed exclusively by the rich. There is hardly a home of reasonable dimensions where it is not possible to place a pipe organ, and a creditable instrument may be purchased for as small an amount as $1,200, although the price may easily be made to run as high as $50,000. The smaller organs are limited, of course, as to stops and possibilities, yet are high grade instruments with which splendid effects may be secured.

An organ for the home must be essentially different from a church organ in order to be satisfactory. It must have special voicing, above all to give it an orchestral quality not to be found or desired in the ordinary church organ tone. In this way the rendition of a class of compositions hitherto considered quite unsuitable for the organ is made possible. The home organ retains the unrivaled musical qualities of the church organ but carries more delicate tones. It avoids the somberness of the ecclesiastical instrument, but yields an orchestral brilliancy more suited to home playing. Any kind of music may be performed on a good instrument of this character. When a pipe organ in the home has proved unsatisfactory, the cause usually can be found in the fact that it actually was an instrument of the type designed for churches and halls, rather than one suited to the private music room.

The home organ is in effect an organ and an orchestra combined. On it may be performed operatic and orchestral music of the most elaborate character. The various instruments found in a complete orchestra, as, for example, the flute, clarinet, oboe, viol, piccolo, trombone and even the harp, are, in effect, at the command of the organist. Opening a stop or tilting a tablet introduces any of these instruments in solo parts with organ accompaniment, or makes possible the grand ensemble produced when all are played in concert. Such music as is never attempted on the church organ is undertaken with perfect freedom on the home instrument. That church and home organs are distinct in voicing, scaling, and purpose is a fact to be carefully emphasized. The delicate tone colorings of the home organ are among its greatest delights. Crashing effects are not in forte, although there is no lack of volume. Refinement of tone, extreme flexibility, and the greatest ease of manipulation characterize a good home organ.

A properly constructed modern organ for the



ORGAN FRONT A PART OF A DECORATION SCHEME

ORGAN IN ALCOVE

home does not contain the old, conventional reed-tongued oboe and other stops, which are continually getting out of tune and are easily affected by dust. Modern methods of scaling and voicing keep these stops always in pitch.

It is not at all necessary to have the console in front of or attached directly to the organ. The performer may just as well sit at the keys in another part of the room or even in another part of the house. This is a great advantage; it allows the player to remain at a sufficient distance from the organ pipes to hear the effects produced to much better advantage than if close at hand. One can then be both performer and audience. The application of electricity is responsible for the fact that the console may be divorced from the organ proper. The console occupies but little more room than an upright piano and may be given a most unobtrusive position. Commonly the console is equipped with two manuals and pedals. It may be plain or ornate, a statement which applies to the entire visible organ. In many houses the instrument is made the principal feature of an elaborate scheme of decoration. As a rule, of course, the sound-producing part of the instrument is mostly hidden, but the front or screen is usually ornamented. Usually a certain number of pipes are displayed in a manner to conform to the architectural scheme of the room.

With its electric-pneumatic action, the modern home organ is played with less effort than a piano. An exceedingly light pressure will depress the keys and the resistance is uniform. This action has other advantages, as well, among them the fact that the several parts of the organ may be divided and distributed. One organ may easily have three or four sections, according to the necessities of the situation or the desire to have special echoes and distance effects.

When a large organ is installed it usually is fitted with a set of chimes or a harp, in some instances both, and the effects to be secured with these accessories and an instrument full of orchestral coloring are beyond description. Certainly they entrance the lover of chamber music. Of course, the diapason quality of the church organ is there, too. Religious and all legato music may be enjoyed to the full, as well as the lightest of light operas.

It is the common practice to have the home organ supplied with an automatic player device, which doubles its value, for then the best music of the world's masters is placed at the command of the man or woman who does not know one key from another. With such an attachment, anyone with a taste for music, although entirely lacking technical skill, may find endless enjoyment. The automatic player is operated by a perforated roll, and there is a library containing many thousands of pieces, embracing practically all classes of music, from which to make a selection. The person at the keyboard has full command of the registration, which is expressed according to his individual taste, but he need know nothing whatever about the manipulation of an organ. There is no better or more enjoyable way to become acquainted with all that is best in music than by means of an automatic organ player. A recent refinement in the art of building home organs is found in the placing of an automatic player in a desk or table, where it is ordinarily hidden from sight.

A house organ must be made, obviously, to conform to the location for which it is intended and the extent of the proposed investment. It may be as small as a five or six-stop instrument and still be satisfactory. Usually it is built to order, for conditions in no two houses are alike. If the organ is to be placed in a new house, it is a simple matter to provide accommodations for it, and without much additional expense. Installing such an instrument in a house already built is often a problem, yet one which is being met and solved all over the country.

Occasionally space is found in the upper landing of a hall. Often a room is given up to the instrument, the console being placed in an adjoining apartment, part of the wall being cut through to display the pipes and give free egress to the sound. Sometimes a room on the second floor is used for the pipes, while the console is placed in the apartment directly beneath. The ceiling of the lower room is torn away and a grill work screen substituted, allowing free passage of the sound to the music room. Frequently an addition large enough to contain the organ is built to an outside room. In some instances the addition of a complete music room is not an architectural detriment. It is seldom that some way of getting a pipe organ into a house cannot be devised.

Electricity is made to serve a useful purpose in organ construction aside from the part it plays in linking the console to the pipes. It may be employed for operating the blowing plant which supplies wind to the bellows. A little electric motor is used in conjunction with a fan blower and may be located in the basement or even in the attic, if it cannot be placed conveniently under the organ. It really makes little difference, for the wind is easily piped to the bellows. This is one of the features of the modern pipe organ designed for home use which explains why it is that the installation of such an instrument has been simplified to the degree indicated. Water motors are much less desirable than electric motors, having a more uneven action, and often giving trouble. When used, the water pressure at the motor should not be less than thirty-two pounds to the square inch. Gasoline engines operating fan blowers are sometimes made use of in the country.

Although these proportions are by no means necessary and often cannot be obtained, it has been found that a music room twice the length of the width, with a height equal to the width, is the most satisfactory for the dissemination of the home pipe organ's tones. It is always well to have a height of at least ten feet, if it can be obtained.

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS FOR MIXED VOICES

ADAMS, FREDERICK W.
No. 12,692. **O Jesus, Thou art standing**.....$0.12
An easy, melodious hymn anthem, with a pleasing solo for tenor or soprano.

BACH-GOUNOD.
No. 12,601. **Ave Maria (O God, Thou art my God).** Arr. by E. C. Nowland..... .16
A choral arrangement, with soprano solo, of the famous song.

SMART, HENRY
No. 12,632. **Callest Thou thus, O Master?** Arr. by Ross Hilton..... .12
An anthem for Communion use, or general occasions; includes an effective solo for soprano or tenor.

FOR WOMEN'S VOICES

BIZET, GEORGE
No. 12,610. **Lamb of God** (*Agnus Dei*). Arr. by A. H. Ryder.....$0.12
A three part choral arrangement of this fine sacred song.

FOR MEN'S VOICES

HANDEL-KINGSMILL.
No. 12,652. **Holy art Thou.** Arr. by C. C. Robinson..$0.12
A choral arrangement of the celebrated *Largo* air.

CATHOLIC CHOIR MUSIC

FALKENSTEIN, J.
No. 12,608. **Ave Verum**.....$0.12
A fine setting of one of the Church hymns, with solo for tenor; easy and melodious.

PART-SONGS FOR MIXED VOICES

BELLINI, GIOVANNI
No. 12,644. **Often, dearest** (*A te, O cara*) (*I Puritani*)..$0.16
A choral arrangement of the favorite quartet in *I Puritani*, with words for concert use.

MUIR, ALEXANDER
No. 12,678. **The Maple leaf forever** (National song of Canada)..... .10
Arranged as a solo (unison) with chorus of mixed or men's voices.

SCHUMANN, ROBERT
No. 12,660. **Träumerei.** Arr. by A. H. Ryder..... .10
The air is sung by the tenors with hummed accompaniment by the other three parts; a fine concert number.

PART-SONGS FOR WOMEN'S VOICES

COWEN, FREDERIC H.
No. 12,672. **The bee and the dove.** Arr. by Ross Hilton.....$0.12
A charming number for a concert program, with striking vocal effects.

CZIBULKA, ALPHONS
No. 12,691. **Morn-rise.** Arr. by C. F. Manney..... .12
An arrangement for two-part chorus of women's voices of this favorite melody.

FLETCHER, PERCY E.
No. 12,658. **O May, thou art a merry time**..... .16
In the madrigal style, a delightful, light concert number, for four part chorus, to be sung unaccompanied.

HARTMANN, ARTHUR
No. 12,669. **May-day song.** Op. 27, No. 1..... .10
A charming four-part song by the celebrated violinist, who handles voices as effectively as he does his instrument; to be sung unaccompanied.

No. 12,670. **Sister, awake.** Op. 27, No. 2..... .12
For four-part chorus, with piano accompaniment; has much of the old madrigal spirit.

MANNEY, CHARLES FONTEYN
No. 12,654. **Softly soundeth through my soul.** (*Leise zieht durch mein Gemuth*)..... .10
A quiet, expressive song, useful as a contrast to some more animated number.

SCHUMANN, ROBERT
No. 12,659. **Träumerei.** Arr. by A. H. Ryder..... .10
For four-part chorus, the lower three voices furnishing a hummed accompaniment to the soprano I.

PART-SONGS FOR MEN'S VOICES

FOSTER, STEPHEN C.
No. 12,676. **Come where my love lies dreaming.** Arr. by Ross Hilton.....$0.12
A four-part setting of this favorite song.

SCHUBERT, FRANZ
No. 12,662. **The erl king.** Arr. by C. C. Robinson.. .20
An effective concert arrangement of this great song.

SCHUMANN, ROBERT
No. 12,663. **The two grenadiers.** Arr. by C. C. Robinson..... .12
A fine concert arrangement of this great song from the classical repertoire, short solo passages for bass, baritone and tenor.

MUSIC FOR SCHOOLS

KING, RUDOLF
No. 12,668. **June song.** Arr. by G. F. Wilson.....$0.08
A bright, melodious number in gavotte rhythm with solos for soprano I and II.

than merely instrument makers. They are familiar with architectural and decorative requirements and have in some instances made an elaborate study of period furniture and allied subjects, in order that the eye as well as the ear may find in the music room only the most complete harmony.

AN ARMENIAN SERVICE

BY J. LAWRENCE ERB

[The readers of THE MUSICIAN have seldom had the chance to hear about a service of the character of the one described by Professor Erb; we ask especial attention for the last paragraph of this interesting article. The party referred to in the article were delegates in attendance at the Paris convention of the International Music Society.—The Editor.]

AN unusual experience awaited a company of us who accepted an invitation to attend an *Audition de Musique Religieuse Arménienne* at the Rue Jean-Goujon, No. 15, at nine o'clock in the evening of the sixth of last June (Saturday). Possibly a few individuals knew what a treat was in store for us, but the great majority did not even know whether 15 Rue Jean-Goujon was a theatre or a concert hall, or what not; consequently a goodly number arrayed themselves in their evening clothes as for a theatre.

We drove down a dimly lighted street, within a stone's throw of the Seine, and surrounded by a quiet residence district, to the arched portal of a mysterious looking building; and it was not until we heard the ringing of a bell that it dawned upon us that we were going to church! And on Saturday night in Paris! However, by this time the unusualness of it all had whetted our appetites for more, and we eagerly opened the door.

The interior was aglow with myriad candles in magnificent chandeliers. No glare of electric light or flicker of gas, but the soft radiance of a forest of candles, to cast its magic luster over an eager, expectant multitude that absolutely filled its rather restricted space. It was the Armenian Church, just about to celebrate its Pentecost service, to which it had kindly invited us "Congressists," as we were everywhere called, that we might undergo what was to most of us a new and unique experience.

The audience chamber is a room practically square, with a high ceiling surmounted by a lantern or dome. It seats probably 200 to 300 people, certainly not more. There is a gallery at the rear, high above the main floor, while in front rises a series of steps, right up to the altar, which is ornate and covered with a canopy. It contains a representation of the Holy Mother with the Child, and the usual candles and some other images and pictures. There is no screen of any kind between the congregation and the altar, although the chancel was separated from the body of the church by silken cords. The interior was largely marble, with a profuse use of gilding in the ornamentation, though the effect was rich and dignified, rather than at all gaudy.

The first thing that attracted the attention was that the priests, of whom there seemed to be four, were all heavily bearded, two of them wore black hoods which completely hid the face, and two were uncovered except for their thick hair. The choir consisted of two or three men and three women trained singers necessarily, but the priests joined freely in the music at times. They were all vested in red vestments of some heavy material, embroidered over the shoulders and chest and down the front with gold embroidery. At certain points in the service golden robes were placed upon two of the priests, and incense was freely burned in a heavy censer swinging from chains that rattled noisily as they swung. The priests conversed freely and not by any means noiselessly throughout the service except during its most solemn moments. An unusual touch was when the priest took the Book to read

the Gospel lesson, he held it in a cloth which looked like a napkin. His hand never touched the Book itself except in turning the pages. Immediately before the reading of the Gospel, two large candles were lighted and placed upon pedestals, one on either side of the priest, who faced the congregation while he read—nearly all of the service being conducted with the backs of priests and choir turned to the congregation. As soon as the reading was concluded, the two candles were extinguished, although the priests and choir continued to hold each a lighted candle throughout the service, as they had done from the beginning.

The music of the service was most interesting and unusual. Of course it was absolutely unaccompanied, there being no musical instrument of any kind in the church. It was most elaborate, consisting of fourteen numbers and lasting almost continuously throughout the entire service of a little more than an hour. It might best be described as in all cases a solo with two-part accompaniment usually. The accompaniment was hummed or rather droned with open mouth, but softly, and was invariably either in fifths or in octaves. When the solo was sung by a male voice, the female voices sang an inverted organ-point (sustained do-sol) above, with sometimes a second male voice doubling the melody an octave lower than the solo. When the women sang the solo, the men droned, bagpipe fashion, below them. Occasionally the men sang alone, in which case they sang both the solo and the accompaniment, and in the same way the women occasionally sang alone in the three parts. Only occasionally was there any slightest attempt at a rough sort of polyphony, a sort of canon in unison, and I was not able to determine whether that was premeditated or simply unison gone awry.

A considerable portion of the first half of the service consisted of responsive sentences, also of the Psalm sung responsively in a manner something like this (all in unison):

sung in true antiphony.

For the most part the music seemed to fall entirely within our minor tonality, with occasional intervals which seemed foreign to our occidental ears, but which may have been as likely the result of the singers being out of tune as of any difference in scale structure as compared with our own. One composition only, a beautiful setting of the *Pater Noster* (*Haïr mer*, in Armenian) was undoubtedly in the major. With the exception noted, there seemed not the slightest relation with any of the oriental scale systems as ordinarily understood. But in melodic character the music was gloriously and uncompromisingly oriental. All the ornamentation and elaboration of line which is always associated with oriental art was strongly in evidence. All sorts of graces and roulades and flourishes were constantly occurring, and it took a vocalist of no mean attainments to sing the solos. In fact, one tenor soloist had a beautiful voice, worthy of a larger public, which he used with much artistic discrimination.

One effect of the performance upon such of the listeners as were musical theorists and historians was to impress upon them in a manner that was likely to leave a permanent imprint the way the old *Neumes* must have sounded when sung. There is little reason to doubt that modern notation—or rather the traditional melodies as expressed in modern notation—does not do them justice. Here was a fine object lesson, sung with intelligence and artistic finish, of the sort of melodies which must have been written in *Neumes* and with the genuine Huebaldian *Organum* in accompaniment. It was like some wonderful form of ancient life, not embalmed, but preserved, in amber, and, like hearing the street gamins in Athens chattering the Greek that cost us so many pangs to acquire, it comes as a shock to find this ancient form of art preserved in the heart of the most sophisticated of modern cities.

———*———

THE ECHO ORGAN

BY H. C. M.

There are optimists abroad! In an article in the *Music Student*, entitled "Extemporising on a hymn-tune," I was rather amused to read of "facile technique, which all organists nowadays have." It may be that in England "all organists" are in that happy state where difficulties of execution trouble them no more; but on this side of the water I am sure there are a few of us still who need regularly an hour or so of daily practice!

I do not deny that the level of execution has steadily risen in the last twenty-five years. In 1889 I lived in a town of about 75,000 people, where there were not more than two organists who were able to play the Mendelssohn organ sonatas; now there are a dozen. The organ, as a mechanical and musical instrument, has been greatly improved and the standards of taste and execution have risen also.

We still, however, have with us, especially in the country towns, a good many persons playing the village church organ who are simply pianists; they are not organists by choice; they find themselves pressed into the service. They are glad to earn a little extra money, to be sure; but on the whole their job gives them a somewhat uneasy feeling of incompetency. What they know of organ playing has been picked up, a bit here and a bit there, from reading musical papers and from hearing a good organist. More ought to be done for this class of musicians than is done.

* * *

In the course of my wanderings during one summer I attended a small church with a volunteer choir of five sopranos, four altos, one tenor, and two basses. The music was rehearsed for a few moments before time for worship, and the singing, in quality and quantity of tone and in execution, could only be described as feeble.

Now, since they must have been aware of their incapacity, would you not expect them to refrain from any music beyond the hymns and a very simple anthem? Not at all! We had "responses" and "amens" and offertories and solos and duets *ad libitum*. There was a straining after something that their powers could not command. On another occasion I attended a small Episcopal church with a seating capacity of perhaps 200. The choir was absolutely the worst I ever heard in my life. Was the service simple? Not a bit of it; they aped a cathedral service of a somewhat elaborate type instead of doing a few simple chants within their reach.

Churches with small resources should do what they can do well; a little music carefully and correctly rendered is the ideal.

* * *

Do you pull your stops out with a bang?

At another church, this same summer, I was much annoyed by the noise the organist made preliminary to his prelude. I was quietly sitting in a side pew enjoying the stillness and feeling more than hearing the music of the wind in the trees outside the open windows, when, closely following the three strokes of the bell, whack! whack! slam! bang! out came some stops, two or three composition pedals were pushed down and the organist was off on his voluntary.

Pull the stops firmly, steadily, and slowly, and practise until you become expert.

* * *

Another thing characteristic of the country organist, who is an organist rather by necessity than by training, is his registration. Too often I have heard a player—and this applies to city as well as to country organists—add and take off stops in an irritatingly purposeless fashion. This is a sure indication of an unmusical temperament. Constant changes of stops are even worse than playing without any change at all. If a player has no instinctive feeling as to registration he cannot make up for it by changing the stops every phrase. Eugene Thayer—a name little known to the present generation, but a great power in the organ world thirty years ago—once said: "If you play one piece only, use all the stops in the organ; but if you play an entire recital divide your stops among your various pieces." Dr. Turpin used to say: "A wise man doesn't spend his money simply because he has it in his pocket." In other words, there is such a thing as economy in registration.

* * *

In *The Diapason* for July is an interesting letter by Flora Ellis Wells, telling of the various Parisian organists she has heard. She mentions particularly the playing of the *Toccata* from Widor's fifth symphony by the master himself and by Vierné. It would be interesting to hear whether either artist succeeded in "putting over" the staccato. It is one thing to make the staccato at the console and quite another to make it in the ears of the listener. One of my earliest enthusiasms was for this toccata, and I can remember playing it over in frenetic ardor to a complaisant landlady again and again, almost *ad infinitum*, in my solitary lodgings in London. The majestic melody, with its four sounds, is wonderfully great in its resistless march, but—and this is a scandalous confession — I have sometimes wondered whether, to the untutored listener, it did not seem like a grandiose velocity study. In conquering the technical we may sometimes forget our hearers' longing for the musical.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

In mapping out work for the coming season, teachers must not forget to reserve some time for their own musical growth. If necessary, take one pupil less, and at the end of the school year the hour given to yourselves will bring in large dividends.

* * *

"I have a new pupil who has the habit of playing her left hand before her right. She is well along in the fifth grade and otherwise has a very good technic. Please suggest some technic and pieces that will help to get her out of this bad habit."—L. M. B.

It surely is a bad habit and hard to correct, because it is of such long standing. She must first hear how bad anything sounds played as we call "cross-eyed." Imitate her playing until she is conscious of the fault. Assign a hymn tune made up of chords, or *America,* to be played slowly, the legato being made with the pedal. Have the chords played with a falling arm touch, taking the pedal half way between each chord. The ear must test each chord, to be sure that the sound comes in a block and not one hand limping along after the other.

The Chopin *Prelude,* No. 20, is most useful to follow. Then possibly the Chopin *Nocturne* in G minor, and, after all of above, the *Butterfly* of Grieg. The last named is most useful, as here the left hand comes in after the right.

* * *

"Will you give me some suggestions as to how to make the history of music interesting to children?"—L. W.

There have been many articles from time to time in THE MUSICIAN on how to interest children in the history of music. A teacher whom I visited this summer showed me a very novel course which she has outlined. I am sure this will interest you.

Each pupil has a Musical Scrap-book in which on one page the picture of composer is pasted, on the opposite one the little biographical sketch given by the teacher in the lesson. The composers are grouped according to nationality and chronologically, and the little sketches are made up of material which will prove most interesting to children, with references to the music which the children had had by the composers as they appeared.

The books included reproductions of some of the celebrated paintings of the masters as well as portraits of the great virtuosi of piano, violin, and great vocalists. It seemed to be very attractive, and certainly it worked with the children.

* * *

"I find myself very nervous in public work where formerly I felt no fear to play before people. I haven't been playing for some years and am astonished that I should develop this most uncomfortable trait. Will you suggest through THE MUSICIAN a remedy?"—H. B. R.

You have accounted for the difficulty yourself. If you haven't been doing any work for some time how can you expect to pick it up just where you left off? The power of concentration is very easily lost and public work demands concentration above everything else. You will probably have to regain this power through some failures, but by playing every chance you get and studying carefully you will, in time, win out. Use for public work music which appeals to you strongly from every side and try to shut the public out of your vision when you go on the platform, thinking only of the music and of making it truly expressive. Your path is not exactly an easy one, but after you secure poise again you will not need to be reminded that sometimes it is easier to keep in trim than to get in trim.

* * *

"I have seen many references lately to hand manipulation. Will you tell me what is meant by this?"—C. D. S.

I presume "manipulation" refers to a course of training for the muscles of the hand which was discussed by one of the men who first brought it into this country, Mr. Burnett Jordan, in a splendid series of articles in THE MUSICIAN.

The articles appeared in the issues for December, 1913, and February, 1914, and if you will refer to your files you will find the work splendidly outlined.

There is no question but what the treatments are most helpful and time savers.

* * *

"Do you use table work for forming the hand?"—B. S.

Yes. It is very hard to get the attention of the child on her hand without it. I continue it during the first twenty lessons with some tapping exercises on a table of the right height.

* * *

"Will you give me some help in bringing out a melody in the upper voice in chord work? I am unable to get the effect I want."—P. C. S.

The voicing of chords is to bring out a melody with ease in any part of the chord. As the soprano voice is generally the voice carrying the melody, this is begun early in grades. I would advise you to keep two things in mind: First, that the melody voice should be stronger; and, second, that the other voices should be softer. It is not enough to try to bring out the melody, but the other parts should be subdued.

Begin with any chord passage which you can easily reach and play the hands alone. Practise the right hand part as follows: The melody alone, getting a clear tone; they play the rest of the chord written for the right hand, very softly, noticing how the hand feels with the weight thrown on the melody finger and the other parts touched in lightly. Repeat the lower part of the chord, playing very softly, and then try to play the chord all together, and see if you can secure the effect of melody as when played by itself. The bringing out of the melody necessitates throwing the weight of the hand on that part of the hand carrying the melody, and it is not so difficult as it sounds. The left hand parts of the chord should be practised alone, to get them soft enough.

* * *

"I am anxious to play some pieces by Liszt. Will you suggest some for me to begin on? Would the *Second Rhapsodie* be too difficult?"—G. D.

I would not advise the *Second Rhapsodie.* Try the *Liebestraum* in Ab, or the *Eclogue.* I would begin on some of the transcriptions like the *Spinning Song* from *The Flying Dutchman* or the *Rigoletto Fantaisie,* rather than the rhapsodies. But the first named would be preferable, as they are shorter and far less difficult for a beginning.

To Do Perfect Typing---

—a writing machine must have a firm carriage and a non-vibrating typebar.

You cannot obtain the best music from a wabbly piano with worn-out mechanism! It is just as difficult to get good results from the average typewriter, with its lack of stability in both platen and typebar.

VICTOR TYPEWRITER

MODEL No. 3

has a platen that is as firmly set as a bed of a printing press and a typebar that cannot vibrate as it reaches the printing center, as it stands on an inch-wide bearing.

The Victor combines visibility with durability. It is built to last, and not to "trade-in" in a year or two. A typewriter and a demonstrator are at your command. Write for "Facts." **Write today.**

VICTOR Typewriter Co.

A FEW SIMPLE STATEMENTS ABOUT THE VOICE AND ITS CULTIVATION IN AMERICA

(*Continued from page 693*)

IDEAS OF THE OLD ITALIAN MASTERS HIGHLY ESTEEMED

The many excellent ideas on the singing voice ontained in the records and traditions which have ome down to us from bygone centuries are not un-lerestimated. They are of real worth and value. Many of these ideas are utilized by American eachers, especially as they relate to the principles f breath development and so-called tone placement. These principles are equally well understood and ractised in one part of the world as well as in nother. They are eternal and inviolate, therefore, ot a national but a universal heritage.

American writers on the subject of vocal culture ive space and unstinted praise to the erudition of arly writers and teachers, especially the old Italians. But while the common sense views of the old nasters are gladly accepted, it is to be said, with ruth, that they fall far short of covering all that s necessary for the singers of modern times to now. An exacting and discriminating public ex-sts in the America of today which demands more f American singers than they would be able to give f they depended wholly upon the requirements, for nstance, of the old Italian school for their devel-pment. Lovers of real song demand of the singer ot only a beautiful quality of tone, but beauty of one clothed with the full meaning of the text.

That the art of singing, at the time when it is enerally believed to have attained its highest form f development, was deficient in this most essential tter named feature is apparent from records and raditions handed down from the old masters. They early reveal that the trend of thought and training as toward the ultimate acquirement of beauty of ne. W. J. Henderson has something to say upon is point in his excellent book, *The Art of the inger*:

"The radical error of the entire Italian school of nging, despite its proclamation of other belief, lay the fact that in actual practice it held that the ltimate purpose of vocal technic was the produc-on of beautiful tone;" whereas, "the fundamental uth," he says, "is that the object of vocal technic the *vitalization of the text* by musical tone, and ie creation of the tone must be for that purpose nd that alone."

If there were no other reason for proclaiming the periority of the voice as a musical instrument an that it is able to elucidate the text, that alone akes it incomparable and absolutely beyond the wer of human invention to duplicate.

As bearing upon the marvelous ease with which e voices of the long ago sang the highest notes, should be remembered that the pitch of those rly days was considerably lower than that in use modern times. The highest pitch in its relation the voice furnishes a problem that has called for creased throat strength and endurance and a more ilful management of the voice. This is particu-rly true in the case of English speaking singers.

A semitone raise in pitch has an appreciable re-rding effect upon the mental, nervous, and muscu-r activity of a singer.

(Part II in THE MUSICIAN for November)

HE PROFESSOR TALKS ON A TEACHERS ACQUIREMENTS

(*Continued from page 667*)

ey find it for themselves, well and good. They ll soon come back to their pure pabulum, to their fty ideals and elevated imagery, tired and ashamed having played 'hookey' with unworthy compan-ions,—and their delight with the great masters will be increased. It is by tasting the bitter in art as well as in life that we learn to appreciate the sweet."

"Imagination, my dear Editor, plays the great-est and most important part in our musical life. Without it, our pupils would make no progress, our sublime profession would become a sordid occupa-tion, our work would be a dreadful drudgery, dig-ging for dollars and music would stagnate. With it, we can reach realms of expression, of thought and of fancy, unattainable by any other gift; and, great-est privilege of all, we can lead our young and old and uplift them beyond the passions and material-ism of grosser vocations.

"Imagination will live as long as the human race. It will expire with the last man, after having light-ened the pain of his approaching end. It is a charitable illusion that adds to life a super-sense. It dangles before the child's eyes the alluring prism of the future; it beckons men on to inaccessible chimeras and consoles the dying old man with fal-lacious hope. Without it, life would have a taste of ashes, the most subtle philosophers would be un-able to find any meaning in it and, in short, music would be but an empty word and a sound without signification."

"But, Professor, has not imagination a higher, more important mission to serve in the realm of in-spired composition?"

"Indeed it has; the sublimest and most elevating of all. But my time is up! Perhaps we may con-tinue the subject when next we meet, eh? For the present *Au revoir et merci!*"

WHAT MEN LIVE BY

(*Continued from page 668*)

forces push you on." How to acquire a taste for work is one of the problems which the book solves most admirably.

We cannot refrain from quoting the author as to seven points of a good job: 1. Difficulty and crude-ness enough to call out our latent powers of mas-tery. 2. Variety so balanced by monotony as to suit the individual's needs. 3. A boss. 4. A chance to achieve, to build something and to recognize what we have done. 5. A title and a place which is ours. 6. Connection with some institution, some firm, or some cause, which we can loyally serve. 7. Honor-able and pleasant relations with our comrades in work.

The music teacher has every one of these factors in his work, except that he unites in himself the two points of being the "boss" as well as the work-er, that is, he must initiate and plan as well as carry out. In his discussion of Play, the author calls attention to the fact that "everybody is taking play so seriously today." It is right "to deliberate about play, devote time, money and brains to work it up"; but in so doing we must not lose our sense of humor and proportion; we may take it seriously, but not forget that it is play. Another delightful thought for the musician is: "Art and Play fulfil the same function, provide us the same refresh-ment." "Play means recreation, and this is also the essential function of art." "Play is one type or aspect of art." Every page of the book is full of thought for the art worker, and the expression of the thought is so delightful, so animated, and so full of modern life and ideas that one reads the page again and again, so that not one phase of the thought shall escape. Here is a book for the quiet hour, for Sunday reading. And above all, we say, keep it on your studio table where every pupil may see it and pick it up while waiting.

. . . . . *before you purchase any piano*

be sure to read "The Pith of the Piano Problem," the 32-page booklet which we are prepared to send free without obligation to all readers of The Musician who may be contemplating the purchase of a piano.

¶ This booklet tells the important things to look for, and the pitfalls to avoid, in selecting a piano.

¶ Far too many pianos have merely a beautiful exterior finish, while the interior of the piano—the part you don't see, but by far the most important—is slighted or cheapened. The pleasure derived from such pianos is ephemeral and fleeting Not so the world-renowned

Sohmer

"The Piano of Permanent Tone"

¶ A piano is for a great many people a *life-time* purchase! Why make such an important purchase without knowing for yourself just what you are doing? "The Pith" tells you. It gives TESTS by which you can judge the quality of different pianos.

¶ Write for this booklet if you contemplate, even remotely exchanging your piano or purchasing a new piano. You will find it not at all dry or technical, but live and interesting.

¶ When you write, we shall consider it a favor if you will mention the make and age of your present piano (if you have one), so that we can classify your inquiry and take proper care of it. Writing for this booklet does not put you under the slightest obligation. Write *today*, mentioning The Musician

A graduate writes: "I wish to thank you again for the great benefits derived from your course. I would not part with it for $1,000. I find it easy to make as high as $17.50 in one day" Write for **Free** book.

NILES BRYANT SCHOOL OF PIANO TUNING, 236 Art Institute, Battle Creek, Mich., U. S. A.

ELEMENTARY VIOLIN TEACHING

(*Continued from page 701*)

material can be selected which will best arouse and develop the latent forces of talent, gradually training these into musical knowledge and understanding. Of course it depends upon the teacher's natural teaching ability and the keenness of his perception as to how well this first musical matter is chosen, so that it will serve most effectively in meeting the psychological conditions of each individual.

To allow further illustration three excellent modern text-books will be referred to in these articles, *First Lessons on the Violin,* by John Craig Kelley, Ditson Edition, No. 29; *The Public School Class Method for the Violin,* by Albert G. Mitchell, Ditson Edition, No. 176; *The Violin,* by Berthold Tours, revised and enlarged by Franz C. Bornschein, Ditson Edition, No. 198. These works present the subject in a most attractive form, briefly yet thoroughly. Their contents have been chosen with a view to the rapid developing of musical appreciation without bearing too drudgingly upon mere mechanical phases of the study. Each work has its distinct merits and, of course, is meant to supply teaching material of a special nature. With these three books the inexperienced teacher can easily form a working basis for the pedagogic suggestions outlined in these articles. Remember, however, that in themselves they do not attempt to cover the subject in its entirety, and will need supplementary material to follow what has been only slightly described.

———*———

BOOK NOTES

Orchestration. By Cecil Forsyth. Macmillan & Co., Price, $5.25.

A new volume in the MUSICIANS LIBRARY of works on music, issued by the Macmillan firm. For the benefit of our readers we give a list of the volumes already published:

Musical Composition. By Sir C. V. Stanford.
Organ Playing. By P. C. Buck.
The First Year at the Organ. By P. C. Buck.
A Practical Guide to the Modern Orchestra. By James Lyon.
Interpretation in Song. By Harry Plunket Greene.
Chamber Music. A treatise for students. By Thomas F. Dunhill.

The student of musical composition who wanted to take up the subject of orchestration has not had a great deal of help in the way of literature or text books on the subject. The work by Berlioz, for many years the standard in the English language, was sadly out of date; other works available were too much condensed. It is true that several valuable treatises existed in the German and French languages, but comparatively few of American students were sufficiently familiar with these languages to undertake their use in a text book.

Mr. Forsyth's book of over 500 large pages comes in very helpfully, and will undoubtedly be taken up by teachers of the subject as well as by musicians who are working without the aid of a teacher. The author's special purpose, as he explains it, is "to describe our modern orchestral instruments, where they sprung from, how they developed, and what they are today; next, to trace the types of music which have been reflected in these constructional changes, and, in especial, the types most familiar since Beethoven's time." In examining the book in detail one notices first the very elaborate and practical list of instruments their compasses and notations which is found at the very beginning. With this available, the young student need have no fear of writing passages that cannot be played. The writer of this sketch is especially struck with the fine characterization of the tone qualities of the different instruments. Of the saxophone for example, he says: "Orchestrally a sort of bridge-quality between that of the horns and the wood-wind; thicker and heavier than the clarinet . . . in four-part harmony it produces at one time the effect of violas and 'cellos *divisi* with added clarinets and bassoons; at another, of the organ diapasons." "The whole compass of the English Horn is tinged with a curious shade of reflection, of sadness, and of melancholy," is a happy statement. The analysis of the tone quality of the viola, string by string, is particularly good.

The illustrations from the works of the masters are apt and well chosen, and include examples from the modern writers, Strauss, Brahms, Humperdinck Elgar, Tchaïkovsky, Debussy, Glazunov, Dvorák Bizet, etc.

The Star Spangled Banner (Revised and enlarged from the "Report" on the above and other airs issued in 1909). By Oscar G. Sonneck. Government Printing Office, Washington, D. C. Price 85 cents.

Issued by the Library of Congress with a special view to the centenary of Francis Scott Key, author of the poem. The question of the origin of the music, the composer, and all the various literature and theories that have been advanced, are discussed by Mr. Sonneck in his usual illuminating and exhaustive style. He gives his adherence to the claim of John Stafford Smith, as the composer of the air upon which *The Star Spangled Banner* is founded.

Sumer is icumen in. By Jamieson B. Hurry. Second Edition Novello & Co.

The story of this remarkable early English glee a composition which has been studied by the greatest authorities in music, its harmony being in advance of that of any contemporary composition, reflecting glory on the English school of music in the 13th century. It is in large octavo shape and profusely illustrated, with a facsimile in colors of the original manuscript, which is preserved in the British Museum. Every musician who is interested in the history of music should have a copy of this work.

First Year Music. Rote songs for kindergarten and first year. By Hollis Dann. American Book Co. Price, 60 cents.

The special purpose of this book is to furnish suitable and attractive material for the first year in music, together with directions for the presentation of the same. In the Introduction the author gives extremely valuable hints to teachers on the subject of how to use "first material." The tunes selected are simple, although the reviewer feels that some of them are set a little high for the tender voices, unless the teacher follows implicitly the directions as to tone quality and production; the light head voice must be used at all times.

Frank Lynes. Arthur P. Schmidt, Boston, Mass.

Readers of THE MUSICIAN who are interested in American music and American composers will be pleased to have a copy of this appreciation of the work of Mr. Frank Lynes, who died June 24, 1911. In addition to a sketch describing Mr. Lynes' career as a musician and composer, the book contains a list of his compositions which shows the range and extent of his work in that field. Op. 62 is the highest in the list of piano pieces, most of them containing five or six numbers, with many songs

part-songs, and anthems, indicating an extraordinarily active career as a composer. Copies of the book may be obtained free from the publisher by mentioning THE MUSICIAN.

Guiding Thoughts for Singers. By George Chadwick Stock. Published by the author, New Haven, Conn. Price, $1.00.

A book of suggestions and ideas for singers and teachers. Just the kind of thing one wants handy for reading at intervals, on the cars, while waiting for pupils or lessons, and at other odd times.

Graded Lists of the Music of the Great Composers. Compiled by G. Surtees Talbot. The Home Music Study Union, 30 Carlton Terrace, Child's Hill, London, N. W. Price, 50 cents

This makes a most valuable guide for teachers and students, covering the compositions in the classical and standard literature.

NEW MUSIC BOOKS

Parsifal. By Richard Wagner. Published by Boosey & Co. Price, $1.50.

Vocal score with piano accompaniment, German and English text, uniform with Boosey's *Royal Edition of Operas.* This should prove very welcome to musicians who are interested in the opera and to music clubs for their study programs, as it presents the whole opera in a convenient time.

Messrs. Boosey & Co. have put out in sheet form one of the best of the late Coleridge-Taylor's *Songs of Sun and Shade,* entitled *The Rainbow Child,* full of charm and beauty. It should add to the composer's reputation as a song writer.

First Year Bach. 20 compositions selected, arranged and edited by Arthur Foote. A. P. Schmidt. 75 cents.

Easy and short pieces by Bach, attractive in a musical way, most of the pieces not appearing in other collections. It can be used by third grade pupils.

Studies in Mechanism. 60 études selected from A. Loeschhorn, augmented, revised, and edited by Otto Thümer. A. P. Schmidt. Two books, each 75 cents.

Each study is preceded by a technical figure repeated a number of times as a preparation for the étude proper. The two books together furnish ample and satisfactory material for the building of a good technic. Book I can be used with pupils near the end of Grade II.

Legato and Staccato. 40 studies by Bertini, selected, arranged and augmented with studies in the style of Bertini by James H. Rogers. A. P. Schmidt. Two books, each 60 cents.

The editor has given to each étude a preparatory exercise working out the leading technical figure. The fingering is excellent, and phrasing clear. These studies can be used with a second grade pupil, and in this modern form are fine material.

Six Melodic Etudes for the pianoforte. By Florence Newell Barbour. A. P. Schmidt. 75 cents.

Most excellent for pupils about the end of Grade III, useful in forming taste and style; full chord playing, arpeggios, and passages requiring rapid finger action represent the material of the book.

If you love music there should be a Victrola in your home

A Victrola has no limitations—with a Victrola you can hear practically all the music of all the world sung and played by the greatest artists, bands and orchestras. For within the pages of the Victor catalog there are more than 5000 vocal and instrumental selections for you to choose from.

Is there not a place for a Victrola in your home? Some day you will surely have a Victrola, and when this day comes you will immediately realize that you have added to your home the one thing that will bring the greatest pleasure to every member of your family.

There are Victors and Victrolas in great variety of styles from $10 to $200, and any Victor dealer will gladly play any music you wish to hear.

EMIL FISCHER, the famous Wagnerian basso, died at Hamburg, August 11. He was born in Brunswick, Germany, June 13, 1838. His début was at Graz, in 1857. After a period of special study he sang baritone rôles in various cities, notably Danzig, Rotterdam, and Dresden, whence he went to New York, in 1885, as a member of the German Opera Company, directed by Leopold Damrosch. In 1898 he retired from the stage and gave his attention to teaching. Later he went back to Germany. His *Hans Sachs* is generally considered to have been his finest characterization.

LESSONS FOR TEACHERS HIGHLY ENDORSED.

These great musicians know musical values fully. They would not associate their names with anything of a doubtful nature. Each artist has carefully examined and endorsed Sherwood's Normal Training Course for teachers—their approval is conclusive evidence of the high merit of the lessons. Progressive teachers will find the opinions of these famous artists of much value and very interesting.

READ WHAT THEY SAY

Riond-Bosson, Morges-Suisso

My dear Mr. Sherwood:
I read your work with the liveliest interest and greatest pleasure. As an excellent guide for students and solid reliable advice for teachers, it is bound to become very popular, and the more so as it bears the stamp of a real pianist and accomplished musician and experienced pedagogue. Wishing your work and yourself all the success you so fully deserve, I am—*I. J. Paderewski.*

Abbazia, Austria

My dear Mr. Sherwood:
Your work has been of great interest to me, and it will doubtless win hosts of friends in America, and I send you herewith my heartiest good wishes towards this end.
—*Theodor Leschetizky.*

Dresden, Germany

Siegel-Myers School of Music:
Mr. William H. Sherwood's idea of written Piano Lessons is as new and original as it is of great merit and important value. I read his excellent and most interesting work carefully and found it a very useful and remarkable reference, which certainly will not fail to attract everybody's attention.—*Emil Sauer.*

Paris, France

My dear Mr. Sherwood:
It gives me great pleasure to send you these words of warmest approval because I find you have solved the problem of giving piano lessons in an altogether brilliant manner. Your method of presentation is brief, easy to understand, and, at the same time, thoroughly complete.—*Moritz Moszkowski.*

THE LESSONS CONTAIN

the knowledge gained by Sherwood after thirty years of teaching, concert playing and lecturing—the **important problems of everyday practical teaching** are comprehensively treated. Much attention is devoted to the little things, as well as the big ones. The physical exercises used by Sherwood in developing his marvelous technic are brought before you clearly by an ingenuous system of photographic illustrations. He shows you how to apply the important principles, which made his own work so successful, to your teaching by a series of University Extension Lectures on the art of teaching music. The complete Normal Training Course includes thorough instruction in Harmony, Counterpoint and Composition by Adolph Rosenbecker and Daniel Protheroe.

FREE VALUABLE CATALOG

Merely fill in the Coupon below and mail it to us and we will send you our interesting catalog, which describes this Normal Course fully and gives portraits and biographies of our Faculty and other great musicians. These Sherwood principles can be secured only through our School in this course of lessons. If you cannot go away to study with the very best teachers, you need this Normal Course. Get the catalog and then judge for yourself how practical the lessons are. Mail the Coupon today for the **Free Catalog** and details of our Partial Scholarship Offer to Musician Readers.

New England Conservatory of Music

George W. Chadwick, Director

BOSTON, MASS.

Year Opens Sept. 17th, 1914

The Largest and Best Equipped School of Music

Located in the music center of America. It affords pupils the environment and atmosphere so necessary to a musical education. Its complete organization, its imposing Conservatory Building, splendid equipment, and the Residence Building offer exceptional facilities for students.

Complete Curriculum. Courses in every branch of Music, applied and theoretical, including Opera.

Owing to the practical training in our Normal Department, graduates are much in demand as teachers.

The free privileges of lectures, concerts and recitals, the opportunities of ensemble practice and appearing before audiences, and the daily associations are invaluable advantages to the music student.

A Complete Orchestra offers advanced pupils in voice, piano, organ and violin experience in rehearsals and public appearances with orchestral accompaniment.

Dramatic Department. Practical training in acting.

Scholarships. A limited number of scholarships in Composition (Director's Class) available 1914.

Address RALPH L. FLANDERS, Manager.

ALEXANDER HENNEMAN, Director of Henneman College of Music

THE WAR

PUTS an end to European study. Students must seek instruction at home. The impetus music will receive in America through this event will be untold. This is YOUR OPPORTUNITY.

WHY NOT study at the Henneman College of Music? Alexander Henneman, the director, has spent six years in European study, and has a national reputation. His yearly VOCAL SUMMER INSTITUTE is noted the country over. As one of the chief examiners of the Progressive Series of Piano Lessons, his fitness for the directorship of this school is proven. A THEATORIUM connected with the school gives opportunities for public performances and recitals. THE OPERA SCHOOL has given such excellent performances that paid engagements resulted.

The advantages of St. Louis and the opportunities to study in the Henneman College of Music assure you of an education equal to that of any foreign or American school. Send for Illustrated Catalog to Secretary,

THE BENCHELEY METHOD OF VOICE DEVELOPMENT

An Original Method of Technical Study by

Intoning Exercises

Copyrighted in 1897 — Copyright renewed in 1914

The system of voice practice originated by Miss Bencheley includes gymnastic exercises for the vocal muscles, which are as potent in their action as are the exercises practised in gymnasiums for the strengthening of different muscles of the arm. — EDWARD TERHUNE GIBSON, M.D. (Minneapolis Times).

Miss Marie Bencheley of Minneapolis, U. S. A., is the author of a system of vocal technic which is pronounced by physicians to be an important advance in the treatment of the voice. This is said to be the first method on record formulated exclusively for specific physiological treatment of vocal muscles.— DRESDEN (GERMANY) ADVERTISER, July 27th, 1901.

Terms for instruction in this method on application to

M. B. BENCHELEY

Mme. Niessen-Stone

Formerly with Metropolitan and Boston Opera Companies

Nine Years Leading Teacher at the Institute of Musical Art, New York City

Announces the opening of her private classes at

326 W. 80th St., New York City

Dr. Frank Damrosch writes in a letter, dated June 19th, 1911: "Your work has the rare merit of combining the ability to teach the fundamentals of correct voice use with the power to develop the highest artistic possibilities in the student, **and the results demonstrated by your pupils are of the best.**"

Mr. Gustav L. Becker

(Chairman Committee on Standardization, N. Y. S. M. T. A.)

Announces that he will open his new season of Music Teaching, 1914-15, for *Advanced Piano Playing* and *General Musical Training* — full *"Conservatory Course"*.— Also special course for less advanced pupils under assistant teachers, taught and trained by Mr. Becker, using his "Superior Graded Course" (pub. by Witmark & Sons), his "Scale and Chord Definer," and other devices and expedients originated by Mr. Becker.

For terms, etc., address,

STEINWAY HALL, NEW YORK

TWENTY-FIVE cities will be represented in the con tests for prizes open to choral and other music organizations at the Panama-Pacific International Exposition in San Francisco. About $25,000 will b distributed in prizes.

SAINT PAUL, Minn., will not have a symphon orchestra this season owing to the fact that suff cient guarantors have not been secured to make pr vision for the annual deficit. It is understood th the Minneapolis Symphony Orchestra will give series of concerts in Saint Paul.

ROCHESTER, N. Y., will have a series of six more concerts by the local Symphony Orchestr Herman Dassenbath, conductor.

GABRIEL DUPONT, one of the most promising the younger French composers, died at Vésine France, in August. He was thirty-six years of ag

POL PLANCON, the celebrated French basso, die in Paris, August 12, 1914. He was born June 1 1854, at Fumay, France. He first came to th United States in 1893, as a member of the gre cast of stars at the Metropolitan Opera House, i cluding Nordica, Eames, Melba, Calvé, and the tw De Reszkes. He retired from the New York se son in 1906.

THE pageant of Cape Cod was held on the ban of the Cape Cod Canal, in the village of Bourn August 15-19. Daniel Gregory Mason composed th music for the pageant, and William Chauncy Lan don was pageant master. The drama consisted fifteen scenes on land and water.

WORCESTER, Mass., held its 57th annual mus festival September 21-25, five concerts with ni public rehearsals preceding. The choral works pr sented were Wolf-Ferrari's *La Nuova Vita*, Me delssohn's *Elijah*, and Bruckner's *Te Deum*, give under the direction of Arthur Mees. The Festiv Chorus numbered 450 singers.

SAMUEL BRENTON WHITNEY, for 35 years orga ist and choirmaster of the Church of the Adver Boston, died at Woodstock, Vt., August 3, at t

age of 72. He was a founder of the American Guild of Organists. His reputation as a composer rests chiefly upon some fine hymn tunes, the best known probably being *The Son of God goes forth to war.*

THE New England Conservatory of Music, Boston, opened September 17 with a registration that indicates that the present unsettled business conditions will have no effect on the attendance. The director, Mr. George W. Chadwick, has added a new prize of $50 for superior performance in organ playing, pupils in the junior and senior classes being eligible to compete.

THE Illinois Music Teachers' Association offers a prize of $500 for the best orchestral compositions in large form, symphony, fantasia, or suite, by an American composer, native born or naturalized. The conditions are that the work has never been played in public, scores must be accompanied by complete parts for a symphony orchestra, that the Association shall have the right to produce the successful composition in Chicago during April, 1915, at the Convention of the Association in Centralia, in May, and at San Francisco as often as the conductors of the Exposition Orchestra desire. Otherwise the work remains the property of the composer. All manuscripts must be in the hands of the chairman, Mr. Glenn Dillard Gunn, Fine Arts Bldg., Chicago, on or before March 1, 1915.

LEONCAVALLO is said to be at work on an opera entitled *Ave Maria.* The scene is laid in old Naples.

PROF. FREDERIC NIECKS has given up his work as Professor of Music at Edinburgh University, a position he held since 1891.

MR. J. LAWRENCE ERB, who filled the position of director of the School of Music, Wooster University, Wooster, O., and went to Chicago a year ago as organist of a large Presbyterian Church, has returned to the college field, having accepted the post of Director of the Music School and University Organist at the University of Illinois, Urbana-Champaign. A new $15,000 Cassavant organ is being installed in the Auditorium, to be ready in October. He succeeds Dr. Charles H. Mills, who has gone to the University of Wisconsin, succeeding Dr. Louis Coerne.

MR. G. W. L. MARSHALL-HALL has been appointed Ormond Professor of Music at Melbourne University, who filled the position 1891-1900. It speaks well for the character of his work as an educator that he returns after a lapse of fourteen years. This is one of the best paid posts in the field of English music education.

THE second annual Saco Valley Music Festival was held at Bridgton, Me., August 3 and 4, under the direction of Mr. Llewellyn B. Cain. The chorus numbered 300 voices, made up from the Bridgton Steep Falls, Kezar Falls, Standish, Limington, Limerick, and Mount Kearsarge Choral Unions.

THE Minneapolis Symphony Orchestra, Emil Oberhoffer, conductor, begins its twelfth season. There will be twelve symphony concerts, October 21-April 1, 1915, a cycle of six Beethoven concerts, November 24-March 31, 1915, and twenty-one Sunday afternoon popular concerts, beginning October 25.

———*———

NEW YORK NOTES

BY EVA EMMETT WYCOFF

THE Philharmonic Society begins its seventy-third season on Oct. 29, followed by forty-one concerts, the last one taking place March 25. Prominent soloists will take part. Joseph Stransky, as conductor, has carried on the splendid work done by his predecessors, until the playing of the orchestra has reached a noteworthy standard.

THE Beethoven Society announces five musicales and two evening concerts, to be held in the Astor Gallery of the Waldorf-Astoria. Dr. J. Christopher Marks is director of the choral section, which is made up of 125 singers.

THE New York Oratorio Society will give three concerts, presenting *The Dream of Gerontius, The Messiah* and *Joan of Arc,* by Enrico Bossi, this being its première in America. Mr. Louis Koemmenich is conductor, and this is the 42d season.

THE Century Opera management announces its second season of twenty weeks, which opened Sept. 14. They have changed their policy. Each opera will have eight performances, but these will be distributed through two weeks, and, instead of one each week, two will be alternated during the two weeks, thus easing the situation for the artists.

MR. ELLMER ZOLLER, of Pittsburg, has located in New York City, and as his efficiency deserves, he is accompanying many artists. He will also be associated with Miss Eva Emmett Wycoff in a series of recitals for piano and voice.

AT *Ocean Grove,* in the great auditorium, splendid concerts have been given during the summer, as in former years. Clarence Reynolds is official organist, and Tali Esen Morgan manages and makes successful everything concerned with these concerts.

THE Zoellner Quartet has a busy season booked. They will visit California before their work is finished in the late spring of 1915.

MISS BEATRICE MCCUE prepared a recital of the "Songs of Americans," which she gave in Akron, O., early in September. She had the assistance of Mr. Charles Gilbert Spross.

MISS CECILE AYRES, pianist, will give joint recitals with Leo Slezak, this season.

MARGARETE MATZENAUER will tour in concert, as will also Jane Osborne Hannah.

GUGLIELMO CARUSON is the teacher of Miss Neida Humphrey, who recently gave a recital at Huntsville. Ala., singing a *Lullaby* by A. H. Edwards.

———*———

CONCERTS FOR THE PEOPLE

THE Boston Music School Settlement has arranged for a series of Sunday afternoon concerts, every other week from October 25-December 6. The following artists will assist: Maud Powell, violinist, Felix Fox, pianist; Arrigo Serato, violinist; George Mitchell, tenor; Tina Lerner, pianist; the Swedish Singing Society Harmoni, Gustaf Sundelius, conductor; Mme. Jeanne Gerville-Reache, contralto, and the Hoffmann String Quartet (members of the Boston Symphony Orchestra). The prices of tickets have been fixed at 15, 25, 50, and 75 cents.

The concerts will have the patronage of persons of social distinction and prominence.

———*———

GUARD against choosing one composer as your favorite. The great masters can only be placed side by side, not above or under each other. They mutually supplement each other.—*C. Reinecke.*

———*———

THE reproduction of a musical art work will meet the demands of art only if it arises out of the unconscious needs of the executive artist to make manifest the beauties of the work with which he is completely filled.—*W. Hutschenruijter.*

VICTOR TALKING MACHINE RECORDS FOR OCTOBER

WHAT a pleasure it is to try over new records! When a musician wishes to test new music he must be a good reader, have an adequate technic to sing or play satisfactorily at sight; or if a vocalist without ability to play the piano must have an accompanist. But the person who has a Victrola only needs to put a record in the machine, start the motor going and sit back and listen. It's a real pleasure to have six or ten new records to study while coming to a decision as to which particular ones to keep. When you go to a Victor Talking Machine agency be sure to hear the new issues for October, of which we consider the following to be specially attractive:

Caruso, Enrico: *Sérénade espagnole,* by Ronald. A charming new song by an English composer, sung in French.

Whitehill, Clarence, baritone: *Confutatis,* a magnificent solo from Verdi's *Requiem.*

Gadski, Johanna, soprano: *Ocean, thou mighty monster,* from Weber's opera, *Oberon,* a number in which lyric beauty and dramatic fervor are blended.

Hempel, Frieda, soprano: *Ah, fors'e lui,* the celebrated coloratura song from Verdi's opera, *La Traviata,* a brilliant piece of vocalization.

Kreisler, Fritz, violinist: *The Austrian National Hymn* as used in Handel's celebrated quartet, and arranged for violin, unaccompanied, by Mr. Kreisler himself; a splendid violin number.

Gluck, Alma, soprano, and **Louise Homer,** contralto: *Barcarolle (Oh, night of love),* from Offenbach's *Tales of Hoffmann;* an exquisite rendition of this favorite and lovely song.

Homer, Louise: *I cannot sing the old song,* a favorite song of a generation ago. Mme. Homer's magnificent contralto voice is admirably suited to this song.

Ruffo, Titto, baritone: *Tremin gl'insani del mio (They shall tremble before me),* from Verdi's opera *Nabucco (Nebuchadnezzar),* no longer given on the stage, but revived a few years ago in Milan. It is a fine air.

Williams, Evan, tenor: *Beloved, it is morn,* by Aylward, a fine love lyric.

Powell, Maud, violinist: *Gavotte* from *Mignon,* as transcribed by Sarasate, a charming piece from the classical repertoire.

Destinn, Emmy, soprano: *Elizabeth's Prayer* from Wagner's opera, *Tannhäuser.* One of the most expressive of opera airs.

Tetrazzini, Luisa, soprano: *Pace, mio Dio (Mercy, O Lord),* the great dramatic air in Verdi's opera, *Forza del destino.*

Martinelli, tenor: *La donna è mobile,* the always admired air from Verdi's *Rigoletto,* which displays the tenor voice to perfection.

Bori, Lucrezia, soprano and **John McCormack,** tenor: The beautiful duet, *O soave fanciulla (Thou sweetest maiden),* from Puccini's *La Bohême.*

McCormack, John: *Funiculi, funicula,* the popular Neapolitan folk-song, with accompaniment of chorus of male voices.

Culp, Julia, mezzo soprano: *Hedge Rose,* by Schubert, sung in German. In this song class Miss Culp's exquisite art as a lieder singer is emphasized.

RECENT CHRISTMAS CANTATAS

Terms for orchestra parts refer to rental from Oliver Ditson Company for one month or fraction thereof

BERGÈ IRÉNÉE
Shepherd's Vision, The..... $0.50
Solo voices: S. A. T. B. 35 pages; 30 minutes.
13 orchestra parts, with harp, $4.00.
Christmas feeling is successfully realized in this score, with suitable simplicity, the latter combined with originality and tasteful expression. The numbers are clear, and grateful for the soloists, and the organ part admits of delicate colorings in many places. About twenty-two pages of chorus-writing.

BERWALD, W.
Christmas Tidings..... .50
Solo voices: S. A. T. B. 33 pages; 30 minutes.
Orchestra parts, full; $3.00.
The composer has set a well-constructed sequence of scripture texts and words of hymns, developing the thought of the prophecy of the Messiah, and of the manner and meaning of its fulfilment. In the music are felt the qualities of imagination and inventiveness. The solo parts are songful and telling, and the climaxes strong and dignified.

CAMP, JOHN S.
Prince of Peace, The..... .75
Solo voices: S. A. T. Bar. 90 pages; one hour.
Orchestra parts, full; $5.00.
The melodic outline of the solos and chorus-parts is largely diatonic in this work, and without complications for the singers, reliance being placed upon well-knit structure and an independent organ part that adds to the general feeling of firmness and activity. About sixty-two pages of chorus-writing. This text is chiefly biblical.

LANG, MARGARET RUTHVEN
Night of the Star, The. Op. 52 ..... .40
(Cycle for Christmas).
Solo voices: S. A. T. B. 16 pages; 10 minutes.
A distinguished simplicity marks this brief cycle—the hush and the pause, under the spell of Christmas wonder; but there is in it, too, the musical justification for finely prepared performance. There are four numbers: I. The Star of Bethlehem (quartet); II. The Vision of Mary (duet for soprano and alto); III. St. Joseph's Vigil (tenor solo); IV. When Christ Was Born (carol for quartet). Quartet choirs are well served by this composition, equivalent to a short cantata, of the right length to introduce into the regular Christmas service.

MANNEY, CHARLES FONTEYN
Manger Throne, The. Op. 9..... $0.60
Solo voices: S. A. T. Bar. 48 pages; 30 minutes.
String quartet parts; $3.00.
The large possibility of musical and religious impressiveness in this cantata, and the composer's moderate exactions in the manner of the means required, are two of the sources of its effectiveness and of its ready availability. There is variety, and the numbers are not too long. The text is made up of scriptural and metrical passages.

NEVIN, GEORGE B.
Adoration, The..... .60
Solo voices: S. A. T. B. 33 pages; 20 minutes.
Orchestra parts, small; $3.00.
By one of the most popular American writers of church music. The voice parts are easily learned, lying well within average compass, each member of the quartet has a solo, and the organ part gives the singers helpful support throughout. The cantata begins and ends with the familiar *Adeste fideles*, in which the congregation joins. Eight voices, two on a part, suffice; or a larger chorus with soloists may be utilized.

REED, WILLIAM
Message of the Angels, The..... .50
Solo voices: S. T. 29 pages; 20 minutes.
Orchestra parts, full; $3.00
Choirmasters will find this cantata a thoroughly favorable selection for the use of average choirs, and for quick preparation by "better than average" choirs, too. The choruses are continuously interesting and the parts for solo voices illustrate the Christmas spirit in tasteful and likable melody. Seventeen pages of chorus-writing. The text is partly biblical with verses from *The Key of Life*, a mystery play by Rev. F. G. Scott.

SPENCE, WILLIAM R.
Story of Bethlehem, The..... .50
Part I. The Shepherds. Part II. The Magi.
Solo voices: S. A. T. B. 30 pages; 25 minutes.
Orchestra parts, full; $3.00.
Among the features of this cantata are the short pastorale which opens the first part, melodious and well-written solos, an affecting lullaby, interesting choruses, and the use of the familiar hymn *Adeste fideles*, at the end, sung by the choir and congregation with free organ accompaniment. Eighteen pages of chorus-writing, only moderately difficult.

For complete list of oratorios and cantatas see Descriptive Circular P. Free on request.

A FRIENDLY WORD

[The letter that follows is a copy of one sent to pupils by Mr. Charles S. Burnham, of Cleveland. It is so apt and right to the point in its handling of the "missed lesson" problem that we pass it along.—The Editor.]

A TEACHER'S only asset is his time. Upon the sale or disposal of his time does his income depend. And he must have an income to live.

Pupils on engaging time for lessons are apt to forget that a contract has been made to buy so much time of a teacher for a certain price, at certain stated intervals, for a given period of time, and that such contract ought to be as binding as though the article were merchandise instead of service.

If lessons must be missed through circumstances which are beyond the pupil's control—illness alone excepted—the teacher is always ready and willing to make up the time lost, and thus keep the schedule intact; and the serious minded pupil should himself be as anxious to do so, even in the case of temporary illness. In any event, if lessons must be missed through any cause, the teacher should be notified a day in advance so as to enable him to dispose of the time lost.

A mutual and friendly understanding between teacher and pupil regarding this matter will tend to progress and co-operation easier and better, and will enable both to work more harmoniously toward a definite end.

Soliciting your hearty co-operation, I am,

Very truly yours,

C. S. BURNHAM.

TWO THOUGHTS ON AMERICANS AND MUSIC

BY JOSEPH HOFMANN

[The New York *Sun* printed a lengthy interview with Mr. Hofmann from which we select the two paragraphs which follow.—The Editor.]

IN America the newspapers write of musical topics under the heading, "Amusements," and they are right. That is the attitude of the American public toward music. You go to a concert for pleasure, because you expect to hear something you will like, and you would rather take your pleasure in good company than in bad. Abroad they have an entirely different notion about it. They go to a concert there because they think it will add to their musical learning. They take it as mental food.

There are two things to be acquired in connection with music, the knowledge of music and the love of music. Sometimes people acquire so much knowledge of music that they lose the love of it. That is what is happening in Germany now, I believe. You have a great deal of love of music here, and you will keep getting a more thorough knowledge. I hope you will never "progress" to the stage of knowledge where you will lose the love. There is the artist's dilemma—to maintain a consistent artistic level and yet at the same time interest and educate the public. Between two sweet pills you must give them one bitter one. As Kipling says, the real man is he who can walk with kings and not lose touch with the common people.

WITH THE SCHOOLS AND TEACHERS

MR. PERLEY DUNN ALDRICH, vocal teacher, of Philadelphia, had a fine group of pupils with him at his summer school on Lake George.

MR. F. FLAXINGTON HARKER, for the past ten years organist and choirmaster at All Souls Church, Biltmore, N. C., established by the late George W. Vanderbilt, has accepted the position as organist at St. Paul's Church, Richmond, Va.

THE Detroit College of Music sends us a fine Year Book. Mrs. Louise Unsworth Cragg is director. Among the faculty we notice the name of Mr. J. Truman Wolcott, a composer of prominence.

THE Cosmopolitan School of Music and Dramatic Art, Chicago, Mrs. W. S. Bracken, principal, has kept up activity right through the summer. September 4 a recital of the songs of Mrs. Vera Brady-Shipman was given at the School.

BRENAU COLLEGE CONSERVATORY, Gainesville, Ga., reported a large registration up to September 15, when the school opened. Mr. H. C. Linscott returned as a teacher of singing, after a two years' stay in Paris. Dr. Henry G. Hanchett is principal of the theoretical department.

EUGENIO DI PIRANI, pianist and composer of New York, spent the summer at State Line, Mass. The Civic and Social Club of the village gave a benefit concert and entertainment August 28, in which Mr. Pirani and Mme. Alma Webster-Powell, soprano, assisted. Mr. Pirani played with great success his

SECULAR SONGS

HIGH VOICE

BULLARD, FREDERIC FIELD
Winter Song. (Pass the pipes, pass the bowl). [B♭] [E-g]..... $0.60
A rollicking, virile drinking song for a tenor voice; just the thing for a smoker.

GOUNOD, CHARLES
Lend me your aid. (*Inspirez-moi*) (*Queen of Sheba*). [C] [F-a]..... .60
A great tenor aria, dramatic and appealing; calls for a ringing, robust style for best effects.

TCHAIKOVSKY, PETER ILYITCH
Tears. (*Les larmes*), Op. 65, No. 5. [G] [d-E]..... .40
Full of pathos and tender expression; a splendid study in tone color for a pupil of musical temperament.

MEDIUM VOICE

MANNEY, CHARLES FONTEYN
Heart of hearts. (*Cor Cordium*). [B] [c-E (F♯)]..... $0.60
Concert quality, in the modern style; the melodic lines are broad and powerful, and the song should be a big success with good singers.

LOW VOICE

BULLARD, FREDERIC FIELD
Winter song. (Pass the pipes, pass the bowl). [F] [B-d]..... $0.60
(For description see Secular Songs, High Voice.)

TCHAIKOVSKY, PETER ILYITCH
Tears. (*Les larmes*). Op. 65, No. 5. [E] [b-C♯]..... .40
(For description see Secular Songs, High Voice.)

WATSON, MICHAEL
Anchored. [F] [*f-d*]..... .60
A standard song for bass voice, in which the low notes are introduced with fine effect.

SACRED SONGS

HIGH VOICE

ABT, FRANZ
He giveth His beloved sleep. [F] [F-F]..... $0.40
A favorite old song in new dress; it is especially effective as a song for funeral or memorial occasions.

NEVIN, GEORGE B.
The heavenly voice. [D♭] [E♭-g♭]..$0.50
The fine lyric quality of this song is supplemented by a warmth of religious color and a quiet dignity which will at once be recognized as appropriate and effective church music.

VINCENT, CHARLES
Nearer home. [B♭] [d-g]..... .40
A pleasing setting of the favorite hymn, "One sweetly solemn thought" will find a good place in the sacred repertoire.

PIANO SOLO

DELIBES, LEO
Mazurka. (From ballet *Coppelia*) IV..... $0.50
A very attractive number for home and social use, as well as for pupils' recital programs; calls for a light graceful style of playing.

LEMONT, CEDRIC WILMOT
Op. 9. **Pleasant Memories.**
No. 2. **The bird clock.** II-III... .30
No. 3. **In the park.** III..... .50
No. 5. **A Storiette.** II-III..... .40
Charming little pieces for young players, musically pleasing and technic builders as well. No 2 has a delightful swing much like a quick march, staccato; No. 3 is in the intermezzo style; No. 5 approaches the gavotte.

STEINFELDT, JOHN M.
The fountain. (*Le jeu de la fontaine*). Op 45. V..... $0.60
A pleasing melody with an accompaniment in rapid sixteenths for the left, and divided between the two hands, the passages a mingling of arpeggios and scales.

WIENIAWSKI, JOSEPH
Valse de concert in D♭. Op. 3. IV-V..... .75
A new edition, carefully prepared for teaching and playing by John Orth.

ORGAN

FAULKES, WILLIAM
Melody in E..... $0.60
A charming, melodious piece, equal to the best of the composer's previous works.

MISCELLANEOUS

SPOHR, LOUIS
God, Thou art great. Op. 98. Cantata for mixed voices. Solos for Soprano, Alto, Tenor and Bass; time of performance, 18 minutes..... $0.50

BATTMANN, J. L.
Mass in F. Op. 193. Edited by Eduardo Marzo..... .50
Thirty Offertories for the Organ. Edited by James H. Rogers..... 2.00
Selected largely from the modern repertoire. The editor has included biographical sketches of the composers represented.

DUDLEY BUCK
AN AMERICAN COMPOSER

DUDLEY BUCK 1839-1909

EVERY Choirmaster and every Choral Conductor should own and use the compositions of DUDLEY BUCK. They are a joy both to audiences and singers and grow in value with the passing of the years.

Will be sent for examination. Complete list of our publications by this favorite and famous composer free on request.

OLIVER DITSON COMPANY, 150 Tremont St., Boston, Mass.

Sixty Musical Games and Recreations

By LAURA ROUNTREE SMITH

Price, 75 cents, Postpaid

THIS stimulating little book is the work of one who understands not only the needs of kindergarten teachers, but the interests of and mode of approach to the child mind.

The Games are very simple at the beginning, and in various forms wherein the children can all take part; and they convey in an agreeable manner much valuable musical instruction.

An introduction price will be made to School Teachers and Music Supervisors on request.

From Music Trade Review

"For class-room work and pupil recitations this volume will be found almost indispensable. It can be recommended most heartily for its value in stimulating a greater love and knowledge of music among ambitious youngsters."

Oliver Ditson Company, Boston
CHAS. H. DITSON & CO., New York
LYON & HEALY, Chicago

latest piano composition, *Whirlwind Gavotte*, which is still in manuscript.

MR. LOUIS ARTHUR RUSSELL had a successful summer teaching season in connection with his normal classes in New York, New Jersey and Ohio, adding over forty teachers to the list of those who use the Russell Method. He reopened his Newark School and his studio in Carnegie Hall, Sept. 7.

THE Fox-Buonamici School of pianoforte playing, Boston, removed from Steinert Hall to the Wesleyan Building, Copley Square.

THE Asheville (N. C.) Ensemble Music Club gave a delightful concert, Aug. 31, the following artists, in the city for the summer, presented the program: Mr. J. F. Surmann, Cincinnati, violin; Mr. M. Lucier, Providence, violin; Mr. C. B. Crumb, Cincinnati, viola; Mr. E. H. Pierce, New York, viola; Mr. R. E. Yarndley, Chicago, 'cello.

MR. JOHN T. WATKINS, of Scranton, Pa., sends us three fine programs given by his pupils this summer. Mr. Watkins is conductor of the Junger Männerchor, which has won prizes at various Sängerfests; his choir has also been successful in contests at various cities during the past twenty years.

MR. FREDERIC A. FRANKLIN, formerly director of music at Fredericksburg College, Va., opened the Fredericksburg School of Music this fall. He will be assisted by two teachers. We wish him a big success in his enterprise.

THE Music School of the Commonwealth Art Colony, summer quarters at Boothbay Harbor, Me., gave two concerts Aug. 7 and 11, under the direction of Prof. Clarence G. Hamilton, of Wellesley College, who is director of the school. During the session Mr. and Mrs. W. J. Baltzell, of Boston, gave two recitals on art and dramatic songs.

MISS MARY WOOD CHASE, pianist, of Chicago, gave a recital at the Epworth Assembly, Ludington, Mich., July 30. Miss Chase conducted a very successful summer normal school near Ludington, July 8-Aug. 19. The Mary Wood Chase School of Musical Arts, Chicago, of which she is director, reopens for the present season, Sept. 14. There are nea thirty teachers on the staff of the school.

MR. JOHN ORTH, pianist, of Boston, gave his ture recital "With Liszt in Weimar," at Denver, C July 29. The lecture includes personal reminisce of his teacher Liszt; and the program is made from compositions by Liszt.

THE College of Music, Cincinnati, A. J. G voort, director, begins its thirty-seventh acade year this fall. The average enrollment of pu exceeds 700.

THE Von Ende School of Music, New Y City, reopened for the new season Sept. 14. courses of study are offered, the "Prescribed" "Elective." The faculty is a strong one.

THE Minneapolis School of Music, Oratory, Dramatic Art began its new season Sept. 15. outlook is unusually good. The Northwes doing aggressive work in music.

THE MUSICIAN

FOR DECEMBER

WILL BE AN ENLARGED NUMBER BOTH IN TEXT AND IN MUSIC

The articles are of absorbing interest to musicians and music lovers, and the music is attractive in every way, useful for public work and teaching.

It makes an attractive Christmas Gift for a musical friend.

CHARLES HUERTER

Born in Brooklyn, N. Y., in the year 1885. Received his first instructions in music from his father. After completing his school education in New York City and Geneva, N. Y., he entered Syracuse University at the age of eighteen. Here he studied piano and harmony with Prof. Joseph C. Seiter; later he took up counterpoint and composition under the guidance of the well-known composer, William Berwald. Adolf Frey was his next teacher in piano playing. In 1913 Mr. Huerter went to Europe and made most profitable studies in counterpoint and composition at the Royal Academy in Berlin, with Paul Juon, the celebrated Russian composer, as his master. For a number of years Mr. Huerter has taught and held a position as choirmaster at Syracuse, N. Y.

FOUR NEW MUSICIANS LIBRARY WORKS

100 Songs of England. Edited by Granville Bantock. High or Low Voice.

In this volume of the Musicians Library the Editor has wrought with enthusiasm in a domain whereof he is master, and to the exploiting of which he has brought both his conspicuous talent and unwearying research. Beginning with what is probably the most remarkable ancient song in existence, *Sumer is icumen in,* he includes in these one hundred examples of England's lyrics many old ballads of the sixteenth and seventeenth centuries, characteristic songs from various English counties, selections from such men as Purcell, Humfrey, and other masters of the madrigal school, down to the works of Dibdin and Bishop. An essay on the subject of English songs in general, highly instructive notes to each of the songs, and an exhaustive table of references complete this remarkable and authoritative work, which is further enriched by a reproduction in colors of the manuscript of *Sumer is icumen in.*

Paper covers, $1.50; cloth, gilt, $2.50.

Anthology of German Piano Music. Vol. II. Later Composers. Edited by Moritz Moszkowski.

This volume of the Musicians Library takes up the subject of German piano music at the point where Hummel and Von Weber led over from the Classic into the Romantic school, and the Editor has indicated the field down to the most recent developments as represented by Strauss and Reger. Within these boundaries stands an array of great names, which are represented in this collection by music that all the world has conceded to be great, and of lasting value. The intelligent editing and fingering, the discerning and instructive essay, no less than the wise selection of material are all worthy of Mr. Moszkowski's high reputation; and he may be truly said to have covered successfully in these two volumes one of the richest fields in musical literature.

Paper covers, $1.50; cloth, gilt, $2.50.

60 Folksongs of France. Edited by Julien Tiersot. Medium Voice.

French folksongs, which have only recently been made the subject of research by litérateurs and musicians of France, possess very marked beauties and a decided racial quality. The editor, who is librarian at the Paris Conservatoire, has made a most catholic and judicious selection, which he introduces to the American public by an illuminating essay and individual notes to each song.

Paper covers, $1.50; cloth, gilt, $2.50.

SPECIAL SUBSCRIPTION OFFER:—One copy, paper cover, of any one of these Musicians Library Volumes, with The Musician, one year, $2.25.

NEW PIANO WORKS

F. Morris Class: Five Vignettes (For the piano). $1.00.

The rich emotional quality of these five short mood pictures will recommend them at once to discerning pianists. In feeling, they may perhaps be likened to some of Schumann's shorter pieces, but the thought—both in melody and harmony—is modern and original, and is also characteristic of the best thought in American composition today. Each piece is preceded by a verse and the cover design is of a high art quality.

Special price in advance of publication, 50 cents. With The Musician, one year, $1.85.

Ernest R. Kroeger: The Whole Tone Scales. $0.60.

This little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

Arnoldo Sartorio: Twelve Melodious Studies in Velocity in Broken Chords Op. 1018, $1.00.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other, or developed entirely from figuration. A

new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

NEW BOOKS OF MUSICAL LITERATURE

Howard Wells: Ears, Brain, and Fingers. $1.25.

In this excellent addition to the Music Students Library, Mr. Wells aims to place in the hands of teachers and pupils material which covers the fundamental needs of the latter, and endeavors to train the diverse functions of the ears, brain, and fingers into co-ordinate action. Mr. Wells is an authoritative exponent of the Leschetizky method and has been a successful teacher of the piano in Berlin for a number of years. In his chapter on ear-training he presents much new and practical exercise, such as will recommend the work to every progressive teacher. (See sample chapter on page 732 of the present issue.)

Special price in advance of publication, 65 cents. With The Musician, one year, $2.00.

Marie Withrow: Some Staccato Notes for Singers $1.00.

The material consists of short, concise paragraphs on matters connected with singing. They approach the subject on the technical, artistic, and interpretative sides, with the purpose of helping singers to attain artistic freedom and independence. The title, *Staccato Notes*, refers specifically to the numerous pithy, extremely practical and stimulating sentences which are scattered throughout the book. This little work should achieve much success, since it is the fruit of the author's long and valuable experience as a teacher and singer.

Special price in advance of publication, 50 cents. With The Musician, one year, $1.85.

MISCELLANEOUS

J. C. Macy: Young People's History of Music. New Edition.

The notice of the new edition of this work was premature. We shall be unable to publish it for a number of weeks. In the meantime, however, we have a few copies, in perfect condition, of the first edition, which we will send, postage paid, to anyone, upon receipt of 50 cents. This is great value. The price of the new edition is $1.25, subject to usual teachers' discount, instead of $1.00 as quoted in the former notice.

American Teachers and Concert Artists Who Are Using Ditson Publications

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music, selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal, marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality.

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription.

Subscription price $3.00 a year. Sample copy 25c.

The Organist's Journal $4.50 / The Musician—value } Both for one year $3.75 { Postage additional on Canadian and Foreign Subscriptions

WM. E. ASHMALL & CO., 11 Pavonia Ave., Arlington, N. J.

The Best Holiday Gift

For Your Pupils or Musical Friends is

A Year's Subscription to the Musician

$1.50 per year, postpaid. Canadian postage, 25 cents

NO present is more appropriate or acceptable to the pupil, teacher, or lover of music than a subscription to this magazine. It brings them just the sort of music and reading-matter they most desire, and serves as a monthly reminder of your friendship and good will. Let us solve the problem of "what to give for Christmas" for you.

A subscription to *The Musician* will be more appreciated than anything else you can select.

For $1.60 we will send to any address in the U. S. *The Musician* for one year, and one copy of the great book of piano music, **"Something to Play,"** 45 pieces, Grades II-III to IV, worth, at teacher's net prices, in sheet form, $11.00. Just the thing for home playing and for use in teaching as well.

A GIFT CARD

announcing the gift and the name of the giver will be sent to each subscriber so that it will be received on December 24, 1914. All subscriptions intended as Christmas presents should be sent so that they will reach us before December 15th. Be sure to state on your order that the subscriptions are intended as Holiday presents, and give your full name and address so that the Gift Card may be made out correctly.

THE MUSICIAN, 150 Tremont St., Boston, Mass.

GRENVILLE COMMOSS

Prominent among organists in cities adjacent to New York is Mr. Grenville Commoss of the Central Presbyterian Church, Newark, where he is also musical director. That he has shown his musicianship as well as fine personal qualities is demonstrated by the fact that he is now in his thirteenth year of service at the church. He has several compositions to his record, organ pieces, vocal solos for the church service, and pieces for the piano.

We are pleased to note that Mr. Commoss makes extensive use of Ditson publications in his church work, and notably of the Ditson Edition in his piano teaching.

WM. HATTON GREEN

Among the leading music schools of Philadelphia we number the School of Pianoforte Playing, founded by William Hatton Green, and based on the Leschetizky principles. Mr. Green has given study to several systems which have found favor with musicians, the Virgil Clavier, the Mason, the Breithaupt, and the Leschetizky. His special studies in the latter system were made under Wager Swayne in Paris, Howard Wells

MODERN PIANO PUBLICATIONS OF UNUSUAL MERIT

SELECTED AND GRADED FOR TEACHING AND RECITAL WORK

GRADE I

d'ALBRET, CLAUDE

6 Easy Melodious Pieces

Playing Soldiers.....25
Menuet.....25
The Little Coquette.....25
Dolly's Lullaby.....25
Blind Man's Buff.....25
The Little Tyrolean.....25

Six charming pieces for juvenile players which are imbued with refreshing melodies and unusual originality.

BOHM, C., Op. 382

The Juvenile Pianist

Morning Song.....40
In Spring.....40
Military March.....40
Longing for Home.....40
Messengers of Spring.....40
In the Chapel.....40
Roundelay.....40

The refreshing simplicity and attractive melodious contents of these little pieces have helped them into immediate favor. They are genuinely interesting and progressive in plan.

GRADE II

DEL CAMPIGLIO, P. F.

5 Piano Compositions

Fleurette, Rondo.....35
Le Moulin (The Mill).....35
Berceuse.....35
Espanita, Danse Espagnole35
Mignon, Polacca.....50

An attractive set of easy little pieces particularly designed for young players. They are very melodious and contain a large number of effective little passages which make them sound very brilliant.

HOFFMANN, A. W.

Six Melodious Pieces

The Song of the Violet....30
The Happy Brooklet.....30
Cupid Waltz.....30
The Galop of the Flowers.30
May Dance.....30
First Dream Waltz.....30

Six instructive pieces which have been written with a keen insight into the practical needs of young players. They are of intrinsic and lasting merit, exceptionally melodious and are worthy of every teacher's careful attention.

GRADE III

ATHERTON, F. P.

4 Sketches for Little Folks

A Little Thought.....25
The Trolley Ride.....25
The Rocking Horse.....25
Gondoliera.....25

Four charming little sketches splendidly designed and carried out for young players.

BORCH, GASTON

A Suite for Children

Childhood Memories.....40
Old Dance.....40
Kathleen.....25
Dolly's Funeral March...25
Minuetto.....50

While designed for little piano players, these Musical Stories are written with a special view towards providing little compositions of genuine musical value and content.

ENGELMANN, H.

Characteristic Dances

Hungarian Dance.....50
Bohemian Dance.....50
Polish Dance.....50
Spanish Dance.....50

A highly interesting set of dances of very strong national character.

GRADE IV

JOHNSTONE, A. E.

Six Entr'actes

The Enchantress.....50

An unusually attractive and melodious number which will appeal to every player.

At the Pantomime.....50

A capricious, sprightly and decidedly charming number in gavotte form and a great favorite everywhere.

Lola.....50

A capricious, fanciful composition, leaning towards the Spanish in style. A delightful musical treat.

La Ballerina.....50

A dance of exceptional charm and piquancy with an interesting, attractive melody in a fine setting for piano.

The Coquette..... 40

A thoroughly delightful valse movement which never fails to please. A number which you will enjoy from start to finish.

Esperanza..... 40

An exquisite little concert intermezzo, novel in conception and demonstrating the splendid ability of this gifted writer.

GRADE V

PIRANI, EUGENIO

Op. 95

Mazurka Pensierosa.....50

Op. 100

Three Fantasias on Popular Italian Songs:

Santa Lucia.....50
Funiculi Funicula.....50
La Bella Gigugin.....40

Piano solos which are admirably fitted for every advanced player's solo repertoire. They are written by an artist whose dreamy, imaginative fancy runs hand in hand with absolute mastery of the modern resources of the instrument.

SEVERN, E.

La Danzatrice.....65

A dashing Southern dance which has been treated in an admirable manner in this composition.

Memoria di Venezia.....65

Pleasing and romantic.

Polonaise.....75

A modern and very attractive piano solo. Although the number is only medium difficult throughout, it gives excellent opportunities to the player for considerable technical display.

The Education of the Music Teacher

THOMAS TAPPER'S
Latest and Most Helpful Book
Price, $1.50

The movement for a more thorough education of the music teacher is national in its scope. The main point of Mr. Tapper's new and interesting work is to show what the teacher must know to achieve the widest success and then how this knowledge and proficiency may be attained. The captions of a few chapters make clear the great value of a work of this character.

Fundamental Requisites	Music Teaching as Service
Equipment and Success	Pedagogy
Music in the Home	Community Music
Public School Music	Efficiency
The Basis of Music Memory	Teaching Material

The work comprises 224 pages and is handsomely bound in cloth.
This work will be sent postpaid to any purchaser upon receipt of price.

Recent Publications of

Clayton F. Summy Co.

64 E. Van Buren St., Chicago, Ill.

Four Piano Pieces, by Carl Beutel, Capriccio (60c), Etude in C (50c), La Coquette (40c), Novelette (50c), have received commendation as being of more than ordinary merit, pieces that concert pianists can well afford to include on their programs.

Four Songs, by Paul Tietjens, Blind (50c), The Dead Flower (50c), Sphinx (60c), Woodland Love Song (60c), just published, are not only receiving high recommendation but are being sung by various singers in concerts.

Readers will do themselves no better service than to look well into the new melodrama, Miantowona, by John Mokrejs (75c). The poem is by Thomas Bailey Aldrich. It is a fine work.

Violinists will be interested in six new pieces for violin and piano, by Adolf Weidig, An Italian Suite: Venice—In the Gondola (50c), Florentine Serenade (50c), In Rome—To the Ancient Gods (50c), In Rome—Ave Maria (60c), Neapolitan Romance (50c), On Capri-Tarantelle (60c).

These are all playable in the first position, but the occasional use of the third position is also recommended.

The Teacher's Loose-leaf Journal-Ledger (pocket size) which we have recently issued is meeting with enthusiastic approval. "I don't see how I ever got along without it," is a common expression. Morocco leather binder (equipped with 6 rings) and 50 leaves, complete, $1.30; with 100 leaves, $1.50. Loose leaves, in packages of 50 and 100, 20c and 40c respectively.

ASK YOURSELF—

WHAT would you pay for a secret or patented process that would double the length of your natural life and keep you looking young always? A small fortune, wouldn't you?

That's the very thing we have for all sheet music—and it's FREE.

It is a linen thread hinge that holds all of the leaves together, lets them turn easily and lie flat. Write for sample.

Every copy of sheet music that we sell is "Gambleized"—FREE. And we sell everything published in music.

So why not insist on Gambleized music every time you buy? All dealers will furnish it if you insist on it, but you'll have to insist, or order direct from

GAMBLE HINGED MUSIC CO.
67 E. VAN BUREN STREET, CHICAGO

NEW CHOICE PIANO COLLECTIONS

CHILDREN'S COLLECTIONS

JOLLY TUNES FOR LITTLE PLAYERS
Nine little pieces for the piano of the easiest grades and provided with rhymes so that they can be both played and sung if desired.
It embodies such a variety of rhythms and keys, major and minor, and the rhymes which accompany each number are of such quaint and original character, that the "little player" cannot fail to be delighted. **PRICE 50 CENTS**

SPELLING NOTES FOR LITTLE FOLKS
A unique and delightful collection of twelve attractive melodies in the first grade, designed to facilitate the beginner's knowledge of the notes.
Each piece is provided with words to be sung or read, in which the principal word is formed of letters spelled with corresponding notes on the staff.
PRICE 50 CENTS

TUNEFUL TALES FOR LITTLE MUSICIANS
This charming collection of fifteen pieces in the first grade has been formed with the idea of presenting, in the most attractive manner, the primary musical forms, and the easier keys — both sharps and flats.
Each piece has verses which may be sung by the player or another pupil, making them especially suitable for elementary or kindergarten work.
PRICE 50 CENTS

MERRY MELODIES
A collection of original melodies with well-known words, so arranged that they may be sung or played separately or both together.
All are **very easy, instructive and entertaining,** presenting an exceptionally fine combination of clever words and bright tunes. **PRICE 50 CENTS**

FIRST AND SECOND GRADE COLLECTIONS

HOURS OF PLEASURE
Every piece in the volume has proved its worth for recreation purposes. Many of the selections are expressly adapted to the needs of small hands. Included in the contents are very easy arrangements of some old familiar songs and some of the pieces include words which may be sung if desired.
PRICE 50 CENTS

RECREATION HOUR
The prevailing idea in this collection is the presenting of strong contrast in the character of the compositions.
Each composition has been selected with care. The small hands of the child receive due consideration in the technical simplicity of all the pieces chosen, while the fancy is pleasantly excited by the merry rhythms and pleasing melodies met on every page.
PRICE 50 CENTS

LITTLE TRIPS TO TUNE LAND
In making this collection, especial care has been taken to keep the subject-matter well within the grasp of childish minds and hands. The majority of the pieces are two pages in length, and all are kept close to the requisite simplicity of primary music—yet the demands of a reasonable progression of difficulties have not been neglected. Indeed, a volume such as this affords to the young musician a fount of never-failing amusement, and one that in the formation of a correct musical taste is valuable. **PRICE 50 CENTS**

MUSICAL MESSAGES
The characteristic feature of this collection is the number of compositions, which, while keeping closely to the technical simplicity demanded by grade limitations, afford scope for the play of fancy and the development of expression generally thought incompatible with music of so simple a nature, so that all sides of the musical intelligence of the young musician may be equally developed. **PRICE 50 CENTS**

THIRD GRADE COLLECTIONS

MODERN FAVORITES
In collections of this kind the great effort is to bring together compositions that, while of a certain grade and standard, will present suitable contrasts; a contrast of mood and temperament as well as style. A large variety of compositions are here presented, and the list of composers embraces those most widely known both here and abroad. **PRICE 50 CENTS**

PIANO GEMS
A group of fifteen compositions of high standard and brilliancy, offering to the pianist a wealth of melodic beauty, from which may be gathered material that gives lasting pleasure. Here may be found "gems" from the best known and most popular writers for the piano in this grade, and the player who presents them in recital or concert is assured of success. **PRICE 50 CENTS**

FAVORITE FANCIES
Here are works to meet all moods, and the player may find the material for several "recitals" without repetition of the numbers on the program. The composers are all of high rank, and take position among the best of their class. Student and teacher will find here a rich store of works, furthering the development of sentiment and expression as well as the mastery of a refined and comprehensive technic.
PRICE 50 CENTS

MODERN RECITAL PIECES
A strong array of high-grade solos of character and merit, from the pens of many well-known and popular composers. Every number is a GEM and the collection embraces all phases of musical composition, as the selection has been made with a view to presenting contrasts and providing something for all occasions. **PRICE 50 CENTS**

IN PRESS

ARPEGGIOS

COMPLETE, CONCISE and COMPREHENSIVE

IT IS the aim of this compilation to lead the student to the point of culmination by the smoothest path and in the shortest period of time. Without a thorough knowledge of the various arpeggios, which are but the fundamental chords in broken or dissected form, little hope can be entertained for advancement in the art of piano-playing. In connection with the scales, arpeggios are the foundation of all pianistic study. For acquiring facility of execution and beauty of tone they are unequaled, except by the scales, but must be correctly practiced. If properly presented, the acquirement of the necessary fingering and method of execution is easy. The rules for fingering in the various positions are simple, and are uniform in all keys. If carefully observed in the easier keys, the application in the difficult ones is automatic. Some of the excellent features of this work are here given:

The concrete common chord is shown in the 3 positions, each followed by the arpeggio in simple form. In the major mode all (15) the keys are illustrated; in the minor, those which are enharmonic are omitted. They are, however, appropriately designated. In the grand arpeggios attention is directed to the uniformity of fingering—exceptions being carefully noted—and the proper method of execution. Examples of varied rhythm are here given. The chords of the Dominant and Diminished sevenths are presented in similar manner, each example bearing the name of the key to which the chord belongs. To insure thoroughness, each note of the earlier studies is fingered. Later the student, relying on knowledge thus obtained, is induced to play from indicated fingering only. Additional arpeggio exercises, founded on the chords previously treated, are introduced in similar and contrary motion, and with varying rhythms. In the Dominant and Diminished sevenths examples are given of finger extension; also in contrary motion. Arpeggios with passing notes, appropriately fingered, are presented. All examples are well spaced, insuring ready reading. Explanatory notes are placed immediately under the examples wherever needed.

The mechanical work represents the greatest excellence in engraving and printing; the plates, which are of the largest size, insuring a large, clear note. Printed on the best quality of music book paper manufactured, and bound in a neat, artistic cover.

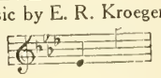
Songs You Should Know

Recreational and Instructive

COULD I BELIEVE
Words by Mrs. J. B. Candy Music by E. R. Kroeger

For High voice in A♭



Words and music blending harmoniously together produce here a high voice solo of rare beauty and touching sentiment.

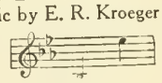
MY HEART AND MY SOUL AND I
Words by Robert Loverman Music by E. R. Kroeger

For Medium voice in F

A dramatic song of power and imagery which, while by no means difficult, is exceedingly effective.

'TWIXT DAYLIGHT AND DARK
Words by Florence Pitt-Hyke Music by E. R. Kroeger

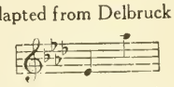
For Low voice in E♭



A simple little song in a beautiful setting of "The hours so mystic and sweet, when the old loves beckon and call."

CRADLE SONG
Words and music by K. D. Bowling
Music adapted from Delbruck

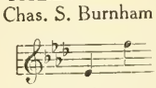
For High voice in A♭



A poem breathing the very spirit of mother-love and supplemented by Delbruck's "Berceuse" becomes a tender, effective lullaby and an admirable concert solo for soprano.

NORAH THE PRIDE OF KILDARE
Words by John Parry Music by Chas. S. Burnham

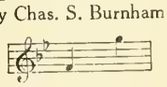
For Medium voice in A♭



An Irish song that is far above the average. Light and easy to sing, it is an ideal solo, suitable for either concert or recital.

SOMEBODY CARES FOR ME
Words by Venita Siebert Music by Chas. S. Burnham

For High voice in B♭



A most effective song of the lighter dramatic type, suitable for either home-recital or public concert use.

The ZENITH Scale Fingering Indicator

A meritorious invention whereby one may learn to play the scales with correct fingering, and will also provide a manner of teaching, far superior to any method heretofore in use. The ZENITH has stored within itself forty Major, Minor and Chromatic scales. The ZENITH indicates the fingering of each scale opposite the key of a keyboard chart.

The ZENITH indicates all sharps in colored print
The ZENITH indicates all flats in a contrasting color
The ZENITH exhibits but one scale at a time

INTRODUCTORY PRICE $1. Wide awake teachers send professional card and 50c for sample. Postpaid.

Manual of the Art of Singing

By EMIL TIFERRO

$1.25

THOUGH there have been many books written on singing, there is always room for a new one which is the practical outcome of experience in teaching, supplementing an honorable career as a public singer. This is the equipment which amply qualifies Emil Tiferro to issue his Manual of the Art of Singing. Born in Cologne, Germany, of an Italian father and a French mother, both possessors of good voices, all the chief musical influences of Europe may be said to have united in his youth. After earlier studies in Munich and Vienna, he finished his vocal training in Milan, and has sung since as first tenor in the leading opera houses of Europe. He is now the foremost teacher in Denver, and he presents his material in the *Manual of Singing* in an admirable manner. The seventy-five exercises contained therein range from the easiest to the most difficult, and are arranged for all voices. They have been tested by constant use, and while the written word can never take the place of personal teaching, the explanations here given, taken with the vocalises, give an excellent understanding of the subjects treated. Singers and teachers can both profit by a close study of this work; the author's directions are very clear and his exercises undeniably helpful.

CEDRIC WILMOT LEMONT

Born at Fredericton, N. B., Canada, Dec. 15, 1879; commenced study of piano as a child, later taking up organ and harmony. Attended University of New Brunswick, intending to qualify as an electrical engineer, but finally decided for serious music study; meanwhile had acted as organist and choirmaster. Attended Faelten Pianoforte School and New England Conservatory, graduating from both institutions. Went to Chicago in 1906, and joined faculty of the Walter Spry Music School. Has remained there ever since, devoting attention largely to teaching; has one of the largest classes in Chicago. Assisted in the preparation of *American History and Encyclopedia of Music.* First composition appeared three years ago.

DREAM PICTURES. Op. 6

Price, $1.25, postpaid

A collection of piano pieces which fascinate by their spontaneity and fresh flavor. Mr. Lemont offers an abundance of melody and a pleasingly euphonious harmonic scheme, which always shows refinement and sprightly fancy, and never degenerates into the trite and the commonplace. His moods are not monotonous but various. To those who play for pleasure, to whom music brings joy and relaxation, these facile and effective compositions will be more than welcome.

The cover is a marvel of the printing art, in four colors, tied with silk cord, making the collection a most attractive gift to a musical friend.

EVERYTHING TO HELP MUSIC TEACHERS

EDWARD BROMBERG, baritone, of New York, is an artist who unites ability as a singer with magnetism as a speaker. Hence the great success of his lecture recitals on the Folk and Modern Music of Russia, which he has given at leading universities, colleges, and before musical clubs.

EDWARD BROMBERG

Like all Russians, Mr. Bromberg is a fine linguist and is successful in the songs of England, Germany, France, and Italy. And it is to his credit that he has always given a place in his programs to American music.

During the past summer he gave a series of recitals at summer resorts, making a decided hit with his American songs, notably *To You*, by Laurence Montague, and *Thinking of You*, by Wm. Dichmont, both published by the Oliver Ditson Company. These songs were received with special enthusiasm, and were called for more frequently than any other songs he used.

Mr. Bromberg is a native Russian, but has been in the United States for a number of years. He is at present soloist of the Church of St. Mary the Virgin, New York. He was a pupil and protegè of Safonoff, the Russian conductor.

THE MUSICIAN
For 1915
BETTER THAN EVER

THE MUSICAL QUARTERLY

Edited by O. G. SONNECK

3030 MACOMB STREET, WASHINGTON, D. C.

$3.00 PER YEAR, IN ADVANCE 75 CENTS PER COPY

THE NUMBERS APPEAR IN JANUARY, APRIL, JULY, OCTOBER

In January, 1915, the first number of a new magazine, **THE MUSICAL QUARTERLY,** will be issued. It is the belief of the publishers that this magazine, as planned, will have a field of usefulness, legitimate and distinctive from that of the excellent musical weeklies and monthlies published in the English language. The appeal of the magazine will be to cultured music lovers and musicians who take an interest in more or less scholarly discussions of the problems that affect the past, present and future of the art of music. It is not to be a magazine devoted to the technical or professional interests of the music teacher, virtuoso and musical antiquarian. In this respect it will be quite distinctive, and it is expected to fill an apparent gap in the present structure of musical periodical literature.

Under the editorship of Mr. Sonneck, arrangements have been made with many of the foremost litterateurs of the world to contribute articles of interest. There will be contributions by Americans, Germans, Frenchmen, Englishmen, Russians, Italians, in fact from reliable sources everywhere. All foreign articles will be presented in literal but attractive translations. Consistent with the avowed policy, the contributions will immediately and clearly establish the tone of the magazine as one with substantial, serious and thoughtful reading matter, but not too heavily, or too eruditely or **too** brilliantly put. Special attention will be given to the publication of letters written by famous musicians.

Portraits, illustrations, facsimiles of autographs, etc., will also find a place in the magazine, as occasion requires. **Each number will contain about 150 octavo pages of reading matter.**

The following is a partial list of contributors so far engaged:

AMERICANS:

Waldo S. Pratt, Albert A. Stanley, Edgar Stillman Kelley, Charles H. Farnsworth, Henry F. Gilbert, Charles Wakefield Cadman, Edward Burlingame Hill, Rev. H. T. Henry, Canon Charles Winfred Douglas, Sigmund Spaeth, Carl E. Seashore, Kurt Schindler, William J. Henderson, Richard Aldrich, Philip Hale, C. Alphonso Smith, Edwin Hughes, Thomas Parker Currier, William G. Rice, Laurence Gilman, W. R. Spalding, etc.

BRITISH:

Sir Hubert H. Parry, Sir Charles Villiers Stanford, Frederick Corder, Edward H. Dent, Ernest Newman, Joseph Holbrooke, Rutland Boughton, John F. Runciman, J. Fuller-Maitland, Cyrill Scott, William H. Hadow, William Barclay Squire, Frank Kidson, etc.

CONTINENTALS:

Julien Tiersot, Jules Ecorcheville, J. G. Prod'homme, M. D. Calvocorressi, Henri Prunieres, Lionel de La Laurencie, Fausto Torrefranca, Conte Francesco Vatielli, Hermann Kretzschmar, Guido Adler, Adolf Sandberger, Hugo Leichtentritt, Edgar Istel, Viktor von Herzfeld, Arnold Schering, Alfred Heuss, etc.

In addition to the reading matter, there will be announcements by American and foreign publishing firms. No other kind of advertisements will be admitted. The magazine will not include news items, editorial paragraphs, reports of concerts, etc., nor a review department.

MME. OLGA SAMAROFF

TALKS ON THE ARTIST'S WORKS BEFORE AND DURING A RECITAL, AND A SCHEME OF STUDY

Reported by G. MARK WILSON

[Madame Olga Samaroff was born in San Antonio, Texas. When quite young she was taken to Paris by her maternal grandmother (at one time a well-known European pianist), where she received her general education in the St. Sacrament Convent. Her piano studies began at a tender age under the able tutorship of the grandparent mentioned, from whose careful guidance she passed to the Conservatoire, being the only American woman ever admitted to that institution since its inception. Graduating from the Conservatoire with high honors, she became a pupil of Jedliczka (a friend and disciple of Tchaïkovsky and Brahms), who was greatly impressed by her remarkable talent. Later on Madame Samaroff made her début as a concert pianist, and from that time on her efforts met with immediate and decided public favor.

In 1911 she was married to Leopold Stokowski, who is at present conducting the Philadelphia Orchestra with marked success. Since her marriage Mrs. Stokowski, or Madame Samaroff, as we shall continue to call her, has with unflagging energy been devoting her time to the study of music in all its various departments, as well as mastering additional numbers for her already prodigious repertoire.]

"I WILL grant you an interview," said Madame Olga Samaroff, laughingly, "if you will promise not to ask what my hobby is. Perhaps you may turn the tables and inquire what my bugbear is. Though as a rule it is unusual for anyone to be interested in bugbears; and yet, for some unaccountable reason, they are more likely to be permanent than hobbies. *As a woman,* I believe my chief bugbear is a fog at sea. For when crossing the ocean such an atmospheric condition quickly reduces me to a state of complete nervous collapse. *As an artist,* my bugbear consists in being obliged to play certain compositions, at a certain hour, and on a certain day. Relative to this, for some reason, probably the 'eternal feminine,' I invariably feel a strong inclination to play almost any of the numbers in my repertoire except those on the program, and, moreover, have often divided the 'bad quarter of an hour' before the concert between wildly desiring to pursue this method and wishing I had never been born.

MME. SAMAROFF PLAYING CHORDS IN TCHAIKOVSKY'S B MINOR CONCERTO

IMPROVISED RECITALS

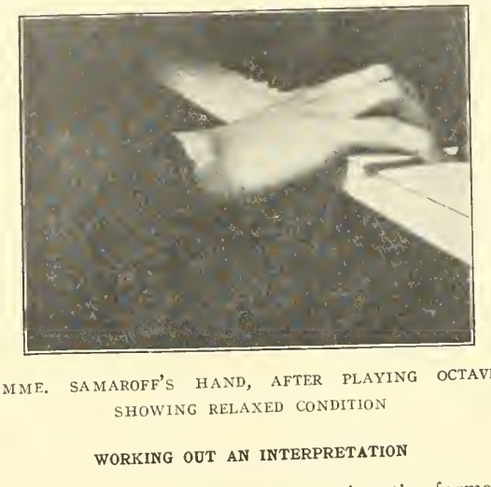
"Once upon a time I thought of satisfying such inclinations by giving improvised recitals. That is, selecting whatever my fancy dictated, and thereby allowing my current mood full play; but this idea, alas! suddenly came to grief by an incident that occurred in a small New England town.

"One of my program numbers on that occasion was a charming little composition by Paul Juon, entitled *Nymphs and Satyrs.* Owing to a change in the program, however, my audience, unacquainted with the literature of the piano, was wholly at sea as to what I was playing. Yes, and there was a heavy fog on that particular sea, for during the most strenuous part of the Rachmaninoff G minor *Prelude,* above all the tumult the big grand and I were making, I heard a nasal voice near the front row despairingly twang, 'Well, by gum, Mandy, if this is supposed to be them nymphs, they're a dern sight more hefty critters than the ones I used hear tell about.' After that I concluded the best plan to be, hold the 'eternal feminine' in check and follow the conventions, which, as a matter of fact, usually have pretty good reasons back of their existence.

JUST BEFORE THE RECITAL

"You ask about the 'bad quarter of an hour' before a concert," said the artist, with a smile. "Yes, I plead guilty to excessive stage fright, to the combating of which the above mentioned fifteen minutes is devoted. Fortunately for my performances, however, the panicky feeling usually ceases as soon as I begin to play, though this does not in the least alter the fact that the high tension occasions great distress while it lasts. Furthermore, and apropos to other virtuosi, I am personally acquainted with most of the famous pianists now appearing in public, and can say with authority that very few, if any, of them are free from this overpowering fear, which, after all, seems to be a natural consequence of the extraordinary strain to which the nerves are subjected by an artistic career, conjoined to the knowledge that all eyes are, for the time being, centered on *you,* and all ears listening to *your* tonal conception of the works rendered.

"How do I get rid of stage fright? By concentration. Concentration is the keynote of successful piano playing, and indeed the successful accomplishment of almost anything. Lack of it invariably breeds uncertainty and want of intensity. For example, many persons decide that while playing a sonata of Beethoven, for instance, the artist indulges in dreams, far removed from the work at hand, and that such airy flights of the imagination are what lends romance and poetry to the rendering. All of which is very esthetic and lovely, but, as a matter of fact (sorry though I am to destroy a popular belief), such a performance is an impossibility. Why? Simply because a virtuoso, to do himself and the composer justice, must concentrate absolutely all his mind and soul on those things that go to make up perfect interpretation. By this I do not necessarily refer to technic, which, needless to say, should have been brought to the highest degree of perfection before the public is invited to listen. On the contrary, I allude to the many other aspects of inspired rendition. Such, for instance, as the meaning, the balance, the light and shade, the mood, and the ensemble effect, each making its separate appeal to the artist for attention, which appeal he strives to heed in order that the combined result may be summed up in the words 'True Art.' Therefore the dreams are dreamed, cultivated, and wooed in the quietude of the studio, during the time the interpretation is being formed, and not, as so many fondly believe, before the audience."



MME. SAMAROFF'S HAND, AFTER PLAYING OCTAVE, SHOWING RELAXED CONDITION

WORKING OUT AN INTERPRETATION

In reply to an inquiry concerning the formation of a definite idea on the rendering of a work, Madame Samaroff exclaimed: "Do I believe in a fixed interpretation? Undoubtedly. Of course, I do not, in any sense, intimate that an artist, in playing, should lack spontaneity, or that in following a fixed interpretation he should do violence to his feelings of the moment. For it is undeniable that every virtuoso will, at times, play faster or slower than on previous occasions, and with more or less intensity and degrees of feeling in the various modes of expression he employs. On the contrary, what I mean by a fixed interpretation is his mental conception of the work as a whole, in addition to a well-defined plan of giving this understanding a tangible form in tone.

"As an example: It would be impossible for a great actor to believe Hamlet insane one night and perfectly lucid the next. Why? Because to attain a forceful presentation he must have a definite and an unchanging idea of the work. Moreover, the deeper and stronger this idea is developed the more convincing will his portrayal be and the less it will vary in its vital principles. The same is true of music. We must possess ourselves of a strong conviction as to the composer's or our own conception, desire, and intent, otherwise we can never hope to convey the message of the composition to others with authoritative eloquence. That is the sum and substance of fixed interpretation.

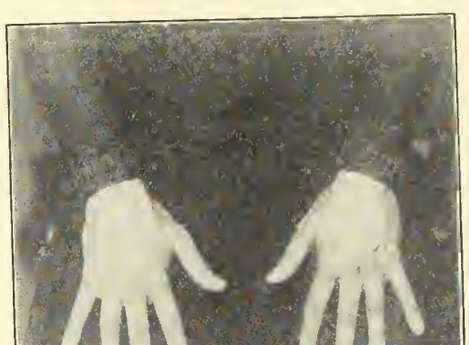
"And in this connection, I often think of what the great French actor, Coquelin, once said to me: 'A true interpretation,' he explained, 'is the fruit of several inspirations, many moods, much thought, and unlimited work. It is not a true interpretation until it has become fixed; that is, until all these things have crystallized into something tangible, capable of being grasped and controlled by the mind. No sincere artist relies on an inspiration of the moment. However, if he has an inspiration of the moment, strong enough to overshadow a preconceived, fixed interpretation, he may yield to it, and by so doing achieve wonderful results; but if he has neither an inspiration of the moment nor a fixed interpretation, he has nothing to offer the public but a mediocre performance,' which quotation applies equally well to every art. For an interpretation into which many fruitful hours of one's life have gone is not a will-o'-the-wisp, but something materially artistic, which one can offer an audience, even when dull or not in the mood. And apropos to this, every artist must, in time, realize that during a long career, perhaps one third of his performances will be given under these adverse emotional and mental conditions.

METHODS OF PLAYING AND STUDY

"Relative to the different methods of piano playing and study, I am satisfied that the last word has been said in this direction by many great keyboard masters, both past and present, who, for one reason or another, have taken part in the various controversies this much discussed subject has aroused. Therefore, any opinions I have on the matter reflect, to a greater or less extent, certain convictions already voiced by someone else; consequently, their expression at this time would be superfluous. However, I will say that eclecticism is the safest road to take. In other words, the mode or method in which the student achieves the best individual results is the best mode or method for him to follow, irrespective of any particular system or certain prescribed course of study someone may endeavor to force upon him.

A BROAD SCHEME OF STUDY

"Concerning future extension of technical achievement, as applied to the piano under



MME. SAMAROFF'S HANDS

present conditions, I do not think advancement in this line probable. However, we cannot peer beyond the veil of the present; so until another and more complex style of instrument is devised, having a greater number of keys, pedals, etc., or a genius appears who will revolutionize the *modus operandi* of today in both composition and execution, it seems that the best we can do, for the time being, is to remain in the beaten track and gratefully follow the splendid work heretofore accomplished by the world's great masters, at the same time devoting ourselves to the study of music in a wider sense.

"By this suggestion I do not mean simply the adding of new numbers to one's repertoire, striving for original forms of expression, cultivating the poetic, etc. No, I allude to the fact that there are other studies more or less directly connected with our art which, if cultivated, will have a decidedly beneficial and broadening influence on the inspiration, conception, and interpretation our repertoire arouses within us. For example, until I was married to Mr. Stokowski and became so vitally interested in orchestral effects, instrumentation, and musical history, to all of which he has ever been a devoted student, I never clearly realized the immense development and various beneficial influences such studies bring about. Therefore, the advice I offer all embryo artists is:

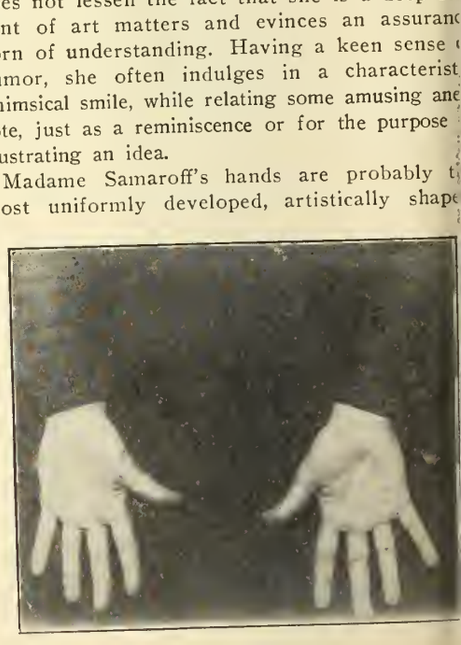
"Regard the mastering of your chosen instrument as only one step on the road of progress towards virtuosity, the next move being to take advantage of every opportunity offered to store away knowledge and keen appreciation of music in all forms of its expression; that is to say, music outside the pale of the particular branch in which you specialize. Such a plan, if systematically and thoroughly pursued, cannot help but unfold new thoughts, new ideas, and new views, by establishing a comprehensive understanding of the foundation on which the art as a whole is built, and at the same time broadening your artistic horizon.

"Aside from offering the virtuoso a chance to browse in foreign fields of study, I have found that a limited retirement from the exacting life of concertizing affords one time to readjust his or her mental perspective to the impressions, convictions, and desires formed during the rush and excitement inseparable with recital tours. For it cannot be denied that leisure moments, spent in a regular orderly review of one's art exposition, conjoined to unbiased self-appraisement and a critical analysis of partially formed hopes or decisions, are valuable in the extreme. For like the space across which a painter now and again views his canvas, the space o so-called inactive periods gives rise to a sense of freedom and impartially reveals the genera color effect, the balance, and outlines of wha we have accomplished in the past and wish t do in the future, in order to make the resul of our efforts more worthy the name of art."

THE ARTIST'S PERSONALITY

Madame Samaroff is possessed of a charmin personality, and the range of subjects wit which she is thoroughly conversant is large an diversified. Her face lights up wonderfully whe some interesting topic is under discussion, an changes to suit the varying moods of conversa tion. In disposition she is naturally cheerfu and easy of approach, all of which, howeve does not lessen the fact that she is a deep stu dent of art matters and evinces an assuranc born of understanding. Having a keen sense humor, she often indulges in a characteristi whimsical smile, while relating some amusing ane dote, just as a reminiscence or for the purpose illustrating an idea.

Madame Samaroff's hands are probably t most uniformly developed, artistically shape



MME. SAMAROFF'S HANDS

and well balanced of any woman virtuoso pl ing at the present time. They are soft, wh and of decidedly fine texture. The hands not exceptionally large in comparison w those of other pianists, but that they are greater size than is usual can be at once s when viewed side by side with the ordin type.

With heart and mouth in harmony,
The best of music there will be.—*Old Ger saying.*

BREITHAUPT'S IDEAS ON PRACTICE

BY ARTHUR ELSON

II

Individuality brings also dangers to be avoided. Not only the average student, but the fairly advanced pianist who practises by himself, may take wrong courses, and adopt technical procedures that bring bad results ultimately. One may judge his own nature wrongly, or practise for mistaken ends, or use incorrect means in trying to attain proper ends. There are also more wholly mental errors of judgment or knowledge. Many of these come through the interference of third parties, or the use of theories adopted from books but not thoroughly assimilated. The individual, with the teacher's guidance in the present or past, usually knows best how to take a passage with the most ease and effect. But frequently he is led away by the mistaken advice of some well meaning friend, and adopts a method of performance that is not so well suited to him. Often he is misled by reading the principles of some well-known teacher, which may suit in some cases but do not in his. There are many, too, who will follow an authority blindly, without trying to see the why and the wherefore of his directions. There are some talents today who become aware of their own mistakes only after many years, when it is practically too late to change.

The only case where the advice of third parties is of use is found where both the player and the adviser use similar methods of action, and reach the same result by the same means. But usually this case does not occur; nine times out of ten the adviser uses different means and methods from the performer, so that the advice does not fit at all.

Each one, therefore, must use the methods and actions that are most suitable in his own case. Thus in piano practice, at least, we find a proof of the old Jesuit motto—"The end justifies the means." Each one must find out his own way of putting mind and body into the best condition and using them to best advantage. Breithaupt maintains that "A real talent has the right to do everything as it desires, and not necessarily as the teacher does it, provided that it sounds good." This, of course, is for the gifted ones, and not for the laggards who need to be pushed forward. With the brighter pupils, the teacher's duty gradually resolves itself into watching that proper and natural procedure is used, the procedure most suitable for attaining the best results and minimizing physical obstacles.

Rules for practice are often negative rather than positive. Nearly everyone has an idea of what to do. The important point is to learn what not to do. The gifted ones in art seem to do right almost instinctively, and make the best use of their abilities. "If they followed this instinct always," says Breithaupt, "they would generally get along better."

Breithaupt wisely discourages any detailed researches in anatomy or physiology. In piano playing we have to do with feelings and experiences, and the reproduction of what these experiences have shown us. Just as the healthy man scarcely knows that he has digestive organs, so the singer will get along more easily if not made self-conscious by long discourses on the cricothyroid muscles, and the pianist will do better if he is not made to think too much of the physical means that he uses, and is therefore left free to pay full attention to getting beauty in his results. The good teacher will see that the pupil learns to control his physical mistakes and weaknesses; but he will do this practically, by training the pupil's ear to judge of results, rather than theoretically, by any over-long dissertations on muscular action or anatomy.

Errors of false conceptions and conclusions are to be found, especially in the domain of style, or expression. Here again individuality should be taken into consideration. What is right for one need not be considered necessarily right for another. True practice has so much to do with the inward nature of a piece that any real misunderstanding will at once be shown by its bad effect. Some artists, on finding that they cannot make a certain piece "go well," will abandon it altogether, just as a painter will leave a certain subject in the unfinished form of a sketch. The real talent will seek out its error, and study the thankless piece or the difficult rôle until the special detail is discovered that turns defeat into victory. Perseverance is needed always; and Breithaupt defines practice again as "The persistent overcoming of obstacles, or mental and physical limitations, imposed by the outward and inward relations of life and art."

Errors arise also through inexactness of observation. We think we have seen something done in a certain way, when in reality it was done differently. Thus, according to Breithaupt, arose the error concerning the wrist in technic. People noticed it shaking and "fluttering" in rapid passages, without seeing that the whole arm, clear up to the shoulder, had a share in the motion. "People believed the effect came from the wrist alone, and practised this by the stretching and bending of the hand. Thus arose the wrist technic, the false varieties of staccato, and octave practice." So, too, in singing certain phrases have arisen, such as singing "on the teeth," etc., which do not correspond with the actual facts of voice production.

Errors of hearing exist, though they are far less common than most other mistakes. In fact, our appreciation of tones is, as a rule, the most accurate point connected with our study. This is not meant to refer to absolute pitch, which does not seem, after all, to aid its possessors in their journey to musical greatness. It is rather a matter of appreciation, a grasp of detail, that enables musicians to assimilate and imitate the methods of the best models with the least possible amount of trouble. An acute and well-developed sense of relative pitch is sufficient for this. Such a sense depends on the imagination back of the act of hearing; so that a Beethoven could create music although deaf. Actors need a similar gift in portraying or mimicking the speech of others. Such actors, especially those who work in dialect, must have this keen discrimination of sounds; so that they are probably gifted musically also. Conversely, musicians are able to master the delicate shades of foreign languages with more than average skill.

The imagination of sounds is most highly developed among orchestral composers. It may go to great lengths, and even surprise its own possessor. This was the case with Wagner, who was so astounded at first by the intensity of his *Tristan und Isolde* music that he actually thought of burning the score. This sense, which consists of an unusual number of perceptions and associations, is in large part inherent in the individual; but it can be much increased by cultivation. It is developed as the child grows, or the student attains continually new capabilities of appreciation; although there must be some foundation of musical temperament and capacity upon which to build in the first place.

Accuracy of memory is another valuable asset for the artist; not merely the ability to memorize notes, but the capability of remembering effects correctly, so that his nuances and expressive phrasing will not vary too much in repeated performances. Some variation is unavoidable. It is even desirable, if the performer is to progress from any level to a higher one. Sir Hubert Herkomer said that when an artist produces pictures of unvarying value he ceases to be an artist and becomes a manufacturer. The same is true in music. But the memory that can improve old effects by new devices is far different from the memory that fails to retain the value of former experience accurately.

"Much consideration," says Breithaupt, "delicacy of thought and contemplation, a search for the inmost feeling, a swift reproduction of this or that difficult passage, to assure oneself quickly of the needed conception, a constant watch against errors and defects, a daily improvement and refinement of the feeling for good tone, correct rhythm, and artistic phrasing, much hearing of finished masters and comparison with them; in short, a keen, wakeful, thoughtful diligence,—all this is and remains the best practice in the world." Carlyle defined genius as the capacity for taking pains; Breithaupt gives an equally good definition by saying that genius is the ability to overcome difficulties.

A HARMONIZATION OF THE BASS IN "THE MUSICIAN" FOR SEPTEMBER

S.N.PENFIELD

The above harmonization is by Dr. S. N. Penfield, of the New York German Conservatory. It shows the various treatments of a bass, and should be compared with those in the October issue, pages 664, 665.

PERCY GOETSCHIUS

Harmonization of a bass in The Musician for October, page 665.

TEACHING MATERIAL

BY HANNAH SMITH

A YOUTHFUL teacher of the pianoforte was told by a professor of years and experience that the most difficult portion of her task would be the judicious selection of music for her pupils. Upon which she mentally commented, "It may have been so when he was young, but nowadays, with catalogues of teaching material from every publishing house, there certainly can be no difficulty in finding pieces for any pupil at any stage."

But the examination of various consignments of sheet music and collections convinced her that, even with the wealth of material offered for selection, the difficulty still exists. Moreover, she found that a piece which seemed absolutely simple not infrequently contained some technical difficulty of which her trained fingers had been quite unconscious, but which postponed its mastery by the pupil until all interest in it was lost.

Now in the earlier stages of learning, a piece should first and foremost give pleasure to the pupil; but it should also be so selected that with a reasonable amount of work it may, in a reasonable amount of time, be performed with a sufficient degree of musical finish to give pleasure to a listener also. In more advanced stages it is not only desirable but necessary to study music which is much too difficult for any hope of immediate mastery. Great works of great composers may be practised by a mature student with entire appreciation of their musical construction and emotional content, while yet the technical equipment is inadequate for their proper rendering. Regular work will develop the necessary technic, and then the piece is already learned.

But with childish students the case is different. To a child a month seems nearly as long as a year, and childish nerves cannot endure much harping on one string. Therefore the piece for the little pupil should not be too long in the learning; else its freshness is lost, and the power of learning quickly fails to be developed. A piece for a beginner should contain nothing of real technical difficulty for the little player. It should be merely the application to musical ends of technic already acquired.

It is rarely that a little student does not come to the first lesson all aglow with enthusiasm and desire to learn. But to learn what? To play music, of course. Now to learn to play music it is necessary to play *music*. All patient practice of all sorts of exercises, all persistent use of patent machines for the acquirement of mechanical dexterity and the development of strength, will never teach a student to play music. They will help, in so far as they provide a means of gaining the control of nerve and muscle which is necessary to enable the pianist to exploit the possibilities of the keyboard, but they cannot teach the application of that power to the expression of musical thought; and more technic than can be applied to musical ends is a useless possession.

And yet the technic—the power to do—is indispensable. But why should not its development and its application to musical ends advance together? Why should a student postpone playing music until he can play difficult music?

During the first month or six weeks a little pupil may be persuaded by a clever teacher to do almost anything; will make his fingers stand properly and move up and down rhythmically, and, finally, will be able to play from C to G with a tolerable degree of evenness. Now unless he may have a tune to study his interest in the lessons will probably begin to flag; so this is the time for a first piece—a piece which, though simplicity itself, is yet really music; that is, has definite phrases and periods, and a proper harmonic construction indicated by single notes in the bass.

It goes without saying that such a little piece must use only white keys, and be within the compass of five notes in either hand. It should also avoid what is really the first serious difficulty of pianoforte playing—the raising of one hand to repeat a note while the other makes at the same time a legato connection. But even in this first tiny piece the pupil can be taught to end a phrase without the thump which, especially when the last note is played by the thumb, seems to give such pleasure to the untrained player.

At first it is better that each new piece should present but one new difficulty; and with some pupils it may be necessary to give several in succession presenting the same difficulty in different forms. Often the freshness of a new combination will help a student over what was before a stumbling block. With a slight extension of the compass, the complications of fingering are encountered in the simplest form. Accidental sharps and flats also may be introduced here and there, the rapidity with which new difficulties are presented depending, of course, upon the talent and industry of the pupil; but the technical demands of a piece should, in the earlier grades, never be so great as to preclude a certain degree of finish in its final performance.

But the technical demands of a piece are not alone the gauge of its fitness for a pupil. There are compositions by Chopin and Schumann which are technically quite within the power of many a twelve-year old, who would have no more notion of their musical meaning that a blind man has of color. Leave them till later. And if one, even a little older, who might, it seems, understand more of Schumann's *Jugend Album* than the *Happy Farmer* and *Wild Rider,* finds the later numbers difficult (which they certainly are) and uninteresting (which they certainly are not) do not be discouraged. Put them aside and wait. Such a pupil has been known to ask for them a year or two later, and play them with intelligent enjoyment.

The taste may be cultivated, but cannot be forced any more than the muscles. If a boy wants to play "popular" music, let him; but insist that it shall be well played. Even aside from the technical gain the time is not always wasted. After such an experience one boy quite lost his liking for the "popular," and asked to have something different.

But after all a child is a child, and must have music that appeals to his childish taste. Bright and gay tunes with decided rhythmical swing ought to be most attractive to a healthy little being who loves vigorous movement, skips instead of walking, whistles about the house and shouts out of doors. Why should he be expected to enjoy sentiment and pathos?

The average music student, whose appreciation of his art at the beginning is embryonic, needing careful development and cultivation, should have a pretty thorough training in ordinary rhythms, regular periods, and pure and simple harmonies, before making practical acquaintance with the exotic rhythms and piquant chords which are so fascinating in many modern compositions. To the pupil who cannot easily keep the regular beat of a march, or feel the compelling swing of a waltz, syncopations and cross-rhythms are only bewildering; and to the player who has not yet a quick apprehension of the fundamental harmonies, the extreme dissonances of many modern chords are positively vitiating to the taste. And even more gifted players of the younger class should not feed too much on such highly seasoned food. For the growing musical, as for the physical, organization, the regular diet should be substantial and nourishing.

But by the substantial and nourishing is not necessarily to be understood sonatinas and melodies with arpeggio or Alberti basses; but rather any good composition the melodic outline and harmonic foundation of which are easily comprehensible by the pupil.

The most successful teachers of today proceed more and more upon the plan of using pieces, rather than merely mechanical exercises, making them serve for technical development; and so acquainting the student with good examples of pianoforte literature while at the same time, and by means of them he is acquiring the technic which is necessary for their interpretation.

———*———

SUPERVISION OF PRACTICE

BY DANIEL BLOOMFIELD

MANY teachers, particularly the less experienced ones, are often discouraged by the lack of progress in pupils as shown in badly prepared lessons. And this is true no matter how much energy and effort the teachers put forth in trying to make their pupils get ahead. All teachers realize the importance of proper practice. They give explicit directions; they have "practice slips" and other means of recording the time spent by the pupil in preparing his lesson; but they seldom make any serious inquiry into the conditions under which their pupils practise. Very often such an inquiry reveals to the teacher new problems to be mastered by him, new methods of correcting evils.

Teachers should investigate the conditions surrounding their pupils' practice. A pupil may have to practise in a room where several persons are present and occupied in conversation or some noisier occupation; others may have to prepare their lessons at a neighbor's house, where conditions make concentration hardly possible, and so on.

To gain the greatest efficiency out of pupils' practice, the writer of this note believes that a "Practice Class" where supervision is exercised is highly essential. Such a class (preferably a small one or several such) could meet weekly or more often, with the teacher or some advanced pupil in charge. Attendance should be obligatory. Effort should be carefully graded and the results made known to pupils and parents. A special point should be made to have backward pupils attend the class with the others, or in a class of their own.

The teacher should stimulate by his enthusiasm. He should drive home a few essentials at each meeting, and at the following assembly of the class give credit for proper home study.

About once a month a scale-playing competition for a suitable inexpensive reward should be arranged.

The time spent on a "Practice Class" will be surprisingly fruitful. It will result in an increase of interest on the part of pupils, a more logical use of their practice hour, and, of course, better lessons. The plan is not an experiment, for it has worked with marked success at a school with over 200 pupils. It is well worth trying.

———*———

A QUERY FROM A HARMONY STUDENT

Some time ago we had a few short notes in reply to several queries from students who were struggling with certain difficulties connected with the practical application of the principles of harmony. We have a few more queries in hand now and will devote space to a short comment on one of these queries.

"Will you suggest some way to improve my harmonization of simple tunes?"

In the first place a simple tune will not call for other than simple harmonies. To use in the harmonization of a simple tune elaborate chromatic progressions will be much out of place, certainly not an improvement. Perhaps our correspondent means that his resources are too limited, that he has but little variety in the use of chords, and that he wishes an "improvement" in his knowledge of the material of harmony, and not in his use of the material he already knows in simple forms.

Going ahead on this premise, first let me say that the student has probably not sounded the possibilities in the use of the three major, the three minor triads, as well as the one diminished in major keys; also the two major, two minor, two diminished, and one augmented triad in minor keys. And it may also chance that he has not drilled himself thoroughly and tried to train his ear to conceive the effects of the use of the various chords in succession. If such be the case what he should do is to write successions of the various chords, in their various positions, for example, the Tonic and the other triads, the Supertonic and the others, etc.

After that try the effect of inverted triads, both in succession, and following or preceding triads with their roots in the bass. There is opportunity to make a great many combinations in this exercise. Pupils are apt to be careless in the matter of their use of inverted triads, thus writing a bass that lacks easy flow. For example, a bass moving diatonically is not possible with good effect, without the use of inversions. If the bass has a flowing, melodic character, and the soprano also has this tuneful quality, the two will make a fairly satisfactory two-part harmony. The two middle parts will come all right if the extremes are well taken care of.

The next step will be to learn the use of triads containing a chromatic alteration of one of the degrees of the scale; for example in the key of C, such degrees as C♯, D♭, D♯, E♭, F♯, G♯, A♭, and to do this without leaving the original key. Here is a suggestion: View a raised note as a leading tone, and harmonize it on the dominant of the scale in which the raised note is the leading tone. For example, C♯ is the leading tone in D; harmonize it as a part of the Dominant triad in D (A-C♯-E) and follow it with the tonic in D minor (not major), which triad is also the Supertonic in the original key of C. As an alternative to the Dominant triad one may use the Leading-note triad, first inversion, generally with third doubled (C♯, E, G, with E in the bass).

A lowered note may safely be considered as the lowered third or sixth of the scale and harmonized with the Tonic triad, minor form (C-E♭-G) with a Subdominant triad, minor form (F-A♭-C), or with a major chord on the lowered submediant degree (A♭-C-E♭), the triads used, in the main, as if they were the regular triads in the diatonic scale, being careful to avoid false relations, and other recognized faults.

The student can spend much time in writing successions of chords as suggested above, especially those in which one of the chords has the chromatic character. For example, C major followed by one including a C♯, or an F♯, or a D♯, or a G♯, an E♭ or an A♭; afterwards reverse the succession; then try the other possible successions, keeping in the key of C; after that try these successions in the other keys. The student will be surprised at the variety and extent of these successions. Once he has command of them he will find his resources greatly increased.

As a principle summing up the use of chromatic triads the following is offered: The key of C, by way of example, includes the major and minor forms and triads from the two forms may be used interchangeably. This gives an E♭ and an A♭. The dominants of nearly related keys, which are chromatic to the original key, may be used with the original key since the tonics are diatonic triads in the original key. That is, one may use chromatically with triads of the key of C the dominant triads of A minor, D minor, E minor, G major. One other chromatic triad used with good effect is a major triad on the lowered supertonic (D♭-F-A♭, in the key of C, and followed by the Tonic or Dominant triads.

Enough chords to keep you busy working for quite a time! But the time will be well spent. In another issue we may take opportunity to make some comment on the use of seventh chords, so as to extend the resources of students.

———*———

DAYTON PUBLIC LIBRARY AFTER THE FLOOD

MUSIC AND MUSICAL LITERATURE FOR THE DAYTON PUBLIC LIBRARY

In the flood of 1913 which engulfed the homes of 85,000 people, the Dayton Public Library lost the greater part of its valuable music collection, comprising both literature and scores. Books, music, and musical instruments that can never be replaced were swept out of existence in a few hours.

The only hope of hundreds of students and music lovers is a general lending collection of music at the Public Library. But the Library is limited in funds and must meet largely increased demands in many other directions. Hence, beyond a moderate expenditure for books of general interest in the literature of music, nothing of direct help to students and musicians can be afforded.

The musical interests of the city are evidenced by the fact that twenty-two musical organizations, comprising a membership of over 1,500 musicians, have combined in a Civic Music League, whose purpose is to give concerts at cost, and also free concerts by local talent in churches, schools, and public auditoriums. Aside from the esthetic and recreational value of this movement, it has greatly stimulated the study of music in the city, and the dearth of musical material due to our flood losses is more than ever apparent.

To meet this situation, the Civic Music League has asked our co-operation in soliciting gifts for a general collection of music to be set apart in a special room at the Public Library as a lending library, where everyone may avail himself of the works of the great composers, ancient and modern.

Hence, I am writing to a number of composers, musicians, publishers of music, and conservatories to ask that the Dayton Public Library may receive their consideration in case they may have in hand any surplus music or books, or standard works of the composers, even if slightly used; or libretti of operas and interpretative programs, such as those of the great symphony orchestras, which they could donate.

The illustration will give but slight notion of the havoc wrought by the Flood of 1913 in the Dayton Library. For two weeks thirteen men were engaged in shoveling mud from the Library building; 50,000 books and all interior furnishings were destroyed.

The Library has received great numbers of gifts in all other departments, both from citizens of Dayton and from outside sources, and we believe that when the situation is known as to music the much needed help will also be extended to this important branch of our service.

The Library earnestly solicits the co-operation of readers of The Musician, and shall welcome any suggestions which they may give in attaining this object.

(Signed)

The Librarian.

A MASTER'S CREDO

BY T. CARL WHITMER

I have faith in the desire of those who come to me.

I believe that the defects of many are but un- or misdirected good.

Turn souls to the light and they will grow that way.

Everyone who is mute may only be waiting for the right force.

The service to a soul leading to its self-expression is quite as valuable to humanity as the most conceded social betterment. Unless we believe that this is true we cannot serve as we should and we belittle our avocation.

To be understood just now is a small thing. Only those who are your spiritual contemporaries can be expected to see your soul. Grieve not over the slowness of God's mills. Are they not efficient?

The periodic impulses which reach us: Are they not a rhythmic activity which we cannot understand? We cannot yet expect our irregularities in inspiration to be clear. Who knows? They may only seem irregular because we have no measuring stick for eternity.

Modern methods recognize the differences between you and some other worker, and the Guide averages but few things in planning your work.

You believe in me and I in you. Only this is of constructive value in growth. Any lack of faith on either side should sever our relations.

THE FIRST PIANO LESSON

By HOWARD WELLS

(Chapter III of *Ears, Brain, and Fingers* soon to be published by Oliver Ditson Company)

THE first step is to learn middle C.

While the teacher is sounding the note, the pupil should listen with closed eyes. The tone should be sounded several times to impress it on his mind. He should also sing or hum the tone. The teacher should then play a few chords to ascertain if the tone has made an impression on his mind which cannot be erased. Then he should sound different tones in the neighborhood of C, coming back occasionally to C, which the pupil should call by name every time he recognizes it.

The pupil can practise trying to recognize this tone at home by standing with his back to the piano in such a way that he does not know just what part of the keyboard he is near, then he should reach back and sound tones until he thinks he has found C. (If the pupil has someone at home to sound the tones for him, it is better.)

This ear training practice should always precede the other work, for the reason that it is easier to force close attention when the mind is fresh. He should practise trying to recognize the tone at least ten times daily. It will do wonders for his powers of concentration. This development of his concentration will be worth more to him than the ability to recognize the tone.

The pupil should be able to recognize a quarter, half, or whole note by sound. The teacher sets the metronome at 50, tells the pupil that a tick represents the length of a quarter note; two ticks a half note; and four ticks, a whole note.

After the pupil has listened to the metronome ticking a few measures, the metronome should be stopped, and he should imitate the ticks by tapping a pencil on the table. This serves to fix the length of the quarter note in his mind. Then sound middle C for him in a rhythmical succession, for example, four quarter notes followed by two halves; or, two quarters, a half, a whole, and four quarters.

He should be able to tell exactly what is the length of the notes sounded, especially as they were presented to him in the simplest possible way (without any variation of pitch to distract his attention).

Then show him how to write the notes, and how to indicate the length of them. In this way, he is taught to recognize the real object, that is, the length of the note before he is shown the picture of it on the paper. (Later on, when the sense of rhythm has been more developed, the pitch of the notes may be varied in the rhythm exercises, but at first it is better to have the mind concentrated on the one tone.)

A pupil who has been taught the length of notes in this way will find "keeping time" much easier.

Note.—It is impossible to map out the exact amount of work in ear training which can be given in one lesson. For a beginner the above amount will be quite enough, but it might not be enough for the more advanced pupil. He should go on with the work given in subsequent lessons.

If the pupil does not know the notes, he should be taught them first on the keyboard, and then on paper.

Have him make the staff himself, then start him out to trace the location of the notes on the five lines and four spaces, giving him only E (on the first line) to figure from. This will take longer than to give them in the usual way, but a child is always more interested in something which he has found for himself, and remembers it better.

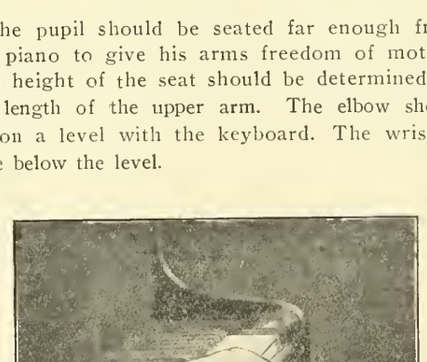
If he can figure out on the staff the location of middle C (which he has commenced to learn by sound), he should be encouraged to do so. Pupils often perceive that there is no place on the staff for any note lower than D, and suggest the necessity of adding an extra line for it. If found in this way, the name of the note on the added line will never be forgotten.

For practice in reading notes, the teacher should make a line of notes, for example, E (first line), A (second space), D, F, C, G, D, B, F, E, E, G, A, C, C (middle C), telling him it is a Musical Roll Call and that he must practise it at home until he can call all the names easily and quickly. He should have a line for each day's practice, giving only these notes, but in a different order.

To give the "roll call" he should go through it in the following way,—"First line, E"—then he sounds the note as if it answered to its name. "Second space, A," then sounds the note, etc. His mentioning the location of the note on the staff first makes him observe it more carefully.

TECHNICAL WORK

The pupil should be seated far enough from the piano to give his arms freedom of motion. The height of the seat should be determined by the length of the upper arm. The elbow should be on a level with the keyboard. The wrist, a little below the level.



The details regarding the hand position should be carefully explained until understood by the pupil.

The wrist is held slightly lower than the hand in the elementary work, the knuckles being slightly raised, particularly those of the weaker fingers, which should be up as nearly in a line with the others as the formation of the hand allows. In this way the fourth and fifth fingers have an equal chance of action from the knuckle with the stronger fingers.

Each finger, with the exception of the thumb, rests on its cushion. This is the position taken for the technical development of the hand. (The strength of the finger tip can be developed only when the finger is held curved. Later on the hand position is adapted to the needs of the passage to be played.)

The arch between the thumb and hand is insisted upon to give the thumb room enough to pass under the hand freely, as is necessary in scales and arpeggios.

The teacher should illustrate this careful explanation with his own hand, and the pupil should show whether he comprehends it by trying to put his hand in the same position. It is better for him to rest his arm on the table when he first takes the position.

REMARKS ON HAND POSITION

The knuckles are slightly elevated in order to give solidity and firmness to the hand, and to enable the fingers to move more freely from the knuckles, thus preparing the way for the finger action which comes later.

The thumb is held out and curved to give it more freedom of movement on the outside of the hand.

The fingers are curved in order to concentrate the finger action at the knuckles, to develop firmness and sensitiveness in the finger tips, and surety and clearness in the finger work.

This hand position is for the purpose of developing the hand for the piano, and should not be understood as a set position to be used in playing.

After this position can be taken easily and quickly, the arm should be taken away from the table, and the position taken with the fingers resting on the edge of the table, and the arm loose and relaxed from the shoulder. The wrist should be a little below the level of the hand, as this will insure better finger action from the knuckles.

Swing the arm at the side, noticing the sensation of a loose arm so that the condition may be retained when the hand is placed on the edge of the table.

The assuming of any new position had a tendency to cause stiffness. Consequently it is necessary to relax the arm many times and to take the hand position until one feels at home with it. Relaxation is the absence of effort, and this position must become so natural that there is no effort to assume and retain it. Every teacher tells his pupils that the wrist should be loose but how can the pupil be expected to have a loose wrist when he has no idea how a loose wrist feels? And does not know how to get one?

FIRST TECHNICAL EXCERCISE FOR THE PIANO

The pupil should put his hand in position then swing his arm at his side, and put the hand up in position again. This will take away any cramped feeling of the hand and arm, and give the relaxation necessary before another difficulty is presented. No beauty of tone or freedom of execution can be brought about with the arm and wrist stiff. The time to begin relaxing them is when the hands are first placed in playing position. That is the time when the tension begins.

This exercise should be practised until the hand assumes the position without effort. An older pupil can go on immediately with the wrist exercise of the next lesson.

To make the points of a lesson as definite as possible, a synopsis like the following should be in the mind of both teacher and pupil:

OBJECT OF THE LESSON

I. Learn middle C.

II. Learn to recognize the length of whole half, and quarter notes by sound, and also t

write them. (This must be practised either with the teacher or with someone at home.)

III. Learn what the correct position of the hand and arm is, and be able to explain the reasons for this position.

IV. Learn to take the hand position easily with each hand.

V. Learn the line of notes written out.

GUIDE POSTS

BY MARIE M. BENEDICT

III

HAND POSITIONS

Our second Guide Post, which we passed in October, directed us to the vantage ground from which might be obtained a survey of the piano keyboard (the "open sesame" to so much of fascinating beauty), acquaintance with the individuality of its primary tones, and its simplest fundamental tonal relations.

The hands of the piano student, under the direction of the student's individuality, may learn to draw through this keyboard entranceway to the realm of music, all the infinitely varied charm that lurks within the strings of the piano. All the pathos, the tenderness, the tragedy; all the sparkling merriment, the piquant gaiety, the self-confident bravura, the quiet majesty, the soaring aspiration of spirit, which it is within the power of the piano to express. It is for the player to learn how to evoke that power, how to control and guide it to the interpretation of the entire range of life experience.

As means to this end, correct hand position is an absolute essential. Without this, the desired result cannot possibly be attained.

But before we try to place the hand in position upon its keyboard playground, let us pay a bit of attention to the condition of the muscles of fingers, hands, and wrists. The muscles are the messengers of power from the individual, through the piano keys, to the strings. If they are hard, tight, inflexible, unyielding, the tone produced will be hard, cold, metallic, unsympathetic in quality. In a word, we shall have sound, we shall have noise, but we shall *not* have music. It is therefore patent that the first necessity is the practice of simple muscular exercises, not at the piano, but with use of lap, table, or book, for development of the requisite degree of flexibility, that all-potent combination of elasticity and firmness in the muscles of hand, wrist, and fingers.

As you are seated in your chair by window or table, lift your wrists to about the level of the shoulders, allowing the hands to droop downwards in complete relaxation. Let us change that word allow, for it is not sufficiently insistent. You must see to it that the hands are as loose and as floppy, as absolutely without initiative, as is a wet cloth, when depending from a hook. Then drop the hands, palms downward, upon the lap, letting them fall with all their weight; just because you have countermanded the mental order which kept them in the air, and therefore they must fall, it is their natural necessity, to a resting place upon your lap. Now slowly draw the hands away from their resting place by *lifting the wrists*. Still keeping well in mind the wet cloth mood of muscles, draw the hands upward in such fashion that the tips of the fingers are the last points of contact with the lap. This may seem unnecessary emphasis upon a trifling thing; but it is in reality a matter of the greatest importance. If the whole hand be lifted at once, instead of being drawn up by the lifting of the wrists, there will not be that relaxation of muscle, which is the prior necessity to development of flexibility in strength, the absolutely indispensable requisites of beautiful tone quality.

Repeat this simple exercise ten or fifteen times consecutively, using a table, or a book laid on the knees, as basis of operations. Do not be content with fifteen repetitions, once each day, but go through the muscle training series of movements several times daily. Surprising freedom from constraint of movement will soon be your reward.

Now, with the hand lying, palm downward, in natural ease of position upon the table before which you are seated, draw the tips of the fingers inward. This movement will of necessity arch the fingers and lift the palm from the table. When the hand has thus been caused to stand upon its finger tips, fingers so arched that the slight angle at each joint is distinctly visible, or, in other words, in the position which hand and fingers would assume, if an orange were pressed against the palm and clasped by the fingers, the novice has attained the correct hand position. The slight angles just referred to should be three in number, two exclusively of the fingers, and the third where the finger joins the hand.

I know that it has long been insisted by many teachers that the knuckles should be depressed; that the back of the hand should be level with the first section of the fingers; but I have as authority the leaders of the profession in America and Europe when I say that this knuckle depression weakens the hand; breaks the connection with the source of power in the muscles of the upper arm, upon which the fingers must depend in the production of many most beautiful effects. In a word, makes the desired result impossible.

Having accustomed both right and left hand to this correct and most natural position, draw them to a point above the table by lifting the wrists, precisely as in the former exercise. Give the hands three or four careless shakes while they are in the air, to insure freedom from any stiffness and constraint of muscle. Then replace them in the easy, palms downward position upon the table, and again draw them to the standing posture, again draw them up, always by *lifting the wrists*. Repeat this exercise, at different periods, twenty or thirty times each day.

When the hand position has become a thing of easy familiarity, let each finger exert a slight downward pressure, just as it would if making an imprint in some cohesive, yet yielding, substance, and again draw the hands from the table by lifting the wrists, always seeing to it that, when in the air, each hand droops from the wrist in perfect relaxation.

Now let us go to the piano. Place the hand upon the keyboard, palm downward, let it lie upon the ivories in the same easy position which it had but now upon the table. Place it so that it shall cover the five tones, C, D, E, F, G, the first finger upon middle C, the fifth upon the G next above, with the fingers pushed well in between the black keys. Now draw the hand to the correct standing position by drawing in the finger tips, and so curving the fingers and lifting the palm, just as you did upon the table. Do not try to sound the tones, only try to find it as easy to assume the natural, unconstrained position of hand and fingers upon the ivories, as it was when practising on the table. Draw the hand up from the keyboard as you drew it from the table, and repeat the exercise.

Having caused the hand again to assume the true position, let us begin a promenade up the white keys by a "silent exchange" of fingers. Using only the first and second fingers, depress C and D, but with so slight pressure that the tones shall not be sounded. Then cause the first finger (or thumb) to take the second's place upon D and the second to move to E, the first to take its place there, and the second to move to F, and so on until the C next above is reached, when the order of exchange is reversed, the first finger taking the lead, the second always following to take its place, as we return down the octave to the starting point upon middle C. This exercise should be practised with each pair of fingers, one and two, two and three, three and four, four and five. Always remembering that it is a "*silent* exchange."

Why must it be silent? In order that, with no trace of tightening or constraint of muscle, the hand and fingers may in the easiest and quickest way learn the natural and, because the natural, the most effective position for work upon the keyboard. The most effective position for drawing from the strings all that enchantment which is but awaiting there, the player who shall have the ability to draw it forth in rhythmic, melodious life.

———*———

LISZT AND WAGNER

The silhouette above shows the great pianist and the great composer in somewhat exaggerated characterization. At the same time the portraits are easily recognizable. The two were the warmest of friends, and indeed Liszt was one of the staunchest partisans of Wagner, and did much to introduce his music to the public of Europe.

STIMULATING THE PUPIL

BY EDNA JOHNSON WARREN

Nearly everyone admits that a child is an imitator. This being the case, why not use it to good advantage along musical lines?

I have tried the following experiment and found that it works well in nearly all cases: When it is nearly time for a pupil to arrive, have either the teacher or the preceding pupil start playing the work which is least interesting to the one who is arriving. For instance, if my first pupil dislikes scales and is in the habit of playing them too fast, I sit down to the piano shortly before she arrives and start playing scales slowly while she enters the room. That helps to lead the conversation into scale work; when she finds that I am doing the work which she dislikes she will more readily take up what she considers a distasteful task.

If number two dislikes arpeggios I have number one do that work last, and she will consequently be playing them just as number two arrives. Then the second pupil will usually inquire if the first one doesn't hate them, and as I try to arrange as far as possible to mix up the pupils in this respect, she gets a negative answer. When her lesson begins, she has the pride which the majority of us have in competition, and will go at her task with much less dislike, and in many cases "horrid" scales, exercises, reviewing, etc., have passed along much easier.

In duet work I try to get two pupils who like opposite parts and after a little they usually like to try what the other one likes best; and that ends difficulties along this line, too.

THE STANDARDIZATION OF MUSIC TEACHING

A Review of the Progress of the Idea in the United States, What Has Been Accomplished, and Some Suggestions for the Future of the Movement

I

By ARTHUR JUDSON

SOMEWHAT over four years ago, the New York State Music Teacher' Association was holding its annual convention at Syracuse. The sessions opened with a banquet, at which were present perhaps twenty-five musicians from the state in general, fifty musicians from Syracuse, and about one hundred friends. There were after-dinner speeches on every conceivable musical subject, most of them interesting, but, at the end, several of us were called upon for whatever ideas we cared to express.

I had listened carefully to the many speeches and I felt that the most vital subject had not been touched upon. As my contribution to the evening's discussion I ventured to point out that there were approximately 30,000 music teachers in the state of New York; that the Association never averaged more than two hundred, at most, at its conventions; that since the teachers in attendance were not, in any sense, delegates, they could not represent adequately the 30,000 teachers of the state. Furthermore, I pointed out that these teachers were not present because it was evident that there was nothing of vital interest to them. The conventions were devoted to discussions which never settled anything, concerts which probably did not equal those in the home towns of the teachers present, and that there was no permanent value to membership in the Association since it did not pretend to do anything during the entire year. The Association activities began and ended with the convention, the dues for the year being paid at that time, and such membership actually expiring with the last session of the convention.

The chief point which I wished to emphasize was that the Association must stand for something if it wished to interest the average teacher and attract an attendance at all representative, and that it should be an active force throughout the year if it hoped to accomplish anything. The chief thing which would accomplish this, I stated, would be a standard for the Association, a foundation upon which it could build, from year to year, a structure which would command the respect of the public and the musician alike.

As a result, the Association appointed committees which were continued from year to year, the final reports being had at the Saratoga convention of this year. It is only just to state that certain committees are yet at work and that the end is not yet in sight. From this beginning with the New York Association there has arisen discussion in most of the state associations with more or less certain and drastic action as the result.

I disclaim any desire to assume credit for starting this movement for standardization. It had been discussed for many years in the New York and other teachers' associations, but, during many conventions, had lain dormant. I did not, at that time, see a definite and practicable method of standardization; and, at the present day, I will not venture to prophesy along what lines the troublesome problem will be settled. Of one thing I am sure: The question of standardization will, and must, be settled if the profession is to develop its fullest capacity for results.

The purpose of this article, and the one following, is to discuss the work which has been done; to sift the various, and widely divergent, methods of solving the problem; and to suggest the best way to standardize. In my suggestions, I shall view the problem from a national, and not a local, standpoint, and shall suggest general methods rather than the details of standardization.

In a comprehensive view of the entire field it will be found that the plans proposed fall into three distinct classes: New York, the minimum (essential) standard; Ohio, the legislative standard; Oregon, the legislative standard as a part of the state school system. A more or less detailed statement of these methods will be necessary.

THE MINIMUM (ESSENTIAL) STANDARD

After much discussion in committee and convention the teachers of the New York Association decided that it was best not to ask legislative action, but to proceed with the reformation from within the Association. It was felt that legislative action could not be recommended because previous experience of other societies had demonstrated that the examinations, if under the Board of Regents, would require impossible academic standards, or that examinations if under appointive officers of the legislature might become a part of politics.

In reforming the Association from within it was found necessary to exempt all members in order to pass the requirements, although many declared their intention of voluntarily taking such examinations. It was further decided that the standard should be an essential standard, that is, one which would require the minimum of knowledge with which a teacher could safely operate. It was further provided that there should be added, from time to time, certain more advanced grades of examinations. Graduates of accredited schools of teachers, or teachers who had, by years of good work, demonstrated the fitness of their pupils, were to be accepted for membership without examination. The general statement of the committee was as follows:

"First—That he is well acquainted with the essential facts of musical tone-phenomena, evinced by an intelligent appreciation of the artistically applied elements of music, rhythm, melody, and harmony, as well as the ready recognition and comprehension of the symbols and signs in common use, by means of which musical thought and emotion are chiefly transmitted from the composer to the executant whether artist, teacher, or pupil.

"Second—That he may be able to elucidate for his pupils any points of doubt or misapprehension, and that he be able on occasion to give an adequate illustration of the proper interpretation or execution of the music taken up for study by his pupils.

"Third—That he may know how to adapt his instruction, also his general personal attitude during the lessons, to the special needs and peculiar traits of each pupil.

"Fourth—That he be sufficiently acquainted with the instructive, classical, and romantic teaching literature of his department or specialty.

"Fifth—That he have a working knowledge of the technical and other difficulties that are most likely to be encountered along the path of advancement, reckoning with the mental, physical, and temperamental equipment of the average pupil, and know how in some effective manner to remedy or help overcome the faults, deficiencies, and problems as they arise.

"A teacher who cannot at all meet such requirements may mean to do well, and may in the isolated case of a very talented pupil show a partial success; yet he is likely with most of his pupils to misguide and influence injuriously against any future possibility of success. Experience constantly shows how true this is.

"It is understood that it will be left to practical experience to show wherein modifications or amplifications of these requirements must be made by subsequent committees and special sessions of this Association. Our committee has realized that it would be wise in making the requirements, at any rate to begin with, as liberal and flexible as can be, and yet fulfil the purpose. Especially is this required in all points wherein there still are held strongly divergent views. There was a strong inclination at times to insist upon this or that particular requirement or test—but finally everything was eliminated which could not be agreed upon as being absolutely essential. It was thought that as soon as our average standard of achievement was raised we could make our requirements and tests for examinations more exacting. We must be glad if at first we can keep out the frauds and incompetents."

These general statements were followed by definite recommendations from the committees on vocal and piano examinations. The demonstration required for teachers of voice was as follows:

"Resolved, That, before a person is considered qualified to teach singing he should demonstrate to the examining committee:

"1—That he possesses an ear, accurate in the appreciation of differences in the pitch and quality of musical tones and in the pronunciation and enunciation of the English language;

"2—That he has sufficient pianistic ability to play simple accompaniments;

"3—That he has had at least three years' continuous study with some competent teacher;

"4—That he possesses such elementary knowledge relating to general musicianship as is contained in such a book as *Musical Essentials*, by Maryott (John Church Co.);

"5—That he is familiar with the contents of one or more standard works dealing with tone production, voice development, and interpretation;

"6—That he possesses the ability to impart his knowledge, that is, to teach;

"7—That he has some familiarity with teaching material in the shape of vocal exercises and songs."

The requirements for pianists were similar in their general import to the vocal requirements, but are too long for detailed statement here. They may be found in their entirety in *Musical America* of July 18.

It is evident from the matter quoted above that the tendency of the committees on standardization of the New York Association was to find a sure, if somewhat general, basis upon which all of the teachers of the Association could unite. There was no desire to create an impossible standard or to specify examinations which could be definitely allied to this or that system of study. On the other hand, these requirements were designed only as a guide to the examiners and as a standard below which such examinations should not fall. Let us not forget that this is but a minimum standard and but a beginning in a reformation from within the Association. It does not force on teachers outside of its membership any such examinations, such as would be required by state legislation.

THE LEGISLATIVE STANDARD

The action in Ohio was taken toward legislative examinations. The resolutions adopted were:

"1. That a legislative committee of five be appointed by the president before July 1, 1914, the

members to be chosen from various parts of the state, to represent the profession as a whole.

"2. The legislative committee shall prepare a bill for the licensing and examination of music teachers; have it introduced before the Legislature; get a proper hearing for it, and push its passage.

"3. All professional music teachers of the state having five or more years of experience shall be assessed one dollar each to form a 'legislative fund,' out of which to defray the expenses necessary to carry on the work of this committee, said fund to be paid to the treasurer of the Ohio State Music Teachers' Association and placed in the hands of the committee.

"4. The bill is to embody the following points and provide for carrying out the same:

1. All professional music teachers now teaching in Ohio and who have had five or more years' experience in teaching shall be entitled to receive a certificate of exemption from examination. Dating from one year of the passage of this law, all persons not exempt from examination desiring to teach music shall be required to have state certificates.

2. There shall be a board of twelve examiners, to be appointed by the Governor on a non-partisan basis, upon recommendation by this Association, to examine applicants for certificates as teachers of voice, violin, organ, and piano. This board of examiners shall hold examinations at any convenient point whenever a sufficient number of applicants desire such examination. Acceptance of appointments as examiners makes obligatory the examiners' attendance or representation at the annual meeting of the State Teachers' Association for the purpose of holding such examinations.

3. The fee for examination shall be five dollars.

"The report then calls for four grades of certificates: elementary, intermediate, advanced, and artistic, the general scope of each being tabulated."

It will be noticed that the bill to be presented to the Ohio Legislature is to be drawn by a legislative committee of the Association. It is, therefore, apparent that the chief work, that is, that of deciding upon the standards, will have to be done by the Association, which is, in itself, an almost impossible task. Further, the examiners are to be appointed subject to the approval of the Association and all teachers of five years' residence in the state are to be exempt.

At this point, it may be of interest to print the standard adopted by the California Association, which, after much agitation, decided not to appeal to the Legislature, but to conduct its own examinations. The Association decided on the following.

"Class I. Teachers of ten years' experience, no examination to be required. This term of experience to be increased two years each year for six successive years. Class II. Teachers of metropolitan, national, or international repute as music artists or teachers, no examination. Class III. Pupils having completed or successfully passed the examinations in a four years' music study course in any accredited school or college of music; also, advanced pupils who have studied at least two years under teachers in Class II admitted upon presentation of diploma without further examination. Class IV. Persons not eligible under Classes I, II, or III may become active members by passing the membership examination as formulated by the committees in the various branches of music. Class V. All active members in good standing at the time of adoption of this classification will be accepted as 'Founding Members' without examination. The degree of title of Fellow shall be conferred upon any active members of this Association upon presentation of a post-graduate diploma covering at least a six years' course of music study in any accredited school or college of music or upon passing an examination formulated for such degree. The degree or title of Associate shall be conferred upon any active member, upon presentation of a diploma covering at least an eight years' course of music study in an accredited college or university, or upon passing an examination formulated for such degree which shall be considered uniform with the degree of Bachelor of Music."

The chief feature of the California plan is the requirement of ten years' teaching experience and the addition of two years to that amount for six successive years, so that to escape examinations in 1920 one must have taught successfully for twenty-two years.

THE LEGISLATIVE-SCHOOL SYSTEM STANDARD

Such action was taken in Oregon. The recommendations were these:

"The bill makes it unlawful for any person who is 'not at this time engaged in the teaching of music in this state to commence such teaching unless he or she has obtained a certificate.' The Superintendent of Public Instruction will appoint a board of five examiners, consisting of two teachers of pianoforte, one of pipe-organ, one of violin, and one of voice.

"The actual registration of teachers will be effected within three months from the passing of the act, when 'it shall be the duty of every person who is now engaged in the teaching of music in this state to cause his or her name and residence, or place of business, to be registered with the Board of Examiners.' These registrations must be sworn to before a notary public, and in return the teacher will receive a certificate to that effect. After receiving a certificate of registration the teacher 'may continue to practise as such without incurring any of the liabilities or penalties provided in this act.' An annual registration fee of one dollar is required.

"The Board of Examiners will meet twice each year for the purpose of examining candidates for registration, and the Superintendent of Public Instruction 'is hereby empowered, after consultation with the Board of Examiners, to make such rules and regulations as he and they may deem necessary for the conduct of such examinations.

"'It is moreover provided that the Board of Examiners shall hold examinations at the county seat of any county within the State of Oregon upon the written request of ten or more applicants for certificates. * * * Any and all persons who shall so desire may appear before the said board at these meetings and be examined with reference to their knowledge and skill in the art of music or any branch thereof, and if the examination of any such person or persons shall prove satisfactory to said board, they shall report their findings to the Superintendent of Public Instruction, who shall issue immediately to such persons as are found to possess the requisite qualifications, a certificate to that effect, in accordance with the provisions of this act. Said board shall also recommend to the Superintendent of Public Instruction for endorsement as satisfactory, diplomas from any reputable chartered or incorporated university, college or conservatory, when satisfied with the character of such institution, upon the holder furnishing evidence satisfactory to the said board of his or her right to the same, and said Superintendent of Public Instruction shall issue certificates to that effect within twenty-one days thereafter. All certificates issued by said Superintendent of Public Instruction shall be signed by him and by the officers of the Board of Examiners, and all such certificates shall be *prima facie* evidence of the right of the holder to practise the teaching of music in the State of Oregon, but no certificate shall be granted by said Superintendent to any person not of legal age at the date of application, or to any person who shall not make affidavit of his or her intention to reside permanently in the State of Oregon.'

"Violations of the provisions in the act constitute a misdemeanor, entailing a fine of not less than $50 or more than $200 or six months' imprisonment."

The chief matters of interest in these recommendations are that the examinations are placed under the direction of the Superintendent of State Instruction, thus coupling up music with the educational system of the state, the providing of a penalty for a violation of the law, the age limit, and the exemption of all those at present teaching in the state of Oregon who have the right to certificates without examination.

In the above plans adopted by four associations we have before us all of the important plans of action concerning standardization. While these steps are in the right direction there are many problems to be surmounted and many flaws to be pointed out. The mere recommendation of a standard or of legislative action does not offhand establish that standard.

TUNING THE SAMISEN

A JAPANESE SAMISEN PLAYER

It has been of recent years difficult for Japan to keep to her old traditional music, for, with our railroads, telegraphs, etc., came our music also, and now our ragtime tunes may be heard whistled from every corner of Tokio or Yokohama!

The Japanese are a musical people, especially the women and all classes are proficient in music. Scarcely a house but what has a musical instrument of some kind, and generally it is the *Samisen*, the Japanese guitar.

This is the favorite of all Japanese musical instruments. The body is made of wood, covered on both sides with catskin. The handle is of hard wood, very long and thin, with three gut strings. It is played with a large plectrum of wood, ivory or tortoise shell; in this case the plectrum is of ivory. It can be tuned in no less than five different ways.

Like our own guitar, the *Samisen* is used to accompany singing, although a skilled performer may play solos upon it with a surprisingly beautiful result.

STANDARDIZING MUSIC TEACHING

BY HARRIETTE BROWER

II

(All Rights Reserved)

[Miss Brower presents certain phases of the subject of standardization with which all of our readers may not agree. Think the subject out for yourself, and then be ready to act if opportunity offers. —Editor.]

THE CERTIFICATE

In a previous article we considered the subject of standardizing the equipment of the music teacher from the artistic side, summing up the necessary technical requirements, and advising the teacher to take an inventory of his attainments, to see if they measured up to the high standard of musicianship which every good teacher ought to set for himself.

We can now look at the subject from another viewpoint, the compulsory or business side.

It is true that music teaching has formerly been of varied and uncertain quality in America; for this reason we should welcome every legitimate effort to establish it on a more sound and efficient basis. Each year the subject receives more attention at the various music teachers' state conventions, and throughout the profession. All serious teachers feel that the definite principles in music teaching should be more fully recognized. For there are positive and definite principles in both piano playing and teaching; the difficulty seems to be to have these universally known, acknowledged, and accepted.

Of the thousands of teachers of the piano all over our country, it is safe to say there are no two persons exactly alike; each one has a different history, temperament, environment, from all the rest; each has a different experience, outlook, and ideal from every other. How can such diversity of opinion in regard to the manner of teaching and the material employed be brought into unity of design? It will require superlative wisdom to draw up and formulate a code of requirements which can be conscientiously accepted by all. What persons or what board of examiners have the necessary wisdom to do this?

If the features of the Associated Board examinations, which have been conducted in England for the past twenty-five years, should be adopted in America, we should be expected to use études for each of the various departments of technic; namely, scales, chords, arpeggios, thirds, sixths, staccato and legato octaves, expression, phrasing, and part-playing. Now this classification may be an excellent thing for teachers who have never thought about specializing études for particular purposes. Let us suppose it is decreed that the teacher must use certain books of études, — that each "grade" has its prescribed selections

To give books and books of études precludes the necessity of specializing on pure technic. We will assume that standardization calls for certain doses of études. You, as a teacher, however, do not care for études, you use almost none. You feel you have found a better way; you teach the principles in concise technical forms and eliminate the étude. The results of your "advanced" ideas fully uphold and justify your manner of teaching. Shall you, therefore, be obliged to use these—to you—worn-out forms when you feel you can save time, patience, and the pupil's money by coming at once to the heart of the matter, to the kernel of the technical point, instead of wading through a sea of études to get there? Yet in order to win that certificate to hang on your studio wall, you must subscribe to what it stands for. How will you feel about this?

On the other hand, let us suppose that you, as a teacher, are in full sympathy with the étude idea; you are familiar with the output in this line, you have been brought up on études yourself, have worked up a great many of them, and are accustomed to give them to your pupils.

A student comes who has very weak, bending finger joints. You recommend a set of études which will give her "strength." Can you tell me whether any études have ever been written, the use of which will cure bending, wabbling fingers? Ah, no, the trouble lies deeper than the étude; it must be conquered by careful foundational training, before the étude can be performed with satisfactory firmness and roundness of touch. The teacher who understands the situation will apply the necessary remedy, and keep on giving it till this fault is eliminated; then there may be no necessity for the étude!

It should be stated here that the term étude is used to denote the rank and file of studies, and does not refer to the masterpieces of Chopin, Liszt, and others, which are used in the concert room.

Another illustration of the necessity of seeking and understanding the causes of failure in the pupil to play artistically, rather than being obliged to follow out any prescribed rule. A pupil comes to you who has great difficulty with octaves. She has studied the piano a long time, with well-known and high-priced teachers. She relates that the last professor, seeing her difficulty with this technical point, advised her to get the Kullak *Octave Etudes* and the sixth *Hungarian Rhapsodie* of Liszt, as they contained plenty of octaves! She obeyed, but was entirely unable to do anything with them. Do you think the young lady could master this point through such a course of study? Not a bit of it. She became thoroughly discouraged, and avoided all compositions containing the hated octaves.

But *you* understood the situation at once; you knew just what that girl needed. You saw her hand had never been properly trained to play octaves, it had never been properly stretched and developed. You proceeded at once to remedy this lack by a set of carefully prepared exercises, original perhaps, as you are an earnest thinker along these lines. You soon had the span of her hand increased by an inch or more. Meanwhile you have taught her the principles which underlie octave playing, of which she had never heard before, and with simple forms and easy movements, first with single fingers, she is gradually learning how the thing is done, and she is very happy about it.

These instances, of which many occur to me, would be most interesting to follow up, but they would lead us too far afield; we must pass on to consider the subject of the certificate.

The teacher's certificate, no matter how carefully worded, may mean much or little. I have seen some of these documents which were not worth the paper they were printed on, as for any real value they had as showing what the teacher knew, or what was his teaching ability. The more be-ribboned and be-sealed they are the more they are calculated to deceive the unwary. Unsophisticated folk are certain to be deceived by an imposing certificate, conspicuously placed. Alas that there can be fake certificates as well as fake teachers. A parchment awarded an advanced student or young artist, after years of hard study, is one thing, and a very desirable thing; a certificate given to a teacher for a few months coaching may be quite a different thing, though to the uninitiated the two may look very much alike.

I do not view with disfavor the honorably won certificate; but to my thinking its standard should be high. It should be given only by a foremost institution or association; it should stand for honest work, artistic ideals, and unquestionable ability; yet it should not be the result of circumscribed and arbitrary rules of method; in other words, it should stand for complete understanding of principles, and the ability to work them out along educational, artistic, and ideal lines.

The serious minded teacher of the piano, who is always at work in the effort to make himself more efficient, is a person of high ideals. He does not stand still, he never settles down into a rut, for he knows the danger of inertia. He has the inner impulse which urges him ever onward and upward. Such an one may not feel the need of a teacher's certificate for several reasons.

First: He may honestly feel, without pride or arrogance, that he knows more about the subject from the practical as well as from the artistic side, than those who drew up the examination plans, through which he must pass in order to obtain that certificate. He may have had greater musical advantages, may be more gifted than his examiners, may have had more experience. Will he brook being required to teach in a way foreign to his natural bent, against his convictions, when he knows he obtains good and artistic results in his own way? That was Jaques-Dalcroze's position, when he separated himself from the Geneva institution and founded one where he could work out his own ideas. The experienced and advanced teacher, while wishing heartily to see fakes eliminated from the profession, may not wish to have freedom curtailed in his own work.

Second: The capable teacher of piano may care nothing for a teacher's certificate, when he knows that the inexperienced and the charlatan can so easily obtain it, as suggested above. In fact, a good teacher may prefer not to exhibit such a testimonial at all.

We want all the light we can get on this difficult question. The discussion of it from all sides is welcome. If such discussion leads to more general undertanding of correct principles of playing and teaching, it will accomplish much in the right direction.

The above illustration shows a virginal, a stringed instrument which was one of the precursors of the piano.

LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

TEACHING BY IMITATION

Aristotle said—"Do as I *tell* you."
Socrates said—"Do as I *do*."

Dramatists call a sudden and violent change from one state of mind to another the "peripety" (peripeteia). Some few years ago a "peripety" may be said to have occurred among the pedagogues. Up to that time the wisdom of Socrates had guided the teacher; a teacher was one who could do something excellently well, and the pupil's ambition was to do this thing as well as his teacher did it. Then it was suddenly and violently discovered that this was all wrong—that it was "slavish imitation." The Beginning Teacher was warned that she must not allow her pupils to imitate—the way to teach was to compel the pupil to remain absolutely passive while the teacher talked and talked and talked; then the pupil was to go out into the world and somehow put into use all the wisdom that had dropped from the teacher's lips. Teachers taught the piano who could not play it.

Teachers taught harmony who had never written a page of good music. Teachers taught the voice who could not sing a note correctly. The *theory* was all-sufficient; pupils were stuffed to repletion with abstract knowledge; if they did not "do as they were *told*" the fault was theirs, not the teacher's.

Now there were good reasons for this change from the methods of Socrates to those of Aristotle. For one thing, the teacher would say, in the modern version of Socrates—"Get your model in your noddle"; but the pitiful model it would be! Or he would ask his pupil to imitate without having learned what imitation really was himself. These were some of the reasons that led the Aristotelians to say that they (the Socratians) were all wrong. Today we have reached a stage where the music teachers' associations, piano manufacturers' associations, and the magazines are trying to make all Beginning Teachers prove themselves disciples of Socrates, prove themselves not only able to talk about what they teach, but also that they have actually done and can still do well at least all that they ask their pupils to do.

IMITATION

It is well to be very clear as to what imitation really is. One can "copy," or "counterfeit," or "mimic," and believe that he is imitating.

Crabb declares that "to *imitate* is to take a general likeness; to *copy* is to take an exact likeness; to *counterfeit* is to take a false likeness. To imitate is therefore always used in a good sense; to copy mostly, and to counterfeit, always, in a bad sense. To imitate is the general term; to mimic and to ape are both species of vicious imitation. One imitates that which is deserving of imitation; one mimics that which is not an authorized subject of imitation. A person wishes to make that his own which he imitates, but he mimics for the entertainment of others. To ape is a serious, though an absurd, act of imitation."

In the study of music there may be both free and close imitation, but always there must be the model, and always it must be made very clear to the pupil that imitation is always the reproduction of someone else's thought plus one's own thought. It must be a reproduction of a thought, not of any act or sound alone, no matter how good these in themselves may be. The Germans are a musical people because they are a thinking people, and it has been said that the trouble with us lies entirely in our educational methods; "the taste for good music has not been implanted in the minds of the young," as The Professor said in his September *Talk on Wrong Educational Methods*. Yet music teachers have worked so very hard to do this very thing they are accused of not having done that they might indeed be said to have just cause for resentment, were it not for the fact that they neglected to learn those very lessons of the Beginning Teacher which no school or pedagogue can teach, which the teacher herself must learn for herself, in the great and not too well filled realm of individuality. If the teacher is to be her pupils' model she must study always, she must have that which is really excellent for her pupils to imitate, else they will deteriorate into mere little copyists or mimics.

IMITATION WITHOUT THOUGHT

A professor of English composition in one of the Boston colleges gave me some examples of what imitation without brains may be. The class were given the sentence, "The laboring stag strained full in view," to imitate. One lad passed this in, "The working stag filtered into whole sight." Another time the class had a sentence with "the lily white doe" in it, and were told to write another sentence with this phrase in it. A boy wrote, "He wore a lily white doe in his buttonhole." Needless to say that he was called the "lily white doe" during the remainder of his college career.

These are the kinds of attempts at imitation we are constantly getting from music students; they are not one whit sillier or more brainless, because the greater number of our pupils are so pitifully at sea as to what they are trying to do. I heard an organist say, "I listened to my teacher talk about phrasing all my life; I suppose I scarcely had a lesson in which he did not tell me to phrase; but I never understood what it was to phrase until I began to teach, and had to sit down and 'think the thing out for myself.'" A teacher may talk about phrasing, may describe the phrase, its beginning, its climax, and its end, but if she does not phrase well and intelligently herself, she might just as well have been talking about the "lily white doe."

TEACHING SCALES

Scales, despite all our modern methods, still remain boresome matter to the pupil. This would not be so if they were taught by imitation. The scale is the *model*, and all running passages in music are either a close or a free imitation of some form of the scale. It is the discovery of this very simple fact that makes it seem so well worth while to the mature pianist to spend hours in scale practice. This might just as well be made plain to the young student; let him understand that we do not expect him to enjoy scales as scales, but to use them as models for the music he is going to enjoy playing in proportion as he "gets his model in his noddle," and is able to imitate it by an intelligent use of his own brains.

Children do like to do their own thinking. Madame Montessori speaks of "the stupid, bored expression of the child who knows someone else will do his thinking for him." A child who is allowed to experiment with the scales himself, to compare scales with "runs," to work out systems of fingering all for himself, who, above all, hears scales well and often played by his teacher, is not going to dislike them. When we think how awful scales sound when first played by most children, and remember that that is all the way they ever hear scales played, and that it is quite impossible for a child to realize what possible use such a succession of notes could ever be to *him*, it is no wonder he "skips" them. But if he hears his teacher play a scale beautifully, then is told that that scale was practised for the very definite purpose of making it possible to play a passage in a sonata well, and if that passage is then played to show how the scale has been the *model*, that scale lesson is going to *mean* something.

Furthermore, the more a child receives through his ear, the better musician he will be. It is difficult for us to realize what a cold, puzzling, forbidding thing a page is to a little child. He has had the struggle with the written page at school, then comes this new, strange looking page. How much more happily does the child receive his first musical impressions from the sounds that leave the piano under the teacher's fingers, all warm and sweet, and pulsing with a rhythm that can be *felt*. Look back into your own first lessons, and think of the difference there was in a line of music when you looked at it staringly black and white on the page, and when you listened to it played by your teacher.

We seem to have forgotten that music, by the one learning, must be a reproduction of sound; that receiving music through the eye is only an adjunct, it bears about the same relation to the true study of music as does the "curate's aid" to the food at a tea party. It is a help certainly, but not the real thing. The teacher must be able to set the perfect model first, then capable of helping the pupil to reproduce this plus his own thought. Most teachers are perfectly able to do this now, but they have been exhausting both time and strength trying to do unnatural things in an unnatural way.

Socrates' way is best.

———*———

THE SUPREMACY OF THE MINOR MODE

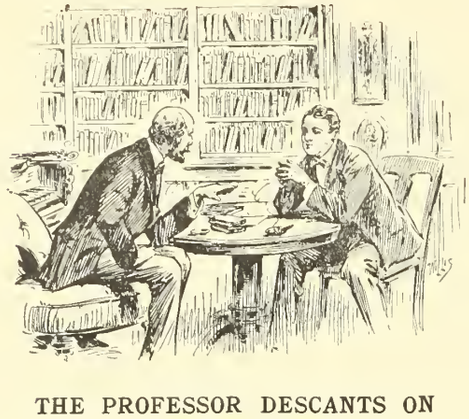
We can call to mind by hundreds—nay, by thousands—melodies which express happiness and are written in the Greek, Dorian, or Hypo-Dorian (tones of *Mi* and *La*)—that is, in the minor mode. Such in Plain-chant are the *Te Deum* of Easter Eve, the prose of Easter Day, that of Whitsun, and—what appears sufficiently significant—all the introits commencing with the words *Gaudeamus* or *Gaudete* (*rejoice!*) In the secular music of the Middle Ages in the pastorals, the rondos, the musical games, it is always the minor which predominates.

In the sixteenth century the dances, the gaillards, the pavanes, the branles, and the tourdions, are all, with rare exceptions, in the minor mode.

Among the Italians of the latter half of the sixteenth or the very early years of the seventeenth century, who created the recitative and founded the opera—Cavalieri, Caccini, Jacopo Peri, and Monteverde—the minor predominates over the major.

I open the collection of pieces, by Rameau, for the harpsichord (1706)—allemandes, corantes, gigues sarabandes, gavottes, minuets—every one in the minor. In another collection of the same composer (1724), pieces like the *Rappel des oiseaux*, the *Poule*, and the celebrated *Tambourin*, are in the minor mode. Bach and Handel have composed, like Rameau, whole suites of dances in the same mode.

Secondly, the minor should have right of precedence over the major, for it is found everywhere in popular music. It would be puerile to say, as Spencer has done, that music is only a simple development of certain parts of natural language. With ideas such as these, we should have to give up all idea of understanding Palestrina and Beethoven. But it is very true that in music many expressive elements are found which already exist in the natural language. Did the one precede the other? It is probable; and in any case, from all the facts mentioned above, a "contribution" only to musical estheticism can be drawn, and not the principle of a definition or of a complete bird's-eye view.—From Combarieu's *Music: Its Laws and Evolution*.



THE PROFESSOR DESCANTS ON IMAGINATION

"You may remember, my dear Editor, that what we talked about chiefly last month, was the extremely important rôle that imagination plays, both in the teacher's teaching and in the student's studying; and we arrived at very definite and highly useful conclusions—conclusions which cannot be too strongly recommended to the consideration of student and teacher."*

"You are quite right, Professor; I remember it all very well, also your promise to tell me your ideas about the higher and more important part that imagination takes in the realm of inspired composition."

"Not 'the higher and more important part,' my dear boy, but the highest and most important—indeed, the one and only part, beside which all else is but subsidiary and accessory. But, if you will allow me, I will proceed in order as closely as possible because there is so much to be said and so little time in which to say it.

IMAGINATION IS ALL-PERVADING

"How can we describe imagination, or apportion any place or rôle which belongs to it? To do this is to undertake the most difficult of tasks. The place assigned to it is always too small and the rôle it plays is much greater than we appreciate. Its free nature seems to flee from compulsion of any kind and to escape curious investigation. It assumes all aspects and forms; it is always present although not always perceived, and it is never stronger than when it hides itself. Feeble or powerful by turns, it scarcely touches our consciousness and the next minute takes complete possession of it. Imagination laughs at our efforts to seize it; nevertheless it is imagination that gives me these imperfect images by which I try to describe it"

"According to that, Professor, it would seem that imagination is the most elusive of gifts. What is its starting point or mainspring, musically speaking?"

"Esthetic emotion or, more strictly defined, esthetic musical emotion. If, in examining or listening to a composition, we could put ourselves in the author's place, or even in the place of those to whom it appeals, we would find a characteristic, the same in every instance, and that characteristic is esthetic emotion. It is a kind of particular pleasure corresponding to a special activity of the mind set up by a series of sounds. This pleasure is accompanied by a sort of mental relaxation which causes us to be like soft wax towards the impressions we receive, and which makes our soul like the surface of a lake that ripples with the least breath of wind. We deliberately abandon our own guidance and control in order to give ourselves up to thoughts that another communicates to us, either in person or through his composition. Thus, esthetic emotion is the essential property of a work of art."

CREATIVE IMAGINATION

"I understand your reasoning quite clearly, Professor; but you speak only of that form of imagination which is excited by an outward influence, that is in itself the spring or source of what you describe. It does not account for the first idea—the one to which the creation of a work is due."

"By which, my dear Editor, you evidently mean creative imagination, eh? There is no such thing as spontaneous creative imagination, unique in itself, proceeding entirely from itself, without relation to any definite cause or source. One who is stone blind from birth can have no idea of a brilliant sunset, or of a Turner picture; Mozart, Wagner, Debussy, and Schönberg are non-existent to the totally deaf. For music, there must exist a knowledge, an appreciation of sounds and sound systems before imagination can be called into play. The phenomena that give rise to imagination are conceptions, images or ideas and, secondly, perceptions. These perceptions are the result of sensations that we experience in different ways and degrees; by their means conception acts by analogy; the whole constituting what is generally known as *association of ideas*—not a very good term, but one that has been accepted by long custom.

"Association of ideas acts by analogy or, more specially, by a resemblance more or less precise to some intellectual, emotional, or unconscious sensation already experienced. This association by resemblance presupposes a mixed action of association and dissociation; it is an active form. Therefore it is the principal source of all matter for creative imagination.

MUSICAL KNOWLEDGE ESSENTIAL

"Forgive me, my dear boy, if my explanation seems more arid than is customary to me. The subject is of the deepest psychological difficulty to make plain in a few sentences; it would require a whole book to set forth even a modest exposition. You see, I must insist upon the fact that there is no such thing as an inspired imagination, created out of absolutely nothing. Many think that music is entirely a Heaven-born gift, without fore-knowledge of its science or art. They ignore the fact that the good old proverb, *Ex nihilo nihil* (from nothing, nothing comes), is just as applicable to music as to everything else. There must be a knowledge and acquaintance of music in some form or other to serve for the association of ideas from which musical imagination will spring.

"It is easy to understand that our imagination must be aroused by our sensations, or action of the senses, by what we read, hear, taste, or see, or by our general experience. An artist, for example, paints what he sees: the sky, the fields, landscape, life, or scenes from historical descriptions, aided by models, costumes, and other accessories. But the musician has nothing beyond the actual sounds to excite his imagination—sounds which have no concrete application, such as the artist can portray with pencil and brush."

"Are you, perchance, a believer in program music?"

"Not at all, my dear Editor. Your plastic artist can paint a cherry so realistically that birds try to pick it from the canvas, or a lemon so lifelike as to bring water to your mouth; but (although I have heard sounds of the sourest, sharpest kind emanating from certain unformed singers and players) I have yet to hear a lemon or a cherry faithfully suggested in music, because sound cannot reproduce material form.

THE GIFTED COMPOSER OR BORN MUSICIAN

"Musical imagination is the type of affective imagination, that is to say, pertaining to or exciting emotion. Many men possess an affectional or emotional memory, that is, a remembrance of emotions and not of the intellectual conditions which caused and accompanied them. I maintain that there is also a form of imagination which is purely affectional and composed exclusively of conditions of mind, temperaments, desires, aspirations, sentiments, and emotions of every kind, and that this form is found in the gifted composer, or a born musician.

"The musician lives in a world that is entirely his own. He carries in his head a coherent system of tonal pictures wherein each element has its place and value; he discerns the delicate differences of sounds and their qualities; practice permits him to penetrate their most varied combinations, and the knowledge of harmonic relations is to him what drawing and the knowledge of colors are to the painter. Intervals and harmonies, rhythms and tonalities are like so many characteristic symbols which arouse his perceptive faculties and which he employs in the wonderful structures of his fancy.

"These sound elements and their combinations are the words of a special language that is very clear to some persons and impenetrable to others. More than enough has been said about the vagueness of musical expression; some maintain that each musician can interpret it as he pleases. It must certainly be admitted that emotional language has not the precision of intellecual language; but it is the same with music as with every other idiom; there are those who do not understand, those who only half understand and consequently commit constant mistakes, and those who understand well; and in this last category there are degrees, according to the aptitude to seize the shades and subtleties of the language.

HEARER'S IMPRESSION AT VARIANCE WITH COMPOSER'S

"That which best permits us to penetrate the psychology of musical imagination is the natural change that takes place in musicians, and which consists of some impression, or event, or even a metaphysical idea that undergoes a metamorphosis of a positive kind. But it should be remarked that this change takes place only in the creative musician (that is, in the composer), for the auditor's imagination will usually picture some idea far removed from the composer's intention.

"Indeed, it may be proved that the most highly educated musicians and, more important still, those who are especially endowed musically, receive no visual impression. During the interpretation they live in the world of sounds and give themselves up entirely to musical pleasure. In short, music appeals to our emotional imagination unaided by any material or concrete signification such as sight and words suggest; it is an interior imagination, self-contained, and self-expressing."

"That is all very interesting and instructive for advanced students, whether composers or interpreters. Now will you kindly tell me, Professor, at what stage of musical education would you begin to train the powers of imagination?"

TRAINING THE IMAGINATION OF YOUTH

"Why, from the very first lesson, of course—if not sooner. We cannot begin too early to help children's imagination to unfold and grow in strength. Give them *Hans Andersen* and *Grimm's Fairy Stories*, and *Alice in Wonderland;* let the girls read *The Lamplighter* and *The Heir of Radclyffe*,

*(See THE MUSICIAN for October, page 666.—Ed.)

and the boys *Tom Brown's School Days* and *The Last of the Mohicans;* let them read tales of travel and stories from history, that history which is full of color, life, and emotion. No matter how much they read, *let them read all the time,* provided the reading be such as appeals to their individual imaginations. Books which are read in leisure hours are frequently more educational than those which are read in study time, if they are uplifting and sane."

"Then," said the Editor, "you are of the opinion that musicians cannot know too much?"

"I am, decidedly so," replied the Professor, with a quaint smile; "their chief fault is that they know so very little and are, therefore, dangerous to themselves and to others; they are bound to be narrow-minded and prejudiced and, if teachers, to propagate these faults in others. In music, indeed, there is an infinity to learn and just as much to be taught.

"Many of your readers look forward to a pedagogic career. They will become teachers of music in some one or other of its branches. If they do not vigorously apply their imaginative faculties to their teaching, they will be no better than mere machines, giving out knowledge but not putting it in. No depth of learning, no fluency of speech will rescue the teacher from barren work, if he lacks the ability to place himself in touch with the minds of those whom he wishes to instruct; and how can that magic bond be established except by the power to understand and feel that to which imagination must be our guide and for which there is no substitute?

SOUL-FELT IMAGINATION

"One point I would like to urge most strongly upon student, teacher, interpreter and composer alike. I would impress upon them the need to strive and put into and get out of their work all that is highest and best in soul-felt imagination; in so doing they will attain the greatest development of which they are capable.

"There is very much more to be said upon this entrancing subject; but my time is up, and I must leave something to your—imagination."

BEETHOVEN AS A MEASURE OF VALUES IN MUSIC

Music which our ancestors deemed masterpieces, fades into *rococo* when exposed to the fierce torch which Beethoven kindled. Music of ante-Beethoven date is as unlike the music of post-Beethoven days, as a rustic footpath is unlike a Parisian boulevard. He has taught us to demand that music shall *say* something, shall *mean* something, shall convey a *message* of some sort, and it has to make this appeal through the ear, *not* through the eye on paper. The ups and downs, the overs and unders, the betweens and betwixts, the inversions, the augmentations, the contractions (I feel tempted to say the contortions) and all other clever technical devices of the old Masters pass the modern man's door, but they do not knock at his heart.—Francesco Berger.

NOTES ON THE MUSIC IN THIS ISSUE

By the use of a large size plate, specially engraved for The Musician, we are enabled to give our readers a large amount of music in each issue. For example, in the present number we have the equivalent of fifty pages of regular sheet music editions, fifteen pieces, with a net value of $3.25. And while we are pleased to be able to include such a quantity of music, we are just as much pleased that the quality of usefulness to the needs of teachers and pupils is specially evident. That is the test which the music must stand, namely, practical usefulness for educational purposes.

Mazurka, from ballet *Coppélia,* by Delibes, is one of the most attractive numbers from the stage repertoire. Musically it is delightful, rhythmically it has plenty of swing, and technically it will give excellent drill in playing chords, and, if the pupil's technic is equal to it, in playing octaves. However, as stated in the note on the music page, this passage can be played with single notes. On page 743, the passage marked *fortissimo* and consisting of a scale fragment alternating with two chords, is to have an orchestral character. These chords must be struck accurately, and pupils who are deficient in the sense of location will find this gives splendid drill in moving the hands from one register to another quickly. Try to do it without bobbing the head from one side to the other.

Valse câline, by Renato Brogi, is the work of an Italian composer whose work has attracted considerable attention of late, particularly two of his songs, *Visione Veneziana,* and *Mentre tu canti,* not yet issued in English translation. *Câline,* used as an adjective, is a French word meaning "coaxing," so that the piece might be called *Coaxing Waltz.* The idea is that it shall have a light, piquant, somewhat capricious character; it is really a *valse caprice* in style, and is to be played with considerable *rubato* as directed in the first measure. Some of the younger musicians who play this piece will notice the syncopated effect in certain measures, which will perhaps interest them enough to make them willing to use this little waltz, as well as the tangos and other dance music that is so popular at present.

Saltarello, in A minor, Op. 207, by J. L. Gobbaerts, is in an old Italian dance form, similar to the *tarantella.* The name comes from the Italian word *saltare,* meaning "to leap," the dance being in the nature of "leaps," a wild, vigorous movement, instead of the quieter movements of the social dances. Technically it offers fine drill in staccato playing, and in groups of two notes, slurred. The touch must always be light with sharp accents on the full chords; but the latter must not be sustained. It can be played without the pedal. Commence rather slowly and gradually increase speed to 144 beats to the minute, or even a little higher for velocity practice.

Petite valse, by R. Langer, for four hands, is one of a set of pieces called *Miettes,* by the composer, which means "crumbs," that is, little pieces. This one is in waltz tempo, a pleasing theme, the *Secondo* player sharing in presenting it. We consider this a good number for use in the ensemble class. By way of reminder, we say again that pupils should change from *Primo* to *Secondo.*

Playful rondo, by C. W. Greene, is included on account of its melodious themes, flowing passage work, and general light-hearted gaiety. Note the staccato and legato in alternation. Here is a delightful little piece for the pupils' recital program, easy to play and easy to memorize.

In the park, Op. 9, No. 3, by Cedric Wilmot Lemont, is one of a set of pieces for young players entitled *Pleasant Memories.* This one has a marked rhythmic swing and the atmosphere of a summer day's outing or a visit to a pleasure park. Note the frequent use of the rhythmic figure of the dotted eighth followed by a sixteenth. Be sure to give the dotted note full value, that is, three sixteenths, and not to play it as if a triplet consisting of a quarter and an eighth, a different rhythmic combination, in which the first note is only twice as long as the second. The left hand has an effective imitation of the right, a sort of echo, in certain measures; bring this out, but not too prominently.

A storiette, Op. 9, No. 5, by Lemont, is from the same set as the preceding, and has some interesting material. Note the slurred groups in the section in C major. Make these distinct, but avoid coming down with a thump on the first note of the group. Try to get the pupil to play this as if he were telling a story, the flow of the notes paralleling the words.

Valse mélancolique, Op. 2, No. 3, by Vladimir Rebikoff, is a fine example of the Russian style of music which is generally in the minor key. The passages in eighth notes must be played smoothly, and quite legato, the left hand subordinating the accompaniment very carefully in measures in which it moves in quarter notes. Begin the practice of the piece at about one half the speed indicated, and increase a few degrees as it is learned by head and fingers. Although at first it may seem slow, it is best to practise one phrase a number of times before taking up the next.

Love song (*Chant d'amour*), by Wilhelm Aletter, presents a melody for the left hand, with accompaniment in chords for the right, the latter being really the more difficult for young pupils. Be careful not to pound these chords; do not play them by an arm or wrist stroke, but more by simple pressure from an arm controlled (not relaxed, in a flabby condition, as some think the word means).

March of the Gnomes (*Marsch der Gnomen*), Op. 27, No. 1, by Otto Becker, has lots of life and energy. The tempo is the moderate, not quick, march. This will make a useful number for gymnasium or school exercises, or for a pupils' recital program. Bring out the theme in the left hand, beginning at the ninth measure. Think of this as a band march and the various instruments sounding out.

Sarabande (from 1st *French Suite*), by J. S. Bach, is intended for players in the latter part of Grade III or early part of Grade IV. It is a fine introduction to the study of Bach's larger works. Keep this as legato as possible. It will pay to memorize it.

Berceuse, in E minor, by Armas Järnefelt, for violin, is from the Scandinavian literature, a simple, appealing melody, which the violin can "sing" most effectively. It has been carefully prepared for teaching use by Mr. Frank C. Bornschein, of the Peabody Conservatory, Baltimore, and will make a good number for recital programs. The use of the different positions is clearly indicated.

The heavenly voice, sacred song by George B. Nevin, has the true churchly style, and is also in full sympathy with the spirit of the text. It is easy and specially effective for the singer. It comes in a lower key for contraltos and baritones, in B♭. Be sure to add this to your song repertoire.

Longing, Op. 27, No. 3, by Egon Pütz, is for our readers who have low pitched voices, that is, contraltos and baritones, and it will be found particularly effective for the former. It requires breath control and good articulation to meet the demand for a sustained style of singing. For high voice in F.

Could I forget, by William Dichmont, is a high class ballad, and should prove an effective addition to the singer's repertoire. It is not difficult and can be used to advantage with a first year pupil to prepare for a recital program. For medium voice in F.

BE SURE TO READ THIS OFFER

We will place on the list of THE MUSICIAN, for a period of six months, the name of any pupil who plays or sings in concert or recital between the present time and Jan. 1, 1915, any one of the pieces in the Music Section of THE MUSICIAN, September-December, 1914. Send us a program listing the piece, and names and addresses of teachers and pupils.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

STANDARDIZATION AGAIN

TEACHING is made up of much repetition. No one has ever found a method of impressing a thought upon the people except by much repetition. THE MUSICIAN believes that there is ample justification for the agitation for a reform in conditions connected with the teaching of music, and that the various suggestions looking toward standardization are worthy means to a desirable end.

The present issue contains two article on the subject, one by Mr. Arthur L. Judson, of the *Musical America* staff, setting forth the different ideas along which effort has been made; the other a discussion of certain phases of the principle of standardization itself, by Miss Harriette Brower, of New York City. It is well for the readers of THE MUSICIAN to keep in mind that there are many views on the subject, agreeing in some respects, quite divergent in others.

Yet we must all be careful not to confuse the possible benefits of standardization with certain details as to how to secure it most effectively and practically. The writer of this note has conversed with a number of musicians and finds the following to represent a common state of mind.

"Yes, standardization will be a good thing. But if we set up standards we must have definitions and must recognize the only correct principles and methods. Now who is to make these definitions, set forth these principles, and select the methods? I cannot accept those of my competitor across the corridor. He is ruining voices, or his pupils play with a hard tone (as the point of view is vocal or pianistic). The right ideas are as follows:"

It is evident that unanimity will scarcely be secured with this point of view. Essentials are not matters of technic, of method, of pet hobbies and clever devices to overcome certain difficulties, but questions of fact, and musicians must be willing to meet upon and accept the common ground that does exist.

From now until next May, when teachers begin to meet in convention again, there should be careful thought and discussion of this most important subject. Mr. Judson will continue his exposition of the various methods suggested in THE MUSICIAN for December.

PLAYER-PIANO ROLLS IN THE PUBLIC LIBRARY

SOME time ago THE MUSICIAN published a note in this column upon the addition of rolls for player-pianos to the music sections of public libraries and cited some instances showing the practicability of the plan.

Recently we received a letter from a reader in Norwood, O., a suburb of Cincinnati, which informs us that for the past year or more the Cincinnati Public Library has had a department for rolls, the first supply being a gift.

In discussing the matter of the sheet music section the writer of the letter, Mr. D. W. Miller, makes the very practical suggestion that composers should present copies of their published works to the libraries of the cities in which they live.

Just a few words of comment: It is eminently desirable that public libraries recognize the musical needs of the people, and do this as liberally as possible. But it is not enough for the musicians of a community to feel proud that they have a fine music section in their libraries. The thing is to make use of it themselves, to see that their pupils go to it for help, and that the general public is told about it. A library is worth having only if it is freely used. The next time you are near the library go in and see just what there is in the way of music there. The librarian will appreciate your interest.

MUSIC IN THE HIGH SCHOOL

TACOMA has a Music Department which is working earnestly to implant in the minds of the pupils a love for the best music obtainable and a thorough appreciation for it just as they are taught to know and love the beauties of great literature. THE MUSICIAN has received a letter from Mr. W. G. Alexander Ball, musical director of the Tacoma High School's which contains statements which we wish to bring to the attention of our readers.

"Last year with our High School Students we gave besides many high class programs the opera *Pirates of Penzance* entirely alone, we sang two choruses from *The Messiah;* each Friday we devote our time to musical appreciation with the aid of a Victrola, and I find time to read to the classes one grand opera each week and demonstrate it also with the Victrola.

"Next year (1915) I hope to be able to give a combined music festival, and for our public entertainment we shall render *The Bohemian Girl,* with costume, scenery and full orchestra from our combined High Schools.

"Our beautiful Stadium High School, of which we are justly proud, seats 2,000 students, and the Stadium seats 40,000 people. Last Stadium Day 14,000 school children went through their exercises. . . . Efforts are under way to place a large pipe organ in the assembly hall.

"I am very anxious to build up a great musical center here and to teach the students that music stands for something. I feel that until we teach the schools the real value of music we shall never be able to drive out the musical 'Profs.'"

We want the readers of THE MUSICIAN to feel a lively and aggressive interest in the work of their local schools. Get in touch with those who are in charge of it. Perhaps you may be able to contribute helpful suggestions. Perhaps you have undervalued it. At any rate make the opportunity to assist in educating for your community young men and women who will know and love good music. It is the one form of art which is peculiarly democratic and social in spirit, and it is accessible to all classes at such a small cost. Help to make your community musical through the public schools.

———*———

THE TEACHER'S SELF

LACK of interest on the part of young pupils is frequently a strong factor in preventing the progress that is so greatly desired. The following illustration may prove suggestive.

A little boy, who is inclined to be domineering and is also impulsive in his thoughts and actions exclaimed angrily to his mother, "Mother, I can't make sister mind me." To which the mother replied: "Is that strange when you can't make *yourself* mind *you?*" Perhaps the teacher who complains of lack of interest on the part of his pupils is at fault. If the teacher does not show strong interest in his work and in his music is it strange that the pupils are indifferent? If a teacher lacks enthusiasm, how is the pupil to have any? To have power over others one must have power over himself.

The SINGER and His ART

A FEW SIMPLE STATEMENTS ABOUT THE VOICE AND ITS CULTIVATION IN AMERICA

BY GEORGE CHADWICK STOCK

II

NOTABLE INSTANCES OF WHAT MODERN SINGERS HAVE ACCOMPLISHED

JENNY LIND, the "Swedish nightingale," could trill as easily and naturally on F above high C as any bird can trill. The pitch of the scale in her time was the highest that has ever been used. More and far better than this, in her powers of truthful and sympathetic expression and her marvelous clarity of speech in song, she was the queen of prima donnas. The divine art of song was presented in its entirety; it was complete in her marvelous singing. There still remain faint memories of Jenny Lind's voice. Soon these will pass away, but the unapproachable loveliness of her inspirational singing and transcendent art has immortalized her name in the annals and traditions of voice and song.

Many readers of THE MUSICIAN have heard Mme. Sembrich. I desire to describe briefly the impressions that the singing of this artist made upon me at a recital given by her in Carnegie Hall, New York, a few years ago.

In Mme. Sembrich's art is embodied all that is best of a glorious past; he who looks for greater vocal achievement has failed to take into account the limits of human ability. Mme. Sembrich is, above all, a singer who feels, and this, together with fine musicianship, indefatigable work, sincerity, and lofty ambition, has placed her high in the firmament of stars. Her voice, the quality of which has ever been one of peculiar sweetness, has taken on additional warmth indescribably beautiful and appealing. Like an autumnal sun in the Western sky, it illumines and glorifies whatever it touches. I would hesitate to say that her singing had given me keener enjoyment. There are tones, brilliant and somber, passionate or serene, as occasion demands. There is artistic abandon in her style of singing and utmost freedom of play of the emotions in this remarkable voice, and there seems no limit to its height. As the tones soared upward they remained at poise, as skylarks stay and sing on high. One listened to the clear, bird-like notes, and somehow it seemed as if they had separated from the singer, who, by invisible means, maintained their wonderful flow and flight, recalling them only to convey some new message or meaning of song ere they rose again. The peerless trill, the unapproachable sustainment and legato, the technic of run and leap, and the pure and graceful use of the portamento were marvelous.

Every song brought with it its invaluable lesson to students of singing. Under her touch and treatment the phrases of a song became like links of a chain, so closely were they related and wrought together into one harmonious whole. Mme. Sembrich endows familiar passages with her own personality, making old songs seem like new.

REASONS FOR THE HOPE OF GREATER SINGING IN THE FUTURE

I firmly believe that as great, possibly greater, singers will appear in the future as any who have yet lived. When we consider how exceedingly difficult modern music has become, what problems of expression are presented to the singer of today—greater may already be in the process of making—and that far greater effort is required of the singer to comprehend and overcome the technical difficulties arising from the more exacting dramatic scope of modern vocal music, the outlook may seem discouraging. But, fortunately, in the twentieth century we are guided by fairly accurate vocal information. Hence, with the splendid ideas of the old school together with those, equally valuable, of the modern, we combine an infinitely clearer physiological knowledge of the vocal parts and their action. This knowledge may be of little use to the student of song, but it does help a teacher to diagnose many difficult vocal problems that would be impossible to solve with the imperfect knowledge of the voice and the hazy information possessed by the masters of long ago.

We know more about psychology. We realize as never before how important a part it plays in all human activities. Of still deeper significance is this, that our ears are open as never before to that mysterious inner admonition constantly reminding us that there can be no real success where the spirit of wisdom, truth, and goodness does not pervade all effort and inspire all achievements.

EARLY TRAINING IN AMERICA

Every American student of song naturally desires to start his vocal training on a sound basis. To do this he should study for the first few years in America with Americans. Other things being equal the preference would naturally lie with native-born teachers. If a foreigner is chosen he should be thoroughly Americanized and actually feel the underlying spirit of the English tongue.

Foreigners recently arrived, however, can but do the things for which they are fitted by the irresistible influence of their early environment, instinct, inclination, and education. They work conscientiously in their own way, but it is impossible for them to enter into fine, sympathetic relationship with native singers. It would be wisdom, then, for young American singers to remain, in the early years of training, under American influences and in an American environment.

At the completion of these years of foundation work and of thorough preparation, no one with common sense will oppose an American singer's going to a teacher of any nationality, if there is likelihood of getting real help. Go abroad if you can afford to do so, for you are now so well prepared that you will reap substantial benefit by a sojourn in Europe. Go anywhere where there is a prospect of being benefited artistically.

Francis Rogers, the well-known American baritone and writer, in an article in *Scribner's*, tells in a graphic manner just what American singers in Europe have to contend with:

"Even when the foreign teacher is conscientious in his effort to do his best for his American pupil, there is apt to be a lack of sympathetic understanding between the two, which prevents either from grasping fully the mental processes and the point of view of the other. Very often this lack of mutual intelligence has degenerated on the part of the teacher, after years of experience with American students, into positive, though concealed, dislike, and in return for the money which he is receiving he attempts only to keep his pupil encouraged and in good humor by flattery as insincere as it is cruel. With such masters, even the best of them, the student finds that, despite his own earnest endeavor to do what is required of him, he is losing, not gaining ground, and that he is receiving no adequate return for the time and energy that he is expending. Anybody familiar with student life in Paris, Milan, Florence, or Berlin has had just such cheerless experiences come within his notice. More young American voices are injured than are benefited in European studios, and our best American singers have built their careers upon foundations laid at home."

THE HEART OF IT

The late Mme. Nordica said in an interview with the writer: "We have worshiped foreign gods long enough, our own are much more adorable and inspiring. American teachers of singing are the embodiment of energy, zeal, thoroughness, enthusiasm, and unwavering devotion to the highest ideals. They are inspired to extraordinary effort by the consciousness that they are on the firing line of the greatest field for vocal development in the whole world. In no other country is found so many splendid voices, so much excellent vocal talent."

Studios and schools for the exclusive study of singing are springing up everywhere in the United States. The result of the good work being done with voices is shown in the increasingly fine harvest of song and in the growing army of singers. Interest in singing is continually growing and spreading. This interest is directly traceable to the broad-gauged and efficient teaching done by Americans.

I believe that there is a fundamental feeling in the heart of American teachers that their ministry in music is a sacred trust and it is held in reverence.

Animated by this sentiment the American teacher enters into his work with a keen realization of the majestic character of his calling.

We have moved in slow procession up to a comparatively recent period. We are now marching rapidly on towards a greater and higher musical life. We have inherited a wealth of tradition that is close enough to us to vitalize song and story with true American spirit and color. As yet few great American composers have appeared, but the production of American music writing, both vocal and instrumental, is good, and reflects depth and promise of greater things to come.

I believe that we are destined to have a great musical history. A history that shall be replete with performances and works of the highest type, and in character *American*, unique and alone.

IDEALISM IN SINGING

BY DAVID C. TAYLOR

When the ambitious student of singing sets out to master the principles of the vocal art, the first and most pressing question to be solved is how to produce and manage the voice correctly. This is, no doubt, a very serious problem. All future progress and success depend, in some measure, on the student's acquiring a proper control of the vocal organs. Yet this is not by any means the only thing to be accomplished in the education of a singer. It is indeed possible to lay too great stress on the matter of tone production, and, in consequence, to neglect other subjects of almost equal importance.

Too many vocal students fall into this error, and come to believe that the correct management of the voice is the only necessity for the finished vocal artist. Yet there are many instances of singers who have attained to a high rank, through the excellence of their interpretations and their power to rouse and thrill their audiences, even though their vocal technic was extremely faulty. On the other hand, singing may be technically flawless, and yet be so cold and devoid of emotion that it gives almost no pleasure to the listeners.

There is a peculiar contradiction in the singers' art. Its basis, the management of the voice, is generally held to be a purely mechanical matter of vocal and breath control, of tone placement and resonance. But its purpose is just as purely emotional and spiritual—the embodiment of the states of the soul in beautiful and expressive tones. The present condition of voice culture lays altogether too much emphasis on the mechanical features of singing, at the expense of those spiritual and ideal elements which are of fully as much importance.

It is a great mistake for the vocal student to postpone the consideration of the ideal and emotional side of singing until the management of the vocal organs has been mastered. This course is apt to lead to a cold, dry, mechanical type of singing, without soul or inspiration. A much better plan is to set before the mind, from the very beginning of one's studies, a high artistic ideal of the nature and purpose of singing. An ideal conception of the art will then expand and ripen in the student, and the free outpouring of the soul through the voice will then come about as a matter of course.

Considered as an art, singing has a double purpose. It gives pleasure to its hearers through the beauties of its tones and melodies. At the same time it awakens and heightens the emotions of the listeners, by means of the beauty and expressiveness with which the composition is sung. In order to acquire the mastery of expression and vocal beauty, the vocal student must approach the subject from the ideal side.

An ideal conception of singing is based first of all on a standard of musical beauty. No one need be told what musical beauty is, for Nature has endowed us all with an ear so constructed that it finds a pure pleasure in hearing beautiful sounds. We enjoy sweet tones, beautiful flowing melodies, and rich, noble harmonies. Keeping this love of the beautiful in sound always present before the mind is to exercise the soul in its understanding of musical beauty. The power to appreciate music constantly grows and develops. This steady development of the musical soul leads the student to listen to music with ever-increasing attention and keenness, to derive greater pleasure, more intense enjoyment from music. It clears, refines, and elevates the taste. It quickens the ambition to embody in one's own singing the ideal standard of pure beauty in tone and melody, of emotional feeling conveyed in beautiful and expressive sounds. As the soul expands in its power to appreciate and absorb the spiritual beauty and meaning of music, the voice keeps even pace in its ability to express this ideal growth.

The voice can do no more than the ear and the musical soul bid it to do. An ideal of perfect and beautiful tone must be present in the imagination before the voice can be expected to produce tones of this character. Even in their mechanical operations, the vocal organs are directly influenced by the ideal formed in imagination by the singer. This is a principle which the vocal student may well bear in mind throughout all the daily practice of singing. A cold, mechanical manner of practising exercises and songs leads to a habit of singing cold and mechanical tones. On the other hand, when the ideal of pure and beautiful tone is kept steadily in mind, the voice naturally responds to this ideal, and strives instinctively to produce tones which are musically beautiful and true.

A striking fact with regard to the operations of the vocal organs can easily be illustrated. Sing a few tones with the idea of beautiful sound in mind; pay no thought to the manner in which the tones are produced, where they start, how the breath is managed, or how the resonance cavities operate. Simply try to make the tones as beautiful as you can, guiding yourself only by your ideal of tonal beauty. You will surely find that your throat feels perfectly comfortable and free when you sing in this manner. Now sing a few other tones in exactly the opposite way; make them as harsh, grating, and unmusical as you possibly can. This time you will find that the tones are extremely painful to your throat.

Here is the fact which we illustrate in this manner: The voice is benefited by singing beautiful tones, and is strained and injured by producing harsh and ugly sounds. This is a fact of the utmost importance to vocal students. It should be made one of the guiding principles in all the practice of singing. So long as the ideal of tonal beauty is held prominently in mind, and the student strives to sing tones which conform to this ideal, the voice cannot go wrong. But the singing of tones which contradict this ideal is sure to work injury to the vocal organs.

This principle of the voice's action was always definitely recognized by the old Italian masters. They had their pupils strive always for tonal beauty, and never permitted a harsh or unmusical tone to go uncorrected. How the tones were produced was a question of no importance in the minds of the old masters. These teachers of the old school are sometimes criticised nowadays, on the ground that they had no definite method. It is claimed that they gave their pupils no help in finding out the way to manage their voices, but obliged them to discover for themselves what they had to do in order to bring their voices under proper control.

Yet the old masters certainly knew how to train the voice. Their pupils learned to sing the most elaborate and difficult music with perfection and ease. Very few singers today can meet the technical demands which the older type of coloratura music imposes on the voice. But the singers who enjoyed the training of the old masters had no difficulty on this score. We cannot doubt that the old Italian method, despite its ignorance of much that we know nowadays, sufficed, in every way, for the needs of the vocal student.

One thing the old masters never failed to do: They always held up before their pupils the ideal of pure tone and musical beauty. There was a constant appeal both to the ear and to the imagination of the student. They demanded that the pupils cultivate their sense of hearing to an ever-increasing fineness and keenness of perception; the ideal of musical beauty was made the basis of expression and style, as well as the guiding principle in the management of the voice.

There is a steady growth in the development of the singer's idealism, just as there is in the training of the musical ear. Both must have their beginning in a set purpose on the part of the student to enter into the spiritual life of music. There is also a mutual help between the two lines of musical growth. The musical ear has its counterpart in the imagination. As the ear progresses in its ability to grasp the nature and the relations of musical sounds, so the mental ear acquires a higher standard of musical excellence and perfection. Sounds which are heard to be imperfect are corrected in the imagination; the hearer knows how they ought to sound, what they would be if freed from their faults. It thus comes about that the mental ear forms its own standard of tonal perfection and musical beauty.

This ideal standard, formed in the imagination, and based on the experiences of the ear in actual hearing, should be the vocal student's monitor and guide in all the exercises of the voice. Whatever is sung, be it exercise or scale, vocalise or song, should be compared at every instant with the ideal conception of how it ought to sound. Instead of judging the correctness of your tones by the manner in which they are produced, simply listen to them and note how nearly they realize your ideal of pure tone. If the correct ideal of tone is kept always in mind, the vocal organs will gradually adopt the manner of action which conforms to this ideal. This is one of the most helpful truths which have come from the old Italian masters, and it is as true today as it was two hundred years ago.

———*———

MODERN VOICE CULTURE

BY RALFE LEECH STERNER

The reason that a voice teacher should understand anatomy is so that he can properly classify and qualify voices. For instance, all vocal teachers will tell of the large number of applicants they receive for lessons who seem to be thrown clear off the track in regard to their natural quality of voice—a student claims that he is a baritone because so and so has told him so, and his voice has been trained in that direction. Now a teacher who understands anatomy would immediately look at the throat, examine it carefully, and tell the applicant without hearing him sing at all, just what his voice should be if properly trained. The teacher without this knowledge would merely try the singer with a few scales and exercises, and, hearing the baritone quality (as any voice trained for years as a baritone, even though it was in the beginning a tenor, could not but help, through that forcing, to take on some of the baritone qualities), would continue to develop it in the wrong way, never suspecting that he was meant for a tenor.

The construction of the voice mechanism and resonance cavities will give us an insight into the quality of the voice. It is lamentable that almost all pupils who come to us have false ideas as to what their voices really are. This is nothing short of criminal on the part of teachers, and it is continually being done because they do not give the proper diagnosis to the pupil at the start. If a man is a tenor, and he is trained for a baritone it cannot help but ruin his voice to a very great extent. If this training is kept up over a period of several years it is absolutely impossible ever to get the voice the way nature intended, because a tenor who would sing as a baritone has forced his other cavities into such shape or shapes that they can never recede to their normal condition.

I have at present with me a young man who, at his second lesson, has done things that not one pupil I have with me now has been able to do although some of them have studied for years. That is, he can sing over a range of two octaves, with every tone nearly perfect in quality, and the power is there also. A person listening to him taking a lesson in the beginning would not believe that he had not studied for a number of years. He cannot possibly understand how a man just starting in would be able to do things that pupils of perhaps greater intelligence, backed by long years of study, find it difficult to do. The reason that he is able to do these things is on account of the wonderful construction of his throat. He has a very short uvula and also a short soft palate. The middle pharynx recedes, and this combination gives him a very wide space between the soft palate and pharynx, making it absolutely impossible for him to have soft palate interference. His throat is so constructed that it would be more difficult to bring about soft palate interference than it is for the average person to get rid of it.

Too much cannot be said in the matter of construction about the sphenoid sinus, a cavity situated directly over the back of the nasal cavity in direct line to receive the air coming up through the pharynx. This has an opening into the nasal cavity which, when completely shut off, will take away a number of overtones and give to the voice a dead quality, or a quality entirely too somber. Although the entrance to this sinus is small, yet, when it is filled entirely with air, it helps to reinforce the air already in the nasal cavity to such an extent that the tone is entirely changed, and of a much better quality.

One of the most striking features of the uses of this sinus is that those singers who use it or are enabled to get some air into it, have a quality of tone which is what is commonly known as the golden quality. It is soft and beautiful, and while it has a ring, it is a velvety ring, without harshness of any kind.

The reason why there are so many different vocal methods is simply because vocal teachers do not understand the instrument that they are working with, getting up a so-called new method for each particular singer to suit his or her requirements. It is true that with different singers we use different exercises, along a different range, and in a decidedly different manner; but it is also true that the same exercises can be used and to good advantage, with all singers.

Most persons have an entirely wrong idea as to how voices are to be classified, and this has caused much evil along these lines. It is not the range of the voice, as it is commonly supposed, that gives us our classification. I know of one tenor who has a very beautiful voice who cannot sing above A♭. This is simply due to the length of the vault, in his case the vault being very short. Many baritones are enabled, with the utmost ease, to sing B♭, but the quality is not of the tenor quality.

There can be nothing more interesting to a voice teacher than throat construction, because his or her entire life's work must be based upon this in order to succeed. A singer with a phenomenal voice, whose throat has not been examined by the teacher, may seem to have, at the beginning of her voice work the voice of a contralto, and yet this voice may, if properly trained by one who will examine the throat carefully, turn out in time to be a dramatic soprano.

After long years of careful study I cannot agree with physicians who claim that the reason one man is a tenor and another is a bass, is solely because of the difference in the size of the larynx itself. Some of the most prominent men say that a tenor always has a small larynx and the bass or baritone a much larger one. On actual examination I have found this to be untrue, because there are so many other organs and cavities concerned in the diagnosis of the quality that, although one man may have a much smaller larynx than another, he could still have a larger voice because of the greater size of the cavities above. Nobody has ever disputed the fact that I am a baritone, and yet I have a much smaller larynx than a number of tenors studying with me at the present time.

The young man of whom I spoke above has what we call "mental poise" with his wonderfully constructed mechanism. It remains a question as to whether this can or cannot be acquired by all of us, and it certainly remains a fact that some will never have it as much as others.

The only reason a man is enabled, at the commencement of his vocal studies, to get such wonderful results as this man has, is because of this mental poise combined with the mechanism. Either one without the other would not enable him to get these much sought for results in such a short time.

The physician who can give the correct diagnosis is the man who is the most sought after, and th should also be true with the vocal teacher. If a physician can give the patient the correct diagnos.. he generally knows what to prescribe to cure the ailment, if the vocal teacher can give the correct diagnosis of the mechanism, he will know at once whether the man or woman has been gifted by God with a tenor or a soprano voice, and he will not train those singers for a baritone or a contralto.

Frequently one hears the student who calls at the studio for voice trial ask "What is my voice?" In fact this is a daily occurrence. If the teacher does not understand the quality of the voice and develops the wrong quality from the beginning, then that teacher is committing a crime against the student.

In an article of this kind it would be impossible to go sufficiently deep into the construction of the throat and anatomy of the voice so as to enable one who reads this article to be able to learn how to examine throats—that is practically a life study. It is not the intention of this article to have those who have never studied the throat try to experiment with a lot of singers' throats and possibly ruin their voices in the meantime either. It is simply laying a way open by which teachers may realize their own various requirements and needs, and showing the good of establishing teachers' classes and criticism classes where the anatomy of the voice is fully explained and understood.

———*———

THE SINGER'S WORDS

"As long as the tune has a right good swing
It doesn't much matter what words you sing."

So quotes the London *Times* in an article which is a challenge to all English singers.

"The intrusion of the atmosphere and literary sense into the sphere of the singer is a comparatively recent development; and it is because he is still struggling with the new difficulties involved by it that he is apt today to fall between the two stools of vocal tone on the one hand and clear diction on the other."

For all that, singers of other nationalities manage to combine these two essentials. How is it that we cannot do the same? The answer to that question is found a little further on; the great obstacle is (to quote the words of the article) "the slipshod method of ordinary English speech."

"No Englishman uses his lips at all in speaking if he can avoid it; and he hardly ever uses his tongue, as the gradual deterioration of all unaccented vowels shows. The French and Russians use their lips markedly, and all the muscles of the mouth contribute to clear articulation; the Germans use them in a less degree, but far more than the English."

The *Times* possibly takes an exaggerated view of vocal delinquencies, but there is nevertheless much truth in the writer's remarks. One consequence of our bad diction is that we are never likely to get opera performed in English till this fault is remedied; for why trouble about a translation when the words are less intelligible in our own tongue than in a foreign language?

The cure for incorrect and slovenly speaking and singing can only be wrought in the schools. The first three or four years of school life will effect more in the way of forming good habits of pronunciation than ten years of an adult's life. Our schools have already much responsibility thrown upon them, but surely this is one of the most important of their duties, and one which, during the early years of a child's life, should take the precedence of most others.—*Music Student.*

TO SINGERS

"The requirements of modern vocal art are too complex and varied for any one teacher to cope with successfully in their entirety."—*Edw. MacDowell.*

Mr. Stock specializes in the field of voice placement, its development along individual lines and in the study and performance of songs, sacred and secular, that are suitable to the first years of vocal study.

When pupils have reached the point where study of advanced repertoire becomes desirable they will be recommended to instructors who specialize in this particular field.

THE BENCHELEY METHOD OF VOICE DEVELOPMENT
An Original Method of Technical Study by Intoning Exercises
Copyrighted in 1897 Copyright renewed in 1914

Referring to letters of inquiry concerning the study of this method, it may be stated that its correct use cannot be adequately taught by correspondence, neither is it advisable for applicants with superficial ideas of voice development to undertake the study of this system of voice practice, as pupils of this class fail to appreciate the value of thorough technical work before attempting the study of vocal art.

U. B. BENCHELEY.
1107 Harmon Place,
Minneapolis, Minn.

After several years of unsatisfactory study with vocal methods in general use, I can well understand why throat specialists consider the system of voice practice formulated by Miss Bencheley an important advance in the treatment of the voice. A year of study with the Author of this method has proved the value of this system of technical practice, which is as thorough, systematic, and exact, as are standard methods for piano practice.

EDITH CLAPPER,
Soloist with the Steck Trio.

A PAGAN THANKSGIVING HYMN

Wheat to Ceres cast we here,
Barley with the golden spear,
Corn to harvest deity,
Early apples from the tree,
Berries from the wind-blown bush,
Hay for cattle, rank and lush,
Olives with the silvered leaves,
Oats, O grant us sheaves on sheaves!
Figs, the sign of fruitfulness,
Fail not, Bacchus, grapes to bless!
Proserpina, pomegranates to give!
Flowers fair and fugitive.
For the blessing cast we here
All the first fruits of the year.

(From *Pageants,* by E. W. Bates.)

MUSICIANS OF THE MONTH

This month celebrate at your club meetings the birthdays of Anton Rubinstein, which occurs Nov. 30th (1830), and of Ignaz Jan Paderewski, who was born Nov. 6th (1859).

It has been suggested that every music club have, once each year, "An American Composers' Day." Why not give this day on MacDowell's birthday, which is the eighteenth of December, and spend the month of November in the study of his and the other American composers' music, in preparation for an "All American" program?

HIDDEN INSTRUMENTS

Hidden in these musical instruments are musicians. Give out the list of instruments and let the members find the musicians.

1. Triangle ..... Elgar
2. Tambourine ..... Bauer
3. Mandolin ..... Lind
4. Zither ..... Herz
5. Guitars ..... Tausig
6. Hautbois ..... Abt
7. Fiddle ..... Field
8. Orchestrion ..... Ries
9. Flageolet ..... Leo
10. Clarinet ..... Tinel
11. Pianoforte ..... Foote

THE LITTLE "THINK-HARD" SPIRIT

BY ELIZABETH A. GEST

One beautiful day Nellie's friends were going to the park to spend the afternoon, and Nellie wanted to go with them. Her mother told her that she could go if she did her practising in the morning; but it was such a lovely morning she did not feel like staying indoors, so she went out under the trees and laid down in the hammock and listened to the wood thrushes.

Her mother called to her to practise, so she could go to the picnic, and she answered:

"I will after awhile. I want to listen to the birds." In an hour her mother called to her again and told her to practise, and she answered: "I will after awhile. I want to watch the butterflies." And in another hour her mother called to her again, and she answered: "There is lots of time yet. I want to watch the humming bird in the trumpet-vine."

Then the afternoon came, and Nellie could not go to the picnic. She could not blame anyone, for she knew it was her own fault, but she was very much disappointed.

Finally she sat down at the piano and tried to practise, but her fingers would not go where she wanted them to, and she leaned back in her chair and began to cry.

Suddenly she heard a soft little voice say, "What's the matter?" and she looked up and saw a tiny elf sitting on top of the piano, smiling at her.

"Oh, dear," she sobbed, "I just can't learn this piece and I hate scales, and teacher says I will never learn to play without practising scales."

"Scales are not so hard," said the little elf. "What one are you trying to play?" he asked.

"B♭ minor," she answered, "and it is awfully hard."

"Oh, no, you are mistaken," answered the elf.

"Well, who are you and how do you happen to know so much about it?" asked Nellie.

"I am the 'Think-Hard Spirit,'" answered the little elf; "and I can help you to learn your scales and pieces if you will let me."

"Oh, I wish you would," answered Nellie.

"Play your scale for me," commanded the little spirit, and Nellie began, "B♭, C, D♭, E♭, E—"

"Wrong," interrupted the elf. Nellie struck F♯. "Wrong," said the elf. Nellie struck G. "Wrong again," said the elf. "Now you are just guessing. You will never learn that way. *Think hard.*" And Nellie thought aloud—"Whole-step, half-step, whole-step, whole-step—why F of course. How easy it is," she said.

"Certainly," said the little spirit.

"And that same scale comes in my piece, so that will be easy, too. Oh, thank you so much," said Nellie.

"You are welcome," answered the elf, "but now I must go and help somebody else."

"Will you come again?" asked Nellie.

"Certainly," answered the elf. "I will come every time you practise if you promise to do as I say, and 'think hard.'"

"Indeed I will," promised Nellie. And she looked up to say goodbye to him, but he had disappeared.

"And when her friends came back from the picnic and told her about the good time they had, Nellie said she had a good time, too; and she told them about the little elf that came to visit her.

A POEM ABOUT HANDEL

As soon as Handel became "the fashion" in England he roused the jealousy of petty people, and opinion differed to such an extent that people actually took sides, some declaring for Handel, others for the Italian, Buononcini. The war raged furiously, and John Byron, famous wit of that day, wrote:

"Some say, as compared to Buononcini,
That Mynheer Handel's but a ninny;
Others aver that he to Handel
Is scarcely fit to hold a candle.
Strange all this difference should be
Twixt tweedledum and tweedledee."

If you are interested to know more about this war read the life of George Frederick Handel.

THE BIRD CORNER

Dear Children: Commencing this month we will have hereafter in each number of The Musician a corner of our own department devoted to the birds.

Musical children should certainly be among the most earnest of those who are working for the protection of our birds. All bird lovers are rejoicing that a $50,000 appropriation for enforcing the migratory-bird law has been passed by the United States Senate. Congress has made plain to us that bird protection is necessary to the welfare of our country, and is looking to the boys and girls for assistance in this beautiful work. If you do not already belong to a bird club, join at once. Ask your school teacher or your music teacher to start one in your district, and write to us about what you are accomplishing.

PUTTING UP BIRD BOXES

The special bird work for November is putting up bird boxes for our friends to winter in.

"No keener pleasure is derived from any source than that which comes from the possession of bird neighbors. No class of tenants give more complete satisfaction than box-dwelling birds, boxes for which can be cheaply and easily erected. No class of tenants can be relied upon for more full and complete rental, in the shape of noxious insects destroyed, delightful music rendered, and, further, they are an unfailing source of amusing and instructive incidents. The boy or girl who puts up boxes for the birds to nest in, supplies them with drinking and bathing places, and provides food for those species which remain in winter, is certain of an unfailing source of pleasure, which can never be known by anyone who pursues them with bean-shooter or stones, or simply ignores their presence. The chances are far better that the bird-loving boy or girl will make the better citizen."

Send to the National Association of Audubon Societies, New York, for "Special Leaflet No. 18, Putting Up Bird Boxes," by B. S. Bowdish.

THE MUSICIANS' BIRD CLUB

Motto: "Ours to befriend the birds."

Pledge: "I desire to become a member of the 'Musicians' Bird Club,' and I promise to study and to protect both song birds and insectivorous birds in every way that I can."

Copy this pledge, sign your name to it, add your address, and send it to "The Children's Work Department of The Musician," Boston, Mass., and you will be made a member of our Bird Club.

Children must be interested in their music as they are interested in other things. An active-minded child must be given opportunity to put his natural energy into action. Clubs and other organized activities are especially desirable.

WITH THE MUSIC CLUBS

THE MUSICIAN'S CATECHISM

II

What is your advice to girls?

B natural; avoid airs.

Which note do you despise?

A flat.

Which of the great composers can you most readily grasp?

Handel.

Name a musical cobbler.

Schumann.

Which is the most appropriate key for "water music"?

C (sea).

With what do you decorate your waist?

A band.

Name some useful members of the orchestra.

Strings.

Which is the most contemptible instrument?

Bass viol (base, vile).

Which is the favorite instrument?

Trum-*pet*.

MUSICAL GAME

BY LAURA ROUNTREE SMITH

No. 3. TO TEACH MUSIC IN SPACES ABOVE AND BELOW THE STAFF

The Leader stands by a screen on which is a staff containing treble and bass clef.

The children go forward and place notes on spaces above the treble clef and below the bass clef.

The Leader says,

"Which notes go, which notes go,
On added space, above, below?"

The children fill in the spaces above the treble clef first, saying,

"Spaces above the treble clef,
G, B, D, F."

They place notes on spaces below the bass clef and say,

"Just the opposite, you see,
F, D, B, G."

When the notes are placed the children wave their arms up and down, saying,

"G, B, D, F, like a seesaw go,
F, D, B, G, spaces add below,
One goes up and one goes down,
Seesaw then in Music Town."

THE ORIGIN OF THE SUITE

In Queen Elizabeth's day there was music of various kinds for dancing. Suites consisting of *"A staide musicke ordered for grave dancing,"* and again for a *"lighter and more stirringe kinde."* The poets of her day made frequent references to these dancing tunes, which are significant to us now in our study of the sonata or symphony, as germs of the original feeling remain in both *tempo* and treatment enough to remind us of these old times and to make our music picturesque and entertaining. The variety in styles and methods of these dancing tunes suggested the idea for putting them together in what came to be known as the suite, and from this grew the sonata.

THE COURTEOUS ROSSINI

In 1824, Gioacchino Rossini, Italian composer, made his appearance in London. He was presented to George IV at the Pavilion, at Brighton, where he found the King playing at *écarté*. Taking his arm the King walked with him to the concert room to hear the band which, in compliment to Rossini, had been ordered to play his *Il Barbière* overture. The next piece his majesty left to Rossini's selection, to which the composer replied with perfect good breeding:

"If I am to select the next piece, then it must be *God save the King.*"

AN ACCOUNT OF WHAT ONE CHILDREN'S MUSIC CLUB IS DOING BY ONE OF ITS MEMBERS

The Music Class of Miss F. L. Story, formed a Music Club in 1913, calling it the "S" Club. There were twelve members, four boys and eight girls. We met every three weeks. After a business meeting, which lasted about twenty minutes, our teacher would have us write out questions about music, for which we were to have the answers ready for the next meeting.

Our President, Secretary, and Treasurer made laws for the Club, which we were to keep; we also had fines for being late and absent. A committee was chosen to decide how we were to spend the money.

The last part of every meeting was given up to the playing of "Musical Composers" and "Trade Spelling Matches," which was both instructive and entertaining.

The Club elected their officers every third meeting. Later in the term each one chose a composer of music. Our teacher furnished us with a composition book in which to write the history of his life. These books were put on exhibition at our Sixth Annual Recital, which occurred in June.

At Christmas time we wished to make some sick children happy, so every member of the Club collected together their Christmas and New Year's cards. One day we met at our teacher's studio and pasted them on large pieces of pasteboard. They formed a very pretty collection, and were sent to the Hospital and District Nurses' Association. We also made valentines to give to our friends.

Our year's work was very interesting and helpful. The members of the Club were very grateful to Miss Story for the time, interest, and helpful suggestions that she gave us.

Faith Elizabeth Burrington,
Holyoke, Mass.

VERSES FOR CLUB RECITATION

PAGANINI

He ambled, awkward, on the stage, the while
Across the waiting audience swept a smile;
With clumsy touch, when first he drew the bow,
He snapped a string. The audience tittered low.

Another broke! Off flies another string!
With laughter now the circling galleries ring.
Once more! The third string breaks its quivering strands,
And hisses greet the player as he stands.

He stands—the while his genius unbereft
Is calm—*one* string had Paganini left.

He plays. The one string's daring notes uprise
Against the storm as if they sought the skies.

A silence falls; then awe; the people bow,
And those who first had hissed are weeping now.

And when the last note, trembling, died away,
Some shouted "Bravo!"—some had learned to pray.

REV. CHARLES L. THOMPSON

A TRAGEDY IN MUSIC LAND

BY PHILLIP GORDON

PLAYLET IN ONE ACT

Scene: The Staff.

Enter Quarter Note on crutches; one leg is cut off at the knee. On his head he wears a little black cap. After him Miss Eighth Note, in a very long gown. She is a short little lady with a hooked nose.

Eighth Note (screams): Uncle Quarter! I'm astounded!
Why these crutches? Injured? Wounded?

Quarter Note (hobbling over): Heavens, niece! What ails Eighth Note?
Ah, what tho' a master wrote,
Reckless, wicked little children—

E. N.: But, dear Uncle, pray do tell then—

Q. N.: Don't you know, my little Eighth Note,
Who lives in a music page,
He must bear the children's rage?
And those wicked little rascals,
That dressed you to twice your length,
Cut me down to eighth-note-dotted.
Took away my life and strength.

E. N.: Why, they really made you shorter
Than myself, good Uncle Quarter;
Oh, could but those children learn
Eighths from Quarters to discern!

Q. N.: Too much friendship breeds contempt;
Years ago none durst attempt
Such assault on music pages;
No, or else he'd get his wages.

Voice outside (weakly): Help, help me, or I die!

E. N. (in alarm): That is Grandpa Half Note's Cry!

(Half Note creeps in painfully. Both run to him and help the old man to the front. He is whitened with age, and cannot walk.)

Half Note: "Mind," I said, when they began,
"Hold me," but they held me not,
Played me like an eighth-and-dot;
Down I fell, a wounded man.
Rascals! (He falls back dead. Deep silence.)

Q. N. (in a loud voice): Ho there! Come Staccato, Flats!
Sixteenth notes as small as gnats!
Piano, Forte, Eighth with dot,
Sharps! Come quick, while anger's hot!

Forte (a big, blustering fellow): What's the matter? Straight explain!

Dotted Eighth (pulling in his dot by a string): Oh, I'm murdered, cut in twain!

Sixteenth (hopping about): I'm padded out to twice my size.

Staccato (a short, thin, wiry person):
I'm only called when someone dies;
Other times they throw me out.

Piano (a pretty young girl; in a soft voice)
For Forte here they run about;
Neglect poor Piano, their best friend.

All (wringing their hands): Oh, when will our torture end!

Q. N. (solemnly): Silence all; no longer roar;
Grandpa Half Note is no more. (Deep silence).

Forte: Who killed him?

All: Who killed him?

(Amid weird music and bluish stage lights, the voice of *Whole Note* is heard, deep and solemn):

They did this who Piano scorned,
Who after Forte wailed and mourned;
Who padded some to twice their size,
Nor heeded pained Staccato's cries;
Who lengthened Eighths and Quarters cut,
To whom sweet Music's soul is shut;
They — did — this. (Silence; the light fades.)

Q. N.: The children, they have done this deed!

All: Execute them all with speed!

Sixteenth: They make me too fat!

Forte: They work me all day!

All: Away with the children. Down! Away!

(The curtain falls, but rises again, showing a group of frightened children chased over the stage by the pursuing members of the staff.)

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

MORE SHIFTING EXERCISES

BY RAY G. EDWARDS

After the preliminary shifting studies presented in the July number of The Musician, I doubt not many of my readers have devised some short exercises of their own—it is not at all difficult, and there is an added interest in the study of exercises that are "home made." Someone may say, with an attempt at great wisdom, that young players should not make up these little technical exercises; that even if the exercises are correct in themselves they will not be taken up in the right order. Admitting that the arrangement will not be in the exact order that an experienced teacher would present them, I would rather take some chances on this point and encourage a pupil to use his head in acquiring mastery of the fingerboard.

To be sure, a knowledge of harmony will be very helpful to the violin student who intends to write out his own exercises, and he may not understand all that is to follow in this article without some knowledge of chords; yet I encourage him to do his best with the musical insight he can command. If he is the right kind of a student, one that will make a violinist, he will blunder along until he learns the great need of a knowledge of harmony, and this will be one of his greatest lessons. To stumble upon a great need is better than to have the thing forced upon one without knowing what it is for.

But now for more difficult shifting exercises: The D major broken chord may be played through two octaves with the fourth finger alone, starting on the G string. Needless to say it can also be played with any other one finger you choose and the shifts made to end in the high positions on the D or A strings, or lower down on the E. (I should expect a bright young pupil to experiment here and see what other broken chords can be treated in like manner.)

As we found (in the July article) what useful shifting exercises could be performed with two fingers, I wonder how many students have tried three fingers. I asked the student to imagine that he was deformed and could use only two fingers in playing the scales. Now if he will imagine the fourth finger of no use to him, and not resort to open string playing, he will find that in the Ab scale he must use the fingers 1, 2, 3, and then shift to the 1st finger in the 4th position and, after using the finger in the same order, shift again to the D string, 3d position, and then to the 6th. Continuing up the scale he plays on the A string in the 5th and 8th positions and on the E string in the 7th and 10th positions. This is very simple and the fingers soon learn to do it quickly and accurately. On each string the shift is up three positions and in changing to the next string a shift down one position, both being very useful shifts to learn. Remember them in this order: 1st and 4th, 3d and 6th, 5th and 8th, 7th and 10th. The shifts will not change if you use the three upper fingers, in the scale of B, starting with the second finger.

Making a change of position at every note of the scale, and crossing the finger each time, we have the novel effect of playing the fingers in reverse order. Starting the D scale with the 4th finger on the G string, we cross over and use the 3d finger, then the 2d and 1st, all on the G string. The shifts are from 1st to 3d, 5th and 7th. The same shifts and fingering on the other strings carries us one note beyond two octaves. The descending scale should then be played.

One more exercise for this month. Double-stop shifting this time, playing the scale of thirds in C major, starting with the 3d finger on C and the 1st on E on the two lowest strings. Ascend one octave with the same two fingers on the lower strings. Descend in the same way. Vary this with ascending with the fingering 1 and 3, 2 and 4. Then to the 3d position and repeat the same fingering. Then to the 7th and 9th positions. Again, instead of shifting to the 7th and 9th positions, finish the octave on the two middle strings, in the 1st and 3d positions. Once more in triple stops, simply adding the octave of the lower note each time.

This exercise, in all its variations as above, can be repeated in the key of Bb, with only slight changes in fingering. These will be readily understood by taking the violin in hand. I shall not trouble the reader about this Bb scale in thirds. The best way to get it is to think. "The more you think the more you find out," and it is, after all, the things you get yourself that you are sure of. If I should hint that for the scale of D major in thirds, the fingering would be identical with the fingering used in the key of C, but that the positions will be one degree higher all the way through, I wonder how many of my readers would know how to play the same scale in Db, Eb, and E. In the triple stops let me suggest an easy way; get the fingers on the two upper strings first. It is a simple little trick, but you might not stumble upon it yourself until you had decided that it is unplayable. Try it on the violin and see how easily the fingers now find their places.

ELEMENTARY VIOLIN TEACHING

BY FRANZ C. BORNSCHEIN

IV

THE ESSENTIALS OF FINGERING

It is supposed that the beginner can easily form the four mental pictures of the open strings. Now for sake of illustration let us further suppose that the text-book selected is that of Kelley, the pupil being a very young child. To teach the use of one finger at a time, as is the plan here, and indeed a splendid one, will need but one consideration. That is: Is the beginner physically able to stretch his first finger upon all the strings with equal ease and without clutching the neck of the violin? Should this not be possible it will not be advisable to follow the material in the order as it is stated on page 3, the use of the G string and D string, first finger tones, requiring a slightly greater stretch than when the finger is used on the two upper strings. Therefore choose only exercises that employ the A string or the E string at first. When the pupil can comfortably find the first finger notes on these strings and there seems to be no danger of a faulty hand position occurring, the fingering on the lower strings can be attempted. Observe that while the pupil does this task the bow arm does not assume too great an elevation at the elbow. For it is chiefly by the action of the fingers (see advice on bow manipulation, Article II) which governs the elevation of the bow.

The Kelley book treats the subject of fingering by offering material, technical and melodic as well, for the training of each finger in turn. In these exercises the whole step and the half step spacings are used from the start, thus showing the change in spacing needed for the sharped notes. Cross string fingering is immediately explained. While having taught the pupil the neighboring tones to those produced with the open strings the teacher should have endeavored to train the pupil's ear and eye to grasp quickly these various successive steps. The beginner should be made to sing or hum the changes of pitch and to describe the difference in the appearance of the notes on the staff. Be cautious and question the pupil in every possible way to ascertain that he is not merely recognizing the notes by their finger order instead of knowing their respective letter names, staff position, and appreciating their various pitches as well.

Perhaps the plan advanced in the Mitchell book, which, by the way, is suitable for individual instruction although originally devised for class use, is a more direct way of teaching the young mind. Here only one string at a time is studied, beginning with the A string which is easiest to bow upon. A system of finger-board diagrams, showing the various spacings, will be found of considerable use; these concrete pictures give the beginner practical aid. His eye can grasp the location of the finger spacings, help in actually gauging the amount of spreading between the fingers, and by having thus cultivated the sense of touch from the outset correct fingering habits will be formed. Therefore the eye must aid the ear in these early attempts at establishing good intonation.

These diagrams should be drawn by the pupil, a straight line to represent the string, dots or cross marks to show the whole or the half steps. In fact, these diagrams should be memorized and the pupil trained to form mental pictures of groups of successive steps, beginning with the open strings and adding the neighboring notes in their order. Do this very slowly at first by dictation, and as the letter names are mentioned, there should arise in the beginner's mind a picture of the staff showing the notes in their respective positions which should suggest certain definite finger spacings upon an imaginary finger-board. In this way, by association of various ideas which suggest collective thought, the pupil will form the habit of reading the notes and at the same time having the fingers correctly perform the necessary actions which are required to produce the specified tones.

In the Tours book the finger spacing diagrams are slightly different. Here the pupil sees a se-

ries of finger marks with the semitone spacing specially indicated, and must in his imagination supply the actual tones which these markings are supposed to govern or indicate. The practical application of these early problems of fingering is given in a most logical manner (see Exercises 1-22). Care should be taken to ascertain by what process the beginner is reading the notes; he must recognize them by letter names, staff position, string order, and finally by the finger employed. To test this have him recite in the order as here suggested, giving this description before every new note, and while playing it describe the next note. Thus will his thought be made to precede action, and this eventually will train the eye to the quickest perception. Occasionally tests of this kind should be given, even as the pupil advances, for through any hesitation or other impediments the young violinist will show certain latent flaws which can be corrected.

The preliminary finger spacings should be thoroughly comprehended by the beginner before the teacher uses a more extended register. No attempt is here made to lay down any hard and fast rule about the physical requirements of fingering other than a few general principles which can be applied to all individuals. Fingers should fall on the strings with strength, guarding against the caving in of weak joints, the movement coming from the root-knuckle, and should be placed on the left side of the tip with the nail pointing towards the face. If any finger is too long in proportion, as is sometimes found, the tip may be placed somewhat on the right side, thus shortening the length. Often this will rectify bad intonation of a certain finger.

Most of the early finger problems were limited to neighboring strings and the range of the tones was kept within certain bounds. As a preparation for interval and scale studies, which form such an important feature in ear training and fingering, it is advisable to give the beginner further drill in finding the notes in their successive order, or by skips, as has been outlined in Tours, page 7. See that these interval problems are understood theoretically as well as practically, and observe that the beginner does not read them simply by rote, executing their sequence forms without appreciating the difference in the spacings. This again brings up the matter of sight work, and again it must be insisted that thought must precede finger action.

It may be helpful for the beginner to know that notes in the spaces and above and below leger lines are taken with the open strings, second or fourth fingers alternately; those on the lines being controlled by the first or third finger, with the exception of the fourth finger extension on each string (which is to be met with much later), and that this order can be followed (later) in the third, fifth, and seventh positions, the second, fourth and sixth, however, requiring the reversal of fingering. Along with this the pupil must know how correctly to adjust the respective fingers which govern the tones so as to produce the various changes of pitch, high or low, as the different intervals demand. As violin music for the most part is read laterally, from note to note, left to right, the pupil must be well drilled in interval formation before much progress in reading and playing need be expected. The beginner should know the harmonic terms applied to each interval and what amount of finger spacing these terms are to suggest.

To do this successfully begin when the subject of notation is started. As soon as the pupil can notice the difference in pitch and appreciate the change in the spreading between the whole step and the half step he should be made to realize that the greater spacing, when the fingers are about an inch apart, is known as a major second (whole tone), and the smaller spacing, with the fingers fairly close together, is known as a minor second (a diatonic semitone). At this point explain the meaning of the word *diatonic* and give the pupil a clear reason for the word *chromatic*. Show how at the piano by means of the successive white keys B-C or E-F a diatonic semitone results. Play these tones on the violin until the beginner understands the tendency of the leading notes B and E. Then show how the chromatic step affects the pitch, requiring that the letter name be modified by a sharp or flat, thus: F-F♯ (black keys on the piano and requiring a change in the fall of the finger on the violin). This prepares the pupil to consider the tones as they succeed each other from a harmonic standpoint, gauging the various distances between the finger tips and forming some idea of the interval measurements through the difference in the spacings. To give a serious student some practical advice on this subject the following may be of assistance:

FINGER SPACINGS HARMONICALLY CONSIDERED

1. Show that successive fingers, when placed closed together a half step, on one string produce a minor second; if placed about an inch apart, a whole step, these fingers produce a large interval still comprising only two letters and known as a major second. (If the spacing between the successive fingers on one string is extended another half step, but still comprising only two letter names, the interval is known as an augmented second, to be met with later in the study of the minor scales in harmonic form.)

2. The half-step measurement with successive fingers on neighboring strings results in a minor sixth; the whole-step measurement results in a major sixth.

3. The half-step measurement on neighboring strings, but having the lower string covered by the higher finger of the group, results in an augmented fourth, while a similarly fingered group with the whole-step measurement produces a perfect fourth.

4. Skipping one finger, using measurement of three half steps on one string produces a minor third; using measurement of two whole steps produces a major third. When finger tips are similarly placed, but on neighboring strings the result is respectively a minor seventh or a major seventh.

5. Skipping two fingers on one string using two whole steps and one half-step measurement results in a perfect fourth; this same spacing on neighboring string produces an octave.

6. Skipping two fingers (0-4) or having the tip control two neighboring strings at the same relative point produces a perfect fifth. (The diminished fifth is to be fingered like the augmented fourth with successive fingers on neighboring strings, and the augmented fifth is similar in spacing to the minor sixth.)

BOWING AND RHYTHMIC ADVICE

Up to this point the teacher will have been guiding the strokes for the pupil occasionally and little attempt need be made to follow the time signatures, for, as a matter of fact, the average pupil can scarcely control his bow well enough at the start to give a long and sustained stroke which will be the equivalent in duration to four slow counts. Therefore, use good judgment in counting for the pupil during these early lessons. Let the "one, two, three, four" be steadily directed, but remember the teacher must govern this count according to the length of the pupil's full stroke. Gradually a slower counting can be attempted, but always gauging the rate of speed by the spending of the stroke. This may seem open to objection, yet this principle of adapting the time to the pupil and not forcing the pupil to abide by a very slow tempo will prevent faults in stroke production. Some control will soon be noticed, even in extreme cases, and then the pupil will be in readiness to comprehend notes of different values. It is advisable to teach half and quarter notes with a full arm motion at first so that muscular tightness can be avoided. Gradually have the amount of stroke reduced. Be sure that the strokes are evenly distributed when notes of equal value are played. Caution the pupil against the spasmodic spending of the down-stroke and of the weakly returned up-stroke.

To teach slurring need offer no difficulty. Begin with preliminary exercises which group two successive tones, starting with the open A string, two notes to a full stroke, each tone getting a proportionate amount of the stroke. Next group three successive tones, a third of the bow to each; then four tones each getting an equal amount of the stroke. If some adeptness is shown have the pupil endeavor to limit his stroke to one half the amount and go through the process with a slightly slower speed. This will teach control of fingers as well as of bow. Cross string slurring can be studied in the same manner, but of course the fingering will have to be on neighboring strings. Guard against improper elevation of the right elbow and insist upon the joints of the hand and arm performing the curvings which have been described. The irregular spending of the bow, a slow stroke to be followed by a swift stroke, each of equal length, however, will require careful consideration. Material for this is to be found in Tours, Ex. No. 36, *Maytime*, and Ex. No. 41, *The Bold Pirate;* also in the Mitchell book, Section 3, etc.

Thus the matter of training the pupil to keep time can be accomplished by the apportionment and the spending of the stroke; by beginning

If You are in the Market for a
RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

LYON & HEALY, 19-31 E. Adams St., Chicago
The world's largest music house. Owners of the famous Hawley collection

When you write to advertisers, mention The Musician

with the full action of the arm representing one unit (the whole note, not necessarily counted slowly); two equal tones slurred on one full stroke; three equal tones on one stroke; four equal tones (equivalent to four quarters) on one slurred stroke. Simple time values will then have been comprehended and can be accomplished without great effort and in a very few lesson periods. Of course, the assigning of practice material for home work cannot be definitely given here as each pupil will require especial consideration. Experience will soon tell how much should be assigned at each lesson, the pupil's mental attitude being a gauge that best measures the amount. Observe constantly how your pupil is being impressed and do not lose patience if there is evidence of denseness. Do not advance too quickly in this, the formative period of the study. Avoid being tedious, however, and remember that all new problems should be put before the pupil as clearly as possible.

BAD HABITS INCIDENTAL TO CHILD VIOLINISTS

BY L. HENDERSON WILLIAMS

THEY are not nearly so bad or so numerous as those laboriously acquired by adult players; but they exist, nevertheless, and must be checked promptly. A few hints as to those most common may not be out of place.

A habit which is likely to have serious future consequences is that of slightly protruding the right hip while standing with the whole weight of the body thrown upon the left foot. This attitude of resting upon the left foot is technically correct; but if persisted in for too long at a stretch it is apt permanently to influence the form of a growing child, especially in the case of one who is slight or delicate.

Discretion may be exercised in the matter of rests and occasional changes of position, and in this the watchfulness of the parent or guardian must supplement that of the teacher.

The trick of left elbow and left arm against the body of the performer is one that commends itself to almost every little beginner. The extended position is so unusual and fatiguing at first, and the neck of the violin nestles so snugly into the hollow between the first finger and thumb, that, doubtless, it is very grievous and discouraging to be told sternly that it is all wrong, and that the hand must be left loose and free to stop the notes, and by no means used as a mere prop.

Have we not all been through it—those who were not geniuses? And it is just as well that we should look back sometimes to long and weary half-hours of our own initiation, and let them teach us mercy towards the present generation of embryo fiddlers.

I have occasionally permitted pupils, while learning to draw the bow across the strings, to rest the head of the instrument upon the ledge of a music stand adjusted to exactly the right level. It counteracts the drooping position, and allows pupils to devote all their attention to the movements of the right hand and arm for the time being.

One thing may be said against this mechanical aid to position—that is, that children are apt to take to it too kindly, and continue it too long unless watched.

There are children, also, who do possess an average keen musical ear—proved by their singing or whistling in tune—who will not take the trouble to stop correctly or alter a false note unless made to do so. With this goes a laxness in the matter of semi-tones.

If such carelessness is persisted in for an undue time, and in the face of constant reproof, the teacher is recommended to wash his hands of a thoroughly unsatisfactory pupil. He or she will never do anyone credit; and a player of that calibre, having possibly arrived at a meretricious semblance of proficiency after years of enforced grind, becomes a public nuisance and a private torture.—From *A Scheme of Study for Country Violin Students.*

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

ORGANISTS AT WORK

CHARLES HARRY MOODY, ORGANIST AND MASTER OF THE CHORISTERS OF RIPON CATHEDRAL

BY H. C. MACDOUGALL

[Previous articles in the series have dealt with S. Archer Gibson, S. B. Whitney, and W. R. Hedden.]

THE globe-trotting American in his nervous jumps and leaps from point to point on the continent of Europe, has little time—or inclination either—to stop in Yorkshire. With a sigh of relief he steps off the boat at Liverpool, ferries across to Woodside, hurries into the train for Chester, inspects the Rows, races around the city walls, rushes through the cathedral, and with a sense of happy accomplishment gets into the train for Warwick and Shakespeare land. There, *sempre allegro,* the same eager sight-seeing is gone through, and then London. After London, the Continent, and so on, world without end!

Yorkshire is the most agreeably disappointing of English counties. One expects to find it a district of smoky manufacturing towns; instead it has moorland, it has seaside resorts like Scarborough and Whitby, it has spas like Harrogate, and cathedral cities like Ripon and York. To be sure there are cities like Halifax, Leeds, Huddersfield, and Sheffield, devoted to a diversity of manufacturing interests; but by far the largest part of the county is country, high hills, and moorland. In no part of England can one find more diversified scenery or more beautiful ruined abbeys; to mention York Minster and the ruins of Fountain Abbey is to name two only out of a very long list of notable monuments of architectural art.

CHARLES HARRY MOODY

Ripon is a town of about 9,000 people, situated midway between London and Edinburgh in the center of Yorkshire. Two rivers find their gentle way through the city, the Ure and the Skell. In common with very many of the English municipalities, that of Ripon does a great deal to attract visitors; there is a spa of great value here, where one can "drink the waters," or be treated to all kinds of remedial baths. In the immediate neighborhood are the most delightful walks and drives; York is only twenty miles away and a railway journey of two hours brings one to the east coast and the North Sea. Although illness in my family forced a three weeks' residence in Ripon I found it a most charming spot and, sometime, well worth a return visit.

The cathedral at Ripon when seen from the river rises in stately fashion above the town. It is both a parochial and collegiate church and was raised to the rank of a cathedral in 1836. For the reason that it was built and altered at several periods, ranging from 1331 to the present, it exhibits several styles of architecture. This mixture of styles adds very much to the interest which the building has for me. To divert Suckling's words bearing on a quite different matter, I say—

> "A sweet disorder
> Doth more bewitch me
> Than when art
> Is too precise in every part."

However this may be, Ripon, although much smaller than York, Lincoln, or even Wells, is well worth seeing

The organ was originally installed in 1878 by Messrs. Lewis & Co., was restored by Messrs. Hill & Son in 1902, and entirely re-constructed by Messrs. Harrison and Harrison in 1912-1913. There are four manuals, CC to A, 58 notes, and two and a half octaves of concave and radiating pedals, CC to F, 30 notes; 51 speaking stops and 21 couplers, making a total of 72 draw stops. The blowing is effected by a nine-horse-power gas engine placed in a chamber about 200 feet from the cathedral, near the song school. The tone of the instrument reminds me very much of the tone of the St. George's Hall organ, Liverpool. To my ear the Walker organs in York Minster and Bristol Cathedral are much more like certain of our American instruments; the tone is refined and sweet, rather than full and powerful. The tone of the Willis organs (St. George's Hall, St. Paul's Cathedral, etc.) is rather hard and brilliant.

Each has its advantages. The Willis organs have a heavy tone inclining to the ponderous, the *Tuba* is magnificent. The Walker organs have extremely beautiful soft stops, sympathetic in quality beyond anything I have heard on the organs of their illustrious competitor. But all this is my personal opinion only; I give it by way of description merely.

I found Mr. Moody in his home studio one afternoon in July. I quite envy him his English garden, its flowers, its quiet, and its space for tennis or bowls. The English love of privacy shows in the high wall which an Englishman

Ripon Cathedral: West Front

Ripon Cathedral from South East

builds up around his house and "castle." Why should we plan our house and its surroundings so that everyone shall have as much of it as ourselves?

In a very large living room Mr. Moody does all his voice, piano, and theory teaching; there is a pedal piano in the room in addition to the grand piano. He finds the former immensely useful in getting up his recital programs. In England the organist of a cathedral, especially in a town the size of Ripon, is quite the cock of the walk in all the surrounding district. Mr. Moody's sphere of influence extends as far as Huddersfield. some fifty miles away. It is somewhat difficult for an American organist to understand how it is that the cathedral organist can "carry" so far. The positions (or "posts," to use the English idiom) are the prizes of the profession, just because so much does go with them.

A cathedral organist's work is varied and abundant. Here, for example, is the Ripon organist's routine for a single week in the midst of the season:

Every day, choir practice (boys) from 8.30 to 9.50, services in the cathedral at 10 and 5. On Monday Mr. Moody goes to Huddersfield to conduct the Glee and Madrigal Society. This is a body of about 400 singers giving four concerts in the Town Hall and filling it with 3,000 people at every concert. He returns to Ripon late on Tuesday morning and his articled assistant takes the boys' practice and the service.

On Tuesdays there are full rehearsals in the Minster from 6 to 7. On Tuesday from 8 to 9.30 P. M. there is the rehearsal of the Ripon Operatic Society. This organization gives a four days' season of light opera during the winter, employing a full orchestra, professional coach for a full month and properties, costumes, etc., from Covent Garden. The coach lives for the month in Ripon.

On Wednesdays Mr. Moody teaches from 9 to 1 at the Free Grammar School, a superior sort of elementary school leading to Eton, Harrow, or Winchester, and then to the university. This school is on a foundation going back to 1555. Although the boys have to take their practice periods out of their play time—only 30 minutes a day—yet they show a lot of enthusiasm; one boy is playing the "48."

In the evenings of Wednesday and Thursday he lectures in the Training College for School Mistresses. He puts these young women through Dunstan's theory, form, ear training, voice production, elementary and advanced. These students are from 19 to 23 or 24 years old, and do excellent work.

On Fridays the organ is dispensed with at the Cathedral services, and at *Evensong,* on that day, the music is all plain-song for men's voices only. In the evening, from 8 to 9.30, Mr. Moody drills the oratorio chorus that sings in the third service on Sundays; these services are held in the nave and are very popular.

But this is not all. There is much private teaching to do in voice, piano, organ, and theory; there are also ten recitals in the Minster to prepare for. The hours for private teaching are from 11 to 1, from 2 to 4.30, and occasionally in the evening from 6 to 8. Much of his own practising is done very late at night. The English custom of having tea at 4.30 and a late supper at 9 or later, helps very much in the utilization of spare moments. Mr. Moody finds the bicycle a great help in saving time; he has one especially constructed for his work and planned to resist the constant dampness of the climate.

In all his routine there is little suggestion of sport or play or hobbies. If you were to look at Mr. Moody you would see physical energy and good health written plainly in his countenance; he rides a bicycle a great deal, of necessity; he is fond of tennis and golf; he has the Englishman's love for out-of-doors. The result is that he looks "fit" for any sort of hard work.

His hobby is writing books on architecture and he has published *Selby Abbey, a Résumé* (Elliott Stock, 1908). Selby Abbey, one of the great Yorkshire Abbeys, was burned in 1906 and through the efforts of a restoration committee, of which Mr. Moody was a member, $250,000 was raised and the restoration completed.

The usual system of giving private lessons in England seems to me very peculiar; but Mr. Moody assures me that very few if any cathedral organists adopt any other. The system is this: The year is divided into three terms of ten weeks each and a vacation period of twenty-two weeks. The first term runs from about February first to Easter; the second finishes about July 30; and the third term begins in October. This gives a long vacation. Possibly this comes to about the same thing as the American way, which is to begin as early in September as the pupils can be coaxed into taking lessons and to continue teaching so long as business continues. There is very little teaching in the United States after the first warm day in June. The usual fee for lessons is about $2.50, although in London fashionable practitioners receive double or more. The men singers in the cathedral choir (lay clerks) have a salary of $425; this they often supplement by a little business "on the side," perhaps voice or piano lessons or some clerkship. The solo alto of the Ripon Minster is a clerk in the tax collector's

office, for example. But the lay clerk is really a professional musician.

The articled pupil gets his entire musical training from his master; in the case of a master like Mr. Moody, steeped in the cathedral tradition, yet a man of the present, the training will be of the most solid description. The usual fee for articled pupils is $500 a year. A cathedral organist getting a salary from the cathedral authorities of from $1,000 to $1,200 a year can usually manage to add another $2,000 to it. If the precentor, who is his "boss," is an agreeable sort of person, the whole experience will be an agreeable one; if not, quite the reverse! I had the pleasure of meeting the Rev. Precentor Swann, of Ripon, a moment after morning prayer, and I can quite believe Mr. Moody's praises of him as a most charming man and musician.

Mr. Moody believes that the unquestioned decrease in the cathedral organist's influence is due to the great increase in the number and quality of operatic and orchestral performances. But this has had its good effect in that it has pushed the cathedrals forward. The cathedral authorities are now more hospitable to music written by non-ecclesiastics, like Brahms, Elgar, and Stanford. Of course, the older music of Tallis, Gibbons, etc., must not be thrown aside. To my suggestion that some of the Tallis music I had heard in English cathedrals was positively hideous, Mr. Moody replied, "Well, I suppose you allude to the false relations, which are certainly queer to modern ears. But do you not think that the false relations were much less offensive in unequal temperament?" I had no means of satisfying myself on that point, but I pass Mr. Moody's suggestion along to those who feel as I do about much of the music of the Tallis period.

Another thing that has waked up the cathedrals is the competitive festival. This is known all over Great Britain and has been the means of bringing choral technic up to a great height. The competition between the composers and the competitive choirs is much like that between the safe manufacturers and the burglars! Mr. Granville Bantock told me that it was almost impossible to write a choral piece too difficult for the crack choirs to sing.

A final word as to the actual musical results at Ripon. Mr. Moody is an excellent recitalist and his playing in the cathedral, when I had the pleasure of hearing him, was very brilliant, vigorous, and rhythmical. His tastes are for the solid and substantial, and the whole man impresses you as efficient, wide-awake; his playing is thus satisfying in brilliancy as well as in those higher qualities of taste and temperamental expression. The choir sings exceedingly well. I heard the choir at York Minster and was rather distressed at the "hooting" quality on high notes, although I have never heard a better choir as regards shading and general style. The tone of the Ripon choristers is even from top to bottom.

War against Germany was declared the last days of our stay in Ripon and my final word with Mr. Moody was in regard to his departure with the reservists for the front. Despite the battle music in Strauss's *Heldenleben* there is an incongruity between the practice of the art of St. Cecilia and "war's wild alarms"; but a glance at the stalwart form and determined countenance of the organist of the Minster (for so the Ripon people love to call their great church) will suggest that whatever the task duty sets him, it will be done.

THE ECHO ORGAN

BY H. C. M.

It is rather interesting to note how the consolidation of interests is worked out in music as well as in business, for example, in the music provided for the ocean liners.

"Going across" this summer I became acquainted

RECENT CHRISTMAS CANTATAS

Terms for orchestra parts refer to rental from Oliver Ditson Company for one month or fraction thereof

BERGÉ IRÉNÉE
Shepherd's Vision, The.....$0.50
Solo voices: S. A. T. B. 35 pages; 30 minutes.
13 orchestra parts, with harp, $4.00.
Christmas feeling is successfully realized in this score, with suitable simplicity, the latter combined with originality and tasteful expression. The numbers are clear, and grateful for the soloists, and the organ part admits of delicate colorings in many places. About twenty-two pages of chorus-writing.

BERWALD, W.
Christmas Tidings.....50
Solo voices: S. A. T. B. 33 pages; 30 minutes.
Orchestra parts, full; $3.00.
The composer has set a well-constructed sequence of scripture texts and words of hymns, developing the thought of the prophecy of the Messiah, and of the manner and meaning of its fulfilment. In the music are felt the qualities of imagination and inventiveness. The solo parts are songful and telling, and the climaxes strong and dignified.

CAMP, JOHN S.
Prince of Peace, The.....75
Solo voices: S. A. T. Bar. 90 pages; one hour.
Orchestra parts, full; $5.00.
The melodic outline of the solos and chorus-parts is largely diatonic in this work, and without complications for the singers, reliance being placed upon well-knit structure and an independent organ part that adds to the general feeling of firmness and activity. About sixty-two pages of chorus-writing. This text is chiefly biblical.

LANG, MARGARET RUTHVEN
Night of the Star, The. Op. 52.....40
(Cycle for Christmas).
Solo voices: S. A. T. B. 16 pages; 10 minutes.
A distinguished simplicity marks this brief cycle—the hush and the pause, under the spell of Christmas wonder; but there is in it, too, the musical justification for finely prepared performance. There are four numbers: I. The Star of Bethlehem (quartet); II. The Vision of Mary (duet for soprano and alto); III. St. Joseph's Vigil (tenor solo); IV. When Christ Was Born (carol for quartet). Quartet choirs are well served by this composition, equivalent to a short cantata, of the right length to introduce into the regular Christmas service.

MANNEY, CHARLES FONTEYN
Manger Throne, The. Op. 9.....$0.60
Solo voices: S. A. T. Bar. 48 pages; 30 minutes.
String quartet parts; $3.00.
The large possibility of musical and religious impressiveness in this cantata, and the composer's moderate exactions in the manner of the means required, are two of the sources of its effectiveness and of its ready availability. There is variety, and the numbers are not too long. The text is made up of scriptural and metrical passages.

NEVIN, GEORGE B.
Adoration, The.....60
Solo voices: S. A. T. B. 33 pages; 20 minutes.
Orchestra parts, small; $3.00.
By one of the most popular American writers of church music. The voice parts are easily learned, lying well within average compass, each member of the quartet has a solo, and the organ part gives the singers helpful support throughout. The cantata begins and ends with the familiar *Adeste fideles*, in which the congregation joins. Eight voices, two on a part, suffice; or a larger chorus with soloists may be utilized.

REED, WILLIAM
Message of the Angels, The.....50
Solo voices: S. T. 29 pages; 20 minutes.
Orchestra parts, full; $3.00
Choirmasters will find this cantata a thoroughly favorable selection for the use of average choirs, and for quick preparation by "better than average" choirs, too. The choruses are continuously interesting and the parts for solo voices illustrate the Christmas spirit in tasteful and likable melody. Seventeen pages of chorus-writing. The text is partly biblical with verses from *The Key of Life*, a mystery play by Rev. F. G. Scott.

SPENCE, WILLIAM R.
Story of Bethlehem, The.....50
Part I. The Shepherds. Part II. The Magi.
Solo voices: S. A. T. B. 30 pages; 25 minutes.
Orchestra parts, full; $3.00.
Among the features of this cantata are the short pastorale which opens the first part, melodious and well-written solos, an affecting lullaby, interesting choruses, and the use of the familiar hymn *Adeste fideles*, at the end, sung by the choir and congregation with free organ accompaniment. Eighteen pages of chorus-writing, only moderately difficult.

For complete list of oratorios and cantatas see Descriptive Circular P. Free on request.

OLIVER DITSON COMPANY, Boston

CHAS. H. DITSON & CO., New York — LYON & HEALY, Chicago

with some of the musicians on board a steamer sailing from Boston. It seems that two brothers in Liverpool have a monopoly of the furnishing of orchestras on the boats from New York and Boston to Liverpool; they also supply for some of the P. and O. boats running to India. In all, during the past season, they catered for about fifty steamers. Men who apply for positions must be well up in routine, must be excellent sight-readers, and must know all the standard overtures, waltzes, entr'actes, and arrangements, and the generally received tempo, shading, etc. There is little or no chance for rehearsal on shipboard and only with competent men can the work go with any sort of success. The men usually play five hours a day, going from first to second class according to arrangement. As the men are told off for a ship they get together for one rehearsal in Liverpool and then shake themselves together as best they can when they get to playing. They may be laid off when getting back to Liverpool, but if they are laid off while in a foreign port their expenses are paid, second class, back to England.

The instrumentation is somewhat peculiar and yet it works out fairly well; it seems to be typically English, since it is the combination used in English restaurants and for which the popular music published in London is arranged. There are two violins, 'cello, bass, and piano. The two violinists play from the same part, which results in a strong melody. Very much depends on the pianist in this combination; he must be very discreet in filling up what is missing. There is very little color but there is no blatant cornet or noise-producing drums.

* * *

This is the first opportunity I have had of referring to the death of S. B. Whitney. Some years ago, soon after his retirement as organist and choirmaster of the Church of the Advent, Boston, I wrote an appreciation of his work in one of the *Organists at Work* series. I need not repeat what I then said as to his real genius as a musician. If Whitney had had the ambition and diplomatic energy of B. J. Lang he would have had a European reputation; he certainly had rich natural endowments. He was a type of the good man, good musician, and honest worker, who does his best always without very much thought of gain.

I first became acquainted with Whitney about 1882, when I had lessons from him in the old building of the Church of the Advent. He was the first real organ teacher I had had, although the instruction I had previously received had been good. Whitney, however, presented to me the ideals of the organist, not of the pianist translated for an hour to the organ bench. I learned to sit low, to sit not too far on the bench, to try for a real organ touch; there were also things to be learned about registration and improvising; really practical things, some of which I use to this day.

Looking back on Whitney's life in its entirety, I regret that he did not devote more time to composition in its higher side. His variations on the *Vesper Hymn* or on *Onward, Christian Soldiers,* do not represent the real S. B. Whitney; and it is a pity that the younger generation will probably regard them as characteristic of his inclinations and powers. I wish to suggest to the New England Chapter of the Guild that they give a performance of Whitney's *Trio* for piano, violin, and 'cello at a public meeting, together with renditions of some of his other works, sacred and secular.

S. B. Whitney filled an honorable place in the development of church and organ music in New England, and he has left behind him a great number of friends and pupils who will regretfully but thankfully cherish his memory.

On excellent authority I learn that out of 400 Presbyterian churches in Glasgow only 24 have paid singers. A few of the most wealthy pay $125 to each of the quartet. A very few organists get $625, the average receiving from $300 to $400. The amateur organist is more in evidence in Scotland than with us and modestly accepts a smaller remuneration than his professional brother. There is said to be only one specimen of the old time precentor left in Glasgow—the man who stands up without the help of a choir and "raises the tune." The novelty of the organ has gone, thanks to Andrew Carnegie.

———*———

DIGNITY AND RESERVE IN ORGAN PLAYING

BY WILLIAM REED

That the traditional dignified atmosphere of organ playing appears to have become somewhat obscured is a fact which is as real as it is apparent.

Primarily a church instrument, the functions of the organ have increased by reason of the improvements in building, its use in concert halls and elsewhere for various purposes, and, generally speaking, because of the style of its present-day literature; each of these conditions being more or less correlative with the others. And although organ playing has lost something of its former dignity, we are fain to admit that it now enjoys a wider popularity than formerly.

It may be, however, that some of this very popularity has resulted from an undue merging of the sensational element within that of the more solid, in such a manner as tends to obliterate a proper distinction between points which should differentiate church and concert styles. In order to realize this distinction and, as it were, to hear the organ in its native setting, one needs to compare its effects in some old cathedral with those in the less restrained atmosphere of a concert hall or even in a proportion of our churches. Good organ music may be played in both cases, but, somehow, *it tastes differently.* The immediate inference will be that this is largely due to the *genius loci* and further enhanced by imagination.

But this is not the entire explanation. It may safely be assumed that a uniformly severe style of accompaniment or solo playing would find but little acceptance with many congregations or the average concert audience. At the same time, the danger lies in the other extreme, rendering it imperative that a player, while exercising a moderated restraint, should be equally careful in the balancing of contrasts and in the use of the emotions. Emotionalism, which has been termed a precious gift, is necessarily innate in the true musician, and, of all musicians, organists, in particular, need to guard against its injudicious application. Our modern organs, sensitively responsive and composite as they are, are apt to prove a lure for the display of kaleidoscopic effects and startling incongruities.

Coloring for its own sake, explosive dynamics, the unthinking anti-climax, and such like are not only foreign to a true organ atmosphere, but inartistic in all music.

In contrast to all this, we find that the careful preparation and reserving of effects, the dignified *leading-up-to* and *down-from* outstanding points, confer a relevant variety and an artistic interest on a performance in proportion to their careful introduction. Such considerations apply all round, as much care being necessary in the accompaniment of a response or chant as in that of anthems, service settings, or in solo playing. Time was when "word painting" in the accompaniment of the Psalms, etc., was exploited to the limit by church organists, and the idea still survives in some degree here and there.

Of course, a certain suggestive coloring in accompaniment is legitimate, and, when carried out cleverly and with good taste, is interesting and unobjectionable.

But it is a resource to be *reserved.* If abused, it soon becomes wearisome to the hearers and is almost certain to develop cheap mannerisms in a player's style.

One important test of the value of an organ piece or accompaniment lies in its possibilities for well-balanced contrasts and restrained effects, both of registration and technic. Such, whether particularly indicated or not, will, nevertheless, be present in good organ music, their exposition depending on the insight of the player, even though the general interpretation may admit of more than one reading.

Thus, while no two musicianly players may interpret a number in precisely the same manner, they will, nevertheless, instinctively observe certain points, presenting the work, *as a whole,* with intelligence and interest. This will result partly from an appreciation of the composer's meaning, but no less from an understanding of the atmosphere which should surround all worthy organ music. And this atmosphere should be maintained with just that balance of intensity needed to obviate coldness; so that whatever is deserving of being rated as good organ music will in performance justify its value as such.

The test of good organ music, above mentioned, applies approximately to arrangements. These latter, however true they may be to the originals, are to be chosen primarily for their suitability to the genius of the organ. Not all arrangements fulfil this condition. For the organ remains *itself;* the heritage of its legitimate functions and dignity being worthy of preservation by all musicians who, whether organists or not, are, while aware of its limitations, jealous for the perpetuation of its true character.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

"I AM in the sixth grade and have never studied any Bach fugues. Have had several of the *Inventions* and parts of the *Suites,* and am now anxious to begin on the fugues. Will you tell me what are the best ones to begin on?"—E. W.

Begin with the fugue in C minor; follow this with the D major and the G minor; then try your luck with the one in C♯ major. Be sure to memorize all of them, for you will receive no lasting benefit from Bach unless you really study him. Three fugues well memorized and reviewed are worth more than the whole book merely read through.

* * *

"Will you please tell me what these scale forms are: The natural minor, the Dorian, Phrygian?"—R. J. B.

The natural minor scale has half steps between 2 and 3 and 5 and 6; the Dorian scale is one of the Greek modes, and has D for its tonic, with the half steps between 2 and 3 and 6 and 7; the Phrygian scale is also one of the Greek modes, and has E for its tonic, with half steps between 1 and 2 and 5 and 6, with the added difference that the dominant of the mode is on 6 or C instead of on 5.

Our natural minor scale is really the old Dorian scale in the Greek form, which had the B flat. The form of Dorian above quoted as having the half steps between 6 and 7 is the old Church form of Dorian. If you will read Lessons three, four, and five in Baltzell's *History of Music* and note especially the tables on page 65, you will get a better understanding of the old Greek modes.

* * *

"I had a pupil with a double joint in little finger. Though I tried to correct it, still I did not keep the pupil for months on technic, but continued to give pieces. She memorized a good deal of music and developed a musical taste. After some years of hard work she went to another teacher, who told her that she could do nothing until this joint was strengthened, and my work was severely criticised. Was I right or wrong? Should I have held this little girl back?"—H. B.

HARMONY LESSONS

BY EMINENT TEACHERS

You can take a complete course of weekly Harmony Lessons at small cost, in the quiet and privacy of your own home, under Mr. Adolph Rosenbecker and Dr. Daniel Protheroe; the former noted soloist and conductor, and a pupil of Richter, and the latter eminent composer, conductor and teacher.

Each lesson is a step in advance, clear, thorough and correct; no learning of a few cut and dried rules without knowing how to apply them in a practical way; a written examination on each lesson, in connection with ample original work develops your knowledge and fixes the important principles in your mind. You are thus able to compose, arrange or orchestrate a piece of music in a thorough and musicianly manner.

HARMONY TEACHES YOU TO:

ANALYZE MUSIC, thus you can determine the key of any composition and its various harmonic progressions; TRANSPOSE AT SIGHT more easily accompaniments which you may be called upon to play; HARMONIZE MELODIES correctly and arrange music for bands and orchestras; DETECT WRONG NOTES and faulty progressions whether in printed music or during the performance of a composition; MEMORIZE RAPIDLY, being one of the greatest benefits derived from the Study of Harmony; SUBSTITUTE OTHER NOTES when for any reason the ones written are inconvenient to play.

In short: Harmony is the "grammar" of music, a knowledge of which will make you a better judge and more appreciative of the music you play, teach and hear. These Harmony Lessons, under Rosenbecker and Protheroe, are not only thorough, practical and comprehensive, but they are endorsed by several thousand leading teachers and musicians throughout the country who are taking them; also by leading authorities, as for example:

"Gentlemen:—In my recent investigation of your work, I was very much interested in your courses you offer, and saw that the work was being done well.

Students who complete your Harmony Course and pass the examinations with satisfactory grades, will be given credit for two years' work in the Northwestern University School of Music in that study. Wishing you success, I am yours very truly,

P. C. LUTKIN,
Dean, Northwestern University School of Music."

On Tour with the New York Symphony Orchestra.
Jacksonville, Ill.

"My Dear Mr. Protheroe:—The lessons are admirably prepared and serve their purpose in every particular.

I had no idea that such sound knowledge of music could be imparted in this novel fashion, and I beg to congratulate you and your pupils. With best greeting,

Sincerely yours, WALTER DAMROSCH."

SAMPLE LESSONS FREE

Fill out the coupon and mail it to us. We will then send you our valuable catalog, sample lessons and test questions, a dictionary of musical terms, full information about our courses in Normal Training by Sherwood; Pipe Organ by Clarence Eddy; Public School Music by Frances E. Clark; History, Choral Conducting, Violin, Cornet, and other courses, besides other interesting information to musicians.

As Harmony is the grammar of music, no musical education is complete nor a teacher properly equipped without a knowledge of the subject. Our catalog shows how we have removed the difficulties and drudgery and have made the study of Harmony interesting, easy and practical. One of the pitfalls into which nearly all of us fall is handling every new pupil as if she intended to become a concert pianist, and I am very glad to hear of one teacher who considers the making of the pupil musical rather than the action of certain muscles and hand position. If this pupil of yours intended to become a concert pianist I think you were wrong; but if she was only practising an hour a day or so and wanted music from the cultural side, I think you were most wise in the direction of her work.

It would be interesting to follow this pupil's progress from now on. I question very much whether her interest will deepen in music. Nearly every student who comes to us has double joints or some other physical defect, and we should recognize them and do all in our power to correct such faults. Still when a pupil is only practising from forty-five minutes to an hour and is too young to appreciate the importance of technical work, should we make her music a question of "joints" or should we seek to open up the art of music to her, and have her get something back from the very first lessons? I must confess that I want children to grow to love music as much or more even than I do, and children will not love it if they must sit for a half hour daily and go through certain mechanical exercises.

Wouldn't it be wise for us teachers, when we find faults in the hands, to talk the matter over with the parents and follow out their wishes? If it is their desire to have their children sit and practise such exercises as are necessary to strengthen double joints, then give them, and have the parents see that the work is done. If they decide against it, as nearly every parent would, then we cannot legitimately be criticised later on for following the other path.

From my point of view, this country needs just such teachers as you, teachers who are teaching music and helping to make a music-loving public.

* * *

"Is there much use trying to master unequal rhythms while working alone?"—S. C.

By all means master them. There is a hallucination among our young people that the teacher is going to do the work, and that unless one can have regular lessons many things which are a little difficult of accomplishment must be left untouched.

If you find the mastering of unequal rhythms difficult, burn a little midnight oil on them. Play each rhythm alone, counting out loud until each hand is well under control; then put the hands together, playing one hand very softly. Then bring out the other rhythm with the part previously played loud, played softly. I wouldn't try to "fit" the hands together mathematically unless I was forced to do so.

Ten minutes' work every day will conquer this difficulty in a very short time. If you were having lessons you would find that the teacher couldn't do this for you. She could encourage you with it, but the work you would have to do yourself; so get at it now and in a month you can get by this milestone.

* * *

"I do not understand very well what to do with an adult beginner."—T.

I judge by your letter that you are using my *First Lessons with Children*. The only change which I would recommend for an adult would be that you present the staff as a whole and give the "key" lesson in the second lesson. The first lesson could be given on the keyboard and staff. Assign some technic, preferably the diminished chord arpeggio in the *Mason* Technic, the table work and some little melodies like in the *Child's First Grade* or some other beginner's book. After the key lesson is given present chords at once, and then you can soon get into a second grade book. You will find duet work very valuable, and the same written work which you would assign a child. Go faster, and give technic that is adapted to the size of the hand, covering the same principles that are outlined for children.

* * *

"Will you give me some titles of pieces to help me in teaching chords covering a tenth?"—R. D.

Song without Words, Tchaïkovsky, *Minuet* in A, Seeboeck, *Nocturne* in F, Schumann, *Butterflies,* Grieg, *Melody* in F, Rubinstein.

The Pith of the Piano Problem

This is the title of a booklet which goes to the very heart of the piano question and explains how to tell the good from the bad in pianos. Every prospective purchaser of a piano will find the "Pith" well worth reading. A postal brings it. Sohmer pianos are priced at $450 and more.

pelled to do the same while the present war conditions endure, and before long we may hope to have the atmosphere of our own country well freighted with musical influences. Proper effort and enthusiasm may create these even in our smaller communities. One instance of how this has been accomplished deserves special mention.

AN ILLUSTRATION

A Western town of some four thousand inhabitants had among its citizens a number of young men and women who had graduated in prominent music schools of various large cities, yet was itself utterly lacking in musical atmosphere. Circumstances led a young woman violinist who had both studied and taught in the nearest large city to return to this, her native city. She was a pupil of America's most famous pupil of the violin king, Joachim, was well equipped for her work, and was bubbling over with enthusiasm.

When she stated her intention of locating in the town, she was promptly informed that she would find there no musical atmosphere, and that the teachers of violin, voice, and piano already established there had the life about crushed out of them. Not discouraged, she began work, and quickly built up quite a large violin class, whose members were so thoroughly inspired by her to accomplish something worth while that it was not difficult, in due time, for her to organize a small string orchestra, which was later reinforced by suitable wood-wind, brass, and drums. The girl violinist infused life into them all, and soon found her orchestra greatly in demand for receptions, school commencements, fairs, and festivals throughout the county and in adjacent counties, as well as in the home town.

Shortly after the orchestra was established, an elderly English gentleman, with a fine musical education, came to the town and organized a chorus choir in one of the leading churches. Like the young violinist, he brought into use only good music, but chose that which, in the point of difficulty, was within the grasp of the people with whom he dealt. He and the violinist had many talks together, and found that their musical ideals were in accord. In England he had belonged to a musical society that held yearly festivals, and had sung in the choruses of famous cantatas and oratorios. He cherished an ardent desire to see such a society formed in the New World town where he had located.

The ideas of these two music lovers soon struck fire, and a musical society was organized whose membership included all the inhabitants, young and old, who were able, in any way, to promote its interests. The English gentleman was appointed director, the lady violinist had charge of the orchestra, and a young man pianist, recently returned from studies abroad, was chosen as accompanist.

a heavy fine was imposed for non-attendance. So lively was the enthusiasm aroused that the society—Musical Union, it was called—had no great financial gains from the fine system. The most inclement weather rarely kept a member at home. Serious illness alone, for which no fine could be imposed, kept a member at home, and this was rare in the very healthy town.

The Musical Union was established about five years ago, and has given Spring Festivals every year since. It began modestly, presenting good but simple part-songs and cantatas. Finally artists from large cities were engaged as soloists, and with their aid most creditable performances have been given, in two successive years, of *The Messiah* and *The Creation*. Other oratorios are discussed for future occasions.

Besides this work, most excellent piano, violin, and vocal recitals have been given during several seasons, with programs of both solo and ensemble work, the performers representing now home talent, now outside artists. The latter have been surprised at the intelligent listening of the audiences. Arrangements have already been completed for the appearance of a noted symphony orchestra in the town for next season.

The musical story of the little Western town is offered as a mere suggestion. If other communities should take the hint and go and do likewise, we might soon have an atmosphere spreading the length and breadth of our land that would make us the musical people Walt Whitman prophesied we would one day become.

———*———

BOOK NOTES

Jeannie's Journal; or, *Two Years at Boarding School.* By Althea Randolph. H. W. Gray Co. Price, $1.25.

The story is told in the form of a diary and covers the usual incidents of a girl's school life, making of friends, and, best of all, the making of character; incidentally several pretty love stories run through this book. It will make a pleasing present for a young girl.

The Cyclopedia of Social Usage. Manners and Customs of the 20th Century. By Helen L. Roberts. G. P. Putnam's Sons. Price, $2.50.

Social life has become so complex that the woman, or man, too, who is anxious to observe elegant conventions, needs a knowledge of the best practice. This book serves to warn, to comfort, and to command the aspirant to a finely correct social manner and authoritatively guide him in the right way to enter a drawing room, use the knife and fork, and lead the bride from the altar, etc. It is a treasury of information regarding the gracious courtesies as practised indoors and out, at home and abroad.

Playtime Songs, Old and New. Arranged with easy accompaniments, including fourteen new melodies by Raymond Perkins, and pictures by Paul Woodroffe. Hearst's International Library Co. Price, 50 cents, net.

Mother Goose Rhymes and Tunes. Arranged with easy accompaniments, including fourteen new melodies, by Raymond Perkins, and pictures by Paul Woodroffe. Hearst's International Library Co. Price, 50 cents, net.

Thé Dansant for Little Folks. Old-time game songs with easy accompaniments, new simple piano pieces for children's home dancing parties, and a musical recitation, arranged by Raymond Perkins, and pictures by Paul Woodroffe. Hearst's International Library Co., Price, 50 cents.

These three books offer delightful material for the use of children in school, and in these va

rious entertainments which are a part of day-school and Sunday-school activities. The accompaniments to the old tunes are easy and playable, and the new airs are in keeping with the best style of music for children. But especially useful are these books for the home life, when the children gather around the piano to sing, or when they have advanced in their own music study sufficiently far to play the pieces for themselves. The illustrations are in colors and very attractive as well as artistic.

Zenith Scale Fingering Indicator. Published by Zenith Keyboard Indicator Co., Chicago. Introductory price, $1.00.

A meritorious device for the use of piano and organ students whereby one may learn to play the scales with correct fingering, all ready before the eye as wanted. The Zenith has within itself forty major, minor, and chromatic scales, with the fingering plainly indicated. No opportunity for mistake. Teachers with classes of children should look into this handy, practical device.

GENERAL NEWS ITEMS

THE Detroit Symphony Orchestra will give a series of concerts on the third Thursday of every month, beginning the present month. Weston Gales is the director.

HANS EBELL, a pupil of Josef Hofmann and Leopold Godowsky, and director of the piano department of the Cracow Conservatory, played a recital at the New England Conservatory, September 21.

HARVEY LEWIS RAUL, a sculptor, of Easton, Pa., has made a bust of Beethoven which has been highly praised by those who have seen it.

BOSTON is having a season of grand opera at the Boston Theatre, given by a strong company, of which the chorus, orchestra, and ballet are mostly from the Boston Opera House, which will not be opened this season.

HARVARD UNIVERSITY music department is now in its new $45,000 building. The auditorium has a seating capacity of 578.

THE Michigan State Teachers' Association-Institute, held at Kalamazoo, October 29-30, had a number of interesting musical features, among them the Russian Symphony Orchestra, Modest Altschuler, director, the Kalamazoo Normal Festival Chorus, Harper C. Maybee, director, 200 voices, Princess Redfeather, mezzo soprano, Saba Doak, soprano, William Fenton, tenor, and Charles Wakefield Cadman, composer and lecturer.

MR. EDUARDO MARZO, composer, of New York, during a visit to Rome the past summer, had an audience with the late Pope Pius X, who sanctioned certain plans which Mr. Marzo presented to him in relation to Catholic Church music.

THE Stern Conservatory, Berlin, is open for pupils this season, although with a diminished attendance.

TRINITY AUDITORIUM is a new concert hall in Los Angeles, the most modern west of Chicago. The leading musical organizations of the city will give their concerts here. In addition to the main hall, there are four smaller rooms, seating from 350 to 650.

With a Victrola every home can enjoy the world's best music

The Victrola is the "open sesame" which admits you to the enjoyment of all the music of all the world.

It reveals to you in their grandeur the musical gems of the ages. It brings to you the art and personality of the most famous singers and instrumentalists. It presents an endless variety of melody and mirth to suit your every mood.

That is the charm of the Victrola, and right in your own home you can have ready access to this inexhaustible supply of musical riches and enjoy them at your pleasure.

Any Victor dealer in any city in the world will gladly play any music you wish to hear and demonstrate the various styles of the Victor and Victrola—$10 to $200.

When you write to advertisers, mention THE MUSICIAN

On account of the outbreak of the war, the management of the Wagner Festival Opera House at Bayreuth had to refund money paid in. The expenses already initiated were $100,000, which are, of course, a total loss.

Carl Flesch's manager announced that Mr. Flesch will surely be able to fill his engagements in the United States this season, as he is free of military duty in the Austrian reserve.

Fritz Kreisler, according to last accounts at this writing, had been sent home to Vienna for treatment. In a charge by Russian cavalry he was wounded in the leg. The following day his company was almost completely wiped out, the probable origin of the report that he had been killed.

Leschetizky was in Berlin when the war broke out, and may still be there.

Frank King Clark, the American vocal teacher, died in Berlin, October 5, of cerebro-spinal meningitis.

George Hamlin will locate in New York this winter, and will devote his time to concert work and coaching of singers.

Arthur Hartmann, violinist, sent to The Musician a very interesting letter reciting his experiences in getting away from Paris to return to the United States. Compelled to leave on less than a day's notice, he could only close his apartments, leaving everything there, taking only a small trunk for the journey, and that did not reach the steamer. Mr. Hartmann will make his home in New York this winter.

Theodore Spiering is another American musician who has returned to his native land on account of the war. He has located in New York, and will give his time to concert work, directing, and teaching.

The English music festivals have been abandoned for the present year. It is likely that there will be no opera season.

Oscar Seagle, the American baritone and teacher of singing, has returned to the United States on account of the war in Europe. He has located in New York.

Wilhelm Ganz, a composer of prominence in England, and accompanist to many of the older artists, such as Jenny Lind and Adelina Patti, died in London, September 12. He was born in Germany in 1833, and came to London in 1845, making his permanent home there.

The Vienna Conservatory has been closed on account of the war. This includes the Meisterschule, of which Leopold Godowsky was head. Mr. Godowsky will spend the season in the United States.

WITH THE SCHOOLS AND TEACHERS

The orchestra and chorus of the Lincoln Park High School, Tacoma, W. G. Alexander Ball, director of music, assisted in the services on "Peace Day," October 4. The musical work in the Tacoma schools is being carried on with great success.

Mrs. Blanche Dingley-Mathews gave an informal talk on *Music Education* at the Wilcox Studios, Denver, October 9.

Mr. Wm. Conrad Mills sends us a handsome booklet of the Arizona School of Music, Phoenix, Arizona, in which he is the head of the vocal department. Mr. Mills is a strong adherent of the method of Wm. Shakespeare of London. Mr. Mills has just taken charge of the music at Trinity Pro-Cathedral.

Miss Eva Emmett Wycoff, of New York, is giving with success a lecture recital on the development and value of the German *Lied* form; and in conjunction with Mr. Ellman Zoller, pianist, a recital of modern foreign compositions.

The Coryell Violin School, Mrs. Eleanor Hooper-Coryell, director, located in Aeolian Hall, New York, is having a good registration for this term of the year. Mrs. Coryell was a pupil of Léonard and Camilla Urso.

Mrs. Marshall Elliott Stewart, director of the School of Accompanying, New York City, reports a demand for good accompanists beyond the supply. The course at the school is thorough.

The Effa Ellis Music School has been moved from Omaha to the McClurg Building, Chicago.

Mrs. Maud A. Meserve, of Los Angeles, sends to The Musician a program of original compositions by her pupils who have been trained according to the Effa Ellis Teaching System. The little folk range from six to eleven years old.

The Ogden (Utah) Conservatory of Music, an association of enterprising teachers, is starting second year with fine prospects. There are nine teachers.

Miss Frances I. Brock, of Philadelphia, sends us an interesting leaflet descriptive of her teaching principles. She is a staunch adherent of the system devised by the late Dr. Wm. Mason, and as developed by his successor, E. M. Bowman.

Mrs. J. Norris Hering, organist of Christ P. E. Church, Baltimore, gave a recital September 9 in honor of the 100th anniversary of the writing of the American national hymn. *The Star-Spangled Banner*.

Alpha Chapter, Phi Mu Alpha, Sinfonia Fraternity, gave its annual housewarming and reception to new men students of the New England Conservatory, Boston, September 28.

LYON & HEALY NEW BUILDING, CHICAGO
(Western Representatives of Oliver Ditson Company, Boston)

THE illustration above gives a good idea of the appearance of the new Lyon & Healy building, which is soon to be erected at the northeast corner of Wabash Avenue and Jackson Boulevard, Chicago.

The building, which occupies a site 96 feet on Wabash Avenue by 171 feet on Jackson Boulevard, will be nine stories and basement, entirely of fireproof construction, and is designed primarily for the needs of Lyon & Healy, but will also accommodate a certain number of offices on the three upper floors. The office building entrance will be located on the east end of the Jackson Boulevard frontage, and leads into a spacious elevator lobby with ample elevator service for the office building section. The entrance to the Lyon & Healy store will be through this entrance, also a large entrance on Jackson Boulevard and an entrance in the center on Wabash Avenue.

The two lower floors of the elevations will be in pink Medford granite, the belt courses above in terra cotta granite to match. The upper floors will be of light gray brick with terra cotta cornices, belt courses, trim, etc., of a shade to match the granite.

Large window spaces have been provided for all floors, and the building will be very well lighted from natural sources. The general feeling of the exterior is of the Italian Renaissance period, as to its main divisions and architectural details. The plain shaft of the façade is relieved by ornamental Italian balconies. The entire ground space, with the exception of the office building entrance, is occupied by Lyon & Healy, and will be of imposing aspect as one enters the store, due to the height of ceiling and the architectural treatment, which will also carry out the Italian Renaissance feeling in its columns, pilasters and vaulted ceilings, all being finished in the natural caen stone.

There will be a mezzanine floor between the first and second floors, with balcony railings, looking over the main portion of the store. The basement and upper floors of the Lyon & Healy space will be served by three large elevators for the use of the public, and by two freight elevators running the full height. There will be two elevators from the backing-in space on the alley running to the basement, thus giving very ample elevator service. In addition, there will be a spiral parcel chute, dumb waiters, etc., all the details being worked out carefully to provide quick service.

The upper floors have been divided into large salesrooms, etc., for the pianos, musical instruments, etc. The general finish of the interior will be equal to that of the best office building, that is, mahogany trim, marble floors and wainscots, ample toilet facilities, etc.

The entire Lyon & Healy space will be provided with a ventilating system to supply fresh air for all departments. In fact, the whole design and equipment will be worked out to the last degree for artistic effect and convenience.

In this connection it is interesting to remember that it is just fifty years since Lyon & Healy opened a music store on Washington Street, opposite the Court House, where the old Chicago Opera House was situated. The business was founded by the late P. J. Healy, and its management today is in the hands of his sons and associates.

MISS MARGARET ANDERTON, pianist, of New York, has an interesting series of lecture-recitals, of special value to clubs, teachers' organizations, and schools of music. In her teaching she pays special attention to class work in training the musical perceptions.

MR. RALPH L. BALDWIN, choirmaster of the Fourth Congregational Church, Hartford, Conn., gave Mendelssohn's *Elijah*, September 20, with the church choir. The week preceding special dedication services were held in the church with elaborate musical program.

NEW YORK NOTES

BY EVA EMMETT WYCOFF

Mme. Clara De Rigaud has opened her vocal studio, and has a very encouraging class to begin the season.

Miss Nora Power, who has charge of the vocal music at the Convent of the Sacred Heart, possesses strong credentials from her instructors.

Maud Powell played in Boston before the Music School Settlement, October 25th, and gave her Aeolian Hall recital, October 27th. She has already opened her tour in the South.

Mme. Niessen-Stone has established her private studio in New York City. Mme. Stone has taken leading contralto rôles at the Metropolitan and Boston Opera Companies.

Rudolf Bauerkeller, formerly with the New York Symphony Orchestra, has taken charge of the Violin department of the Skidmore School of Arts, at Saratoga, N. Y.

Mr. David Bispham is giving up his time to legitimate concert work this year, and is under his own management.

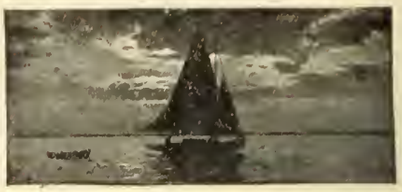
Mr. Benjamin Berry, after spending the summer on his farm in Vermont, has returned to take up his position as tenor soloist with the quartet of the Broadway Presbyterian Church.

Mrs. Carl Alves has resumed her residence in New York City after spending many years in Leipzig.

Mrs. Mary Cheney, soprano, has been visiting and singing in the West during the summer.

Mr. Edward W. Berge has resumed his classes in Ensemble Piano Playing at his residence-studio.

Oscar Saenger, after spending the summer abroad, resumed his teaching October 1st.



IMPROVE YOUR CAMERA-WORK

BY READING

PHOTO-ERA MAGAZINE
383 BOYLSTON STREET
BOSTON, U. S. A.

Mr. and Mrs. John W. Nichols are preparing for a busy season. Their tour will take them West as far as Arkansas.

Mr. Joseph Baernstein-Regneas has now so large a class that the majority of teachers would be content with its size. but his standard is a full class, and his energy does not stop short of that aim.

Mr. Gatty Sellars, the English organist, is in this country concertizing.

The Mulkin Music School, New York City, gave a number of free or partial scholarships this fall. Examinations were held October 20th.

Mr. Eduardo Marzo, an indefatigable worker for the cause of Catholic church music, has been promised the honor of knighthood in one of the orders, St. Gregory or St. Sylvester, as a reward for his services. We hope the recent change in the Pontificate will not affect this promise. The late Pope gave him a portrait with autograph signature. Mr Marzo is an honorary member of the Academy of St. Cecilia, of Rome.

NEW MUSIC BOOK
FOR TEACHERS, STUDENTS and LOVERS OF MUSIC

VOICE

FIVE QUATRAINS FROM THE RUBAIYAT OF OMAR KHAYYAM

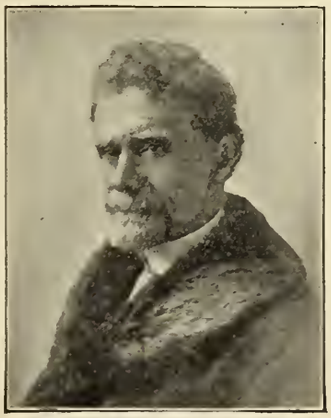
By JAMES H. ROGERS

HIGH VOICE MEDIUM VOICE

Each $1.25, postpaid

The tempting quality of Omar's immortal verses has inspired the composer with most felicitous musical imaginings. For this a set of five song quatrains have been chosen which are in themselves among the most beautiful and which are adroitly contrasted in mood. To meet their poetic content Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more vital, nor his economy of means to produce just the right emotional effect more sure. These songs, the latest product of his muse, may be used as a cycle or singly, and will adorn any artistic recital program.

JAMES B. ROGERS



GEORGE B. NEVIN

STANDARD ANTHEMS FOR MEN'S VOICES

Edited by GEORGE B. NEVIN

Price, $1.00, postpaid

The editor's name is associated with church music perhaps as closely as that of any American composer. The majority of the arrangements are from the practised and practical hand of the editor, and all are skilfully done with a view to use by choirs of moderate ability.

PIANO

ISIDOR PHILIPP

EXERCISES FOR THE DEVELOPMENT OF THE HIGHER PIANOFORTE TECHNIC

By ISIDOR PHILIPP

(Ditson Edition, No. 196)

Price, 75 cents net

Isidor Philipp is known to pianists as one of the most distinguished teachers of piano playing connected with the celebrated Paris Conservatoire. His system, which has been the educational basis of the training of many of the younger French pianists, consists in using exercises to give drill in variations of intensity of tone, or duration of tone; practising passages in legato, detached and portamento styles; changing of key; special practice with one finger; alternate extension and contraction of the fingers; modifications in all possible forms, scales, arpeggios, repeated notes; exercises for acquiring suppleness; passing under of the thumb; velocity in scales; the use of the fingering of C in all keys; studies in double notes, octaves with intervening notes, etc.

OPERATIC and CHORAL

A New Edition of Vocal Score

GOUNOD'S FAUST

With introductory essay by PHILIP HALE

Price, $1.50, postpaid

This new edition of Gounod's masterpiece is without question the handsomest and most satisfactory ever issued. The score is completed by the inclusion of all the songs later added to the opera, the Walpurgis Night scene, and the Ballet Music. The original French text and the standard English version of H. F. Chorley, revised and completed, are given; while the admirable essay by Philip Hale says the last word upon the Faust of both opera and history.

The first edition of FAUST published in the United States was by Oliver Ditson, in 1864, shortly after its production in New York at the Academy of Music. It was the best edition possible to make at that time and showed the enterprise and zeal of its publisher in providing for the enjoyment of opera lovers, a score destined to be famous.

This new edition is the very last word in music-book making. It is for 1914 what the first edition was for 1864, ABSOLUTELY THE BEST.

GOUNOD

FREDERICK STEVENSON

OMNIPOTENCE

Motet for Men's Voices

By FREDERICK STEVENSON

Price, 50c, postpaid

The broad lines upon which this striking motet is molded have produced, together with the composer's sterling musicianship, a very interesting composition. The chorus writing achieves a sense of power and mass and it is nobly dramatic. In this latter quality the vivid solo participates; it calls for a soprano or tenor of brilliant voice and extended range. The accompaniment (scored for organ and piano) owes to the former body and weight, and to the latter tonal brilliance.

VICTOR TALKING MACHINE RECORDS FOR NOVEMBER

THE holiday season is coming apace, and indeed will be on us before many are ready. If your friend has a Talking Machine you will be perfectly safe in sending a new record as a souvenir of the holiday season. So great is the variety that a choice is easy to make, and in doing so the giver will do well to look over the list for November, which is unusually rich and complete, for the average music lover as well as for the cultured musician and experienced concert goer. We are frank to say that we have greatly enjoyed going over these records, which have much to commend them. Here are some which we would note in particular:

Lucrezia Bori, soprano; Josephine Jacoby, mezzo-soprano; John McCormack, tenor; Reinald Werrenrath, baritone: The quartet from *Rigoletto,* in Italian, one of the finest concerted numbers in the operatic repertoire.

Margarete Ober, mezzo-soprano: *An die Musik,* by Schubert, one of this great song composer's gems, by a famous *Lieder* singer.

Frieda Hempel, soprano: *Il bacio* (*The kiss*), by Arditi. one of the most popular waltz songs ever written, sung by all the famous prima donnas during the past 50 years.

Ernestine Schumann-Heink, contralto: *Good-morning, Sue* (*Bonjour, Suzon!*), by Delibes, a dainty little song in the best French style.

Evan Williams, tenor: *The cross,* by Harriet Ware, a fine song by an American composer.

Especial care given to Programs and Printing that requires a personal rather than a commercial touch.

41 Arch Street - - Boston, Mass.

Pasquale Amato, baritone: *Di provenza il mar* (*Thy home in fair Provence*), air from *La Traviata,* an expressive number.

Martinelli, tenor: *Recondita armonia* (*Strange harmony*), from Puccini's opera, *La Tosca,* a magnificent aria.

Clarence Whitehill, baritone: *The heart bow'd down,* from Balfe's *Bohemian Girl,* an always popular song.

Luisa Tetrazzini, soprano: *O luce di quest anima* (*Guiding star of love*), from Donizetti's opera, *Linda di Chamounix,* one of the most brilliant coloratura numbers in the opera repertoire.

Maud Powell, violinist: *Silver threads among the gold,* a transcription of the famous ballad of a generation and a half ago.

Lucrezia Bori, soprano: *Malagueña,* by Pagans, a Spanish composer. Miss Bori is a Spaniard and sings this song of her own country with much grace and beauty.

Alma Gluck, soprano: *Serenata,* by Tosti, sung in Italian; with accompaniment of Violin, Flute and Harp.

John McCormack, tenor: *Lullaby* from *Jocelyn,* by Godard; with violin obbligato by Fritz Kreisler. Also the very popular song *Because,* by d'Hardelot, a great love song, given with a thrilling climax by Mr. McCormack.

A fine double number is Drdla's *Souvenir,* played by Max Pilzer, violinist, and *Lohengrin Fantaisie,* Wagner, played by Rosario Bourdon, 'cellist. String numbers are always effective on the Victrola.

Harry Lauder's latest song *The Message Boy.* one of the best he has written.

A CHRISTMAS CANTATA

FOR SOLI, CHORUS, AND ORGAN

THE ADORATION

By GEORGE B. NEVIN

Copies sent for examination. Size 6 7-8 x 10 3-4 inches.
Price, postpaid, 60 cents. Liberal discount on quantities.

Orchestra parts may be rented of the publisher, $3.00

¶ This choral work, by one of the best known and most popular writers of church music, is, like all his work, tuneful and thoroughly singable. The entire work may be readily performed by the average choir of not less than eight voices. It has been sung in about three thousand churches.

Dr. A. S. Vogt, conductor of the far-famed Mendelssohn choir of Toronto, Canada, writes:—"I have had much pleasure in reading your Christmas Cantata, *The Adoration*, by George B. Nevin, and desire to express myself as having been most favorably impressed thereby. The general outline of the work with its clever contrasts in part-writing for ordinary mixed chorus, for chorus for women's and men's voices respectively, solos and instrumental accompaniment, combine to render the work a very attractive one for use during the Advent season or sacred concerts generally. I take much pleasure in recommending the Cantata to the favorable notice of any choir in search of an effective and well-scored novelty." (The Mendelssohn choir is considered one of the world's greatest choirs.)

Dear Mr. Nevin: The writer has just received a copy of your Christmas Cantata, and I want to congratulate you on the very excellent work. It is so very much above the average cantata, that choirs who want to sing something respectable should not hesitate to allow themselves to have their ideas elevated by securing such a composition. The trouble in that most of our easy music is usually as worthless as it is easy. You are therefore indeed to be congratulated. Very cordially yours, **Adam Geibel.**

SECULAR SONGS

HIGH VOICE

TOSTI, F. PAOLO
Mattinata (*Matin Song*) [G] [E-*g*]... $0.60
One of the finest of this great writer's songs. Mme. Melba popularized it some years ago by using it in her recitals.

MEDIUM VOICE

DICHMONT, WILLIAM
A wish [F] [c-D]..... .40
An easy love song in the ballad style; just the thing for parlor or popular use; good for teaching first year pupils.

TOSTI, F. PAOLO
Mattinata (*Matin Song*) [F] [d-F]..... .60
(For description, see Secular Songs: High Voice.)

LOW VOICE

BULLARD, FREDERIC FIELD
Winter Song (*Pass the pipes, pass the bowl*) [Ab] [d-F]..... .60
A stirring song for a man singer; especially good for "smokers" and men's dinners.

GRIEG, EDVARD
I love thee (*Ich liebe dich*), Op. 5, No. 3 [B♭] [d-E♭]..... .30
The most popular of the many songs by the great Norwegian composer; a fine teaching song for first and second year pupils.

TOSTI, F. PAOLO
Mattinata (*Matin Song*) [E♭] [c-E♭].. .60
(For description, see Secular Songs: High Voice.)

SACRED SONGS

HIGH VOICE

MILLER, WILLIAM T.
The land immortal [E] [c♯-g♯(b)] .. .60
A big song for the church service, broad in style, and sustained in tone, with tuneful melody, just the combination that the average audience likes.

MEDIUM VOICE

VINCENT, CHARLES
Nearer home [G] [b-E] $0.40
A fine setting of the text "One sweetly solemn thought"; compares very favorably with the one better known.

LOW VOICE

MILLER, WILLIAM T.
The land immortal [C] [a-E (*g*)].... .60
(For description, see Sacred Songs: High Voice)

NEVIN, GEORGE B.
The heavenly voice [B♭] [c-E♭]..... .50
The fine lyric quality of this song is supplemented by a warmth of religious color and a quiet dignity which will be recognized at once as appropriate and effective church music.

WRIGHT, MINNIE T.
Love and light [B♭] [b♭-F]..... .60
A fine sacred song with a range especially good for a rich contralto voice.

SECULAR DUET

BULLARD, FREDERIC FIELD
The Kavanagh. Tenor and Bass.... .60
A rollicking song for two men to sing for men at a smoker, reunion, banquet, etc.

PIANO SOLO

BEHR, FRANZ
Gipsy dance (*Zigeunertanz*), Op. 590, No 8. III..... .40
A piece to use in teaching and for recitals; tuneful melodies and lively rhythms.

GANNE, LOUIS
Arlequinade (*Pizzicati*). III-IV..... .50
An attractive piece in the ballet dance style; a most excellent study for staccato playing, alternating with heavy accented chords.

LEMONT, CEDRIC W.
Story-book Folk, Op. 7. Complete.. .60
1. **Little Jack Horner**
2. **Little Bo-Peep**
3. **Little Miss Muffet**
4. **Little Boy Blue**
5. **Old King Cole**
6. **The Old Witch**

Grade II pieces of unusual musical interest and striking effect. The six numbers make a delightful little cycle for one or two players to give on a recital program.

Springtime sketches, Op 8.

No. 2.	**Clotilde**	III.....	$0.50
No. 3.	**Care-free**	III.....	.30
No. 4.	**La debutante**	III.....	.60
No. 5.	**Nocturnette**	III.....	.30
No. 6.	**A roundelay**	III.....	.50
No. 7.	**Shadow pictures**	III.....	.30

A set of eight pieces of fine value to teachers, each having a technical purpose, which does not diminish from musical interest. No. 2 introduces a syncopated rhythmic figure in the tango style; No. 3 has a repeated note figure played staccato; No. 4 is a tuneful waltz; No. 5, a study in melody playing; No. 6 in rondo style with a principal motive of two sixteenths followed by an eighth, and slurred, giving useful drill in clean cut phrasing; No. 7 has passage work for right and left hands. Nos. 1 and 8 will be ready later.

STEINFELDT, JOHN M.
Le desir, Op. 43, No. 1. IV..... .50
A piece of poetic quality somewhat after the style of Jensen and Heller; a fine study assignment for a musical pupil.

WARREN, A. E.
Consolation, II-III..... .40
A simple, tuneful piece for use in developing a feeling for expressive playing; the principal rhythmic figure is that of a dotted eighth followed by a sixteenth, one that requires much practice to play accurately at all times.

PIANO—FOUR HANDS

CUI, CÉSAR
Timid avowal (*Aveu timide*), Op. 20, No. 2. III..... .60
A musical number of unusual fulness of harmonic color, and beauty of melody.

GODARD, BENJAMIN
Berceuse from *Jocelyn*. III.....$0.60
An always popular number for any combination of instruments; a very effective duet arrangement.

OFFENBACH, JACQUES
Barcarolle from *Tales of Hoffmann*. III..... .75
A melody that everyone enjoys; it will make a good number for the ensemble class and recitals.

RUBINSTEIN, ANTON
Melody in F, Op. 3. No. 1. III... .60
In solo form an always admired piece; the duet arrangement is effective.

VIOLIN and PIANO

BOCCHERINI, LUIGI
Minuet, Transc. by Maude Powell.... .50
A concert arrangement of a celebrated number from the classical repertoire; calls for double stopping, especially successions of thirds.

ENGELMANN, H.
Gavotte Op. 562 No. 4. Arr. by Wm. Dressler..... .60
Moderately difficult with easy double stopping.

DITSON EDITION

GRIEG, EDVARD
Eight lyric pieces, Op. 12. (Ditson Edition, No. 184)..... .50
Eight lyric pieces, Op. 38. (Ditson Edition, No. 186)..... .75
Six lyric pieces, Op. 43. (Ditson Edition, No. 188)..... .75

CZERNY, C.
Exercises in passage-playing (*Passagen-Ubungen*), Op. 261. (Ditson Edition, No 197)..... .50

MISCELLANEOUS

STEVENSON, FREDERICK
Omnipotence. Motet for men's voices, with solo for soprano or tenor. .50

ROGERS, JAMES H.
Five quatrains from the Rubaiyat of Omar Khayyam.
High or low voice. Each..... 1.25

LEMONT, WILMOT
Dream pictures, Op. 6. Piano..... 1.25

AGENTS WANTED All over the United States to solicit subscriptions for the "Musical Observer." We pay an unusually liberal commission. For particulars address Agency Department, "Musical Observer," Cooper Square, New York.

THE MUSICAL OBSERVER

Offers Another NEW POLICY

YOUR MONEY BACK IF YOU WANT IT

The tremendous success of the new MUSICAL OBSERVER, since its publication in large size (commencing with the September issue), has created such a stir in music circles, that

WE ARE PREPARED TO ANNOUNCE ANOTHER NEW POLICY

in order to still further increase our subcription list.

Although the MUSICAL OBSERVER has increased its circulation to more than double in the past eight months, we are anxious to get FIFTY THOUSAND NEW READERS, by January 1st, so therefore offer to all those who are interested in music, a chance to **read the November issue of the MUSICAL OBSERVER, with the understanding that if it does not please you, return it to us and we will refund your money.**

The MUSICAL OBSERVER is America's fastest growing musical monthly—a monthly so good, so interesting, so instructive and so progressive in its ideals; which has such splendid music supplements—about twenty complete compositions in full sheet-music size in each issue—so many valuable departments for Teachers, Students and Music Lovers, that we believe, that if you

READ ONE ISSUE, that you will be a regular subscriber.

So confident are we of this, that we

WILL SEND THE NOVEMBER ISSUE UPON RECEIPT OF 15 CENTS

in stamps or coin, with the distinct understanding that we will refund your money, if you are not satisfied. You can obtain a year's subscription, for One Dollar and Fifty Cents (sent at our risk), with the same understanding—if the November issue doesn't satisfy, return it to us, we'll cancel your subscription, and return

YOUR MONEY WITHOUT FURTHER QUESTIONS.

A drastic policy to be sure, but we want to convince you, and WE CAN, if you'll allow us to do so. Better send your order now—you can send the money at our risk, but DO IT TODAY—Don't delay.

Just fill out coupon and send to us.

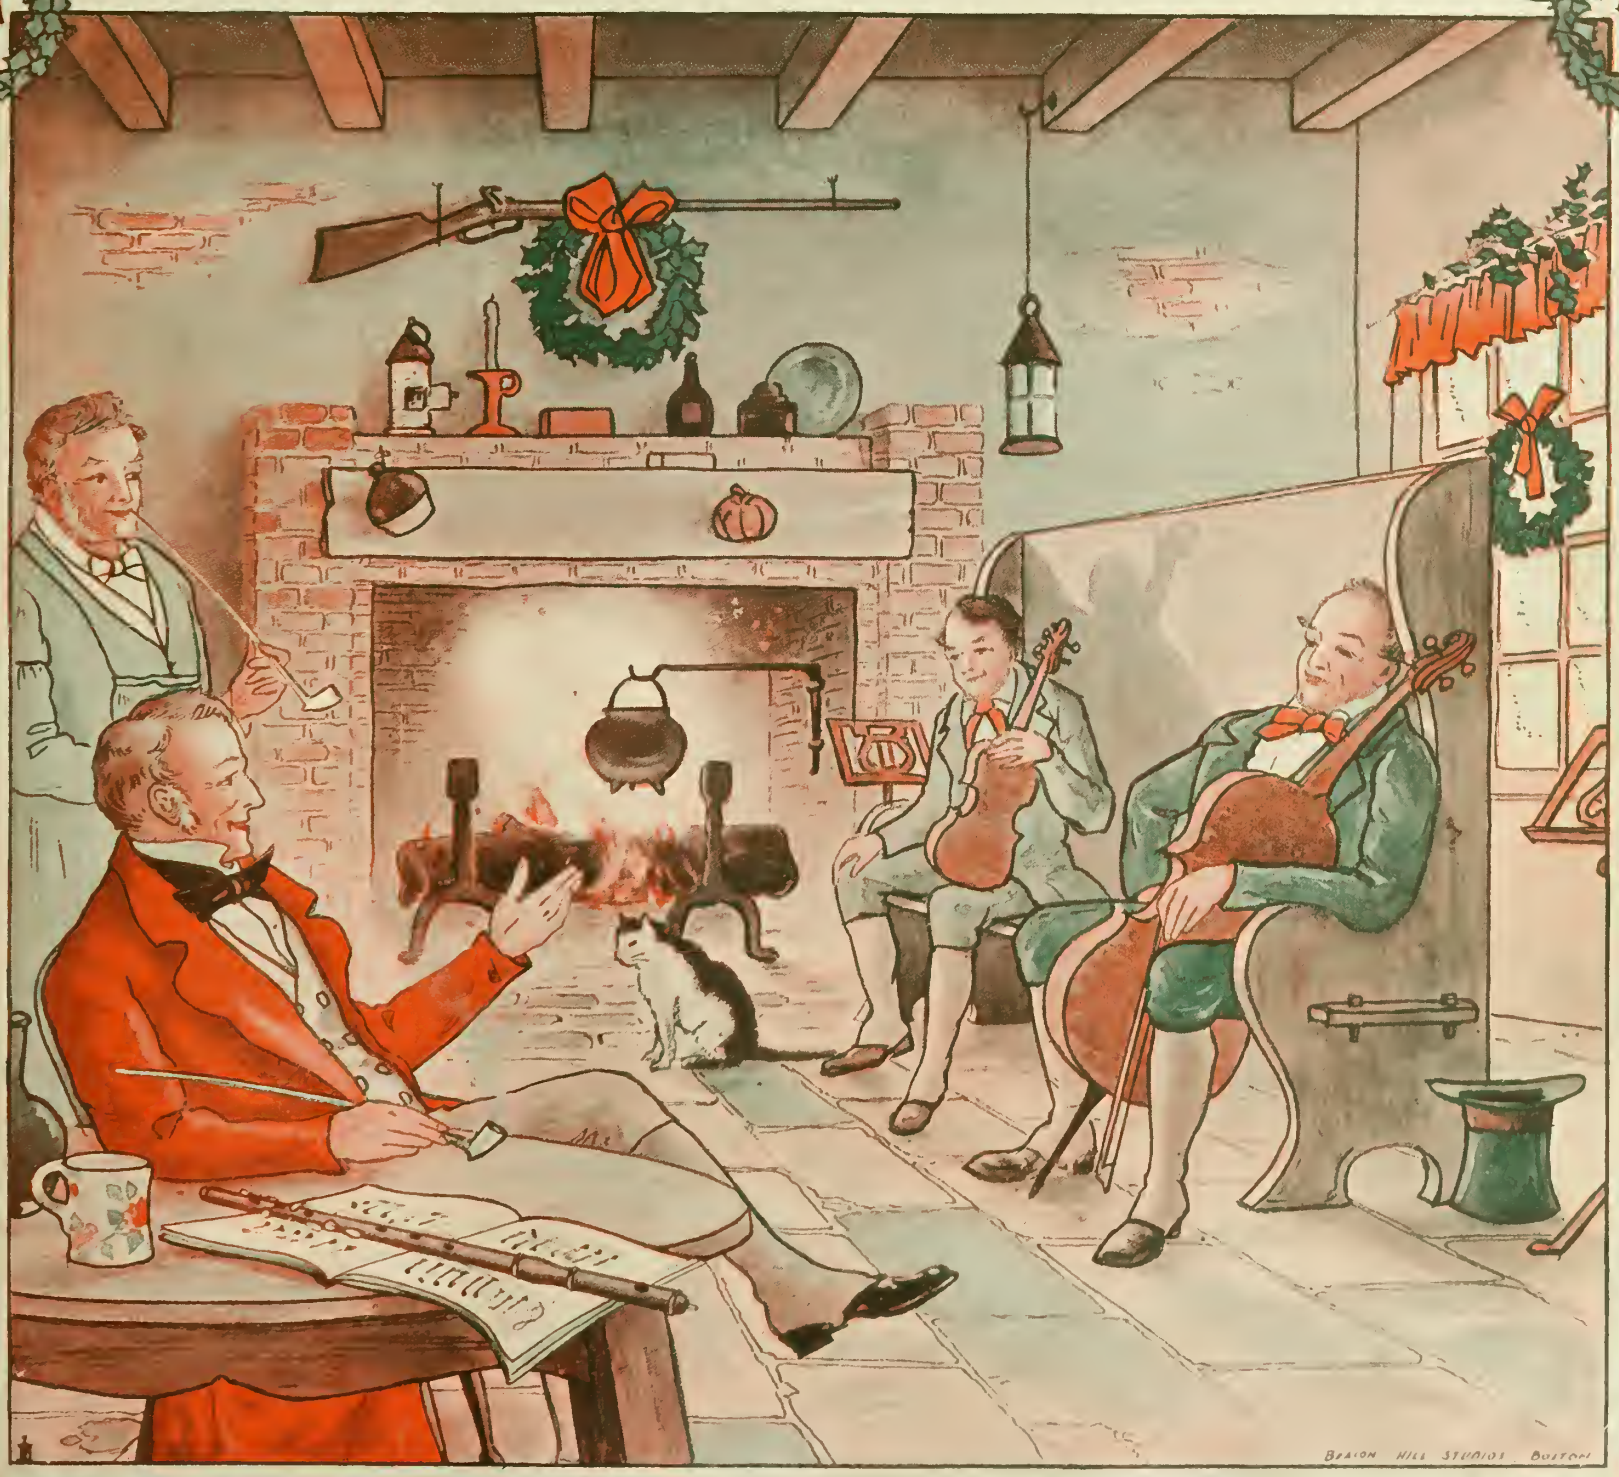
THE MUSICIAN



OLIVER DITSON COMPANY - BOSTON, MASS.

15¢ COPY $1.50 YEAR

FREE A Great Music Book FREE

"Something to Play"

45 Pieces for the Piano

"Something to Play" IS NOT FOR SALE. IT CAN BE OBTAINED ONLY IN CONNECTION WITH A SUBSCRIPTION TO "THE MUSICIAN"

Should you purchase in sheet form the music contained in "Something to Play" it would cost, at teachers' prices, not less than $11.00.

There are one hundred and four pages of music in the volume, printed from large-sized plates, representing an issue of nearly two hundred and fifty pages, ordinary sheet music size.

The selections, while light, are not of a trashy type. Pleasing music does not need to be cheap music. We have chosen compositions that are not only suitable for a popular repertoire, but will improve a player's skill and musical taste.

The technical requirements vary for the playing of the pieces. Six are quite easy, sixteen are easy, and twenty-three are moderately difficult, such as the average player can use.

Twenty-one of the compositions are in various dance rhythms—four marches—eleven are character or descriptive pieces, ten have special value in promoting certain phases of technical skill, eight are in classical style. Some of the selections belong to more than one style.

The following composers are represented in "Something to Play": Aceves, Arbanot, Bach, Bennet, Bohm, Cadman, Dandrieu, Dvorak, Engelmann, Gregh, Grieg, Hause, Heindl, Hitz, Hoth, Howland, Kern, Koelling, Kronke, Lazarus, Levine, Mathe, Paradies, Phelps, Retter, Rhode, Sabathil, Scarlatti, Schmoll, Tessarin, Wachs, Warren, Westerhout, Weyts, Wollenhaupt.

TAKE ADVANTAGE NOW OF THIS EXTRAORDINARY OFFER

The regular cash in advance subscription price of The Musician is $1.50 a year; $1.75 in Canada; $2.20 in foreign countries.

Send us one year's subscription price, adding **ten cents** for postage, and we will mail you one copy of "Something to Play" and The Musician; to separate addresses if desired.

If you are a present subscriber your subscription will be extended one year. We can also furnish any magazine published, at lowest market prices.

BRUNO HUHN

MR. BRUNO HUHN, although best known to the general public as a gifted and popular composer of beautiful songs and church music, is, in reality, a composer in his leisure moments only—his vocation is the teaching of singing in all its branches. For twenty years he has been closely identified with the musical progress of New York and has been associated professionally with most of the best known singers, not a few of whom have been his pupils. He has studied to good purpose in the best of all schools, that of practical experience, and is well qualified to instruct not only the beginner, but also to impart to the professional student the correct principles of phrasing, diction and interpretation. Especially competent is he to aid in the building up of a comprehensive repertory and in the choice and arrangement of concert programs.

COMPOSITIONS

I WILL EXALT THEE. High in E minor, low in G minor . . .60
MEDITATION. (For men's voices). Octavo No. 12,705 . . .12
LOVE'S TRIUMPH. (A cycle of five songs). High and low voice 1.25

In this cycle, the most recent work of a successful composer, the happy and significant union of poems and music is noteworthy, and the various phases of a noble passion are beautifully voiced. The text, with its terse, definite and vital expression, is splendidly adapted to musical setting, and has inspired the composer with melody that is now tender and endearing, now ardently dramatic, and now at the height of exultant rapture. The thoroughly practical and superbly vocal quality of Mr. Huhn's music must likewise not be passed over in silence, as it adds the final word of recommendation to intelligent singers.

Gentlemen:--
Please insert in our usual space the following list of songs recently published by us entitled:

A Lover's Litany	2 keys	A. Walter Kramer	.50
Reincarnate	3 keys	Charles Wakefield Cadman	.60
When My Laddie Turns Back Hame	3 keys	Charles Wakefield Cadman	.60
Nature Awaits Thee	2 keys	Frank Howard Warner	.50
Night in the Desert	2 keys	Gertrude Ross	.60
Dawn in the Desert	2 keys	Gertrude Ross	.60
Egyptian Boat Song	2 keys	Arthur Nevin	.50

This list is given so that the singers of this country may know of the successful and worth-while songs written by American composers.

Sincerely yours,

White-Smith Music Publishing Co.

P. S. "Dawn in the Desert" is being sung by Mme. Schumann-Heink, and "Night in the Desert" by Mme. Gerville-Reache.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Single Copies ..... $ .15
Subscription Price, Per Year 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew. Renewals should be sent promptly as subscriptions are not continued after the time for which they are paid.

Note.—Customers with charge accounts in good standing may have their subscription charged to their regular account, if desired.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of *The Musician.* All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of *The Musician.*

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in *The Musician,* and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

Introduction prices include postage if cash is sent with order, but if charged on account the transportation is extra.

Accounts solicited from reliable persons.

If you desire to open an account send references with first order.

THREE NEW MUSICIANS LIBRARY WORKS

100 Songs of England. Edited by Granville Bantock. High or Low Voice.

In this volume of the Musicians Library the Editor has wrought with enthusiasm in a domain whereof he is master, and to the exploiting of which he has brought both his conspicuous talent and unwearying research. Beginning with what is probably the most remarkable ancient song in existence, *Sumer is icumen in,* he includes in these one hundred examples of England's lyrics many old ballads of the sixteenth and seventeenth centuries, characteristic songs from various English counties, selections from such men as Purcell, Humfrey, and other masters of the madrigal school, down to the works of Dibdin and Bishop. An essay on the subject of English songs in general, highly instructive notes to each of the songs, and an exhaustive table of references complete this remarkable and authoritative work, which is further enriched by a reproduction in colors of the manuscript of *Sumer is icumen in.*

Paper covers, $1.50; cloth, gilt, $2.50.

60 Folksongs of France. Edited by Julien Tiersot. Medium Voice.

French folksongs, which have only recently been made the subject of research by litérateurs and musicians of France, possess very marked beauties and a decided racial quality. The editor, who is librarian at the Paris Conservatoire, has made a most catholic and judicious selection, which he introduces to the American public by an illuminating essay and individual notes to each song.

Paper covers, $1.50; cloth, gilt, $2.50.

SPECIAL SUBSCRIPTION OFFER:—One copy, paper cover, of any one of these Musicians Library Volumes, with The Musician, one year, $2.25.

NEW PIANO WORKS

Ernest R. Kroeger: The Whole Tone Scales. $0.60.

This little work is designed to meet a need which has arisen since latter-day composers have been employing with increasing frequency the whole tone progressions. Twelve possible scales are given with their corresponding arpeggios both in parallel and contrary motion, all equipped with their most convenient fingering. The work will be a boon to teachers and to all pupils who have encountered in their studies this new and at times perplexing musical resource.

This work will be added to the Ditson Edition. In advance of publication we will accept orders at 25 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.60.

Arnoldo Sartorio: Twelve Melodious Studies in Velocity in Broken Chords Op. 1018, $1.00.

As the title implies, these very useful studies employ chiefly arpeggios in many and varied forms and applications. They are remarkably melodious, whether it be in the style of accompanied cantabile themes in one hand or the other or developed entirely from figuration. As new and valuable pedagogic material, these studies by a well-known composer of technical works are heartily recommended to progressive teachers; they are moderate in difficulty and do not exceed Grade IV.

This work will be added to the celebrated Ditson Edition. In advance of publication we will accept orders at 40 cents, postage paid, if cash accompanies the order; if a charge is to be made on our books, postage is additional.

SPECIAL SUBSCRIPTION OFFER:—With The Musician, one year, $1.75.

NEW BOOKS OF MUSICAL LITERATURE

Howard Wells: Ears, Brain, and Fingers. $1.25.

In this excellent addition to the Music Students Library, Mr. Wells aims to place in the hands of teachers and pupils material which covers the fundamental needs of the latter, and endeavors to train the diverse functions of the ears, brain, and fingers into co-ordinate action. Mr. Wells is an authoritative exponent of the Leschetizky method and has been a successful teacher of the piano in Berlin for a number of years. In his chapter on ear-training he presents much new and practical exercise, such as will recommend the work to every progressive teacher.

Special price in advance of publication, 65 cents. With The Musician, one year, $2.00.

Marie Withrow: Some Staccato Notes for Singers $1.00.

The material consists of short, concise paragraphs on matters connected with singing. They approach the subject on the technical, artistic, and interpretative sides with the purpose of helping singers to attain artistic freedom and independence. The title, *Staccato Notes,* refers specifically to the numerous pithy, extremely practical and stimulating sentences which are scattered throughout the book. This little work should achieve much success, since it is the fruit of the

author's long and valuable experience as a teacher and singer.

Special price in advance of publication, 50 cents. With The Musician, one year, $1.85.

MISCELLANEOUS

J. C. Macy: Young People's History of Music. New Edition. THE notice of the new edition of this work was premature. We shall be unable to publish it for a number of weeks. In the meantime, however, we have a few copies, in perfect condition, of the first edition, which we will send, postage paid, to anyone, upon receipt of 50 cents. This is great value. The price of the new edition is $1.25, subject to usual teachers' discount, instead of $1.00 as quoted in the former notice.

———*———

JUST PUBLISHED

ANTHOLOGY OF GERMAN PIANO MUSIC, Vol. II, LATER COMPOSERS, edited by Moritz Moszkowski, is now on the market. It is a most excellent collection of piano music for the advanced player and to be added to the repertoire of the teacher who has pupils in Grade V and upwards. It includes works from the romantic and modern schools. Paper cover, $1.50; cloth, gilt, $2.50.

FIVE VIGNETTES, Op. 7, by F. Morris Class, a set of five short mood pictures for the piano, will be eagerly examined by discerning pianists. In a general way they may be likened to some of Schumann's shorter pieces. Each piece is preceded by a verse. The cover is a gem of artistic design. Price, $1.00.

LOVE'S TRIUMPH, a cycle of five songs, by Bruno Huhn, for high or low voice; varied and contrasting in style, distinctly vocal in quality, with a marked virile note, and ending with a broad, triumphant climax. Price, $1.25.

AMERICAN TEACHERS AND CONCERT ARTISTS WHO ARE USING DITSON PUBLICATIONS

GLENN FRIERMOOD

GLENN FRIERMOOD

ONE of the well-known singers and teachers of the Middle West is Mr. Glenn Friermood, of Indianapolis, as a large class of pupils well testifies.

Mr. Friermood began his teaching career at Birmingham, Ala., where he remained five years. After a period of study in Berlin, during which time he gave considerable attention to composition under the direction of Hugo Kaun, he returned to the United States and located in Indianapolis, where he is much sought after by the best singers of the state. In his own public singing Mr. Friermood has had special success with Mary Turner Salter's song, *Blossom Time*, published about a year ago by Oliver Ditson Company.

The Organist's Journal

The Largest, Best, Most Useful and Most Practical Organ Periodical

Each issue of The Organist's Journal contains sixteen large pages of Pipe Organ Music, selected from the latest compositions of the leading English, French, German, and American Organ Composers. There are also many transcriptions from the scores of the world's greatest masters.

The music is edited in the most careful manner, special attention being given to the phrasing, pedal marking, registration, etc., etc.

It is printed from specially engraved plates in the finest style of engraver's art. The lithographing is exceedingly clear, and the paper of the best quality

None of the pieces are too difficult for the amateur or the organ student, while the professional organist will find an abundance of choice material exactly suited to his requirements.

There are 196 of the largest size music pages in 12 issues, with an average of about 80 pieces. This music cannot be bought in sheet music form for a dozen times the cost of a year's subscription

Subscription price $3.00 a year. Sample copy 25c

The Organist's Journal $4.50 / The Musician—value } Both for one year $3.75 } Postage additional on Canadian and Foreign Subscriptions

The Best Holiday Gift

For Your Pupils or Musical Friends is

A Year's Subscription to the Musician

$1.50 per year, postpaid. Canadian postage, 25 cents

NO present is more appropriate or acceptable to the pupil, teacher, or lover of music than a subscription to this magazine. It brings them just the sort of music and reading-matter they most desire, and serves as a monthly reminder of your friendship and good will. Let us solve the problem of "what to give for Christmas" for you.

A subscription to *The Musician* will be more appreciated than anything else you can select.

For $1.60 we will send to any address in the U. S. *The Musician* for one year, and one copy of the great book of piano music, **"Something to Play,"** 45 pieces, Grades II-III to IV, worth, at teacher's net prices, in sheet form, $11.00. Just the thing for home playing and for use in teaching as well.

A GIFT CARD

announcing the gift and the name of the giver will be sent to each subscriber so that it will be received on December 24, 1914. All subscriptions intended as Christmas presents should be sent so that they will reach us before December 15th. Be sure to state on your order that the subscriptions are intended as Holiday presents, and give your full name and address so that the Gift Card may be made out correctly.

SUITABLE HOLIDAY GIFTS

FOR TEACHER or PUPIL

European Reminiscences

Spirited Recollections of a Musician's Vacation Tours in Great Musical Centers Abroad

By LOUIS C. ELSON

Professor of Theory, New England Conservatory

Price, 50 cents postpaid

Music, Wit, Philosophy, Biography, Epigram flash brightly on every page of this intensely interesting book which is now going into a new edition. The work has been compared with the best of Mark Twain's travel experiences and yet it is so filled with Mr. Elson's notes upon musical conditions, talks with famous musicians, etc., that it becomes an ideal book for all music workers who see the necessity for looking upon the brighter side of musical life.

Mr. Elson has covered much of the ground where the great conflict is now raging and this makes the book doubly interesting at this time.

A better Christmas Gift for the Music Lover could not be imagined.

The new edition has much additional material and is published especially bound in paper.

Special Holiday Cash Price, 40c postpaid

FOR THE YOUNG STUDENT

Souvenirs of the Masters

Introducing Famous Melodies for the Pianoforte, with Text ad Libitum

By GEO. L. SPAULDING

Price, 50 cents

One of the most delightful collections for young players ever published. The plan is unique and original, one of Mr. Spaulding's best ideas. There are 27 pieces in all, each one introducing a famous melody by a classic or modern master, preceded by appropriate introductory musical material written by Mr. Spaulding, with *ad libitum* text by Jessica Moore. The pieces all lie in the second grade or a little beyond. All are adapted for small hands. No more pleasing introduction to the works of the masters can be imagined. The book is handsomely gotten up, bearing upon its cover page a half-tone portrait of each of the composers represented. The notation is in large type and the spacing is generous.

A few of the melodies introduced are: Schumann's *Happy Farmer*, Mendelssohn's *Spring Song*, Rubinstein's *Melody in F*, Handel's *Largo*, Scharwenka's *Polish Dance*, Paderewski's *Minuet*, etc.

Special Holiday Cash Price, 25c postpaid

HARMONY

A COMPLETE SYSTEM of HARMONY

By H. E. PARKHURST

THE interest attaching to a new work on Harmony depends upon the ability, name and progressive purposes of its writer, as well as upon the presentation and plan of the subject-matter. As a rule, new works on Harmony are met with more or less distrust; the standard works already in existence form a strong bulwark against new comers. Consequently, to attract attention and succeed, a new work must embody all the advantages of the accepted standards in addition to new, modern and musically advanced ideas.

Such a work is offered in "**A Complete System of Harmony**" by H. E. PARKHURST. MR. PARKHURST, acknowledged as an authority in matters pertaining to the study of music, has divided his work into two parts:

Part I. The Fundamental Chords in 12 Chapters
Part II. The Auxiliary Chords in 8 Chapters

with a summary intended both for self-examination and for the teacher's use.

Some of the Distinctive and Important Features of this Work are the following:

Extended and Systematized Treatment of the Auxiliary Chords.
Original Presentation of the Principles of Modulation.
Distinct rules for effective and thorough mastery of Organ-point.
Special exercises for effect and combination of chords without playing them.

PRICE, IN CLOTH, $1.75 POSTPAID

HARMONY

How To BREATHE SPEAK and SING

By ROBERT STEPHENSON, B. A.

The value of a refined, well-modulated voice and distinct enunciation cannot be over-estimated, and in this little manual a teacher of wide experience points out in a clear and practical way how they may be gained. As the basis of both health and voice production, the proper method of breathing is thoroughly explained and taught in a series of simple exercises. Chapters on phonetics, speaking, reading, reciting and the rudiments of singing follow with appropriate exercises. A book for self-instruction.

Cloth, 12 mo., 60 cents net.

EQUALIZING EXERCISES FOR ALL SCALES

A SCALE AND ARPEGGIO BOOK FOR PIANO STUDY

by GEORGE BAILHE — Price, $1.50

(Summy Edition, No. 63)

You know what set of exercises to give your pupil for strengthening the fourth finger, what one for passing the thumb, or for wrist rotation, trill work, or scale and arpeggio execution. Each phase of technique has had to be accomplished by a separate set of exercises.

You have never been able to give him *one set of studies, embracing all this training*—that is what we offer you in Mr. Bailhe's book. It gives your pupil, in one hour's practice, the training he has otherwise spent hours in getting; each exercise applies immediately and effectively to the scale, for each one is indeed *a part of the scale itself.*

Make each minute of your pupil's practice time count, by having him use these exercises. Strongly endorsed by Moritz Moszkowski, Joseph Lhevinne, Isidor Philipp. The book has been priced very low, so that it is within the reach of every student.

PRIMARY COURSE IN EAR TRAINING AND MELODY WRITING

by BESSIE WILLIAMS SHERMAN — Price, 35c

Simple and explicit directions for training the ear and establishing an understanding of melody with a class of little children—to be used in connection with a small set of Piano studies by the same author, "On the Road to Toneland."

What the Montessori method is in other branches of work with the child, this course is for music—the child acquires a knowledge of the scale, intervals, rhythm, accent, cadences, etc., quite unconsciously, just as he earlier learned to talk—with no conscious effort. Confusing technical terms have been avoided—in their place words have been used which are in keeping with appropriate little melody-stories which are all that is visible to the child of the real study he is making.

Price, $1.00

When you write to advertisers, mention The Musician

ANTHONY M. JONES

ANTHONY M. JONES was born at Mountain Ash, Wales, Dec. 25, 1886. When he was thirteen he led a large chorus of men's voices and attracted the attention of eminent Welsh musicians. His début was in London, in 1906. At a national festival, in 1907, he was an easy victor over forty contestants. After successful concert engagements, Mr. Jones toured the United States and Canada, winning great appreciation for the beauty of his voice and fine delivery. In 1910 he located in Pittsburgh where he still makes his home. He is one of the artists for the Columbia Phonograph Co.

Mr. Jones finds the songs issued by the Oliver Ditson Company most useful both in his own public work and in his teaching. Among the late songs those most enjoyed by his audiences and pupils are: *Such a li'l fellow, Thinking of you,* and *Could I forget,* by Dichmont; *When I think of you,* Johnston; *Mistress Rosebud,* Chapman; *Thoughts of you,* Stickles; *Sweetheart's eyes,* Kronold; *In dreams* Kramer; *Love in Spring,* Harris; *Evening fair,* Debussy. We also note the following in Mr. Jones' repertoire: *The eagle,* Busch; *Silent tears,* Chapman; *A dream,* Bartlett; *Maypole dance,* Garnett.

IN PRESS

SELECTED GURLITT STUDIES

Arranged in Progressive Order. Revised, Edited and Fingered, With Annotations

By HAMILTON C. MACDOUGALL

Professor of Music, Wellesley College

American piano teachers have always been fond of Cornelius Gurlitt's Melodious and Instructive Studies—and by right. He has turned his attention to all the fundamental technical problems. In his best moods he suggests Schumann; he rivals Heller in variety of phrasing, and surpasses Czerny altogether in musical interest.

Up to the present time, so far as we are aware, no attempt has been made to pick out the best of the Gurlitt etudes. At our request, Professor Macdougall, of Wellesley College, has examined all the Gurlitt material and selected from it such studies as his long and wide experience has proved to be useful in the best part of piano teaching.

Teachers using the present collection may be sure that the cream of the composer's work is included. The whole range of technical study up to about the fourth grade is covered and the etudes selected are among the most melodious Gurlitt wrote, and in every one he shows himself genial and interesting; always melodious and entertaining.

Great care has been taken in the editing; it is practical, but not fussy. Several new ideas looking toward increased technical fluency are brought forward. The studies will interest every student. We consider this work one of the best put on the market in recent years.

You are an up-to-date music teacher and you take advantage of all legitimate short cuts.

Why Not, Then, Try This Edition of Gurlitt?

A New Year's Gift to Every Music Teacher

If you are a Teacher of either Piano, Violin or Voice, you will surely be interested in the following:

SPECIAL OFFER

We intend to absolutely GIVE AWAY 100,000 copies of sheet music, and the following are our reasons and the conditions of the gift.

OUR REASONS

1st—We know we have one of the best catalogs of Easy Teaching Music in the world.

2d—We know our Editions are as good, as regards engraving, editing, paper and printing, as can be produced.

3d—Although our catalog already has an enormous sale, we realize that there are teachers in the world who are not acquainted with our publications.

4th—We are confident that after you have seen a sample of our music you will want more.

5th—We want your name and address, in order to send you future catalogs and circulars regarding our New Music.

CONDITIONS

1st—The above Offer is made only to bona-fide MUSIC TEACHERS.

2d—Send us your full name and correct address (professional card if convenient), stating which branch of music you teach.

3d—State the kind of music you wish sent: if vocal, whether for high or low voice; whether Ballad, Love Song, or Sacred Song; if for piano or violin, whether it should be first, second or third grade. (We cannot include the higher grades in this Offer.)

4th—This Offer is for a limited time only, and is not good after Jan. 15, 1915.

5th—Send 2 TWO-CENT STAMPS to cover postage.

6th—We shall send samples which we think will prove useful in your future teaching, and consequently some of our very best music.

NOTE—All corresponden e regarding this Special Offer should be sent to our Boston office.

Operatic Tales

By Frederick S. Law

The tales contained in this volume give the plots of the *thirty-seven* operas which practically comprise the modern operatic repertory. Arranged chronologically they cover a wide range—from the classical operas of Mozart to Wagner's operas and music dramas and Paderewski's *Manru*. Brief but interesting chronological and other data are given, including the full name of each composer (not always known), with the year of his birth and death; the title of each opera in its original language—French, Italian or German—with the English equivalent; the year and place of its first performance, and a pronouncing index of composers, operas, characters, etc. Altogether, it will be found unique, interesting and particularly suitable as a gift-book old or young. Cloth Binding, Price $1.50

Makers of Music

By R. Farquharson Sharp

A series of instructive and entertaining biographical sketches of the great composers, with chronological summaries of their works, portraits, facsimiles of their compositions and a general chronological table. The subject matter is presented in a chatty, conversational manner, and is comprehensive without the least suspicion of pedantry. A splendid present for teacher or pupil. Cloth Binding, Price $1.50

KEEP YOUR NAME
BEFORE THE PUBLIC

RELATING TO SCHIRMER'S LIBRARY OF MUSICAL CLASSICS

The music-loving public has long been convinced of the value of Schirmer's Library, and those musicians who have had occasion to use the series most, have been most eager to testify to its superiority over every other American edition of the musical classics. The teacher, especially, has benefited by it, because of the wealth of material contained therein,—material which in many cases would otherwise have been withheld from his use, and which in others has been brought to light and reintroduced to the public. In fact, as the edition stands today, it already contains not only the best of the entire literature of classical music known in the realm of the piano, the voice, and the violin, but also the most valuable pedagogical material in every department of musical education.

But not to the artist and the teacher alone is **Schirmer's Library** useful or even necessary. The music-lover and the cultivated amateur in almost every field of musical endeavor will find here music for his every need; for the **L brary** catalogue also contains the titles of many "Albums" of songs, of piano music, and of violin music, that possess a real recreational value. There are not only albums containing the works of one composer, as in the case of Schubert and Schumann and Brahms and Beethoven, but there are miscellaneous albums comprising examples of various composers, especially as representing the writers of a single school or nation, usually called "racial music." It has often been said that **Schirmer's Library** is the most complete and comprehensive American edition of musical classics, but large as it is now, it is still in its infancy. The publishers intend to add constantly to it, not merely for the sake of increasing its size but to the end of making it universally interesting and useful.

Catalogue free on application. Published by

FREDERICK STEVENSON

"Omnipotence"

For Soprano or Tenor Solo, Chorus of Male Voices, Full Orchestral Strings (or Piano) and Organ.

BY

Frederick Stevenson

Op. 70

40 9-SCORE PAGES
TIME TEN MINUTES
FIFTY CENTS

This work is to be presented at the Second Orchestral Hall Concert of the Chicago Mendelssohn Club (Harrison M. Wild, Director) with Miss Florence Hinkle, Allen W. Bogen (organ) and the full string choir of the Chicago Orchestra.

"Omnipotence" is also programmed for the First Concert of the Hartford Choral Club (Ralph L. Baldwin, Director) with Miss Anna Case, the brilliant young Metropolitan prima donna, organ and full orchestral strings.

Mr. Harrison Wild may be quoted: "A superb work which we will interpret with all the splendid forces at our command—a work that will be programmed by every big male choral body of the country."

DR. HUMPHREY J. STEWART, DEAN OF THE NORTHERN CALIFORNIA CHAPTER, A. G. O., WRITES REGARDING "OMNIPOTENCE":—

"This Motet is really one of the finest things I have seen in years, and this may be taken as an absolutely sincere expression of opinion from one who, I fear, does not often enthuse about anything. I have gone over the work several times and each reading seems to reveal new beauties. It has *inspiration*, and a man must be cold indeed who fails to respond to the sweep of its magnificent harmonies.

"In addition to the San Francisco and Oakland interpretations there should certainly be a presentation by the massed male voices during the Exposition period, and it is to be hoped that this will eventuate so that the work may be heard under the glorious conditions which are even now foreshadowed."

OLIVER DITSON COMPANY, BOSTON

THE PATRIOTIC SONGS OF THE NATIONS

BY FREDERICK H. MARTENS

WHILE the great body of folk-song of any nation is gradually developed in the course of centuries out of the inner existence of the nation itself, singing its everyday duties, its joys and pleasures, its stories and legends, the folk-song of the "patriotic" type is usually called forth by some great crisis of the national life, some great emotional moments in which the patriotism of an entire people crystallizes in song

As might be expected, little heed is paid in a moment of intense exaltation, to what might be called the moral copyright which should protect the songs of any one particular nation against use by another. Of the melodies of our own representative national songs, one only, *Hail Columbia,* may be said to be of American origin—and that was written by a German. The others: *Yankee Doodle,* which came across in Lord Howe's ships with the British army bands at the beginning of the Revolutionary War, acclimatized itself so rapidly that the musicians in buff and blue played it as a matter of course when Cornwallis' hungry soldiers stacked their arms at Yorktown; *The Star-Spangled Banner,* which Francis Scott Key's virile words made the patriotic song of the war of 1812, had rung out above the steaming punch-bowl in London taverns some fifty years before; and *My Country, 'tis of Thee* (originally *God save the King*) might also be considered to have a claim on the Esperantists—so many nations use it as a national hymn that a universal text would make it common property.

The fact, however, that the national air is developed out of the storm and stress of a national crisis is shown in each of these songs, and if we are led, at times, to deprecate their musical value, it should be borne in mind that the critic cannot well put himself in the place of the contemporaries who thrilled to their music because uplifted by the enthusiasm of patriotic fervor, and the new meaning supplied by an appropriate text.

There is but little doubt that every civilized nation has celebrated the great moments of its existence by patriotic song. The marching-songs of the Roman legions, which they chanted alike in Persia or Britain, sang the glory of the Roman power; Taillefer, when he rode into the battle of Hastings, sang the *Song of Roland* to show his Norman pride of race and his contempt of the Saxons; and the song of the victory at Agincourt, which sprang up in England to celebrate the victory of Henry V over the French in 1415, was a national song in the truest sense of the word.

GREAT BRITAIN

Of English patriotic songs of the present day but two, *Lillibulero* and *The British Grenadiers,* date back to the seventeenth century. The catchy tune of the first-named, probably did much to give the song, which is of the "historical" rather than the distinctly national "patriotic" type, its one-time vogue. Originally a quickstep written by Henry Purcell, the Whig Lord Wharton wrote a set of satirical verses to it ridiculing the Earl of Tyrconnel, who was the instrument of the repressive measure adopted toward the Irish Protestants by King James II in 1688. *The British Grenadiers,* also of seventeenth century origin, a rousing march-tune, with a drum refrain, is a genuine national song, since it epitomizes the joy of the English nation at the victories of Marlborough in Flanders. While *God save the King* is emphatically a "national hymn" rather than a "national song," *Rule, Britannia,* composed by Dr. Arne, in 1740, may be called a naval counterpart to *The British Grenadiers,* and is intimately associated with the naval victories of Nelson during the Napoleonic wars—another period of intense national feeling in England.

Finally, *Home, Sweet Home,* its melody probably written by Bishop, in 1823, its text by an American, John Howard Payne, might be considered, together with the Scotch *Auld Lang Syne,* as a patriotic song of a restricted type; one whose appeal is broadly racial rather than individually national. Both of these songs seem to be the common property of the English-speaking nations. Though neither is identified with an epic time or moment of national existence, both are truly national because they establish a bond of sympathy and understanding between all Anglo-Saxon peoples.

The air of *Scots, wha hae,* to which Burns adapted his stirring words, has a twofold claim to be considered the national song of Scotland. Traditionally it is supposed to have been played by the pipers of the Bruce, when he defeated the English at Bannockburn in 1314, and again, as *Here's to the King, Sirs,* it inflamed the loyalty of the Highlanders during the Jacobite risings of a later period. In 1793, six years before he wrote the text which now gives its name to the melody, the idea was suggested to Burns by a visit he paid to the ancient battlefield of Bannockburn.

While of the songs of the Irish, *Saint Patrick was a Gentleman* and *St. Patrick's Day* are thoroughly characteristic musically (and the first mentioned textually as well) of their ilk, *The Wearing of the Green* is far more truly national. Contrary to the stirring airs which are born of a sense of national defiance or victory, this pathetic ballad was wrung from a nation's despair, and speaks the grief of a liberty-loving people constrained by force.

Of the Welsh tunes, *Men of Harlech,* dating from the time when Dafydd ap Ienan ap Einion, a Welsh champion of the White Rose, held Harlech Castle in Merionethshire against the Yorkists under the Earl of Pembroke, is far more spirited and interesting musically, as well as more distinctly national in character, than later airs such as *Land of my Fathers* and *God bless the Prince of Wales.* The representative song of the Dominion of Canada, which should be mentioned in connection with the British national songs, *The Maple Leaf,* is of the deliberately created rather than the spontaneous type. For all that it is a straightforward melody, dating from 1871, and answers its purposes admirably.

FRANCE

In France, frequent dynastic and political changes have given rise to a variety of national songs, calculated to suit the needs of the moment, though none has ever attained the popularity of the *Marseillaise,* which is *par excellence* the national song of France. Beginning with *Vive Henri IV,* a musically robust and dignified popular national song of the seventeenth century, voicing the gratitude of a nation, and always associated with the Bourbons, to *En revenant de la revue* (once known in this country as *Boulanger's March*), the short-lived *Marseillaise* of a modern political party, almost every national crisis has found its corresponding vocal expression.

Like the English *Lillibulero,* the song *Malbrouk s'en va-t-en guerre* is a fine example of the satiric patriotic type. It was probably written by some French officer or soldier who wished to give expression to his disgust at the loss of the battle of Malplaquet, in 1709. This makes it contemporary with *The British Grenadiers.* Forgotten until 1781, Marie Antoinette heard the nurse of the Dauphin sing the child to sleep with it, and her influence made it so popular that soon coiffures, shoes, gowns, cakes, and even bonbons were all *à la Malbrouk.* It is a strange example of the influence of chance in determining popular favor. In this country and in England the melody, exchanging its original satiric for a convivial text, is known as *We won't go home till morning.*

Among the national songs of the first French republic, including Méhul's *Chant du départ,* Rouget de L'Isle's naval hymn, *Héros du vengeur,* the Girondin hymn, *Mourons pour la patrie,* and *Veillons au salut*

de l'Empire—not the "empire" of Napoleon I, but the "realm" of revolutionary France—three stand out above the rest: The *Marseillaise*, the *Carmagnole* and *Ca ira*. But while the *Marseillaise* is a wonderful outburst of the purest patriotic fervor, a flaming appeal to Freedom, in text and music, which, to quote Michelet, "fired all hearts like a stroke of lightning," the *Carmagnole* and *Ca ira* have a more sinister association, for they were the favorite airs of the ferocious *tricotreuses*, the knitters about the guillotine, who sang them as the tumbrils brought the heads of the aristocracy to the deadly liberty-tree for "shortening." Both are fine airs musically, the *Ca ira*, in particular, has a rousing lilt. Racial members of the family of French national airs are: The old provincial French melody *Derrière chez mon père*, which is known in the Province of Quebec and among French Canadians generally as *Vive la Canadienne;* and *La Brabançonne*, the Belgian national anthem, born of the stress of the struggle which made Belgium independent of Holland, in 1830.

GERMANY

The two great national war songs of Germany are: *The Watch on the Rhine* (Carl Wilhelm), and the *Rhine Song* (Kunze), both springing up with the rebirth and triumph of the national spirit in 1870. *The Watch on the Rhine* is, officially, the anthem of imperial Germany. And as *The Watch on the Rhine* is the anthem of imperial Germany, so *I am a Prussian* is that of royal Prussia. This last, an air rather sentimental in type, is far from enjoying the wide popularity of *The Watch on the Rhine*, yet is a Godsend to the military band-master on occasions when the presence of a member of the Prussian royal family calls for proper musical acknowledgment.

AUSTRIA

In Austria, Haydn's *God preserve our noble emperor*, a genuine national anthem, composed in 1797, is identified as the Austrian battle-hymn, with the Napoleonic wars, when France and Austria were adversaries.

HOLLAND

The Dutch songs, *Bergen op Zoon* (17th century) and *Wilhelmus van Nassouwe* (16th century), are fine specimens of ancient patriotic airs born of deep national feeling. They express the spirit of the embattled Netherlands during their struggle against what was then the world-power of Spain. *Let all with Dutch blood in their veins*, its text written in 1815 (when William I, of Orange, was crowned king of Holland, at Brussels), its music, composed five years later, is the most modern of the Dutch national hymns.

SONGS WITHOUT A COUNTRY

Know ye that race, officially adopted in 1875 as the national hymn of the former South American Republic, which became the Transvaal Colony as a result of the Boer War, is one of the historically interesting group of national songs "without a country." Others, farther removed from the sympathies of our own times, are the national airs of what was once the Commonwealth of Poland. *Poland's not yet dead*, and *God for Poland*, are now but impotent musical echoes of the heroic final struggles of the Poles in 1830 against the overwhelming power of Russia. One of the most curious of these homeless national airs is the national hymn of the *Kingdom of Araucania*, which the French adventurer, Antoine de Tounens, tried to found among the Indian tribes of Southern Chile, in 1861, under the title of King Orélie Antoine I. He was captured by the Chileans and sent back to France as a madman. The national hymn of the *Kingdom of Araucania* (it has been published) had little musical merit, and of course, in any strict sense of the word, is not a national song at all. The *Hymno Nacional* of Portugal and *Hymno Nacional* of Brazil, both belong to the category of defunct national anthems. Strange to state, each was written by a reigning member of the Braganza family, whose kingdom and empire respectively have since joined the ranks of the world's republics.

ITALY AND SPAIN

Garibaldi's Hymn is not only musically, but also as regards the text, a worthy sister of the *Marseillaise*, since, like it, it represents a direct outburst of national patriotism, called forth by the war of 1859 between Italy and Austria. The official national air, for military band, used at all state occasions, is the *Marche Reale* or *Royal March*. Spain offers the same strange contrast—a true national hymn (by Colonel Rafael Riego), the song of the Spanish Republicans who revolted against Ferdinand VII, "the absolute king," in 1820, and the medieval Aragonese march-tune, musically negligible, to which words have been set, and which serves as a ceremonial musical identification of the presence of the reigning monarch.

SCANDINAVIA

The Scandinavian national songs are in the main musically virile and stirring. Denmark's best known patriotic airs, *King Christian stood beside the mast* (which might be called *the* national hymn), *Denmark's verdant meadows*, and the *Song of Denmark*, are of comparatively recent origin, the first dating from the eighteenth, the last named from the nineteenth century. In Sweden, both *Carl Johan* and *From depths of Swedish hearts*, are official dynastic hymns, the first composed by a Swiss, which do not antecede the founder of the present reigning family, the Gascon Bernadotte. That international favorite, *God save the King*, is also used, but it seems regrettable that some genuine patriotic song from the epic days of Charles XII should not have been handed down as a legacy from the age of Sweden's glory. Luther's choral, *Eine feste Burg ist unser Gott*, the hymn of militant seventeenth century Protestantism, is also associated with Sweden, for the soldiers of the Swedish king, Gustav Adolf, sang it before the battle of Lutzen.

Nor have the songs of the Vikings — the early Norse kings — survived. Yet, the *Sons of Norway* and *Ay, this land*, though of recent origin, are full of genuine patriotic feeling. The short air *Iceland*, which is a favorite with the dwellers of that Northern country, gives evidence of considerable musical antiquity, and is of the type of *Home, Sweet Home*, rather than of that of the *Marseillaise*.

RUSSIA

One of the finest and most impressive of all national hymns is the Russian *God save the Tzar*, and it is one of the exceptions that prove the rule regarding music written "by command"; for its composer, Alexis Lvoff, wrote it at the order of the autocrat Nicholas I. The text of the ringing national song of Finland, *Our Land, our Fatherland*, shows the distinctive local patriotism of this once independent country, now, politically, a Russian grand-duchy.

THE BALKAN STATES

As might be expected, the national songs of Greece and the Balkan States are modern. The *War-Song* is the older of the two Greek anthems, dating back to the War of Independence and the days of Missolonghi. It has good rhythmic movement and genuine spirit. The *Hymn of Freedom*, often heard during the last war, is the official anthem of the nation. The airs of the Servian and Bulgarian national songs, *Rise, O Servians* and *Join oh Maritzka* are of considerable antiquity. Both originating in the struggles for independence from Turkish rule, are true in spirit to the ideal of real patriotic song. The Roumanian national hymn, *Long live our noble King*, is a "prize composition," and is good of its kind; but after all, spontaneity is the first requisite of a real patriotic air.

MEXICO AND ARGENTINE

We guard our independence, the patriotic air of the Mexican Republic, dates back to the year 1822 when the first Mexican Congress met. Originally identified with the Mexican revolution against the yoke of Spain, its text allows of its use by any of the parties who are now ravaging their native land in the name of freedom. Though of later date (1867), the *National Hymn* of the Argentine Republic also celebrated the birth of the country's political independence. It has a stirring march-rhythm, and its full share of the verbal grandiloquence common to the patriotic airs of Latin lands.

THE ORIENT

From the East come the traditional Hebrew melodies. *Then did Moses sing*, which is a national song of the purest and highest type, a song of exultation celebrates Israel's triumph over her national enemy, Egypt. Evidently of great antiquity, legend claims it was sung by Miriam after the passage of the Red Sea. A counterpart of this exultant melody is the no less characteristic plaint, which tradition assigns to the era of the Morisco and Jewish inquisitorial persecutions in Spain. It is instinct with the despair of a persecuted race.

Yet in general the patriotic national song is not a native of the Orient, but rather a stranger, of Occidental origin, tolerated, as in Turkey (*Song to the Sultan*) and Egypt (*Khedival Hymn*), and acclimatized because convenient for ceremonial occasions.

The Japanese national anthem, however, *May our Lord long reign*, is based on a native air, as is the *Drill Song* (*Shōtai*), which was a favorite song with the "little brown men" during the Russo-Japanese War. Both have the exotic flavor of the pentatonic scale employed by the Japanese, who cling to their native music in spite of the fact that most Japanese regimental bands have been trained by European band-masters and play modern operatic airs.

A brief survey of the patriotic songs of the nations makes clear that while there may be chaff among the wheat, and a natural tendency to "harp on one string," broadly speaking, they are one of the most interesting of folk-song groups. In most cases directly identified with the most glorious moments in the individual existence of a nation, they quicken the dry bones of history with the life of tone. The *Marseillaise*, to cite but one instance; how wonderfully it epitomizes the whole spirit of the French Revolution in song! It is, in many cases, possible to tell the story of a nation or trace the political development of a race in its patriotic airs. The music club could find material for many an interesting program in the general or detailed consideration of national song, and the individual music lover who has not yet explored this field has a definite pleasure in store.

———*———

YOUNG lady to officer: "Major, do you know general bass?"

Major: "Not personally. If I am not mistaken he was retired when I was a lieutenant."

THE MUSICIANS' CLUB OF PITTSBURGH

BY CARL WHITMER

RECENTLY a world-wise journalist visited our atmospheric town. He talked with all the disciples of Tone. On leaving he remarked that he had the unusual experience of not hearing a single ungenerous opinion given by one musician of another. The question came up as to whether this meant a lack of "punch" or just a better understanding. At any rate we believe a Club, such as was formed a year ago, has a decided place in the World's Peace Congress.

CONCERNING MEMBERSHIP AND COMMITTEES

The active membership of the Club is entirely made up of the erstwhile "lords of creation." This may be due to the inability of the ladies to adapt themselves to the merry pipe or that special product of Pittsburgh: the stogie. For there is one very active committee in the Club entirely unappointed, yet going gaily forward, and that is the committee on smoke consumption, composed of several of the most vigorous talents in that line. Other committees with a finer legal standing and nearly as industrious are the Entertainment Committee, with Charles Heinroth, chairman, Harvey B. Gaul and T. Carl Whitmer; the Membership Committee, Vincent Wheeler, chairman, Dallmeyer Russel and George Weitzel; House Committee, Ralph B. Savage, chairman, Morris Stephens, Harry B. Gaul; Convention Committee, Will Earhart, chairman, Wm. H. Oetting, Wm. C. Hamilton, Frank M. Hunter, Theo. Rentz.

Practically all of Pittsburgh's best musicians are members. All phases of music are represented. Not least interesting is the composers' group; organists, pianists, and singers are, as usual, in the ascendency. Diverse schools meet on a common ground of uncommon sociability

CONCERNING OFFICERS

Presidents naturally are born. They also are elected. Charles N. Boyd—well known to readers of THE MUSICIAN—was born a few years ago. Elected one year ago. Mr. Boyd has charge of the music in Western Theological Seminary where rare programs of early and modern music are given weekly. He is also director of a choir where Bach is on the program every Sunday of the year in either pipe or vocal organs. Incidentally Mr. Boyd edits United Presbyterian hymnals, conducts choral societies, and knows several ways of being a music editor on daily papers.

The Vice-President is Mr. Will Earhart, known wherever public school music is known. Mr. Earhart is the head of Pittsburgh's public school music system. His recent report of our school music from a national standpoint, through the government's publications, is enlightening. His handling of the whole problem is heroic.

The Secretary, Mr. Oscar W. Demmler, is engaged in solving public school music problems.

The Treasurer, Mr. William Oetting, is organist of a large church and directs numerous youth how to turn their hands, feet, and brains in the best and most approved manner. Mr. Oetting has written songs and several piano works.

The above officers, with Ralph Butler Savage, E. N. Bilbie, and John A. Bell, constitute the Board of Directors.

A word about the chairmen of committees is in place. Mr. Vincent Wheeler is organist of the First Unitarian Church. Songs, organ works and especially *a cappella* compositions for choruses in the ecclesiastical style are the interesting results of his application to the art.

Charles Heinroth is official organist of the Carnegie Institute with its fine four manual organ. It is here where the organ recitals of national importance are given from October to June, inclusive, with two recitals a week, with attendance often of two thousand or more, from all classes of people.

CONCERNING CLUB ROOMS

The headquarters of the Club are in the well known Schenley Farms district. This is where rise in imposing fashion the Carnegie Institute, the Carnegie Technical Schools (with more than three thousand students), the Schenley Hotel, Masonic Building, University of Pittsburgh, the Cathedral, the lovely Baptist Church, numerous other churches, and thousand or more, from all classes of people.

OUR CONSTITUTION--ALSO THE M. T. N. A.

Our constitution is simple. We stand for the promotion of "good fellowship among local musicians and to extend hospitality to visiting musicians." One of the first things we did to show also that we stand for the things which are best for the country, for that which we conceive to be the greatest for the growth of all that is worth while, was to invite the Music Teachers National Association to hold its meetings here in December. It was the first united move and we expect to prove worthy of our calling. They are coming, and the sessions will be held in the Hotel Schenley and the Carnegie Institute.

Returning to the constitution, we have active, associate, honorary, and life classes of membership. The voting privileges rest in the active membership—which "shall consist of men whose time is devoted in whole or in part to professional musical activity, or to the promotion of musical progress." The associates are lovers and patrons of music.

QUALITIES AND PERSONAL MATTERS

Our Club has comparatively simple tastes. Our styles of hair—when we have any—are not numerous and our neckwear is conservative. We range in height from a shadow to Apollo. We are all supposed to be self-supporting. Our treasury proves we are excellent pay and prompt withal. It is astonishing how many are married. (Does that account for the large attendance at Club functions?) Not too many dinners (though many Dutch treats) keep our coffers solid. We are not, however, rated in "Dun's."

The organization of the Club began with the incitation of the gustatory centers, a very elemental method of association. Groups who are able by location to combine nutrition with excellent thought still gather several times a week for said purpose. These informal "salons" are held in some central cafe.

ENTERTAINMENT

Since "talk" is life or destruction to a club, according to the patience of the ones talked to or at, the Entertainment Committee plans, from time to time, diversions which so far have not been too taxing on the intellect. Some of our members may be given Schoenbergian shocks later. The Club, however, is too young to have created any tradition but one and perhaps the best way to keep it young in spirit is to have only that one, namely, the tradition that all club members are equal. So, good faith is the order of the day.

IN CONCLUSION

And what does all this mean to a city but a gain in friendliness, an understanding that back of a method opposed to yours or mine are knowledge and sincerity as great as yours or mine, even if it is different in scope and intention. This is more far-reaching than one may suppose. It spells creation of respect for the workers in music and the feeling that we are all after the same end. I do not believe that any two of us agree on method, but we all seem to agree that there is more than one method in the world. And—and—and, the world is the gainer for this practical psychology.

We get information by association. Let there be light on other people and there is—UNDERSTANDING!

———*———

VERDI'S FIRST IMPROVISATIONS

IN his boyhood Verdi was for a time the pupil of a certain Pietro Seletti, canon of the Cathedral of Busseto, who taught him Latin, but was inclined to discourage his love of music.

"What good will it do you?" asked Seletti. "You are getting on capitally with Latin; you must be a priest. You will never make your living by music. Do you imagine that you will ever be made organist of Busseto?"

But one Sunday morning the regular organist did not appear, and young Verdi had the chance to play as his substitute. Verdi's performance made a deep impression, and after mass was over Seletti asked him in astonishment whose music he had been playing.

"It was mine, sir," replied the boy. "I followed my own inspiration."

"Follow it always," said the canon, "and study music as much as you like. I will not advise you to drop it."

MAKING AMERICA MUSICAL

BY HENRY T. FINCH

SINCE the most destructive war of all times broke out in Europe, paralyzing musical life almost everywhere, it has been argued by many writers that much as the situation is to be deplored, it would be foolish for us Americans not to seize this opportunity for enriching and enlarging our own musical activities.

A cynic might ask: "Why should we try to make America musical, or more musical than it is? Is not music a mere accomplishment—a luxury we can easily do without?"

WAR MUSIC A NECESSITY

How very far it is from being a superfluous luxury we can learn from this very war. With the armies of Germany, Austria, Russia, France, Belgium, and England spending together more than twenty million dollars a day, and facing financial exhaustion, each of these countries nevertheless has deemed it absolutely necessary to maintain its military bands. Russia alone has in the field over 50,000 musicians, and a similar number in her military and naval training schools.

Many attempts have been made to banish music from the army because of its great cost, but the generals have always thwarted these attempts. The late Gen. Linevitch, commander of the Russian army, declared that "music is one of the most vital ammunitions of the Russian army. Without music, a Russian soldier would be dull, cowardly, brutal, and inefficient. From music he absorbs a magic power of endurance and forgets the sufferings and the mortality. It is a *divine dynamite.*"

Napoleon attributed his disastrous defeat in Russia quite as much to this effect of military music as to the arctic cold. He wrote in his notebook that "the weird and barbaric tunes of these beastly Cossack regiments simply infuriated the half-starved Muscovites to the maddest rage, and they wiped out the very cream of the army."

This does not seem to agree well with Congreve's dictum that "music hath charms to soothe the savage breast." But the poet was right, too. The most wonderful thing about music is that it can inspire in the human breast any emotion, from the most ferocious to the gentlest. Music is not only "the food of love," as Shakespeare called it; it is also the food of religion, of grief, and of merriment, in all their phases. No other art is so protean and sympathetic; no other associates itself so closely with all the subtle changes of our feelings; and that is one of the main reasons why it is so popular and deserves to be generally cultivated.

AT FUNERALS AND WEDDINGS

A wealthy woman in Vienna once directed in her last will that her favorite Strauss waltz should be played at her funeral. It was done, although every one felt the incongruity of the proceeding. Sad music is craved by all mourners, be they civilized or savage. A funeral without a dirge seems almost as anomalous as would be an opera without music.

One of the most pathetic of my experiences was at the obsequies of Anton Seidl, at the Metropolitan Opera House. When the Philharmonic Orchestra intoned the *Adagio lamentoso* of Tchaïkovsky's *Pathetic* symphony, there was hardly a dry eye among the hearers. But no world-famed orchestra, or church organ, or huge military band is needed. A quartet of singers or trombones, or a simple parlor organ suffices to melt the mourners to soothing tears. No less than in war, music is a necessity at funerals.

And was there ever a wedding when music was not heard or craved? As the funeral marches of Handel, Beethoven, and Chopin have been heard in nearly every house in which there has been a death, so the *Bridal Chorus* from *Lohengrin* and Mendelssohn's *Wedding March* have been played wherever a marriage has been celebrated.

It is odd that, notwithstanding this universal demand for nuptial music, there are only a few really good wedding marches in existence. Here is a chance for the American composer! If he cannot write anything of his own that will vie with the productions of Wagner and Mendelssohn, he might take a hint from a chapter of Wolzogen's famous musical novel, *Kraftmeyer* (recently translated and published as *Florian Meyer*), in which Liszt, who is one of the principal characters in the story, plays at a betrothal an improvised medley of love and wedding motives from various operas and other sources.

RELIGION'S MOST POWERFUL ALLY

In the church, as everywhere, music is a necessity.

The English are the most religious of all nations, and it was one of their great statesmen, Gladstone, who said that "ever since the time of St. Augustine, I might, perhaps, say of St. Paul, the power of music in assisting Christian devotion has been upon record, and great schools of Christian musicians have attested and confirmed the union of the art with worship."

Germany's great religious leader, Martin Luther, placed music, as a civilizing influence, as second only to religion. He explained "why the prophets preferred music to all the other arts" and confessed that his heart was often "solaced and refreshed by music when sick and weary."

So thoroughly was the Church imbued with the idea of the necessity of an alliance with music that for several centuries it almost monopolized the services of the greatest composers, headed by Palestrina and Bach.

Nor was it the Christians alone who paid this tribute to music as an essential part of the service. All other religions recognized its power as an ally, in all parts of the world, and in all stages of development, from savagery to civilization.

MUSIC, MUSIC, EVERYWHERE

A whole number of THE MUSICIAN might be filled with facts like the foregoing, showing how far music is from being a mere accomplishment and pastime, and how deeply it enters into the recesses of our inmost life. At political, as at religious meetings, we have music; at the restaurants and hotels and at most social gatherings, we have music. Music, music everywhere! It has been estimated that in hundreds of ways the enormous sum of $600,000,000 is expended on music annually in the United States.

Even if we cut that estimate by one half, it is still an enormous sum. And if it be true that "money talks," have we not reason to claim that we are a musical nation already?

To a considerable extent, yes. But a great deal of this money is spent in unworthy ways—wasted on the lowest forms of the art. We are a musical nation commercially, there is no doubt of that—many fortunes have been made out of it. But are we a musical nation artistically? Does music appeal to us as a fine art?

No doubt we are, like most peoples the world over, and of all stages of civilization, affected by war music, by funeral dirges, by religious chants, by the various kinds of music that spice our social gatherings. But this is only an elementary state of appreciation. It shows that our *instincts* are all right, but says nothing about the development of the faculties for appreciating music *per se,* in its highest manifestations.

The editor of one of our leading magazines once informed me he estimated that only three or four per cent of its purchasers were sufficiently interested in music to read a serious article about it. That seems a discouragingly small percentage, yet it would really be optimistic to assume that as many as four per cent, or 200,000 of the 5,000,000 persons in Greater New York are interested in the best music. If there were as many as that, the orchestras of this city would not need millionaires to support them, and most artists would not have to give recitals there for prestige rather than for profit.

VALUE OF MUSIC AS A FINE ART

No, music as a fine art is not appreciated here as it should be. It should be cultivated more widely as such because it is the most harmless of all amusements. That is one reason and a very good one in itself. But there are many others. Shakespeare called attention to one of these when he wrote that it has the power of "killing care and grief of heart."

Allied to this is a third: The power of averting *ennui,* or boredom, which, as Schopenhauer justly remarked, is the worst of all tortures. No one who loves good music and has access to a piano is likely ever to be bored; while for those who cannot afford to go to the theatres or other public entertainment, home music is a joy forever. Those who can indulge in it often feel like echoing the Chinese saying that "music has the power to make Heaven descend upon earth."

Margaret Fuller thus describes the effect of music upon her: "I felt raised above all care, all pain, all fear, and every taint of vulgarity was washed out of the world."

Is not a fine art which can do this worth cultivating by everybody?

In America, particularly, we need music as a tonic, to cure the infectious and ridiculous business fever which is responsible for so many cases of premature collapse.

That music is a great tonic was known already to the ancient Greeks, whose greatest philosopher, Plato, declared that the practice of it does for the mind what gymnastic exercises do for the body. The ancient Hebrews also knew that music heals a wounded mind or heart.

Absorption in the refinements of music weans us away from low and demoralizing pastimes, and this in one of the main functions of the divine art.

THROWING AWAY INNOCENT HAPPINESS

Its chief function, however, is to give us pleasure. We are wiser than the old Puritans; we know that pleasure, when refined, is wholesome. Sir John Lubbock once wrote a book on *The Pleasures of Life,* which has sold by the hundreds of thousands. It has had this large circulation because it eloquently expresses the sentiments of the readers. In one of the chapters, *The Duty of Happiness,* he remarks: "It is wonderful, indeed, how much innocent happiness we throw away."

This is true particularly of those who fail to cultivate music. There are enough charming pieces and songs in the world to fill up every spare moment in our lives with ecstatic bliss, and to banish every temptation to indulge in vicious or vulgar pastimes.

No art is so companionable at every moment as music. "How often I relate to my piano everything I should like to communicate to you," Chopin once wrote to a friend.

INFLUENCE OF MUSIC TEACHERS

Teachers would do well to keep in mind these diverse considerations proving the desirability of an intimate acquaintance with music. It will help them to convince parents that music is not a mere luxury which might as well be given up in war time, or hard times in general. It may not be as important as food and clothing and shelter, but it is a fact worth pondering that while there are savages who do without clothes and houses, none have been found who do not have some kind of music. Shall we be below savages in this respect?

Not all teachers realize the tremendous influence they can exert in making a community musical.

Look at the case of Liszt. Nearly all the promising young pianists of his time studied with him at Weimar, Rome, or Budapest, and thence they carried the gospel of his art to all parts of the world. William Mason and Amy Fay were two of the Americans who benefited by his lessons. They handed on the traditions to their pupils, and these, in turn, are scattering them broadcast. Many others, like them, have helped to leaven the community with sound musical knowledge.

It is an advantage to be a pupil of Liszt or of Leschetizky, but by no means a necessity. Many a teacher in many an American town has, without that advantage, succeeded in creating a genuine musical atmosphere in his or her locality. Tens of thousands of pupils are turned out by our conservatories and private teachers every year. Few of these attain international or national fame; but many of them become local celebrities and help to make their neighbors musical.

Their influence is exerted not only on their pupils but on the families of the pupils. I recall, for example, the case of a girl who, when she first began to take lessons, was voted a nuisance by her brothers. Up to that time they had no interest whatever in music, but after a while they learned to like the pieces she played and presently they began to spend their money on concerts and operas. There are many such cases.

SCHOOL MUSIC

One of the most important influences in making a community musical is the school.

Probably the principal reason why the Germans are the leading musical nation is that they have had music in their schools for generations.

In our own country there are still not a few educators who frown on music as a fad and a waste of time. They do not realize that it rests and refreshes the minds of the children, vitalizing them as fresh air and exercise do their bodies.

Fortunately the opposition is weakening and much progress has been made in school music since Lowell Mason did his pioneer work.

The most important lesson we can learn from Germany in regard to school music is that in its early stages its main features should be assimilation or imitation. Professor Farnsworth, of the Teachers' College, New York City, remarks on this point: "If we include the mothers' schools and kindergartens, in the first five or six years the child does nothing with notation, but learns *a great many beautiful songs,* singing them year after year until his eleventh or twelfth year, when he practically has a fine repertoire of the best chorals and folk-songs."

This "learning of a great many beautiful songs" in childhood is the best way to make a nation musical. It makes all the young ones interested in the art, thus creating a large number of listeners; and as every observer knows, good listeners and plenty of them are more needed than public singers and players, of whom, owing to the limited number of listeners, we already have more than we know what to do with.

In the high schools and colleges much has been done in the last ten years in the way of stimulating an interest in music by the formation of singing clubs and orchestras, which give attention to a higher class of music than that cultivated by the mandolin and banjo clubs. Co-educational schools have the advantage of providing for a division of labor, the girls playing the strings, while the wood-wind and brass instruments are taken by the young men and instructors. Valuable hints as to what can be done along these and other lines in making America musical may be found in the reports of the Music Teachers' National Association, copies of which may be obtained of Waldo S. Pratt, 86 Gillett Street, Hartford, Conn. There are hintful articles and pages on what can be done by encouraging municipal band music in parks; by starting violin classes in schools, as is done in England on so large a scale.

ORCHESTRAS AND OPERA COMPANIES

The fact that St. Paul has given up its orchestra does not indicate a general backward movement. It was really foolish for the "Twin Cities" to have two orchestras. The excellent Minneapolis Orchestra is quite able to supply all the music needed in the neighboring city. It gives some two hundred concerts a year in dozens of cities and towns. New York has three orchestras which go on the road. Boston, Philadelphia, and Chicago also send their orchestras on tour, and there are others.

Owing to the great expense of maintaining an orchestra this is a wiser plan than to have too many local orchestras, and yet several cities are added every year to the list of those who have their own. Wherever a sufficient number of wealthy men and women can be found to back up such organizations, they should be established, by all means, for nothing stimulates musical progress as orchestral concerts of a high class. It is well, however, not to make them so "high toned" as to repel those who are not up to the most abstruse music. Put a goodly number of melodious and simple works into the programs and the audiences will surely increase in size.

To operatic managers it would be superfluous to give such advice. They simply cannot exist unless they make up their repertory of the most tuneful and popular operas. Fortunately these are usually the best; nothing could be better than *Faust, Carmen, Aïda, Madame Butterfly, Lohengrin,* or *Die Walküre,* to name half a dozen favorites.

Opera, with its scenery and action, appeals to thousands who shun orchestras. It is therefore to be regretted that it is so difficult to make it pay. Both the Chicago and Boston Opera Companies went out of business this winter on account of the war, it was said; but there were other reasons. The plain truth is that high-priced opera cannot be made to pay its way unless there are plenty of great singers, and great singers are scarce.

It is estimated that there are over 300,000 music teachers in America. If only one in every thousand of these would provide a great singer, the problem would be solved, and the operatic performances would greatly help the efforts to make America musical.

SOLOISTS AND MANAGERS

To recital givers America is still the dollar land. Many, to be sure, who come from abroad expecting to pick up gold in the streets, are disappointed, especially in New York, where competition is excessive. Outside of the largest cities, Americans are certainly becoming more appreciative every year of the foreign and native singers and players, who are less and less compelled to "stoop to conquer." Some of the greatest artists have expressed their surprise to me at the genuine musical appreciation to be found even in out of the way American towns.

The Women's Clubs are doing a great deal to smooth the path of touring artists the country over, and an interesting article might be written on the many ways in which these clubs are helping

36TH ANNUAL MEETING OF THE MUSIC TEACHERS' NATIONAL ASSOCIATION PITTSBURGH, PA., DEC. 29-31

The next meeting of the M. T. N. A. is to be in the East, and is to be held in a city which has not heretofore been visited by the Association. The Musicians' Club and the Tuesday Musical Club will be the hosts of the visiting members, and will undoubtedly take splendid care of those who come from other cities. Mr. Will Earhart, head of the Music Department of the Public Schools of Pittsburgh, is chairman of the local Committee of Arrangements. A reception is to be tendered to visitors, an occasion which is always enjoyed by those who reach the city in time. A concert of original compositions and a visit to the Carnegie Institute have been arranged as special features.

The regular sessions of the Association will begin on Tuesday, Dec. 29, and continue to Thursday. The Piano Round Table discussions will be under the direction of Prof. H. C. Macdougall of Wellesley College; the Harmony Conference will be in charge of Prof. H. D. Sleeper, of Smith College; the Voice Conference will be directed by Prof. J. Lawrence Erb, of the University of Illinois; and the meetings of the Public School Music Section will be under the chairmanship of Mr. E. B. Birge, of Indianapolis.

An interesting feature will be papers by four of the original founders of the Association, Theodore Presser, Calvin B. Cady, N. Coe Stewart, and Wm. H. Dana.

An entirely new departure is the presence of a representative of the English musical association, Mr. Percy R. Scholes, Extension lecturer of several English universities, and editor of *The Music Student.* He will make an address on some phase of music education in Great Britain.

Other papers will be a report of the last meeting of the International Music Congress at Paris, by Prof. J. Lawrence Erb, one on some features of musical work in the Northwest by Prof. Elias Blum, of Whitman College, Washington, and one by Prof. Dykema, of the University of Wisconsin, describing the experiment of bringing the Music Department of the University into touch with the needs of the people.

As said before Pittsburgh is central to a large section of the country and there is every reason to look for a fine attendance of members of the musical profession. The work of the Association has been criticised by certain persons who claim that the body is too small to use the name National. There is no reason why this should continue. The objects of the Association and the problems discussed are all such as to deserve the support of the profession as a whole. The greater the number who attend the greater the possible usefulness of the Association. Eastern musicians should make a special effort to attend.

For particulars address Prof. Charles H. Farnsworth, President, Teachers' College, Columbia University, New York, or Prof. J. Lawrence Erb, Secretary, University of Illinois, Urbana, Ill.

A FAMILY STRING QUARTET

BY A. WALTER KRAMER

THOSE persons who still entertain doubts as to the grade of musical appreciation in the United States have a refreshing piece of evidence, which may tend to change their belief, in the reception which has been accorded a chamber music organization in this land during the past three seasons. This occurrence is perhaps unparalleled; for even the Old World, with its traditions, its customs, hundreds of years old, does not receive new artists readily. Our country, eager, young, willing to learn and a sympathetic listener, has responded to a new call. It is the call of chamber music.

Much nonsense is still believed about chamber music. Some will tell you that it is "for the few," that it is dull and that it lacks in variety. Even Franz Liszt, who, by the way, should have known better, is said to have remarked when asked why he did not write a trio or quartet: *"Kammermusik? Jammermusik!"* ("Chamber music? The music of woe!") And he meant it in the sense of woe for the persons who had to listen to it. Yet one can understand a man like Liszt not feeling sympathetically toward the intimate type of music. Liszt was a seeker after effects, not a creator of the pure and sublime in art; only in rare instances did he create things which were noble and aloof, such as the *Margarete* theme in the second movement of the *Faust* symphony.

We have had chamber music in this country for years. Franz Kneisel and his associates paved the way and played throughout the land at a time when the inhabitants of the United States were truly acquainted with the music of the great composers. The seed, sown by the leader of the above mentioned Quartet, took root and from it sprang a large army of men and women all through the States who love chamber music, who play chamber music and who spend some of the pleasantest hours of their lives in its pursuit.

Germany's thorough musical character has been built upon one principal thing: *Chamber music in the home.* Whether the son of a family played the violin accompanied by his father at the piano, or his mother sang accompanied by the father, there was music in the home and music of a worthy type. And it is this which has made the German nation what it is today in the musical world. Standing, as it does, for the serious in music it may attribute it to a zealous cultivation of good music in the home from childhood to manhood.

America has welcomed a chamber organization during the last few musical seasons. Even our small towns have waxed enthusiastic over Beethoven quartets and the like. And the ensemble which has given so much pleasure, which has been so well received is the Zoellner String Quartet. One may indeed be proud to record that this is an American chamber music organization, that it represents this great land more than adequately and that it will yet carry the banner of "American in music" far afield.

The Zoellner Quartet is indeed unique in its composition. Father, daughter, and two sons comprise it; thus, that intimacy, which is so integral a part of performing chamber music, is attained here as in no other contemporary quartet. How this happened makes an interesting chapter, it seems, in the musical history of this country and it is well worth setting down so that it may be known in years to come.

JOSEPH, JR., ANTOINETTE, AMANDUS, MRS. ZOELLNER, MR. ZOELLNER

THE ZOELLNER QUARTET, 1914

ANTOINETTE ZOELLNER, FIRST VIOLIN;

AMANDUS ZOELLNER, SECOND VIOLIN;

JOSEPH ZOELLNER, SR., VIOLA;

JOSEPH ZOELLNER, JR. VIOLONCELLO

So reads the *personnel* of this quartet listed at the top of its programs The violist, Joseph Zoellner, Sr., was born in Brooklyn, in 1862, of German parents. Like most children who really have a gift he showed his love for music at a very early age. At six his father, who played the flute, a popular amateur instrument in those days, granted his desire and got him a violin. Almost instantly did little Joseph play simple melodies by ear on his instrument. The family left for Europe, and in Würzburg, in Bavaria, the boy was placed under a good teacher. One and a half years of solid foundation work and the family returned to America interrupting the boy's studies. Once more the Zoellners retraced their steps, and this time to Aschaffenburg where the boy, now ten years of age, studied violin and piano under Ostermeyer and Hegner. Here he also attended the *Musikschule* (Music School) of the city. His precocious talent was recognized; he became a favorite pupil and played solo much in public. In 1872 the family was dealt a harsh blow in the matter of finances and America once more became their home. Money was scarce and economy had to be practised. It seemed as though young Joseph's musical career would have to be abandoned. He was obliged to take anything that came along and also to help his father.

But at fourteen the boy met a German manufacturer who had weekly chamber music evenings at his home. He liked Joseph and a string quartet was formed, a quartet that not only played through the Haydn, Mozart, and early Beethoven quartets, but, what is more, actually studied its parts, rarely the case in amateur quartets. The boy worked in the day and occupied his evenings playing and teaching the violin. Later more pupils and the director's post at the old Niblo's Garden on Broadway, New York, combined to make the road easier. At once the boy placed himself under one Lorenzen, a pupil of the famous Ferdinand David, and with him he worked for a year and a half until the teacher died. Theodore Jacoby was his next instructor, and with him he went through the large works of the violin literature. He was married in 1884.

Now begins the story of the Zoellner Quartet of today! Antoinette, the first child, showed talent, and from her fourth year she was taught violin daily by her father. A prodigy indeed was this young woman, who today plays with musicianly authority the first violin in such works as the Debussy Op. 10 and the magnificent quartet of César Franck, for at eight she played from memory the 23d concerto by Viotti. The first boy, Joseph, Jr., was found to desire to study the piano and at six he began his studies. The third child, Amandus, leaned toward the violin. His studies were begun at the age of four and a half. And so the young Zoellners were started on their way.

From duets, trios, etc., the quartet was arrived at, for Joseph, Jr., who had studied the piano had since begun the study of the 'cello. It was when Amandus was about seven and a half that the quartet was founded. From the beginning the idea of serious work was impressed on the children. As Mr. Zoellner, Sr., puts it: "'Never play things through!' was what I told them over and over again. I always impressed upon them the idea of conscientious, thorough work, and they have never forgotten it. The first public appearance of the quartet was in a church on Schermerhorn Street, Brooklyn. Our number, the familiar Hadyn *Theme and Variations* was to come at the end of the miscellaneous program, but it had to be announced that it would have to be changed to the opening number as the second violinist, little Amandus, was falling asleep!"

Perhaps no family has moved its domicile as often as did this artist group. From Brooklyn, where Mr. Zoellner now had a well-established music school, they went abroad, the father having the intention of taking charge of a school in Forst, near Leipzig. This did not materialize and the family remained in Dresden for a while; here it was possible to hear the performances of great artists which was of great importance to the young musicians. "Back to America, to California!" was the order, this time given by a physician who advised a climatic change owing to the ill-health of Mr. Zoellner and one of the children. Off to the Coast went the family and there a flourishing school was established by the father, assisted by his children. Concerts were given in Stockton and other Californian cities, and there they remained for five years.

But the desire to bring the Quartet to a higher state of excellence would not rest and though sacrifices had to be made Mr Zoellner saw only one thing before him. That was the goal for

(*Continued on page* 865)

OLD TIMES IN AMERICAN MUSIC

By LOUIS C. ELSON

AS long ago as 1350 Jean De Muris, in writing about the state of music, sighed regretfully for the "good old times." It is quite possible that the only persons who did not vaunt the good old times were Adam and Eve in the earliest stages of their existence. Now, when it comes to the subject of American music, there are many who are so delighted with the progress that has been made in this country that they always speak of the older epoch as one of barbarism. Yet there was much of musical endeavor and much of earnestness in the musical life of this country even in the middle of the last century, although music was not nearly so widely understood then as now. It is the object of this article to dwell upon a few of the bright spots of that past which so many regard as being of Cimmerian darkness.

MUSICAL CRITICISM

Musical criticism (always a reflection of musical taste) was just beginning to lift its head. Before 1850 any flowery notice of a concert, written at any time after the event, was supposed to fill all the exigencies of the case. Elegance of diction (what one might call an exasperating kind of literary affectation) was the rule. One would scarcely find such a sentence as the following (from a criticism written in 1821) in any modern review of a Handelian chorus:

"The superiority of vocal over instrumental music consists in the more complete and definite expression which the combination of words with notes affixes to a composition. The elocution of the art of singing divides itself into distinct branches, one of which is technical, the other intellectual and philosophical."

In 1852, however, there was a different kind of criticism, in *Dwight's Journal of Music*, which then began. But even in this there was a degree of verbal embroidery which often took the place of technical analysis or scientific judgment. In the very introduction to the first number, Mr. Dwight speaks of Germany as "the land of real music," and his views upon musical subjects were generally within Teutonic boundaries. It is interesting to read in an editorial of that first number how much of musical activity there was in Boston over a half century ago:

"Evening concerts and afternoon 'rehearsals' have been thronged, the winter through, by eager listeners to the orchestral symphonies and overtures of Haydn, Mozart, Beethoven, Mendelssohn, and Gade; to Handel's and Mendelssohn's sublime oratorios; to choice chamber music."

Biscaccianti, Alfred Jaell, and Jenny Lind are named as special attractions, and the Bosio-Bettini-Badiali troupe of Italian opera singers.

We should scarcely go very wild over Gade at present, but at that time he was a rising star in composition, and Mendelssohn was held to be the acme of music, in America as in England.

OPERA

Italian opera was a very different thing then from what it is now, in America; as different as a modern dreadnought is from a wooden frigate. There were no very high-priced stars. If there was a ballet it was a very disconsolate and lonely one. The few members of the chorus were leather-lunged veterans. The scenery was something to remember and shudder at. The drawing room in the castle of the Ashtons (in *Lucia*) was of the dismal boarding-house type; and the Duke in *Rigoletto*, and the unfortunate Manrico, had the same barren room in their castles—and the same scanty furniture. But sometimes the underpaid artists would electrify the audience with a burst of true Italian enthusiasm, which would extend at once to the hearers, and there would be a thrill of delight in the music such as I have seldom experienced in a more modern, "all-star" performance. The prices, too, were very different from those of the present. A dollar would buy a very good seat, but I recall rushing up long flights of stairs in a wild effort to get into the first row gallery seat, at twenty-five cents, or, on some very festive occasion, twice this sum.

INSTRUMENTAL ORGANIZATIONS

Chamber music was but poorly patronized, but the Mendelssohn Quintet Club, in Boston, and the Mason-Thomas String Quartet, in New York, made the American public acquainted with the best string quartets of the masters. The latter organization first taught the American public the beauties of Brahms' and of many of Schumann's works.

Dwight's boundaries were never more clearly shown than when he attacked Gottschalk's piano playing in Boston. His German tendencies could find nothing to sympathize with in the tropical warmth of the Latin pianist. But, after all, at this time, Mason did more for the instrumental advance than Gottschalk, and was more distinctively an American pianist, for Gottschalk, born in New Orleans, was decidedly French in his tendencies.

The Germania Society, although it was about half the size of our present orchestras, gave excellent interpretations of the chief classical symphonies. They made Boston their home. And when Carl Bergmann left them they took their tall young flute player as conductor, and that was the launching of Carl Zerrahn.

Some years later we find Thomas founding his great orchestra. In 1862 he was giving excellent programs both in New York and in Boston. He sometimes sugar-coated the pill a little for the non-classical auditor, and we find such a number as *Amaryllis, by Louis XIII* (it was not composed by that monarch, but by Baltazarini), upon his programs, and often a dainty waltz appeared.

New York had a critic who had much more technical musical knowledge than Dwight — Wm. Henry Fry. Just as Dwight had German proclivities, Fry had strongly Italian predilections. His work upon the New York *Tribune* was the first able newspaper criticism of music that had yet appeared in America.

THE PEACE JUBILEES

By these, and by many other instances which might be quoted, it will be seen that the leaven was in the meal, the seeds were being planted which were to grow into the great musical harvest of the present. Yet, a little later, there came an influence which took advantage of the love of the sensational in America and turned the quickly growing interest in music into a classical channel. The two Peace Jubilees, organized by P. S. Gilmore, did more for the advance of music in America than any events that I can recall. It can scarcely be questioned that there was some degree of humbug connected with the second festival, of 1872.

It seems rather comical to read of a bass drum eight feet in diameter, which was made especially to punctuate that festival. It may seem equally strange to the cultured musicians of today to read of a piano solo played in a hall seating some 80,000 people, and to imagine a grand piano about eight feet long, made by a manufacturer especially for Arabella Goddard to astonish the audiences with. National music emphasized by cannon was also thought rather extreme, until Tchaïkovsky composed his "1812" overture, which employed an almost equal outdoor tumult of accessories.

Forty solo singers sang such works as Gounod's *Nazareth* in unison, and a "bouquet of artists" with forty solo singers on each part gave the quartet from *Rigoletto*, while the ever popular *Lucia* sextette also was given at wholesale. I contributed the words of *How can I bear to leave thee?* (*The Soldier's Farewell*) which conundrum was voiced by some 20,000 singers at one fell swoop. In the "Artists' Room" one could rub elbows with the priestly looking Franz Abt, the dapper Johann Strauss, the florid Dan Godfrey, and a host of other importations. Abt's *When the swallows homeward fly* was sung by some 5,000 sopranos.

Upon the surface, this looked very much like Barnumized music, but, if one looked a little deeper, one found worthier deeds and valuable results. Selections from the great oratorios were given by the chorus. Dozens and dozens of small country musical clubs, which entered into the great chorus, were obliged to turn from their "musical convention" song collections to something better. When the "Jubilee" had passed away, it left in its wake a universal acquaintance with the works of some of the great masters that continued to grow all over the United States.

CHANGING TASTES

I consider that this was the turning point. Before this time every country music teacher was a "professor." His profession often extended only as far as tonic, dominant, and subdominant chords, however. Many a veteran can remember how often *Silvery Waves* and the *Maiden's Prayer* were inflicted upon the drawing room auditor in those days. *The Last Rose of Summer, The Old Folks at Home,* and *Home, Sweet Home,* were all dressed up in this style also. This school of composition can thus be described: A few notes of melody, then a wild arpeggio up and down the keyboard (tonic); a few more notes of tune, and then another scramble (dominant); a few more notes of tune and then one more dash (subdominant this time), and so on in alternate layers of tune and scrambles until the end. Many will easily recall such presentations of *Home, Sweet Home* with the hiccoughs or *The Old Folks at Home* with the ague, as just described.

Nous avons changé tout cela! The teachers, true teachers, began to multiply, and great conservatories began to be established. It was pathetic to see the avidity with which the devotees of music, who had been so badly misled, turned to the right path. All things considered, I believe that the pupil of thirty years ago was more anxious to learn, was more intense and earnest, on the average, than the student of today, who has so much better opportunities. But I noticed one point: he did not assimilate so easily with the foreign teacher as the pupil of today does.

There was a reason for this. Many a sterling and conscientious Teutonic instructor expected the thoroughness of his own nation, with its ages of musical advance, in the American neophyte, who loved music, but in a vague and uncertain manner. It was because of a certain bond of sympathy and understanding between them that the American teacher got on better with the American pupil in the sixties and seventies. At present, when more of musical culture has been assimilated, this apathetic feeling no longer exists, and the foreign teacher in

(*Continued on page 866*)

THE STANDARDIZATION OF MUSIC TEACHING

A Review of the Progress of the Idea in the United States, What Has Been Accomplished, and Some Suggestions for the Future of the Movement

II

By ARTHUR JUDSON

IN the previous article I presented the various plans for the standardization of music teaching in the United States, in so far as the separate state organizations had taken the question under advisement. It will be recalled that the several plans proposed united entirely on but two phases: the exemption from examinations of members of the association, or, as in the case of Oregon, of all teachers in the state, and the necessity of having some standard.

As a beginning of the discussion of standardization, one may as well inquire into the value of establishing a standard. In the first place, let us eliminate the argument that music teachers should be standardized because doctors, lawyers etc., are standardized. If a standard for music teachers is to be established, it must be because reputable teachers and the general public need protection. The lawyer and the doctor deal with matters touching the public in so vital a way that a professional license is necessary; with music teachers, and the public, the necessity may be great, but non-standardization is not likely to effect either the life or liberty of any person. Neither, to my mind, does the lack of a standard keep greatly talented pupils from attaining to their rightful position in the musical world. Voices are ruined, violin and piano students suffer from wrong instruction, but those who have great talents, or are positive geniuses, usually succeed in spite of bad instruction. Furthermore, the mission of by far the greater number of music teachers in the United States is the general musical education of the public. When we examine the classes of ninety-nine per cent of the music teachers of this country, we find that the number of great artists, or even fairly great artists, produced is an almost negligible quantity. The life of the average teacher is spent in training children, from good families, to play and sing as well as possible for their own pleasure and for the edification of their friends. The public appearances of most of them will be limited to small musicals in their home towns, or to teaching in a more or less limited way. Allowing for a small percentage who enter the teaching profession, it is apparent that about ninety per cent of the music students of America study because it has become a part of the educational life of the country.

This may seem quite aside from the subject until we observe that the prime feature of such study is the acquaintance with music in general, and not the development of a flawless technic. It matters little in the long run whether, or not, a student plays with the technical ease and assurance of a Paderewski, but it is of tremendous importance for him to understand music. The most important matter to be accomplished by the music teachers of this country, during the next decade, is, therefore, the production of a country-wide and thorough musical culture. The musical future of the United States depends on the creation of an understanding of music such as will enable our people to appreciate good concerts, such as will give them more widely the ability to distinguish between the good and the bad, and which will, in time, produce a greater number of serious performers and composers. It is therefore plain that the establishing of a *technical* standard is not of as much importance as the establishing of a *musical* standard.

In view of this fact, the question of standardization becomes much simplified. If one will examine the disputes which have occurred over this standardization problem, one will discover that most of the difficulties have arisen over methods concerned with the technic of the art. Voice teachers have not been able to agree on just how the voice should be placed, violin teachers have differed on whether a high bow arm is better than a low one, and pianists have had their technical arguments; but there has been no disagreement on the subject of general musical knowledge. At the present time there is no apparent possibility of various authorities agreeing on technical procedure, beyond a very few of the most elementary points, and it is impossible to imagine a time when such agreement may be had; but an agreement on musical fundamentals is not only possible, but could be reached with little argument.

The only defence, technically, which the average teacher needs is the elimination of the fake teacher. What does it matter how the goal of technical proficiency is reached providing it is reached? And yet, while it may not be profitable, or desirable, to argue about technical methods at this time, it is certainly wise to take steps which will eliminate those who are preying on the public. The so-called teacher who has as his stock in trade nothing but advertising and a colossal conceit, should be eliminated at once.

By far the best means of doing this was presented by John C. Freund, Editor of *Musical America*, to the New York State Music Teachers' Association, and was adopted by them. It is, briefly, as follows:

"First: That a bill be introduced to the legislature at Albany, calling for the registration of music teachers who practise in this state with the Secretary of State. That the fee for such registration shall be a modest one, two or three dollars, as may be determined.

"Second: That in the application for registration the applicant should state his or her claims to the right to teach, must state where, with whom and how long he has studied; what diplomas, if any, he has.

"Third: That the applicant must swear to this statement before a public notary.

"Fourth: That false statements should be considered a misdemeanor — that is, punishable by a fine of $500 or imprisonment for one year, or both.

"Fifth: That every music teacher should be compelled, as are the members of other professions, to display in a prominent place in his studio a certified copy of his sworn statements.

"Sixth: That any person can get a copy of the statement made by any teacher through the Secretary of State, by sending a request for same, accompanied by the sum of fifty cents."

Such a law would not cause all fake music teachers immediately to be imprisoned, but it would enable those whose names the charlatan used to protect themselves and would also protect the public. No student would wittingly study with a teacher whose certificate showed him to have had no preparation for his work. The further advantages of this are that it could be put into nation-wide operation without much opposition, because it requires no examinations and would almost immediately clear the profession of those charlatans who are the chief opposition to any scheme of standardization. With the great music teaching body of the United States freed from unfair competition, it would be easier to agree on technical points.

The second point to be made is that any standardization system, to be successful, must be national and not local. Of what value is it if New York adopts stringent laws concerning standards if Connecticut and New Jersey do not? Just at present we are in much trouble over our railroad rate laws, our varying divorce laws, and many other laws in which states have different standards. Why add to them, when it is possible to act in a national way?

As a point for further consideration, let me call attention to the fact that different communities demand different standards. A standard which will do for New York City will not fit the small town up-state; that for Ohio might not work in Mississippi. The teacher in New York City has pupils who come to him from other teachers, or at least whose general knowledge is vastly different from the student who comes in from the farm to take his lesson in the small town. Yet the desires of the students are the same. Both want to learn music for the pleasure they may get out of it. No teacher, however, with any pedagogic ability, will attempt to teach these pupils in the same way. Again, the teacher who occupies a position in a college conservatory has his problems to meet, problems which differ from those of the city or the small town teacher. How, then, can a standardization be attained which will meet the needs of these different teachers?

The chief difficulty in arriving at a national standardization is that many states have no associations of music teachers, and those which have are not fully representative. As I pointed out in the opening paragraphs of the first article, even the New York Association is not, in this way, representative. Surely, a membership of 200 is not representative of 30,000! Therefore, without further commenting on association membership, it is evident that legislation by an association cannot have much effect on the general body of teachers.

To be fair, it must be stated that these associations have disclaimed all desire to legislate for the great body of teachers. They have pointed out—notably the New York Association—that they are establishing their own standards for their own members, hoping that when this standard is working it will attract the great mass of teachers to membership. I do not believe that such a result will ever be attained. The establishing of a standard for a small body will only result in widening the breach between the mass of teachers and the associations, unless steps are taken to counteract this provincial viewpoint.

The only remedy, to my mind, is the attack of the problem in a big way by the various state associations. It is not enough to establish a standard and then wait for teachers to come to it; missionary work must be done. Unless the standard can be made state and nation wide, it will not be productive of good. My solution of this difficulty would be this:

In each community there are certain teachers who, because of knowledge or good work, have become known as the leaders of their profession; around them center the chief musical activities of the town, or city, and tributary country. With this conceded authority, let these teachers organize their fellow teachers into an association of mutual helpfulness. Such small associations could take up the question of stand-

ardizing teaching in their own communities. Slow as the work would be, it would be possible for these small groups to agree on the essentials for their communities. When this result has been attained, it would then be possible for larger circles in the same section to arrive at an agreement. This would mean that the present state-wide teachers' associations would have to be reorganized. In my opinion, it would be far better to have a state association meeting every four years with delegates from all of the smaller associations. With the local associations meeting every year, with perhaps section conventions every two years, it would be possible to touch all of the teachers in the state and to arrive at an agreement. It is a step in the right direction when any body of teachers, no matter how small or unrepresentative, adopts a standard, but when it is possible to reach all of the teachers, it should be done.

Now to come to the chief conclusions. The various plans proposed for standardization all have their grave faults. Aside from the fault of not being fully representative in that they are the proposals of small bodies of musicians, they would not accomplish what is hoped.

The system whereby the legislature is to pass a law is impossible. Examine the various plans proposed and you will find that these laws are to be passed only after the association has agreed on the standards, and the lesson of the New York Association, which has yet failed to establish a definite technical standard, after four years of work, shows the futility of this action. In the second place, these standards, or laws, call for the exemption of all now teaching. If it were impossible to get a standard which would require all teachers to be examined, no matter to what association they belong or how long they have taught, or if the establishing of a standard were a matter of immediate necessity, such a course would be advisable; but not otherwise. In the next place, no legislating body will pass a law about which there is a widely divergent feeling. Until associations and teachers can agree it is hopeless to go to a law-making body and ask it to act. The Ohio Association of some years ago tried to get a law passed, and was told that when the musicians agreed, the law would be passed. This was more than twenty years ago and the Association has not yet agreed.

The system making such legislation a part of the school system is also bad. Music teaching, as at present constituted, is not a part of the school system, and I doubt very much whether there is a great deal of sympathy with music, that is, teaching instruments or voice, in the public school system. Co-operation with the school system is advisable, for the teaching of music in the public schools will greatly aid the music teacher in his work; but the two systems of instruction are so widely different at present that I doubt the wisdom of using the school system to aid in standardization. Let the public schools solve their music problems with the aid of musicians, but let the musicians establish their own standards before uniting.

In spite of its having accomplished little, the New York Association, with its essential standard, is on the right track. The establishing of a standard is not a matter of legislation, but of education. Education should begin at the beginning. A standard which is put forth in its full power cannot help but fail, but a standard which calls for a minimum with a gradually rising standard of examination works no hardships, engenders no antagonisms, and will educate teachers to its acceptance.

In addition to the various associations which

(*Continued on page 864*)

REST THROUGH EXERCISE FOR THE TIRED STUDENT

BY ELEANOR BALDWIN CASS

For excessive mental or emotional fatigue exercise acts as the most effective and the promptest antidote. This fact may easily be realized by the knowledge that such fatigue is the result of an over-supply of blood to the brain. In stimulating muscular activity, a general feeling of fatigue is introduced throughout the body. This minimizes the localized weariness. Thus exercise becomes a counter-irritant by tiring one part to rest another.

In music one may become fatigued almost to the breaking point, when muscularly passive. The senses can produce this feeling by concentration, causing an almost abnormal condition of exhaustion.

It is frequently the case that when a student has spent the evening at the opera the emotions become keyed to a very high pitch and a sleepless night follows. If the student has devoted a long evening to the following day's lesson, it is, in some instances, an excuse for much restlessness after retiring. In the latter instance, the vitiated air of the room added to the strain of practising, causes the nerves to vibrate so rapidly that it takes some time to quiet them.

Sleep being Nature's most practical method of restoring worn tissue, it is well to woo her, even with ardor, if she seems even playfully elusive. Here is a point upon which you cannot afford to take fooling. Drugs and sleeping powders are simply out of the question, and no rational person will resort to them. In exercise you have the greatest and the safest remedy for all mental fatigue.

I will give here a set of compound exercises for relieving the kind of fatigue from which the student of music suffers mostly; also a set of simple exercises that the student or the musician may do either morning or night, for the general tuning up of the body to keep in physical harmony.

Before starting the exercises open the windows far enough and long enough to purify the air in the room; if not too cold leave the windows open while exercising.

Position 1 is always the starting position. Here the weight is placed well forward on the balls of the feet and the hands on the hips ready to rise on toes. (Picture 1.)

From position 1 begin: Up on toes (1), down (2); repeat ten times.

Exercise 2. From position 1 elevate on toes, slowly bend knees, only as far as can be done with ease. Down (1), up (2); repeat ten times.

Exercise 3. Bend slowly from the hips, keeping the head back. Down (1), up (2); repeat ten times.

Exercise 4. In this exercise, which is taken from the Baldwin Cass setting up drill for fencing, the starting position is as in picture 1 as to the body position, but the arms are to the shoulders as in picture 2. With the right foot forward and the fingers on the shoulders begin. Throw the arms up (1) and extend the right foot (2), with a little skipping movement change the feet as the arms are exended (3). Do the exercise through twenty counts. (Picture 3.) This exercise is one of the best general exercises ever arranged. It strengthens the waist muscles and keeps the whole framework of the body well set up and adjusted. We give it as a preliminary exercise for poise and the poise we will test with the balance movement. In physical training, as in other things, poise means more for power not to do than power to do. It is the result of the excellent training that has gone before that makes good muscular control possible.

The balance movement begins as in picture 4. From this position bend slowly forward, lifting the right leg until the head and toe are almost in line. Do first by raising the right foot, then with the left foot raised (Picture 5.)

The student with well-trained muscles can hold this balance movement for several minutes without losing the balance, while the pupil with less power cannot hold the position at all, and in some cases cannot even do the exercise. It is an exercise given to secure perfect poise, which is really muscles made strong enough to do nothing with ease.

For special exercise, where rest must be secured quickly to relieve some mental fatigue, I have prepared three standard ones, which the student can memorize and find them always effective in relieving mental and emotional weariness. They are the Archery movement, the Swing movement, and the Standing run.

Special exercises. 1. Swing movement. Position as in picture 6.

1. Swing the right arm and leg up, picture 7; alternate first with the right arm and leg, and then with the left. Do this exercise ten times, and then alternate by elevating the right leg and the left arm, and change. Do this also ten times. 2. The Archery movement you begin as in picture 8, with fist closed, elbows drawn back, and backward leg bent. Count 1, and on 2 throw the arms forward and touch the floor in front of the forward toe and bend the forward leg and straighten the backward one. (Picture 9.) 3. Standing run. Take position as in picture 1, and lift the feet as in running, picture 10. Count fifty.

During a long concert someone asked a clever woman, "Are you not delighted?"

"Delighted?" was the reply. "I enjoy my pleasures with patience."

ESTHETIC DANCING

By ARTHUR ELSON

I

ISADORA DUNCAN

THE Greek term from which we derive our word music was of broad significance in ancient times, and originally included other arts, such as poetry, and even dancing. There were, however, many special Greek dances, which developed in the course of time. Thus Sparta had its military dances, while nearly every Grecian temple made religious dancing a part of its ceremonies. Apart from these, there were the more popular affairs, varying from the stately Emmeleia of the tragedy of the wildest bacchanalian revels. There was also a sort of general education of the body, in which grace of motion was made a means of expressing inward feelings.

In the luxurious days of the Roman Empire, dancing degenerated somewhat in its aim. It became at times a matter of acrobatics, and reflected in part the loose ideas of the period. But there was also a most remarkable development of the pantomime idea, which was carried to extremes that have probably remained unequaled. Thus we read that when Nero wished a departing Eastern prince to name some gift, the visiting potentate chose the pantomime dancer who had recently performed "The Labors of Hercules," on the ground that such a master of physical expression would be invaluable as an interpreter.

THE MEDIAEVAL PERIOD

In the Middle Ages, dancing was still kept up as a part of the services of the Church. It had its share of prominence in the Moralities and Miracle Plays. In very early Christian times, St. Gregory Nazianzus reproved the Emperor Julian for inclining to dissolute pagan dances instead of the sacred ones, such as that showing David before the Ark. The mediaeval Fathers had varying opinions about dancing, and we find Bishop Odon of Paris proscribing it in the twelfth century. Spain afterwards developed the *Vilhancicos de Nadividad,* a set of dances celebrating the birth of Christ. The dance of the *Seises* is still kept up in the cathedral of Seville. This was authorized in 1439 by a papal bull; and when some priests objected to it, the dancers were taken to Rome, where their art won the papal approval. Certain of the religious dances, such as the stately saraband, were adopted for popular use also.

With the development of musical plays, dancing took its place on the stage. Italy began to witness such spectacles over a century before Peri and his comrades wrote operas in our sense of the word. The masque, which became popular in England, was another institution that gave opportunity for dancing. Most influential, however, was the ballet, in the form given to it in France.

The ballet, or pantomime with music, is said to have been invented in China; and something of the sort is mentioned by Confucius. The Roman pantomimes were practically ballets, displaying the famous dancers of Greece, Egypt, or Spain; and they have been described in detail by Lucian. The mediaeval ballet is said to have begun in 1489, with the festival at Tortono celebrating the marriage between Isabella of Aragon and the Duke of Milan; though there had been ballets by strolling players before that time. Catherine de Medici introduced the ballet into France—with the idea, according to some, of diverting her son's attention from affairs of state. Some nineteen years before the end of the sixteenth century, Paris heard the *Ballet comique de la Reine,* by the composer Baltazarini. This contains the tinkling *Amaryllis,* often confused with the song of the same name composed by Louis XIII. In the reign of Henry IV, as many as eighty new ballets were introduced. Louis XIII was himself the composer of the dance music in the *Ballet de la Merlaison,* produced in 1635.

GRETE WIESENTHAL

DEVELOPMENT OF THE BALLET

The real development of the ballet came under Louis XIV. The National Academy of Music and Dancing was founded in 1661. Soon after that came the period of Lully, who wrote many ballets for the French court. Women as well as men took part in these. Prévost and Sallé were famous *danseuses* of the time, while La Camargo afterwards eclipsed them both. From then on the steps of the ballet dancers began to develop along the conventional lines of *entrechats, pirouettes,* and so on, though the great dancers used these as a means to an end in individual pantomime.

Among the celebrated dancers since then, Vestris stands at the head of the men. He became so renowned that he claimed there were only three well-known men in France—the king, Voltaire, and himself. When a lady apologized to him after stepping on his toe, he replied, "Madame, you have put all Paris in mourning for a fortnight."

Among the later women dancers, Marie Taglioni held a leading place. She danced with a delicate grace that seemed to have something ethereal and angelic about it. Her great rival, Fanny Elssler, was more passionately human in her effects. Both won many triumphs in Europe. Elssler, however, was not content with a divided fame, but finally chose to appear in *La Sylphide,* which was Taglioni's most famous rôle. Elssler was unsuited to the part, and made a failure. As a result, she left her old haunts and came to the United States, where she was received with the wildest enthusiasm. Another famous dancer was Carlotta Grisi, who won much success in Adam's *Giselle.*

MANY VARIETIES OF DANCES

The dancer has many varieties of dance to draw upon—so many that she (or he) should not fail to find something suited to her individual style. The popular dances of Europe in early modern times, which have found such an echo in the music of the older composers, have already been described in THE MUSICIAN. The stateliness of the saraband, the rapidity of the courante and gigue, the grace of the minuet, or the intricacy of the gaillard, may serve as examples showing that the old dances are still practicable for solo work. But besides these, there is an almost infinite variety of folk-dances, ranging from the sword dances of Scotland to the weird posturing of the Orient. The dances of the American Indian form another group that is well worthy of attention. The character of some folk-dances may be briefly enumerated here.

FOLK-DANCES

Military dances may have descended directly from the old Greeks, for the Arnaut dancers of Albania still show the contortions used in the old Spartan dances to simulate the warding off of blows. The Germanic nations indulged in sword dances from very early times, an old Breton dance bringing in circular sword figures that may have originated in sun worship. The Scotch sword dancers could interweave their weapons in the most intricate patterns.

Among more peaceful folk-dances, those of early England are full of variety. The Morris dance, probably derived from *Morisco,* showing a Moorish origin, was used to celebrate famous characters such a Robin Hood and Maid Marian. It could be made into a traveling affair, and Will Kempe once danced it from London to Norwich. There were May-day dances, which took a serpentine nature in Ireland; also garland dances, and figures about a May-pole. There were dances around a fire, with leaps over it. There were dances to go with Christmas carols, and even an old mistletoe march of Druidic origin. There were ball dances, not unlike those of ancient Greece. The cushion dance was a ring affair, in which the dancer in the center passed a cushion to his successor with varying ceremonies. The somewhat recent *Sir Roger de Coverley* could be danced indoors, and allowed each participant to dance with all the others in turn.

Ireland did not have a monopoly of the jig, but it had full possession of a graceful field dance, in which couples, united by handkerchiefs, passed under the handkerchiefs of other couples. Scotland has its more vigorous reels and flings.

Spain has some dances of the usual leg-motion type, and others that demand graceful motions of the arms and body, which are much used in Java and Japan also. Partaking of both characters is the well-known *Fandango.* This, like the *Seis* dance, once came under the ban of the Church, and a number of prelates gathered to judge it as danced by partners of opposite sex. At first the judges assumed a severe mien, but after a time the grace of the dancers won their admiration, and they were even impelled to beat time themselves with hands and feet. Those dances that call for the arm and body motions are well suited for use by our *ballerinas.*

Italy's tarantellas, saltarellas, and sicilianos are suitable for stage use, but a far greater variety is found in the Slavonic dances. The action of Russian folk-dances is often slow, and almost pantomimic in picturing love episodes. Thus a man will bow profoundly to a woman, and follow her at signals from her handkerchief, while others, standing around, sing an improvised song suited to the occasion. This sort of procedure is said to be akin to the Chinese, Mongol, and Tartar dances. The *Pletionka,* or *Braid,* is like the old Greek chain dances. The *Khorovodi* is a circular wedding dance in which flower-crowned girls enact a love story. One of them, representing a youth, complains that he has no sweetheart; his mother then has him choose one, who is made the center of a circle and crowned by garlands which the pseudo-swain brings. The *Makovitza* is a dance of cakes used as a harvest thanksgiving, in which girls move in circles eating cakes of honey and poppy-seeds. Among the Kalmucks, the women's dances are sad and slow, while those of the men are livelier and wilder. This seems typical of the marriage status among

these people, in which the peasant wife thinks herself neglected if she is not subjected to assault and battery once in a while. Even the Russians have a proverb saying, "I love thee like my soul, and beat thee like my fur cape." There are also Russian sword dances, sometimes given on horseback. A *Labyrinth Dance*, not unlike that of modern Greece, calls for couples tied with handkerchiefs. The gypsy dances are often wild orgies of irregular shape; but the Roumanian gipsies have slow and graceful dances. Such, for instance, is the *Tanaña*, in which the dancers resemble flowers swaying in the wind. The Spanish gipsies have a bright *Polo Gitana*, while all the tribes indulge in wedding dances. The Basques of the Pyranees use the *Pordon-Dantza*, a slow affair, for the Feast of St. John; also the ceremonial *Edate* and *Zorzico*, and the leaping *Mutchico*.

(Part II describes various national dances and the modern phases. It will be printed in THE MUSICIAN for January.)

LETTERS TO THE BEGINNING TEACHER

BY HELENA MAGUIRE

AUTOPIANOS AND AUTOMOBILES

"THERE is hardly a village footway left today where one cannot see two Worlds struggling to possess, to master the fate of man—one the world of the Hand-made, and the other the Machine-made world. But the men who let machines get the better of them grow unspiritual and mechanical themselves. It does not take a machine to make a machine out of a man; anything will do that if the man will let it."—From *Crowds*.

Every beginning music teacher who has been watching the apparent ascendency of the mechanical piano over the art of pianoforte playing realizes this, and knows that she herself is a part of this struggle; knows, too, that she must so adjust her thoughts and feelings that she may be equal to living in this day of struggle. It is useless for the Beginning Teacher to wish herself back in the days before the invention of the automatic piano, or to wish that she had not been born until the struggle was over and victory won either by the Musician or by the Machine. We are here—in this present age—and we have only to do what other people are doing—force the Machine to help us, and refuse to allow it to hurt us. It can be done. I know that to adopt a hopeful attitude "with the New York *Sun* and Bernard Shaw looking on" takes courage, but have the music teachers less of this than have our livestock men throughout the country? And here is where the automobile helps us.

There was one teacher who saw men who had made pianos "give it up" and go into the autopiano business; who saw excellent music teachers "give it up" and go to demonstrating the machine pianos; who saw splendid pianists "give it up" and enter the vaudeville circuit. Seeing all this, it seemed to her that to encourage young people to study the piano was but to hold out false hopes; that there simply was no future for the pianist; that the day of the pianoforte teacher was done. There was bitterness in all this, from which she turned to that which seemed farthest away and least related to music—to the study of livestock, mostly horses.

And here, looking down from her high seat in the arena upon glorious stallions, upon gentle Percherons, and gay and giddy foals, she got the best lesson of her musical life. As she listened to the professors quietly discuss the advent and advance of the automobile, the autotruck, the auto-everything, she saw what a world-problem hers really was, how far from being music-limited it was, and she saw the music teacher, shoulder to shoulder with millions, in an advance every step of which was strife. Then she looked again to see how the horsemen were meeting this invasion of the Machine, and these were some of the facts, hot from Washington, that she gleaned:

"After fifteen years' competition with the automobile there are in the United States 25,411,000 horses and mules." Again, ". . . despite the fact that promoters of the mechanical substitutes have convinced themselves and many others that the automobile is superior in every way, horses have an estimated value amounting to $2,842,658,000," and, "comparing the census returns for 1910 with those of 1914, we find an increase of 1,358,118, or about five and one half per cent, while values have gone up during this period $194,082,000, or about seven per cent."

No one has denied the Machine anything that it claims to be or to do; but the men whose business is horses simply continue to believe that there is still a demand for horses, and, instead of sitting down and nursing a grouch against the Machine, they busy themselves to produce a splendid and attractive supply, and the result is that horses are not a drug on the market and the machine has not got things all its own way.

This is the spirit of which the Beginning Teacher cannot possess too much. The other day a critic wrote an article on *The abysmal seriousness of our young teachers*. He said in part: "They are a thousand years old. They have no joy of living, no feeling of spontaneity; they are intellectual pollywogs, born out of their time, and stirring about gloomily in the dregs of an unkind world. Looking up through the moss-brown environment of their little universe they see no hope." This would be dreadful if true, and the fact that it looks like the truth to even one single person makes it necessary for us to hasten to prove the contrary.

The autopiano fills a real need of the present day, just as does the automobile. It is a necessity to those who need an expensive plaything; surely we would not deny it to those who want something without making an effort to get it, who must have even their music done up in neat packages, a mood in every package. Then, too, it is a blessing to those who never had opportunity in youth to learn to express themselves musically, or who could not have done so even if they had had the opportunity. It is not for us to deny the Machine anything that it is or does, but even as the horse goes on doing that for which he has been bred and trained, and steadily increasing in value, even so can the music teacher go on with that work to which she has been trained, realizing the limitations of the Machine, and always growing herself into a more and more valued member of her community.

There are two questions the Beginning Teacher might ask herself in adjusting herself to present conditions: First. What has the Machine done for me personally? Second. Of just how much importance am I to the community in which I live?

The Machine is a factor for good to all those who permit it to be. With the wireless, the motor car, the mechanical piano, and the rest, have come new faculties and possibilities—humans have, through these, gained swifter insights, longer vision, higher speeds. We have attained a "going consciousness"; we see deeper and more clearly because of the greater speed. "The faster a man goes—if he has the brains for it—the more people and the more things his mind covers in the minute." We speak quite calmly now of "raising the standards of impossibility." Even as Luther Burbank made a tree eighteen months old bear chestnuts where always before it had taken from ten to twenty-five years, even so the teachers of today are doing for pupils in one year what formerly it took five to do. Young Korngold is one more proof that it is not necessary to wait until middle age for maturity. If the Beginning Teacher starts with the premise that nothing is impossible to youth, her pupils will keep the mechanical piano in its proper place.

As to the second question: It is the teacher whose work proves her capable of using every advantage of this age and who refuses to be put at a disadvantage, who has a real place in a community. A teacher is of value to a community in proportion as it would be difficult to fill her place. Could the Machine fill your place? Could the Machine do for your young people what you are doing for them?

Machines are good and necessary, but we have our work to do, which will be necessary and profitable in proportion as we make it good.

HOWARD WELLS

TWELVE POINTS IN SCALE PLAYING

BY HOWARD WELLS

(From *Ears, Brain, and Fingers*, in press of Oliver Ditson Company)

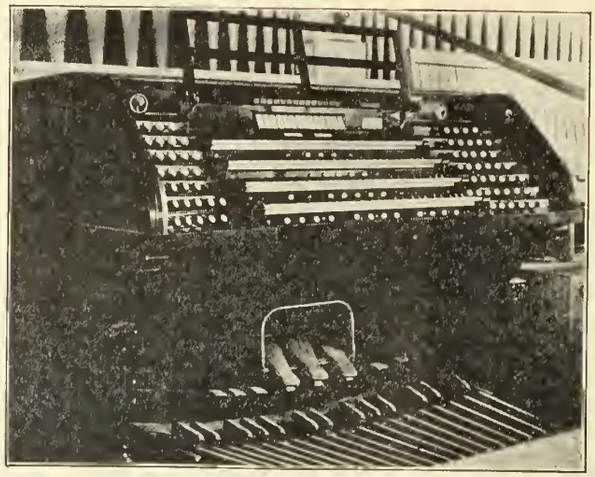
IN good scale playing there are twelve points which are important factors:

1. Knowledge of the scale formation.
2. Oblique position of the hand.
3. Loose wrist and arm.
4. Finger action from the knuckles. (High finger action and close finger action.)
5. Curved fingers.
6. Quickness of the up action of the fingers.
7. Passing the thumb under quickly.
8. Sense of rhythm.
9. Hand slightly tipped toward the fifth finger as the movement is in that direction; tipped toward the thumb as the movement is in that direction.
10. Depression of wrist at turning points.
11. Steady passing of the arm.
12. Evenness of tone quality, developed by keenness of hearing.

Chromatic scales are played in a similar manner to diatonic scales. The wrist may be held somewhat higher on account of the frequent occurrence of black keys. The thumb should be near enough to the edge of the black keys that they have the same relation to the hand as the white keys, and that the arm may pass along in a straight line from right to left without going zigzag back and forth.

The practice of chromatic scales is of particular advantage in developing fluency, in that they require a light thumb, and the frequent recurrence in the use of the thumb gives this unruly member of the hand special training.

SHERWOOD MUSIC SCHOOL, CHAUTAUQUA, N. Y.



CONSOLE OF ORGAN, CHAUTAUQUA AUDITORIUM

THE EDUCATIONAL WORK IN MUSIC OF THE CHAUTAUQUA INSTITUTION

BY JAMES MILLER PARMELEE

THE Chautauqua Assembly has always been known as a musical community. In the very earliest services held, soon after its founding in 1874, when Chautauqua was a Sunday-school Assembly, an important place was given to song. Even at that time the splendid and cheering hymns of praise and thanksgiving kept this band of earnest workers together, and helped them to strive to do things which they otherwise might not have had courage to undertake.

No one who has heard the Sunday evening "Sacred Song Service" can fail to be moved by the fervor with which the vast congregation joins in the singing of the hymns. The entire body, irrespective of youth or age, of deficiencies in tone production or vocal range, join together as if inspired by the very fact of the multitude all singing in one body. The enthusiasm and spirit in this way produced are of the most inspiring of Chautauqua precedents. Many persons are helped in this way to lead a life of more usefulness to themselves and to their neighbor. The sweet hymns of Mary Lathbury, dedicated to Chautauqua in the early days, have sung themselves around the world, and have been used in several hundred assemblies in this year of 1914.

When the Summer School feature was added to the Chautauqua idea, music soon took prominence, and for many years Chautauqua has been considered a music center.

The great Music Festival Week, the culmination of the Chautauqua music season, promises that Chautauqua will be the greatest summer musical center of the country. Needless to say, the vast audiences attending the concerts, given twice a day, during Music Festival Week, gave way to most unusual demonstrations of enthusiasm. The programs, though chosen from composers of a high order, were still popular enough to be familiar to music lovers. More than $5,000 beyond the regular revenue obtained from the gate tickets was expended for the purpose of bringing Mr. Victor Herbert and his orchestra, and Mr. W. G. Merrihew with the Schubert Club, of Schenectady, to Chautauqua.

One may sit in the volunteer choir, side by side with conservatory directors, vocal teachers, orchestra conductors, choir soloists, and choir directors, all bent on learning as much as possible during vavation time.

The splendid benefit which the student of music derives in the short season of six weeks is the result of two important things: First, the competency of the instructors; Second, the artistic and cultured atmosphere of the place.

The fact might here be stated that more than half of those who come each year to Chautauqua to study music are teachers. Now a man may be an excellent and competent teacher, but he must be more than this to be a teacher of teachers. The music faculty is one of unusual strength of purpose and thorough knowledge of subject. Their pupils come to them with a determination and will to learn, which inspires both teacher and pupil to better work, and assures results of a far more lasting character. No time is unnecessarily spent and their every minute is made to count for something.

No matter how enthusiastic and interested one is in one's work, it is often impossible to accomplish best results in an unpleasant or uncultured atmosphere. In this respect Chautauqua leaves little to be desired. While the student of music is working, he is unconsciously accomplishing more, getting more real good out of his course of study, because he is surrounded with an atmosphere of culture and refinement. He is away from the noise and bustle of the city and finds time together with his labors for complete relaxation and rest.

The atmosphere of such an institution should be cultured. The student should be surrounded by influences which will assist his intellectual development. Chautauqua, New York, is not the only Chautauqua capable of producing this helpful influence, although this first of all the Chautauquas has in a large measure developed this atmosphere. Every Chautauqua may, in pleasing surroundings, develop an influence for culture and refinement—a certain something which inspires all to better and more perfect achievement.

Besides a sufficient amount of sleep, the student should set aside a certain time each day for the many different sorts of recreations afforded on the grounds. He may swim, play tennis or golf, indulge in long walks into the woods, or, in fact, do any of the things which he may care to do. His work will count for more to him, and he will accomplish more permanent results if he allows himself this play spell and does not make his day one merely of work.

The best possible equipment for intelligent work has been provided, so that the old excuse for poor work—poor equipment—is entirely eliminated. In the piano department, Steinway pianos are provided throughout, situated in practice rooms where the student may concentrate on his work without annoying interruptions. Too many times, a student attempting to put in one or two hours of serious work at home finds himself combating a series of interruptions which are sufficient to discourage even the most faithful worker. The department for organ instruction provides an organ for organ instruction, where the student may build a firm foundation for later work, the building to house the organ being one of the new structures of the year. Those wishing to study mandolin and orchestral instruments are given every opportunity, with all of the other students, to accomplish the most in the shortest possible time.

As a result of the Old First Night Gift, in 1912, the Sherwood Memorial Studio was built. For many years the need of such a building had been recognized, and at last the studio was erected, at a cost of $5,000. The studio is in memoriam of William H. Sherwood, who, for the best twenty-two years of his life, worked in the interest of the Chautauqua Institution as head of the piano department. All who knew Mr. Sherwood loved and respected him, and this building is an appropriate memorial in his honor.

The building is of concrete and wood, with a covered portico on all four sides. It contains an office, in which business relative to the course is transacted. Beyond this is the interpretation class room, which contains seats for nearly one hundred pupils, and in which Mr. Ernest Hutcheson, the head of the piano department, conducts all of his classes in the interpretation of pianoforte literature. Next to this is a smaller room used for a music club room and for any extra classes. The other studios in the building are those of the other members of the piano department's faculty, Miss Eliza McC. Woods', Mr. Austin Conradi's, and Mr. Hutcheson's. The building is an attractive one, and furnishes ample opportunity for every kind of piano work. Near it is Higgins Hall, where recitals are held and other musical events take place. Here one who is studying music may hear the work of others, perhaps, who are no better than himself; but by hearing others one is often able to improve his own conception of the composition.

The expense of the music pupil may be large or small according to his requirements and income. It may safely be stated that the student cannot count on spending the summer at Chautauqua with any comfort on much less than one hundred dollars. Let us say, then, that he comes to Chautauqua with one hundred dollars. If he wishes to take a course with Mr. Hutcheson, he will find that a very beneficial one is to take one half hour lesson of private instruction with Mr. Hutcheson, and four interpretation classes each week. The interpretation classes are most instructive, even the beginner being given a good working knowledge of pianoforte music and its interpretation. The student's room and board will cost him from seven to thirty-five dollars a week, according to what he can afford and what he wishes to get. And so it is that a student may live for very little, during his six weeks of vacation. Many students, each year, either from necessity or preference, find employment in the cottages or in various other ways about the grounds, and are in this way enabled to greatly reduce their expenses.

One of the fine things which the Chautauqua Institution is doing in a musical way is the awarding of a free piano scholarship to one student each year. The contest is held in the Sherwood Studio, with Mr. Hutcheson, Mr. Conradi, and Miss Woods as judges, more than seventy persons usually taking part. The student is allowed to select any two pieces which he wishes, and plays these before the judges and all of the other contestants. Of course, he may take as much time as he likes in the preparation of these selections, as it is a yearly affair, and the entries are made several months in advance.

This is a splendid thing in many ways. In the

(*Continued on page 864*)

A GROUP OF INTERESTING PICTURES

The pictures above are taken from a set of cards which contain portraits of composers with references to certain of their famous works.

No. 1 represents Beethoven in the woods—he was extremely fond of Nature in all her moods—gaining inspiration for his symphonies.

No. 2 shows Gounod at the piano, while across his mental vision sweep the forms of Marguerite, Faust, and Mephistopheles.

No. 3. Chopin improvising themes for his beautiful *Preludes,* while before him pass figures which embody his poetic fancies.

No. 4 represents Verdi in a creative mood, with Othello and Desdemona calling for musical delineation.

No. 5. Wagner at his desk working out his motives to characterize the various persons who take part in the development of his great dramas based on the *Nibelungen Lied.*

No. 6. Rossini, the composer of the *Barber of Seville,* is planning this opera, destined to be one of the masterpieces of musical dramatic work. The Serenader is plainly seen.

No. 7. Massenet is planning the details of his lovely opera, *Nanon.* The lovers are to be seen in the background.

No. 8. Robert Schumann writing his famous song cycle, *Poet's Love.*

No. 9. Berlioz working out ideas for his opera, *The Trojans.*

COMMUNITY ART IN A KANSAS TOWN

One of the great forces in the campaign to make the United States musical is the work being done in the public schools, not only of the large cities, but also in the smaller cities, wherever a few persons are ready to work systematically and persistently to secure results. The size of the town is not so important as the character and personality of those who have the work at heart.

Winfield, Kan., a city of about 7,000, is on the educational map of the United States in prominent letters, especially in regard to a movement to develop and give expression to the art craving of the people. From a booklet sent to The Musician, by Mr. Edgar Gordon, of the school faculty, we quote the following:

"The plans for the series of [eight] programs include a carefully balanced number of dramatic and musical evenings, so that the venture bids fair to be a real expression of community art. Fundamental to the purposes of the plan are:

"1. To present musical and dramatic works of real merit. This does not necessarily mean that the numbers shall be chosen for the trained hearer; on the contrary, there is much good music and drama of a lighter vein, and each number chosen is carefully considered from the angle of its popular appeal.

"2. To offer to as large a number as possible an opportunity to participate in these programs. Active participation in the production of good music is the very best way to develop an appreciation for it.

"3. To develop self-expression and not self-exploitation. Here again is a democracy of opportunity, the aim being to give the average young person, rather than the exceptional one, a chance to do things."

The net proceeds of the concerts are turned into the community life in some form. Last year they were used in the purchase of orchestral instruments for the public schools, the year previous for reference books on music to be placed in the public library.

The forces available for the presentation of these concerts are the pupils of the schools and the Winfield Orchestral Club. The orchestral numbers selected are of a style to suit the public taste, such as the *March* from Raff's *Lenore* symphony, excerpts from Wagner, Dvorák's *Humoreske,* Mendelssohn's *Ruy Blas* overture, Goldmark's *Rustic Wedding,* Grieg's *Sigurd Jorsalfar.* Gounod's *Redemption* was given by the High School Chorus of 160 voices.

The dramatic works were: A Christmas Mystery Play, *Eager Heart,* by Buckton; *The Queen of Hearts,* by Krohn; *Demeter and Persephone,* by Goodwin, with music by Colburn; *Allison's Lad,* by Dix; *Mr. Sampson,* by Lee; *The Pageant of Patriots,* by Mackay.

THE CREATIVE FACULTY IN THE PUPIL

BY NANCY GILFORD

At the last "Vacation Conference" of English music teachers, Miss Gilford read a paper on the above subject. We have selected from a report of the address the following very pertinent paragraphs:

The development of initiative in the adult is the result to be looked for if we encourage it in the child, the power of *thinking for himself, and doing as the result of thinking.* Such training in early days does not affect only the one subject on which it is then brought to bear, but gives a general power.

Children are the most original beings in the world. Whose is the fault if they become stereotyped?

Grooves make for ease. Do they make for advancement? If you happen to have a groove-educated pupil of the average type, she will smile sweetly and say: "We've never done that sort of thing," and quote the last teacher!

By getting pupil's own ideas we cure that brain slackness that is the great worry and trouble of all educationists.

The creations of children may be original, but they are not necessarily *unique.* Do not look for big ideas; they would most likely be imitations, rather than their own efforts.

The best way to attract children to the study of harmony is to let them hear their own tunes clothed in that way. One girl naïvely said: "It didn't sound like my tune." When they can write their melodies it does not take long for them to learn to write the harmonies, if they have discovered the mental effect of chords and chord progressions, just as they listen to the mental effects and progressions of the degrees of the scale.

THE PROFESSOR TALKS ABOUT ACQUIRING BETTER PROFESSIONAL POSITION

"You are quite a stranger, Professor! A busy season's beginning has, I suppose, deprived me of some of our illuminating conversations, eh? Several callers—teachers—have been asking for you, requiring your valuable advice, probably."

"Whist, now! Shtop yer blarney, my bhoy! Shure, an' oive been away!—Lecturing in some cities within easy distance from here, and a very profitable experience it has been! What? Financial profit! No; that is farthest from my thought. The profit to me has been the knowledge I have gained, as to the way in which the profession of music is carried on in some cities—to say nothing of the profit that others may have gained from our heart-to-heart talks. As you are well aware, *my* chief object in life is to help my brother musicians attain to a better position and a higher standard, so that a mighty impetus may be given to musical progress.

"Are you not stating the case the wrong way about, my dear Professor? Surely teachers will enjoy a better position as a result of that impetus and thereby cause the adoption of a higher standard of teaching?"

HOW TO EXCITE ENTHUSIASM

"Not at all, sir; not at all. The amelioration must come from within the teaching body. Teachers must first improve themselves, their knowledge and their teaching art; then they must adopt more aggressive tactics. The mere fact of doing this will change lukewarmness into healthy enthusiasm and force the public along upon a steady stream of musical progress.

"How can the people enthuse themselves alone? Can you enthuse all by yourself? They must be aroused, their imaginations excited by the teachers' examples, their musical instincts awakened and carefully prepared manifestations of song and instrumental music, and their confidence fully established in the teaching element of their city."

"I do not quite follow your argument there, Professor. There are plenty of teachers to be found—if not in the home city, then in some one of the chief music centers of the country."

"That is *just the point*, Mr. Editor. The whole argument is therein.

PUTTING ON THE DAMPER PEDAL

"Let me put a few typical cases before you. Here is a city that has drifted into a state of musical apathy, despite the fact (or, perhaps, because of it) that many of the inhabitants believe it to be the most critical city in the U. S. Since many years it rejoices in the possession of a choral society, whose musical director is a teacher of singing. But, although several concerts are given each year, neither the members of the society nor the pupils of the director are ever called upon to sing the solo parts; these are given to singers from one of the aforesaid 'chief music centers,' despite the fact that there are talented artists to be found in the city itself!

"What encouragement is there in that city for an aspirant after musical honors? The general result is that they, who wish to study for professional advancement, quit their home city to seek instruction and opportunity elsewhere. Nor could it be otherwise. If the teacher has no confidence in the result of his own teaching, how can the pupil have confidence in him?

"This is but one case typical of many similar. It frequently occurs that a teacher has made his position in years past, a position that contents him completely—a contentment that engenders want of ambition, sloth and retrogression—and it is the community that suffers."

"But do you, Professor, attribute the lack of musical enthusiasm and progress in a city solely to what you have said?"

WHERE A TEACHER SHOULD START

"Not solely, my dear boy, but to a great extent. It is owing to the contented apathy of the teacher and to the want of encouragement and artistic opportunity for the pupils that these seek their instruction in another city; there they make their *débuts,* their reputation, and, perhaps, gain their teaching experience. Of course, it is all wrong. Now that the somewhile pupil has become an artist and a teacher, it is his duty to take his talents to his home city, because he knows, from bitter experience, how much they are needed there."

"Take care, Professor; you know the Biblical saying: 'A prophet is not without honor, *save* in his own country'?"

"Certainly; and it is a saying that is overabused. There are numerous examples which prove its falsity: Geraldine Farrar, for instance. Are her popularity and success enjoyed and honored more than by her fellow-citizens of Melrose, Mass.? Nay, I would go further and say that it is to the young teacher's advantage to leave the big city and to return to his home, or to go to some small city to begin his career.

"Undoubtedly, there are faults on both sides; on the side of the members of the community who frequently slight their fellow-citizen while they open their arms wide in welcome to a stranger, who is an unknown quantity to them, whereas they knew that the youth who lived amongst them had talent, which he has cultivated and matured; also, on the side of the young teacher, who is held a prisoner by the glamor and fallacious promise of the position of a teacher in a big center, instead of in a small locality, forgetting that it is preferable to be the leader of a chosen few, rather than to be reduced to insignificance among the many.

FOREIGN STUDY NOT ESSENTIAL

"Did he go abroad and study in some celebrated school, or with some equally celebrated teacher? He did not do wrong, because travel, foreign language, other methods, other mentalities and temperaments, all contribute to take off angles and to round out the artist. But the foreign study was not an essential. He could obtain his education as a teacher, perfectly well here.

"Perhaps he did study here with some excellent teacher and became admirably fitted to shine as an instructor. If there is no opening for his talents in his home city, let him go to some relatively small city to consolidate his experience and to give the benefit of his vigorous endeavors to a community such as I have described. There, the teacher of talent, tact, and energy may become instrumental in a great musical uplift, shaking the city out of its self-satisfied complacency and making meritorious strides in the march of musical progress. In achieving this, he will establish an enviable position for himself, both artistically and financially."

"Is there any particular way in which you think he should set about the work, Professor, so that he also may not become 'groovy'?"

DON'T BE "GROOVY"

"'Groovy' is a very good word to depict the stagnant teacher; pray accept my compliments, Mr. Editor. 'Groovy' he must not become, for that would mean a lingering death to any aspirations. Unfortunately, teachers are as a rule *self-centered; their* study, *their* pupils, *their* acts, *their* reputation. The higher their position, the greater their degree of self-interest, to the exclusion of the needs of the community. They look through the wrong end of the telescope putting the world afar off and making their infinitesimally small selves the only point worthy of notice. As a matter of fact, if they were sincere and their minds not so obfuscated by the weight of their enormous bump of self-appreciation, they would realize the great truth that *as musicians* they belong neither to themselves, nor to the community, nor to the city, but *to the Nation.*

"All their efforts should be consecrated to the betterment of the community and of the city. That which exalts the community must exalt them; therefore they must not only progress themselves but they must make the community progress: the results will be commensurate.

HOW TO ENERGIZE

"This idea is a summary reply to your query as to a particular way to go about the good work. In general terms: let the young teacher be tactfully aggressive in his musical campaign; let him start singing societies, sight-reading classes for the multitude at a low price (the numbers make it worth while); give lectures upon music with vocal and instrumental numbers; foster congregational singing; devote his own best endeavors ungrudgingly to arouse musical enthusiasm among the people, without grasping always for financial gain—this will surely come by itself, as soon as he is recognized for a competent, enthusiastic musician. Let him not neglect his own study, but keep up with the times; otherwise he will be put in the same category as the unsuccessful dentist, of whom it was said: 'He don't never learn nuthin' new!'

A PRACTICAL EXAMPLE

"The example of a case occurs to me which points a palpable moral. Instead of remaining in the big city where he had finished his preparation as a teacher, a bright young fellow went West as a teacher in a conservatory. Having tried his 'prentice hand upon the pupils there and found that there was not a sufficient element for success or, at least, for any marked musical progress, either for himself or for the cause of music, he left the school at the end of the season and went to a neighboring city.

"There he found a teaching connection in a school that had run down from inattention and intemperance of the principal. After due inquiry he learned that the school could be had for two thousand dollars. He did not possess two thousand pennies, but he had a good reputation and was favorably known at the conservatory and by the parents of some of those who had been his pupils. So off he went and returned within an hour with three men, who backed his notes for the amount. These were accepted by the outgoing owner and he started in to work with

so much tact and zeal, and by giving his pupils such real value for their money, that, before the year was up, he had paid the $2,000 and the school was (and still is) reputed as the best and most successful music school in the State.

MAKE FORTUNE SERVE YOU

"It may be said that this teacher was fortunate. Perhaps so; but he made Dame Fortune bend to him and serve him. Such was the man's energy and whole-souledness that, if he had not found this chance, he would have created his own musical atmosphere and, by the measures he would have initiated, he would have commanded success.

"All teachers who are beginning their careers—yes, and all those who have 'got in wrong' by teaching in a city where there is too much competition—may go and do likewise, provided they have the knowledge and ability to teach coupled to tact and enterprise and unalloyed devotion to the cause of musical advancement.

MAKE PEOPLE THINK

"In this, like in everything else, the chief thing is to make the people think—'sit up and take notice,' as the popular phrase has it. There must be no questionable proceeding, nothing of the fake or charlatan, nothing but the most legitimate, reputable, and well-pondered actions, but—*make the community think*, and you will win out.

"One excellent plan to adopt is to start a club; call it The Musicians' Club and admit, not only professional musicians (a ticklish, clanny, skeptical, jealous lot), but all those who care for music. By exercising a little tact and diplomacy there is no reason whatever why such a club should not be made the centrifugal force to radiate the powerful influence of music throughout the entire community. That it can be done is certain, for I know where an active campaign is now being carried on successfully by a club of over 300 members, where a year ago there was nothing.

"Now is the time, my dear Editor, for our energetic teachers to get busy. The thousands of pupils who are going to Europe are kept here to study. It is true, on the other hand, that there are many teachers from abroad, who have come here to avoid war conditions. But, if our own teachers will only try their utmost to profit by present conditions by concentrating their teaching powers with all sincerity, tact, loyalty, energy and wholesouled endeavor, they should be able to show and to prove that the best instructor for the American pupil is the American teacher, and so hold him by his excellence that hereafter, when these sad times shall be past, there shall be no more running after foreign gods."

———*———

NOTES ON THE MUSIC IN THIS ISSUE

JUDGING from the programs of previous years, many teachers are accustomed to give recitals during the month of December, in which music of various kinds and styles is played, from the simple little dance tune up to pieces suitable for a quite advanced player. In selecting music for the December issue, we have kept in mind the average needs of the average reader, not only for educational purposes, but also for pure recreation in music, and for use as entertainment of family and friends.

While none of the pieces for piano have titles especially suited to the Christmas season, they all have much of the spirit which we think peculiarly appropriate to the holiday time. Therefore they will make good numbers for a program of music to be given during December.

Blest be Thou, O Christ eternal by Samuel Richards Gaines, is a song for the Christmas church service, which can be given with or without the obbligato for the violin. It is not at all difficult, but has so much breadth of style and broad sustained melody that it is bound to make an attractive number for the Christmas program. The climax, near the close, where the voice is working toward the upper G, is very effective. It may be suggested that in case a violin cannot be secured for the obbligato, the organist registrate so as to secure solo effects in the accompaniment. This will not be difficult. This song may be had for low voice in Eb.

Mattinata (*Matin Song*), by F. Paolo Tosti, the celebrated composer, is one of his most tuneful songs, introduced and widely popularized some years ago by Mme. Melba. It is typically Italian in style, with an appealing melody, which lies well for the voice and can therefore be made very effective. Withal it is very easy to sing, and will prove an admirable teaching song for a pupil who is in the first year of vocal training. In this respect note that there are few wide skips—in fact the only one is a downward progression—therefore no special trouble in blending registers. As a general thing the words can be pronounced without effort or tightening the throat. The edition for medium voice is in F, for low voice in Eb.

Russian peasant's lullaby, by Robert Coverley, has a large measure of the Russian style, and ought to be a useful song for the use of singers and teachers, particularly for those who are seeking national color. The compass is well suited to a low mezzo or medium contralto voice; the skip of the octave, B to B, which occurs several times, is quite effective. In the two note groups shorten the second sixteenth just a little, sufficient to give a sense of detachment. The short Russian lullaby phrase is admirably adapted to the semi-vocalizing style demanded. Why not try this on a recital program? It can also be had in the key of G minor.

A wish, by William Dichmont, is in the artistic ballad style, a song that should find a warm place in the hearts of singers and hearers. The melody is easy and lies in the middle of the voice. Without being in slow tempo the movement is not so rapid as to interfere with the formation of good tones and clear enunciation, and therefore the song makes a good teaching number, especially to the principles of expressive singing.

Snow birds, by Charles Huerter, has a title suitable for the present time of the year or for a program of "winter music." It is not a waltz, but more of the caprice in style; a certain amount of variation in tempo is admissible. As this piece is intended for young players, the use of the pedal is not indicated. It is just as well to omit it altogether. In the first section play the chords for the left hand very lightly; so also in the second section for the right hand. The melody in the left hand is to be brought out clearly.

Consolation, by A. E. Warren, is the musical expression of a poetic thought, and the player should try to reproduce the feeling or emotion of sympathy indicated by the title. Be careful, in this piece, to observe the relative time values in the little motive containing the succession: dotted eighth and sixteenth. The first note has three times the time value of the sixteenth. As ordinarily played the notation would be a quarter followed by an eighth forming a triplet, in which the first note has twice the value of the second. Teachers and pupils should watch this. Omit the lower notes in the octave passage.

The Dresden shepherdess, by Percy E. Fletcher, is one of a set of three fanciful sketches issued under the title *Old Curiosities.* The pastoral style of this piece suits the title. It can be made an effective recital program number by dressing a girl player in Colonial costume. Teachers frequently miss opportunities for novel effects by not taking advantage of the suggestions contained in title and music. Costuming a player or staging a tableau are legitimate and effective novelties, which cause a recital to be talked about by the public. And such publicity is a good thing for a teacher.

Melodie, Op. 85, No. 2, by Paul Zilcher, is a charming little piece for young players, in which the melody is wholly in the left hand, a feature that is usually attractive to players in the elementary grades. The chords for the right hand are to be pressed lightly, not struck with a thump, or pounded out by wrist or arm. The Pedal *may* be used, but most young players will prove unable to use it well enough.

Clotilde, Op. 8, No. 2, by Cedric W. Lemont, is one of a set of eight piano pieces entitled *Springtime Sketches.* This number has quite a little syncopation, probably enough to class it as a "ragtime" piece of high grade both musically and technically. We are sure that our readers will like this piece very much, and we fully expect to receive quite a number of recital programs with this named on them. Teachers will make no mistake in assigning this as lesson material.

Happy-go-lucky, by Arthur L. Brown, is also for young players, a piece full of animation and "go." Phrase it exactly as printed, snapping off the notes at the end of the slur signs. In the second section play legato and sustained tones in the melody for the left hand. In learning this little piece commence at a slow tempo, gradually increasing and more snappy in style. Learn a few measures at a time. It is singular that to play a piece through, repeating each passage, say five to ten times, is much better than to play the same piece through, without a stop, ten times.

Throwing kisses (*Kusshändchen*), Op. 327, No. 4, by the well-known composer, Carl Bohm, is in the concert mazurka style, and is intended for moderately advanced players. It is brilliant and effective, and is a good number to place on a recital program. Note that the Pedal is used but little save in the middle section. It *can* be used in the first part, but the effect is good without it. Aim for a smooth legato in the passages in sixteenth notes.

Arlequinade (*Pizzicati*), by Louis Ganne, is a delightful piece in the French style. The subtitle, *pizzicati,* refers to the sound of the violin string when plucked. The staccato passages have an effect analogous to that of the plucked violin strings. To preserve the individual quality of this staccato, do not make use of the Pedal, which has been carefully marked when and where to be used.

A clear track (*Sans obstacle*), Op. 63, No. 6, is by Henri Van Gael, a French composer who has written some very delightful music. It is a simple, easy four-hand piece for the younger players, and can be made a feature of a Christmas program by being made to refer to the famous sleigh ride of Santa Claus when he delays for nothing. Children will be pleased to work this up for an entertainment.

The return (*Rückkehr nach der Heimath*), Op. 190, No. 3, by Carl Heins, is one of those compara-

(*Continued on page 865.*)

BE SURE TO READ THIS OFFER

We will place on the list of THE MUSICIAN, for a period of six months, the name of any pupil who plays or sings in concert or recital between the present time and Jan. 1, 1915, any one of the pieces in the Music Section of THE MUSICIAN, September-December, 1914. Send us a program listing the piece, and names and addresses of teachers and pupils.

The Musician
A MONTHLY PUBLICATION
W. J. BALTZELL, Editor
PUBLISHED BY
OLIVER DITSON COMPANY
Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

Merry Christmas to All And a Happy New Year

EDITORIAL NOTES

GIVING A CHEER

CHRISTMAS time is considered a time of good cheer. And rightly so. It is necessary to all of us that at certain times we receive from outside of ourselves the spirit of cheer. Even the person whose habit of mind is misanthropic will yield to the influence of good cheer persistently directed at him, and show a softening of his grouch toward mankind in general.

And not only individuals but causes are the better for cheering influences. For example, when we speak of the American composer and the duty which we have to encourage him, our thought is collective and not individual. We do not think of any one, but of all; we have in mind, an American School of Composition, not the work of one special composer.

The Anglo-Saxon, which term may include the American, is strong on cheering, to use a secondary meaning of the word. He cheers his heroes, he cheers his friends and fellow workmen when they do some useful or brave deed. Wittingly or unwittingly, he obeys a profound psychological principle, that of transferring force from one to another. The cheering of a crowd! How inspiring, how necessary to the athlete striving toward the goal! The steps about to falter become steady once again, the blood takes on a more vigorous course, and renewed strength is felt because of the cheering.

A fireman once entered a burning building. Presently he emerged from flame and smoke to a window bearing a body on his shoulder. He looked about helplessly. Danger was nearing rapidly. Would the ladder be able to reach him in time? Some one in the watching crowd divined his flagging courage and shouted "Give him a cheer, boys!" And they did with a will. The brave man responded instantly, directed the rescue operations, and presently came down the ladder with his burden.

So we say, "Give the American composer a cheer," not merely because he is an American, but because his work is worth it, and because we want him to be spurred on to better work in the coming years. To give preference in all cases to music "Made in Europe," is to take all courage from one whose work touches your interests and those of all other Americans. Give a cheer for the American composer by speaking up for him, by studying his music and comparing it, impartially, with the work of his European colleagues, by using it in teaching and concert work, thus justifying the public in accepting it as worth while. The audience will naturally believe the European made article superior when it is placed before them in great abundance with only an occasional home product.

We can give a cheer for the American teacher by waiting a few years longer before going to Europe, and by granting him the proper credit for what he did for a pupil before the latter went to a European teacher for a short period. The American teacher is a good fellow who well deserves a rousing cheer.

A European artist and teacher of international fame once said to the writer of this note that his American pupils were always fine students, quick to learn and to absorb instruction. In many the sense for educational values was very keen. We can afford to give a cheer for the American student whom we believe to be equal in capacity, enthusiasm, and courage to those of any other nationality. Let us help him to bring to his work his best and finest qualities of mind and heart.

So then, for 1915, let us give a great big, prolonged, rousing cheer for the American composer, the American teacher, the American student, and the great American people.

LOVING MUSIC

HOW often we hear some one say, very enthusiastically, "I love music so much!" Of course sometimes this is said purely for effect; at other times we recognize that the one who says it is sincere. The real question is whether the party understands just what is implied in the idea of loving music.

Is it enough to be swayed by the rhythm, to move foot or body in unison with the lilt of the music? Is it loving music to drink in sensuous beauty of tone when the orchestra or some golden-voiced singer presents a masterwork of music? Is it loving music to watch eagerly the unfolding of a great music-drama as interpreted by artists of the first rank? Is it a sign of loving music to read with avidity about music and musicians? We might add other queries, but the above are sufficient to indicate that these points represent but phases of the whole question.

To be a music lover, in the true sense of the word, is to go deeply into music and its phenomena and to learn to think music, not merely to steep oneself in musical sounds as they are given out by executants or by oneself. You may say that you love music, but it is a statement that requires proof in many cases.

WARMING PUPILS

TRAVELING in England some years ago the writer of this note took a train for a sixty-mile trip on a cold day in winter. For a small fee a porter provided a foot warmer which made the journey a fairly comfortable one. This was composed of sand, heated, and placed in a metal receptacle, covered with wood. Today electricity has been pressed into service and contributes to our comfort and convenience in many ways, warming devices, iron heaters, toasters, etc., all of them depending upon the power of electricity to generate heat under certain conditions.

Have you ever inquired how electricity can be made to give out heat? Perhaps you have sat in a trolley car on a cold day near one of the little radiators under the seat and found the heat agreeable. Did you reflect that the same power made the car move and heated it as well? The difference in result was due to the different methods used. As explained in a scientific discussion, if a strong electric current is forced through a small wire the friction, so to speak, generates heat, just as in drilling through metal, or in filing, or rubbing two articles together.

Teachers have constant need of warming up their pupils, not physically, but mentally, or nervously; not by electricity, but by that personal power, equally strong and subtle, enthusiasm. But we must never lose sight of the fact that if we wish to heat pupils up to the point desired we must force into them, from our own high voltage current of enthusiasm, the energy that will lead to action, definite and continued.

The new season will furnish teachers with many an opportunity to warm their pupils and thus create an enthusiasm for work and a passionate love for music that will bring good results, both personally and for the community. The teacher should think of himself as a musical dynamo or storage battery giving out the necessary current to all the pupils. Have heat and power in your teaching.

ANTHOLOGY OF GERMAN PIANO MUSIC

Volume II. Modern Composers

Edited by
M. MOSZKOWSKI

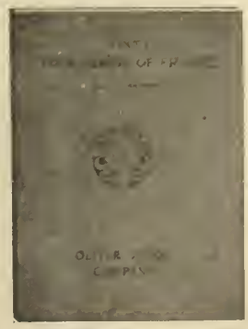
A superb collection of pieces by German composers of the modern period, with biographical notes and critical comment on the pieces, by the Editor.

ONE HUNDRED SONGS OF ENGLAND

High or Low Voice

Edited by
GRANVILLE BANTOCK

The most valuable collection of English songs ever issued, covering the period from the 13th to the 19th centuries. The Editor has contributed an authoritative discussion of folk-song and the examples in the book.



SIXTY FOLK-SONGS OF FRANCE

Medium Voice

Edited by JULIEN TIERSOT

French folk-song has charms and beauties wholly peculiar to itself. The Editor has made an admirable and interesting selection, which he has discussed in his scholarly introductory essay. Mons. Tiersot is an authority on the subject.

DREAM PICTURES. Op. 6

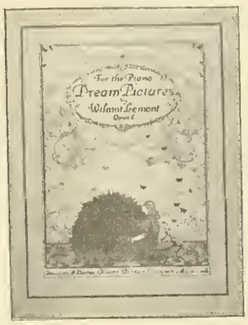
WILMOT LEMONT

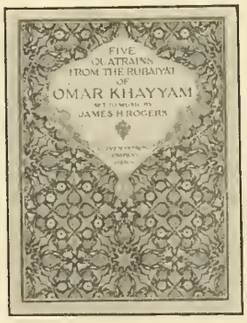
Price, $1.25 Postpaid

A collection of piano pieces which fascinate by their spontaneity and fresh flavor. Mr. Lemont offers an abundance of melody and a pleasingly euphonious harmonic scheme, which always shows refinement and sprightly fancy. To those who play for pleasure, to whom music brings joy and relaxation, these facile and effective compositions will be more than welcome.

The cover is a marvel of the printing art, in four colors, tied with silk cord, making the collection a most attractive gift to a musical friend.

"Destined to be the most successful suite since WATER SCENES."—*Musical Courier.*





FIVE QUATRAINS FROM THE RUBÁIYÁT OF OMAR KHAYYÁM

Set to Music by JAMES H. ROGERS

High and Medium Voices

Price, each, $1.25 postpaid

From Omar's immortal verses the composer has chosen five quatrains which are among the most beautiful, besides being well contrasted in mood. Thus inspired, Mr. Rogers' melodic vein was never more fluent, his harmonic scheme more vital, nor his economy of means to produce just the right emotional effect more sure. These songs may be used as a cycle or singly, and will adorn any artistic recital program.

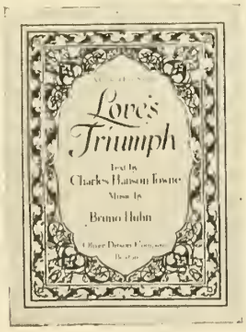
LOVE'S TRIUMPH

A CYCLE OF FIVE SONGS

By BRUNO HUHN

Price, $1.25 postpaid

In this cycle, the most recent work of a successful composer, the happy and significant union of poems and music is noteworthy, and the various phases of a noble passion are beautifully voiced. The text, with its terse, definite and vital expression, is splendidly adapted to musical setting, and has inspired the composer with melody that is now tender and endearing, now ardently dramatic, and now at the height of exultant rapture. The thoroughly practical and superbly vocal quality of Mr. Huhn's music must likewise not be passed over in silence, as it adds the final word of recommendation to intelligent singers.



FIVE VIGNETTES FOR THE PIANO

Op. 7

By F. MORRIS CLASS

Price, $1.00 postpaid

Five short pieces under one cover, with accompanying poems, describing and indicating the moods of the different compositions. These will prove excellent studies for interpretation and portrayal of emotional color. They grade about IV. Handsomely printed with fine art title. A splendid gift.

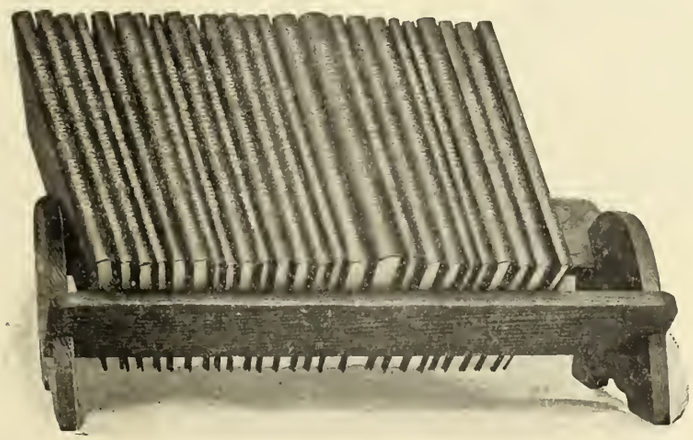
THE MUSIC STUDENTS LIBRARY

A series of Educational Text-books suited to the requirements of the average student and covering every essential branch of musical instruction



PIANO

KOTZSCHMAR, MRS. HERMANN

Half Hour Lessons in Music. Class work for beginners. A practical course for teachers and mothers. Fully illustrated..... 1 00

BULLARD, FREDERIC FIELD, Editor

Burrowes' Piano Primer. A new and enlarged edition of a well-known work. Pronunciation of each foreign word is given as it occurs... 50

CHASE, MARY WOOD

Natural Laws in Piano Technic. This work presents clearly and concisely the essential laws of the building up of a good Piano Technic in a practical manner.. 1 25

HAMILTON, CLARENCE G., A.M.

Piano Teaching: Its Principles and Problems. A practical book written by a practical man to meet practical needs..... 1 25

VENABLE, MARY

The Interpretation of Piano Music. Studies in the meaning of printed signs used in music, and their bearing on the interpretation of standard works..... 1 25

VOICE

PANSERON, AUGUSTE MATHIEU

A B C of Music. Edited and extended by N. Clifford Page. This book is a primer of vocalization, not a complete course in singing. It gives the beginner all the necessary elementary methods—the A B C's..... 1 00

MANCHESTER, ARTHUR L.

Twelve Lessons in the Fundamentals of Voice Production. Presents in a succinct, clearly stated form the fundamental principles illustrated by simple, practical exercises..... 1 00

JOHNSON, CLAUDE ELLSWORTH

The Training of Boys' Voices. A thorough and practical guide to the correct "placing" and training of boys' voices..... 75

RUSSELL, LOUIS ARTHUR

The Commonplaces of Vocal Art. The plain truths of vocal art presented in simple, untechnical language..... 1 00

RUSSELL, LOUIS ARTHUR

English Diction for Singers and Speakers. For all singers or speakers who pretend to refined or artistic use of the English language..... 1 00

ARNOLD, WILLIAM HARKNESS

French Diction for Singers and Speakers. The elements of French pronunciation are reduced to a few fundamental principles, readily mastered..... 1 00

FILLEBROWN, DR. THOMAS

Resonance in Singing and Speaking. A scientific exposition of fundamentals, with breathing and vocal exercises and illustrations..... 1 25

VIOLIN

CUTTER, BENJAMIN

How to Study Kreutzer. What every violin teacher discusses and illustrates in the lesson room put into book form..... 75

Note.—All volumes are bound in neat, serviceable cloth. Copies of any will be sent with return privilege to those with accounts in good standing and to those with no accounts upon RECEIPT OF PRICE, which will be cheerfully returned, less postage, if not satisfactory.

FORM, INSTRUMENTATION AND ACOUSTICS

GOETSCHIUS, PERCY, Mus. Doc.

Lessons in Music Form. A manual of analysis of all the structural factors and designs employed in musical composition..... 1 25

PAUER, ERNST

Musical Forms. The students of musical form, and especially those who study composition, will find this a very valuable and thorough work..... 75

PROUT, EBENEZER, Mus. Doc.

Instrumentation Primer. A valuable guide and assistant to students who wish to gain a knowledge of the proper blending of orchestral instruments, their compass, capabilities, etc..... 75

HAMILTON, CLARENCE G., A. M.

Sound and its Relation to Music. A handbook of acoustics as relating to music. Thoroughly up-to-date and based on the latest discoveries and experiments.... 1 25

DEFINITIONS AND HISTORY

MACCONNELL, M. F.

Some Essentials in Musical Definitions. Covers the needed information on all points connected with musical theory, and therefore of special value to Piano, Singing, Violin and Organ Students..... 1 00

HAMILTON, CLARENCE G., A. M.

Outlines of Music History. A compact, clear-cut work for class use and the general reader. Fully illustrated..... 1 50

ELSON, ARTHUR

Music Club Programs from All Nations. Outlines the various schools from all nations with a rich series of programs, and over one hundred portraits..... 1 25

HARMONY AND COUNTERPOINT

BROWN, JEAN PARKMAN

Intervals, Chords and Ear Training. Exercises and examples in rudimentary harmony and ear training for use in conjunction with piano study..... 1 00

ALCHIN, C. A.

Ear Training for Teacher and Pupil. Designed to teach the pupil to think in tones, and so to sing, name, write, and play what he hears..... 1 00

WELLS, HOWARD

Ears, Brain and Fingers. The author, a successful exponent of the Leschetizky method, offers a practical plan for training "ears, brain and fingers" to co-ordinate action..... 1 25

YORK, FRANCIS L.

Harmony Simplified. A practical text-book presenting in a concise manner the fundamental principles of harmony, with non-essentials omitted..... 1 00

STAINER, SIR JOHN, Mus. Doc.

Harmony. New edition of a standard text-book which presents the principles of harmony with conciseness and lucidity..... 75

CUTTER, BENJAMIN

Harmonic Analysis. Teaches one to analyze the harmonic structure of both classic and modern music..... 1 25

YORK, FRANCIS L.

Counterpoint Simplified. A concise text-book of formal counterpoint. (Sequel to author's "Harmony Simplified")..... 1 25

BRIDGE, DR. J. FREDERICK

Counterpoint Primer. This book has freshness and plainness combined with thoroughness, and must commend itself to young students and teachers..... 75

OLIVER DITSON COMPANY, 150 Tremont Street, Boston

CHAS. H. DITSON & CO., New York LYON & HEALY, Chicago

Handsomely Bound

MUSICAL GIFT BOOKS

Beautifully Printed

These books comprise the best of our extensive catalog, and are especially appropriate as gifts

PRICES INCLUDE POSTAGE

PIPE ORGAN COLLECTIONS

THIRTY PRELUDES FOR THE ORGAN

Edited by H. Clough-Leighter. Compositions by representative modern writers. Registration is for a three-manual organ, that can be adapted for a two-manual instrument, if necessary. Biographical notes of the composers represented in the volume are included. Price, in cloth, $2.

THIRTY POSTLUDES

Edited by William C. Carl. Compositions by representative modern organists of Europe. 150 pages. Price, in cloth, $2.

THIRTY OFFERTORIES FOR THE ORGAN

Edited by James H. Rogers. A new volume uniform with the popular thirty Preludes and thirty Postludes. The editor has drawn upon the best works by European composers, and has made a number of admirable transcriptions especially for this work. It is to be bound in cloth with gilt top, and is in every way a distinct addition to the organists' collection. Price, in cloth, gilt top, $2.

THIRTY ORGAN PIECES FOR USE IN CHRISTIAN SCIENCE CHURCHES

Edited by Walter E. Young. This is the first collection of organ music published expressly to meet the needs of organists in Christian Science churches. The author, who is organist of the Mother Church in Boston, has a full knowledge of what is suitable. The book contains ten preludes, ten offertories, and ten postludes. It is bound in cloth, with gilt top. Price, $2.

"HOME SONGS,"—SERIES

Only 50 cents, post-paid

HALF DOLLAR COLLECTIONS OF THE SONGS THAT WILL NEVER GROW OLD

Songs endeared to us by association.
Songs that we heard as children, as youths, and as men and women.
Songs that are jolly.
Songs that are sad.
Songs of the college.
Songs sung by the Boys in Blue.
Folk Songs of many nations.
Love Songs.

All these and many more are included in the "Home Songs,"—Series,

HOME SONGS

Contains 140 of the choicest old familiar songs; the kind our mothers loved to sing. Songs that will never die.

IRISH SONGS

66 of the best-known Irish folk songs selected with care from the many beautiful airs of this melody loving race.

COLLEGE SONGS

113 in all—a collection consisting of the cream of the popular melodies of the different American Colleges.

WAR SONGS

Arranged for Mixed Voices. 63 old time favorites for camp fires and gatherings of soldiers. 124 pages of music.

WAR SONGS

Arranged for Men's Voices. The original edition, which is so justly popular.

The arrangements for mixed and men's voices have handsome title pages in colors with authenticated portraits of Generals Grant, Sherman, and Sheridan.

Price for each, bound in heavy paper, cloth back, 50 cents, post-paid.

NOTE.—Home Songs, Irish Songs, and College Songs may be had in the holiday edition in cloth, gold, neatly boxed, very handsome, at $1.25, post-paid. War Songs for men's voices may be had in cloth, gold, for $1.00, postpaid.

SONG CYCLES

ALBUM OF SONGS

High Voice, Medium Voice, by Charles Wakefield Cadman.
This American composer has won unusual success with his songs, which are distinguished for attractiveness of melody, artistic style, and originality. The present collection offers to the singing public the choicest of Mr. Cadman's published songs, together with several new works of charming quality. Price, each voice, postpaid 1 25

ALBUM OF SONGS

High Voice, Medium Voice, by Ethelbert Nevin. Price, each, postpaid..... 1 25

A SHROPSHIRE LAD

Medium Voice, by Charles Fonteyn Manney. Price, postpaid..... 1 25

FIVE QUATRAINS FROM THE RUBÁIYÁT OF OMAR KHAYYÁM

Set to music by James H. Rogers. High and Medium Voice. (See first page for description) 1 25

LOVE'S TRIUMPH

A Cycle of Five Songs by Bruno Huhn. High and Low Voice. (See first page for description) 1 25

SONGS OF THE SERAGLIO

Text by Helen F. Bantock, music by Granville Bantock. High Voice. The sensuous charm of these songs, their melodies at once alluring and novel, will prove a keen pleasure to musical ears. The composer's splendid musicianship has enabled him to make a splendid union of Oriental ideas and Occidental treatment 1 25

THREE IDYLS FROM ARCADY

Words by Thomas S. Jones, Jr. Set to music by H. Alexander Matthews. High Voice, Medium Voice. Price, each, postpaid 75

MUSICAL LITERATURE

COMPLETE CATALOGUE OF MUSICAL LITERATURE AND THEORETICAL WORKS SENT FREE ON REQUEST

ALDRICH, RICHARD

A Guide to Parsifal. The origin of the drama, its story, and an analysis of the music with the reading motives in notation. With eight illustrations of scenes from the drama. Size, 4¼ x 7¼; pages, 96; 8 illustrations; binding, cloth..... 1 00

A Guide to the Ring of the Nibelung. To the happy faculty of treating his subject in concise and lucid fashion, Mr. Aldrich adds a charm of style which holds the reader's attention from cover to cover. Illustrated by reproductions in musical notation of all the leading motives or themes. The phraseology throughout is happily free from technical terms. Size, 4⅞ x 7⅛; pages, 148; binding, cloth, gilt 1 25

BALTZELL, W. J.

Baltzell's Dictionary of Musicians. (New Edition with Supplement.) Contains biographical sketches of nearly 2500 persons eminent in music from early days to the present, special attention being given to Americans and contemporaries; data brought down to May 1st, 1914. A valuable feature is the pronunciation of the names of foreign composers, one not found in similar works. It is the most comprehensive and concise handbook of musical biography in the market. Size, 5⅝ x 8¾; pages, 272; binding, cloth..... 1 25

BEAUFORT, RAPHAEL LEDOS DE

Franz Liszt. Including a chapter entitled "Franz Liszt in Rome," by Nadine Helbig. Size, 4⅞ x 7½; pages, 244; 1 portrait; binding, cloth..... 1 25

HAMILTON, CLARENCE G. (A.M.)

Outlines of Music History. A practical handbook for schools, colleges, and conservatories of music, and a guide for the home student and reader. Paragraphs are numbered consecutively and have headings, grouped into sections, with summaries for review and references to standard works for supplementary reading. Size, 5½ x 8; pages, 308; illustrated; binding, cloth..... 1 50

Piano Teaching: Its Principles and Problems. A new volume of the popular *Music Students Library* based on the experience of the author, who is Associate Professor of Music at Wellesley College. The various problems of music teaching are discussed and the best ways of solving are indicated. It is a logical and systematic presentation of educational principles applied to music teaching. Size, 5¼ x 7⅞; pages, 171; binding, cloth..... 1 25

Sound and Its Relation to Music. A handbook of acoustics in its relation to music, in the light of modern discovery and experiments, suitable for use as a text-book in conservatories, schools of music and colleges. It is one of the popular *Music Students Library*. Size, 5¼ x 7⅞; illustrated; binding, cloth..... 1 25

KOBBÉ, GUSTAV

Opera Singers New Edition. Has been brought up to date by adding biographical sketches of newer singers, giving the work present-day interest and value. A number of full-size portraits have been added and a much larger number of smaller ones as well. These additions make the book the best of musical gift books and *the only one of its kind*. Everyone who is interested in the opera of today will find this book a treasure house in regard to the personality of the famous opera singers who are in the public eye. The retail price of the book is, postpaid..... 1 25

MACY, J. C.

Young People's Illustrated History of Music. With Biographies of Famous Musicians. Size, 4⅞ x 7½; pages, 135; illustrations, 16; binding, cloth. (New Edition) 1 25

SMITH, LAURA ROUNTREE

Sixty Musical Games and Recreations. This stimulating little book is the work of one who understands not only the needs of kindergarten teachers, but the interests of and mode of approach to the child mind..... 75

NOTE.—These works will be sent with return privilege to those with accounts in good standing, and to those with no account upon RECEIPT OF PRICE, which will be returned, less postage, if not satisfactory.

The SINGER and His ART

FRIEDA HEMPEL

MME. HEMPEL has returned to the United States for a concert season, after having spent some time in the Red Cross service in Germany.

THE GOAL OF THE AMERICAN VOCAL STUDENT

BY D. A. CLIPPINGER

THE impulse to sing is as old as the human race. The voice was the first medium through which man expressed the joy of living, and throughout the ages it has maintained its supremacy.

There is joy in living. Much more than most people suspect. If humanity could rid itself of the "cares of *this* world" and the gloomy apprehension of the *next*, which, reduced to its lowest terms is nothing but fear, it would find that all of life's activities are joyful.

But notwithstanding this mental confusion, the result of education of a certain kind, the positive element in life, which is joy, asserts itself and finds its natural expression through the voice. For this reason almost everyone sings in some degree. It is the universal mode of giving expression to feeling and never can be repressed. The question confronting us, therefore, is to make the voice a more perfect medium of expression. In other words, how to make people sing better.

The process of learning to sing well is not a short one. Much time, patience, and care are necessary, to say nothing of the expense. What inducements can be offered to American vocal students by way of compensation for such an undertaking?

The time is coming when it will be unnecessary to ask this question, for when the sociological value of music is once fully recognized, it will become a necessity and the thought of compensation will be no greater than that associated with other branches of a liberal education.

"The aim of education," said Herbert Spencer, "is to prepare one for living," but it must be admitted that in the past music has had but small part in the educational systems of our country. It has been looked upon as a parasite existing on the body politic and extracting therefrom moneys which might have been spent for meat and drink. It has not been looked upon as a necessary part of an education. The truth of this statement lies in this, that in practically all of our educational institutions, there may be a few exceptions, the music department must pay its way. A large endowment may be used for other departments, but music must give a financial reason for its existence or go. That this is the result of a confused apprehension of values there can be no doubt in the mind of a musician.

The same desire for financial returns obtains in the mind of a majority of vocal students, especially those who are at all gifted by nature. The question is not how much joy I shall receive from it, or how much joy I shall be able to give to others, but what financial returns shall I receive? There must be a money equivalent and it must not be long delayed. If it is the student begins to chafe. Six years in the university without a penny coming in is proper and right. It is according to the educational code; but two years' study of singing without producing is likely to be regarded as a waste of time if nothing more. Again we are impelled to suggest that this attitude is wrong. The cultural value of the study of singing should be its sufficient warrant. It is not in the nature of things that art should be primarily a money maker. Where that idea is dominant real art must suffer.

The overweening desire on the part of the singer to earn money is almost always associated with the determination to make the course of study as short as possible; the result is that the singer goes through life with the handicap of being but partially formed.

But looking at it from the point of view of the business man, what does America offer to the vocal student? We answer unhesitatingly, more than any other country on earth.

On the continent of Europe about all that is open to the singer is the opera, and as not more than one in a thousand is fitted by nature for an operatic career, the rest have scant encouragement.

There is practically no such thing as concert singing in Italy. It is opera or nothing. It is much the same in Germany, although, owing to its great song literature, there are many more concerts than in Italy.

England is the home of oratorio, and there are plenty of miscellaneous concerts, but the territory is limited.

On the Continent the church offers nothing to women singers and little to men. The condition is much the same in England.

In comparison with this, what does America offer the singer? What are the avenues through which financial returns may come?

There are in this country many thousands of churches; just how many I am unable to say, but the number is enormous. A large majority of these churches pay for their music. The amount per year ranges from a few dollars to many thousands. The number of singers who have been helped in this way to earn a living while completing their musical education is beyond computation, and the number of well-trained singers employed in church choirs runs far into the thousands.

We have now about three thousand Chautauqua Assemblies in operation, and the number is increasing yearly. Every one of these Assemblies engages singers. It is safe to say that every day these Assemblies are in session each one of them has one or more singers to whom money is paid. This avenue offers to singers about three months of work at a time when engagements are most likely to be few elsewhere.

The Lyceum bureaus, whose business amounts to a considerable number of millions of dollars annually from supplying entertainment courses throughout the country with talent, furnish steady employment for many months each year to an astonishingly large number of singers.

The Federation of Women's Musical Clubs, numbering many hundreds, furnish engagements at good prices to a large number of singers each year.

Almost every town of any size in this vast country has its choral society, and in the larger cities there are many such societies. These all do works requiring soloists.

Practically every one of the thousand of colleges in the United States has a music department and a choral society. Many of these, in addition to their regular season's work, hold a May Festival lasting two or three days, during which some large choral work is done with orchestral accompaniment. The number of these spring festivals, which are not confined to the month of May, may be judged by the fact that every orchestra in the country is employed in this kind of work for from six to eight weeks every spring. Each of these orchestras carries a sufficient number of soloists to take care of the oratorio concerts.

If the exact amount of all this business could be determined, it would be seen that singers in America earn several millions of dollars each year through avenues that are denied to singers of all other countries.

I have not mentioned the business of teaching. There is no way of computing the earnings of teachers of singing in the United States; but as almost every singer does some teaching, the figure, if known, would be astonishingly large. I hesitate to say that all of this teaching may be labeled "Music Education," but at least it serves to make a living for a very large number of people.

There are no limitations placed on the American vocal student. He may aspire to the greatest things in the gift of the world. The spirit of freedom in our country, its free institutions, yea, the very bigness of it all should be a constant urge and inspiration to him. The resistance is less here than elsewhere and the opportunities far greater. In fact, they are unlimited.

HEARING SINGERS

BY H. W. GREENE

The benefit a student of singing may gain from hearing a concert depends upon the kind of hearing he enjoys; and if it does not stand the test of value, his willingness to sacrifice it in the pursuit of a better kind.

Generally speaking, there are two classes of hearers in attendance upon all concerts: Those who know what good singing is, and those who do not. Another classification more to our purpose is: Those who are given to criticism, and those who merely yield themselves to the enjoyment of the occasion.

The latter comprehends a blend of the glamor of lights, beautiful faces and gowns, pleasing texts with tuneful melodies, and the exhilaration that is usually aroused by a well-filled auditorium. Those who constitute the former, who are given to criticism, and those whose business is criticism are, of course, greatly in the minority; but they are, or should be, augmented by all present who are students of singing. It is not only the student's prerogative but his duty to criticise. Criticism must be intelligent, that is, planned for and systematized.

The student should assume the attitude of the critic for a double purpose; to find things worthy of imitation, and to take note of things that the singer does that he cannot do himself because of personal limitations or for reasons involving in his opinion the probity of the art. To do this he must be saturated with the work in hand in much the same way that the teacher of psychology would prepare himself to confront his class.

It is inevitable that the highly successful singer is intelligent. He knows his composer and his author equally well, and he has a reason for everything he attempts to do whether he is able to carry it out or not. This preparedness of the artist is necessary to a satisfying presentation of his numbers; therefore the student, who is to hear him, should prepare with equal care that he may gain an insight concerning the qualities that exert the various influences upon an audience.

An objection that will be raised is: "Why, this is real work, and if one attends many concerts he will not have the time to make such careful study of programs." Certainly he could not, but why attend many concerts? Is it not a wiser plan to select one concert that is to be given by an artist of acknowledged distinction, secure the program in advance, go deep into its numbers and their arrangement, than to get a gossipy acquaintance with half a dozen concerts, even though they were equally fine.

The result of such concentration upon the numbers to be heard will be to stamp indelibly upon the mind every detail of the artist's rendering. There will be passages that the student had predetermined as to how they should be rendered that will not be given at all as expected. A reason should be forthcoming, and it will show that either the student or the singer was at fault, or that the passage was susceptible of two readings, neither of which could be adversely criticised. It is hardly necessary to suggest further.

The idea is clear that the danger the student should avoid is a superficial attitude to concerts and recitals. One should develop, not smother, the critical faculty. A too constant attendance upon concerts will have a destructive tendency. That the faculty can be blunted needs no further proof than is afforded by the writings upon musical subjects in the daily papers. The attendance of a critic upon one or more concerts every day results in criticisms which are often so trivial that the artists in quesion who read them are sick with humiliation that their high ideals and endeavors have roused no responsive note of appreciation on the part of those whose privilege it is to shape opinion.

We use the word "criticise" because it is the generally accepted term for an expressed opinion; but the student's attitude to a singer's rendering of a program should comprehend more than an opinion. He should STUDY the work of the singer. The study of a subject must result in a better understanding of it. Thus the student who studies the program *before* he hears it, who studies its effect upon the audience and himself when it is identified with the mind and voice of the artist, who brings to bear upon the questions involved, be they esthetic, technical or personal, all that he himself has accumulated in the way of experience, has become a better singer himself. The humiliating truth about students of singing is that they so rarely are *students*.

"They pipe and dance
'Mid sights and sounds
But thinking they do never."

Only those who sincerely imitate sincerity evolve, and evolution is as important to singing students as it is to nations.

A MODERN STATEMENT OF ANCIENT TRUTH

BY F. W. WODELL

There has recently appeared from the press of Frederick Stokes & Co., New York, a book by a London, England, teacher of elocution and singing,* which is more than usually interesting, because the author recognizes the fact that the fundamentals of voice-production are the same for speaking as for singing.

In a certain sense singing is but an extension of speaking. Not all elocutionists are singers, but every artistic singer is, in an important and practical way, an elocutionist. Mr. Stephenson states that one of his objects has been to "set forth the main features of the Old Italian Method of voice production in relation more particularly to the study of the speaking voice." He also gives, as an additional reason for publishing his book "a desire to shed light in dark places, and by reference to its numerous advantages—artistic, hygienic, and therapeutic—to encourage people to apply themselves to the study of voice-production."

The author deals somewhat in detail with various so-called "methods" of breathing for voice-production. His chapters on the "relation of voice-production and phonetics" should interest the singer, and will certainly hold the close attention of the public speaker and reader. Perhaps the most valuable chapter is that devoted to a presentation of the "Old Italian Method."

Here Mr. Stephenson acknowledges his indebtedness to works on the *Art of Singing* by the late Francesco Lamperti and by William Shakespeare. Singers who may wish to read an intelligent, comprehensive statement concerning the principles of the Old Italian School, in a condensed and easily understood form, should certainly read Mr. Stephenson's eighth chapter. This method or system is truly to be judged, as is any other, by its results. Those who have genuine knowledge of its underlying principles know that its ideal is the production of beautiful tone; always there must be tonal beauty, as recognized by the cultivated ear.

This tone means, as a matter of course, ease of production; and this means, equally as a matter of course, other things being normal, a long life for the voice. This method insures as well continuity of tone in singing—the singer is able to bind together his tones, to sing with a genuine legato. Further, as Mr. Stephenson makes clear, because it is founded upon the observance of natural law this method is marked by simplicity—freedom from exaggeration of every sort.

Those who teach "registers" will here find something worth thinking about And teachers who use the *"coup de glotte"* will be interested to observe the author's treatment of this much disputed topic. It may be open to question whether Mr. Stephenson is quite justified in giving the impression that complete, voluntary control over the soft palate as regards raising or lowering it at pleasure, forms an integral part of the "Old Italian Method."

Mr. Stephenson touches upon another subject of controversy when he deals with "stationary position of the voice-box," and takes issue with Behnke of *Voice, Song and Speech,* in this connection Our author says the larynx "must not ascend as the pitch rises," in the "manner advocated by Behnke." Where does Mr. S. get his authority for his own position on the matter?

Of three things the present writer, from personal study, observation, and experience, is reasonably certain: first that the natural position of the larynx is higher on the vowel E as in "feet" than upon OO as in "food" when both are sung upon the same pitch; second, that most singers, consciously or unconsciously, adjust the larynx at too high a point in the neck for the best results in freedom of the vocal instrument and quality of tone; third, that any attempt, locally and directly to place, or fix, or hold the larynx at a given point, high or low, in the neck while singing an aria, can result in nothing but injury to the tone.

This book is an excellent example of how to say much of value in comparatively few words. It is strongly recommended to all teachers and students of singing and elocution who are broad-minded enough to want to get at "the other fellow's point of view."

SOME MEDICAL ADVICE TO SINGERS

For those whose occupation involves use of the voice above ordinary requirements, and who require to maintain it at its highest pitch of perfection, alcohol and tobacco should form forbidden articles. They are themselves sufficient, if indulged in to excess, to set up a chronic form of pharyngitis and laryngitis, producing hoarseness.

Various causes are capable of producing an acute inflammation of the delicate lining of the larynx, such as the infections of measles or influenza; but to the professional vocalist there is importance in remembering the facts that chilling of the throat from unwonted exposure or the over-use of the voice may also produce such a condition. There is a sensation of tickling in the larynx with cough, huskiness of the voice, and perhaps temporary loss of the faculty. No speaking should be indulged in during an attack, while the patient should remain in bed and in a room saturated with moisture from a bronchitis kettle and kept at an even temperature. Ice, applied externally, affords relief, and the rapidity of the pulse should be reduced by appropriate remedies prescribed by a physician.

A chronic form may be set up by repeated acute attacks, or may again be caused by over-use of the voice. This becomes rough and hoarse, the laryngeal lining being swollen and the action of the vocal cords impaired. Occasionally this condition is associated with obstruction to the free passage of air through the nose, which should always be examined.

While local treatment is applied by a brush or spray to the larynx it is important to avoid any loud speaking or breathing the air of heated rooms, and, of course, alcohol, tobacco, hot and spiced foods.—*The Standard,* London.

SINGING TEACHERS OF TODAY AND YESTERDAY

BY SARA MESICK

In the death of Madame Mathilde Marchesi, which occurred a little over a year ago, lay an incident of a deeper significance than the mere passing of a woman who was revered as the teacher of many great singers belonging to this and the past generation. For with Madame Marchesi has finally passed out of existence the old school of teachers of the art of singing.

It is as if the last scion of a long and valiant race had died, and with him was buried a family name that had been written large upon the page of history. It is not empty sentiment that leads us to liken the line of "Old Italian" singing teachers to a race of men bound by the ties of blood.

The family of the "Old Italians" had many members living outside of Italy. Madame Marchesi was a notable example of one who had not even any Italian blood in her veins. Yet her claim to bear the name "Old Italian" was indisputable. And there is cause for rejoicing that the last of the famous line was a woman of such distinction and achievement.

To be sure, we see on every hand careful and sincere masters who profess to be representatives of the Old Italian school of singing. But they are either mere pretenders or else out of the direct line of the race. For the day of the Old Italians is past. And the demise of Madame Marchesi startles us to the fact that we have entered a new era. A changed order of things has arisen; and though the physical end of the old régime has come with her death, the real change started several decades ago—even before the death of the elder Lamperti or the venerable Garcia.

The lamentations over the passing of the true art of "bel canto" have been loud and sincere. And it is unfortunately true that the singer of today does not pass through the severe and thorough schooling of voice and musicianship that was demanded a century or two ago. A notebook kept by a student in a famous vocal school in Rome in the eighteenth century, records such items as "an hour each day spent on the cultivation of the trill, two hours spent in composing a canon or fugue or motet, an hour in not only the practice but also the improvisation of elaborate cadenzas."

But though we bemoan the fact that such conditions exist no more, we must realize that today they are no longer possible. The singer who wrote fugues for two hours a day a century ago now must needs devote that same time to a system of musicianship that will enable him to master the intricate tonalities of a Strauss or Debussy score. At least a part of the time devoted to the trill must now be spent in a school of fencing; and the improvisation of cadenzas has given way to the study of dramatic art.

And so today there are few if any teachers who can, unaided, give to a pupil a thorough and complete training as a singer. After a few years the tone specialist calls to his aid the operatic coach; the coach's work must be supplemented by the teacher of acting. The singer is not of our generation, who studied for six years on a single page of exercises, and then was bidden by his master: "Go forth; you are the greatest singer in Europe."

The day of the human music box, with the singing teacher turning the crank, is gone. We regret that the perfection of vocal mechanism has to some extent gone with it; but we are glad that the art of singing has been raised to the point where the intelligence and individuality of the singer himself is the all-important essential.

Who has ever read the name of Farinelli except in connection with that of his maestro Porpora? Yet Farinelli was one of the greatest singers of the eighteenth century. Careful as must have been the training of de Reszke, of Fremstad, of Garden, we believe that their claim to fame will rest upon their own achievements. The true greatness of a *Tristan*, a *Brünnhilde*, or a *Thaïs* could never be passed over from teacher to pupil.

It has come about that the maestro as a famous personality is passing. Thirty years ago the newspaper editor molded the great mass of public opinion with his pen. Today the reader looks through the news columns, and forms his own opinions about civic and political questions. We still have great minds on the staffs of our metropolitan dailies, but there would hardly be a niche into which another Horace Greeley would fit.

So it is with the singing teacher. There are many men and women of eminence and distinction in the profession, but it is a tendency of the times that they point rather than lead the way for their pupils.

It is far from our purpose to deprecate the work of the modern singing teacher. We wish only to call attention to the fact that his work lies along new lines. Once more we may go to the journalistic field for our analogy. Fifty years ago the newspaper was rare enough to be a luxury, and each copy that came from the press had its every word devoured by many readers; the less carefully read news sheet of today, however, certainly plays a more important part in our daily life.

So, in the day that is past, it was only the phenomenal voice that was thought worthy of being put under the direction of a singing teacher, and the pupil early decided to make singing his life work. Today the great majority of the patrons of our vocal studios have as their purpose the acquirement of a pretty accomplishment, or at most only a semi-professional career.

And indeed it is through this group of pupils that the larger part of the singing teacher's influence is wrought today. It is the great army of dilettantes who are making our country steadily more musically intelligent and appreciative,—who will make not only possible but necessary many such institutions as the Century Opera Company.

For surely the modern world needs as many influences as possible to lift it up from the materialism of the street into the idealistic world of art appreciation. And so, though the age of "bel canto" in its original sense may be behind us, may it not possibly be that we are reaching up and out from a sense pleasure in singing, to something that lies nearer the soul and the ever elusive Truth?

———*———

TWO POINTS OF ADVICE BY CARUSO

The *mezza voce* is a concentration of the full voice, and it requires, after all, as much breath support. A soft note which is taken with the "head voice" without being supported by a breath taken from the diaphragm, is a helpless sort of thing. It does not carry, and is inaudible at any distance, whereas the soft note which does possess the deep breath support is penetrating, concentrated, and most expressive.

With a *piano* tone properly taken in the register which is proper to it there is no danger of having to change the position of the throat, and consequently the real character of the tone when making a crescendo and again diminishing it. On the other hand, when a soft tone is taken in a register foreign to it, as soon as its strength is augmented the register must be suddenly changed, and the result is like a Tyrolean yodel.

Practising with closed mouth is a method of study, really all that is necessary to place certain voices, but is bad for others. It all depends on the formation of the mouth and the throat. For example, a singer troubled with the fault of closing the mouth too much should never work with the mouth closed. When one can do it safely, however, it is a most excellent resource for preparatory exercises in respiration. Breathing through the nose with closed mouth throws back the respiration to the abdomen, hence it is best to do the exercise seated in a comfortable, natural position.

TO SINGERS

Mr. Stock specializes in the field of voice placement, its development along individual lines and in the study and performance of songs, sacred and secular, that are suitable to the first years of vocal study.

When pupils have reached the point where study of advanced repertoire becomes desirable they will be recommended to instructors who specialize in this particular field.

The Bencheley Method of Voice Development

An Original Method of Technical Study by Intoning Exercises
Copyrighted in 1897 *Copyright renewed in 1914*

This system of voice practice was copyrighted for special reasons, one being to insure its correct use by well prepared teachers who appreciate the usefulness of a vocal method as thorough in the details of technical work as are methods used by representative teachers of the violin or piano. A brief outline of this method will be given in a later issue of The Musician.

M. B. Bencheley,
1107 Harmon Place,
Minneapolis, Minn.

The system of vocal technic formulated and taught by Miss Marie Bencheley is of great interest to me, because of what it has done for a member of my own family. In a year's study with Miss Bencheley, my daughter, who, apparently, had little to build upon, either vocally or physically, has developed a very clear, strong voice, and her chest and throat measurements are materially increased.

The Bencheley system of technical practice is evidently the natural method of voice development and as such is worthy of widely extended notice and use.

Mrs. Florence Hall Clague,
Instructor and Organist First Presbyterian Church.
Hudson, Wisconsin.

MERRY CHRISTMAS MUSICALS

OLD CHRISTMAS SONG

Now Christmas is come,
Let us beat up the drum,
And call all our neighbors together;
And when they appear,
Let us make them such cheer
As will keep out the wind and the weather.

(I am sure there is a member of each of our Music Clubs who can put this old Christmas song to music for the Christmas meeting. It makes a "rollicking" chorus.)

THE SPIRIT OF AMBITION

BY ELIZABETH A. GEST

One day Nellie was so tired that she could not practise, and she fell asleep in the hammock with a red rose in her hand. Presently the rose grew large and turned into a beautiful fairy prince. He had golden wings and a sword hung at his side, and Nellie thought he looked like a general in the fairy army. He saluted her with a low bow, and said, "Good morning!"

"Oh, good morning," answered Nellie; "and who are you?" she asked timidly.

"I am the Spirit of Ambition," answered the fairy. "When people really want to gain anything, and try hard to do so, I come and help them, and cut a path for them with my sword, and lead them on to their goal."

"Oh, how wonderful!" cried Nellie. "No, wonder people succeed when you help them. Will you help me, sometime?"

"Certainly," answered the fairy, "any time you invite me to come to you, I will come. But now I must go, for someone else is calling me. Good-bye." And he vanished.

The next day Nellie was practising, and could not learn her scales. "Little fairy prince, come and help me," she cried; but he did not come. Another day her piece was hard and she could not learn it. "Oh, little Spirit of Ambition, please come and help me." But he did not come, and she was very much disappointed, for she thought he did not keep his promise to come to her when she invited him.

But one day she was going with some of her friends to spend the day in the country, and she told her mother that she did not want to go.

"Why not?" asked her mother. "It will be so nice, and you will have such a good time playing in the fields."

"No, I would rather stay home and practise," answered Nellie, "for I am going to practise hard every day of my life, and when I grow up I am going to be the greatest pianist in the world, and people will come in great crowds to hear me; and I will be very famous. So you see, I really must stay home and practise."

"Very well," said the mother, "do as you wish."

So she ran off to the piano, and there, sitting on the music-rack was the little fairy prince.

"Well, where did you come from?" asked Nellie. "I have invited you to come several times, but you have never come. I thought you had deserted me," she said mournfully.

"You only invited me once," said the fairy.

"When was that?" asked Nellie.

"When you said you wanted to practise hard and be the greatest player in the world; and I heard you say it and came to help you."

"And will you stay with me, and help me always?" she asked. "As long as you wish," answered the fairy.

And the little Spirit of Ambition stayed with her always, and helped her to become one of the great pianists in the world.

ETHEL'S MUSIC LESSONS

BY HARRIETTE BROWER

VII

(All Rights Reserved)

ETHEL'S MUSIC TRAVELS

We left Ethel with her parents among the snow-capped mountains of the Austrian Tyrol, enjoying a delightful week in Salzburg, the home of Mozart. Ethel procured all the picture postals she could find of the great composer himself, his birth house, his living house, portraits of his parents and sister, his statue in the Platz in Salzburg, and the tiny house where he composed his opera of *The Magic Flute*. She wrote home to her teacher, Miss Dudley, an account of all she had seen

and enjoyed in this beautiful Mozart-land, sent her some of the pictures she had collected and begged that she might study some more Mozart pieces as soon as she returned home.

A little later Ethel was on her way northward, and soon she found herself located in Berlin for a fortnight's stay. She went into raptures over the massive, elegant buildings, the beautiful parks, and the fine picture galleries. She loved the Tiergarten, a beautiful park quite nearby, and wanted to go there every day. Here she found the triple statue to Mozart, Haydn, and Beethoven, carved in pure white marble. Another day she discovered the Wagner statue, which represents the composer seated, and surrounded by some of the characters in his operas. The statue was placed in a lovely green bower, and the composer seemed to be listening to the songs of birds above him in the tree-tops. Mamma suggested he might be hearing the bird theme which he used in the *Siegfried* music. Of course Miss Dudley had to receive pictures of these favorite statues at once. Ethel visited them so often that they seemed like old friends to her.

Berlin is a great musical center, and Ethel heard considerable music, even though it was summertime. She was also taken to visit the great music schools, several of which are famous. The Royal High School of Music attracted her very much, with its fine new buildings and concert hall. She saw, too, the house where Mendelssohn used to live; it is now on one of the busiest squares of the city. She also found his grave in a little cemetery, just off one of the noisy thoroughfares —"tucked away between the houses, so that you never could find it unless you knew just where to look," wrote Ethel to her teacher. "But mother knew just the way, for she had been there before, when she was a girl."

Ethel grew to love Berlin, and was almost sorry to be told they were to leave it in a day or two, and start for Hamburg. That meant going home of course, for she knew they were to sail from there. "But Berlin is so lovely," she would exclaim; "and oh, the flowers, mamma, did you ever see so many?—almost like London." She meant the flower pots and window boxes full of blooms which decorate nearly every house.

The hours flew all too fast, and very soon they found themselves in Hamburg, a city which also delighted our little American, with its fine squares and buildings, the beautiful lake right in the middle of the city, and in some places waterways for streets, crossed by bridges—like the pictures of Venice, for all the world.

Ethel learned that two great composers

were born in Hamburg: Mendelssohn in 1809, and Brahms in 1833. The Mendelssohn house was quite easy to find. It is well preserved, though there are no relics or souvenirs in it now of the composer. It must have been a very good house a hundred years ago, and is in a very pleasant part of the city. Not so with the Brahms' birth house. It is in a poor quarter, to begin with, and then it is so hidden away behind other houses as to be almost impossible to find. "We never would have found it," said Ethel afterwards, "if mamma had not met a gentleman at the music store who knew just how to go, and he drew it all out on paper—like a map, you know." We will let Ethel tell the rest.

"We walked through ever so many streets, some of them such queer ones, with such oddly dressed people in them. At last we came to an open square, all paved with rough stones, and no sidewalks at all. I didn't see any house where I thought the great composer Brahms could have lived, for all the buildings looked like factories or breweries. But mamma said it must be there, according to her map. So we began to walk around the square. Then we came to a little slit between two buildings, hardly big enough to walk through. Mamma said we must go in there. We came to a tiny back yard, all filled up with old rusty iron and things. I didn't see how anybody could live in such a place; there were people living in the old house in front of us, and on looking up we saw a tablet on it which said that Johannes Brahms had been born there, May 7th, 1833. I wrote down what was on the tablet, so I could always keep it. We went up the narrow, little wooden staircase, and knocked at the door. There were children inside, for we heard their voices. The children would not open the door when we knocked, for they said: 'Mother is out, and we dare not open.' So we had to go away without getting into the room. But we could see that Brahms must have been very poor, indeed, when he was a little boy, to have lived in such a place as that. It didn't matter so much, though, that he was so poor at first, for he grew to be a great man and a wonderful musician, and that is the main thing. I hope I can soon play some of his music. Mamma says perhaps I might learn the *Cradle Song* before long."

In a few days Ethel was on the ship which was carrying them back to the home land; of course she was eager to see her little friends and begin her lessons on the piano. About her further musical studies you shall hear a little later.

A CHRISTMAS JUBILEE

BY LAURA ROUNTREE SMITH

THE children's heads are seen above a large shoe which occupies the center of the stage. The words *Merry Christmas* are upon the shoe.

Mother Hubbard and the Old Woman sit in front of the shoe. The children may wear costume or not as desired.

The Pretty Maids wear cheesecloth dresses of dainty colors, two blue, two pink, two green, two white, two yellow, two lavender. They carry wreaths of flowers or holly.

Bo-Peep wears white dress, pink bodice and overskirt, pink hat. She carries a crook wound with pink ribbon.

The Queen of Hearts wears a white dress covered with red paper hearts, a heart-shaped hat, and she waves a string of hearts in time to music (*Hearts and Secrets*).

The Singing Waits wear long capes and pointed hats.

The children make the invitations on bell-shaped paper, containing a real sprig of holly fastened in the corner, and the following rhyme:

Mother Goose Children, one and all,
Give invitation hearty,
To a musical at Christmas time;
Come join our merry party.

PART I. PRIMROSE HILL. IN THE MORNING

1. Song. Merry little maids are we. (*Sixty Songs from Mother Goose.* L. E. Orth.)
2. Dialogue and Songs.

OLD WOMAN:

No stockings for Christmas, oh what shall we do?
No chimney for Santa Claus in this old shoe.

MOTHER HUBBARD:

I'd so like to help you for Christmas draws near,
But my cupboard is bare at all times of year!

OLD WOMAN:

Call Little Boy Blue, for it may be true,
If he lived in a shoe, he'd know what to do.

Song. *Little Boy Blue.* (*Thirty Songs for Children.*)

CHILDREN IN THE SHOE:

Boy Blue's in the meadow asleep today,
But Little Tom Tucker sings on the way.

Song. *There was a little fellow* (*Sixty Songs from Mother Goose.* L. E. Orth.)

OLD WOMAN:

Sweet music may lure Little Bo-Peep,
Tho' she is sad, for the loss of her sheep.

3. Piano. *Little Bo-Peep.* (*Mother Goose Songs without Words.* L. E. Orth.)

(Enter Bo-Peep.)

ALL:

While we children all are singing,
Hear the sheep-bells ringing, ringing.

4. Piano. *Little Sheep Bells.* Paul Beaumont.
5. Dialogue and Music.

CHILDREN IN THE SHOE:

Oh, Little Bo-Peep, what shall we do?
We are so crowded in this old shoe;
No stockings, no chimneys for Santa, 'tis true;
Oh, Little Bo-Peep, pray what shall we do?

BO-PEEP:

I'm Little Bo-Peep, I really don't know,
But call the Pretty Maids all in a row;
Tho' each is airy as a fairy,
Old Mistress Mary is still contrary!

Piano. *Mary! Mary!* (*Mother Goose Songs without Words.* L. E. Orth.)

(Enter Pretty Maids singing.)

Song. *Mary Contrary.* (*Sixty Songs from Mother Goose.* L. E. Orth.)

PRETTY MAIDS:

Come! build your *own* chimney, this much we know,
Tho' we are but Pretty Maids all in a row!

(The children in the shoe build a chimney of blocks or they fasten up paper, lined off like bricks of a chimney, on a screen by the shoe.)

Song. *We're the tribe of Mother Goose.* (*Sixty Songs from Mother Goose.* L. E. Orth.)

(Enter Queen of Hearts.)

OLD WOMAN:

Queen of Hearts, oh, what shall I do
For my poor little children who live in a shoe?
My children have no stockings at all;
They have no stockings if Santa should call!

QUEEN OF HEARTS:

I'm the merry Queen of Hearts,
Tho' the Knave once stole my tarts,
I'm quite happy, as you see,
For I helped deck a Christmas tree.
Some Christmas secrets I surely know,
But ask the Pretty Maids all in a row.
A merry Christmas, and how do you do?
Dear little children that live in a shoe.

Piano. *Hearts and Secrets.* Kern.

PRETTY MAIDS:

The Old Woman of Leeds
Was known for kind deeds;
Perhaps she would know
How to hang in a row
Stockings she knit
In the long, long ago.
Sleigh bells are ringing,
Blow, merry winds, blow.

(Sleigh-bells are softly rung behind the scenes.)

Piano. *The Sleigh-ride.* Behr. (*Rhythm and Action.* Norton.)

(Enter Old Woman of Leeds with a basket full of stockings which the children hang up back of the shoe.)

Song. *Santa Claus will come tonight.* (*Thirty Songs for Children.*)

(Pretty Maids wave wreaths to and fro while the next selection is played.)

Swing Song. Esipoff. (*Rhythm and Action.* Norton.)

PART II. PRIMROSE HILL. IN THE EVENING.

(The stage is darkened. The Singing Waits pull bellropes.)

1. Piano. *The Chimes.* Müller. (*Rhythm and Action.* Norton.)
2. Carol. *Stilly night, starry and bright.* (*Folk-songs and Other Songs for Children.*)
3. Recitation. *The Waits.*

We are Singing Waits on Christmas Eve,
This is Primrose Hill, we do believe;
Forth to the woods then let us go,
To gather in holly and mistletoe.
Heap on the Yule-log with good cheer,
For Merry Christmas time is here.

4. Violin, 'Cello, and Piano. *Frolic under the Christmas Tree.* Paul Th. Miersch.
5. Piano. *Under the Christmas Tree.* Hiller.
6. Piano. *The Bells.* Wachs.
7. Recitation. *Chiming Bells.*

Hear the sweetly chiming bells,
Bells on Christmas Eve;
Each one a sweet story tells,
Bells on Christmas Eve.
Chiming bells of long ago
Sweetly ring across the snow,
Chiming, chiming, sweet and low,
Bells on Christmas Eve.

Hear the sweetly chiming bells,
"Peace, good will to men."
Stronger now the music swells,
"Peace, good will to men."
Chiming bells, where'er we are,
Carry tidings glad afar;
In the East a glowing star,
"Peace, good will to men."

8. Piano. *Evening Chimes.* Rollinson.
9. Recitation. *My 'Cello.*

In winter when the lights burn low,
At Merry Christmas time, you know,
I take my 'cello and I play
Melodies not dreamed by day.
You'll hear the sweetly chiming bells,
As louder still the music swells,
When thus I lightly touch the strings,
The sweetest songs my 'cello sings.

The tinkling sleigh bells you will hear,
For Merry Christmas time is near;
The chiming bell in castle hall,
The children carol, one and all.
But there's one song that's sweeter far,
The song of the bright evening star.
Then softly sing, while lights burn low;
Hang high the holly and mistletoe!

10. 'Cello and Piano. *Song to the Evening Star.* Wagner.
11. Drill. By the Merry Maids.

March in from right and left, meet, march forward in two's, bow, recite:

We're the Pretty Maids that stood in a row
In Mistress Mary's garden, you know.
But Christmas is coming, sing hi! sing ho!
'Tis the time of holly and mistletoe.

Hold wreaths over faces, right, left, over heads, on heads, swing to and fro. Face each other, sides to the audience, end couple march under, all who hold wreaths touching, the rest follow, march right and left, form two circles, march round, meet in lines, form one circle inside the other, each circle marches to center, those in outer circle hold wreaths high up over the heads of the rest. All hold wreaths high, touching, recite. *Song of Christmas:*

Sing a song of Christmas,
With holly berries bright.
Sing a song of evergreen,
With candles all alight.
Hear the Christmas bells chime low;
Sing a song of mistletoe.

Sing a song of Christmas,
With carols loud and clear.
Sing a song of chimney wide,
And Yule-log with its cheer.
Keep the candles burning bright,
'Tis Christmas *everywhere* tonight.

(March right and left. The Waits march between singing.)

12. Song. *The First Nowell.* (*Folk-songs for Children.*)

Note.—This program may be given in part or as a whole. Each part is complete in itself.

MERRY CHRISTMAS

OUR BIRD CORNER

"A Bird in the *Bush* is worth two in the *Hand.*"

THE CHRISTMAS COCK

SOME say that ever 'gainst that season comes
Wherein our Saviour's birth is celebrated,
This bird of dawning singeth all night long;
And then, they say, no spirit dares stir abroad;
The nights are wholesome—then no planets strike,
No fairy takes—no witch hath power to charm,
So hallow'd and so gracious is the time."

OUR FRIENDS THE BIRDS

NEVER before has the interest in birds in this country been so widespread as it is today.

Many plans are on foot for the establishment, in various parts of the country, for bird refuges or sanctuaries, and for the systematic placing of nest houses and feeding stations in parks and cemeteries.

At present, in our opinion, the greatest single factor hastening this ornithological millennium is the formation of *Junior* classes by the National Association. The enrolment in a single season of nearly 100,000 children in definite courses of bird-study, and supplying them with leaflets and colored plates of the Association is an accomplishment of untold importance.

At the present rate of increase not many years will pass before one million children will have had some instruction concerning birds, and will have learned where to get further information.—From *Bird Lore Magazine,* organ of the Audubon Societies, published by D. Appleton, N. Y.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

AMERICAN COMPOSERS' DAY

FEBRUARY SIXTH, 1915

THE musical season now before us is one in which American musicians, both performers and composers, will find ample scope for their talents. So important is the opportunity, made by conditions abroad, that it seems to the writer an occasion for emphasizing the standing of American composers by means of programs of compositions by American composers (born here or resident in America at least ten years), and the selection of February 6th as the date of performance of these programs in all cities from coast to coast. This date, the first Saturday in February (falling on the 6th in 1915) and to be known as "American Composers' Day," is chosen for several good reasons: It is "symphony night" in all the large music centers, a night when conductors can arrange to have a program of orchestral works by American composers. It is also far enough advanced in the season to afford ample time for amateur musical clubs, schools of music, and societies to prepare special programs and give to each number a finish not possible earlier in the season.

It is desirable to have one day every year when music lovers may do honor to composers of the Western world, when the general public may also become acquainted with the art creations of their countrymen. The day can be made helpful and inspiring both to composers and performers and should be the means of bringing to public hearing all the best recent productions of American composers—solo, chamber, orchestral, and choral music. Such united effort will encourage creative artists and give to American musical circles an impetus greatly to be desired.

Already conductors and directors of musical societies are arranging American programs for the winter, and I take this opportunity of making an appeal to them to arrange dates for concerts so that a program of American compositions may be given by their respective organizations February 6th. I would make the same appeal to the musical directors of choral societies, to schools of music and to program committees of all music societies and women's clubs, and would be pleased to have a few words from them on the subject, by way of suggestions for making the day more helpful.

Independent musicians, vocal and instrumental, including organists, should make the occasion one for bringing to a public hearing compositions for the voice or instrument in which they are chiefly interested. Chamber music, piano trios, string quartets, quintets, etc., should be brought forward by groups of players of the various instruments. It will be surprising to find that in almost every city composers of budding talent have manuscripts waiting for performance, and I would suggest that it will be feasible in some cities to confine the program to composers of the state, or to compositions in manuscript, or to works published within the year.

We shall present an appropriate program, and probably two, on "American Composers' Day" at the music colony at Ruskin, Florida, held during January and February, and will be glad to have the privilege of looking over manuscripts or published music for piano, strings, voice, chamber music, chorus and orchestra, with a view to performance. I look to the day as one that will be the means of bringing amateur and professional players together in concerted music, and therefore, that one of the lasting results will be the formation of organizations for the enjoyment of chamber and orchestra music. So here I leave the matter for your consideration.

RAY G. EDWARDS, Director,
Ruskin School of Music,
Ruskin, Florida.

CALISTHENICS AND THE VIOLIN

BY PAUL STOEVING

I HAVE sometimes been asked for an opinion as to the value of calisthenics as an aid to practising on the violin. That not one of the popular violin methods, to my knowledge, recommends them would be no reason for discarding them or denying their efficacy; but I think the claims of the majority of calisthenic propagandists show this efficacy in too optimistic a light. The assumption that calisthenics can reduce practising on the instrument to a minimum is certainly unwarranted by theory and fact. If, in the case of the bow arm of the violinist, it were possible to localize certain muscles or sets of muscles and exercise them separately from others, and thus more strenuously than is possible in practising, gymnastic exercises, causing a precipitated inflow of nourishing blood, might, indeed, to a great extent, replace less direct, and therefore also less efficacious, work at the instrument.

This, however, is a problem which, for its solution, would require profound anatomical knowledge; and, further, the laws of the physiology of the bow arm mock any attempt at turning it to practical account. For even the slightest effort in working the bow involves the activity, not of one or two of a small number of muscles, but a multitude of them, all at the same time, and with graded intensity; with every portion of the arm working, the whole arm is, to a greater or less degree, drawn into activity, or at least affected. There is no such thing, for instance, as an exclusive wrist movement, however slight; it appears only as such; in reality the movement may be, or may not be, initiated by the wrist, but requires for its consummation the cooperation of and is continued in the whole arm.

The late Dr. Steinhausen, of Berlin, an amateur violinist, by profession a noted anatomist and surgeon, having made the physiology of the arm in violin and piano playing his special study, claimed that one of the fundamental movements of the violin arm consists in the tremulous revolutions of the forearm in the socket of the elbow bone. In this movement, which he calls the pronations and supinations of the forearm, he sees the secret lever for the execution of most styles of bowing, the staccato in particular, and with respect to the left hand, for that of the vibrato.

So far as the staccato is concerned, the truth of this assertion can be tested by anyone who pulls up his shirtsleeve and watches the wrist performing the characteristic little turning movement necessary for this style of bowing; he will see that it is really the forearm and not the wrist which does the work. But I doubt that the knowledge of this fact and any special gymnastic exercises deduced from it will bring him appreciably further in the acquisition of the staccato or any other style of bowing based on it. The tremulous revolving of the forearm is indeed easy for anyone, scribbler, tailor, or blacksmith; with some it is naturally faster than with others; let, however, any individual with the best capacity for revolving the forearm and an otherwise untrained arm try a staccato, he will fail dismally. The fact is, that to produce it while the forearm revolves other parts of the bowing apparatus, the forefinger, thumb, etc., must act at the same time as supplementary, modifying, or determining agents, and require no less training than the fundamental one.

I fear it is thus with every theory put forward to replace by calisthenics the established traditional exercises on the instrument. Taking, for instance, the forefinger of the bow hand. Varying pressure of this finger, in conjunction with counter-pressure from the thumb, is the prime factor, not only in effecting an increase of tone, but for all accentuation and the execution of an infinite variety of bowing styles both of the martelé and rebounding kind. But no amount of gymnastic exercises for strengthening the muscles of these fingers, apart from actual playing, will, to any appreciable degree, help in acquiring either a strong, let alone a beautiful tone, or a facility in the bowing styles referred to. And this simply for the reason mentioned above, that the work of the forefinger and thumb depends upon, and is conditioned by, the simultaneous activity of other muscular factors. For the same reason, that is, the complexity of the muscular apparatus, the experience of players and teachers proves that proficiency in many styles of bowing is attained not so much by practising these styles by themselves as in an indirect, roundabout way, through the persistent use of other widely different or related styles, and thereby exercising, strengthening, developing the muscles principally involved in the execution of the former. Thus, in order to attain the responsive strength in the forearm and flexibility of the wrist (while the grip of the hand remains comparatively loose) which are necessary for a mastery of the spiccato, sautillé, and springing bow arpeggio, one of the best means is diligent practice of sciolto balzato or fouliette (short, hard hitting with the bow) at the nut, and for tone shading sureness, and lightness of touch the study of martelé, at all parts of the bow.

These facts are not meant to be taken as an argument against the use of special calisthenics, or as a proof that they are useless. No, they seem to me to point only to the futility of according them,

at least in the bowing curriculum of the violinist, more than a very modest place at best.

I confess to doing myself for years regularly every morning, in connection with a few Swedish exercises, one or two calisthenics for the right arm and left hand, although I have really never tested their assumed virtue by omitting them for a time and then making comparison. No one indeed can possibly gainsay the beneficial effect which gymnastic exercises, just like outdoor games, have on the body and mind in general; and through them they should also react beneficially on the violin playing organs, the nerves and muscles of the back of the neck, the arms, and hands; but aside from this excellent general use of calisthenics, special, ingenious gymnastics for the right arm and hand may do something in the way of preparing these members for the actual work with the bow.

A pupil, for instance, who experiences a more than ordinary lethargic opposition on the part of the forearm to revolve quickly in the elbow socket, in Dr. Steinhausen's sense, may derive some benefit from the following exercise, which I take from a brochure by Heinrich Davidsohn, of Danzig, a thoughtful propagandist of the Doctor's theories: "Let the arm hang down loosely with the hand acting like a pendulum and energetically swing the forearm backward and forward from the elbow (revolving fashion); then do the same movement more rapidly in a bent middle position of the arm, as though playing on the A string, and also while, as it were in imagination, the bow was being pushed up (making an upstroke)."

I also remember some valuable suggestions made by Mr. Ray G. Edwards in THE MUSICIAN some time ago on the subject of calisthenics for the violinist. Likewise would I recommend for children with weak hands that at first they learn to hold the bow with only alternately, the thumb and middle finger, the thumb and third, thumb and index, thumb and second and third, third and fourth, second and fourth, and index and fourth, in various positions of the arm and wrist, that is, as though playing at different parts of the bow (particularly with outstretched arm at the point), and also while drawing it full length through the air in the approximate direction of each string. These latter exercises, however, can hardly be called calisthenics pure and simple, as they are performed with the bow, and actually touch the muscles involved in the stroke and benefit them accordingly.

Less complex and involved is the activity of the left hand in playing the violin, and gymnastic exercises rationally, systematically, and regularly pursued may do some good. But so would the same amount of time given with the same regularity to exercises on the instrument; and here they would serve the purpose not only of increasing the strength and independence of the fingers, but in doing so in the needed right position, develop their sense of touch and familiarity with the finger board, that is, the intonation, while at the same time the bow arm is being exercised, as well as the muscles of the left shoulder, elbow, chin, etc., employed in holding the instrument.

If You are in the Market for a
RARE Old VIOLIN

This Book Will be Sent You Without Cost

If you appreciate the time, money, travel, experience and work necessary to produce such a book; if you realize that we have bought and sold more precious violins than any other house in America, then we know this book will be treasured by you.

Within white and gold covers, in the highest form of the printer's and graver's art are faithful color-type plates of rare old violins we own. Many of them are world renowned masterpieces.

From Stradivarius and Guarnerius violins at $10,000, down to genuine old violins at $50 and $100, we show and describe rare old instruments which have responded to the bows of masters of greater or lesser fame.

In this book you feel and breathe the atmosphere of the violin world and if you wish to buy a good old violin this book is for you.

It goes without saying when you buy a valuable violin it is most necessary that you deal with a responsible house whose word and guarantee will protect you.

To those who are soon to be in the market for a fine violin we extend this invitation to write us for a complimentary copy.

THE PROSPECTS OF MUSIC IN AMERICA

BY RAY G. EDWARDS

LESS than one hundred years ago "playing on an organ with a loud noise" was a sin in this country, and the music of voices was looked upon by most people as wicked in that it made men satisfied with this world. The music, and even the names of the great masters, Bach, Mozart, and Beethoven, were known only to the few, and the instruments required to perform the orchestra music of these composers were a rarity indeed. Symphony orchestras, of course, were unknown. Our grandparents, and even our parents, were sung to sleep with songs the words of which must have caused many a nightmare, portraying as they did the most awful and mournful deeds of murder, death, robbery, and midnight scenes of the gallows and churchyard.

In 1817 there was but one bassoon in New York City, while the only oboe player in the country in 1828 lived in Baltimore. The first Italian opera company to come to America was heard in New York in 1825. The New York Philharmonic Society Orchestra was founded in April, 1842, by U. C. Hill, a pupil of Spohr, whose *Violin School* he edited later for the publishing house established by Oliver Ditson in 1857. The Chicago Musical College was founded in 1869, the New England Conservatory in 1870, and many New York societies and schools for musical culture were organized during the eighties. Chickering founded his piano factory in 1823.

And so, in a few words, we can mention the important events in American musical history, in much of which living men and women took part. Is it any wonder, then, that we have not yet produced another Bach or Beethoven? The wonder is that we have mastered every form of composition and have such works as those of MacDowell, Nevin, Loomis, and Paine. Today the greatest opera companies and symphony orchestras are on this side of the Atlantic, as well as some of the greatest schools and teachers of music. If we go to Europe to study composition, which no one is anxious to do at the present moment, we find several of the best known teachers for a number of years have been Americans. American singers are in demand everywhere, while our violinists have played in all the great orchestras abroad. Eighteen thousand bands in America alone have bought Sousa's music, so we can safely say the total number of bands in the country is around twenty thousand. The Kneisel Quartet and the Flonzaley Quartet, members of the latter organization, by the way, being, except the 'cellist, all pupils of César Thomson, are the two leading string quartets of America, and of the world.

These two quartet organizations are serving a better purpose than as entertainers only; they are the models upon which numerous amateur string quartets are building, and they have fired more than one composer to try his powers in chamber music writing. And it only remains, now, for American composers to prove themselves in the larger forms for chamber instruments and orchestra, having already shown to the world that as writers in the smaller forms, for voice and for piano, they can create works equal to any being produced in these later days in other parts of the world.

But, of course, the absolute music of the orchestra, and more especially of the string quartet and piano trio, these are the supreme tests for a composer, to be able to write as easily in the large forms as our countrymen have already done for voices and the piano. The writer for stringed instruments alone, or for full orchestra, has not the aid of words or of a program; he depends entirely, or nearly so, upon pure tone, unassociated with the other arts.

But if this is the test, who will doubt that America is to produce new and wonderful examples of "absolute music" as the next step forward in her musical development? Surely, as we review the progress of one short century, or of even the last fifty years, we cannot but take hope and feel proud of the achievements during these last few decades. The last thirty years have seen the establishment of most of our orchestras. When we have as many string quartets of equally high standing, and a fair number of amateur quartets and trios compared with the twenty thousand bands, music will have become a power in the land, such a power as it has not been in the golden days of any nation.

When we think of the coarse songs of our grandparents, and the little knowledge even the favored had of the master compositions, we can be at ease concerning the future of music in America and the part it will play in the culture of every home. Nothing hinted at above can convey a true idea of what is possible for American composers and performers to accomplish during the next fifty or one hundred years, a period that will see as great a change as that between our present symphony orchestra devotee and the general public of the pioneer states one hundred years ago.

ON FINGERING

BY L. HENDERSON WILLIAMS

I WONDER how many average amateur violinists, who have ceased taking lessons, take the trouble to finger their new music before actually beginning to play it? Not the majority, I fear—particularly if the piece is something they have recently heard and are anxious to reproduce quickly, and with as little trouble as possible. A great many of the dainty and delightful little "encore" pieces played by the modern concert artists are victimized in this way by the unskilful imitator. All goes well enough, perhaps, except for "just one" passage; "just one" little bit that evades the player's grasp and worries him or her every time the piece is brought out. Yet very often this worry and uncertainty are caused by having no fixed scheme of fingering. The performer attempts it in several different ways and sticks to none in particular. Now it is quite right to finger it at first in various ways, but, after due consideration of the effects, a choice must be made and rigidly adhered to; otherwise there will be lasting confusion in the violinist's mind concerning that precise passage, and it will remain a

permanent defect in what might otherwise be a meritorious reading.

The safest plan is to mark every change of position in good, clear penciling as soon as a definite choice has been made. It can be rubbed out later if desirable, but it should be left as long as there is the slightest hesitation in the stopping.

There are several considerations which must influence us in our choice of fingering. Roughly speaking, they may be classed under three heads: Facility, Phrasing, and Tone-color.

The term "facility" is not altogether easy of definition without special illustration, because it so often happens "that one man's meat is another man's poison" in matters technical. Indeed, as regards fingering, the shape and size of the hands must often be taken into account as well as the speed and style of the music. Consequently we can throw out only a few general suggestions:

In lengthy passages begin to shift early, and do not keep all the work for the E string.

In repetition of broken chord passages it is better to divide the notes between two strings or more, and remain in one position, than to keep perpetually shifting.

In chromatic passages choose one of the accepted fingerings and stick to it. Variations of fingering in this scale are more likely to result in faulty intonation than even in the diatonic modes.

The understanding and practice of correct phrasing is of the greatest importance to all true lovers of music. Without it melody is pointless and tasteless, and harmony degenerates into mere tolerable noise. The violinist phrases with his bow as the singer with controlled breathing, and any manner of fingering which interferes with, or renders ineffectual, this special function of bowing, must be unhesitatingly condemned. It may be conspicuously easier for the left hand to play certain notes in a different manner from that indicated or implied by the composer, but if the alteration seriously interferes with the spirit of the phrasing, then the apparent convenience is too dearly bought. Indeed, it is surprising how many players sacrifice the greater to the lesser in this matter; get the notes anyhow and anywhere, with the faintest conception of the inartistic effect, and thus inflict indescribable suffering upon more sensitive musicians.

Very much the same reasoning applies in the consideration of tone-color. Each string has its characteristic quality of tone; and in no case will notes produced upon the upper portion of one string sound exactly similar if played upon the lower part of the next. To take a familiar example: How much finer and more sonorous the opening melody of Raff's *Cavatina* sounds when played altogether on the G string than when the third and even the second strings are utilized for the higher notes. Again: the middle third of the D string is used with excellent effect in parts of Wieniawski's *Légende,* when the impression to be conveyed is that of a veiled and mysterious melancholy. This peculiar quality of tone cannot be obtained in any other register, but it is not by any means the easiest way of playing the notes. Once more, facility must be sacrificed to phrasing; or, in this instance, more particularly, to tone.

Of specific faults, that of using the open string where a stopped note would be preferable is extremely prevalent with children. It is commonly caused by laziness—the dislike to exerting a weak fourth finger when anything else can be substituted. Akin to this is the habit of not stopping any finger with sufficient firmness, thereby producing a hoarse and hazy instead of a clear note; also that of letting the thumb slip upwards with a convulsive wiggle, when a note such as F on the first string is required.

Harmonic, even the natural series, like the open strings, should be rather sparingly used. There are two reasons for this: one—having reference chiefly to young pupils—being that it is necessary to displace the lower fingers in order to produce them; which displacement should be avoided without good reason. The other objection lies in the nature of their sound, which is easily distinguishable from that of the surrounding stopped notes, not having their fulness or intensity, but being, by contrast, more clear and penetrating. Their legitimate use depends entirely on the player's judgment, but in a sustained scale passage they are usually undesirable. The treatment of artificial harmonics does not come within the province of this paper.—From *A Scheme of Study for Country Violin Students.*

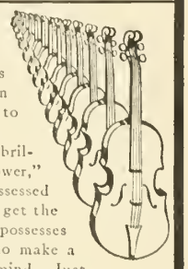
REGISTRAR, 51 West 76th Street, New York City

Hp., Lb., Oz., Ft., Sec., Cgs., Btu.



Pounds, ounces, feet, seconds, centimeter-gramme-seconds, British thermal units—Fine as these and many other scientific measurement systems are, no one has ever reduced violin tone power and violin tone quality to any system of measurements.

When the violin maker tells you "brilliance", "mellowness," "carrying-power," "volume," "sonority," etc., are possessed by a violin you get no figures. You get the maker's word for it that the violin possesses these qualities in a degree sufficient to make a marked impression on *his* ear and mind. Just how much of an impression, he can't say. Your only safety lies in selecting a maker reputed to be trained in ear and mind for the accurate measuring of tone qualities.

OLD and MODERN VIOLINS

"Gemünder Art" Violins possess every desirable quality to a very marked degree. They are the tone-standards of the present day. Catalog No. 1B describes these famous Gemünder models.

Excelsior, Concert, and David are three moderate-priced instruments graduated and finished by the Gemünders. These also qualify in all qualities of distinction. Folders sent free.

Old Violin Catalog No. 3B lists remarkable instruments at all prices, from $10 up.

CONDUCTED BY H. C. MACDOUGALL

ORGAN MUSIC FOR SPECIAL EVENTS

BY HARVEY B. GAUL

THERE are times when an organist is at his wits' ends, and those times are not confined to Saturday night rehearsals, or a cold church to practise in, or an implacable sexton; but very often he is harassed to find suitable music for certain occasions.

Some of the occasions that try his soul are the Church Festival, the Consecration, Dedication, or Anniversary Service. These events happen with ill-regulated regularity in some churches. Other events that take his mind off the high cost of living and the trouble in Europe are the National holiday and the local celebration. To find organ music that is specifically designated for these events is like finding the unearned increment in a country music teacher's bank account. It is almost impossible.

To be sure, we have *Festival Preludes* and *Festal Postludes* without end, but none of these is entirely applicable to a particular service. They are about as general and prevalent as our ideas on suffrage.

Many an organist, just to show that he feels joyous and that the occasion is a felicitous one, falls back on Batiste's *Offertoire* in D minor, or Meyerbeer's *Torchlight March,* and feels that he has done his full share, with the aid of noise and a flourish of pyrotechnics, to observe the day. In some instances that is all very well, as noise is synonymous with holiday. But "breathes there an organist with soul so dead, who never to himself has said, 'I wish I could get something for Decoration Day besides *My Country 'Tis of Thee'?*"

With the aid of several publishers' catalogues, it was discovered that there are many pieces applicable to certain days and events. The only difficulty was that the average publisher scattered them generously throughout his catalogue instead of classifying them.

For a HARVEST HOME FESTIVAL the following numbers will be found excellent:

Variations on "Come, Ye Thankful People, Come" ..... Woods
Thanksgiving ..... Coenen
Thanksgiving March ..... Best
Thanksgiving March ..... Calkin
March for a Church Festival ..... Calkin
Thanksgiving Hymn ..... Edward German
Song of Thanksgiving ..... Booth
Thanksgiving ..... Foster
All Nations Upon God Depend ..... Handel

For a COMMEMORATION SERVICE for either a distinguished person or event, the following pieces are suggested:

In Memoriam ..... Rheinberger
In Memoriam ..... Adolph Foerster
In Memoriam ..... Bonnet
Commemoration March ..... West
Piece Héroïque ..... Franck
Song of the Hero ..... Volkmann
Funeral March on the Death of a Hero ..... Beethoven
Caprice Héroïque ..... Bonnet

For a national holiday such as DECORATION DAY or the FOURTH OF JULY, the following compositions may be used:

Jubilate Deo ..... Silver
Jubilate ..... Frysinger
Hymn of War (Aïda) ..... Verdi
War March (Rienzi) ..... Wagner
War March of the Priests ..... Mendelssohn
War March of the Priests ..... Rossini

For a MILITARY or PATRIOTIC SERVICE for our own nation or some other (please exclude Mexico), the following numbers will be found applicable:

Military Overture ..... Mendelssohn
Variations on "God Save the King" ..... Hesse
Variations on "God Save the King" ..... Rinck
(*God Save the King* is *America,* as we understand it, so that the titles are interchangeable.)
Coronation March ..... Tchaïkovsky
Coronation March ..... Elgar
Military Polonaise ..... Chopin
March Salvator Rosa ..... Liszt
Rakoczy March ..... Berlioz
Marche Slav ..... Tchaïkovsky
Overture 1812 ..... Tchaïkovsky
Norwegian War March ..... Sinding
Finlandia (Tone Poem) ..... Sibelius

For a CIVIC OCCASION, of which we have few, though there are organists—city organists, for example—who have to play at state or city meetings and conventions, the following may be used to advantage:

See the Conquering Hero Comes ..... Handel
Variations on "See the Conquering Hero Comes" ..... Borst
Civic March ..... Best
State March ..... Spencer
Imperial March ..... Elgar

For a PUBLIC DAY, when our people are gathered together for celebration, the numbers below will be found popular:

Fantasia on "My Old Kentucky Home" ..... Lord
Variations on American Air ..... Flagler
Variations on "Home, Sweet Home" ..... Flagler
Concert Variations on "The Star Spangled Banner" ..... Dudley Buck
Concert Variations on "Home, Sweet Home" ..... Dudley Buck

There is no restriction on some of these numbers; they may be used at many different services either for recital purposes or for *Preludes* or *Postludes.*

The hope is that some of them will be substituted for Gounod's *Queen of Sheba March,* which has been the *pièce de résistance* of too many organists on too many occasions

SPECIAL MUSICAL SERVICES FOR CONGREGATIONS

BY CHARLES N. BOYD

IN many churches with a volunteer chorus choir the special musical service is regarded as a distinct advantage, not only for the pleasure it affords the congregation, but also for the benefit accruing to the choir on account of the performance. It should be clearly understood, however, that the special musical service does not properly consist of a *mélange* of solos, duets, and choruses. Such a pointless, formless affair is bad enough on week days, and doubly bad in church. If the special service is to be more than a passing "entertainment" it should have a subject and an object.

Naturally the sacred cantata comes to mind as perhaps the most common example of this sort of service. There is an abundance of these works of every grade of difficulty and every grade of musical excellence. From such an array it is not hard to pick a cantata suitable to the choir and occasion. But, the question of musical merit altogether aside, the cantata has one defect for a church service—the congregation has little to do but listen. For many years composers have yielded the only point possible in an art work, and allowed the congregation to sing chorales or hymns at appropriate moments in the cantata. More than this cannot be expected of the congregation, but it is an undeniable fact that the congregation is willing to assist as far as it is able, and, like other contributors, takes added pride and enjoyment in the service. Let the performance of cantatas be encouraged, but in addition let something be promoted from a more congregational standpoint.

This means the use of the only music in the congregation's repertoire, hymn-tunes, and signifies that the service will center about the feature. The possibilities are almost without number, but the general plan of each service includes congregational and choir singing in approximately equal amounts, and the narrative or explanatory remarks by the minister. If the latter is wise his remarks will not be too verbose.

Many hymnals contain a "subject index," by means of which the hymns appropriate to a certain subject may be located. With a well-chosen subject the arrangers of the service will find many hymns available for any congregation, and also the subjects of enough anthems and solos to fill the choir's list. This material of course needs careful programming, for it must not be presented in haphazard order. Minister and choirmaster may co-operate in arranging the service, and the minister's remarks can bind the service into complete and desirable form.

Another hymnal index groups the hymns according to their Scriptural references. So the clergyman may select a certain Psalm or chapter, and hymns and choir music may all be grouped around it. Here the choirmaster finds abundant opportunity for the use of excerpts from oratorios and cantatas, and often has a chance to include material that would otherwise be much less effective. It is sad but true that the lack of co-operation between clergymen and choristers so often leads to the conflict of sermons and music, and lessened effectiveness of each.

Either Barnby, Sullivan, or Stainer provide enough music for both choir and congregation

A SONG OF OLDEN TIME

to spend many evenings with one composer. Dykes falls a little short on the choir side, as do Lowell Mason and many of the American hymn-tune writers whose names figure so frequently in our hymnals. Services devoted to English, American, or German composers, grouped by periods, are excellent means of interesting people in their hymnals and promoting better congregational singing. In such cases the choir leader may sometimes have to adopt later or foreign settings of familiar texts, but the hymn-tune part of the program is easily provided. The great composers are not always the best subjects for special musical services, mainly because of the lack of hymn-tunes. What musician would care to have Beethoven represented by the fragment from the *Ninth* symphony which so many hymnals present, or Schumann by a scrap of the F major *Nachtstück?*

Once properly started, the congregations are easily interested in such services. They do not require any special preparation on the part of the audience, and yet afford an unusual opportunity for general participation. They do not require much extra work from the choir, and yet may bring as much benefit to those in the choir loft as to any other participants. By all means let us have as many special and appropriate choir services as may be, but do not overlook the congregation, and the immense asset of an interested and well-disposed church membership.

—*—

AT THE ORGAN

BY WILLIAM REED

A CHURCHGOER recently told the writer of this article that, in his opinion, an academy of deportment for church organists would prove a useful institution, basing the suggestion on his experience that many organists display undesirable mannerisms of one sort or another while seated on the organ bench. It must be admitted that there is some truth in the latter part of the statement, and were it not the case that the players themselves are often unaware of their ungraceful deportment, we might conclude that mannerisms are sometimes consciously assumed. Possibly they are in some cases.

At any rate, such mannerisms as facial contortion, oscillation of the head, swaying of the body, a spasmodic jerking of the limbs, etc., are all unnecessary; a tendency to any or all of them requiring vigilance and correction at the outset, since all such are habits which, once having gained ground, are difficult of eradication. Of course, mannerisms may result from congenital nervousness and, as such, be more or less incurable. But they also proceed from imitation of the mannerisms of others, or (as above hinted) from a mistaken idea that they impress the onlookers.

But from whatsoever cause they proceed, it is to be remembered that all unnecesary movements of a player tend unduly to force his outward personality on public attention, to distract the devout, and amuse the undevout. Nor are they of use in themselves. In former times, when organ action was uniformly heavy, and when registers were stiff and long in the "draw," some excuse existed for a display of energy on the part of the player. When manuals were coupled, it was a not uncommon spectacle to see the player actually *pounce* on the manuals in order that every note in a heavy chord be made to sound. Pedal springs were also obstinate; so much so that they were apt to cause the player's legs to *ache* in the performance of what now would be considered a passage of moderate difficulty. In short, organ playing was, at the period referred to, decidedly physical work, demanding some visible effort.

With present-day action and the newer mechanical accessories provided, there need be neither noticeable effort nor physical fatigue to the player. Actions are light and combinations can be prearranged and readjusted as required by a few quiet and deft touches here and there; the old feverish grabbing for registers need no longer disturb a congregation.

Considering, then, the present advantages, the use of unnecessary gestures and corporeal contortions seems the more absurd; and, it may be said the majority of people know better than to judge such as evidences of a specially musical temperament. Comparatively few would be found nowadays to deliver themselves of such remarks as these: "That organist is full of music; see how energetically he plays"—"He *does* bring out the organ tone; it requires muscle for that"—or "I like to see a man play as if his heart and soul were in his work"—(why not his body also?). We have all heard similar remarks and have learned, even in our youth, to value them accordingly.

Another and an important side of a church organist's deportment is that of his demeanor during church service. To our days it is a far cry from those when a singer broke off in the course of his solo and, pointing to the organist, informed the congregation that "He can't play it!" An innuendo to which the organist would retort audibly in terms not complimentary to the singer's vocal qualities. At the periods referred

(PLEASE ORDER BY NUMBER)

ANTHEMS FOR MIXED VOICES

BIRD, P. DOUGLAS

No. 12,679. **Hail to the King**.....$0.12
A fine trio for soprano, alto and tenor; not difficult but effective for the voices.

BURDETT, GEORGE A.

No. 12,680. **Lead on, O King eternal**..... .10
Opens with a pleasing bass solo. The chorus part is short, easy, and pleasing.

MOZART, W. A.

No. 12,685. **O eyes that are weary.** Arr. by Wm. Dressler..... .12
An anthem setting of one of the composer's lovely themes; with solos for soprano and alto.

PRICE, C. E. B.

No. 12,686. **Thine forever, God of love**..... .12
Opens with solo for soprano or tenor, followed by a chorus part, broadly lyric in style; includes a short duet passage for soprano and alto.

STEANE, BRUCE

No. 12,687. **He hath been always mindful**..... .12
For harvest use, full of spirited chorus passages; includes (*ad lib.*) solos for soprano and bass.

STOUGHTON, R. SPAULDING

No. 12,689. **By the waters of Babylon**..... .12
A fine chorus, effective but easy; contains solo passages for alto and tenor.

SACRED SONGS FOR MEN'S VOICES

BURDETT, GEORGE A.

No. 12,701. **The Lord Is merciful**.....$0.12
An attractive work for a quartet or chorus; may be sung without accompaniment if desired.

ROBINSON, CLARENCE

No. 12,578. **The Son of God goes forth to war**..... .12
A strong march theme gives character to this effective chorus for men.

PART-SONGS FOR MIXED VOICES

THOMPSON, WILL L.

No. 12,664. **Come where the lilies bloom**..... .16
A revision of a former favorite quartet.

FOR WOMEN'S VOICES

BARNBY, JOSEPH

No. 12,675. **Phœbus shines in splendor o'er us**..... .10
For two-part chorus; bright and animated.

ROECKEL, JOSEPH L.

No. 12,665. **A bird in the hand**..... .12
For three-part chorus; the text is humorous, and the music effective; a good number for a school concert.

THOMPSON, WILL L.

No. 12,700. **Come where the lilies bloom**..... .16
For three-part chorus; an old favorite.

PART-SONGS FOR MEN'S VOICES

THOMPSON, WILL L.

No. 12,699. **Come where the lilies bloom**..... .16
A fine arrangement of a former great favorite; quartets will find it well received.

LOUIS SPOHR, 1784-1859

GOD, THOU ART GREAT

CANTATA FOR MIXED VOICES

By LOUIS SPOHR

Price - - 50 cents, postpaid

THIS standard cantata for mixed voices is here issued, carefully edited, in a beautiful new edition. The rich chromatic harmony and melodic flow which are found in the best of Spohr's work are here amply in evidence, and both in the writing for chorus and the episodes for solo the cantata is as vital and fresh as when it was first composed. It is suitable for inclusion in any church service.

OLIVER DITSON COMPANY, BOSTON

Chas. H. Ditson & Co., New York — Lyon & Healy, Chicago

to, the personality of the different church officials—not even overlooking the organ-blower—was sometimes surprisingly in evidence.

Nowadays there is a vast difference in such matters and there is, consequently, all the more reason why the organist should be careful to shape his demeanor in accordance with his surroundings and, amongst other things, avoid flippancies or that "jesting which is inconvenient." A reverential attitude will, moreover, not only enable him to do his work in the proper spirit, but will also act as an example to his choir and add weight to his discipline in the practice room.

The previous remarks as to gesture refer, of course, to those only which are unnecessary. Where the organist is also choirmaster, he is at times obliged to conduct in some manner while playing, in order to give leads or to pull his forces over rocky ground. Such conducting should be done as unostentatiously as possible and with a clear mutual understanding between organist and choir as to its meaning. In any case, the less of such conducting the better, since choirs depending upon help of this nature are apt to look for it on any and all occasions, with the result of feeling more or less at a disadvantage should the organist, when, literally, having his hands full, be obliged to temporarily withdraw it.

Method in every particular is of the essence of dignity, order, and certainly in all matters pertaining to the conduct of the church service. Nothing should be left to chance. Such matters as a careful adjustment of the organ bench, provision in all sufficiency of the necessary music and its arrangement in the order required, or possible, and likely alterations in the music projected should always receive sufficient attention from the organist before and *not during* service.

By taking precautions, possible casualties are averted or their probability at least minimized. And (not the least important point) the organist will have a freer mind, such as he needs to bring him into close touch with the spirit of his work which should be in line with the other components of the church service; never forgetting to sink his outward individuality as much as possible.

———*———

To play good music well is the calling of the virtuoso.—*H. von Bülow.*

THE QUARTET CHOIR

BY GORDON BALCH NEVIN

IN reading a number of articles, recently, dealing with the question of the best form of choir for the average church, especially the non-liturgical church, the present writer has been struck by the almost universal disapproval of the quartet choir. Having felt for a long time that this form of choir is, when properly selected and trained, the nearest approach to the ideal choir, he has been led to raise his voice in protest against the disparagement of this type of choir.

ADVANTAGES

First, let us notice the advantages of the quartet, and then we may consider how to go about securing a good quartet choir. Possibly the first and most striking point of superiority lies in the tremendously increased chances of the work being done in an artistic manner. It is true that with most paid chorus choirs it is *possible* to do things in first-class shape, and it is also true that with *some* volunteer choirs artistic results are possible; but it can hardly be gainsaid that the results in many cases are far from being such as would delight the ear of a critical musician or produce feelings of reverence or religious delight in the heart of the ordinary listener. Now what is the cause of this condition?

Well, it lies principally in the inherent necessity of using more or less spirited numbers with a chorus choir; as an example, let me say that it would be hard to discover a chorus that would hesitate to scramble through the *Gloria* from Mozart's *Twelfth Mass,* given a good organist and a powerful instrument back of them; but try them on some short *a cappella* number, or one with an independent organ part, and see what will happen, particularly if the tempo of the number be *andante* or *adagio.*

Herein lies the great advantage of the quartet; it shines the brightest in numbers requiring delicate nuance, finished phrasing, independence of parts, and depth of feeling. And after all, are these not the things which we should most consider in church music? We church musicians are engaged with the hope that our work, in our various capacities, will bring—not wonder, or amazement, or surprise into the heart of the listener—but will put him into such a receptive frame of mind that the truths uttered from the pulpit will strike deep into his heart; or, in other words, as a minister once said to me and to my choir, "It is my hope that you will be 'assistant *pastors,*'" and this is as it *should* be. It has been truly said that music in the church does not make anyone *religious;* however, it does put the listener into an emotional state where it becomes possible for what is preached to reach down into and grip the innate tendencies towards religion that are in us all.

Now I ask you, which is most likely to place you in a receptive frame of mind: a chorus of the average kind, or a quartet? In the first you will have the invariable quantity of "dead-wood" members with no voice, members with some voice but limited as to reading capacity or accuracy of ear, members who think it good fun to whisper or write notes to each other, and all the other drawbacks growing out of the gathering together of any large group of singers; on the other hand, you will have the possibility, at least, and there is no excuse for anything else, of hearing four trained singers, whose work can be expected to be accurate and finished, whose decorum is above reproach, and whose numbers should be within their individual capacity and group capacity, and with a director of good sense their numbers will be suited to the *genre* to which they belong.

I said "with a director of good sense"; and it is unnecessary to say that all results will be bad unless the director is so qualified; but, with a chorus choir, the sense and taste of the director are limited in scope by the inherent weaknesses of the type of choir, and for safety it is almost essential that all the music be of a spirited nature and with enough motion to carry along the choir—(and the "dead-wood").

Even worse, is the fact that it is just this type of music that does *not* place the listener in the receptive frame of mind which is the prime reason for the presence of the choir. The hearer will probably be placed in a rather cheerful frame of mind, right enough in itself and not at all incompatible with religion; but so also does the opening chorus of a Broadway show place one in this happy humor. What is wanted is the quiet, devotional, receptive frame of mind, and the average chorus choir cannot and does not produce this mood.

FORMING A GOOD QUARTET

Now as to the securing of a desirable choir. It has often been stated that all the members should be consecrated persons, and I feel that this would be a splendid thing if it were possible; unfortunately it does not seem to be so. But, what is possible, is to select persons with a sense of the fitness of things; and herein lies the crux of the matter. No one with natural refinement or strong sense of fitness, will ever be a hindrance to religion while in the choir loft; while alas! even consecrated singers have been known to behave in a manner open to criticism before the congregation. To pick reliable persons will necessitate much careful inquiry, but this should not be neglected. Next, no singer should be engaged for a long term contract without a thorough try-out of some weeks or months.

In the selection the organist or director should have an important part; he should select a number of available singers for each part, and they should sing for his committee. This will doubtless result in some eliminations, and then the remaining singers should be carefully tried out in groups for blending, and at the same time their behavior in the choir loft should be noted, and any who show signs of frivolity and lack of

respect for the position should at once be discarded. This is a more important matter than seems to be generally realized, particularly among the organists who are prone to forgive all sins of deportment, if the candidate can only sing. Thus, and thus only, can a perfectly satisfactory choir be secured. Once started, it is not so trying a matter to replace any one singer; the start is the critical time.

I would even recommend in some cases the building up of the choir around some one good reliable singer: for instance, suppose a soprano or tenor is secured or can be located; get that one singer; then start searching for an alto or baritone, bearing in mind both the personal qualifications and the blending properties of the voice with the one already secured. With two singers the possibilities increase; duets alternate with solos, and we have all too few duets these days. Soon a third singer may be located, the blending of the voice with the other two being carefully considered; then finally the fourth. This would doubtless be the ideal way to secure a new quartet; with one already engaged and not satisfactory, the process is simply to eliminate and then build up along the above lines.

In closing, I would say to organists, show your music committee and pastor, that you are seeking to increase the religious stimulus of the service, rather than trying to feature yourself; and if you have the ability to command their respect there is little that they will not try to do for you. Then when you have a good quartet, see to it that your selections are within the scope of the singers, and I think you will agree that the quartet is the ideal choir and the most delightful form of choir to work with in church music. It is simply a case of quality in preference to quantity, with the former well in the lead.

THE ECHO ORGAN

BY H. C. M.

THERE has been a good deal of discussion in the English papers as to the relative size of the organs in St. Michael's, Hamburg, and the proposed organ for the Liverpool Cathedral. The table below will give in condensed form the principal points of comparison; the figures are taken from the London *Musical News*.

ST. MICHAEL'S, HAMBURG

Stops	163
Pipes	12,173
16-ft. stops	28
8-ft. stops	59
Mixture stops	16
Pipes in do	4,022
Total pipes (deducting mixture and mutation stops)	7,137
Mechanical accessories	125
Cost with case	$60,000
Maker	Walcker

LIVERPOOL CATHEDRAL

Stops	167
Pipes	10,657
16-ft. stops	38
8-ft. stops	72
Mixture stops	9
Pipes in do	2,257
Total pipes (deducting mixture and mutation stops)	7,639
Mechanical accessories	152
Cost without case	$90,000
Maker	Henry Willis & Son

* * *

IN an English paper some time ago I read of the death of a person whose claim to distinction seemed to be that he was "Amen" bass in ——— Cathedral. This to me was at once a reminder and an explanation; it reminded me of my wonder, while visiting the various English cathedrals, at hearing one voice anticipate all the others in singing the unaccompanied amens at the ends of the prayers; it explained what to me was a ridiculous and inexcusable blemish on otherwise good work, by the suggestion that the person responsible for it really occupied a position with a certain attached responsibility. I may be quite wrong in my deductions and will be glad to be set right. At one cathedral, not visited much by Americans, the "amen" bass was particularly obnoxious; he was a real *basso profundo* and his portamento snortings from some deep note up to the proper note were memorable.

* * *

A FEW months ago a suggestion came to this column that it would be an excellent plan to publish each month service lists in order that organists and choirmasters might know how other people ordered their services and what music was being performed. This naturally led to the suggestion that choirmasters send their service lists to this department for publication. A Pittsburgh organist puts it interestingly in a recent letter; he writes "when my Wife gives a luncheon she gets out menu books and consults them for fresh ideas, although she has been cooking for a number of years. I have been selecting music for a congregation for fifteen years and I am always glad to receive a tip from the congregation as to what they like. If you could publish each month a few samples, either those you arrange or print programs which have been used recently by good choirs, I for one would appreciate it, since I could use them for new suggestions. I find it quite a difficult matter to arrange material for the whole of Sunday that shall bring expressions of satisfaction from the pews. I think every choir director who is not an autocrat admits this."

* * *

OUR readers will remember a reference in these columns to the dissatisfaction expressed in many quarters at the engagement of Mr. E. H. Lemare to design the organ for the San Francisco Fair in 1915, to be the official organist, and to give a large number of the recitals. The London *Musical News* in the issue of Sept. 5 refers to the matter in the following terms: "There seems to be still a considerable amount of perturbation in the United States over the engagement of Mr. Lemare to give recitals at the Panama exhibition in 1915. . . . This, of course, is a matter for the Americans to settle for themselves, and we have not the smallest desire to impugn their right to stick up, if they so wish, the sign, 'No foreigners need apply.' At the same time, we may point out that Mr. Stewart, who is in charge of the musical arrangements, presumably did not engage Mr. Lemare because he was a foreigner, nor because he thought him superior to native players, but because he considered that his reputation was such that he would draw the great American public.

If this were so, Mr. Stewart had warrant for his supposition. America, like Great Britain, is fond of putting the foreigner in places of honor. Take their great orchestras alone; how many of them are native Americans? Both the Damroschs are Germans, so is Frederick Stock, so is Karl Muck, and so are many others, more than we can remember offhand. Some of them have been naturalized, but that does not make them Americans. Then we seem to remember that one Antonin Dvorák was called from Europe to become the head of the New York Conservatory, and that at the present moment the opera houses in the great cities like New York and Chicago are directed by foreigners, who visit Europe every year to pick up foreign "singing birds." All this shuts out the native-born American from various spheres of musical activity; but the American public insists on having it so, because of the idea—erroneous, no doubt, but firmly planted—that the foreigner is better than the home product. Consequently, it is no use finding fault with Mr. Stewart; the proper procedure is to convert America, though if that were done it is not so certain that unlimited satisfaction would result. There must be free trade in art; protection spells isolation and consequent stagnation. As we have often urged with regard to British music, the duty of a country, merit being equal, is to give the preference to the native article when the question of a choice has to be faced. But a man in Mr. Stewart's position is bound to listen to *vox populi*."

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

1. Why is the sixth degree of the diatonic scale called the "submediant"? In the natural sequence of tones it is above the mediant and the prefix "sub," as I understand it, means *below*, as in the case of the subdominant.

2. How can I explain the difference between the major and minor modes to pupils? I have a pupil who when asked to play the scale of A minor is quite at sea, and apt to play A major.

3. Is there any published work on transposition? Is there not some rule to guide one? I can transpose accompaniments, but have no idea how I do it.

4. How should I go about learning score reading at the piano?

5. In one number of THE MUSICIAN which I am unable to find now, Mr. W. S. B. Mathews mentioned two *Album Leaves*, by Hugo Kaun, as being good preparation for the *Intermezzi* by the latter.

1. The prefix "Sub" means *under;* Submediant means the under-mediant, that is, counting *down* a third. It is also the mediant in the chord of the "Sub" or *under* dominant (the fourth of the scale that is, the dominant counting down five). I think one of the old ways of naming the scales is better, Tonic, Sub-Mediant, Mediant, Sub-Dominant, Dominant, Super-Dominant, Leading Tone. It seems to me more rational. Most good musicians use the terms tonic, sub-dominant, and dominant, and refer to the other tones by number, that is, 2, 3, 6, or 7. Now that our scheme of modulation is condensing and we refer to modulation as being on the dominant or on the sub-dominant side of the key, it would seem that only three names would be necessary for piano students.

2. You have not put work enough on the modes, or possibly on the difference between major and minor chords. If from the first study you have brought out the difference in effect in major and minor chords, supplemented by a theoretical knowledge of the same, have had the chords written, and the dominant seventh with both major and minor answer thoroughly mastered, then it is easy enough to have the pupil understand the difference in effect in the modes. If the tonic or key tone is minor, then the mode is minor. If major, then the mode is major. I always present the three forms of the minor scale at one time, and because the chord arrangement within the mode is so different with each form of scale, I bear down hard on the chord on the key tone as being the chord which determines whether the mode is major or minor.

3. There are many. I like the new book by Carl W. Grimm, published by Willis Co., Cincinnati. It seems very comprehensive and, once the signs are mastered, very simple.

4. Learn the C clef and put some time on the transposing instruments before you try to read the score as a whole. I think you will need a good deal of work in these before you will find the score reading practicable.

5. The piece referred to was the *Album Leaf* from the Op. 2 of Hugo Kaun, published by Kaun Music Company, Milwaukee, Wis.

There is a *Serenade* by the same composer, Op. 7, published by the same company, which is a nice teaching piece, although not in the same mood as the *Album Leaf*.

1. Seeboeck's *Minuet* in A. What is the meaning of the harmonic character, o, over A and D, page 3? Also over right hand's last note of the composition?

2. First period, second measure, from double bar, should the right hand come in on grace note, octave, B, or on principal?

3. Fourth measure, second period, should right hand come in on lowest or highest note of extended chord?

4. Mason's *Technic*, page 9, section 11, triceps tone production. When passing from one third or triad to the next, does the lift come from the shoulder or elbow?

5. Page 33, No. 12. What is the meaning of "Touches 1 and 4, Section 30"? I examined Section 30, but found nothing that I could associate with No. 12.

Does the expression, first form, second form, third form, fourth form, refer to speed or to the kind of touch?

1. This is the stringed instrument sign for a harmonic tone. Mr. Seeboeck himself used to produce something of the same effect on the piano by a trick of pedal. Using a bounding arm on the tone over which you find this sign and, leaving the tone very quickly, try to pedal just after the tone is played. If you are successful you will catch only a small part of the tone on the pedal, which will give the effect he desired of losing the tone played and hearing only the overtones.

2. As this is not strictly "classical music," you have the right to do as you please. I much prefer the octave grace note B on the beat, that is, with the right part, as I want the octave on the pedal for harmonic support.

3. On highest. It is the rule on all such extended chords that the spread precedes the accent, although it is so quickly made that the ear hardly recognizes it. While it is permissible to change this rule, if you desire to have the lowest tone on the pedal clearly, still you must always consider the loss of effectiveness in rhythm. Make up your mind whether it wouldn't be better to do without the clear low note for the added intensification of accent which the widespread chord before the beat always gives. In this case, if the spread is not before the beat, the rhythmic effect is very much weakened.

4. There is no perceptible "lift" in the triceps touch. You are thinking of the "bounding arm" mentioned in the next selection, I think. While, of necessity, to move the arm from one position to another, there is action in the shoulder joint, still the shoulder joint does not rise as in shrugging the shoulders.

5. The Editor preferred that the first and fourth touches should be practised through the diminished chord as outlined in Section 30, rather than through the diatonic scale. The numbers refer to the touch used.

* * *

The following is a copy of the first measure of *Simple Aveu* (*Simple Confession*), by Francis Thomé. Are the notes A and F, right hand, and B and F, left hand, played as grace notes or not; if not, how are they to be played? I have found notes printed the same in *Under the Leaves*, by Francis Thomé.

I notice that some notes are printed smaller than others. It will be a great help to me if you will please explain these things. Are they important in learning music?

This method of printing is to assist the student in ascertaining quickly the melody notes from the accompaniment. The notes that are printed small are not grace notes, but accompaniment notes, and are to be given their full value, but played very softly. The large notes are the melody tones, and must be played clearly with a good, full singing tone.

———*———

THE STANDARDIZATION OF MUSIC TEACHING

(*Continued from page* 807)

are working for standardization, there should be a central examining body. If the work is to be national, and it must be national to succeed, it must be under the supervision of a national body. This may be the National Music Teachers' Association, or it may be a private and endowed corporation which shall have for its purpose the applying of standards, if not the establishing of standards. This latter idea was first suggested by W. J. Baltzell, the Editor of THE MUSICIAN, and has much to favor it. A general standard cannot come without a general controlling force, and such an examining board would be an ideal way in which to solve the final problem.

To recapitulate. The agitation for standardization has come because there is a general demand for it. As was natural, the various, and by no means uniform, plans have originated in bodies here and there in the United States and which were more or less representative. The various plans proposed have been devised from the local point of view, sometimes being designed for a whole state, sometimes for a small body of teachers. In all cases the tendency has been to localize standardization and to discuss it from a technical standpoint.

The main point to be emphasized is that standardization must be standardization of general musical knowledge first and technical procedure afterwards; that it must come by small degrees and to small groups of teachers; that it must come voluntarily and not because of legislation; and that it must be national in scope When any plan of standardization takes into account these things, that plan will have a great chance of success.

THE EDUCATIONAL WORK IN MUSIC OF THE CHAUTAUQUA INSTITUTION

(*Continued from page* 810)

first place, it enables one person, who is talented and worthy of instruction, and who otherwise would perhaps have to do without, to receive the benefit of Chautauqua and all that it stands for. It enables this one person to enjoy all the privileges which are provided for the student of piano music, and to enjoy them with no personal expenditure. Among those who tried for the scholarship this year were students and teachers, a body of musicians representative of many states and coming from many different teachers of the country. The 1914 scholarship was awarded to Miss Blanche Brocklebank, of Wellesley College. Miss Brocklebank had given a recital some weeks previous to the scholarship contest, and from her program she selected two numbers which she played. Miss Woods was so pleased with the work of Harold Jewett, of Fredonia, N. Y., that she gave to him as a prize a free course in all of her classes for the season.

And so it is that every year hundreds of earnest workers come to Chautauqua with the idea of getting the very most possible good out of their vacation time, and return to their homes with a little bigger, a little better conception of truly great things. The worth of this great Assembly as an

educational institution can hardly be overestimated for its real merit, and for the permanent results on those who come, and the familiar words, "Education ends only with life," have now been changed by this aspiring throng to "Education is life," the keynote of Chautauqua's success.

———*———

NOTES ON THE MUSIC IN THIS ISSUE

(*Continued from page* 813)

tively easy pieces with a movement in notes in rapid succession which children like to play because it compels busy, lively fingers. There is an object to practise on a piece such as this. It is good to develop rapid action of the fingers.

Liebeslied (*Idylle*), Op. 3, No. 1, by F. Flaxington Harker, will make a fine number for use in the recital before or after the church service. The melody, largely in a middle solo voice, is an attractive one, and given on the oboe has plenty of rich color. It is a good number for the Christmas program.

Valse, in D (*Minute waltz*), Op. 64, No. 1, by Frédéric Chopin, has been transcribed effectively for the violin by Mr. Karl Rissland, of the Boston Symphony Orchestra. It is so well known as to need no comment, and will surely be welcomed by violinists. It has been transferred from D♭ into D, a key well suited to the violin.

———*———

A FAMILY STRING QUARTET

(*Continued from page* 804)

which he had originally set out. This time Brussels was the destination. In 1907 the advanced studies were begun at the Royal Conservatoire under Henry Van Hecke and César Thomson in violin, Joseph, Jr., studying 'cello with Gerardy and Gaillard, and piano with Arthur de Greef and Joseph Wieniawski. Here they met all the great artists, played before critical audiences, and were recognized as an ensemble of formidable attainments. Both Van Hecke and Thomson gave them much encouragement, Thomson introducing them to the Brussels public at *soirées* at his home, and Van Hecke, a man of high ideals, keeping their spirits up at critical moments. Brussels was the home of the Zoellners for five years, from 1907 to 1912, and there they won many notable *encomia* for their playing. They appeared in Berlin, with success, in France and in a number of the cities of Belgium.

In 1912 they came back to America and they have since played three seasons from coast to coast, making many friends and winning numerous admirers. In New York, Boston, and other large centers the playing of the Zoellner family has elicited warm praise. Quartet playing of the type which they exemplify is always interesting; it is not the dry-as-dust, academically hampered kind, which is heard playing nothing more modern than Beethoven. The Zoellners play Beethoven, and they play it well; but, like all progressive musicians, they believe in bringing out the works of contemporary musicians. And so this year they introduced a *Romantische Serenade* (*Romantic Serenade*) by Jan Brandts-Buys, Glazounow's *Suite,* Op. 35, and a quartet, Op. 15, by Ernst Von Dohnanyi.

It is indeed a long series of events which have piled one upon the other to lead to the Zoellner Quartet of today. To some it may seem very difficult and trying. But artists who have real merit and justification for calling themselves artists survive it, as have these players. Mr. Zoellner has demonstrated that it is possible to attain one's end in the face of hardships and ill-fortune of all kinds. His Quartet today has proved itself and will doubtless occupy a place of distinction in the concert field for some years to come.

And what the Zoellner family has done may be held up as a model to be pursued by all who love music and who play an instrument. To be sure, they have done it professionally, but it is quite as possible to build up a quartet or a trio, for that matter, without any idea of a concert career. If you play the violin, and have a friend who plays the 'cello, seek out a pianist of some capability, and you can at once make the acquaintance of some of the most inspired music we have, namely, the trios for those instruments by the great masters, Beethoven, Mozart, Brahms, Schumann, Schubert, etc. Or look about you and find some friends who love music and convince them that it is worth while to study an instrument seriously, even for amateur performance. A string quartet may thus be organized and the most enjoyable of evenings passed. For with chamber music playing go friendship and good cheer. There is nothing that gives more satisfaction to everyone concerned in it than the playing of chamber music, there is nothing that requires as fine a sense of form, of color, of balance. And the development of these qualities in the individual is not only useful, when acquired, for music, for are they not the qualities which we need all through life in whatever work we chance to be engaged?

But there has been one other influence in the Zoellner Quartet's working toward its goal. The writer of these lines, after assembling his material, received an additional letter from Joseph Zoellner, Jr., 'cellist of the Quartet, recenty in which he wrote: "Two persons who inspired us a great deal in our work were César Thomson and Henry Van Hecke. But most important of all is she, who has helped us to overcome every discouragement, both while in Europe and on our travels here: our mother. It would indeed be a long letter, were I but to commence to enumerate the countless sacrifices which she has made for us." In all the work this artist family has done and now does the kindly personality of the mother and wife has been an aid in the accomplishment of their work in the field of musical art.

The spirit of the home, of the family, of the domestic pervades all walks of life. We feel it in virtually everything we do. And so the Zoellner Quartet, aided in its climb to recognition by the advice and thoughtful, gentle nurturing of a wise and loving mother, is but one of many. If an artist quartet has won note, aided by this home influence, is it not natural to believe that the home is a place where chamber music should be fostered, where weekly gatherings of young men and women, or the members of a single family will go far in making of our younger generation better men and nobler women?

WHAT a strange history is that of music. Everywhere, in all ages, one sees in it something mysterious and inexplicable which places it outside the other forms of human activity. At the present time even, when we call to our aid all the resources of our "sciences," we are unable to explain clearly what it is that moves us when we listen to a beautiful air of eight measures; and the modern mind, though freed from many superstitions, is often obliged to speak the same language as that of primitive folk.

COMBARIEU: *Music, Its Laws and Evolution.*

OLD TIMES IN AMERICAN MUSIC

(*Continued from page* 805)

America is able to apply the curriculum that he uses abroad, without alienating a single pupil.

THE FOREIGN INFLUENCE

But even in the older days the few advanced American music lovers were seeking the more thorough German training. Mason and Richardson and Paine and J. C. D. Parker were probably the earliest of the procession of American students of music which went to Germany to imbibe knowledge at the fountain head. Of these, Richardson understood so well (after his return) that he must temper the wind to the shorn lamb in the matter of musical instruction, that he evolved a piano method which had a sale of over a million copies!

At first Leipzig and Berlin were the Mecca and Medina of the American musical enthusiasts, but with a younger generation the tide set in toward Munich. It was in 1878-79 that Charles D. Carter, of Pittsburgh, and George W. Chadwick, went to Rheinberger, at Munich, for musical instruction. After that there was a long list of earnest Americans, all going to the same city and the same teacher. There was the lamented Frederic Field Bullard, the American Bizet, who might have become the most virile of the American composers had his life not ended so prematurely. There was Wallace Goodrich, Henry Holden Huss, Arthur Whiting, Horatio Parker, and Louis Adolph Coerne. Decidedly, Joseph Rheinberger had very much to do with turning the music of America into a more earnest and classical channel. His conservative influence was a very wholesome thing for our country in the days when it was groping towards the higher reaches of music.

Even today the good influence is still at work in the compositions of such men as George W. Chadwick and Horatio Parker; for I hold such works as the *Melpomene* overture or *Hora Novissima* to be much more important to our musical advance than the wild strivings after intense modernism which have recently been displayed by some of the younger and less balanced American composers.

AMERICAN MUSICIAL PEDAGOGY

In the matter of musical pedagogics America has become absolutely self-sustaining in the sixty or seventy years which I have been describing. I doubt whether any country in the world has ever made such rapid yet thorough progress in any art as the United States has made in music teaching in about a half century. But *festina lente* needed to be the motto at first. If Dr. Tourjée, for example, had begun his Conservatory with as stiff examinations and as broad a course as one finds in the leading conservatories at present, he would have found only a corporal's guard willing to take the many branches required to win a diploma.

Let me cite but a single instance: When he desired to found a little orchestra in his conservatory, he requested the students who played other instruments than piano and organ to meet one evening and bring their instruments with them, that they might organize. They came promptly enough, but, when it was found that some nineteen flutes and a couple of mandolins only were present, the formation of a conservatory orchestra was indefinitely postponed. Today, in the same institution, a splendid students' orchestra has played eight of Beethoven's symphonies, and is now considering the production of the great ninth.

It is not at all an exaggeration to say that America at present spends more upon music than any European nation ever did, even before the days of ruinous war. It has no operas or conservatories subsidized by the government, such as we find in Germany or France, but it patronizes opera more liberally than any nation. Its outlay upon musical tuition is far in excess of that of any foreign country. There is more universal study of music here than abroad. By means of victrolas, piano playing devices, etc., good music is heard in isolated portions of the country, where such audition would never be dreamed of in Europe. Undoubtedly the uplift in music has been almost miraculous in the last half century, but I trust that I have shown that the seed was planted, more than fifty years ago, and therefore it is unjust to think of the mid-nineteenth century as a period of American musical barbarism, and the veteran may not be wrong when he thinks of the days before musical cubism had set in, and sighs occasionally for "those good old times."

MAKING AMERICA MUSICAL

(*Continued from page* 803)

to make America musical. Among other things, they facilitate the work of the managers in placing players and singers.

The managing business, on its part, is growing apace. A decade ago there were managers only in the largest cities. Now they ramify throughout the country, and many of the local managers are women who show excellent business sense in furthering the good cause.

Mr. Sousa made a mistake when he sneered at the player-pianos and talking machines as producing "canned music." Great traveler though he be, his band cannot be heard by hundreds of thousands in remote regions who would like to hear it; and to these the phonograph records are a great pleasure. Everyone, of course, would prefer to hear him and Caruso and Sembrich and Gadski, or Paderewski, Hofmann, and Kreisler at "first hand," but the reproductions of their art and style are really wonderful; and the fact that records of such art can be multiplied by the millions, like newspapers, is of the utmost importance.

Musicians and teachers, therefore, ought not to oppose mechanical sound reproducers. They pave the way for the artists themselves, and are among the most potent influences in making America musical.

BOOK NOTES

My Path Through Life. By Lilli Lehmann. With 50 illustrations. 500 pages, 8vo. G. P. Putnam's Sons. Price, $3.50.

The musical public will welcome this volume of memoirs, which contains both musical and personal reminiscences mingled with suggestions of an educational character of much value. For example, in discussing the appoggiatura, she says: "In every instance when the accent of syllables at the end of a spoken or musical phrase requires the appoggiatura, Spohr, Marschner, Weber, and Wagner have written it out, and Mozart and Beethoven, according to the manners of their time, have indicated it by means of two notes of equal value and pitch, thereby signifying the correct rendering. What would be the state of mind of these two masters if they heard today their wonderful recitatives which precede the arias, and the dialogue recitatives, rendered with a total absence of the appoggiatura, that is to say, with a total loss of expression?"

In this book Mme. Lehmann unfolds the complete story of her musical career and how she attained to her commanding position, a story fascinating to those who are interested in the development of character and personality through music. Conditions in her case were not always favorable, and the record is full of incidents showing the absolute necessity of hard work. The student of opera will find this book full of value, for no singer now living has had a finer influence upon true art and art ideals than Lilli Lehmann. The volume is rich in anecdote and pervaded with the author's splendid personality.

Essentials in Music History. By Thomas Tapper and Percy Goetschius. Charles Scribner's Sons. Price, $2.00, net.

At the present time there is a great interest in the history of music, and as a result a fair literature on the subject, in the English language. Consequently every new book is closely scanned to find out the reason for its publication. In the work under present consideration, by two distinguished American educators in music, we find that the object is to place before the public a work which shall present the essential facts in the history of music and to interest and benefit the student, thus making it available for individual reading or for use in the classroom, with references to other works for collateral reading. It is an eminently practical book.

Some Famous Singers of the Nineteenth Century. By Francis Rogers. H. W. Gray Company, New York. Price, $1.00.

A series of sketches of the great singers of the previous century, among them the Garcias, Lablache, Catalani, Rubini, Jenny Lind, Sontag, and Mario. It should be especially interesting to teachers and students of singing.

Advice to Singers. By F. J. Crowest. Frederick Warne & Co., New York. Price, 50 cents, net.

The fine reception accorded to this book is proven by the fact that the present is the tenth edition. For some years past it has been out of print, although always in demand, and we acknowledge indebtedness to the publishers for reissuing it in its present form at such a moderate price. It deserves a place in every singer's library. It is full of practical suggestion on such points as personal life of the singer, diction, voices, instruction, practice, style and expression, exercises, etc.

of these two books, which are printed at the Government Printing Office, Washington.

They contain a description of the songs used by the Chippewa tribe, their musical instruments. In the first book the religious or ritual songs are the central topics, also the social songs. In the second book "war" forms the keynote, with songs of tribal games and dances, and songs "composed in dreams." Both books are profusely illustrated with portraits of Indians, pictures of instruments used, materials used in dances, games, etc., and copious musical examples.

GENERAL NEWS ITEMS

In the twelfth annual competition for the W. W. Kimball Co. prize of $100 offered by the Chicago Madrigal Club, D. A. Clippinger, conductor, the award has been made to Will C. Macfarlane, of Portland, Me. The composition will be sung at the Club's concert in March. Mr. Macfarlane is city organist of Portland.

The Junior Class of the New England Conservatory numbers 126 members, the largest in the history of the institution.

Frederic Gerhard, of Pottsville, Pa., director of the Third Brigade Band, and a musician of prominence in that section of the state, died suddenly, October 7. He was well known as a bandmaster and violinist.

Mr. A. J. Goodrich and wife, who were professionally engaged in Paris for several years past, have returned to the United States in consequence of conditions in France.

Prof. Horatio Parker, of Yale University, was awarded the $10,000 prize offered by the National Federation of Music Clubs, for the best opera in English by an American composer. The work is entitled *Fairyland*, and the libretto was written by Brian Hooker, also of Yale University. One of the conditions of the contest was that the successful opera is to be presented next summer in Los Angeles, during the Panama-Pacific Exposition.

Christian Sinding, the Norwegian composer has been given an annual income of about $400 to compensate for the loss in sales of his compositions in Germany.

As an indication of the anti-German feeling in England, we notice that a musician who enjoyed considerable popularity in London advertised that in spite of his Teutonic name he is French in birth and training, having been born in Alsace before it was transferred to Germany.

Sigismond Stojowski, the noted pianist and composer has again become a member of the Von Ende School of Music, New York.

Miss Clara Angela Macirone, an English composer, died August 19. She was born in London, January 21, 1821, and was educated at the Royal Academy of Music. She enjoyed a fine reputation as a composer of part songs.

The Jaques-Dalcroze Institute, at Hellerau, near Dresden, has been closed on account of the European war Mr. Jaques-Dalcroze is at the branch school in London this season.

Mr. W. L. Hubbard, whose "Opera Talks" were so much appreciated by music lovers of Boston and suburbs last season, gave a series of "Talks" at the Century Opera House, New York, in November.

The San Diego Symphony Orchestra will give a series of six rehearsals and six concerts this season. The first was presented October 30, and the last comes on May 15.

Organ music will be represented at the Panama-Pacific Exposition. The organ to be erected will tower to a height of 71 feet; it will be 40 feet wide, 20 feet deep, will have five manuals and 113 speaking stops. After the Exposition the organ will be taken over by the city of San Francisco.

Theodore Spiering, since his return to New York, has accepted a position on the faculty of the New York College of Music.

The Minneapolis Symphony Orchestra, Emil Oberhoffer, conductor, opened its twelfth season, October 23. The wide range of support given by citizens is shown by the fact that there are 325 subscribers to the guaranty fund.

A portrait of Carl Busch was presented to the Kansas City Permanent Art Collection, November 17. Mr. Busch has been one of the leaders in musical work in the Western metropolis for a number of years.

Jersey City is to have a musical association. At a preliminary meeting it was decided to invite musicians living in the adjoining cities of Hoboken and Bayonne to join with Jersey City. Musicians in the state are well organized; Paterson, Newark, and Trenton have musicians' clubs.

Detroit has an Operatic Ensemble of sixty members. *Maritana* is in rehearsal at the present time.

Louis Lombard delivered an address before the Philadelphia Music Teachers' Association, November 9, on the subject, "The effect of the great war on music, here and abroad." Mr. Lombard came to the United States as a concert violinist, then took up opera conducting, and finally organized a conservatory of music at Utica, N. Y. Later, through fortunate investments in Wall St., he accumulated a large fortune, retiring from music and living in Switzerland, where he was a munificent patron of music and the arts.

CHINESE ORCHESTRA

A CHINESE ORCHESTRA

HERE we have a full Chinese orchestra of ten musicians, photographed while the "music" was at its height. Beginning at the right of the picture, the instruments are as follows:

The *San-heen*, a sort of guitar. This instrument has three strings, a long wooden neck, and the head is covered with snake skin. The timbre is not unpleasant when heard alone, although in this orchestra, as you can imagine, the gentle tones are generally quite lost.

Standing next to the *San-heen* player is the flute player. The Chinese flute is called *Ti-tzu;* it is made of lacquered wood.

Next comes the brass gong player (seated in the front row). Bells and gongs are favorite musical instruments with the Chinese, and those of all sizes and shapes are used. The general name for any bell is *Chung*. This one is a sort of brass gong suspended from a wooden support and played with a rather heavy wooden mallet.

Standing directly behind the "gongist" is the *Chi-sian* player. The *Chi-sian* is a form of tambourine—a small wooden frame like a drum covered with snake skin.

The cymbals you will of course readily recognize. They are called *Po,* are made of brass, and are generally of generous dimensions. The *Po* player, by the way, is the most important member of a Chinese orchestra. You can see by the look of determination in his face that he realizes the responsibility of his position.

Immediately in front, seated in the center is the *Huien-chung* player. This is one of the most interesting and remarkable instruments in China. It is a very ancient form of *Chung* (or bell), cast into a peculiar oval shape like an inverted bowl. It has raised knobs of metal cast in three rows around the bottom. These little knobs are so arranged that by striking them successively with small wooden hammers, the notes of a rude musical scale are produced. The *Huien-chung,* in this case, is supported by a tripod of sticks.

Next, to the left, comes the drum. This form—one of an almost unlimited variety—is called *Tsu-tou.* The skin (as you can readily see) is merely stretched over a wooden frame and fastened with a double row of large headed tacks.

Standing behind the drum player is another musician with a *Ti-tzu,* or flute; this one is of lacquered wood also.

Next to the left end (seated in front) is the only violinist in the orchestra, and how inadequate is his tiny instrument to cope with the tremendous volume of noise produced by the others. This form of violin is called *Ur-heen.* It has two strings; the head is covered with snake skin. The bow he uses is made of bamboo and threaded with horsehair.

Last of all, on the extreme left, a boy wielding another *Chung.* This one is quite similar to the other, only smaller and sounded by striking with a short stick.

It would not be possible to give an accurate impression by means of words, of the timbre of any one of these instruments; to attempt a description of the result when all are played at once would be sheer folly. The phrase some enthusiastic advertisement writers for popular songs in this country have used is quite applicable: "Hear this once and you'll never forget it."

How to Get More Money for Teaching

HOW TO HAVE LARGER CLASSES AND BETTER PUPILS

If you would excel in your competitor earning power, in the quality and number of your pupils and results obtained from them, you must increase your teaching ability so that you can offer your students higher grade instruction with a more definite end in view than can your competitor.

The really great and prosperous music teachers are those who pay particular attention to those many vitally important little things which every teacher should know but which many completely overlook altogether.

The great Sherwood was superlative. He became one of America's greatest piano teachers largely because he gave particular heed to the little things, small points of technic, etc., which many other teachers overlooked. He overcame every obstacle, no matter how apparently insignificant.

After years of study with Deppe, Kullak, and Liszt, William H. Sherwood spent thirty years in teaching, playing in concert and lecturing. The sum total of the knowledge thus obtained, combined with his valuable training, gained from the old masters, Sherwood put into imperishable form in the

NORMAL TRAINING COURSE FOR MUSIC TEACHERS

In these lessons, embodying every phase of piano playing, the little things, as well as the big ones, which every artist and teacher must assimilate before achieving great success, are comprehensively treated with particular emphasis.

By the aid of actual photographs—and many of them—Sherwood illustrates plainly the proper positions of the arm, wrist, and fingers for the up and down movements from the knuckles; the proper use of the forearm and fingers for chord and octave playing; the exact positions of the hand, wrist, and fingers for contracted, extended positions for crossing movements during scale passages; interlocking passages in double thirds, etc. Every physical exercise used by Mr. Sherwood in developing his marvelous technic is brought before you and ever kept before you for constant review. This Normal Training Course includes thorough instruction in the subjects of Harmony, Counterpoint, and Composition by Adolph Rosenbecker and Dr. Daniel Protheroe, two noted musicians.

Paderewski, Emil Sauer (Vienna Conservatory), Moszkowski, Walter Damrosch, Leschetizky, Henry T. Finck, and other great musical authorities have freely endorsed this Normal Training Course of Weekly Lessons for Music Teachers, which you can take in your spare time, in the quiet of your own home, at small cost.

Don't be deceived—these Sherwood principles can only be secured through the Siegel-Myers School of Music in this University Extension Course. If you cannot go away from home to study under the very best teachers, you need this Normal Course.

OTHER COURSES OF GREAT VALUE TO MUSIC TEACHERS AND MUSICIANS

Our Faculty, as a whole, is composed of artists of international reputation, trained by the best American and European Masters. Each is a specialist and has had years of successful teaching experience in his particular branch of music. No matter what course you select, you will have the satisfaction of knowing you are receiving the instruction of a great teacher. Some of the Weekly Lesson, Home-Study Courses we offer teachers, musicians and those desiring to prepare to teach or to learn to play any instrument or sing, are: The Advanced Composition and Choral Conducting Courses, by Daniel Protheroe; Public School Music and Supervisors' Course, by Frances E. Clark; History, Analysis and Appreciation of Music, by Glenn Dillard Gunn; Pipe Organ (Beginners and Advanced), by Clarence Eddy; Voice Culture (with the aid of the phonograph), by George Crampton; Piano (Beginners), by William H. Sherwood; Violin, by Arthur Heft; Cornet (Beginners and Advanced), by A. F. Weldon; Reed Organ, by Frank W. Van Dusen; Mandolin, by Samuel Siegel; Guitar, by William Foden; Banjo, by Frederick Bacon.

Each of these courses is the equivalent of a Complete Conservatory Course and is offered to students under our binding guarantee of satisfaction after the full course has been completed, or money refunded.

NEW YORK NOTES

BY EVA EMMETT WYCOFF

THE Metropolitan Opera opened, Nov. 16. Several new operas will be produced; one having its première on any stage is *Mme. Sans-Géne*, by Renato Simoni. This will be practically the only novelty of the season. Yet operas will be produced which have never been heard here. One will be Borodine's *Prince Igor*. The afternoon cycle of Wagner's *Der Ring des Nibelungen*, performances of *Parsifal*, and special matinees of novelties will be continued as usual. Another production will be Weber's *Euryanthe*, which is unknown to the present generation, and Beethoven's *Fidelio* will be heard after an absence of many years.

MR. ALBERT SPALDING gave his first New York recital in two seasons at Carnegie Hall, Oct. 29.

DAVID and CLARA MANNES will give their series of joint recitals at the Belasco Theatre during the months of January. February, and March.

MR. REINALD WERRENRATH gave a song recital Oct. 26 at Aeolian Hall. His singing displayed a splendid voice and artistic intelligence. In his program he produced many novelties.

ALMA GLUCK presented her song recital, Oct. 31 at Carnegie Hall.

MME. SCHNABEL-TOLLEFSEN, pianist, and Mr. Horatio Connell, baritone, gave a joint recital in Aeolian Hall, Nov. 4. They are splendid artists and gave a most interesting recital. Ellis Clark Haumann, at the piano.

MME. YVONNE DE TREVILLE presented her recital "Three Centuries of Prime Donne" in costume at Aeolian Hall on November 6.

MR. HAROLD HENRY, the American pianist, played a recital at Aeolian Hall on Oct. 29. His technique is clean and his audience was much interested.

MISS FLORENCE HINKLE sang delightfully in her recital at Acolian Hall on Nov. 2.

THE National Opera Club of America has been organized in New York City by Mme. Katherine Evans von Klenner. It has among its vice-presidents and directors many names of prominent singers and directors. The object of the club is to further the interest of musicians in music as an educational factor instead of one of amusement.

MME. HUDSON-ALEXANDER, with Arthur S. Hyde at the piano, gave a song recital at Aeolian Hall, Oct. 29. She is a serious artist.

MR. LEONARD PORWICK gave his first recital in Carnegie Hall, Nov. 5. The program was unusually interesting.

GENERAL NEWS ITEMS

MOSZKOWSKI is said to be a naturalized Frenchman. A son is in the French Army.

WILLEM MENGELBERG, the famous Dutch conductor, died at Amsterdam, late in October, as the result of a fall downstairs. He was born at Utrecht in 1871, and was conductor of the Concertgebouw, of Amsterdam, for a number of years prior to his death. Several years ago he conducted the New York Philharmonic Orchestra as a "guest."

ALBERTO JONAS, the pianist, who left the United States some years ago to locate in Berlin, has returned and opened a studio in New York.

EMIL OBERHOFFER, conductor of the Minneapolis Orchestra, has announced that all his directions in rehearsal shall hereafter be given in English, instead of German as heretofore.

SIGISMUND STOJOWSKI, pianist and teacher in New York, is conducting a series of weekly class recitals to which piano teachers, artist students, and young concert piano students will be admitted for criticism, at the Von Ende School.

VIOLIN classes have been established in the Brooklyn public schools upon recommendation of Dr. Frank Rix, director of music.

YSAYE lost his home in Brussels and is now in England.

BOSTON: OLIVER DITSON COMPANY
NEW YORK: CHAS. H. DITSON & CO. CHICAGO: LYON & HEALY

THE People's Choral Union of Detroit, under the direction of William Howland, is planning to hold a spring festival in 1915.

ANDREAS DIPPEL has inaugurated a series of performances of light opera in New York. Later the company will go to the Century Opera House.

TROY, N. Y., now has a Symphony Orchestra of more than fifty players.

EDWARD C. MOORE, of Chicago, was awarded a prize of $500 for music best suited to a new dance to be introduced by Pavlowa, the Russian danseuse.

VIENNA is without performances at the Royal Opera House for the present.

———*———

DURING a visit to Weimar in 1889 Von Bülow was very much out of humor and excitable. During the orchestra rehearsal of the *Adagio* of Beethoven's Eb major concerto, which he was playing, he turned to violinists and said, "Like sardines in oil, gentlemen!" Lassen, who was conducting, hastily broke in, "But without vinegar!" which caused Von Bülow to laugh and change his mood.

HUMMEL, the composer, was once asked what beautiful object he had in mind when he wrote his charming *Rondo*. He might have answered truthfully, a beautiful theme from Bach's fugue in C♯ major. But he very frankly replied that the 80 ducats his publisher had promised him was very much in his mind.

———*———

HE who thinks *adagio*, speaks *andante*, acts *allegro*, and improves *presto* what he has felt, is a virtuoso.

VICTOR TALKING MACHINE RECORDS FOR DECEMBER

IN the present issue Mr. Henry T. Finck, music editor of the New York *Evening Post*, in discussing the topic of *Making America Musical*, speaks of the great aid which has been given by the Talking Machine and its records covering the best in musical literature.

Now that the Christmas season is at hand, one need have no hesitation in sending a record or two to a friend who has a Victrola; such a gift will make a most satisfactory souvenir. We notice here a few that especially interest us, taken from the December issues.

Enrico Caruso and **Alma Gluck**: *Brindisi-Libiam nei lieti calici,* from Verdi's *Traviata*, the great banquet scene.

Alma Gluck, soprano: *Comin' thro' the rye*, a charming record of the old Scotch ballad.

Sophie Braslau, contralto: *Brindisi* (*Drinking Song*) from Donizetti's opera, *Lucrezia Borgia;* one of the great opera airs.

Frieda Hempel, soprano, and **Pasquale Amato**, baritone: *Figlia! Mio padre*, from *Rigoletto*, by Verdi, one of the celebrated duets in the opera repertoire, by two great artists.

Lucy Isabelle Marsh, soprano, and **John McCormack**, tenor: *O terra addio* (*Farewell, oh earth!*) The great duet from Verdi's opera *Aïda*.

Julia Culp, contralto: *Auld lang syne.*

Lucrezia Bori, soprano: *Niña Pancha*, a Spanish song by Valverde; the singer's sweet, flexible voice is splendidly shown.

Margarete Ober, contralto: *Heimweh* (*Longing for home*), by Hugo Wolf. One of this great song composer's best numbers.

Mischa Elman, violinist: *The prophet bird* (*Vogel als Prophet*), Op. 82, No. 7, by Schumann, a number which is beautifully adapted to the violin.

Giovanni Martinelli, tenor: *Cielo e mar* (*Heaven and ocean*), from Ponchielli's opera *Gioconda*. The singer's fine voice is in evidence with a ringing high B at the close.

Frances Alda, soprano: *Love's own sweet song*, from the late opera *Sari*, a dainty waltz song, much admired in the opera production.

John McCormack, tenor: *My wild Irish rose*, one of Chauncey Olcott's most popular songs.

———*———

VON BÜLOW usually objected to the presence of visitors at a rehearsal. On one occasion, at Wiesbaden, a Russian society dame, whose social habit was by no means retiring, attended a rehearsal without an invitation. It must be explained that she was the morganatic wife of a Russian grand duke, "married with the left hand," as Germans put it. After Von Bülow had finished she rushed up to him, saying, "My dear master, why do you play this hateful Brahms, whose music is so lacking in melody and so thankless?"

With his most amiable smile, Von Bülow excused himself with the following: "Your highness is right. Perhaps I should have played Dreyschock's *Étude for the left hand alone*. Doubtless you would have been better pleased."

Compositions by CHARLES FONTEYN MANNEY

BORN in Brooklyn, New York, Feb. 8, 1872; educated at private schools and the Brooklyn Polytechnic Institute; studied harmony with William Arms Fisher and Wallace Goodrich, counterpoint and composition with Percy Goetschius; has composed and published numerous works in smaller forms, including songs and piano pieces, anthems, part-songs, a song cycle entitled **The Shropshire Lad** and two highly successful church cantatas, **The Resurrection** and **The Manger Throne** for solo voices, chorus, organ, and orchestra. Among other activities Mr. Manney has had experience in choral and orchestral conducting, has made many arrangements, and has to his credit a large number of English translations for the classic and standard French and German songs, as well as other translations in verse and prose. Resides in Boston, where he is on the editorial staff of the Oliver Ditson Company.

PRESS COMMENTS:

Charles Fonteyn Manney, the Boston composer, has written a truly noteworthy song in his setting of Fiona MacLeod's *Heart of Hearts* (*Cor Cordium*).

There is in Mr. Manney's music the ecstatic joy which the poem proclaims so magnificently. It is set on surging arpeggios, which rise splendidly to the climax. The middle portion, *Meno mosso*, beginning in B minor, with its aptly managed imitative passages, reaches into a free *arioso* section which is tremendously significant. After it the first part returns, again climaxed with even greater power.

Mr. Manney's music has always been worthy of sincere admiration. His harmonic sense is keen and his workmanship of a high order. Here he reveals not only these qualities but also a flow of ringing melody that will make the song admired by singers and public alike. It stands high in the list of contemporary American songs.

It is issued for high voice in D and for medium voice in B. —*Musical America*, July 25, 1914.

Charles Fonteyn Manney, unquestionably one of the most gifted of the younger Americans who believe in harmonic individuality, has written two noteworthy piano compositions, *Chansonette* and *Scherzo-Minuet*, issued by the Oliver Ditson Company.

American piano music, as much as any department of native composition, is in need of the kind of work which Mr. Manney has so successfully performed here. The *Chansonette* is an *Andantino con tenerezza* in F sharp minor, common time, of surpassing loveliness. The theme is simple and straightforward and its treatment makes it even more distinguished than it is. It is a gem, this *Chansonette*, poetic, strongly imaginative and representative of the best thought in American music today.

In the *Scherzo-Minuet* we find the composer in another mood. Here one must admire the structure more perhaps than the material. The latter is simple and direct, but the building up of the composition is almost symphonic. The development of the themes and the arrangement of details are masterly.—*Musical America*, Oct. 3, 1914.

WITH THE SCHOOLS AND TEACHERS

Miss Belle Andriessen, a prominent teacher of Beaver, Pa., gave a recital at New Brighton, in which eighteen pupils assisted. American composers were well represented on the program.

Expositions of classical and modern chamber music have been arranged for at three leading American universities by Miss Loraine Wyman, soprano, George Barrère, flute, Robert J. Toedt, violin, William Durieux, 'cello, and Arthur Whiting, harpsichord. The dates are Yale, December 7; Princeton, December 11; Harvard, December 17.

Mr. J. Warren Andrews, organist of the Church of the Divine Paternity, gave a free organ recital under the auspices of the A. G. O., November 10, assisted by Miss Mildred Potter, contralto, and Mr. Edward Boyle, tenor.

Mr. Ralfe Leech Sterner, director of the New York School of Music and Arts, sends us a program of the 386th pupils' concert, at the school, given October 8. The first part of the program was devoted to excerpts from grand operas, October 16 a program was given at Plainfield, N. J.

Mr. Frank Parker, baritone, gave a recital at the Cedar Valley Seminary, Osage, Iowa, October 29, and at the Conservatory of Music, Charles City, Iowa, November 3.

Mr. Otto Meyer, violinist, and Miss Marie Ten Broeck, pianist, gave a *Paganini-Chopin Recital* at Minneapolis, November 4. Mr. Meyer has a very complete repertoire of Paganini's compositions.

Miss Fannie Brounstein, soprano, of Rochester, N. Y., pupil of Prof. Harold Butler, of the music department, Syracuse University, gave a delightful recital recently in the opera house of her city.

The School of Musical Art, Jacksonville, Fla., gave two fine recitals in October. On the 27th Miss Foster, director of the school, gave an organ recital, and on the 28th, Miss Alma Patton played a violin recital.

The choir of the Memorial Presbyterian Church, New York City, Mr. S. Lewis Elmer, organist and choirmaster, sang Mendelssohn's *Elijah,* November 1, as a part of the evening service.

Members of the faculty of the Cosmopolitan School of Music and Dramatic Art, Chicago, gave a recital at the Branch School, E. 47th Street, October 16.

The Philharmonic Orchestra, of New York, Josef Stransky, conductor, gave a concert under the auspices of the Dutchess County Association of Musicians, November 16. Mr. Charles Gilbert Spross, pianist, was the soloist.

Mr. Charles N. Boyd, of Pittsburgh, Pa., arranged a pupils' recital at his studio, November 6. Nine pupils assisted.

The Alumni Association of the N. E. Conservatory, Boston, presented Mary Antin and a body of singers in a lecture recital, *Songs of the Ghetto,* October 26. The proceeds were added to the fund for helping deserving students.

Miss Lillian P. Norman, of Los Angeles, gave a pupils' recital, October 23, in which nineteen of the class took part.

A piano recital was given at the Pennsylvania College for Women, Pittsburgh, by Miss Mae Mackenzie, assisted by Mr. Charles Edward Mayhew, baritone.

Mr. Henry Doughty Tovey, pianist, director of the School of Music, University of Arkansas, gave a recital of modern music, November 4.

Mr. Henry Hall Duncklee, organist and director of music at the Collegiate Church, New York, sends us an interesting program of the service music on October 11. Five of the numbers were from the catalog of the Oliver Ditson Company.

Mr. William Benbow, of Buffalo, N. Y., gave a lecture recital at St. Mark's Lutheran Church, Hanover, Pa., October 12. This church recently installed a new organ built by J. W. Steere & Son, Springfield, Mass.

Mr. D. A. Clippinger, of Chicago, gave a lecture recital on *Russian Songs and Song Writers,* October 15, assisted by Miss Jessie N. Baldwin, soprano.

A very interesting program comes from Miss Knudson, of Yorkville, Ill. Fifteen of her pupils presented the program.

Mr. J. Alfred Pennington, of Scranton, Pa., is giving a series of organ recitals at the Immanuel Baptist Church, that city. The large organ in the church was built by the Austin Company, Hartford, Conn.

The vocal faculty of the College of Fine Arts, Syracuse University, gave a concert, October 26. The following took part: Miss Belle L. Brewster, soprano, Miss Laura Van Kuran, soprano, Miss Clara Drew, contralto, Mr. Reginald Billin, baritone, Mr. Howard Lyman, tenor, and Mr. Harold L. Butler, bass-baritone.

*

There is a technic of execution, the actual playing of passages. There is a technic of phrasing, the division of the music into phrases, sentences, periods. There is also, paradoxical though it may seem, a technic of expression, the subtle *nuances* in tone and tempo, upon which the emotional meaning of the music is entirely dependent. With this amplification Bülow's famous epigram may be regarded as comprehensive and true.—*E. L. Bainton*

SECULAR SONGS

HIGH VOICE

MANNEY, CHARLES FONTEYN
Softly soundeth through my soul. [G♭][d-g♭] $0.40
A short, expressive song to a text by Heine; an excellent encore number.

RYDER, ARTHUR H.
Didst thou not love me. Op. 15, No. 1 [B][d♯-F♯] ..... .40
A love song of broad, passionate expression; calls for artistic treatment although not at all difficult.

MEDIUM VOICE

MANNEY, CHARLES FONTEYN
Softly soundeth through my soul. [E♭][b-E♭] ..... .40
(For description see Secular Songs, High Voice.)

TOWNSEND, STEPHEN S.
The night has a thousand eyes. [B♭][c-E♭] ..... .40
A pleasing setting of a familiar text, by an experienced singer; it well displays the voice.

LOW VOICE

DICHMONT, WILLIAM E.
When violets grow. [E][b-D♯] ..... .50
A capital song for an alto or a baritone voice; as a teaching song it will give fine drill in diction and phrasing.

JOHNSON, WILLIAM SPENCER
From oversea. [B♭][b♭-E♭] ..... .40
A short lyric song with a strong climax.

SACRED SONGS

HIGH VOICE

GAINES, SAMUEL RICHARDS
Blest be Thou, O Christ eternal. With violin and 'cello obbl. [G] [d-g] .75
A fine Christmas song, broad in melody and with a fine climax; the obbligati parts add much to the effectiveness.

WRIGHT, MINNIE T.
Love and light. [D♭][d♭-a♭] $0.60
A sacred song of more than average attractiveness and usefulness; it has a certain amount of breadth that will make it useful for special occasions.

LOW VOICE

STEVENSON, FREDERICK
O radiant hour. Op. 68. (A Marriage Song.) With obbl. for violin, 'cello and harp. [E♭][g-B♭] ..... .60
Distinctly a low voice song, bass or alto, preferably; in text and music it suits admirably a wedding occasion, the instrumental obbligati adding much to the effect.

PIANO SOLO

ALDEN, JOHN CARVER
Evening song. (*Chant du soir*) IV ..... .60
Has an attractive lyric character, and calls for a fine singing tone; contains passages in octaves.

BRAHMS, JOHANNES
Hungarian dance. (*Ungarischer Tanz*) No. 7. IV-V ..... .40
One of the most popular of the composer's easier works; should be in every teacher's repertoire.

CRAMM, H. L.
Spider dance. (*Tarantella*). Op. 18, No. 2. II-III ..... .50
A fine teaching piece in fast tempo; excellent to use in developing speed.

LEMONT, CEDRIC WILMOT
An April shower. Op. 8, No. 1. III .... .40
The wood nymph. Op. 8, No. 8. III .. .40
Two pieces of a set entitled, *Springtime Sketches*. No. 1 is built on a broken chord figure in sixteenth notes. No. 8 is in waltz rhythm, with notes alternating between the two hands; a showy piece.
At the Carnival. Op. 9, No. 1. III .... .50
March of the clowns. Op. 9, No. 4. II .40
Part of a set, *Pleasant Memories*, for young pupils. No. 1 is a rhythm suitable for the two-step; No. 4 has much the same rhythm, but more marked. Both are good teaching pieces.

PIANO—FOUR HANDS

SARTORIO, ARNOLDO
A happy occasion. (*Ein heiteres Augenblick*). Op. 1023, No. 3. II-III $0.60
An easy piano duet in a waltz rhythm.
In the gentle summer night. (*In lauer Sommernacht*). Op. 1023, No. 2. II-III ..... .60
A pleasing duet in which the *Secondo* part has the melody, in one section, while the *Primo* plays an accompaniment in arpeggios.
In the friendly circle. (*Im Freundeskreise*). Op. 1023, No. 1. III ..... .60
A good number for the ensemble class, with a light, graceful swing.

VIOLIN and PIANO

BARTLETT, J. C.
A dream. Trans. by Karl Rissland. .. .60
A delightful transcription of this favorite song.

CADMAN, CHARLES WAKEFIELD
At dawning ..... .60
Indian Summer ..... .60
Memories ..... .60
Three songs of Mr. Cadman's finest songs, transcribed for the violin by Mr. Karl Rissland, of the Boston Symphony Orchestra. They are fine lyric numbers, and excellent teaching piece to develop a feeling for tone.

COWLES, EUGENE
Forgotten. Trans. by Karl Rissland... .60
A song that has always been admired; it makes a fine number for the violin.

LEMONT, CEDRIC WILMOT
The dancers. Op. 6, No. 2. Trans. by Karl Rissland ..... .60
An attractive number for young players.

MACY, J. C.
Good night, little girl, good night. Trans. by Karl Rissland ..... .60
One of the most popular songs in the catalog of the Oliver Ditson Company; it makes a fine lyric number for the violin.

STULTS, R. M.
The sweetest story ever told. Trans by Karl Rissland ..... .60
Just as good a violin number as it proved to be as a song.

VIEUXTEMPS, HENRI
Andante, from Violin Concerto, No. 2 $0.60
A fine concert number from the classical repertoire.

'CELLO and PIANO

BARTLETT, J. C.
A dream. Trans. by Karl Rissland .60
This beautiful song makes a fine lyric number for the 'cello.

CADMAN, CHARLES WAKEFIELD
At dawning ..... .60
Indian Summer ..... .60
Memories ..... .60
Three songs transcribed for the 'cello by Karl Rissland.

COWLES, EUGENE
Forgotten. Trans. by Karl Rissland... .60
The 'cello sings this lovely air very effectively.

DICHMONT, WILLIAM E.
Thinking of you. Trans. by Karl Rissland ..... .60
A fine song melody.

STRING QUARTET

BOWDEN, WILLIAM COMERFORD
Madrigal ..... .60
Scherzo, in A minor 1.00
Two easy movements for a string quartet. Especially suitable for a pupils' organization.

MISCELLANEOUS

Anthology of German Piano Music. Vol. II. Modern Composers. Edited by Moritz Moszkowski. (*Musicians Library.*) Paper, $1.50; cloth, gilt, $2.50.
Five Vignettes. Op. 7. By F. Morris Class. (*Piano Sketches*) 1.00

First "Peer Gynt" Suite. Op. 46. Ditson Edition, No. 189 ..... .75
PHILIPP, ISIDOR
Exercises for the development of the higher pianoforte technic. Ditson Edition, No. 196 ..... 1.50

DEEMS TAYLOR

NEW CHORAL WORKS OF SIGNIFICANCE

The Highwayman

A Cantata for Baritone Solo, Chorus and Orchestra

Ballad by
ALFRED NOYES
Music by
DEEMS TAYLOR

Op. 8

Issued in two editions—With Chorus for Mixed Voices, and with Chorus for Women's Voices (three-part). The Baritone Solo, Accompaniment and Orchestration are the same in both editions.

Time of performance, about thirty minutes.

Price, 75 cents postpaid

Orchestra parts may be rented of the publishers.

First performed at the Fifth MacDowell Festival, Peterboro, N. H., Aug. 19, 1914, when it registered "An emphatic and resounding success."

"A work which cannot fail to take a place of distinction in modern literature. There is genuine genius evidenced in it, and the music has all the attributes that permanent compositions require.

"Mr. Taylor's melodic gift is notable and his command of his orchestral instruments is that of a master. With it all he is modern in his feeling for harmonic subtlety and his picturing of moods and dramatic touches."

A. W. Kramer in *Musical America*

"I have spent five or six hours in the study of Mr. Deems Taylor's cantata THE HIGHWAYMAN and the more I work at it the better I like it. It is one of the best things of its kind done in America in a long time."

Victor Harris, Conductor the *St. Cecilia Club*, New York City

"Throughout there runs a wholesome and unvarnished sincerity and directness of speech. Rather than disdaining melody he fancies and cultivates it, melody not of the obvious type which soon surfeits, but that which leaves echoes in the memory, which sings of a serious mood the hearer may name for himself."

Arthur Wilson in *Boston Globe*.

"A thoroughly pleasing composition which charms by reason of its beauty (an old-fashioned virtue, it must be admitted), and grips through the intensity of its emotional expression, direct and unforced. The dramatic moments have point and yet are not brusque and the lyrical episodes please with the smoothness and grace of the writing for the singing and orchestral voices."

Leonard Liebling in *Musical America*

The Chambered Nautilus

Cantata for Mixed Voices—With Piano, Organ and Orchestra

Poem by
OLIVER WENDELL HOLMES

Music by
DEEMS TAYLOR

Price, 50 cents postpaid

Orchestra parts may be rented of the publishers.

This Cantata was first performed in May, 1914, by the University Heights Choral Society of New York City.

From Musical America, May 16, 1914.

"Mr. Taylor, who stands in the front rank of the younger American creative musicians has made a setting of the inspired Holmes verses which is to be reckoned one of the finest new choral compositions by an American.

"He has written music which is modern to the core and free in its harmonic grain, but his modernity is natural and not forced and his sense of the fitness of things is proved by his voicing the uplifting lines '*Build thee more stately mansions, O my soul*' in diatonic harmonies, the only harmonies in which a direct and noble thought may correctly be set. The thrilling climax at the end won long continued applause."
